1 INTRODUCTION

1.1 PROJECT OVERVIEW

Crosswind, a Shell and Eneco joint venture, was awarded the tender to develop the offshore Hollandse Kust Noord (HKN) wind farm, located 18.5km off the coast of Netherlands near the town of Egmond aan Zee. The consortium plans to have HKN operational in 2023 with an installed capacity of 759MW generating at least 3.3TWh per year. This is sufficient renewable power to supply more than 1 million Dutch households with green electricity.

Offshore wind farms produce intermittent electricity and balancing these dips and peaks and integrating this electricity into the national energy system requires new technologies. For this reason, the offshore wind farm will include several new technologies that could be implemented at full-scale in the future. The new technologies being explored include a floating solar park, a short-duration battery storage as well as long-term storage via green hydrogen produced by water electrolysis and subsequently consumed in a fuel cell. The combination of these individual measures, herein referred to as the Base Load Power Hub (BLPH) will ensure a continuous power supply regardless of the wind situation.

1.1.1 Project Location

The Hollandse Kust Noord (HKN) wind farm is located 18.5km off the coast of the Netherlands near the town of Egmond aan Zee.

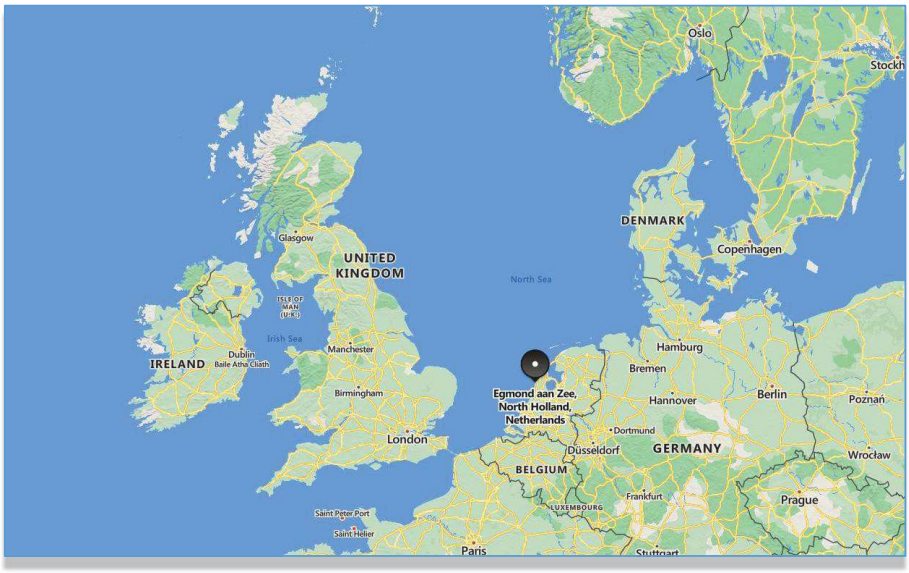

Figure 1 HOLLANDSE KUST NOORD WIND PARK Location Map

Figure 2 - Wind Park Details

The wind farm will consist of No. 69 x 11.5MW wind turbine generators each to be installed on a dedicated monopile structure. A 70th monopile located on coordinates E 590719.1, N 5841602.3 is reserved for installing the platform accommodating the BLPH. The monopile structure was designed and installed by Van Oord Offshore Wind (VooW) and therefore not part of the BLPH scope.

1.1.2 Project Concept

All components included in the BLPH will be integrated onshore on a topsides and installed in an offshore location within the boundaries of the HKN wind farm. At its simplest, the BLPH will store energy during periods of high electricity generation from renewable sources (a wind turbine generator and the floating solar PV farm) and release it during periods of low generation. In practice. It is expected that the energy stored will supplement generation from renewable sources to ensure that at least 1.0MW of power is exported to the electrical grid regardless of wind/solar availability.

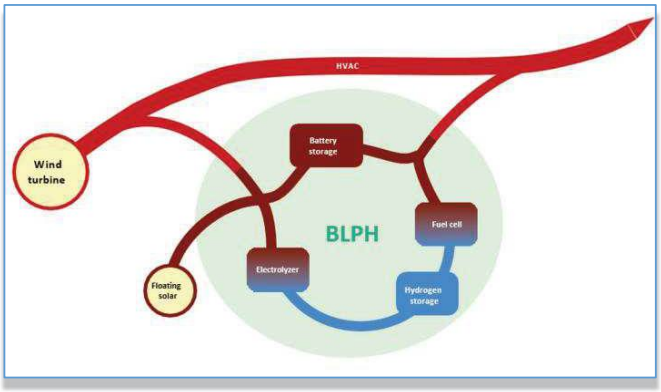

Figure 3 – BLPH Concept

This document undergoes an issuance cycle within EDMS Fusionlive". Its distribution is electronically controlled. Once printe d shall be considered as "NOT CONTROLLED" copy

File: 1724000798-PP-DA-00003_6.*docx*

Electricity in the BLPH will be stored in the form of electrons in a battery energy storage system (BESS) as well as converted into green hydrogen via water electrolysis. When the power output from the connecting wind turbine drops to below 1 MWe, the BLPH will return its stored energy to supplement the remaining power output. This will be by discharging the BESS, while stored hydrogen will be converted back into electricity using a fuel cell to extend the discharge duration.

The purpose of the BLPH s to function as a testbed for the integration of energy storage technologies with renewable generation. It is expected that equipment installed on the BLPH will operate as Normally Unmanned Installation for at least two (2) years with no or minimal maintenance and it will have its own independent control room with the ability to communicate with Crosswind's control room

SPECIFICATION

1. Construction: 1 Ball Isolate
2. Inlet: 3/4" Cl.150 RF (ASME B16.5)
3. Outlet: 3/4" Cl.150 RF (ASME B16.5)
4. Design Code: ASME B16.34/B16.5
5. Bore Size: DN 20
6. Face to face dimension according to ASME B16.10
7. Antistatic device
8. Anti-blow out stem
9. Design temperature: -29°C / +100°C
10. Pressure test: API 598, API 6D
11. Corrosion Allowance 3mm
12. PMI: PMI Test on body, closure and wetted parts
13. Bidirectional valve
14. Cavity Relief Pressure Test
15. Antistatic Test
16. Hardness Test on body, closure and wetted parts
17. Fire Safe: API 607 / ISO 10497, API 6FA
18. Painting: treatment according to spec. 123A90-DDL-MAT-SP-60006,
    Valve: System SYS-6A, Color RAL 9002
    Lever: System SYS-6A, Color RAL 9005

20	LOCKING PLATE BOLT	St.St. 316
21	ANTISTATIC DEVICE SPRING	ELGILOY R30003

SPECIFICATION

1. Construction: 1 Ball Isolate
2. Inlet: 1" Cl.150 RF (ASME B16.5)
3. Outlet: 1" Cl.150 RF (ASME B16.5)
4. Design Code: ASME B16.34/B16.5
5. Bore Size: DN 25
6. Face to face dimension according to ASME B16.10
7. Antistatic device
8. Anti-blow out stem
9. Design temperature: -29°C / +100°C
10. Pressure test: API 598, API 6D
11. Corrosion Allowance 3mm
12. PMI: PMI Test on body, closure and wetted parts
13. Hardness Test on body, closure and wetted parts
14. Bidirectional valve
15. Cavity Relief Pressure Test
16. Antistatic Test
17. Fire Safe: API 607 / ISO 10497, API 6FA
18. Painting: treatment according to spec. 123A90-DDL-MAT-SP-60006,
    Valve: System SYS-6A, Color RAL 9002
    Lever: System SYS-6A, Color RAL 9005

22	BRACKET	ASTM A479 316/316L NACE
23	STEM EXTENSION	ASTM A479 F55 NACE
24	BRACKET BEARING	Polyamide
25	BRACKET BOLTING	ASTM A193 B7M + HDG
26	ANTISTATIC DEVICE SPRING	ELGILOY R30003

SPECIFICATION

1. Construction: 1 Ball Isolate
2. Inlet: 2" Cl. 150 RF (ASME B16.5
3. Outlet: 2" Cl. 150 RF (ASME B16.5
4. Design Code: ASME B16.34 / B16.5
5. Bore Size: DN50
6. Face to face dimension according to ASME B16.10
7. Antistatic device
8. Anti-blow out stem
9. Design Temperature: -29°C / +100°C
10. Pressure Test: API 598, API 6D
11. Lever is suitable for insulation up to 100mm
12. PMI: PMI Test on body, closure and wetted parts
13. Bidirectional valve
14. Cavity Relief Pressure Test
15. Antistatic Test
16. Fire Safe: API 607 / ISO10497 / API 6FA
17. Impact Test on raw material of body and closure at -50°C
18. Hardness Test on body, closure and wetted parts

4. Design Code: ASME B16.34/B16.5
5. Bore Size: DN 20
6. Face to face dimension according to ASME B16.10
7. Antistatic device
8. Anti-blow out stem
9. Design temperature: 5° / +50°C
10. Pressure test: API 598, API 6D
11. Corrosion Allowance 3mm
12. Lever is suitable for insulation up to 100mm
13. PMI: PMI Test on body, closure and wetted parts
14. Bidirectional valve
15. Cavity Relief Pressure Test
16. Antistatic Test
17. Hardness Test on body, closure and wetted parts
18. Fire Safe: API 607 / ISO 10497, API 6FA

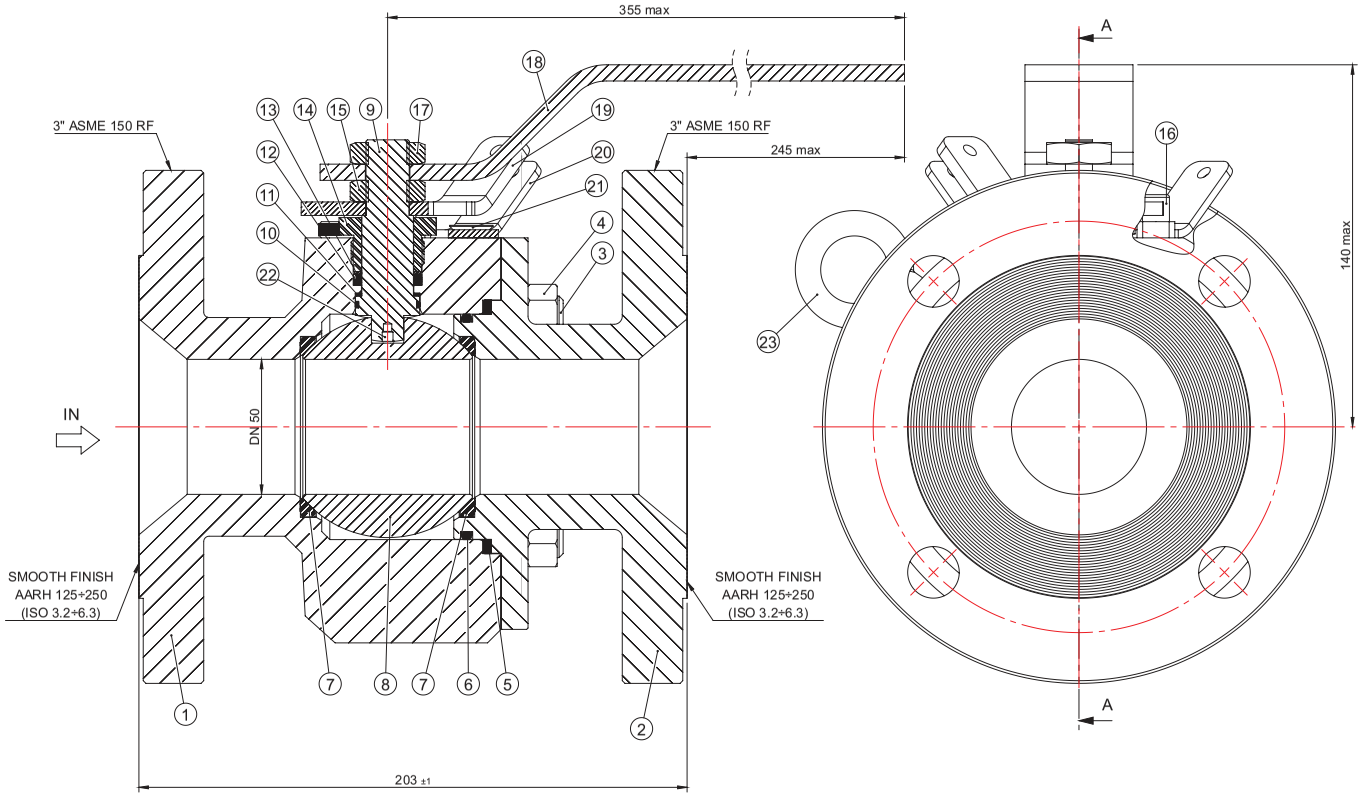
SPECIFICATION



1. Construction: 1 Ball Isolate
2. Inlet: 4" 300 RF (ASME B16.5)
3. Outlet: 4" 300 RF (ASME B16.5)
4. Vent: 1/2" NPT-Female (ASME B1.20.1)
4. Design Code: ASME B16.34 / ASME B16.5 / B1.20.1
5. Bore size: Ball DN100, Needle 5mm
7. Antistatic device
8. Anti-blow out stem
9. Design temperature: -46°C / +80°C
10. Pressure test: API 598, API 6D
11. Dye Penetrant Test on body and closures
12. PMI: PMI Test on body, closures and wetted parts
13. Bidirectional valve
14. High Pressure Gas Test with Helium
15. Cavity Relief Pressure test
16. Antistatic Test
17. Fugitive Emission Certificate according to EN ISO 15848-1
18. Fugitive Emission Test according to ISO 15848-2
19. Fire Safe: API 607 / ISO 10497, API 6FA
20. Hardness Test on body, closures and wetted parts
21. Hydrogen Service
22. Painting:
    Treatment according to spec. 123A90-DDL-MAT-SP-60006,
    Valve: System SYS-6A, Color RAL 9002
    Handwheel: System SYS-6A, Color RAL 9005

SPECIFICATION

1. Construction: 1 Ball Isolate, 1 Needle Vent
2. Inlet: 1-1/2" Cl.150 RF (ASME B16.5)
3. Outlet: 1-1/2" Cl.150 RF (ASME B16.5)
4. Vent: 1/2" NPT-Female (ASME B1.20.1)
5. Design Code: ASME B16.34 / B16.5 / B1.20.1
6. Bore Size: Ball DN40, Needle 5mm
7. Antistatic device
8. Anti-blow out stem
9. Design Temperature: -29°C / +100°C
10. Pressure Test: API 598, API 6D
11. Lever and bonnet are suitable for insulation up to 100mm
12. PMI: PMI Test on body, closure and wetted parts
13. Cavity Relief Pressure Test
14. Antistatic Test
15. Fire Safe: API 607 / ISO10497 / API 6FA
16. Impact Test on raw material of body and closure at -50°C
17. Hardness Test on body, closure and wetted parts
18. Bidirectional valve

SPECIFICATION

1. Construction: 1 Ball Isolate
2. Inlet: 6" CL. 150 RF (ASME B16.5)
3. Outlet: 6" CL. 150 RF (ASME B16.5)
4. Design Code: ASME B16.34/ASME B16.5/API 6D
5. Bore size: DN150
6. Face to face dimension according to ASME B16.10
7. Antistatic device
8. Anti-blow out stem
9. Design temperature: -29°C / +100°C
10. Pressure test: API 598, API 6D
11. PMI: PMI Test on body, closure and wetted parts
12. Bidirectional valve
13. Cavity Relieve Pressure Test
14. Antistatic Test
15. Fire Safe: API 607 / ISO 10497, API 6FA
16. Dye Penetrant Test on body and closure
17. High Pressure Gas Test with Helium
18. Fugitive Emission Test according to ISO 15848-2
19. Fugitive Emission Certificate according to ISO 15848-1
20. Hydrogen Service
21. Hardness Test on body, closure and wetted parts
22. Painting: treatment according to spec. 123A90-DDL-MAT-SP-60006,
    Valve: System SYS-6A, Color RAL 9002
    Gear: System SYS-6A, Color RAL 9005

1 INTRODUCTION

1.1. PROJECT OVERVIEW

Crosswind, a Shell and Eneco joint venture, was awarded the tender to develop the offshore Hollandse Kust Noord (HKN) wind farm, located 18.5km off the coast of Netherlands near the town of Egmond aan Zee. The consortium plans to have HKN operational in 2023 with an installed capacity of 759MW generating at least 3.3TWh per year. This is sufficient renewable power to supply more than 1 million Dutch households with green electricity.

Offshore wind farms produce intermittent electricity and balancing these dips and peaks and integrating this electricity into the national energy system requires new technologies. For this reason, the offshore wind farm will include several new technologies that could be implemented at full-scale in the future. The new technologies being explored include a floating solar park, a short-duration battery storage as well as long-term storage via green hydrogen produced by water electrolysis and subsequently consumed in a fuel cell. The combination of these individual measures, herein referred to as the Base Load Power Hub (BLPH) will ensure a continuous power supply regardless of the wind situation.

1.1.1 Project Location

The Hollandse Kust Noord (HKN) wind farm is located 18.5km off the coast of the Netherlands near the town of Egmond aan Zee.

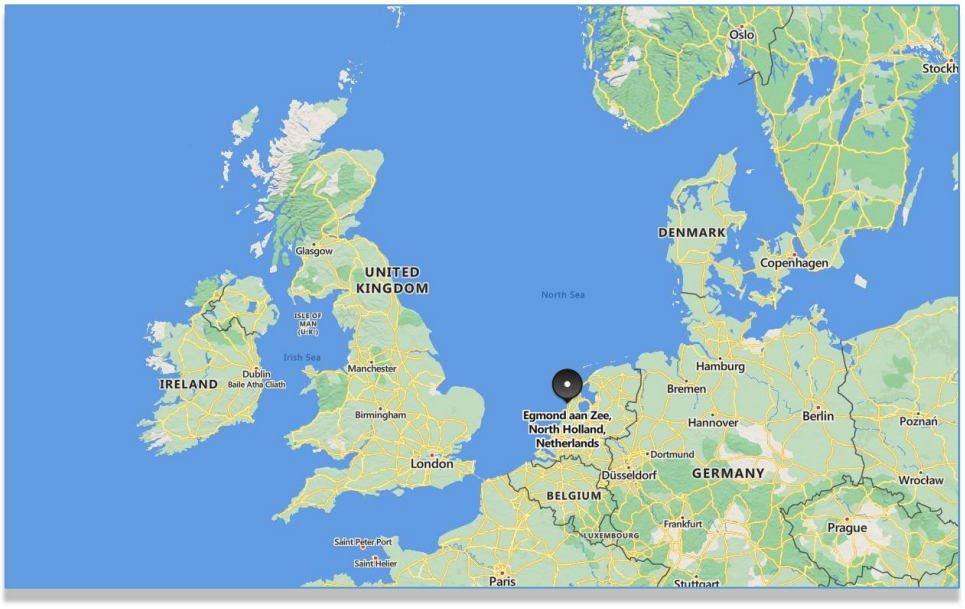

Figure 1 HOLLANDSE KUST NOORD WIND PARK Location Map

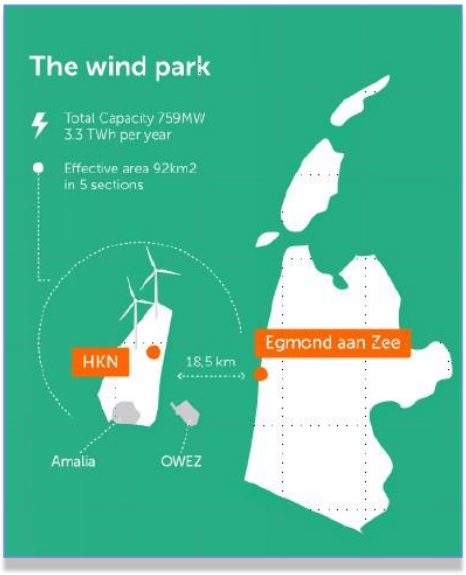

Figure 2 - Wind Park Details

The wind farm will consist of No. 69 x 11.5MW wind turbine generators each to be installed on a dedicated monopile structure. A 70th monopile located on coordinates E 590719.1, N 5841602.3 is reserved for installing the platform accommodating the BLPH. The monopile structure was designed and installed by Van Oord Offshore Wind (VooW) and therefore not part of the BLPH scope.

1.1.2 Project Concept

All components included in the BLPH will be integrated onshore on a topsides and installed in an offshore location within the boundaries of the HKN wind farm. At its simplest, the BLPH will store energy during periods of high electricity generation from renewable sources (a wind turbine generator and the floating solar PV farm) and release it during periods of low generation. In practice. It is expected that the energy stored will supplement generation from renewable sources to ensure that at least 1.0MW of power is exported to the electrical grid regardless of wind/solar availability.

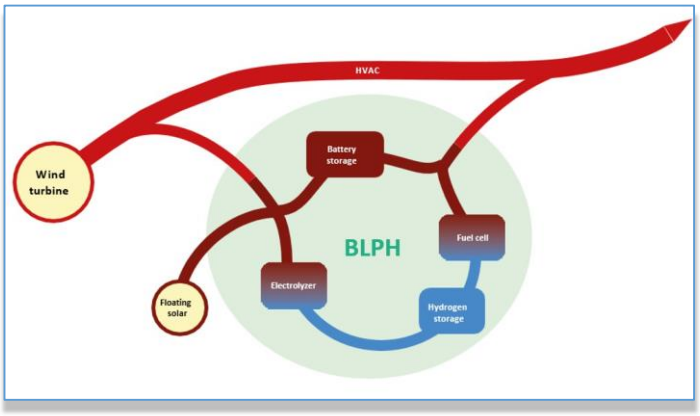

Figure 3 – BLPH Concept

Electricity in the BLPH will be stored in the form of electrons in a battery energy storage system (BESS) as well as converted into green hydrogen via water electrolysis. When the power output from the connecting wind turbine drops to below 1 MWe, the BLPH will return its stored energy to supplement the remaining power output. This will be by discharging the BESS, while stored hydrogen will be converted back into electricity using a fuel cell to extend the discharge duration.

The purpose of the BLPH s to function as a testbed for the integration of energy storage technologies with renewable generation. It is expected that equipment installed on the BLPH will operate as Normally Unmanned Installation for at least two (2) years with no or minimal maintenance and it will have its own independent control room with the ability to communicate with Crosswind's control room.

1 INTRODUCTION

1.1 PROJECT OVERVIEW

Crosswind, a Shell and Eneco joint venture, was awarded the tender to develop the offshore Hollandse Kust Noord (HKN) wind farm, located 18.5km off the coast of Netherlands near the town of Egmond aan Zee. The consortium plans to have HKN operational in 2023 with an installed capacity of 759MW generating at least 3.3TWh per year. This is sufficient renewable power to supply more than 1 million Dutch households with green electricity.

Offshore wind farms produce intermittent electricity and balancing these dips and peaks and integrating this electricity into the national energy system requires new technologies. For this reason, the offshore wind farm will include several new technologies that could be implemented at full-scale in the future. The new technologies being explored include a floating solar park, a short-duration battery storage as well as long-term storage via green hydrogen produced by water electrolysis and subsequently consumed in a fuel cell. The combination of these individual measures, herein referred to as the Base Load Power Hub (BLPH) will ensure a continuous power supply regardless of the wind situation.

1.1.1 Project Location

The Hollandse Kust Noord (HKN) wind farm is located 18.5km off the coast of the Netherlands near the town of Egmond aan Zee.

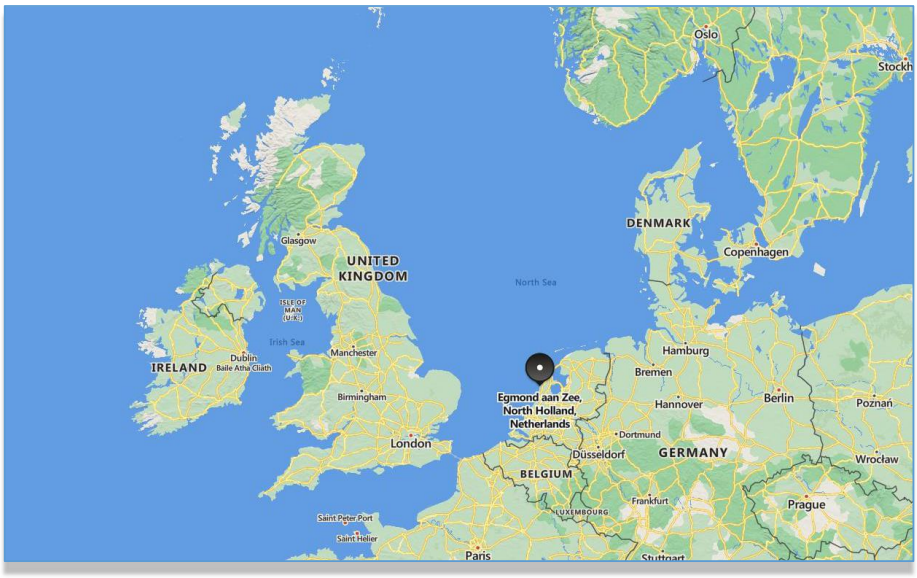

Figure 1 HOLLANDSE KUST NOORD WIND PARK Location Map

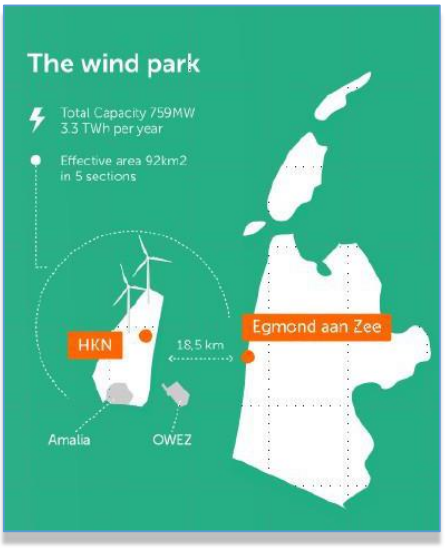

Figure 2 - Wind Park Details

The wind farm will consist of No. 69 x 11.5MW wind turbine generators each to be installed on a dedicated monopile structure. A 70th monopile located on coordinates E 590719.1, N 5841602.3 is reserved for installing the platform accommodating the BLPH. The monopile structure was designed and installed by Van Oord Offshore Wind (VooW) and therefore not part of the BLPH scope.

1.1.2 Project Concept

All components included in the BLPH will be integrated onshore on a topsides and installed in an offshore location within the boundaries of the HKN wind farm. At its simplest, the BLPH will store energy during periods of high electricity generation from renewable sources (a wind turbine generator and the floating solar PV farm) and release it during periods of low generation. In practice. It is expected that the energy stored will supplement generation from renewable sources to ensure that at least 1.0MW of power is exported to the electrical grid regardless of wind/solar availability.

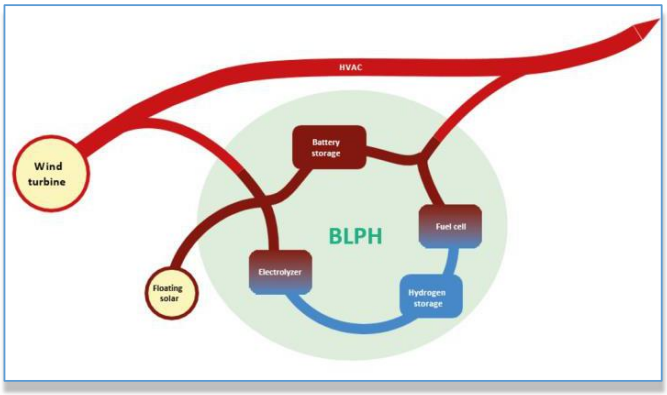

Figure 3 – BLPH Concept

This document undergoes an issuance cycle within EDMS Fusionlive". Its distribution is electronically controlled. Once printe d shall be considered as "NOT CONTROLLED" copy

Electricity in the BLPH will be stored in the form of electrons in a battery energy storage system (BESS) as well as converted into green hydrogen via water electrolysis. When the power output from the connecting wind turbine drops to below 1 MWe, the BLPH will return its stored energy to supplement the remaining power output. This will be by discharging the BESS, while stored hydrogen will be converted back into electricity using a fuel cell to extend the discharge duration.

The purpose of the BLPH s to function as a testbed for the integration of energy storage technologies with renewable generation. It is expected that equipment installed on the BLPH will operate as Normally Unmanned Installation for at least two (2) years with no or minimal maintenance and it will have its own independent control room with the ability to communicate with Crosswind's control room.

This document undergoes an issuance cycle within EDMS Fusionlive". Its distribution is electronically controlled. Once printe d shall be considered as "NOT CONTROLLED" copy

2 DOCUMENT SCOPE

2.1 PROCEDURE OF TEST DYE PENETRANT

SCOPE AND FIELD OF APPLICATION

This procedure describes the performance method and acceptance criteria of colour contrast dye penetrant examination of forgings, welding and overlay. If the performance is enforced by third party, the latter must issue their own procedure, according to the indications reported in this document, and submit it in advance for approval. This procedure has been issued in accordance with the minimum contents required by: ASME V table T 621.

In agreement with table T 621 there is a distinction between the essential variables and not essential variables. Any change of value or value range, requires a requalification of the written procedure. Any change of essential and not essential variables requires the revision of the written procedure.

1. SCOPO E CAMPO DI APPLICAZIONE

Lo scopo della presente procedura è quello di stabilire le modalità per l'esecuzione di prove di durezza, mediante apparecchiature portatili, su componenti finiti.

2. DOCUMENTI DI RIFERIMENTO

I documenti di riferimento sono:
- Manuale della qualità, ultima edizione.
- Procedura di gestione strumentazione (PG-07) ultima edizione.
- ASME Sez. II, ultima edizione.

3. APPARECCHIATURA

Per effettuare le prove di durezza verrà utilizzato un durometro a rimbalzo (Modello TH-110 Portable Hardness Tester 1600HV, S.N. 32159000013), con la possibilità di convertire i risultati nelle varie scale di durezza.

4. CALIBRAZIONE

4.1 Prima effettuare il controllo sul componente in questione lo strumento verrà verificato attraverso il suo blocco di riferimento S.N. 57061.

4.2 Le differenze tra il valore di lettura della media di N° 5 misurazioni effettuate sul blocco di riferimento S.N. 57061 e il valore riportato sul certificato del blocco saranno sottratte dalla media delle misurazioni effettuate sul componente in esame.

5. CONDIZIONI SUPERFICIALI

5.1 L'area di prova deve essere sufficientemente liscia per consentire la corretta esecuzione della prova.

5.2 La rugosità deve essere massimo 1.6 µm (ottenibile con mola a grana fine) e deve essere sufficientemente ampia da consentire il corretto appoggio del corpo di battuta (circa 20 x 20 mm).

5.3 Lo spessore del campione da testare non deve essere inferiore a 5 mm.

1. SCOPE AND FIELD OF APPLICATION

The purpose of this procedure is to establish the procedures for the execution of hardness testing on finished components using portable equipment.

2. REFERENCE DOCUMENTS

The reference documents are:
- Quality Manual, latest edition.
- Equipment management procedure (PG-07) latest edition.
- ASME Section II, latest edition.

3. EQUIPMENT

To carry out the tests a rebound hardness testing device will be used (Model TH-110 Portable Hardness Tester 1600HV, S.N. 32159000013), with the possibility of converting the results on the various hardness scale.

4. CALIBRATION

4.1 First carry out the check on the component in question, the instrument will be checked through its reference block S.N. 57061.

4.2 The differences between the value of the average of N° 5 measurements made on the reference block S.N. 57061 and the value shown on the certificate of the block will be subtracted from the average of the measurements made on the component in question.

5. SURFACE CONDITIONS

5.1 The test area must be smooth enough to allow the test to be carried out correctly.

5.2 The surface must have a maximum roughness of 1.6 µm (obtainable using a fine-grained wheel) and must be large enough to allow the impact body to rest correctly (about 20 x 20 mm).

5.3 The thickness of the sample to be tested should not be less than 5 mm.

5.4 I pezzi campione che hanno peso inferiore a 5 Kg. necessitano di appropriato sostegno per eseguire la prova.

5.5 I componenti che non soddisfano i requisiti 5.2 e 5.3 non possono essere testati in quanto il risultato di durezza non sarebbe attendibile.

6. ESECUZIONE DELLA PROVA

Come concordato con il cliente, la modalità di esecuzione del test prevede che, per ogni punto, dovrà essere registrato il valore medio di N. 5 prove.

7. CRITERI DI ACCETTABILITA'

Se non diversamente concordato con il cliente, i valori riscontrati dal controllo devono rispettare le normative di riferimento presenti nella ASME Sez. II in base al tipo di materiale.

8. DOCUMENTAZIONE

Se richiesto, l'operatore deve firmare e datare un certificato in grado di identificare ogni test effettuato. I valori delle durezze effettuate saranno registrati su un certificato INDRA od uno proposto dal cliente ed approvato dal RSQ (Responsabile del Sistema Qualità).

9. RESPONSABILITA' DEL PERSONALE

L'operatore ha ricevuto un'adeguata istruzione ed è responsabile per l'uso dello strumento, la manutenzione e la conduzione dei test. Il responsabile del sistema qualità (RSQ) è responsabile della corretta applicazione di questa procedura.

10. INDICE REVISIONI

Rev.0 Prima emissione

5.4 Sample pieces weighing less than 5 Kg. require appropriate support to carry out the test.

5.5 Components not compliant to requirements 5.2 and 5.3 shall not be tested since the obtained hardness would not be reliable.

6. TEST EXECUTION

As agreed with the costumer, the test execution method provides that, for each point, the average value of 5 tests must be recorded.

7. ACCEPTANCE CRITERIA

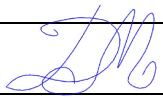
Unless otherwise agreed with the customer, values based on the control must comply with the relevant regulations of the ASME Sec. II according to the type of material.

8. DOCUMENTATION

If requested, the operator has to sign and date a report to identify each test. The values of hardness made will be recorded on a INDRA certificate or one proposed by the customer and approved by the QAM (Quality Assurance Management).

9. PERSONNEL RESPONSABILITY

The operators have to be suitably trained and are responsible for the instrument use and direction. Quality Assurance Manager (QAM) is responsible for the correct application of this procedure.



10. REVISIONS INDEX

Rev.0 First emission

Antistatic Test Procedure

THIS INSTRUCTIONS ARE PROPERTY OF INDRA S.R.L.

ANY DIVULGATION, REPRODUCTION OR TRANSFER OF ANY THIRD PARTIES CONTENTS MUST BE AUTHORIZED BY THE SAME COMPANY.

Revision: 0	Created	Checked

Purpose

The test shall confirm the electrical conductivity between the obturator and the valve body, according to standard BS EN 12266-2.

Test procedure

General

After carrying out the required pressure test and drying out the valve, the valve shall be operated at least five times and the electrical resistance of the obturator shall be determined for several intermediate positions in accordance to following point.

Test

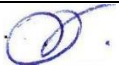
The electrical resistance between the metal parts of the obturator and the valve body shall be measured using a power source not exceeding 12 V DC.

Acceptance criteria

All-metal construction

The electrical resistance shall not exceed 10 Ω

Composite construction (plastics/metal)



The electrical resistance shall not exceed 10^6 Ω

1. SCOPE AND FIELD OF APPLICATION

This procedure describes the performance method and acceptance criteria of colour contrast dye penetrant examination of forgings, welding and overlay. If the performance is enforced by third party, the latter must issue their own procedure, according to the indications reported in this document, and submit it in advance for approval. This procedure has been issued in accordance with the minimum contents required by: ASME V table T 621.
In agreement with table T 621 there is a distinction between the essential variables and not essential variables. Any change of value or value range, requires a requalification of the written procedure. Any change of essential and not essential variables requires the revision of the written procedure.

1. SCOPO E CAMPO DI APPLICAZIONE

La presente procedura descrive le modalità di esecuzione e i criteri di accettabilità del controllo con liquidi penetranti a contrasto di colore di fucinati, saldature e riporti. Se l'esecuzione è effettuata da terzi, questi ultimi devono emettere la propria procedura, secondo i criteri indicati in questo document, e sottoporla preventivamente per approvazione.
Questa procedura è stata redatta secondo i contenuti minimi richiesti da: ASME V, tabella T 621. Secondo la tabella T 621, viene effettuata una distinzione tra le variabili essenziali e variabili non essenziali. Ogni cambiamento di valori o range di valori richiede la riqualificazione della procedura scritta.

2. REFERENCE DOCUMENTS

2. DOCUMENTI DI RIFERIMENTO

ASME V Div.6: 2021	Liquid Penetrant Examination
ASME VIII Div.1 App.8: 2021	Methods for Liquid Penetrant Examination
ASTM E1417: 2021	Standard Practice for Liquid Penetrant Testing
ASTM E165: 2018	Standard Practice for Liquid Penetrant Testing for General Industry
ASME B16.34: 2020	Standard for Valves Flanged, Threaded and Welding End
R.P. SNT-TC-1A: 2020	Personnel Qualification and Certification in Non-destructive Testing.

3. PERSONNEL

Personnel performing this examination shall be qualified minimum as Level II in this method according to SNT-TC 1A.

4. PENETRANT TESTING PRODUCT

Penetrant, Cleaner and Developers
For the control shall be used products qualified in accordance with ASM 2644-QPL (MIL-I-25135), ASTM E165, ASTM E1417. Unless otherwise specified, it shall be used water or solvent removable penetrant. All used products shall not contain contaminating elements more 1% in weight of the dry residual. Contaminants are: Chlorine, Fluorine, Sulphur.
For above elements, producer shall be required a certificate statingthe presence and quantity of contaminating elements in the products.
The certificate should be containing the name of the product, the producer's name, the number of job of production, the results gotten by chemical analisys, the year of manufacturing and the expiry date.

The products used listed in the following table, they belong to the groups indicated according to the, ASTM E165, ASTM E1417 and ASME V classification and are certified by the manufacturer as approved after many years of experience and the supplier qualification.
It is not possible to use, for the same test, products of different groups/suppliers.
Fluorescent penetrant examination shall not follow a color contrast examination.
The batch number, the year of production and expiry date are shown on the product certificate of conformity.
The product certificates are stored in paper and digital form.

3. PERSONALE

I controlli effettuati secondo questa procedura sono eseguiti da personale qualificato in accordo al Livello II SNT-TC 1A.

4. PRODOTTI PER I LIQUIDI PENETRANTI

Penetrante, Pulitori e Rivelatori
Per il controllo verranno usati prodotti qualificati in accordo alla ASM 2644-QPL (MIL-I-25135), ASTM E165, ASTM E1417. Se non diversamente specificato, dovranno essere utilizzati penetranti rimovibili con acqua o con solvente.
Tutti i prodotti utilizzati non devono contenere contaminanti più del 1% residuo secco. I contaminanti sono: Cloro, Fluoro, Zolfo.
Per quanto sopra citato, deve essere richiesto al produttore un certificato sulla presenza e la quantità di contaminanti nei prodotti.
Il certificato deve indicare il nome del prodotto, il nome del produttore, il lotto di produzione, i risultati ottenuti dall'analisi chimica, l'anno di produzione e la data di scadenza.

I prodotti utilizzati elencati in tabella, sono appartenenti ai gruppi indicati secondo la classificazione, ASTM E165, ASTM E1417 ed ASME V e sono certificati dal produttore come approvati a seguito di pluriennale esperienza e qualifica del fornitore.
Non è possibile utilizzare per lo stesso test, prodotti di gruppi differenti o di diversi fornitori.
L'esame con liquidi penetranti fluorescenti non deve seguire un esame con contrasto di colore.
Sul certificato di conformità del prodotto è riportato il numero di lotto, l'anno di produzione e la data di scadenza.
I certificati sono archiviati in formato cartaceo e digitale.

5. EQUIPMENT

Lighting means
It is necessary to periodically calibrate all white light lamp as black light lamp (PDT-074), operators should ensure that the luminous intensity of the parts being examined is adequate.

Digital Luxmeter
Other
- Bristle brushes and in good condition, if the dye penetranti s not applied using aerosol or immersion tanks.
- Clean, dry, lint-free clothes or paper.
- Metal brush or lamellar disc grinding wheel if required for surface preparation.

6. ENVIRONMENTAL CONDITIONS

The ambient where the examination is performed should be well aerated, a safe position for the sample and adequate light intensity according to the requirements of the following paragraphs shall be granted.
Minimum light intensity requested on the examination surface is ≥ 1076 lux (in accordance with ASME V Art.6 or ASTM E165, ASTM E1417).

7. PREPARATION OF SURFACES

The entire surface of the piece to be examined shall be cleaned from dirt, oil, grease, flakes, oxides, humidity, welding slivers, or other elements that could mask defects and absorb or contaminate the penetrant.
Cleaning operations could be carried out using cloths or paper soaked in an appropriate solvent.
The drying of the pieces may be done per normal evaporation, or with hot/cold air. Generally, the surface can be as welded, forged, swaged or cast. Grinding, machining, and any other preparation shall be applied on surface that show irregular conditions which can disturb the examination.
The cleaning of the preparation after final mechanical processing, must be carried out at 100% of the zones accessible with the use of a dedicated solvent.

8. APPLICATION OF PENETRANT

It is particularly important to verify that the temperature of components, of the liquid penetrant, of the compressed air and of the environment are within the range 10°C / 50°C.
If this doesn't occur, the whole process needs to be qualified as special procedure.

8.1 Penetrant application
The penetrant liquid can be applied with a brush, sprayed or by immersion.
Penetration time varies according to the material under examination and to the type of penetrant used.

5. APPARECCHIATURA

Mezzi di illuminazione (lampade)
È richiesta una taratura periodica sia delle lampade a luce bianca che di quelle a luce nera (PDT-074), e l'operatore deve assicurarsi che sulle parti da esaminare l'intensità luminosa sia adeguata.

Luxmetro digitale
Altro
- *Pennelli in setola e in buono stato, qualora il liquido penetrante non sia applicato usando bombolette spray o per immersione.*
- *Panni o carta puliti, asciutti e senza sfilacciature.*
- *Spazzola metallica o mola a disco lamellare, se necessarie, per la preparazione superficiale.*

6. CONDIZIONI AMBIENTALI

La postazione di lavoro dove vengono effettuati i controlli, deve essere ben aerata, deve garantire un posizionamento sicuro del pezzo da controllare e deve garantire una luminosità adeguata sulla superficie controllata.
L'illuminamento richiesto sulla superficie da controllare è ≥ 1076 lux (in accordo ad ASME V Art.6 o ASTM E165, ASTM E1417).

7. PREPARAZIONE DELLE SUPERFICI

L'intera superficie del pezzo da esaminare deve essere ripulita da sporcizia, olio, grasso, ossido, scaglie, umidità, residui di saldatura e spruzzi o altri elementi che possano occludere i difetti, assorbire o contaminare il penetrante.
La pulizia può essere effettuata mediante stracci o carta imbevuti del solvente idoneo.
L'asciugatura del pezzo può essere effettuata tramite normale evaporazione o con aria forzata calda/fredda.
In generale, le superfici possono essere saldate, forgiate, stampate, fuse. La molatura, la lavorazione di macchina e qualsiasi altra preparazione, devono essere applicate su superfici che presentano condizioni irregolari che possono disturbare l'esame.
La pulizia di preparazione dopo lavorazione meccanica finale deve essere eseguita al 100% delle zone accessibili, con l'utilizzo di solvente dedicato.

8. APPLICAZIONE DEL PENETRANTE

È particolarmente importante verificare che la temperatura dei pezzi, dei liquidi penetranti, dell'aria compressa e dell'ambiente, siano comprese tra 10°C e 50°C.
In caso diverso, l'intero processo è da qualificare specificatamente.

8.1 Applicazione del penetrante
Il liquido penetrante può essere applicato a pennello, a spruzzo o per immersione del pezzo.
Il tempo di penetrazione è in funzione del materiale da controllare e del tipo di penetrante usato.

The minimum time is 10 minutes (5 minutes for casts, welds and non-metal materials) both for liquids that can be removed with water and for those removable with solvents.

For special cases and for information on maximum penetration time, refer to the quoted standard and to the instructions provided by the supplier of the liquid.
In any case, max penetration time is 60 minutes.
During penetration, the surface under examination should be maintained "wet" in order to prevent the penetrating liquid from drying inside the discontinuities.

Il tempo minimo di penetrazione è 10 minuti (5 minuti per fusioni, saldature e materiali non metallici) sia per i liquidi asportabili con acqua che per quelli asportabili con solvente.

Per casi particolari, così come per i tempi massimi di penetrazione, riferirsi alla norma citata ed alle istruzioni del fornitore dei liquidi.
In ogni caso, il tempo massimo di penetrazione è 60 minuti.
Durante il tempo di penetrazione, la superficie in esame dovrà essere mantenuta "bagnata" in modo da evitare che il liquido penetrante si asciughi dentro le eventuali discontinuità.

8.2 Excess penetrant removal

8.2.1 Water washable penetrants

a) after the expire of the penetrating time, the penetrating liquid in excess should be removed from the surfacebeing examined using one or more of the systems listed here below:
   - by immersing the component in current/circulating water
   - by spraying the component with water at a low pressure (p ≤ 200 kPa).
     The water jet is showered and the minimum distance of the nozzle from the surface of the component should not be below 30 cm.

   The temperature of water should be within the range 10°C ÷ 43°C
b) Washing should be continued only until all the penetrant is removed from the surface under examination to avoid removing also the liquid that has penetrated in discontinuous areas.

8.2 Asportazione dell'eccesso di penetrante

8.2.1 Liquidi penetranti lavabili con acqua

a) Trascorso il tempo di penetrazione, il liquido penetrante in eccesso viene asportato dalla superficie di esame usando uno o più dei sistemi elencati di seguito:
   - immersione del pezzo in acqua corrente/agitata
   - spruzzatura con acqua a bassa pressione (p ≤ 200 kPa).
   Il getto d'acqua viene spruzzato e la distanza minima dell'ugello, dalla superficie del componente, non deve essere inferiore a 30 cm.

   La temperatura dell'acqua deve essere compresa tra 10°C ÷ 43°C
b) Il lavaggio dura il tempo strettamente necessario ad asportare il penetrante dalla superficie in esame per evitare che possa venir asportato anche quello penetrato nelle eventuali discontinuità.

8.3 Drying

Before the application of the developer, the surface under examination should be perfectly dried with clean cloths and/or absorbent paper and/or air blown at a low pressure with temperature no higher than 50°C.

8.3 Asciugatura delle superfici

Prima dell'applicazione del rivelatore, la superficie in esame deve essere perfettamente asciugata con stracci puliti e/o carta assorbente e/o aria soffiata a bassa pressione con temperatura non maggiore di 50°C.

8.4 Wet developer application

The developer should be applied as soon as possible after the removal of the penetrant (10 minutes max).
The developer should be sprayed in several light layers and not with a single and heavy layer, at a distance from the surface of 20-30 cm, in order to create a thin and consistent film with a thickness suited to create a good contrast with the dye liquid penetrant.

8.4 Applicazione del rivelatore

Il rivelatore va applicato nel più breve tempo possibile, dopo l'asportazione del penetrante (10 minuti max).
Il rivelatore va applicato a spruzzo (prima dell'applicazione il contenitore va agitato in modo da disperdere adeguatamente le particelle in sospensione), in più passate leggere piuttosto che in un'unica passata abbondante, da una distanza dalla superficie del pezzo di 20-30 cm, fino a creare un velo sottile ed uniforme, ma di spessore sufficiente a creare un buon contrasto per i liquidi a contrasto di colore.

8.5 Interpretation/Evaluation

This phase starts as soon as the developer has dried.

8.5.1 Visible liquid penetrants

The surface should be carefully examined after the application of the developer.
The examination must be extended over the whole developing time.

8.5 Ispezione

Il tempo di sviluppo inizia non appena il rivelatore sia asciugato.

8.5.1 Liquidi penetranti a contrasto di colore

La superficie deve essere esaminata attentamente subito dopo l'applicazione del rivelatore.
L'esame verrà poi continuato durane tutto il tempo di sviluppo.

The evaluation of results should be carried out after a minimum of 10 minutes and a maximum of 30 minutes from the completed application of the developer.

a) The surface should be adequately lighted during all the examination.
The minimum lighting intensity should be 1076 lux
For this scope a periodical calibration of the white light lamps is performed in order to obtain the required light intensity.
The light intensity is also verified with a luxmeter positioned on the surface to be tested and reading the obtained value.

b) The indications will appear as dye spots on a white background. Their information should be carefully followed so that it is possible to determine their cause.
In doubtful cases, i twill be necessary to carry out further examinations with other techniques or locally grinding of specific areas (provided that there is sufficient removable thickness) followed by a new re-test.

9. CRITERIA FOR APPROVAL/REFUSAL OF RESULTS

During the development phase, using a color contrast technique, a background tending to pale pink color control indicates that the removal of penetrant has not been performed correctly, for which the repetition of the test is necessary.

If in doubt could be necessary to proceed to further analysis by other techniques or to a local grinding (where the allowance permits), and subsequent re-test.

10. ACCEPTANCE CRITERIA

The following indications are not acceptable (see definitions at para.4):

- Linear indications
- Non-linear indications with a diameter above 5 mm
- Four or more non-linear indications in a line at a distance below 1.5 mm between the edges.

Indications with dimensions below 1.5 mm are not taken into consideration.
The above-described acceptance criteria are in compliance with standard ASME VIII Div.1 App.8 and ASME B16.34.

For information, some criteria more detailed are attached and can be used with client agreement.

See Annex B

La valutazione delle indicazioni non dovrà essere eseguita prima che siano trascorsi 10 minuti e non deve essere protratta oltre 30 minuti dal termine dell'applicazione del rivelatore.

a) È necessario che la superficie sia adeguatamente illuminata durante l'esame.
L'intensità minima di illuminazione deve essere pari a 1076 lux
A tale scopo viene eseguita una taratura periodica delle lampade a luce bianca, al fine di ottenere l'intensità luminosa richiesta.
Le condizioni di illuminamento vengono inoltre verificate con luxmetro, appoggiandolo sulla superficie di prova e leggendo la misura rilevata.
b) Le indicazioni appariranno come macchie di colore sullo sfondo bianco e la loro formazione andrà attentamente seguita, per individuarne la causa.
In casi dubbi, sarà necessario effettuare ulteriori esami con altre tecniche o molare localmente aree specifiche (a condizione che ci sia sovrametallo sufficiente) seguito da un nuovo controllo.

9. CRITERI PER APPROVAZIONE/RIFIUTO DEI RISULTATI

Durante la fase di sviluppo, nel caso di un controllo a contrasto di colore, uno sfondo tendente al colore rosa più o meno pallido, indica che l'asportazione del penetrante non è stata eseguita correttamente, per cui è necessaria la ripetizione del controllo.

In caso di dubbi si dovrà procedere ad ulteriori esami con altre tecniche o alla molatura locale (ove il sovrametallo lo permetta) e successiva ripetizione del controllo.

10. CRITERI DI ACCETTABILITA'

Non sono accettabili difetti che danno le seguenti indicazioni (vedi definizioni al par.4):

- *Indicazioni lineari*
- *Indicazioni tondeggianti superiori a 5 mm di diametro*
- *Quattro o più indicazioni tondeggianti allineate, distanziate meno di 1.5 mm tra i bordi.*

Non vengono prese in considerazione indicazioni di dimensioni inferiori a 1.5 mm.
I criteri di accettabilità sopra indicati, sono conformi all'ASME VIII Div.1 App.8 e ASME B16.34.

A titolo informativo, vengono allegati alcuni criteri più dettagliati e possono essere utilizzati in accordo con il cliente.

Vedi Allegato B

11. REPAIRS

For not finished components in production, it is possible to grind unacceptable defects provided that there is sufficient removable thickness.
Unacceptable defects on laminates and on drawn profiles, can be removed by eliminating the sections of defective material.
Welded additions are not permitted on forged, laminated, hot-drawn and rolled materials or on bolts.
All repaired areas should be re-inspected by qualified personnel following the procedures described above.

12. FINAL CLEANING

Cleaning of the component after examination shall be carried out when the residuals of the developer could impair subsequent operations on the components, for example during painting.
Final cleaning is always necessary for aluminum alloys that could be corroded by the residuals of the developer.
Special instructions shall be indicated when necessary.

13. RECORDING RESULTS

The test report (TR) is prepared in accordance with the attached form.

14. HEALTH AND SAFETY

Dye penetrant solutions have a low flash point and must not be heated or put in contact with a flame or hot surface. Avoid contact between skin and penetrant or developer, because such liquids are irritant of the skin. Workers have to respect regulations for their safety and for the environment.
Residual liquids (including washing water) must be disposed according to environmental regulations in force.

15. ATTACHMENT

15.1 Acceptance criteria ASME VIII App.8

15.2 Test Report

11. RIPARAZIONI

Nei pezzi non finiti di lavorazione, è ammessa l'asportazione di mola dei difetti inaccettabili, compatibilmente con il sovrametallo disponibile.
Difetti inaccettabili su laminati e trafilati possono essere asportati eliminando le porzioni di materiale difettoso.
Su fucinati, laminati, trafilati, rullati e bulloneria, non sono ammesse riparazioni mediante riporti di saldatura.
In ogni caso le zone riparate vanno ricontrollate da personale qualificato con le medesime modalità.

12. PULIZIA FINALE

La pulizia dei componenti dopo l'esame deve essere eseguita quando i residui di rivelatore possono provocare inconvenienti nelle successive operazioni sui pezzi, ad esempio durante la verniciatura.
La pulizia finale è sempre necessaria per i materiali in lega di alluminio, per i quali sussiste il pericolo di corrosione da parte dei residui di rivelatore.
Istruzioni specifiche devono essere indicate quando necessario, per materiali e/o impieghi particolari.

13. REGISTRAZIONE DEI RISULTATI

La stesura del rapporto di prova è eseguita in accordo al formato allegato.

14. PRECAUZIONE DI SICUREZZA

Le soluzioni del penetrante hanno un basso punto di infiammabilità e non devono venire riscaldati o esposti a fiamme libere o a superfici calde. Si deve evitare di esporre la pelle ad un contatto prolungato con il penetrante o il rivelatore, in quanto tali liquidi sono irritanti della pelle. L'operatore è responsabile per operare in piena conformità a quanto richiesto dalle disposizioni di legge vigenti.
I residui dei liquidi (incluse le acque di lavaggio) devono essere smaltiti secondo le vigenti norme ambientali.

15. ALLEGATI

15.1 Criteri di accettabilità ASME VIII App.8

15.2 Rapporto di Prova

ANNEX 15.1

Acceptance standards to ASME VIII Div.1 Appendix 8

Only indications with majors dimensions greater than 1/16 in (1.5 mm) shall be considered relevant.
All surfaces to be examined shall be free of:

a) Relevant linear indications
b) Relevant rounded indications greater than 3/16 in (5 mm)
c) Four or more relevant rounded indications in a line separated by 1/16 in (1.5 mm) or less (edge to edge).

Indications of any size are not permitted on seal contact surfaces.

Criteri di accettabilità secondo ASME VIII Div.1 Appendice 8

Solo le indicazioni con la dimensione maggiore, superiore a 1/16 in (1.5 mm) sono considerate rilevanti.
Tutte le superfici che devono essere esaminate devono essere esenti da:

a) Indicazioni lineari rilevanti
b) Indicazioni tondeggianti rilevanti più grandi di 3/16 in (5 mm)
c) Quattro o più indicazioni tondeggianti rilevanti allineate, separate da 1/16 in (1.5 mm) o meno.

Nessuna indicazione di nessuna dimensione è permessa o accettabile nelle zone di tenuta.

5.0 PERSONNEL

6.0 SAMPLE SURFACE PREPARATION

7.0 TEST PROCEDURE

8.0 RESULT EXPRESSION

9.0 ACCEPTANCE CRITERIA

10.0 TEST REPORT

1.0 PURPOSE AND APPLICATION FIELD

This procedure describes the operation modalities for the "Non-Destructive Testing" of materials by the "on-site" Positive Material Identification using a portable X-Ray Fluorescence Instrument, and Laser Induced Breakdown Spectroscopy (LIBS), a type of atomic optical emission spectroscopy (OES).

With EDXRF analyzer is possible to verify a wide range of alloys since almost all element with an atomic number higher than 12 (Magnesium).

With LIBS analyzer is possible to verify carbon content too.

The analyzer automatically compensates for reducing many effects that would otherwise bias or distort sample analyses.

These effects include:

- Geometric effects caused by the sample's shape, surface texture, thickness and density.
- Spectroscopic interferences and other sample matrix effects.
- Critical absorption of the characteristic x-rays of one element by other elements in the sample, and secondary and tertiary x-ray excitation of one or more elements by other elements in the sample (only X-Ray instrument).

2.0 REFERENCE DOCUMENTS

- Equipment Operating Manual
- API 578 RP

3.0 METHOD PRINCIPLE

3.1 X-Ray Analyzer

Each of the atomic elements present in a sample produces a unique set of *characteristic x-rays* that is a fingerprint for that specific element. EDXRF analyzers determine the chemistry of a sample by measuring the spectrum of the characteristic x-rays emitted by the different elements in the sample when it is illuminated by high energy photons (x-rays).

Each element present in the sample emits its own unique fluorescent x-ray energy spectrum. By inducing and measuring a wide spectrum of the range of different characteristic fluorescent x-rays emitted by the different elements in the sample, XRF analyzers can determine the elements present in the sample and their relative concentrations, in other words, the elemental chemistry of the sample.

3.2 LIBS Analyzer

For LIBS analyzer, the wavelength (color) of specific lines reveals the elements present, and the intensity of the light at a given wavelength is related to the concentration of each element.

4.0 EQUIPMENT

4.1 X-Ray Analyzer

Main features of the portable X-Ray Fluorescence instrument (**NITON XL2 980 GOLDD**):

- Plays Non-destructive chemical analysis via simultaneous detection and quantification of fluorescent x-rays of multiple elements in test sample.
- X-ray fluorescence (XRF) is induced by miniaturized X-ray tube (35 kV 100 µA miniaturized low- power X-ray tube).
- The Instrument detector is a High-performance, thermo-electrically cooled, solid state detector system.
- Operating temperature range 20° to 122°F (-7° to 50°C).

3.2 LIBS Analyzer

Main features of the portable LIBS instrument (**SciAps HH-LIBS Z-902**):

- Plays Non-destructive chemical analysis with high energy pulsed laser.
- Operating laser temperature range 79° to 95°F (26° to 35°C).

5.0 PERSONNEL

The technicians that perform the analysis are trained and qualified according to the company quality system procedure. They also must observe the applicable safety standards.

6.0 SAMPLE SURFACE PREPARATION

The kind of preparation depends on the material to be examined, usually specific surface preparation could be omitted, even if it is advisable for improving analytical results.

In facts it is sufficient that the surface is free from grease, oil, paint, rust, dust and rough irregularities.

A portable smoothing machine could be used for sample surface preparation. The best paper granulometry should be about 60. The specimens also used for the calibration of the equipment are submitted to the above-mentioned surface preparation.

7.0 TEST PROCEDURE

The operations listed hereinafter are described in the Equipment Operating Manual.

The analysis starts with the "verification procedure" by using the instrument set up sample.

After this operation the equipment is ready for both identification analysis and anti-mixing control.

Calibration of PMI X-Ray Machine is done every 6 months using a verification block IARM 35KN certified 1.25Cr-0.5Mo.

LIBS instrument calibration certificate is Certificate Number: 230725-Z902-00943.

Calibration procedure used is: "Istruzione operativa: taratura pistola PMI Rev.2".

8.0 RESULTS EXPRESSION

On the display is visible the percentage results for each single element aside with direct alloy identification if the alloy is memorized in the instrument library.

PMI Machine limits of detection (only X-Ray) are listed below in ppm (mg/kg):

Time 60s per filter (A/S= Application specific) (N/A=Not Applicable)

Matrix	Al-based Alloys	Ti-based Alloys	Fe-based Alloys	Cu-based Alloys
Sb	30	100	150	175
Sn	30	60	90	120
Pd	20	25	30	35
Ru	20	50	70	100
Mo	N/A	A/S	A/S	A/S
Nb	N/A	200	240	320
Zr	N/A	50	70	100
Bi	20	35	50	65
Pb	20	20	75	50
Se	N/A	20	20	25
W	50	150	200	220
Zn	30	40	60	300
Cu	30	75	110	N/A
Ni	50	150	220	110
Co	50	120	750	50
Fe	75	300	N/A	75
Mn	100	250	220	75
Cr	200	500	110	100
V	500	1300	150	150
Ti	1000	N/A	250	275
S	N/A	N/A	100	N/A
P	N/A	N/A	200	200
Si	700	750	425	425
Al	N/A	4000	3000	3000
Mg	7500	N/A	N/A	N/A

The measurement tolerance is determined with the standard deviation, range $\mu \pm 2\sigma$ (confidence interval 95%).

The instrument errors should eventually be verified and corrected using a different Certified Reference Materials.

9.0 ACCEPTANCE CRITERIA

The acceptance criteria will be per the ASME Boiler & Pressure Vessel Code, Section II, unless otherwise specified by the customer.

10.0 TEST REPORT

All results are given in the follow company docs.:

- MD/PMI-VSF
- MD/PMI-VSP
- MD/PMI-CVH

It shall contain information about the: customer, job number and position, tested samples, place where the test is performed, test specifications.

Usually, in addition to a declaration of correspondence / non correspondence to the declared material, the found values are reported for information.

The test report also contains the percentage results for each single element, according to **Table 1**, and refer to the rules stated therein.

Attachment 2 provide sample PMI Test Report.

When components of a valve are PMI tested, Valve nameplate is marked with indication of executed PMI test through stamping the note “AV” (Alloy Verified).

1 INTRODUCTION

1.1 PROJECT OVERVIEW

Crosswind, a Shell and Eneco joint venture, was awarded the tender to develop the offshore Hollandse Kust Noord (HKN) wind farm, located 18.5km off the coast of Netherlands near the town of Egmond aan Zee. The consortium plans to have HKN operational in 2023 with an installed capacity of 759MW generating at least 3.3TWh per year. This is sufficient renewable power to supply more than 1 million Dutch households with green electricity.

Offshore wind farms produce intermittent electricity and balancing these dips and peaks and integrating this electricity into the national energy system requires new technologies. For this reason, the offshore wind farm will include several new technologies that could be implemented at full-scale in the future. The new technologies being explored include a floating solar park, a short-duration battery storage as well as long-term storage via green hydrogen produced by water electrolysis and subsequently consumed in a fuel cell. The combination of these individual measures, herein referred to as the Base Load Power Hub (BLPH) will ensure a continuous power supply regardless of the wind situation.

1.2 Project Location

The Hollandse Kust Noord (HKN) wind farm is located 18.5km off the coast of the Netherlands near the town of Egmond aan Zee.

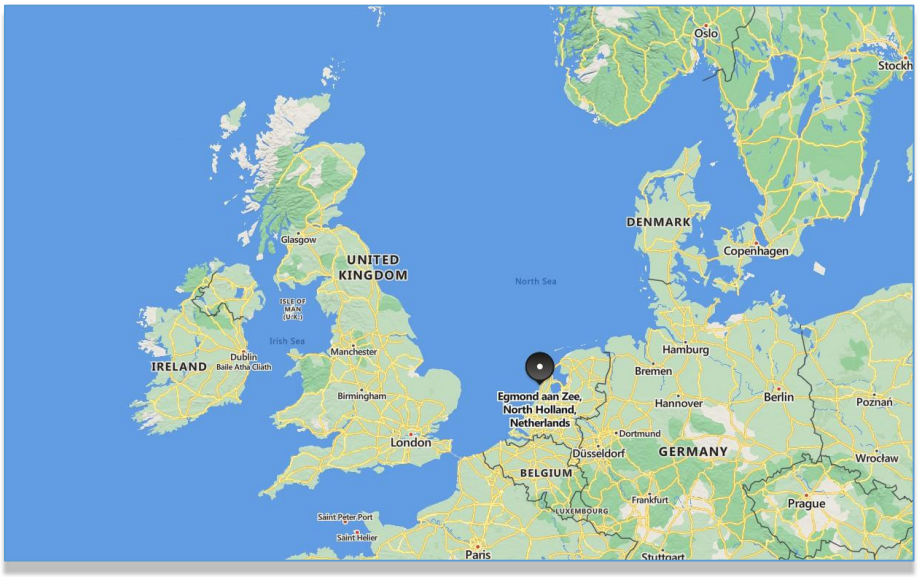

Figure 1 HOLLANDSE KUST NOORD WIND PARK Location Map

This document undergoes an issuance cycle within EDMS Fusionlive". Its distribution is electronically controlled. Once printe d shall be considered as "NOT CONTROLLED" copy

File: 1724000798-QC-PRO-00008_3.*docx*

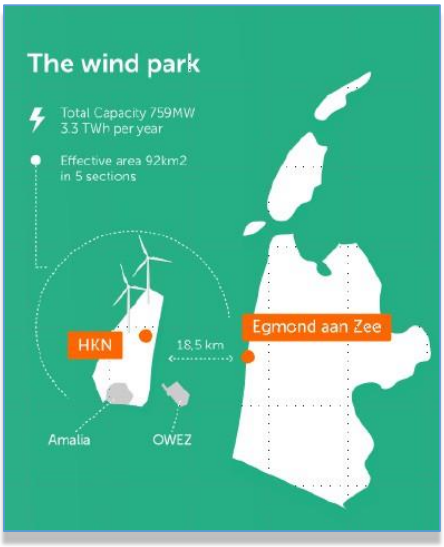

Figure 2 - Wind Park Details

The wind farm will consist of No. 69 x 11.5MW wind turbine generators each to be installed on a dedicated monopile structure. A 70th monopile located on coordinates E 590719.1, N 5841602.3 is reserved for installing the platform accommodating the BLPH. The monopile structure was designed and installed by Van Oord Offshore Wind (VooW) and therefore not part of the BLPH scope.

1.3 Project Concept

All components included in the BLPH will be integrated onshore on a topsides and installed in an offshore location within the boundaries of the HKN wind farm. At its simplest, the BLPH will store energy during periods of high electricity generation from renewable sources (a wind turbine generator and the floating solar PV farm) and release it during periods of low generation. In practice. It is expected that the energy stored will supplement generation from renewable sources to ensure that at least 1.0MW of power is exported to the electrical grid regardless of wind/solar availability.

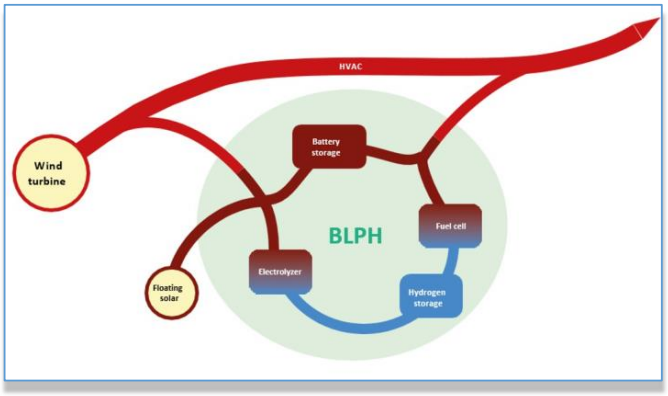

Figure 3 – BLPH Concept

Electricity in the BLPH will be stored in the form of electrons in a battery energy storage system (BESS) as well as converted into green hydrogen via water electrolysis. When the power output from the connecting wind turbine drops to below 1 MWe, the BLPH will return its stored energy to supplement the remaining power output. This will be by discharging the BESS, while stored hydrogen will be converted back into electricity using a fuel cell to extend the discharge duration.

The purpose of the BLPH s to function as a testbed for the integration of energy storage technologies with renewable generation. It is expected that equipment installed on the BLPH will operate as Normally Unmanned Installation for at least two (2) years with no or minimal maintenance and it will have its own independent control room with the ability to communicate with Crosswind's control room.

1. INTRODUCTION

The objective of this document is to define the procedure on how to carry out the production test correctly.

This procedure complies with the requirements of ISO 15848-2

2. SCOPE

This document specifies testing procedures for evaluation of external leakage of valve stems and body joints.

3. NORMATIVE REFERENCES

ISO 15848-1:2015, *Industrial valves — Measurement, test and qualification procedures for fugitive emissions — Part 1: Classification system and qualification procedures for type testing of valves*

ISO 15848-2:2015, *Industrial valves — Measurement, test and qualification procedures for fugitive emissions — Part 2: Production acceptance test of valves*

4. PREPARING THE VALVE

4.1 Selecting the valve

- Only a fully assembled valve must be used for the test.

- At least one valve per batch, randomly selected from each production batch, must be tested for each valve type, pressure class and nominal size.

4.2 Preparation

Before carrying out the test, the valves must fulfil the following conditions:

a) The valve design must have been successfully tested according to ISO 15848-1.
b) The valves selected must have been successfully tested in line with the applicable production procedures and/or standards and/or customer specifications.
c) The inside of the valve must be dry and free from lubricant.
d) The valve and test equipment must be clean and free from water, oil and/or dust.
e) No protective coating must have been applied to the test valve.
f) The valves to be tested shall be set up in an area protected from draughts.

4.3 Adjusting the stem seal

The initial compression of the stem seals must be adjusted as set out in the production procedures.

5. SAFETY REQUIREMENTS DURING TESTING

High pressure levels of the test fluid combined with high temperatures require operators to apply appropriate safety measures when carrying out tests and measurements.

6. TEST CONDITIONS

6.1 Test fluid

The test fluid must be helium gas with a minimum purity of 97% by volume.

6.2 Test pressure

The test pressure must be 6 bar (1 bar = 0.1 MPa = 10^5 Pa) unless otherwise agreed.

6.3 Test temperature

The test must be performed at room temperature as specified in ISO 15848-1.

* *Room temperature: in the range of -29 °C to +40 °C (ISO 15848-1)*

6.4 Measuring the leak

Leaks must be measured using the sniffing method in compliance with ISO 15848-1: 2015 (Annex B) and values must be expressed in ppmv.

The sniffing method (with a measuring probe as shown in figure 1) enables the measurement of leakage from both the stem and body seals.

Leak Detector: Pfeiffer Vacuum ASM 340

Prober: Pfeiffer Vacuum Standard Sniffer Probe

1. Valve stem
2. Sniffers

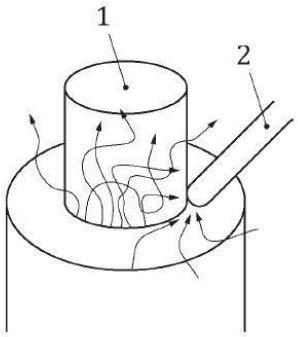

Figure 1

Sequence of operations for correctly measuring the leak:

a) Start the helium mass spectrometer as per manufacturer's instructions and wait until it has heated up.
b) Initial calibration of the leak detector shall be performed with an auto-calibration mode that use the certified internal calibrated leak. Only if requested, initial calibration shall be performed with the certified external calibrated leak.
c) Measure the ambient helium concentration.
Before each measurement, the ambient helium concentration around the source must be 5 ppmv ±0.3
The probe must be placed at 1 or 2 m from the source.
d) During the measurement, the probe must be placed as close as possible to the potential leakage point, which should never be more than 3 mm away.
e) Move the probe along the entire perimeter of the joint while observing the measured value given by the instrument. Adjust the speed with which the perimeter is scanned based on the instrument's response time.
f) If a higher leakage value is observed during the measurement, scan the perimeter where the leak is located more slowly until you find the point where the maximum leakage value is detected.
g) Record the maximum leakage value measured.
h) The different between this value and the ambient helium concentration value (measured as indicated in point b) determines the actual leakage value of the valve.

7. TEST PROCEDURE AND EVALUATION OF RESULTS

7.1 Measuring leaks from the stem seal

The procedure for measuring leaks from stem seals is as follows:

a) Half open the valve and pressurise it to the pressure value given in section 6.2. After the test pressure has stabilised, measure the leak using the method described in section 6.4.
b) Fully open and close the valve 5 times while keeping it under pressure.
c) Half open the valve and measure the stem seal leak again using the method described in section 6.4.
d) If the value measured is higher than the values given in Table 1 (for the relevant Class), the test has failed. In this case, the entire batch of valves must be rejected, and corrective actions must be taken.

Table 1

Class	Leak measured (ppmv)
A	≤50
B	≤100
C	≤200

7.2 Measuring leaks from the body seal

The procedure for measuring leaks from the body seal is as follows:

a) Half open the valve and pressurise it to the pressure value given in section 6.2. After the test pressure has stabilised, measure the leak using the method described in section 6.4.
b) If the value measured is higher than the values given in Table 2, the test has failed. In this case, the entire batch of valves must be rejected, and corrective actions must be taken.

Table 2

Leak Measured (ppmv)
≤50

1 INTRODUCTION

1.1. PROJECT OVERVIEW

Crosswind, a Shell and Eneco joint venture, was awarded the tender to develop the offshore Hollandse Kust Noord (HKN) wind farm, located 18.5km off the coast of Netherlands near the town of Egmond aan Zee. The consortium plans to have HKN operational in 2023 with an installed capacity of 759MW generating at least 3.3TWh per year. This is sufficient renewable power to supply more than 1 million Dutch households with green electricity.

Offshore wind farms produce intermittent electricity and balancing these dips and peaks and integrating this electricity into the national energy system requires new technologies. For this reason, the offshore wind farm will include several new technologies that could be implemented at full-scale in the future. The new technologies being explored include a floating solar park, a short-duration battery storage as well as long-term storage via green hydrogen produced by water electrolysis and subsequently consumed in a fuel cell. The combination of these individual measures, herein referred to as the Base Load Power Hub (BLPH) will ensure a continuous power supply regardless of the wind situation.

1.1.1 Project Location

The Hollandse Kust Noord (HKN) wind farm is located 18.5km off the coast of the Netherlands near the town of Egmond aan Zee.

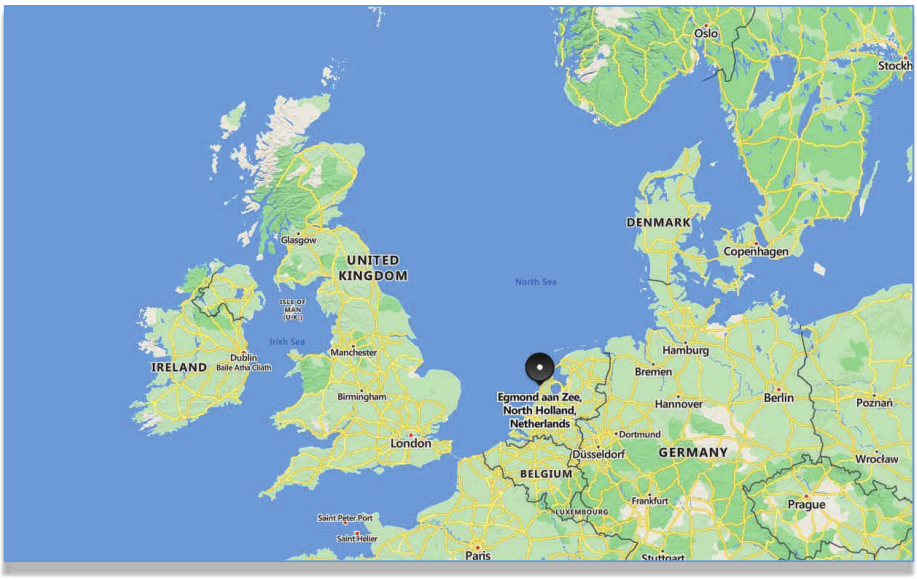

Figure 1 HOLLANDSE KUST NOORD WIND PARK Location Map

This document undergoes an issuance cycle within EDMS Fusionlive". Its distribution is electronically controlled. Once printe d shall be considered as "NOT CONTROLLED" copy

Figure 2 - Wind Park Details

The wind farm will consist of No. 69 x 11.5MW wind turbine generators each to be installed on a dedicated monopile structure. A 70th monopile located on coordinates E 590719.1, N 5841602.3 is reserved for installing the platform accommodating the BLPH. The monopile structure was designed and installed by Van Oord Offshore Wind (VooW) and therefore not part of the BLPH scope.

1.1.2 Project Concept

All components included in the BLPH will be integrated onshore on a topsides and installed in an offshore location within the boundaries of the HKN wind farm. At its simplest, the BLPH will store energy during periods of high electricity generation from renewable sources (a wind turbine generator and the floating solar PV farm) and release it during periods of low generation. In practice. It is expected that the energy stored will supplement generation from renewable sources to ensure that at least 1.0MW of power is exported to the electrical grid regardless of wind/solar availability.

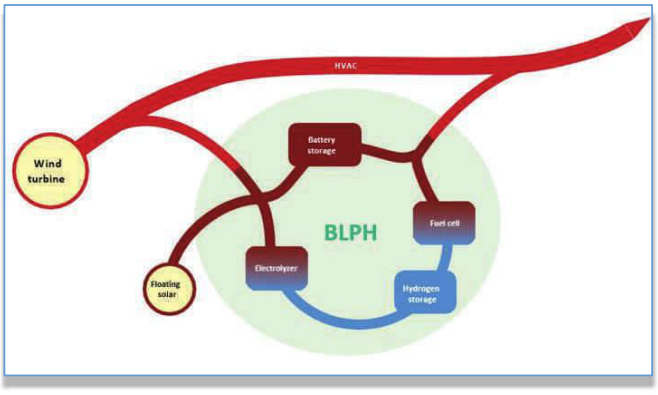

Figure 3 – BLPH Concept

Electricity in the BLPH will be stored in the form of electrons in a battery energy storage system (BESS) as well as converted into green hydrogen via water electrolysis. When the power output from the connecting wind turbine drops to below 1 MWe, the BLPH will return its stored energy to supplement the remaining power output. This will be by discharging the BESS, while stored hydrogen will be converted back into electricity using a fuel cell to extend the discharge duration.

The purpose of the BLPH s to function as a testbed for the integration of energy storage technologies with renewable generation. It is expected that equipment installed on the BLPH will operate as Normally Unmanned Installation for at least two (2) years with no or minimal maintenance and it will have its own independent control room with the ability to communicate with Crosswind's control room.

1. SCOPO

Lo scopo di questa procedura è di implementare la produttività attraverso una standardizzazione e semplificazione dei criteri di prova, stabilendo delle procedure di test ed ispezione valvole.

2. AMBITO DI APPLICAZIONE/NORMATIVE APPLICABILI

2.1) **AMBITO DI APPLICAZIONE**

Le tipologie di valvole prodotte, indicate nel titolo della procedura.

2.2) **NORMATIVE APPLICABILI**

2014/68/UE PED, se applicabile
P.E.R. 2016 (N°1105), se applicabile

Test Valvole a Sfera:
API 6D 25th Ed. – 2022
ASME B16.34 – 2020
ISO 5208 – 2015

Test Valvole a Spillo:
API 598 11th Ed. – 2023

Ispezioni:
API 598 11th Ed. – 2023

3. REQUISITI GENERALI

3.1) **TIPO DI PROVA**

3.1.1) **Prove idrauliche – Requisiti generali**

Tutte le prove idrauliche devono essere conformi ai requisiti della presente sezione.

- Le valvole devono essere assemblate e tutti gli accessori / raccordi/tappi/ingrassatori devono essere montati sulla valvola durante il collaudo.
- Le superfici esterne delle valvole devono essere esenti da qualsiasi tipo di rivestimento protettivo quali antiossidanti, verniciatura, ecc.
- Tutte le parti bagnate devono essere pulite, prive di ogni traccia di oli, grassi, vernici e sporcizia in genere.
- Le superfici di tenuta non devono essere ricoperte o impregnate con prodotti sigillanti, che potrebbero nascondere perdite nel corso del collaudo.
- Le valvole devono essere prive di aria o gas interni.
- Le valvole non devono essere sottoposte ad alcun urto o danneggiamento mentre sono in pressione durante il collaudo.
- In caso di perdite, la valvola viene portata al reparto di assemblaggio, dove viene smontata e analizzata per verificare la causa. Dopo aver verificato la perdita, la valvola verrà riparata.

1. PURPOSE

The purpose of this procedure is to contribute to the productivity through standardization and simplification of testing criteria, establishing valve test and inspection procedures.

2. SCOPE/APPLICABLE STANDARDS

2.1) **SCOPE**

Valve types produced, mentioned in the title of the procedure.

2.1) **APPLICABLE STANDARDS**

2014/68/UE PED, if applicable
P.E.R. 2016 (N°1105), if applicable

Ball Valve Testing:
API 6D 25th Ed. – 2022
ASME B16.34 – 2020
ISO 5208 – 2015

Needle Valve Testing:
API 598 11th Ed. – 2023

Valve Inspections:
API 598 11th Ed. – 2023

3. GENERAL REQUIREMENTS

3.1) **TEST TYPE**

3.1.1) **Hydrostatic Testing – General Requirements**

All hydrostatic tests shall be conformed to the requirements of this section.

- The valves shall be assembled, and all the accessories/fittings and any pressure boundary penetration shall be fitted on the valve during testing.
- Protective coatings, such as paint, shall not be applied to any external surface of the valves before the pressure tests are completed.
- All wetted areas shall be clean and free from any trace of oil, greases, paints or dirt.
- Pressure seal areas shall not be coated or soaked with any sealing products that may hide the leakage detection during the test.
- Valves shall be relieved of air or gas.
- Any impact or damage to the under-testing valve shall be prevented and avoided until the valve is under pressure.
- In case of leakage, the valve is taken to the assembly department. The valve is dismantled and analyzed to identify the cause. After the leakage has been verified, the valve will be repaired.

3.1.2) **Prove idrauliche – Criteri di accettabilità**
I criteri di accettabilità specificati di seguito, si applicano alle prove di corpo e seggi.

- Non sono ammesse perdite visibili (in accordo alla ISO 5208 Rate "A").
- Per le valvole a sfera metalliche, la massima perdita ammessa deve essere in accordo alla ISO 5208 Rate "C". Per convertire da mm^3/secondi a gocce/secondi durante il test idraulico, vedere ISO 5208 e fare riferimento alla Tabella 2.
- La pressione deve essere isolata dalla valvola durante il test idrostatico del corpo e deve essere stabilizzata prima dell'inizio della durata del test di pressione.

3.1.3) **Prove a gas – Requisiti generali**
Tutte le prove a gas devono essere conformi ai requisiti della presente sezione.

- Il test a gas deve essere effettuato a temperatura ambiente.
- La misurazione del periodo di tenuta non deve iniziare fino a quando non è stata raggiunta la pressione di test, le apparecchiature e i manometri di monitoraggio sono stati isolati dalla sorgente di pressione.
- Le superfici esterne delle valvole devono essere esenti da qualsiasi tipo di rivestimento protettivo quali antiossidanti, verniciatura, ecc.
- Tutte le parti bagnate devono essere pulite, prive di ogni traccia di oli, grassi, vernici e sporcizia in genere.
- Le superfici di tenuta non devono essere ricoperte o impregnate con prodotti sigillanti, che potrebbero nascondere perdite nel corso del collaudo.
- Le valvole non devono essere sottoposte ad alcun urto o danneggiamento mentre sono in pressione durante il collaudo.
- In caso di perdite, la valvola viene portata al reparto di assemblaggio, dove viene smontata e analizzata per verificare la causa. Dopo aver verificato la perdita, la valvola verrà riparata.

3.1.4) **Prove a gas – Criteri di accettabilità**
I criteri di accettabilità specificati di seguito, si applicano alle prove di corpo e seggi.

- Non sono ammesse perdite visibili (in accordo alla ISO 5208 Rate "A").
- Per le valvole a sfera metalliche, la massima Perdita ammessa (closure test) deve essere in accord alla ISO 5208 Rate "C". Per convertire da mm^3/secondi a gocce/secondi durante il test idraulico, vedere ISO 5208 e fare riferimento alla Tabella 2.

3.2) **FLUIDO DI PROVA**
I fluidi da utilizzare per l'esecuzione delle prove a pressione devono essere dei tipi seguenti:

• Liquido: acqua fresca, addizionata con inibitore della

3.1.2) **Hydrostatic Testing – Acceptance Criteria**
The acceptance criteria specified below, shall be apply to shell test and seat test.

- The equipment shall show no visible leakage (according to ISO 5208 Rate "A").
- For ball valves with "metal to metal" seat sealing, the maximum allowable leakage from seat and ball is defined according to ISO 5208 Rate "C". To convert from mm^3/seconds to drops/seconds during the water test, please see ISO 5208 and see Table 2 for reference.
- The supply pressure shall be isolated from the valve during hydrostatic shell testing and shall be stabilized prior to the start of pressure testing duration.

3.1.3) **Gas Testing – General Requirements**
All gas testing shall conform to the requirements of this section.

- Gas testing shall be performed at ambient temperature.
- Hold periods shall not start until the test article and the pressure measuring/recording equipment has been isolated from the pressure source and the pressure source bled to zero.
- Protective coatings, such as paint, shall not be applied to any external surface of the valves before the pressure tests are completed.
- All wetted areas shall be clean and free from any trace of oil, greases, paints or dirt.
- Pressure seal areas shall not be coated or soaked with any sealing products that may hide the leakage detection during the test.
- Any impact or damage to the under-testing valve shall be prevented and avoided until the valve is under pressure.
- In case of leakage, the valve is taken to the assembly department. The valve is dismantled and analyzed to identify the cause. After the leakage has been verified, the valve will be repaired.

3.1.4) **Gas Testing – Acceptance Criteria**
The acceptance criteria specified below, shall be apply to shell test and seat test.

- No visible leakage shall appear during the pressure-holding period (according to ISO 5208 Rate "A").
- For ball valves with "metal to metal" seat sealing, the maximum allowable leakage from seat and ball is defined according to ISO 5208 Rate "C". To convert from mm^3/seconds to drops/seconds during the water test, please see ISO 5208 and see Table 2 for reference.

3.2) **TEST FLUID**
The test fluids to be used for the execution of pressure tests shall be the following:

• Liquid: fresh water treated with a corrosion inhibitor,

corrosione, avente un contenuto di cloruri massimo di 30 ppm, mantenuta ad una temperatura compresa fra 7°C e 38°C.

• Gas per prova bassa pressione: aria disoleata o gas inerte.

3.3) **ORDINE DI ESECUZIONE PROVA**
Il collaudo delle valvole deve essere effettuato in accordo alla seguente sequenza di operazioni:

- BACKSEAT TEST – solo per valvole a spillo (verifica ad alta pressione della tenuta posteriore dello stelo)
- SHELL TEST (verifica della tenuta del corpo valvola)
- HIGH PRESSURE CLOSURE TEST – per tutte le tipologie di valvole (verifica ad alta pressione della tenuta dell'elemento di chiusura)
- CAVITY RELIEF TEST
- LOW PRESSURE CLOSURE TEST (ARIA) – solo per valvole a sfera "VSF" e opzionale per valvole a spillo (verifica a bassa pressione della tenuta dell'elemento di chiusura)
- BDP SHELL TEST – solo per valvole trunnion "VSFT" (per tappo di drenaggio del corpo)
- FUNCTIONAL TEST

Per le valvole con NPS minore o uguale a 4" BACKSEAT TEST e SHELL TEST possono essere eseguiti contestualmente.

4. METODO DI PROVA
I criteri di prova sono conformi alle normative citate al paragrafo 2.2).

Il modulo MD-02-05-IT-UK per valvole standard, modulo MD-02-09-IT-UK per valvole certificate PED, modulo MD-02-09-IT-UK-PER per valvole certificate PER, sono rapporti di prova INDRA compilati in conformità con questa procedura.

4.1) **BACKSEAT TEST – solo per valvole a spillo**

4.1.1) **Pressione**
La prova deve essere effettuata con acqua, ad una pressione non inferiore ad un 1.1 volte il valore di rating, a 100 °F (38 °C), facendo riferimento all'Allegato 1.

4.1.2) **Metodologia di esecuzione**
La prova deve essere effettuata con la valvola in condizione di completa apertura e con le estremità tappate.

4.1.3) **Durata**
La durata della prova non deve essere inferiore a quanto riportato in Tabella 1.

maximum chloride content of 30 ppm and temperature between 7°C and 38°C.

• Gas for Low pressure gas test: oil free air or inert gas.

3.3) **TEST EXECUTION ORDER**
The valve test shall be carried out according to the following sequence:

- BACKSEAT TEST – only for needle valves (high pressure check of backseat stem seal)
- SHELL TEST (in order to check the valve body seal)
- HIGH PRESSURE CLOSURE TEST – for all type of valves (high pressure check of closure members seal)

- CAVITY RELIEF TEST
- LOW PRESSURE CLOSURE TEST (AIR) – only for ball valves "VSF" and optional for needle valves (low pressure check of closure members seal)

- BDP SHELL TEST – only for trunnion ball valves "VSFT" (for Body Drain Plug)
- FUNCTIONAL TEST

For valves DN 4" NPS and smaller, the BACKSEAT TEST may be combined with SHELL TEST.

4. TEST METHOD
The test criteria are in compliance with applicable standards mentioned at paragraph 2.2).

MD-02-05-IT-UK form for standard valves, MD-02-09-IT-UK form for PED certified valves, MD-02-09-IT-UK-PER form for PER certified valves, are INDRA Test Reports compiled in accordance with this procedure.

4.1) **BACKSEAT TEST – only for needle valves**

4.1.1) **Pressure**
The test shall be performed with water, at a pressure no less than 1.1 times the rating pressure, at 100 °F (38 °C), with reference to Annex 1.

4.1.2) **Execution method**
The test must be performed with the valve in conditions of complete opening and with the ends plugged.

4.1.3) **Duration**
The test duration shall not be less not be less than as reported in Table 1.

4.1.4) **Requisiti generali**
- Testare ogni singola valvola.
- Nel corpo valvola non deve rimanere aria intrappolata.
- La pressione nel banco prova deve rimanere costante per l'intera durata del test.
- Non sono ammesse perdite visibili.

4.2) **SHELL TEST – per tutte le tipologie di valvole**

4.2.1) **Pressione**
La prova deve essere effettuata con acqua, ad una pressione non inferiore ad 1.5 volte il valore di rating, a 100°F (38°C), facendo riferimento all'Allegato 1.

4.2.2) **Metodologia di esecuzione**
La prova deve essere effettuata con la valvola in posizione semi aperta e con le estremità tappate.

4.2.3) **Durata**
La durata dei tempi di mantenimento della pressione è quella riportata in Tabella 1.

4.2.4) **Requisiti Generali**
- Testare ogni singola valvola.
- Nel corpo valvola non deve rimanere aria intrappolata.
- La pressione nel banco prova deve rimanere costante per l'intera durata del test.
- Non è permessa nessuna perdita esterna visibile dal corpo valvola e da tutte le sue connessioni inclusa l'assenza di danni strutturali permanenti.

- Solo per le valvole a spillo: eventuali perdite dalla tenuta dello stelo che possono verificarsi durante la prova di SHELL TEST non sono causa di scarto del campione provato. Tuttavia, le guarnizioni dello stelo devono essere in grado di garantire la tenuta sino al raggiungimento di una pressione pari al rispettivo rating valvola alla temperatura di 100 °F (38 °C).

- Per le valvole ad orifizio variabile, identificabili dal codice 00.VSP.OV.00XX, dopo la prova idraulica deve essere sempre eseguita una prova aggiuntiva con aria o gas inerte. Le modalità di esecuzione, la pressione e i tempi di collaudo rimangono quelli sopra indicati. Durante l'esecuzione di questa prova, a parziale modifica di quanto indicato al punto 4.2.2, l'otturatore del bonnet deve essere in posizione di totale chiusura. Ricoprire i punti di tenuta della valvola con opportuna schiuma per evidenziare perdite gassose.

4.1.4) **General requirements**
- Each valve shall be tested.
- Into the valve body shall not remain trapped air.
- Gauge pressure of test equipment shall not be dropped down.
- No visible leakage.

4.2) **SHELL TEST – for all type of valves**

4.2.1) **Pressure**
The test shall be performed with water, at a gauge pressure not less than 1.5 times the rating pressure, at 100°F (38°C), with reference to Annex 1.

4.2.2) **Execution method**
The test must be performed with the valve in conditions of partial opening and with the ends plugged.

4.2.3) **Duration**
The duration of pressure-holding periods shall be as reported in Table 1.

4.2.4) **General requirements**
- Each valve shall be tested.
- Into the valve body shall not remain trapped air.
- Gauge pressure of test equipment shall not be dropped down.
- No external visible leakage is permitted in the valve body and in all body joint connections including no evidence of structural damage.

- For needle valves only, stem seal leakage during SHELL TEST shall not be cause for rejection. However, stem seal shall be capable of retaining pressure at least equal to the 100 °F (38 °C) ratings without visible leakage.

- For the variable orifice type valves, identified with code 00.VSP.OV.00XX, after hydraulic test, it must always be performed an additional test with air and water. The execution method, the pressure and the time of testing remain as above described. During the execution of this test, in partial modofication to what indicated at the point 4.2.2, the shutter bonnet must be in closed position. Cover the points with proper valve sealing foam to highlight gaseous losses.

4.3) **HIGH PRESSURE CLOSURE TEST – per tutte le tipologie di valvole**

4.3.1) **Pressione**
La prova deve essere effettuata con acqua, ad una pressione non inferiore ad un 1.1 volte il valore di rating, a 100 °F (38 °C), facendo riferimento all'Allegato 1.

4.3.2) **Metodologia di esecuzione**
La prova deve essere effettuata con la valvola in posizione chiusa.

Per le valvole costituite da 2 o più valvole, come i manifold, la prova in pressione dovrebbe essere eseguita in successione su ciascuna delle valvole di chiusura, controllando le eventuali perdite di ciascuna valvola.

Per le valvole con medesima connessione sia in ingresso che in uscita (es. Flangiate-Flangiate, Filettate-Filettate, BW-BW, ecc.) la prova deve essere eseguita in entrambe le direzioni.

Per le valvole con connessione in ingresso diversa da quella in uscita (es. Flangiate-Filettate, BW-Filettate, ecc.) la prova sarà eseguita solo nella direzione indicata dalla freccia.

Monitorare la perdita dal lato opposto a quello in pressione.

Quindi ripetere il test applicando la pressione sull'altra estremità della valvola chiusa.

In caso di valvola unidirezionale, la pressione di prova deve essere applicata all'estremità appropriata della valvola.

4.3.3) **Durata**
La durata dei tempi di mantenimento della pressione è quella riportata in Tabella 1.

4.3.4) **Requisiti Generali**
- Testare ogni singola valvola.
- Nel corpo valvola non deve rimanere aria intrappolata.
- La pressione nel banco prova deve rimanere costante per l'intera durata del test.
- Non sono ammesse perdite visibili in corrispondenza degli elementi di tenuta (sfera/seggio) o da altri componenti di serraggio delle tenute interne.

- Per le valvole a sfera serie VSF con tenuta metallica è ammessa una perdita tra seggio e sfera entro i limiti definiti dalla Tabella 2. Le valvole a sfera con tenuta metallica sono identificabili dal digit "MS" (es. DBB-897-MS-10-I-L235…).

4.3) **HIGH PRESSURE CLOSURE TEST – for all type of valves**

4.3.1) **Pressure**
The test shall be performed with water, at a pressure no less than 1.1 times the rating pressure, at 100 °F (38 °C), with reference to Annex 1.

4.3.2) **Execution method**
The test must be performed with the valve in close position.

For valves with 2 or more valves applied, such as manifold, the pressure test should be performed in sequence on each valve, checking eventually leakages for each single valve.

For valves with the same inlet and outlet connection (for ex. Flanged-Flanged, Threaded-Threaded, BW-BW, etc.) the test shall be performed in both directions.

For valves with inlet connection different from the outlet one (for ex. Flanged-Threaded, BW- Threaded. etc.) the test will be performed only in the direction indicated by the arrow.

Monitor seat leakage from the respective downstream end of the valve.

Then repeat the test applying the pressure on the other end of the closed valve.

In case of unidirectional valve, the test pressure shall be applied to the appropriate end of the valve.

4.3.3) **Duration**
The duration of pressure-holding periods shall be as reported in Table 1.

4.3.4) **General requirements**
- Each valve shall be tested.
- Into the valve body shall not remain trapped air.
- Gauge pressure of test equipment shall not be dropped down.
- No visible leakage from closer or other internal seal tightening components.

- For ball valves with "metal to metal" seat sealing, the maximum allowable leakage from seat and ball is defined according to Table 2. "Metal to metal" ball valves can be identified by digit "MS" (Ex. DBB-897-MS-10-I-L235….).

4.4) **CAVITY RELIEF TEST**

a) Con la valvola in posizione parzialmente aperta, pressurizzare la valvola alla pressione di design.
b) Chiudere la valvola e sfiatare ciascuna estremità alla pressione atmosferica; attendere che le linee a monte e a valle del banco di collaudo siano completamente depressurizzate e scaricate (1 minuto).
c) Aprire la valvola e monitorare il rilascio del fluido di prova intrappolato nella cavità.

L'evidenza del fluido di prova intrappolato nella cavità deve essere motivo di rifiuto.

4.5) **LOW PRESSURE CLOSURE TEST – solo per valvole a sfera "VSF" e opzionale per valvole a spillo**

4.5.1) **Pressione**
La prova dei seggi a bassa pressione deve essere effettuata con aria, ad una pressione compresa tra 4÷7 bar.

4.5.2) **Metodologia di esecuzione**
La prova deve essere effettuata con la valvola in posizione chiusa.

Per le valvole con medesima connessione sia in ingresso che in uscita (es. Flangiate-Flangiate, Filettate-Filettate, BW-BW ecc.) la prova deve essere eseguita in entrambe le direzioni.

Per le valvole con connessione in ingresso diversa da quella in uscita (es. Flangiate-Filettate, BW-Filettate, ecc.) la prova sarà eseguita solo nella direzione indicate dalla freccia.

Monitorare la perdita dal lato opposto a quello in pressione.

Quindi ripetere il test applicando la pressione sull'altra estremità della valvola chiusa.

In caso di valvola unidirezionale, la pressione di prova deve essere applicata all'estremità appropriata della valvola.

4.5.3) **Durata**
La durata della prova non deve essere inferiore a quanto riportato in Tabella 1.

4.5.4) **Requisiti Generali**
- Testare ogni singola valvola.
- Assicurarsi che le superfici di tenuta della valvola siano pulite e non siano presenti eventuali tracce di olio lubrificante, grasso o sigillanti.
- La pressione nel banco prova deve rimanere costante per l'intera durata del test.
- Non sono ammesse perdite visibili in corrispondenza degli elementi di tenuta (sfera/seggio) o da altri componenti di serraggio delle tenute interne.
- Per le valvole a sfera serie VSF con tenuta metallica è

4.4) **CAVITY RELIEF TEST**

a) With the valve half-open, pressurize the valve to design pressure.
b) Close the valve and vent each end to atmospheric pressure; wait until the upstream and downstream lines of the test bench are completely depressurized and discharged (1 minute).
c) Open the valve to the half-open position and monitor for the release of test medium trapped in the cavity.

Evidence of the trapped pressurizing medium in the cavity shall be cause for rejection.

4.5) **LOW PRESSURE CLOSURE TEST – only for ball valves "VSF" and optional for needle valves**

4.5.1) **Pressure**
The low-pressure closure test shall be performed with air, with pressure value between 4÷7 bar.

4.5.2) **Execution method**
The test must be performed with the valve in close position.

For valves with the same inlet and outlet connection (for ex. Flanged-Flanged, Threaded-Threaded, BW-BW etc.) the test must be performed in both directions.

For valves with inlet connection different from outlet one (for ex. Flanged-Threaded, BW-Threaded, etc.) the test must be performed only in the direction indicated by the arrow.

Monitor seat leakage from the respective downstream end of the valve.

Then repeat the test applying the pressure on the other end of the closed valve.

In case of unidirectional valve, the test pressure shall be applied to the appropriate end of the valve.

4.5.3) **Duration**
The test duration shall not be less than as reported in Table 1.

4.5.4) **General requirements**
- Each valve shall be tested.
- Make sure that the valve sealing surfaces are clean and free from lubricating oil, grease, or sealants.
- Gauge pressure of test equipment shall not be dropped down.
- No visible leakage from closer or other internal seal tightening components.
- For ball valves with "metal to metal" seat sealing, the maximum allowable leakage from seat and ball is defined according to Table 2. "Metal to metal" ball

ammessa una perdita tra seggio e sfera entro i limiti definiti dalla Tabella 2. Le valvole a sfera con tenuta metallica sono identificabili dal digit "MS" (es. DBB-897-MS-10-I-L235…).

4.6) **BDP SHELL TEST – solo per valvole trunnion "VSFT"**

Lo scopo della prova è verificare la tenuta dei tappi di drenaggio/sfiato dopo il collaudo del corpo e del backseat. Al termine di queste prove, installare i tappi di drenaggio/sfiato sulla valvola.

Ripetere quindi la prova del corpo per verificare la tenuta dei tappi di drenaggio installati.

La prova deve essere eseguita utilizzando acqua come fluido di prova.

NOTA: nel caso in cui in commessa /scheda tecnica sia richiesto il Gas Test, andrà eseguito il test con le stesse modalità, fluido e durata del collaudo a gas, ma con i tappi di drenaggio/sfiato installati.

4.7) **FUNCTIONAL TEST**

Ogni valvola deve essere testata con il suo dispositivo di azionamento (leva, volantino o riduttore) per garantire il raggiungimento di una corsa completa (da posizione completamente chiusa a posizione completamente aperta e viceversa) alla massima pressione differenziale che corrisponde alla pressione nominale della classe di pressione della valvola.

Al termine del test verificare l'allineamento della sfera con i seggi, in condizione di completa apertura e completa chiusura della valvola. Regolare la posizione dei fermi leva o del riduttore se necessario.

La prova deve essere eseguita utilizzando acqua come fluido di prova.

5. TIPOLOGIA E METODO DI ISPEZIONE E CONTROLLO

5.1) **ISPEZIONE VISIVA E MARCATURA**

- Le superfici dei corpi valvola devono essere esenti da graffiature, rigature o da qualsiasi altra imperfezione visibile.
- Le superfici a contatto con seggi e stelo, così come le superfici della sfera, devono essere prive di imperfezioni.
- Bave metalliche o spigoli taglienti devono essere rimossi in modo appropriato.
- I canali di passaggio del fluido devono avere una finitura uniforme ed essere esenti da bave.

valves can be identified by digit "MS" (Ex. DBB-897-MS-10-I-L235….).

4.6) **BDP SHELL TEST – only for trunnion ball valves "VSFT"**

The purpose of the test is to verify the tightness of drain/vent plugs after shell and backseat tests. After these tests are complete, install the drain/vent plugs on the valve.

Repeat the shell test to verify the tightness of drain/vent plugs installed.

The test shall be carried out with water as test fluid.

NOTE: if the Gas Test is required, the test will be performed with the same methods, fluid and duration time as the gas test, but with drain/vent plugs installed.

4.7) **FUNCTIONAL TEST**

Each valve shall be tested with its own operating device (lever, hand wheel or gear box) to ensure a complete stroke is achieved (from full closed to full open position and viceversa) at the maximum differential pressure corresponding to the nominal pressure of the valve pressure class.

Valve obturator alignment with seats in open condition and in close condition shall be verified and position travel stops of lever or of gear box shall be adjusted accurately.

The test shall be carried out with water as test fluid.

5. TYPE AND METHOD OF INSPECTION

5.1) **VISUAL INSPECTION AND MARKING**

- The surfaces of valve bodies shall be free of scratch, scale and crack.
- The surface contacted with seat and stem, as well as the surface of ball, shall be free of scratch.
- Metal chips or cut edges shall be cleaned properly.
- Flow channel shall be surface finished and be fee of burrs.
- Valve specifications such as trade mark, class and pressure, size, material and others if applicable, shall

- I dettagli valvola, come logo produttore, classe e pressione, dimensione materiale e quant'altro applicabile, devono essere marcati su di una superficie esterna del corpo valvola.
- Le valvole che vengono testate in entrambe le direzioni (bidirezionali) non devono presentare alcuna marcatura relativa alla direzione di flusso.
- Effettuare il controllo visivo per il rilievo di eventuali irregolarità del profilo della filettatura.

5.2) **CONTROLLO DIMENSIONALE**

Il controllo dimensionale dei componenti valvola deve essere effettuato prima dell'assemblaggio degli stessi.

6. DESCRIZIONE REVISIONI

Rev.0 Prima emissione

be marked on the exterior surface of the valve body.
- Valves tested in both direction (bidirectional) don't have to show any flow direction marking.
- Perform the visual inspection for the detection of any irregularity of the thread profile.

5.2) **DIMENSIONAL INSPECTION**

Dimensional inspection shall be performed before the valve assembling.

6. REVISIONS DESCRIPTION

1 INTRODUCTION

1.1 PROJECT OVERVIEW

Crosswind, a Shell and Eneco joint venture, was awarded the tender to develop the offshore Hollandse Kust Noord (HKN) wind farm, located 18.5km off the coast of Netherlands near the town of Egmond aan Zee. The consortium plans to have HKN operational in 2023 with an installed capacity of 759MW generating at least 3.3TWh per year. This is sufficient renewable power to supply more than 1 million Dutch households with green electricity.

Offshore wind farms produce intermittent electricity and balancing these dips and peaks and integrating this electricity into the national energy system requires new technologies. For this reason, the offshore wind farm will include several new technologies that could be implemented at full-scale in the future. The new technologies being explored include a floating solar park, a short-duration battery storage as well as long-term storage via green hydrogen produced by water electrolysis and subsequently consumed in a fuel cell. The combination of these individual measures, herein referred to as the Base Load Power Hub (BLPH) will ensure a continuous power supply regardless of the wind situation.

1.1.1 Project Location

The Hollandse Kust Noord (HKN) wind farm is located 18.5km off the coast of the Netherlands near the town of Egmond aan Zee.

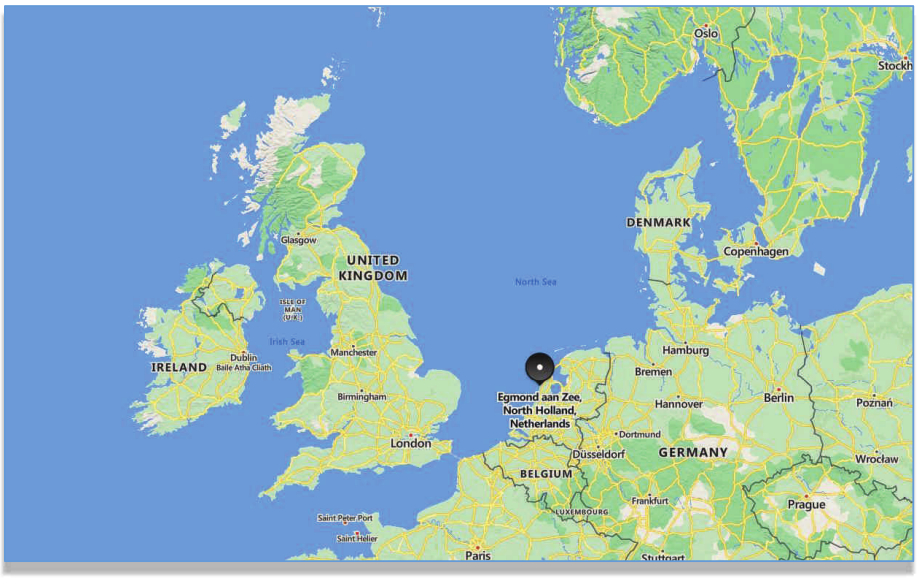

Figure 1 HOLLANDSE KUST NOORD WIND PARK Location Map

This document undergoes an issuance cycle within EDMS Fusionlive". Its distribution is electronically controlled. Once printe d shall be considered as "NOT CONTROLLED" copy

Figure 2 - Wind Park Details

The wind farm will consist of No. 69 x 11.5MW wind turbine generators each to be installed on a dedicated monopile structure. A 70th monopile located on coordinates E 590719.1, N 5841602.3 is reserved for installing the platform accommodating the BLPH. The monopile structure was designed and installed by Van Oord Offshore Wind (VooW) and therefore not part of the BLPH scope.

1.1.2 Project Concept

All components included in the BLPH will be integrated onshore on a topsides and installed in an offshore location within the boundaries of the HKN wind farm. At its simplest, the BLPH will store energy during periods of high electricity generation from renewable sources (a wind turbine generator and the floating solar PV farm) and release it during periods of low generation. In practice. It is expected that the energy stored will supplement generation from renewable sources to ensure that at least 1.0MW of power is exported to the electrical grid regardless of wind/solar availability.

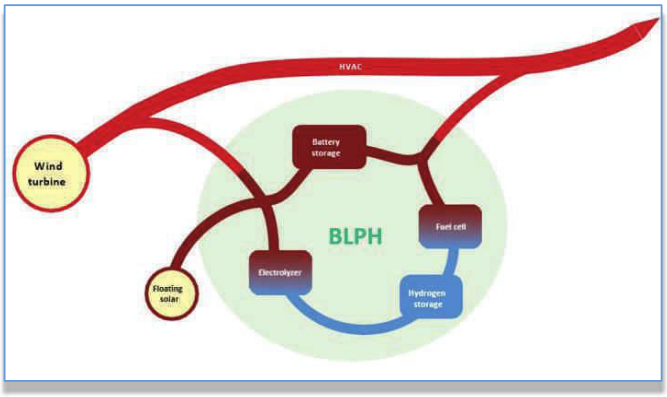

Figure 3 – BLPH Concept

This document undergoes an issuance cycle within EDMS Fusionlive". Its distribution is electronically controlled. Once printe d shall be considered as "NOT CONTROLLED" copy

Electricity in the BLPH will be stored in the form of electrons in a battery energy storage system (BESS) as well as converted into green hydrogen via water electrolysis. When the power output from the connecting wind turbine drops to below 1 MWe, the BLPH will return its stored energy to supplement the remaining power output. This will be by discharging the BESS, while stored hydrogen will be converted back into electricity using a fuel cell to extend the discharge duration.

The purpose of the BLPH s to function as a testbed for the integration of energy storage technologies with renewable generation. It is expected that equipment installed on the BLPH will operate as Normally Unmanned Installation for at least two (2) years with no or minimal maintenance and it will have its own independent control room with the ability to communicate with Crosswind's control room.

This document undergoes an issuance cycle within EDMS Fusionlive". Its distribution is electronically controlled. Once printe d shall be considered as "NOT CONTROLLED" copy

Revision: 8	Created	Checked	Approved
Date	27/11/2023	27/11/2023	27/11/2023
Signature	L.Imbriani	E. Ranzani	C. Cattaneo

1) SCOPE

This manual procedure deals with the procedures and methods to manage the handling, packaging, storage, preservation and delivery of the manufactured valves and valve components.
This procedure manual specifies the requirements and responsibilities that should be applied in order to prevent thermal diffusion, obstruction, damage and misuse of the valve.

2) GENERAL REQUIREMENTS

The solvents and/or corrosion inhibitors shall be used with adequate ventilation. Adequate ventilation is required for curing of corrosion inhibitors used, and to avoid formation of an explosive atmosphere. The partially cured film of corrosion inhibitors should not be exposed to ignition sources such as flares, flames, sparks, excessive heat, or torches.

3) HANDLING OF VALVES

Handling of valves shall be done using correct and proper handling equipment considering their capacity, limits and their maintenance conditions to avoid damages of the material itself and any potential cause of injury/harm to involved personnel. The valves shall be lifted using the established lifting points.

4) PACKING/RESPONSIBILITY

For the preparation of the goods for the shipment we must proceed as follows:

1. Take the delivery note

2. Proceed to pick up the material from the warehouse and tick off each item mentioned in the document

3. Check if on the delivery note there are special instructions for the packaging of the goods requested by the customer

4. Prepare the packaging for any item indicated in the delivery note (for example if on the delivery note there are three positions we must proceed to issue three different packaging)

5. Set the foaming machine; lower the bag, place it on the bottom of the box and press with the appropriate template to create a homogeneous and compact plan

6. Connections Protection:
Stick rubber or Plastic cups protection on Flanges & HUBs
Plastic Cap/Plug on non plugged threads

7. All uncoated metallic components are in in 316 minimum and do not required additional treatment/coating

8. Recheck that all the items indicated in the delivery note are present before storing the material in the box

9. Place the goods to be packed on a flat surface

10. With another bag of foam composing the upper layer which will take the shape of the product. After this operation make sure that the product is perfectly adherent to the bag in order to prevent that during the transport will be damaged because of bumps

11. Close the carton box, making sure that the layer of foam is completely fills the box

12. Close the box with tape above and below

13. After closing the package, attach the label on the package, add the reference /positions of the order, the weight

14. On the delivery note indicate the weight and dimensions of the shipment

5) MARKING OF CASE/CARTON BOXES

Our standard packing is carton boxes on pallets. The marks will be printed in black colour on DYMO labels and will be clearly legible. Minimum content of marking as follows:
- Consignee/delivery address

- Customer

- Purchase Order No.

- Item No.

- Case No. of

- Gross Weight (Kg)

- Net Weight (Kg)

- Dimensions : x x (cm)

When requested by the customer we can use wooden cases and all the markings shall be legible, permanent and not covered by banding or in any other way. Package shall be marked on at least two sides (long side and short side). All information will be fixed to each package in a Waterproof A4 size labels.

6) PROTECTION WITH WATERPROOF BAGS (WHEN REQUESTED BY THE CUSTOMER)

The protection is an action directed at satisfying the needs connected to the maintenance of the integrity of the contents and it is used to guarantee the insulation of the products against the action of atmospheric or degrading agents, such as water, water vapour, salt air, pressure/depression. In all this case, the choice is the waterproofing bag with vacuum.

The materials for fitted barriers are compounds of polyethylene and aluminium and are selected according to their degree of permeability to water vapour and their mechanical resistance. They have a low transpiration grade and are therefore the only not rigid products that allow the protective sheet to keep its vacuum status for long time. All this conforming to standards MIL/TL.

These coupled barriers that we called barrier bags, must be hermetically sealed and a depression must be created inside that will reduce the volume of air it containts and eliminate as much as possible the quantity of relative humidity in the barriers.

Inside the barrier certain amount of dessicant salts must be inserted, sufficient to keep the relative humidity below a certain level. The quantity must be calculated according to the climatic conditions that the package will be subject to, during the journey.

Climate conditions, place of departure, transport method, destination are all factors on which we base to calculate the units of dessicant salts to use, to maintain the humidity inside the vacuum barrier.

7) STORAGE AND MAINTENANCE AT SITE

Type of packing : - Carton boxes on pallet

- Wooden case

- Wooden case with bag barrier (fumigated HT-ISPM15)

- Seaworthy packing

Type of storage : Closed warehouse without humidity

Preservation Expiration: goods stored in their original packing in a dry, clean and safe area can guarantee the correct operation even after the expiring of the product's warranty period. Storage longer than the contractual warranty term it is up to the user's to preserve the goods properly as per common practice for storage & handling.

Due to the mechanical properties of the internal seals, the storage temperature must never be lower and maintained at -15°C.

1 INTRODUCTION

1.1 PROJECT OVERVIEW

Crosswind, a Shell and Eneco joint venture, was awarded the tender to develop the offshore Hollandse Kust Noord (HKN) wind farm, located 18.5km off the coast of Netherlands near the town of Egmond aan Zee. The consortium plans to have HKN operational in 2023 with an installed capacity of 759MW generating at least 3.3TWh per year. This is sufficient renewable power to supply more than 1 million Dutch households with green electricity.

Offshore wind farms produce intermittent electricity and balancing these dips and peaks and integrating this electricity into the national energy system requires new technologies. For this reason, the offshore wind farm will include several new technologies that could be implemented at full-scale in the future. The new technologies being explored include a floating solar park, a short-duration battery storage as well as long-term storage via green hydrogen produced by water electrolysis and subsequently consumed in a fuel cell. The combination of these individual measures, herein referred to as the Base Load Power Hub (BLPH) will ensure a continuous power supply regardless of the wind situation.

1.1.1 Project Location

The Hollandse Kust Noord (HKN) wind farm is located 18.5km off the coast of the Netherlands near the town of Egmond aan Zee.

Figure 1 HOLLANDSE KUST NOORD WIND PARK Location Map

Figure 2 - Wind Park Details

The wind farm will consist of No. 69 x 11.5MW wind turbine generators each to be installed on a dedicated monopile structure. A 70th monopile located on coordinates E 590719.1, N 5841602.3 is reserved for installing the platform accommodating the BLPH. The monopile structure was designed and installed by Van Oord Offshore Wind (VooW) and therefore not part of the BLPH scope.

1.1.2 Project Concept

All components included in the BLPH will be integrated onshore on a topsides and installed in an offshore location within the boundaries of the HKN wind farm. At its simplest, the BLPH will store energy during periods of high electricity generation from renewable sources (a wind turbine generator and the floating solar PV farm) and release it during periods of low generation. In practice. It is expected that the energy stored will supplement generation from renewable sources to ensure that at least 1.0MW of power is exported to the electrical grid regardless of wind/solar availability.

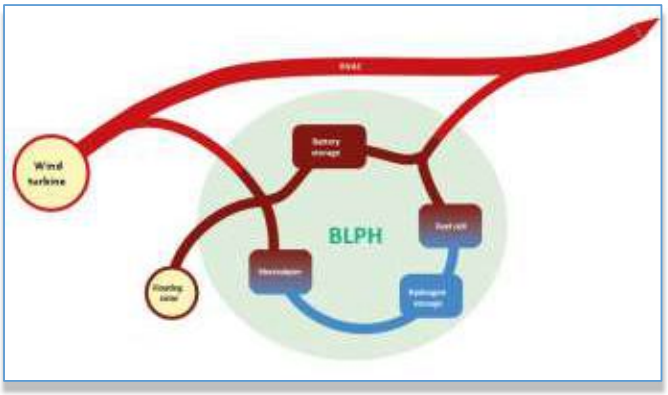

Figure 3 – BLPH Concept

Electricity in the BLPH will be stored in the form of electrons in a battery energy storage system (BESS) as well as converted into green hydrogen via water electrolysis. When the power output from the connecting wind turbine drops to below 1 MWe, the BLPH will return its stored energy to supplement the remaining power output. This will be by discharging the BESS, while stored hydrogen will be converted back into electricity using a fuel cell to extend the discharge duration.

The purpose of the BLPH s to function as a testbed for the integration of energy storage technologies with renewable generation. It is expected that equipment installed on the BLPH will operate as Normally Unmanned Installation for at least two (2) years with no or minimal maintenance and it will have its own independent control room with the ability to communicate with Crosswind's control room.

This document undergoes an issuance cycle within EDMS Fusionlive". Its distribution is electronically controlled. Once printe d shall be considered as "NOT CONTROLLED" copy

2 DOCUMENT SCOPE

This manual outlines the methods to be used for the storage, protection, installation, operation and maintenance of flanged-flanged, flanged-threaded and welded ball valves (SB-SBB-DB-DBB). The purpose of this manual is to maintain the best levels of performance of the valves over the long term, providing the user with instructions for the correct methods to be used for the storage, protection, installation, correct operation and maintenance of the valves.

WARNING:

Depressurize the circuit before carrying out any operations, especially in the presence of dangerous fluids. The pressure in the circuit must be the same as that of the outside environment.

Please refer to tag plate information for operating use.

1.0 Purpose of this manual

This manual outlines the methods to be used for the storage, protection, installation, operation and maintenance of flanged-flanged, flanged-threaded and welded ball valves (SB-SBB-DB-DBB). The purpose of this manual is to maintain the best levels of performance of the valves over the long term, providing the user with instructions for the correct methods to be used for the storage, protection, installation, correct operation and maintenance of the valves.

2.0 Limitations of use

- Must not exceed the admissible limits described on the plate
- the end user is responsible for equipping the line with adequate safety accessories to protect against exceeding the admissible limits.

Service: On/Off (fully open/fully closed)

Note: INDRA soft seal valves cannot be used as control valves.

Level of seal for new valves:

- Hydrostatic test on casing: Permitted leak: None
- Hydrostatic test on seats: Permitted leak: None
- Pneumatic test on seats (air 6±1 bar): Permitted leak: None

The rated values for INDRA valves are compliant with Standard ASME B16.34, based on the materials used. As an example, the rated pressure values at ambient temperature are provided for the main materials used. Different temperature conditions cause variations in the rated pressure values as set out in Standard B16.34 and on the information plate on the supplied product. The rated pressure/temperature values also depend on the seals used in making the product. For further details please contact INDRA S.r.l.

ASME B16.34 Material	Temperature	150#	300#	600#	900#	1500#	2500#
A105, A350 LF2	-29°C / +38°C	19.6	51.1	102.1	153.2	255.3	425.5

	+200°C	*13.8*	*48.3*	*96.7*	*145.0*	*241.7*	*402.8*
	+450°C	*4.6*	*33.7*	*67.7*	*101.4*	*169.0*	*281.8*

** This material may become brittle after service at moderately elevated temperature. Should not be used over 315°C.*

All valves are tested in accordance with Standards API 598 and 2014/68/EU PED

- Hydraulic test on casing: The pressure used for the hydrostatic test on the valve casing is calculated at a value higher than or equal to 1.5 times the rated pressure at ambient temperature.
- Hydraulic test on seats: The pressure used for the hydrostatic test on the seats is calculated at 1.1 times the rated pressure at ambient temperature.
- Pneumatic test on seats (low pressure): The pressure values for the pneumatic test for the seats are as follows for all classes: 6 ±1 bar.
- Max. operating Temp. at rated pressure: See table below

RATING	**150#**	**300#**	**600#**	**900#**	**1500#**	**2500#**
Seat Material	PEEK			METAL SEAT/ GRAPHITE		
Max operating Temperature	*+200°C*			*+450°C*		

For pressure/temperature rating for valves compliant to API std design, refer to API 6A (contact INDRA technical office if necessary).

2.1 Temperature: Ambient and Process

It is important to maintain the valve, during all the stages of storage and operation, within the limits of the temperature range provided. The following tables represents the temperature range of the floating ball valves.

AMBIENT TEMPERATURE	
NON EAC (STANDARD)	**EAC**
-46°C +80°C	*-54°C +80°C*

PRODUCT	**CATEGORY**	**SEALING**	**NON EAC (STANDARD)**	**EAC**
VSF (BALL VALVES) (*)	**STANDARD**	*PEEK/FKM/GRAPHITE*	*-46°C +200°C*	*-54°C +200°C*
	CRYOGENIC	*KEL-F/GRAPHITE*	*-110°C +100°C*	
		KEL-F/Lip-Seal/ GRAPHITE	*-196°C +100°C*	
	HIGH TEMPERATURE	*Metal Seat/GRAPHITE*	*-46°C +450°C*	*-54°C +450°C*

(*) Includes Floating and Trunnion mounted ball valves.

The surface temperature of manual ball valves depends exclusively on the higher of the ambient or process temperature. Make sure that T is not higher than the minimum ignition temperature of the gas (considering an appropriate safety factor), which determines the temperature class of the area where the equipment will be installed.

The surface temperature of actuated ball valves depends on the greater of the ambient or process temperature increased by 60 ° C (possibility of maximum overheating due to friction and rubbing between the parts). Make sure that Tmax is not higher than the minimum ignition temperature of the gas (considering an appropriate safety factor), which determines the temperature class of the area where the equipment will be installed.

Manual Ball Valve				Actuated Ball Valve		
Class [Max temperature allowed]	Tmax Valve Surface	T process/amb.		Class [Max temperature allowed]	Tmax Valve Surface	T process/amb.
T6 [85°C]	75°C	75°C		T6 [85°C]	75°C	15°C
T5 [100°C]	90°C	90°C		T5 [100°C]	90°C	30°C
T4 [135°C]	125°C	125°C		T4 [135°C]	125°C	65°C
T3 [200°C]	190°C	190°C		T3 [200°C]	190°C	130°C
T2 [300°C]	290°C	290°C		T2 [300°C]	290°C	230°C
T1 [450°C]	440°C	440°C		T1 [450°C]	440°C	380°C

2.2 Precautions and limitations of use

Below is a list of possible hazardous conditions which, if not previously specified on the contractual documents, have not been considered during the design stage.

Caution! Possible hazardous conditions:

- **Acoustic vibrations and/or vibrations induced by flow;**
- **Ram;**
- **Chemical attack;**
- **Thermal expansion;**
- **Stray currents**
- **Pressure and thermal fatigue;**
- **Seismic loads;**
- **External corrosion;**
- **Contaminated fluid;**
- **Cavitation and flashing;**
- **External flame;**
- **External loads.**

Any hazardous conditions (e.g.: temperature and pressure gradients etc.) attributable to the operation of the component or system are in any case the responsibility of the user.

Precautions and additional information

The user should always check that the valves are not used for services at temperatures and pressure values that exceed the maximum values declared by the manufacturer and given on the valve information plate/label.

The user should always provide the necessary means to ensure that the valve is not installed for services that exceed the envisaged limits.

The valve may release any excess pressure present in the casing through the seats. Before carrying out any maintenance operations, carry out a full opening and closing maneuver (with the line not under pressure).

The user must provide suitable means to prevent rapid opening and/or closing actions from creating ram effects in the valve.

Split-body valves are sized for low stress factors caused by axial loads on the line. Please contact INDRA for special conditions.

The user must guarantee that for valves installed at the end of a line any opening of the valve does not cause fluid to be released freely into the environment.

Do not remove or replace or assemble any valve components with the valve under pressure or without having released any pressure trapped in the cavity of the casing (e.g. before removing the bleed plug, make sure there is no pressure inside the valve casing).

The valves should be used with clean fluids that are not abrasive and free of solid particles.

3.0 Storage and preservation

Ball valves must be delivered suitably packed in containers normally made from cardboard and wrapped in their standard packaging. It is also possible to apply customized packaging on the specific request of the customer. We recommend storing the valves in their packaging until they are installed.

Valves should be stored in a clean, dry and closed space.

Valves removed from their packaging before installation should be stored with the handle open (in line with the valve casing or in line with the main circuit).

Valves removed from their packaging should be stored in a clean and dry place. If left in the open, they should be protected against knocks. All valve connections, whether they are flanged or threaded, should be protected with specific plugs or adhesive discs and covered with anti-corrosion paint, as required.

WARNING: Do not use the handle to lift the valve during transport and handling. 

If the valves have to be stored for a long period on site prior to their installation, they should be kept covered and dry. It is mandatory that the end covers, and original packaging are kept in good condition. All the valves are supplied with end plugs, to protect the internal parts. These end plugs must not be removed during storage. If it is necessary for maintenance or inspection, care should be taken to replace them when the valves are returned to the store.

3.1 Scheduled maintenance during storage

In case of extended storage time, the valves should be inspected and checked as follows at least every 6 months:

- External surface inspection checking any alteration of the protective coating. In case of presence of rust and/or damaged paint work, the area should wire brushed and degreased using an appropriate chemical solvent.
- Inspection of the protective coating. In case of damages, it should be locally restored as per the applicable packing procedure.
- Removal of the end protection plugs and without moving the ball, inspection of the internal surfaces of the valve for the complete absence of dust, rust, foreign matter and the integrity of lubricant coat.
- Rotate the ball by completely opening and closing the valve.
- The ball must be kept always in the fully open position.
- Replace the protective end plugs.

4.0 Safety instructions

All installation and maintenance operations on the valve should be carried out by qualified personnel and with the circuit fully de-pressurized (the pressure in the circuit must be the same as that of the outside environment).

The valve and/or plugs on the vents should only be removed when the circuit is fully de-pressurized (the pressure in the circuit must be the same as that of the outside environment).

The bonnets (where present), and the associated anti-unscrewing pins, should not be removed from their housings on the valve casing.

The maximum torsion torque for operating the bonnet (where present), is 0.8 Nm (0.6 lb.ft)

Avoid subjecting the valve to knocks or impacts greater than 40 Nm (30 lb.ft).

The technical data given on the valve must always be legible. Paint or anything else that could obscure the technical data on the valve should be avoided

5.0 Operating instruction

VALVE OPERATION

Rotating the handle anti-clockwise by one quarter turn causes the ball to open the passage; the handle is in line with the valve casing or the main circuit. (Valve in OPEN position).
Rotating the handle clockwise by one quarter turn causes the ball to close the passage; the handle is perpendicular to the valve casing or the line of the main circuit. (Valve in CLOSED position).

WARNING: Handles locking device must be removed before operation (see para. 12) 

VENT

Rotating the wheel on the bonnet (T-Bar) or the handle anti-clockwise, causes the shutter in the bonnet to open the passage. Rotating the wheel (T-Bar) or the handle clockwise, causes the shutter in the bonnet to close the passage. (Approximately 5 full rotations are required to close the passage). Bonnets equipped with stainless steel anti-dust caps allow you to view the status of the bonnet (open or closed).

6.0 Installation instructions

All valve installation operations must be carried out by qualified personnel.

Installation should be carried out in such a way as to ensure the information provided on the valve casing remains visible:

- Manufacturer's name (INDRA)
- Product code
- Rating
- Material
- Manufacturing lot
- Additional labelling (if required)

Before installation check that the project data is compatible with the valve specifications, in particular: material, pressure, temperature, process fluid type.

Check that safety regulations for operators are observed before handling or installing the valve.

Check that the installation layout is suitable for the correct operation of the valve, avoiding any interference with pipes or other nearby components that could obstruct the correct operation of the valve.

Remove the valve from its packaging and inspect it for any damage that may have occurred during transport.

Check the condition of the valve before installation.

Make sure that the handle and any accessible seals are clean and free of any visible damage.

Connect the valve to the circuit, tightening the nuts on the flange and/or connecting the pipes to the threaded connections.

When the valve is open the lever is parallel to (in line with) the axis of the main channel of the valve and of the flow.

When the valve is closed the lever is orthogonal (at 90°) to the axis of the main channel of the valve and of the flow.

WARNINGS:

- **Do not install the valve if it has been visibly damaged by knocks. Inform the INDRA technical department immediately by sending an e-mail to: indra@indra.it with photographs attached.**
- **The valve can operate once it has been fully installed into the circuit.**
- **The valve must be operated in accordance with the procedures in point 4.0.**
- **The valve must be operated using its own handle. Avoid the use of screwdrivers, pipe wrenches, etc.**
- **Before connecting any measuring and/or monitoring instruments, the line must be bled in order to eliminate any residues created by mechanical processes or other residues which, if present, could interfere with the correct operation of the instrument downstream, as well as causing possible greater damage due to the presence of contaminant residues. We therefore recommend pressurizing and bleeding the circuit several times before and after the valve is installed. In the presence of process fluids with contaminant particles, it is essential to fit filters upstream of the valve. The necessary measuring and monitoring instruments should only be installed after having completed these operations.**

6.1 Instructions for Weld End valves (BW)

The execution of the permanent joint of the valve to the pipeline is entirely the responsibility of whoever installs the valve into the line.

It is not necessary to disassemble the valve during the phases of welding connection to the pipeline.

During the welding process, the valve must be kept in the fully open position, in order to avoid possible sticking or damage of internal seals caused by thermal conduction.

During the welding process (preheating, welding, heat treatment), the temperature of valves with soft seats should not exceed 93 C° in the area of the valve seats.

In the event of damage to external painting, it is essential to quickly repair any defects.

The welding activity must be conducted to prevent the introduction of debris and dirt into the line. Such debris could damage valve seals and seats.

WARNINGS:

- **Personnel involved in welding operations shall be provided and use all applicable personal safety devices needed to carry out each activity in safe conditions (shoes; clothing; gloves; glasses; mask; etc...).**
- **Particular attention must be paid during welding performed at considerable heights.**
- **Particular attention must be paid considering presence of hot surfaces (> 80°C).**

7.0 Maintenance instructions

The valves are designed and manufactured to provide continuous operation with little or no maintenance. However, the instructions provided below are useful for maintaining valve efficiency:

Periodically check the efficiency of the seals (no leaks).

In the event of a leak in the valve, it must be removed from the system, identifying the cause of the leak, and replacing the seal if necessary.

WARNINGS:

- **Before removal the valve should be opened and closed at least twice and then kept partially open. (handle at 45° with respect to the axis of the valve or line of the main pipe).**
- **Process fluids may potentially be toxic or hazardous, the user must therefore ensure that maintenance staff are aware of which fluids they may come into contact with and also that they use the required and suitable accident prevention and protection systems.**
- **Even when the valve is isolated from the line, the cavities of the valve casing may still contain trapped pressure, we therefore recommend checking that all pressure has been fully released from the valve casing using the vent, before any activities are carried out.**

8.0 Eliminating leaks

WARNING: The valve should only be removed or dismantled by trained personnel.

Valve series: SB-SBB-DB-DBB

Leaks from the valve control stem (Fig.1 component “A”).
[See Fig.1] - If the stem is the source of the leak, tighten nut (B) even further using a suitable wrench, after having loosened nut (D) or hex screw (E) for valves that have these.

Leak from the bonnet stem (Fig.1 component “C”).
[See Fig.2] - Fully open the bonnet by rotating wheel (1) anti-clockwise, remove the tightening screw on wheel (9), wheel (1) and anti-dust cap (2). Loosen and unscrew the locking nut (4) by 2-3 threads. Gradually tighten the compression nut (3), avoiding excessive movements, 1-2 mm max., until the leak has been eliminated (see torsion torque value table). Once the leak has been eliminated tighten the locking nut (4) once again, reposition the anti-dust cap (2) and the wheel (1), re-tighten the tightening screw on the wheel (9) and check that the leak has been eliminated.

WARNING: If the leak persists, contact INDRA for maintenance requests.

9.0 Removing SB-SBB-DB-DBB valves

For instructions on how to remove and reassemble the components of the KITS listed below, please refer to the Spare Parts Replacement Procedure documents:

KIT_RC_VSF_FB_01
KIT_RC_VSF_RB_01

The first module applies to full-bore ball valves, and the second to reduced-bore ball valves. These modules contain the necessary instructions for safely replacing the following spare parts:

2 metal spheres
2 PEEK seats
2 closure sealing rings in graphite
4 stem sealing rings in graphite
2 O-rings or 2 Lip Seals (per closure)
2 O-rings or 2 Lip Seals (per stem)
1 Bonnet
1 Protective cap

10.0 Torsion torque values for operating the bonnet

Maximum torque for bonnet maneuver: 0.8 Nm (0.6 lb.ft).

11.0 Tightening torque values for the seal compression nut

Seal compression nut tightening torque: 10 Nm (7.4 lb.ft).

12.0 Drawing of the valve

1 INTRODUCTION

1.1. PROJECT OVERVIEW

Crosswind, a Shell and Eneco joint venture, was awarded the tender to develop the offshore Hollandse Kust Noord (HKN) wind farm, located 18.5km off the coast of Netherlands near the town of Egmond aan Zee. The consortium plans to have HKN operational in 2023 with an installed capacity of 759MW generating at least 3.3TWh per year. This is sufficient renewable power to supply more than 1 million Dutch households with green electricity.

Offshore wind farms produce intermittent electricity and balancing these dips and peaks and integrating this electricity into the national energy system requires new technologies. For this reason, the offshore wind farm will include several new technologies that could be implemented at full-scale in the future. The new technologies being explored include a floating solar park, a short-duration battery storage as well as long-term storage via green hydrogen produced by water electrolysis and subsequently consumed in a fuel cell. The combination of these individual measures, herein referred to as the Base Load Power Hub (BLPH) will ensure a continuous power supply regardless of the wind situation.

1.1.1 Project Location

The Hollandse Kust Noord (HKN) wind farm is located 18.5km off the coast of the Netherlands near the town of Egmond aan Zee.

Figure 1 HOLLANDSE KUST NOORD WIND PARK Location Map

This document undergoes an issuance cycle within EDMS Fusionlive". Its distribution is electronically controlled. Once printe d shall be considered as "NOT CONTROLLED" copy

Figure 2 - Wind Park Details

The wind farm will consist of No. 69 x 11.5MW wind turbine generators each to be installed on a dedicated monopile structure. A 70th monopile located on coordinates E 590719.1, N 5841602.3 is reserved for installing the platform accommodating the BLPH. The monopile structure was designed and installed by Van Oord Offshore Wind (VooW) and therefore not part of the BLPH scope.

1.1.2 Project Concept

All components included in the BLPH will be integrated onshore on a topsides and installed in an offshore location within the boundaries of the HKN wind farm. At its simplest, the BLPH will store energy during periods of high electricity generation from renewable sources (a wind turbine generator and the floating solar PV farm) and release it during periods of low generation. In practice. It is expected that the energy stored will supplement generation from renewable sources to ensure that at least 1.0MW of power is exported to the electrical grid regardless of wind/solar availability.

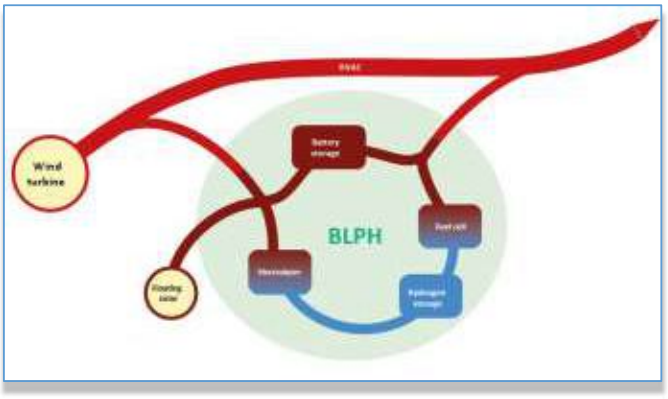

Figure 3 – BLPH Concept

This document undergoes an issuance cycle within EDMS Fusionlive". Its distribution is electronically controlled. Once printe d shall be considered as "NOT CONTROLLED" copy

File: 1724000798-COM-LIS-00014_2*.docx*

Electricity in the BLPH will be stored in the form of electrons in a battery energy storage system (BESS) as well as converted into green hydrogen via water electrolysis. When the power output from the connecting wind turbine drops to below 1 MWe, the BLPH will return its stored energy to supplement the remaining power output. This will be by discharging the BESS, while stored hydrogen will be converted back into electricity using a fuel cell to extend the discharge duration.

The purpose of the BLPH s to function as a testbed for the integration of energy storage technologies with renewable generation. It is expected that equipment installed on the BLPH will operate as Normally Unmanned Installation for at least two (2) years with no or minimal maintenance and it will have its own independent control room with the ability to communicate with Crosswind's control room.

This document undergoes an issuance cycle within EDMS Fusionlive". Its distribution is electronically controlled. Once printe d shall be considered as "NOT CONTROLLED" copy

1 INTRODUCTION

1.1. PROJECT OVERVIEW

Crosswind, a Shell and Eneco joint venture, was awarded the tender to develop the offshore Hollandse Kust Noord (HKN) wind farm, located 18.5km off the coast of Netherlands near the town of Egmond aan Zee. The consortium plans to have HKN operational in 2023 with an installed capacity of 759MW generating at least 3.3TWh per year. This is sufficient renewable power to supply more than 1 million Dutch households with green electricity.

Offshore wind farms produce intermittent electricity and balancing these dips and peaks and integrating this electricity into the national energy system requires new technologies. For this reason, the offshore wind farm will include several new technologies that could be implemented at full-scale in the future. The new technologies being explored include a floating solar park, a short-duration battery storage as well as long-term storage via green hydrogen produced by water electrolysis and subsequently consumed in a fuel cell. The combination of these individual measures, herein referred to as the Base Load Power Hub (BLPH) will ensure a continuous power supply regardless of the wind situation.

1.1.1 Project Location

The Hollandse Kust Noord (HKN) wind farm is located 18.5km off the coast of the Netherlands near the town of Egmond aan Zee.

Figure 1 HOLLANDSE KUST NOORD WIND PARK Location Map

Figure 2 - Wind Park Details

The wind farm will consist of No. 69 x 11.5MW wind turbine generators each to be installed on a dedicated monopile structure. A 70th monopile located on coordinates E 590719.1, N 5841602.3 is reserved for installing the platform accommodating the BLPH. The monopile structure was designed and installed by Van Oord Offshore Wind (VooW) and therefore not part of the BLPH scope.

1.1.2 Project Concept

All components included in the BLPH will be integrated onshore on a topsides and installed in an offshore location within the boundaries of the HKN wind farm. At its simplest, the BLPH will store energy during periods of high electricity generation from renewable sources (a wind turbine generator and the floating solar PV farm) and release it during periods of low generation. In practice. It is expected that the energy stored will supplement generation from renewable sources to ensure that at least 1.0MW of power is exported to the electrical grid regardless of wind/solar availability.

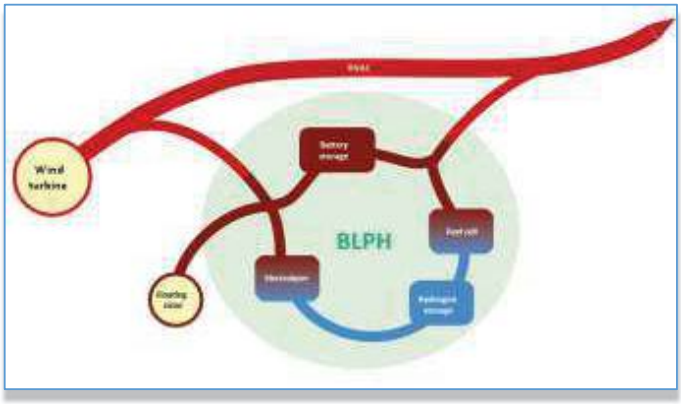

Figure 3 – BLPH Concept

Electricity in the BLPH will be stored in the form of electrons in a battery energy storage system (BESS) as well as converted into green hydrogen via water electrolysis. When the power output from the connecting wind turbine drops to below 1 MWe, the BLPH will return its stored energy to supplement the remaining power output. This will be by discharging the BESS, while stored hydrogen will be converted back into electricity using a fuel cell to extend the discharge duration.

The purpose of the BLPH s to function as a testbed for the integration of energy storage technologies with renewable generation. It is expected that equipment installed on the BLPH will operate as Normally Unmanned Installation for at least two (2) years with no or minimal maintenance and it will have its own independent control room with the ability to communicate with Crosswind's control room.

This document undergoes an issuance cycle within EDMS Fusionlive". Its distribution is electronically controlled. Once printe d shall be considered as "NOT CONTROLLED" copy

Melted, poured and manufactured in Italy No welding or weld repair Material free from Mercury contamination

We declare that the finished product is checked for radioactive contamination by the portal system when it leaves the production plant.

The Quality Management System is also Certified according to Pressure Equipment Directive 2014/68/EU Annex 1,chapt.4.3 by TÜV and LLOYD`S
The Quality Management System is also Certified according to PER 2016/1105, Schedule 2, Part 4, Para 31 (8) by Competent Body TÜV SUD BABT Unlimited.
Any act of tampering, modification, alteration, counterfeiting and/or falsification and/or any other action which modifies the contents of this test certificate shall constitute a violation of applicable civil and criminal laws. Acciaierie Valbruna shall protect its rights and interests before any competent court, authority and jurisdiction.
Maxival and/or Valplus grades/products are manufactured with ladle techniques to control composition, distribution, size and shape of non-metallic inclusions for improved machinability.
The supplied product conforms to requirements expressly requested by the purchaser and conforms to requirements specified by certified norms and standards. Should the product be used for more severe, critical and/ or in any case different applications than those the material is generally intended for, any different and/or supplementary requirements shall be specifically demanded, at least, upon order of the Product by the Purchaser. Acciaierie Valbruna SpA shall not be responsible for any improper use of the Products.

The Quality Management System is also Certified according to Pressure Equipment Directive 2014/68/EU Annex 1,chapt.4.3 by TÜV and LLOYD`S
The Quality Management System is also Certified according to PER 2016/1105, Schedule 2, Part 4, Para 31 (8) by Competent Body TÜV SUD BABT Unlimited.
Any act of tampering, modification, alteration, counterfeiting and/or falsification and/or any other action which modifies the contents of this test certificate shall constitute a violation of applicable civil and criminal laws. Acciaierie Valbruna shall protect its rights and interests before any competent court, authority and jurisdiction.
Maxival and/or Valplus grades/products are manufactured with ladle techniques to control composition, distribution, size and shape of non-metallic inclusions for improved machinability.
The supplied product conforms to requirements expressly requested by the purchaser and conforms to requirements specified by certified norms and standards. Should the product be used for more severe, critical and/ or in any case different applications than those the material is generally intended for, any different and/or supplementary requirements shall be specifically demanded, at least, upon order of the Product by the Purchaser. Acciaierie Valbruna SpA shall not be responsible for any improper use of the Products.

Company with Management Systems certified according to ISO 9001, ITAF 16949, EN 9100, ISO 14001 and ISO 45001.

SFERA / BALL

(certificate no. 0432-CPR-00166-01)
Material produced according to the system #Regulation 305/2011/EU of the European Parliament and of the Council of 9 March 2011#
ULTRASONIC TEST ACCORDING TO EN 10308 Class.3: SATISFACTORY
EDDY CURRENT INSPECTION OF SURFACE ACCORDING TO EN 10277 CLASS 4.
DIMENSIONAL CONTROL ACCORDING TO EN 10278: SATISFACTORY.
NO WELDING REPAIR ON THE MATERIAL.
ANTIMIXING TEST BY PORTABLE SPECTROMETRE: CONFORMING
MARKING: SYMBOL OF THE MANUF. WORK, MATERIAL N. , CAST N., LOT N., RECEIVING AGENT STAMP
COUNTRY OF MELTING AND ORIGIN: ITALY, THE MATERIAL COMPLIES WITH FAR DFARS
252.225-7009 ALT 1.
THE PRODUCT SATISFIES THE DIRECTIVES: 2015/863/EU (ROHS3) - 2011/65/EU (ROHS2) - 2000/53/EU - 2002/95/EU(RoHS) - 2003/11/EU-
2005/618/EU AND PED 2014/68/EU.
ALL THE NORMS MENTIONED ARE INTENDED IN THEIR LAST REVISION AT THE DATE OF ISSUE OF THIS DOCUMENT.
MATERIAL ACCORDING TO NACE MR0103/ISO 17945
INSPECTOR'S STAMP LF
QUALITY SYSTEM CERTIFIED BY KIWA CERMET ACCORDING TO UNI EN ISO 9001:2015 -IATF 16949:2016 (THE LAST ONE ONLY FOR WIRE ROD AND HOT ROLLED-PEELED-GROUND STAINLESS STEEL BARS).
THE MATERIAL IS FREE OF ANY MERCURY, MERCURY COMPOUNDS AND OR RADIUM CONTAMINATION AT TIME OF SHIPMENT AND WAS PRODUCED WITHOUT USING OZONE DEPLETING SUBSTANCES OF CLASS I AND II.
RADIOACTIVITY CONTROL PERFORMED WITH A GAMMA SPECTROMETER: ASTM E181.
GAMMA ACTIVITY ON THE PRODUCTS BELOW 0.1 BQ/G ACCORDING TO EU RESOLUTION 2013/59/EURATOM , IAEA RS-G-1.7 AND IAEA SSG-17.

Melted, poured and manufactured in Italy No welding or weld repair Material free from Mercury contamination

We declare that the finished product is checked for radioactive contamination by the portal system when it leaves the production plant.

The Quality Management System is also Certified according to Pressure Equipment Directive 2014/68/EU Annex 1,chapt.4.3 by TÜV and LLOYD'S
The Quality Management System is also Certified according to PER 2016/1105, Schedule 2, Part 4, Para 31 (8) by Competent Body TÜV SUD BABT Unlimited.
Any act of tampering, modification, alteration, counterfeiting and/or falsification and/or any other action which modifies the contents of this test certificate shall constitute a violation of applicable civil and criminal laws. Acciaierie Valbruna shall protect its rights and interests before any competent court, authority and jurisdiction.
Maxival and/or Valplus grades/products are manufactured with ladle techniques to control composition, distribution, size and shape of non-metallic inclusions for improved machinability.
The supplied product conforms to requirements expressly requested by the purchaser and conforms to requirements specified by certified norms and standards. Should the product be used for more severe, critical and/ or in any case different applications than those the material is generally intended for, any different and/or supplementary requirements shall be specifically demanded, at least, upon order of the Product by the Purchaser. Acciaierie Valbruna SpA shall not be responsible for any improper use of the Products.

SFERA / BALL

ANTIMIXING TEST BY PORTABLE SPECTROMETRE: CONFORMING
EDDY CURRENT INSPECTION OF SURFACE ACCORDING TO EN 10277 CLASS 4.
DIMENSIONAL CONTROL ACCORDING TO EN 10278: SATISFACTORY.
NO WELDING REPAIR ON THE MATERIAL.
ULTRASONIC TEST ACCORDING TO EN 10308 Class.3: SATISFACTORY
QUALITY SYSTEM CERTIFIED TO UNI EN ISO 9001:2015 -IATF 16949:2016 (THE LAST ONE ONLY FOR WIRE ROD AND HOT ROLLED-PEELED-GROUND STAINLESS STEEL BARS).
MATERIAL ACCORDING TO NORSOK M630 EDITION 6.
INSPECTOR'S STAMP LF
THE PRODUCT SATISFIES THE DIRECTIVES: 2015/863/EU (ROHS3) - 2011/65/EU (ROHS2) - 2000/53/EU - 2002/95/EU(RoHS) - 2003/11/EU-2005/618/EU AND PED 2014/68/EU.
THE MATERIAL IS FREE OF ANY MERCURY, MERCURY COMPOUNDS AND OR RADIUM CONTAMINATION AT TIME OF SHIPMENT AND WAS PRODUCED WITHOUT USING OZONE DEPLETING SUBSTANCES OF CLASS I AND II.
RADIOACTIVITY CONTROL PERFORMED WITH A GAMMA SPECTROMETER: ASTM E181.
GAMMA ACTIVITY ON THE PRODUCTS BELOW 0.1 BQ/G ACCORDING TO EU RESOLUTION 2013/59/EURATOM , IAEA RS-G-1.7 AND IAEA SSG-17.

The Quality Management System is also Certified according to Pressure Equipment Directive 2014/68/EU Annex 1,chapt.4.3 by TÜV and LLOYD`S
The Quality Management System is also Certified according to PER 2016/1105, Schedule 2, Part 4, Para 31 (8) by Competent Body TÜV SUD BABT Unlimited.
Any act of tampering, modification, alteration, counterfeiting and/or falsification and/or any other action which modifies the contents of this test certificate shall constitute a violation of applicable civil and criminal laws. Acciaierie Valbruna shall protect its rights and interests before any competent court, authority and jurisdiction.
Maxival and/or Valplus grades/products are manufactured with ladle techniques to control composition, distribution, size and shape of non-metallic inclusions for improved machinability.
The supplied product conforms to requirements expressly requested by the purchaser and conforms to requirements specified by certified norms and standards. Should the product be used for more severe, critical and/ or in any case different applications than those the material is generally intended for, any different and/or supplementary requirements shall be specifically demanded, at least, upon order of the Product by the Purchaser. Acciaierie Valbruna SpA shall not be responsible for any improper use of the Products.

Corrosion test in 16% sulfuric acid and copper sulfate solutions

Test standard: ASTM A262-Practice E

Test	Heat treatment before test	Length of Period (h)	Test temp (°C)	Bend Angle (°)	Ø spindle (mm)	Result of visual inspection at 20 x magnification after bend test	Result
Intergranular corrosion	Sensitization	15	boil	180	5	Absence of cracks	**SATISFACTORY**

Corrosion test in 16% sulfuric acid and copper sulfate solutions

Test standard: UNI EN ISO 3651-2 Method A

Test	Heat treatment before test	Length of Period (h)	Test temp (°C)	Bend Angle (°)	Ø spindle (mm)	Result of visual inspection at 20 x magnification after bend test	Result
Intergranular corrosion	Sensitized T1	20	boil	90	5	Absence of cracks	**SATISFACTORY**

Reduction ratio = 14,0 : 1
Material solution annealed 1060°C for 2.5h/water cooled.

Allegati / Anlagen / Enclosure / Attachments :
UT24000303

Sono state soddisfatte tutte le condizioni richieste
Die gestellen Anforderungen sind lt. Anlage erfüllt
The material has been furnished in accordance with the requirements
Le materiel il eté trouvé conforme aux exigences

Controllo antimescolanza con tecnica XRF/OES portatile : OK
Verwechslungprüfung: durch XRF/QES Gerät geführt : OK
Antimbing testing performed with XRF/OES portable : OK
Contrôle antimélange svt technique XRF/QES portable : OK

Controllo visivo e dimensionale: soddisfa le esigenze
Besichtigung und Ausmessung: ohne Beanstandung
Visual inspection and dimensional checks:satisfactory
Contrôle visuel et dimensions: satisfaisant

Melted, poured and manufactured in Italy No welding or weld repair Material free from Mercury contamination

We declare that the finished product is checked for radioactive contamination by the portal system when it leaves the production plant.

Melted, poured and manufactured in Italy No welding or weld repair Material free from Mercury contamination

We declare that the finished product is checked for radioactive contamination by the portal system when it leaves the production plant.

The Quality Management System is also Certified according to Pressure Equipment Directive 2014/68/EU Annex 1,chapt.4.3 by TÜV and LLOYD`S
The Quality Management System is also Certified according to PER 2016/1105, Schedule 2, Part 4, Para 31 (8) by Competent Body TÜV SUD BABT Unlimited.
Any act of tampering, modification, alteration, counterfeiting and/or falsification and/or any other action which modifies the contents of this test certificate shall constitute a violation of applicable civil and criminal laws. Acciaierie Valbruna shall protect its rights and interests before any competent court, authority and jurisdiction.
Maxival and/or Valplus grades/products are manufactured with ladle techniques to control composition, distribution, size and shape of non-metallic inclusions for improved machinability.
The supplied product conforms to requirements expressly requested by the purchaser and conforms to requirements specified by certified norms and standards. Should the product be used for more severe, critical and/ or in any case different applications than those the material is generally intended for, any different and/or supplementary requirements shall be specifically demanded, at least, upon order of the Product by the Purchaser. Acciaierie Valbruna SpA shall not be responsible for any improper use of the Products.

Soaking time: 4 Hours, Cooling in water
Material Compliant to: ASTM A276-16a / A479-16a / A182-24
ASME: SA479; SA276; SA182 - UNS 31600 - 31630 AISI 316-316L
According to: NACE MR-0175 / ISO 15156-3:2015
NACE MR-103/ISO 17495-1:2016
Intergranular Corrosion according to EN ISO 3651-2:98 Met.A

Surface quality condition 2H conforming also to EN 10277 class 3

We certify hereby, that the above mentioned products are consistent with the order prescriptions.
This certificate was generated by data system acc. to EN 10204, it is not necessary to be signed for validity.

Materiale conforme alle seguenti direttive/regolamenti europee:
. Regolamento REACH 2006/1907/CE e tutti successivi aggiornamenti, compresa la modifica M80 Direttiva Delegata 2022/1632, e SVHC Candidate List aggiornata al 17/01/2023.
. Direttiva ROHS 2011/657UE e tutti i successivi aggiornamenti, compresa la modifica M80 attraverso la Direttiva Delegata 2022/1632, e Decreto Legislativo 27 del 04/03/2014.
. Direttiva RAEE 2012/19/UE e tutti successivi aggiornamenti, compresa la modifica M1 attraverso la Direttiva 2018/849.
. Direttiva ELV (End-of-Life Vehicles) 2000/53/CE e tutti i successivi aggiornamenti, compresa la modifica M15 attraverso la Direttiva 2020/363
. Contaminazione Radioattiva, Direttiva 2013/59/EURATOM e Decreto Legislativo N.101 del 31 Luglio 2020.
. Canadian List 168 aggiornata al 16/03/2022.
. Minerali di Conflitto, Regolamento (UE) 2017/821 e tutti i successivi aggiornamenti, compresa la modifica M1 attraverso il Regolamento Delegato 2020/1588, e Dodd-Frank Wall Street Reform and Consumer Protection Act Section 1502.

Material conforming to the following European directives/regulation:
. REACH regulation 2006/1907/EC and all subsequent updates, including modification M80 Delegate Directive, and SVHC Candidate List updated to 01/17/2023.
. ROHS Directive 2011/65/EU and all subsequent updates, including the M80 amendment through the Delegated Directive 2022/1632, and Italian Legislative Decree 27 of 03/04/2014.
. WEEE Directive 2012/19/EU and all subsequent updates, including the M1 amendment through Directive 2018/849.
. ELV (End-of-Life Vehicles) Directive 2000/53/EC and all subsequent updates, including the modification M15 through Directive 2020/363
. Radioactive Contamination, Directive 2013/59/EURATOM and Italian Legislative Decree No. 101 of 31 July 2020.
. Canadian List 168 updated 03/16/2022.
. Conflict Minerals, Regulation (EU) 2017/821 and all subsequent updates, including amendment M1 through Delegated Regulation 2020/1588, and Dodd-Frank Wall Street Reform and Consumer Protection Act Section 1502.

Melted, poured and manufactured in Italy No welding or weld repair Material free from Mercury contamination

We declare that the finished product is checked for radioactive contamination by the portal system when it leaves the production plant.

The Quality Management System is also Certified according to Pressure Equipment Directive 2014/68/EU Annex 1,chapt.4.3 by TÜV and LLOYD`S
The Quality Management System is also Certified according to PER 2016/1105, Schedule 2, Part 4, Para 31 (8) by Competent Body TÜV SUD BABT Unlimited.
Any act of tampering, modification, alteration, counterfeiting and/or falsification and/or any other action which modifies the contents of this test certificate shall constitute a violation of applicable civil and criminal laws. Acciaierie Valbruna shall protect its rights and interests before any competent court, authority and jurisdiction.
Maxival and/or Valplus grades/products are manufactured with ladle techniques to control composition, distribution, size and shape of non-metallic inclusions for improved machinability.
The supplied product conforms to requirements expressly requested by the purchaser and conforms to requirements specified by certified norms and standards. Should the product be used for more severe, critical and/ or in any case different applications than those the material is generally intended for, any different and/or supplementary requirements shall be specifically demanded, at least, upon order of the Product by the Purchaser. Acciaierie Valbruna SpA shall not be responsible for any improper use of the Products.

The Quality Management System is also Certified according to Pressure Equipment Directive 2014/68/EU Annex 1,chapt.4.3 by TÜV and LLOYD`S
The Quality Management System is also Certified according to PER 2016/1105, Schedule 2, Part 4, Para 31 (8) by Competent Body TÜV SUD BABT Unlimited.
Any act of tampering, modification, alteration, counterfeiting and/or falsification and/or any other action which modifies the contents of this test certificate shall constitute a violation of applicable civil and criminal laws. Acciaierie Valbruna shall protect its rights and interests before any competent court, authority and jurisdiction.
Maxival and/or Valplus grades/products are manufactured with ladle techniques to control composition, distribution, size and shape of non-metallic inclusions for improved machinability.
The supplied product conforms to requirements expressly requested by the purchaser and conforms to requirements specified by certified norms and standards. Should the product be used for more severe, critical and/ or in any case different applications than those the material is generally intended for, any different and/or supplementary requirements shall be specifically demanded, at least, upon order of the Product by the Purchaser. Acciaierie Valbruna SpA shall not be responsible for any improper use of the Products.

The Quality Management System is also Certified according to Pressure Equipment Directive 2014/68/EU Annex 1,chapt.4.3 by TÜV and LLOYD`S
The Quality Management System is also Certified according to PER 2016/1105, Schedule 2, Part 4, Para 31 (8) by Competent Body TÜV SUD BABT Unlimited.
Any act of tampering, modification, alteration, counterfeiting and/or falsification and/or any other action which modifies the contents of this test certificate shall constitute a violation of applicable civil and criminal laws. Acciaierie Valbruna shall protect its rights and interests before any competent court, authority and jurisdiction.
Maxival and/or Valplus grades/products are manufactured with ladle techniques to control composition, distribution, size and shape of non-metallic inclusions for improved machinability.
The supplied product conforms to requirements expressly requested by the purchaser and conforms to requirements specified by certified norms and standards. Should the product be used for more severe, critical and/ or in any case different applications than those the material is generally intended for, any different and/or supplementary requirements shall be specifically demanded, at least, upon order of the Product by the Purchaser. Acciaierie Valbruna SpA shall not be responsible for any improper use of the Products.

Sono state soddisfatte tutte le condizioni richieste
Die gestellen Anforderungen sind lt. Anlage erfüllt
The material has been furnished in accordance with the requirements
Le materiel à eté trouvé conforme aux exigences

Controllo antimescolanza con tecnica XRF/OES portatile : OK
Verwechslungprüfung: durch XRF/OES Gerät geführt : OK
Antimixing testing performed with XRF/OES portable : OK
Contrôle antimélange svt technique XRF/QES portable : OK

Controllo visivo e dimensionale: soddisfa le esigenze
Besichtigung und Ausmessung ohne Beanstandung
Visual inspection and dimensional checks:satisfactory
Contrôle visuel et dimensionnel satisfaisant

Melted, poured and manufactured in Italy No welding or weld repair Material free from Mercury contamination

We declare that the finished product is checked for radioactive contamination by the portal system when it leaves the production plant.

The Quality Management System is also Certified according to Pressure Equipment Directive 2014/68/EU Annex 1,chapt.4.3 by TÜV and LLOYD`S
The Quality Management System is also Certified according to PER 2016/1105, Schedule 2, Part 4, Para 31 (8) by Competent Body TÜV SUD BABT Unlimited.
Any act of tampering, modification, alteration, counterfeiting and/or falsification and/or any other action which modifies the contents of this test certificate shall constitute a violation of applicable civil and criminal laws. Acciaierie Valbruna shall protect its rights and interests before any competent court, authority and jurisdiction.
Maxival and/or Valplus grades/products are manufactured with ladle techniques to control composition, distribution, size and shape of non-metallic inclusions for improved machinability.
The supplied product conforms to requirements expressly requested by the purchaser and conforms to requirements specified by certified norms and standards. Should the product be used for more severe, critical and/ or in any case different applications than those the material is generally intended for, any different and/or supplementary requirements shall be specifically demanded, at least, upon order of the Product by the Purchaser. Acciaierie Valbruna SpA shall not be responsible for any improper use of the Products.

Melted, poured and manufactured in Italy No welding or weld repair Material free from Mercury contamination

We declare that the finished product is checked for radioactive contamination by the portal system when it leaves the production plant.

The Quality Management System is also Certified according to Pressure Equipment Directive 2014/68/EU Annex 1,chapt.4.3 by TÜV and LLOYD`S
The Quality Management System is also Certified according to PER 2016/1105, Schedule 2, Part 4, Para 31 (8) by Competent Body TÜV SUD BABT Unlimited.
Any act of tampering, modification, alteration, counterfeiting and/or falsification and/or any other action which modifies the contents of this test certificate shall constitute a violation of applicable civil and criminal laws. Acciaierie Valbruna shall protect its rights and interests before any competent court, authority and jurisdiction.
Maxival and/or Valplus grades/products are manufactured with ladle techniques to control composition, distribution, size and shape of non-metallic inclusions for improved machinability.
The supplied product conforms to requirements expressly requested by the purchaser and conforms to requirements specified by certified norms and standards. Should the product be used for more severe, critical and/ or in any case different applications than those the material is generally intended for, any different and/or supplementary requirements shall be specifically demanded, at least, upon order of the Product by the Purchaser. Acciaierie Valbruna SpA shall not be responsible for any improper use of the Products.

COUNTRY OF MELTING AND ORIGIN: ITALY, THE MATERIAL COMPLIES WITH FAR DFARS 252.225-7009 ALT 1.
The products delivered are conforming to EN10088-5 and bear the CE marking on the basis of the test results here reported and the continuous surveillance, assessment and approval by MPA NRW (certificate no. 0432-CPR-00166-01)
Material produced according to the system #Regulation 305/2011/EU of the European Parliament and of the Council of 9 March 2011#
DOCUMENT ISSUED IN AGREEMENT WITH TUEV BAYERN(11.1972) WAVING OF COUNTERSIGNING (SEE TUEV BAYERN LETTER DATED 17.01.80).
MARKING: SYMBOL OF THE MANUF. WORK, MATERIAL N. , CAST N., LOT N., RECEIVING AGENT STAMP
CORROSION TEST ACCORDING TO ASTM A262 PRACTICE E EN ISO 3651-2 PRACTICE A: SATISFACTORY.

SFERA / BALL

ANTIMIXING TEST BY PORTABLE SPECTROMETRE: CONFORMING
EDDY CURRENT INSPECTION OF SURFACE ACCORDING TO EN 10277 CLASS 4.
DIMENSIONAL CONTROL ACCORDING TO EN 10278: SATISFACTORY.
NO WELDING REPAIR ON THE MATERIAL.
ULTRASONIC TEST ACCORDING TO EN 10308 Class.3: SATISFACTORY
QUALITY SYSTEM CERTIFIED TO UNI EN ISO 9001:2015 -IATF 16949:2016 (THE LAST ONE ONLY FOR WIRE ROD AND HOT ROLLED-PEELED-GROUND STAINLESS STEEL BARS).
MATERIAL ACCORDING TO NORSOK M630 EDITION 6.
INSPECTOR'S STAMP LF
THE PRODUCT SATISFIES THE DIRECTIVES: 2015/863/EU (ROHS3) - 2011/65/EU (ROHS2) - 2000/53/EU - 2002/95/EU(RoHS) - 2003/11/EU-2005/618/EU AND PED 2014/68/EU.
THE MATERIAL IS FREE OF ANY MERCURY, MERCURY COMPOUNDS AND OR RADIUM CONTAMINATION AT TIME OF SHIPMENT AND WAS PRODUCED WITHOUT USING OZONE DEPLETING SUBSTANCES OF CLASS I AND II.
RADIOACTIVITY CONTROL PERFORMED WITH A GAMMA SPECTROMETER: ASTM E181.
GAMMA ACTIVITY ON THE PRODUCTS BELOW 0.1 BQ/G ACCORDING TO EU RESOLUTION 2013/59/EURATOM , IAEA RS-G-1.7 AND IAEA SSG-17.

DOCUMENT NUMBER 2024011723

CUSTOMER:	C.S.C. SPA		
CUSTOMER'S ORDER:	A2024282SSS		
MANUFACTURER'S WORKS:	AOSTA, VIA PARAVERA 16 - ITALY		
PRODUCER OF THE DOC:	QUALITY DEPARTMENT		
MANUFACTURER'S WORKS ORDER NO:	0025313236 / 000010		
MARK OF THE MANUFACTURER:	COGNE		
DISPATCH NOTE:	0081597602 / 000010 WEIGHT: 1660 KG / 3660 LB		
INTERNAL SPEC:	NORSOKREV5		
PRODUCT:	SPE ROUGHPEELED ROUND BARS TOLERANCE: + 1,500 - 0,0000 (+ 0,0591 - 0 in)		
SURFACE FINISH:	1X Hot Finished		
PRODUCT DELIVERY CONDITION:	RS SOLUTION ANNEALED		
PRODUCT DIMENSIONS (mm):	133,360 (5,250 in)	LENGTH (mm)	04000 06000 (00157 00236 in)
GRADE:	F55 UNSS32760 1.4501	INTERNAL GRADE:	329S
IDENTIFICATION HEAT NO:	301290	IDENTIFICATION LOT NO:	441600
MARKING OF THE PRODUCT:	1.4501	TEST PIECE N:	160

STEELMAKING EAF + AOD
HEAT TREATMENT: SOLUTION ANNEALING AT 1120°C + WATER QUENCHING DOWN TO 260°C.MIN.SOAKING TIME 1,5 Min./mm THICKNESS.
ASTM G48 A/ASTM A923 C TESTING CONDITIONS: Sample surface 120 GRIT, Solution 100g FeCl3.6H2O+900ml H20, T 50°C, 24h, no pitting at 20X. UNIT OF MEASURE: G/M2
MELTING PROCESS UHP + AOD + INGOT CASTING
HEAT TREATMENT PERFORMED IN CALIBRATED FURNACES ACCORDING TO INTERNAL PROCEDURE PR-GDQ.ITT COMPLYING WITH API6A Annex M Ed. 21st, API 6D annex H Ed. 25th & API 6DSS annex J Ed.3rd.
HOT FORGED
REDUCTION RATIO 22,7

THE PRODUCT SATISFIES CE DIRECTIVES EU: 2015/863 (ROHS3) - 2011/65 (ROHS2) - 2000/53 - 2002/95(RoHS) - 2003/11 - 2005/618 AND PED 2014/68.
THE MATERIAL IS FREE OF ANY MERCURY, MERCURY COMPOUNDS AND OR RADIUM CONTAMINATION AT TIME OF SHIPMENT AND WAS PRODUCED WITHOUT USING OZONE DEPLETING SUBSTANCES OF CLASS I AND II.
VISUAL SURFACE INSPECTION AND EDDY CURRENT WITH ROTATING HEAD ACCORDING TO EN 10277-1 Class 4 : SATISFACTORY . DIMENSIONAL TEST ACCORDING TO EN 10278 : SATISFACTORY . ULTRASONIC TEST IN ACCORDING TO EN 10308 , Class 3 : SATISFACTORY . ANTIMIX SPECTROMETER CONTROL WITH PORTABLE PRODUCT : SATISFACTORY . NOT BEEN MADE BY ANY REPAIR MATERIAL WELDING
CORROSION TEST ACCORDING TO ASTM A262 Method E EN ISO 3651-2: SATISFACTORY. NO CRACKS AT 20X MAGNIFICATION

CORROSION TEST ACCORDING TO ASTM A262 Practice E EN ISO 3651-2: SATISFACTORY.
ROTARY HEAD EDDY CURRENT AND VISUAL INSPECTION OF SURFACE ACCORDING TO EN 10277-1 Class4: SATISFACTORY.
DIMENSIONAL CONTROL ACCORDING TO EN 10278 :SATISFACTORY.
ULTRASONIC TEST ACCORDING TO EN 10308 CLASS 4, EQUIVALENT TO SEP 1920 GROUP 3 CLASS C (CLASS B FOR SIZES > 75 MM) AND ASTM A388 FBH 5(ONLY FOR SIZES > 100 MM): SATISFACTORY.
ANTIMIX TEST WITH PORTABLE SPECTROMETER: SATISFACTORY.
NO WELDING REPAIR ON THE MATERIAL.
THE PRODUCT SATISFIES CE DIRECTIVES: 2011/65 (ROHS2) - 2000/53 - 2002/95(RoHS) - 2003/11 - 2005/618 AND PED 2014/68/EU.
MARKING: PRODUCER LOGO, MATERIAL NO, HEAT NO, LOT NR.
QUALITY SYSTEM CERTIFIED BY I.G.Q ACCORDING TO UNI EN ISO 9001:2008 - ISO/TS 16949:2009 (THE LAST ONE ONLY FOR HOT ROLLED-PEELED-GROUND, STAINLESS STEEL BARS AND ATOMIZED METALLIC POWDERS).

Heat treatment: annealed temperature 1060°C
Soaking time: 4 Hours, Cooling in water
Material Compliant to: ASTM A276-16a / A479-16a / A182-24
ASME: SA479; SA276; SA182 - UNS 31600 - 31630 AISI 316-316L
According to: NACE MR-0175 / ISO 15156-3:2015
NACE MR-103/ISO 17495-1:2016
Intergranular Corrosion according to EN ISO 3651-2:98 Met.A

Surface quality condition 2H conforming also to EN 10277 class 3

We certify hereby, that the above mentioned products are consistent with the order prescriptions.
This certificate was generated by data system acc. to EN 10204, it is not necessary to be signed for validity.

Materiale conforme alle seguenti direttive/regolamenti europee:
- Regolamento REACH 2006/1907/CE e tutti successivi aggiornamenti, compresa la modifica M80 Direttiva Delegata 2022/1632, e SVHC Candidate List aggiornata al 17/01/2023.
- Direttiva ROHS 2011/657UE e tutti i successivi aggiornamenti, compresa la modifica M80 attraverso la Direttiva Delegata 2022/1632, e Decreto Legislativo 27 del 04/03/2014.
- Direttiva RAEE 2012/19/UE e tutti successivi aggiornamenti, compresa la modifica M1 attraverso la Direttiva 2018/849.
- Direttiva ELV (End-of-Life Vehicles) 2000/53/CE e tutti i successivi aggiornamenti, compresa la modifica M15 attraverso la Direttiva 2020/363
- Contaminazione Radioattiva, Direttiva 2013/59/EURATOM e Decreto Legislativo N.101 del 31 Luglio 2020.
- Canadian List 168 aggiornata al 16/03/2022.
- Minerali di Conflitto, Regolamento (UE) 2017/821 e tutti i successivi aggiornamenti, compresa la modifica M1 attraverso il Regolamento Delegato 2020/1588, e Dodd-Frank Wall Street Reform and Consumer Protection Act Section 1502.

Material conforming to the following European directives/regulation:
- REACH regulation 2006/1907/EC and all subsequent updates, including modification M80 Delegate Directive, and SVHC Candidate List updated to 01/17/2023.
- ROHS Directive 2011/65/EU and all subsequent updates, including the M80 amendment through the Delegated Directive 2022/1632, and Italian Legislative Decree 27 of 03/04/2014.
- WEEE Directive 2012/19/EU and all subsequent updates, including the M1 amendment through Directive 2018/849.
- ELV (End-of-Life Vehicles) Directive 2000/53/EC and all subsequent updates, including the modification M15 through Directive 2020/363
- Radioactive Contamination, Directive 2013/59/EURATOM and Italian Legislative Decree No. 101 of 31 July 2020.
- Canadian List 168 updated 03/16/2022.
- Conflict Minerals, Regulation (EU) 2017/821 and all subsequent updates, including amendment M1 through Delegated Regulation 2020/1588, and Dodd-Frank Wall Street Reform and Consumer Protection Act Section 1502.

Azienda con sistema di gestione certificato da IGQ
secondo UNI EN ISO 9001:2015

The Company's Quality Management System
is certified by IGQ according to UNI EN ISO 9001:2015

Segue certificato di controllo N. 173501 Date 13/11/2023
Inspection Certificate's continuance

NOTE - Notes

Materiale Conforme a NACE MR-0175/ISO 15156-3:2015
NACE MR-103/ISO 17495-1:2016
Corrosione Intercristallina EN ISO 3651-2:98 Met.A

Melting Process: E + A. O. D
Intergranular corrosion tested to ASTM A262-15 "E"
Heat treatment: annealed temperature 1060°C
Soaking time: 4 Hours, Cooling in water
Material Compliant to: ASTM A276-16a / A479-16a / A182-24
ASME: SA479; SA276; SA182 - UNS 31600 - 31630 AISI 316-316L
According to: NACE MR-0175 / ISO 15156-3:2015
NACE MR-103/ISO 17495-1:2016
Intergranular Corrosion according to EN ISO 3651-2:98 Met.A

Surface quality condition 2H conforming also to EN 10277 class 3

We certify hereby, that the above mentioned products are consistent with the order prescriptions.
This certificate was generated by data system acc. to EN 10204, it is not necessary to be signed for validity.

Materiale conforme alle seguenti direttive/regolamenti europee:
. Regolamento REACH 2006/1907/CE e tutti successivi aggiornamenti, compresa la modifica M80 Direttiva Delegata 2022/1632, e SVHC Candidate List aggiornata al 17/01/2023.
. Direttiva ROHS 2011/657UE e tutti i successivi aggiornamenti, compresa la modifica M80 attraverso la Direttiva Delegata 2022/1632, e Decreto Legislativo 27 del 04/03/2014.
. Direttiva RAEE 2012/19/UE e tutti successivi aggiornamenti, compresa la modifica M1 attraverso la Direttiva 2018/849.
. Direttiva ELV (End-of-Life Vehicles) 2000/53/CE e tutti i successivi aggiornamenti, compresa la modifica M15 attraverso la Direttiva 2020/363
. Contaminazione Radioattiva, Direttiva 2013/59/EURATOM e Decreto Legislativo N.101 del 31 Luglio 2020.
. Canadian List 168 aggiornata al 16/03/2022.
. Minerali di Conflitto, Regolamento (UE) 2017/821 e tutti i successivi aggiornamenti, compresa la modifica M1 attraverso il Regolamento Delegato 2020/1588, e Dodd-Frank Wall Street Reform and Consumer Protection Act Section 1502.

Material conforming to the following European directives/regulation:
. REACH regulation 2006/1907/EC and all subsequent updates, including modification M80 Delegate Directive, and SVHC Candidate List updated to 01/17/2023.
. ROHS Directive 2011/65/EU and all subsequent updates, including the M80 amendment through the Delegated Directive 2022/1632, and Italian Legislative Decree 27 of 03/04/2014.
. WEEE Directive 2012/19/EU and all subsequent updates, including the M1 amendment through Directive 2018/849.
. ELV (End-of-Life Vehicles) Directive 2000/53/EC and all subsequent updates, including the modification M15 through Directive 2020/363
. Radioactive Contamination, Directive 2013/59/EURATOM and Italian Legislative Decree No. 101 of 31 July 2020.
. Canadian List 168 updated 03/16/2022.
. Conflict Minerals, Regulation (EU) 2017/821 and all subsequent updates, including amendment M1 through Delegated Regulation 2020/1588, and Dodd-Frank Wall Street Reform and Consumer Protection Act Section 1502.

SFERA / BALL

ANTIMIXING TEST BY PORTABLE SPECTROMETRE: CONFORMING
EDDY CURRENT INSPECTION OF SURFACE ACCORDING TO EN 10277 CLASS 4.
DIMENSIONAL CONTROL ACCORDING TO EN 10278: SATISFACTORY.
NO WELDING REPAIR ON THE MATERIAL.
ULTRASONIC TEST ACCORDING TO EN 10308 Class.3: SATISFACTORY
QUALITY SYSTEM CERTIFIED TO UNI EN ISO 9001:2015 -IATF 16949:2016 (THE LAST ONE ONLY FOR WIRE ROD AND HOT ROLLED-PEELED-GROUND STAINLESS STEEL BARS).
MATERIAL ACCORDING TO NORSOK M630 EDITION 6.
INSPECTOR'S STAMP LF
THE PRODUCT SATISFIES THE DIRECTIVES: 2015/863/EU (ROHS3) - 2011/65/EU (ROHS2) - 2000/53/EU - 2002/95/EU(RoHS) - 2003/11/EU-2005/618/EU AND PED 2014/68/EU.
THE MATERIAL IS FREE OF ANY MERCURY, MERCURY COMPOUNDS AND OR RADIUM CONTAMINATION AT TIME OF SHIPMENT AND WAS PRODUCED WITHOUT USING OZONE DEPLETING SUBSTANCES OF CLASS I AND II.
RADIOACTIVITY CONTROL PERFORMED WITH A GAMMA SPECTROMETER: ASTM E181.
GAMMA ACTIVITY ON THE PRODUCTS BELOW 0.1 BQ/G ACCORDING TO EU RESOLUTION 2013/59/EURATOM , IAEA RS-G-1.7 AND IAEA SSG-17.

Elongation	A 5 (%)	41,1
Hardness	HBW	211,0
Reduction of area	Z (%)	68,0

NOTE - Notes

Processo di Fusione: E + A. O. D.
Prova di Corrosione Intergranularena: ASTM A262-15 "E"
Trattamento termico: Temperatura di Solubilizzazione 1060°C
Tempo Mantenimento: 4 Ore, Raffreddamento in Acqua
Materiale conforme a: ASTM A276-16a / A479-16a / A182-24
ASME: SA479; SA276; SA182 - UNS 31600 - 31630 AISI 316-316L

Azienda con sistema di gestione certificato da IGQ secondo UNI EN ISO 9001:2015

The Company's Quality Management System is certified by IGQ according to UNI EN ISO 9001:2015

Segue certificato di controllo N. 173501 Date 13/11/2023
Inspection Certificate's continuance

NOTE - Notes

Materiale Conforme a NACE MR-0175/ISO 15156-3:2015
NACE MR-103/ISO 17495-1:2016
Corrosione Intercristallina EN ISO 3651-2:98 Met.A

Melting Process: E + A. O. D
Intergranular corrosion tested to ASTM A262-15 "E"
Heat treatment: annealed temperature 1060°C
Soaking time: 4 Hours, Cooling in water
Material Compliant to: ASTM A276-16a / A479-16a / A182-24
ASME: SA479; SA276; SA182 - UNS 31600 - 31630 AISI 316-316L
According to: NACE MR-0175 / ISO 15156-3:2015
NACE MR-103/ISO 17495-1:2016
Intergranular Corrosion according to EN ISO 3651-2:98 Met.A

Surface quality condition 2H conforming also to EN 10277 class 3

We certify hereby, that the above mentioned products are consistent with the order prescriptions.
This certificate was generated by data system acc. to EN 10204, it is not necessary to be signed for validity.

Materiale conforme alle seguenti direttive/regolamenti europee:
. Regolamento REACH 2006/1907/CE e tutti successivi aggiornamenti, compresa la modifica M80 Direttiva Delegata 2022/1632, e SVHC Candidate List aggiornata al 17/01/2023.
. Direttiva ROHS 2011/657UE e tutti i successivi aggiornamenti, compresa la modifica M80 attraverso la Direttiva Delegata 2022/1632, e Decreto Legislativo 27 del 04/03/2014.
. Direttiva RAEE 2012/19/UE e tutti successivi aggiornamenti, compresa la modifica M1 attraverso la Direttiva 2018/849.
. Direttiva ELV (End-of-Life Vehicles) 2000/53/CE e tutti i successivi aggiornamenti, compresa la modifica M15 attraverso la Direttiva 2020/363
. Contaminazione Radioattiva, Direttiva 2013/59/EURATOM e Decreto Legislativo N.101 del 31 Luglio 2020.
. Canadian List 168 aggiornata al 16/03/2022.
. Minerali di Conflitto, Regolamento (UE) 2017/821 e tutti i successivi aggiornamenti, compresa la modifica M1 attraverso il Regolamento Delegato 2020/1588, e Dodd-Frank Wall Street Reform and Consumer Protection Act Section 1502.

Material conforming to the following European directives/regulation:
. REACH regulation 2006/1907/EC and all subsequent updates, including modification M80 Delegate Directive, and SVHC Candidate List updated to 01/17/2023.
. ROHS Directive 2011/65/EU and all subsequent updates, including the M80 amendment through the Delegated Directive 2022/1632, and Italian Legislative Decree 27 of 03/04/2014.
. WEEE Directive 2012/19/EU and all subsequent updates, including the M1 amendment through Directive 2018/849.
. ELV (End-of-Life Vehicles) Directive 2000/53/EC and all subsequent updates, including the modification M15 through Directive 2020/363
. Radioactive Contamination, Directive 2013/59/EURATOM and Italian Legislative Decree No. 101 of 31 July 2020.
. Canadian List 168 updated 03/16/2022.
. Conflict Minerals, Regulation (EU) 2017/821 and all subsequent updates, including amendment M1 through Delegated Regulation 2020/1588, and Dodd-Frank Wall Street Reform and Consumer Protection Act Section 1502.

Melted, poured and manufactured in Italy No welding or weld repair Material free from Mercury contamination

We declare that the finished product is checked for radioactive contamination by the portal system when it leaves the production plant.

The Quality Management System is also Certified according to Pressure Equipment Directive 2014/68/EU Annex 1,chapt.4.3 by TÜV and LLOYD`S
The Quality Management System is also Certified according to PER 2016/1105, Schedule 2, Part 4, Para 31 (8) by Competent Body TÜV SUD BABT Unlimited.
Any act of tampering, modification, alteration, counterfeiting and/or falsification and/or any other action which modifies the contents of this test certificate shall constitute a violation of applicable civil and criminal laws. Acciaierie Valbruna shall protect its rights and interests before any competent court, authority and jurisdiction.
Maxival and/or Valplus grades/products are manufactured with ladle techniques to control composition, distribution, size and shape of non-metallic inclusions for improved machinability.
The supplied product conforms to requirements expressly requested by the purchaser and conforms to requirements specified by certified norms and standards. Should the product be used for more severe, critical and/ or in any case different applications than those the material is generally intended for, any different and/or supplementary requirements shall be specifically demanded, at least, upon order of the Product by the Purchaser. Acciaierie Valbruna SpA shall not be responsible for any improper use of the Products.

BGH-Auftrags-Nr. / BGH works no. / BGH référence: 359328-01

Zeugnis-Nr. / Certificate no. / No. de certificat: 494070

Erzeugnisform : Stab, rund, gewalzt, geschält
Product : round bars, rolled, peeled

Werkstoff/Quality : UNS N10276 (Chem.+Mech.only) Schmelze: 903981

Abmessung/Dimension: 25,40 RD

Anzahl/Quantity : 1 Bd Gewicht /Weight : 410 kg

Wärmebehandlungszustand : Hot finished - solution annealed
Condition of heat treat : solution annealed

Melted, poured and manufactured in Italy — No welding or weld repair — Material free from Mercury contamination

We declare that the finished product is checked for radioactive contamination by the portal system when it leaves the production plant.

The Quality Management System is also Certified according to Pressure Equipment Directive 2014/68/EU Annex 1,chapt.4.3 by TÜV and LLOYD'S
The Quality Management System is also Certified according to PER 2016/1105, Schedule 2, Part 4, Para 31 (8) by Competent Body TÜV SÜD BABT Unlimited.
Any act of tampering, modification, alteration, counterfeiting and/or falsification and/or any other action which modifies the contents of this test certificate shall constitute a violation of applicable civil and criminal laws. Acciaierie Valbruna shall protect its rights and interests before any competent court, authority and jurisdiction.
Maxival and/or Valplus grades/products are manufactured with ladle techniques to control composition, distribution, size and shape of non-metallic inclusions for improved machinability.
The supplied product conforms to requirements expressly requested by the purchaser and conforms to requirements specified by certified norms and standards. Should the product be used for more severe, critical and/ or in any case different applications than those the material is generally intended for, any different and/or supplementary requirements shall be specifically demanded, at least, upon order of the Product by the Purchaser. Acciaierie Valbruna SpA shall not be responsible for any improper use of the Products.

Melted, poured and manufactured in Italy No welding or weld repair Material free from Mercury contamination

We declare that the finished product is checked for radioactive contamination by the portal system when it leaves the production plant.

The Quality Management System is also Certified according to Pressure Equipment Directive 2014/68/EU Annex 1,chapt.4.3 by TÜV and LLOYD`S
The Quality Management System is also Certified according to PER 2016/1105, Schedule 2, Part 4, Para 31 (8) by Competent Body TÜV SUD BABT Unlimited.
Any act of tampering, modification, alteration, counterfeiting and/or falsification and/or any other action which modifies the contents of this test certificate shall constitute a violation of applicable civil and criminal laws. Acciaierie Valbruna shall protect its rights and interests before any competent court, authority and jurisdiction.
Maxival and/or Valplus grades/products are manufactured with ladle techniques to control composition, distribution, size and shape of non-metallic inclusions for improved machinability.
The supplied product conforms to requirements expressly requested by the purchaser and conforms to requirements specified by certified norms and standards. Should the product be used for more severe, critical and/ or in any case different applications than those the material is generally intended for, any different and/or supplementary requirements shall be specifically demanded, at least, upon order of the Product by the Purchaser. Acciaierie Valbruna SpA shall not be responsible for any improper use of the Products.

Melted, poured and manufactured in Italy No welding or weld repair Material free from Mercury contamination

We declare that the finished product is checked for radioactive contamination by the portal system when it leaves the production plant.

The Quality Management System is also Certified according to Pressure Equipment Directive 2014/68/EU Annex 1,chapt.4.3 by TÜV and LLOYD'S
The Quality Management System is also Certified according to PER 2016/1105, Schedule 2, Part 4, Para 31 (8) by Competent Body TÜV SUD BABT Unlimited.
Any act of tampering, modification, alteration, counterfeiting and/or falsification and/or any other action which modifies the contents of this test certificate shall constitute a violation of applicable civil and criminal laws. Acciaierie Valbruna shall protect its rights and interests before any competent court, authority and jurisdiction.
Maxival and/or Valplus grades/products are manufactured with ladle techniques to control composition, distribution, size and shape of non-metallic inclusions for improved machinability.
The supplied product conforms to requirements expressly requested by the purchaser and conforms to requirements specified by certified norms and standards. Should the product be used for more severe, critical and/ or in any case different applications than those the material is generally intended for, any different and/or supplementary requirements shall be specifically demanded, at least, upon order of the Product by the Purchaser. Acciaierie Valbruna SpA shall not be responsible for any improper use of the Products.

Melted, poured and manufactured in Italy No welding or weld repair Material free from Mercury contamination

We declare that the finished product is checked for radioactive contamination by the portal system when it leaves the production plant.

The Quality Management System is also Certified according to Pressure Equipment Directive 2014/68/EU Annex 1,chapt.4.3 by TÜV and LLOYD'S
The Quality Management System is also Certified according to PER 2016/1105, Schedule 2, Part 4, Para 31 (8) by Competent Body TÜV SUD BABT Unlimited.
Any act of tampering, modification, alteration, counterfeiting and/or falsification and/or any other action which modifies the contents of this test certificate shall constitute a violation of applicable civil and criminal laws. Acciaierie Valbruna shall protect its rights and interests before any competent court, authority and jurisdiction.
Maxival and/or Valplus grades/products are manufactured with ladle techniques to control composition, distribution, size and shape of non-metallic inclusions for improved machinability.
The supplied product conforms to requirements expressly requested by the purchaser and conforms to requirements specified by certified norms and standards. Should the product be used for more severe, critical and/ or in any case different applications than those the material is generally intended for, any different and/or supplementary requirements shall be specifically demanded, at least, upon order of the Product by the Purchaser. Acciaierie Valbruna SpA shall not be responsible for any improper use of the Products.

The Quality Management System is also Certified according to Pressure Equipment Directive 2014/68/EU Annex 1,chapt.4.3 by TÜV and LLOYD`S
The Quality Management System is also Certified according to PER 2016/1105, Schedule 2, Part 4, Para 31 (8) by Competent Body TÜV SUD BABT Unlimited.
Any act of tampering, modification, alteration, counterfeiting and/or falsification and/or any other action which modifies the contents of this test certificate shall constitute a violation of applicable civil and criminal laws. Acciaierie Valbruna shall protect its rights and interests before any competent court, authority and jurisdiction.
Maxival and/or Valplus grades/products are manufactured with ladle techniques to control composition, distribution, size and shape of non-metallic inclusions for improved machinability.
The supplied product conforms to requirements expressly requested by the purchaser and conforms to requirements specified by certified norms and standards. Should the product be used for more severe, critical and/ or in any case different applications than those the material is generally intended for, any different and/or supplementary requirements shall be specifically demanded, at least, upon order of the Product by the Purchaser. Acciaierie Valbruna SpA shall not be responsible for any improper use of the Products.

Melted, poured and manufactured in Italy No welding or weld repair Material free from Mercury contamination

We declare that the finished product is checked for radioactive contamination by the portal system when it leaves the production plant.

The Quality Management System is also Certified according to Pressure Equipment Directive 2014/68/EU Annex 1,chapt.4.3 by TÜV and LLOYD'S
The Quality Management System is also Certified according to PER 2016/1105, Schedule 2, Part 4, Para 31 (8) by Competent Body TÜV SUD BABT Unlimited.
Any act of tampering, modification, alteration, counterfeiting and/or falsification and/or any other action which modifies the contents of this test certificate shall constitute a violation of applicable civil and criminal laws. Acciaierie Valbruna shall protect its rights and interests before any competent court, authority and jurisdiction.
Maxival and/or Valplus grades/products are manufactured with ladle techniques to control composition, distribution, size and shape of non-metallic inclusions for improved machinability.
The supplied product conforms to requirements expressly requested by the purchaser and conforms to requirements specified by certified norms and standards. Should the product be used for more severe, critical and/ or in any case different applications than those the material is generally intended for, any different and/or supplementary requirements shall be specifically demanded, at least, upon order of the Product by the Purchaser. Acciaierie Valbruna SpA shall not be responsible for any improper use of the Products.

Azienda con sistema di gestione certificato da IGQ secondo UNI EN ISO 9001:2015

The Company's Quality Management System is certified by IGQ according to UNI EN ISO 9001:2015

Segue certificato di controllo N. 173501 Date 13/11/2023
Inspection Certificate's continuance

NOTE - Notes

Materiale Conforme a NACE MR-0175/ISO 15156-3:2015
NACE MR-103/ISO 17495-1:2016
Corrosione Intercristallina EN ISO 3651-2:98 Met.A

Melting Process: E + A. O. D
Intergranular corrosion tested to ASTM A262-15 "E"
Heat treatment: annealed temperature 1060°C
Soaking time: 4 Hours, Cooling in water
Material Compliant to: ASTM A276-16a / A479-16a / A182-24
ASME: SA479; SA276; SA182 - UNS 31600 - 31630 AISI 316-316L
According to: NACE MR-0175 / ISO 15156-3:2015
NACE MR-103/ISO 17495-1:2016
Intergranular Corrosion according to EN ISO 3651-2:98 Met.A

Surface quality condition 2H conforming also to EN 10277 class 3

We certify hereby, that the above mentioned products are consistent with the order prescriptions.
This certificate was generated by data system acc. to EN 10204, it is not necessary to be signed for validity.

Materiale conforme alle seguenti direttive/regolamenti europee:
. Regolamento REACH 2006/1907/CE e tutti successivi aggiornamenti, compresa la modifica M80 Direttiva Delegata 2022/1632, e SVHC Candidate List aggiornata al 17/01/2023.
. Direttiva ROHS 2011/6570E e tutti i successivi aggiornamenti, compresa la modifica M80 attraverso la Direttiva Delegata 2022/1632, e Decreto Legislativo 27 del 04/03/2014.
. Direttiva RAEE 2012/19/UE e tutti successivi aggiornamenti, compresa la modifica M1 attraverso la Direttiva 2018/849.
. Direttiva ELV (End-of-Life Vehicles) 2000/53/CE e tutti i successivi aggiornamenti, compresa la modifica M15 attraverso la Direttiva 2020/363
. Contaminazione Radioattiva, Direttiva 2013/59/EURATOM e Decreto Legislativo N.101 del 31 Luglio 2020.
. Canadian List 168 aggiornata al 16/03/2022.
. Minerali di Conflitto, Regolamento (UE) 2017/821 e tutti i successivi aggiornamenti, compresa la modifica M1 attraverso il Regolamento Delegato 2020/1588, e Dodd-Frank Wall Street Reform and Consumer Protection Act Section 1502.

Material conforming to the following European directives/regulation:
. REACH regulation 2006/1907/EC and all subsequent updates, including modification M80 Delegate Directive, and SVHC Candidate List updated to 01/17/2023.
. ROHS Directive 2011/65/EU and all subsequent updates, including the M80 amendment through the Delegated Directive 2022/1632, and Italian Legislative Decree 27 of 03/04/2014.
. WEEE Directive 2012/19/EU and all subsequent updates, including the M1 amendment through Directive 2018/849.
. ELV (End-of-Life Vehicles) Directive 2000/53/EC and all subsequent updates, including the modification M15 through Directive 2020/363
. Radioactive Contamination, Directive 2013/59/EURATOM and Italian Legislative Decree No. 101 of 31 July 2020.
. Canadian List 168 updated 03/16/2022.
. Conflict Minerals, Regulation (EU) 2017/821 and all subsequent updates, including amendment M1 through Delegated Regulation 2020/1588, and Dodd-Frank Wall Street Reform and Consumer Protection Act Section 1502.

Melted, poured and manufactured in Italy No welding or weld repair Material free from Mercury contamination

We declare that the finished product is checked for radioactive contamination by the portal system when it leaves the production plant.

The Quality Management System is also Certified according to Pressure Equipment Directive 2014/68/EU Annex 1,chapt.4.3 by TÜV and LLOYD`S
The Quality Management System is also Certified according to PER 2016/1105, Schedule 2, Part 4, Para 31 (8) by Competent Body TÜV SUD BABT Unlimited.
Any act of tampering, modification, alteration, counterfeiting and/or falsification and/or any other action which modifies the contents of this test certificate shall constitute a violation of applicable civil and criminal laws. Acciaierie Valbruna shall protect its rights and interests before any competent court, authority and jurisdiction.
Maxival and/or Valplus grades/products are manufactured with ladle techniques to control composition, distribution, size and shape of non-metallic inclusions for improved machinability.
The supplied product conforms to requirements expressly requested by the purchaser and conforms to requirements specified by certified norms and standards. Should the product be used for more severe, critical and/ or in any case different applications than those the material is generally intended for, any different and/or supplementary requirements shall be specifically demanded, at least, upon order of the Product by the Purchaser. Acciaierie Valbruna SpA shall not be responsible for any improper use of the Products.

Soaking time: 4 Hours, Cooling in water
Intergranular corrosion tested to ASTM A262-15 "E"
According to: NACE MR-0175 / ISO 15156-3:2015
NACE MR-103/ISO 17495-1:2016
Material Compliant to: ASTM A276-24a / A479-23a/ A182-24
ASME SA: 479-21 276-21 182; UNS 31600 - 31630 AISI 316-316L
Intergranular Corrosion according to EN ISO 3651-2:98 Met.A

Surface quality condition 2H conforming also to EN 10277 class 3

We certify hereby, that the above mentioned products are consistent with the order prescriptions.
This certificate was generated by data system acc. to EN 10204, it is not necessary to be signed for validity.

Materiale conforme alle seguenti direttive/regolamenti europee:
. Regolamento REACH 2006/1907/CE e tutti successivi aggiornamenti, compresa la modifica M80 Direttiva Delegata 2022/1632, e SVHC Candidate List aggiornata al 17/01/2023.
. Direttiva ROHS 2011/65/UE e tutti i successivi aggiornamenti, compresa la modifica M80 attraverso la Direttiva Delegata 2022/1632, e Decreto Legislativo 27 del 04/03/2014.
. Direttiva RAEE 2012/19/UE e tutti successivi aggiornamenti, compresa la modifica M1 attraverso la Direttiva 2018/849.
. Direttiva ELV (End-of-Life Vehicles) 2000/53/CE e tutti i successivi aggiornamenti, compresa la modifica M15 attraverso la Direttiva 2020/363
. Contaminazione Radioattiva, Direttiva 2013/59/EURATOM e Decreto Legislativo N.101 del 31 Luglio 2020.
. Canadian List 168 aggiornata al 16/03/2022.
. Minerali di Conflitto, Regolamento (UE) 2017/821 e tutti i successivi aggiornamenti, compresa la modifica M1 attraverso il Regolamento Delegato 2020/1588, e Dodd-Frank Wall Street Reform and Consumer Protection Act Section 1502.

Material conforming to the following European directives/regulation:
. REACH regulation 2006/1907/EC and all subsequent updates, including modification M80 Delegate Directive, and SVHC Candidate List updated to 01/17/2023.
. ROHS Directive 2011/65/EU and all subsequent updates, including the M80 amendment through the Delegated Directive 2022/1632, and Italian Legislative Decree 27 of 03/04/2014.
. WEEE Directive 2012/19/EU and all subsequent updates, including the M1 amendment through Directive 2018/849.
. ELV (End-of-Life Vehicles) Directive 2000/53/EC and all subsequent updates, including the modification M15 through Directive 2020/363
. Radioactive Contamination, Directive 2013/59/EURATOM and Italian Legislative Decree No. 101 of 31 July 2020.
. Canadian List 168 updated 03/16/2022.
. Conflict Minerals, Regulation (EU) 2017/821 and all subsequent updates, including amendment M1 through Delegated Regulation 2020/1588, and Dodd-Frank Wall Street Reform and Consumer Protection Act Section 1502.

Melted, poured and manufactured in Italy No welding or weld repair Material free from Mercury contamination

We declare that the finished product is checked for radioactive contamination by the portal system when it leaves the production plant.

The Quality Management System is also Certified according to Pressure Equipment Directive 2014/68/EU Annex 1,chapt.4.3 by TÜV and LLOYD'S
The Quality Management System is also Certified according to PER 2016/1105, Schedule 2, Part 4, Para 31 (8) by Competent Body TÜV SUD BABT Unlimited.
Any act of tampering, modification, alteration, counterfeiting and/or falsification and/or any other action which modifies the contents of this test certificate shall constitute a violation of applicable civil and criminal laws. Acciaierie Valbruna shall protect its rights and interests before any competent court, authority and jurisdiction.
Maxival and/or Valplus grades/products are manufactured with ladle techniques to control composition, distribution, size and shape of non-metallic inclusions for improved machinability.
The supplied product conforms to requirements expressly requested by the purchaser and conforms to requirements specified by certified norms and standards. Should the product be used for more severe, critical and/ or in any case different applications than those the material is generally intended for, any different and/or supplementary requirements shall be specifically demanded, at least, upon order of the Product by the Purchaser. Acciaierie Valbruna SpA shall not be responsible for any improper use of the Products.

Melted, poured and manufactured in Italy No welding or weld repair Material free from Mercury contamination

We declare that the finished product is checked for radioactive contamination by the portal system when it leaves the production plant.

The Quality Management System is also Certified according to Pressure Equipment Directive 2014/68/EU Annex 1,chapt.4.3 by TÜV and LLOYD`S
The Quality Management System is also Certified according to PER 2016/1105, Schedule 2, Part 4, Para 31 (8) by Competent Body TÜV SUD BABT Unlimited.
Any act of tampering, modification, alteration, counterfeiting and/or falsification and/or any other action which modifies the contents of this test certificate shall constitute a violation of applicable civil and criminal laws. Acciaierie Valbruna shall protect its rights and interests before any competent court, authority and jurisdiction.
Maxival and/or Valplus grades/products are manufactured with ladle techniques to control composition, distribution, size and shape of non-metallic inclusions for improved machinability.
The supplied product conforms to requirements expressly requested by the purchaser and conforms to requirements specified by certified norms and standards. Should the product be used for more severe, critical and/ or in any case different applications than those the material is generally intended for, any different and/or supplementary requirements shall be specifically demanded, at least, upon order of the Product by the Purchaser. Acciaierie Valbruna SpA shall not be responsible for any improper use of the Products.

Melted, poured and manufactured in Italy No welding or weld repair Material free from Mercury contamination

We declare that the finished product is checked for radioactive contamination by the portal system when it leaves the production plant.

The Quality Management System is also Certified according to Pressure Equipment Directive 2014/68/EU Annex 1,chapt.4.3 by TÜV and LLOYD'S
The Quality Management System is also Certified according to PER 2016/1105, Schedule 2, Part 4, Para 31 (8) by Competent Body TÜV SUD BABT Unlimited.
Any act of tampering, modification, alteration, counterfeiting and/or falsification and/or any other action which modifies the contents of this test certificate shall constitute a violation of applicable civil and criminal laws. Acciaierie Valbruna shall protect its rights and interests before any competent court, authority and jurisdiction.
Maxival and/or Valplus grades/products are manufactured with ladle techniques to control composition, distribution, size and shape of non-metallic inclusions for improved machinability.
The supplied product conforms to requirements expressly requested by the purchaser and conforms to requirements specified by certified norms and standards. Should the product be used for more severe, critical and/ or in any case different applications than those the material is generally intended for, any different and/or supplementary requirements shall be specifically demanded, at least, upon order of the Product by the Purchaser. Acciaierie Valbruna SpA shall not be responsible for any improper use of the Products.

Certifichiamo che i materiali sono stati fabbricati, campionati, testati e ispezionati in conformità alle specifiche e conformi alle prescrizioni degli ordini.
We certify that the fasteners were manufactured, sampled, tested and inspected in accordance with the specification and are consistent with order prescriptions.

Melted, poured and manufactured in Italy No welding or weld repair Material free from Mercury contamination

We declare that the finished product is checked for radioactive contamination by the portal system when it leaves the production plant.

The Quality Management System is also Certified according to Pressure Equipment Directive 2014/68/EU Annex 1,chapt.4.3 by TÜV and LLOYD`S
The Quality Management System is also Certified according to PER 2016/1105, Schedule 2, Part 4, Para 31 (8) by Competent Body TÜV SUD BABT Unlimited.
Any act of tampering, modification, alteration, counterfeiting and/or falsification and/or any other action which modifies the contents of this test certificate shall constitute a violation of applicable civil and criminal laws. Acciaierie Valbruna shall protect its rights and interests before any competent court, authority and jurisdiction.
Maxival and/or Valplus grades/products are manufactured with ladle techniques to control composition, distribution, size and shape of non-metallic inclusions for improved machinability.
The supplied product conforms to requirements expressly requested by the purchaser and conforms to requirements specified by certified norms and standards. Should the product be used for more severe, critical and/ or in any case different applications than those the material is generally intended for, any different and/or supplementary requirements shall be specifically demanded, at least, upon order of the Product by the Purchaser. Acciaierie Valbruna SpA shall not be responsible for any improper use of the Products.

Melted, poured and manufactured in Italy No welding or weld repair Material free from Mercury contamination

We declare that the finished product is checked for radioactive contamination by the portal system when it leaves the production plant.

The Quality Management System is also Certified according to Pressure Equipment Directive 2014/68/EU Annex 1,chapt.4.3 by TÜV and LLOYD'S
The Quality Management System is also Certified according to PER 2016/1105, Schedule 2, Part 4, Para 31 (8) by Competent Body TÜV SUD BABT Unlimited.
Any act of tampering, modification, alteration, counterfeiting and/or falsification and/or any other action which modifies the contents of this test certificate shall constitute a violation of applicable civil and criminal laws. Acciaierie Valbruna shall protect its rights and interests before any competent court, authority and jurisdiction.
Maxival and/or Valplus grades/products are manufactured with ladle techniques to control composition, distribution, size and shape of non-metallic inclusions for improved machinability.
The supplied product conforms to requirements expressly requested by the purchaser and conforms to requirements specified by certified norms and standards. Should the product be used for more severe, critical and/ or in any case different applications than those the material is generally intended for, any different and/or supplementary requirements shall be specifically demanded, at least, upon order of the Product by the Purchaser. Acciaierie Valbruna SpA shall not be responsible for any improper use of the Products.

Soaking time: 4 Hours, Cooling in water
Intergranular corrosion tested to ASTM A262-15 "E"
According to: NACE MR-0175 / ISO 15156-3:2015
NACE MR-103/ISO 17495-1:2016
Material Compliant to: ASTM A276-24a / A479-23a/ A182-24
ASME SA: 479-21 276-21 182; UNS 31600 - 31630 AISI 316-316L
Intergranular Corrosion according to EN ISO 3651-2:98 Met.A

Surface quality condition 2H conforming also to EN 10277 class 3

We certify hereby, that the above mentioned products are consistent with the order prescriptions.
This certificate was generated by data system acc. to EN 10204, it is not necessary to be signed for validity.

Materiale conforme alle seguenti direttive/regolamenti europee:
. Regolamento REACH 2006/1907/CE e tutti successivi aggiornamenti, compresa la modifica M80 Direttiva Delegata 2022/1632, e SVHC Candidate List aggiornata al 17/01/2023.
. Direttiva ROHS 2011/65/UE e tutti i successivi aggiornamenti, compresa la modifica M80 attraverso la Direttiva Delegata 2022/1632, e Decreto Legislativo 27 del 04/03/2014.
. Direttiva RAEE 2012/19/UE e tutti successivi aggiornamenti, compresa la modifica M1 attraverso la Direttiva 2018/849.
. Direttiva ELV (End-of-Life Vehicles) 2000/53/CE e tutti i successivi aggiornamenti, compresa la modifica M15 attraverso la Direttiva 2020/363
. Contaminazione Radioattiva, Direttiva 2013/59/EURATOM e Decreto Legislativo N.101 del 31 Luglio 2020.
. Canadian List 168 aggiornata al 16/03/2022.
. Minerali di Conflitto, Regolamento (UE) 2017/821 e tutti i successivi aggiornamenti, compresa la modifica M1 attraverso il Regolamento Delegato 2020/1588, e Dodd-Frank Wall Street Reform and Consumer Protection Act Section 1502.

Material conforming to the following European directives/regulation:
. REACH regulation 2006/1907/EC and all subsequent updates, including modification M80 Delegate Directive, and SVHC Candidate List updated to 01/17/2023.
. ROHS Directive 2011/65/EU and all subsequent updates, including the M80 amendment through the Delegated Directive 2022/1632, and Italian Legislative Decree 27 of 03/04/2014.
. WEEE Directive 2012/19/EU and all subsequent updates, including the M1 amendment through Directive 2018/849.
. ELV (End-of-Life Vehicles) Directive 2000/53/EC and all subsequent updates, including the modification M15 through Directive 2020/363
. Radioactive Contamination, Directive 2013/59/EURATOM and Italian Legislative Decree No. 101 of 31 July 2020.
. Canadian List 168 updated 03/16/2022.
. Conflict Minerals, Regulation (EU) 2017/821 and all subsequent updates, including amendment M1 through Delegated Regulation 2020/1588, and Dodd-Frank Wall Street Reform and Consumer Protection Act Section 1502.

Corrosion test in 16% sulfuric acid and copper sulfate solutions

Test standard: UNI EN ISO 3651-2 Method A

Test	Heat treatment before test	Length of Period (h)	Test temp (°C)	Bend Angle (°)	Ø spindle (mm)	Result of visual inspection at 20 x magnification after bend test	Result
Intergranular corrosion	Sensitized T1	20	boil	90	5	Absence of cracks	SATISFACTORY

Corrosion test in 16% sulfuric acid and copper sulfate solutions

Test standard: ASTM A262-Practice E

Test	Heat treatment before test	Length of Period (h)	Test temp (°C)	Bend Angle (°)	Ø spindle (mm)	Result of visual inspection at 20 x magnification after bend test	Result
Intergranular corrosion	Sensitization	15	boil	180	5	Absence of cracks	SATISFACTORY

Reduction ratio = 457,3 : 1
Material annealed 1040°C for 135'(total time)/water cooled.
SURFACE QUALITY COMPLIANT TO EN 10088-3 TAB.1 COND. 2H
"Issued in agreement with TÜV SÜD Industrie Service GMBH (07/1972)"
"Qs approved according to PED, Annex I, Para. 4.3 by Notified Body 0036"
"(Certification no. DGR-0036-QS-W 23/2002/MUC)"

Melted, poured and manufactured in Italy No welding or weld repair Material free from Mercury contamination

We declare that the finished product is checked for radioactive contamination by the portal system when it leaves the production plant.

The Quality Management System is also Certified according to Pressure Equipment Directive 2014/68/EU Annex 1,chapt.4.3 by TÜV and LLOYD'S
The Quality Management System is also Certified according to PER 2016/1105, Schedule 2, Part 4, Para 31 (8) by Competent Body TÜV SUD BABT Unlimited.
Any act of tampering, modification, alteration, counterfeiting and/or falsification and/or any other action which modifies the contents of this test certificate shall constitute a violation of applicable civil and criminal laws. Acciaierie Valbruna shall protect its rights and interests before any competent court, authority and jurisdiction.
Maxival and/or Valplus grades/products are manufactured with ladle techniques to control composition, distribution, size and shape of non-metallic inclusions for improved machinability.
The supplied product conforms to requirements expressly requested by the purchaser and conforms to requirements specified by certified norms and standards. Should the product be used for more severe, critical and/ or in any case different applications than those the material is generally intended for, any different and/or supplementary requirements shall be specifically demanded, at least, upon order of the Product by the Purchaser. Acciaierie Valbruna SpA shall not be responsible for any improper use of the Products.

QUALITY MANAGEMENT SYSTEM CERTIFIED BY LLOYD'S REGISTER ACCORDING TO ISO 9001 : 2015, IATF 16949 : 2016, AS 9100D

Corrosion test in 16% sulfuric acid and copper sulfate solutions

Test standard: UNI EN ISO 3651-2 Method A

Test	Heat treatment before test	Length of Period (h)	Test temp (°C)	Bend Angle (°)	Ø spindle (mm)	Result of visual inspection at 20 x magnification after bend test	Result
Intergranular corrosion	Sensitized T1	20	boil	90	5	Absence of cracks	**SATISFACTORY**

Furnace calibrated according to API 6A REV 21th ED ANNEX M.
Furnace calibrated according to API 6D REV 25th ED ANNEX H.
Macroetch test per ASTM E381: acceptable.
Reduction ratio = 12,6 : 1
SURFACE QUALITY GUARANTEE BY ET INSPECTION (max defect depth 1% DIAMETER)
UT ACC. TO:A388/API 6A PSL3-EN 10308cl.3-ASME B16.34/IV
Solution annealed 1080°C for 3h/water cooled.
Treatment made on date 23/10/2023 in batch
furnace M1A calibration expiry date 29/11/2023.
"Issued in agreement with TÜV SÜD Industrie Service GMBH
(07/1972)"
"Qs approved according to PED, Annex I, Para. 4.3 by
Notified Body 0036"
"(Certification no. DGR-0036-QS-W 23/2002/MUC)"

Melted, poured and manufactured in Italy No welding or weld repair Material free from Mercury contamination

We declare that the finished product is checked for radioactive contamination by the portal system when it leaves the production plant.

The Quality Management System is also Certified according to Pressure Equipment Directive 2014/68/EU Annex 1,chapt.4.3 by TÜV and LLOYD`S
The Quality Management System is also Certified according to PER 2016/1105, Schedule 2, Part 4, Para 31 (8) by Competent Body TÜV SUD BABT Unlimited.
Any act of tampering, modification, alteration, counterfeiting and/or falsification and/or any other action which modifies the contents of this test certificate shall constitute a violation of applicable civil and criminal laws. Acciaierie Valbruna shall protect its rights and interests before any competent court, authority and jurisdiction.
Maxival and/or Valplus grades/products are manufactured with ladle techniques to control composition, distribution, size and shape of non-metallic inclusions for improved machinability.
The supplied product conforms to requirements expressly requested by the purchaser and conforms to requirements specified by certified norms and standards. Should the product be used for more severe, critical and/ or in any case different applications than those the material is generally intended for, any different and/or supplementary requirements shall be specifically demanded, at least, upon order of the Product by the Purchaser. Acciaierie Valbruna SpA shall not be responsible for any improper use of the Products.

Melted, poured and manufactured in Italy No welding or weld repair Material free from Mercury contamination

We declare that the finished product is checked for radioactive contamination by the portal system when it leaves the production plant.

The Quality Management System is also Certified according to Pressure Equipment Directive 2014/68/EU Annex 1,chapt.4.3 by TÜV and LLOYD`S
The Quality Management System is also Certified according to PER 2016/1105, Schedule 2, Part 4, Para 31 (8) by Competent Body TÜV SUD BABT Unlimited.
Any act of tampering, modification, alteration, counterfeiting and/or falsification and/or any other action which modifies the contents of this test certificate shall constitute a violation of applicable civil and criminal laws. Acciaierie Valbruna shall protect its rights and interests before any competent court, authority and jurisdiction.
Maxival and/or Valplus grades/products are manufactured with ladle techniques to control composition, distribution, size and shape of non-metallic inclusions for improved machinability.
The supplied product conforms to requirements expressly requested by the purchaser and conforms to requirements specified by certified norms and standards. Should the product be used for more severe, critical and/ or in any case different applications than those the material is generally intended for, any different and/or supplementary requirements shall be specifically demanded, at least, upon order of the Product by the Purchaser. Acciaierie Valbruna SpA shall not be responsible for any improper use of the Products.

Melted, poured and manufactured in Italy No welding or weld repair Material free from Mercury contamination

We declare that the finished product is checked for radioactive contamination by the portal system when it leaves the production plant.

The Quality Management System is also Certified according to Pressure Equipment Directive 2014/68/EU Annex 1,chapt.4.3 by TÜV and LLOYD'S
The Quality Management System is also Certified according to PER 2016/1105, Schedule 2, Part 4, Para 31 (8) by Competent Body TÜV SUD BABT Unlimited.
Any act of tampering, modification, alteration, counterfeiting and/or falsification and/or any other action which modifies the contents of this test certificate shall constitute a violation of applicable civil and criminal laws. Acciaierie Valbruna shall protect its rights and interests before any competent court, authority and jurisdiction.
Maxival and/or Valplus grades/products are manufactured with ladle techniques to control composition, distribution, size and shape of non-metallic inclusions for improved machinability.
The supplied product conforms to requirements expressly requested by the purchaser and conforms to requirements specified by certified norms and standards. Should the product be used for more severe, critical and/ or in any case different applications than those the material is generally intended for, any different and/or supplementary requirements shall be specifically demanded, at least, upon order of the Product by the Purchaser. Acciaierie Valbruna SpA shall not be responsible for any improper use of the Products.

Intergranular Corrosion according to EN ISO 3651-2:98 Met.A

Surface quality condition 2H conforming also to EN 10277 class 3

We certify hereby, that the above mentioned products are consistent with the order prescriptions.
This certificate was generated by data system acc. to EN 10204, it is not necessary to be signed for validity.

Materiale conforme alle seguenti direttive/regolamenti europee:
- Regolamento REACH 2006/1907/CE e tutti successivi aggiornamenti, compresa la modifica MBO Direttiva Delegata 2022/1632, e SVHC Candidate List aggiornata al 17/0172023.
- Direttiva ROHS 2011/657UE e tutti i successivi aggiornamenti, compresa la modifica MBO attraverso la Direttiva Delegata 2022/1632, e Decreto Legislativo 27 del 04/03/2014.
- Direttiva RAEE 2012/19/Ue e tutti successivi aggiornamenti, compresa la modifica M1 attraverso la Direttiva 2018/849.
- Direttiva ELV (End-of-Life Vehicles) 2000/53/CE e tutti i successivi aggiornamenti, compresa la modifica M15 attraverso la Direttiva 2020/363
- Contaminazione Radioattiva, Direttiva 2013/59/EURATOM e Decreto Legislativo N.101 del 31 Luglio 2020.
- Canadian List 168 aggiornata al 16/03/2022.
- Minerali di Conflitto, Regolamento (UE) 2017/821 e tutti i successivi aggiornamenti, compresa la modifica M1 attraverso il Regolamento Delegato 2020/1588, e Dodd-Frank Wall Street Reform and Consumer Protection Act Section 1502.

Material conforming to the following European directives/regulation:
- REACH regulation 2006/1907/EC and all subsequent updates, including modification MBO Delegate Directive, and SVHC Candidate List updated to 01/17/2023.
- ROHS Directive 2011/65/EU and all subsequent updates, including the MBO amendment through the Delegated Directive 2022/1632, and Italian Legislative Decree 27 of 03/04/2014.
- WEEE Directive 2012/19/EU and all subsequent updates, including the M1 amendment through Directive 2018/849.
- ELV (End-of-Life Vehicles) Directive 2000/53/EC and all subsequent updates, including the modification M15 through Directive 2020/363
- Radioactive Contamination, Directive 2013/59/EURATOM and Italian Legislative Decree No. 101 of 31 July 2020.
- Canadian List 168 updated 03/16/2022.
- Conflict Minerals, Regulation (EU) 2017/821 and all subsequent updates, including amendment M1 through Delegated Regulation 2020/1588, and Dodd-Frank Wall Street Reform and Consumer Protection Act Section 1502.

Melted, poured and manufactured in Italy No welding or weld repair Material free from Mercury contamination

We declare that the finished product is checked for radioactive contamination by the portal system when it leaves the production plant.

The Quality Management System is also Certified according to Pressure Equipment Directive 2014/68/EU Annex 1,chapt.4.3 by TÜV and LLOYD`S
The Quality Management System is also Certified according to PER 2016/1105, Schedule 2, Part 4, Para 31 (8) by Competent Body TÜV SUD BABT Unlimited.
Any act of tampering, modification, alteration, counterfeiting and/or falsification and/or any other action which modifies the contents of this test certificate shall constitute a violation of applicable civil and criminal laws. Acciaierie Valbruna shall protect its rights and interests before any competent court, authority and jurisdiction.
Maxival and/or Valplus grades/products are manufactured with ladle techniques to control composition, distribution, size and shape of non-metallic inclusions for improved machinability.
The supplied product conforms to requirements expressly requested by the purchaser and conforms to requirements specified by certified norms and standards. Should the product be used for more severe, critical and/ or in any case different applications than those the material is generally intended for, any different and/or supplementary requirements shall be specifically demanded, at least, upon order of the Product by the Purchaser. Acciaierie Valbruna SpA shall not be responsible for any improper use of the Products.

The Quality Management System is also Certified according to Pressure Equipment Directive 2014/68/EU Annex 1,chapt.4.3 by TÜV and LLOYD`S
The Quality Management System is also Certified according to PER 2016/1105, Schedule 2, Part 4, Para 31 (8) by Competent Body TÜV SUD BABT Unlimited.
Any act of tampering, modification, alteration, counterfeiting and/or falsification and/or any other action which modifies the contents of this test certificate shall constitute a violation of applicable civil and criminal laws. Acciaierie Valbruna shall protect its rights and interests before any competent court, authority and jurisdiction.
Maxival and/or Valplus grades/products are manufactured with ladle techniques to control composition, distribution, size and shape of non-metallic inclusions for improved machinability.
The supplied product conforms to requirements expressly requested by the purchaser and conforms to requirements specified by certified norms and standards. Should the product be used for more severe, critical and/ or in any case different applications than those the material is generally intended for, any different and/or supplementary requirements shall be specifically demanded, at least, upon order of the Product by the Purchaser. Acciaierie Valbruna SpA shall not be responsible for any improper use of the Products.

IDENTIFICATION HEAT NO:	073183 IDENTIFICATION LOT NO: 528350
MARKING OF THE PRODUCT:	1.4404 TEST PIECE N: 835

REFERENCE NORMS: EN 10088-3 2014, EN 10272 2016, ASTM A276/A276M-17, ASTM A479/A479M-18, ASTM A193 B8MCLASSE 1D-17, ASME SA276/SA276M-17, ASME SA479/SA479M-17, AMS 5653J, AMS 5648M, ISO15156-3/NACE MR0175 2015, NACE MR0103/ISO 17945, NORSOK M630 MDSS01 REV5.
REFERENCE NORMS FOR CHEMICAL COMPOSITION AND MECHANICAL PROPERTIES: ASTM A182, ASME SA182.
REFERENCE NORMS ONLY FOR CHEMICAL COMPOSITION: EN 10222-5 2017,ASTM A403-07a, ASTM A484-18a,ASTM A314-08, AMS-QQ-S-763D.
THE PRODUCT IS CONFORMING TO THE CONTRACT AGREEMENT AND TO THE RULE AD2000-MERKBLATT W0/W2.
ASTM A484 DOES NOT APPLY FOR SIZE AND LENGTH TOLERANCES.
STEELMAKING EAF + AOD + CONTINUOUS CASTING
REFERENCE NORM ASME BPVC.II.A-2015.
HOT ROLLED
REDUCTION RATIO 11,8

Corrosion test in 16% sulfuric acid and copper sulfate solutions

Test standard: UNI EN ISO 3651-2 Method A

Test	Heat treatment before test	Length of Period (h)	Test temp (°C)	Bend Angle (°)	Ø spindle (mm)	Result of visual inspection at 20 x magnification after bend test	Result
Intergranular corrosion	Sensitized T1	20	boil	90	5	Absence of cracks	SATISFACTORY

Furnace calibrated according to API 6A REV 21th ED ANNEX M.
Furnace calibrated according to API 6D REV 25th ED ANNEX H.
Macroetch test per ASTM E381: acceptable.
Reduction ratio = 12,6 : 1
ET ACC. TO EN 10088-3 TAB.1
UT ACC. TO A388/API 6A PSL3-EN 10308cl.3-ASME B16.34/IV
Treatment made on date 07/11/2022 in batch
furnace M3B calibration expiry date 29/03/2023.
Solution annealed 1080°C for 4 h / water cooled.

Melted, poured and manufactured in Italy No welding or weld repair Material free from Mercury contamination

We declare that the finished product is checked for radioactive contamination by the portal system when it leaves the production plant.

The Quality Management System is also Certified according to Pressure Equipment Directive 2014/68/EU Annex 1,chapt.4.3 by TÜV and LLOYD`S
The Quality Management System is also Certified according to PER 2016/1105, Schedule 2, Part 4, Para 31 (8) by Competent Body TÜV SUD BABT Unlimited.
Any act of tampering, modification, alteration, counterfeiting and/or falsification and/or any other action which modifies the contents of this test certificate shall constitute a violation of applicable civil and criminal laws. Acciaierie Valbruna shall protect its rights and interests before any competent court, authority and jurisdiction.
Maxival and/or Valplus grades/products are manufactured with ladle techniques to control composition, distribution, size and shape of non-metallic inclusions for improved machinability.
The supplied product conforms to requirements expressly requested by the purchaser and conforms to requirements specified by certified norms and standards. Should the product be used for more severe, critical and/ or in any case different applications than those the material is generally intended for, any different and/or supplementary requirements shall be specifically demanded, at least, upon order of the Product by the Purchaser. Acciaierie Valbruna SpA shall not be responsible for any improper use of the Products.

Sono state soddisfatte tutte le condizioni richieste	Controllo antimescolanza con tecnica XRF/OES portatile : OK	Controllo visivo e dimensionale: soddisfa le esigenze
Die gestellten Anforderungen sind it. Anlage erfüllt	Verwechslungprüfung durch XRF/OES Gerät geführt : OK	Besichtigung und Ausmessung: ohne Beanstandung
The material has been furnished in accordance with the requirements	Antimixing testing performed with XRF/OES portable : OK	Visual inspection and dimensional checks:satisfactory
Le materiel à été trouvé conforme aux exigences	Contrôle antimélange avt technique XRF/OES portable : OK	Contrôle visuel et dimensions: satisfaisant

Melted, poured and manufactured in Italy No welding or weld repair Material free from Mercury contamination

We declare that the finished product is checked for radioactive contamination by the portal system when it leaves the production plant.

The Quality Management System is also Certified according to Pressure Equipment Directive 2014/68/EU Annex 1,chapt.4.3 by TÜV and LLOYD'S
The Quality Management System is also Certified according to PER 2016/1105, Schedule 2, Part 4, Para 31 (8) by Competent Body TÜV SUD BABT Unlimited.
Any act of tampering, modification, alteration, counterfeiting and/or falsification and/or any other action which modifies the contents of this test certificate shall constitute a violation of applicable civil and criminal laws. Acciaierie Valbruna shall protect its rights and interests before any competent court, authority and jurisdiction.
Maxival and/or Valplus grades/products are manufactured with ladle techniques to control composition, distribution, size and shape of non-metallic inclusions for improved machinability.
The supplied product conforms to requirements expressly requested by the purchaser and conforms to requirements specified by certified norms and standards. Should the product be used for more severe, critical and/ or in any case different applications than those the material is generally intended for, any different and/or supplementary requirements shall be specifically demanded, at least, upon order of the Product by the Purchaser. Acciaierie Valbruna SpA shall not be responsible for any improper use of the Products.

Materiale conforme a: ASTM A276-24a / A479-23a/ A182-24
ASME SA: 479-21 276-21 182; UNS 31600 - 31630 AISI 316-316L
Corrosione Intercristallina EN ISO 3651-2:98 Met.A

Melting Process: E + A. O. D
Heat treatment: annealed temperature 1060°C
Soaking time: 4 Hours, Cooling in water
Intergranular corrosion tested to ASTM A262-15 "E"
According to: NACE MR-0175 / ISO 15156-3:2015
NACE MR-103/ISO 17495-1:2016
Material Compliant to: ASTM A276-24a / A479-23a/ A182-24
ASME SA: 479-21 276-21 182; UNS 31600 - 31630 AISI 316-316L
Intergranular Corrosion according to EN ISO 3651-2:98 Met.A

Surface quality condition 2H conforming also to EN 10277 class 3

We certify hereby, that the above mentioned products are consistent with the order prescriptions.
This certificate was generated by data system acc. to EN 10204, it is not necessary to be signed for validity.

Materiale conforme alle seguenti direttive/regolamenti europee:
. Regolamento REACH 2006/1907/CE e tutti successivi aggiornamenti, compresa la modifica M80 Direttiva Delegata 2022/1632, e SVHC Candidate List aggiornata al 17/01/2023.
. Direttiva ROHS 2011/65/UE e tutti i successivi aggiornamenti, compresa la modifica M80 attraverso la Direttiva Delegata 2022/1632, e Decreto Legislativo 27 del 04/03/2014.
. Direttiva RAEE 2012/19/UE e tutti successivi aggiornamenti, compresa la modifica M1 attraverso la Direttiva 2018/849.
. Direttiva ELV (End-of-Life Vehicles) 2000/53/CE e tutti i successivi aggiornamenti, compresa la modifica M15 attraverso la Direttiva 2020/363
. Contaminazione Radioattiva, Direttiva 2013/59/EURATOM e Decreto Legislativo N.101 del 31 Luglio 2020.
. Canadian List 168 aggiornata al 16/03/2022
. Minerali di Conflitto, Regolamento (UE) 2017/821 e tutti i successivi aggiornamenti, compresa la modifica M1 attraverso il Regolamento Delegato 2020/1588, e Dodd-Frank Wall Street Reform and Consumer Protection Act Section 1502.

Material conforming to the following European directives/regulation:
. REACH regulation 2006/1907/EC and all subsequent updates, including modification M80 Delegate Directive, and SVHC Candidate List updated to 01/17/2023.
. ROHS Directive 2011/65/EU and all subsequent updates, including the M80 amendment through the Delegated Directive 2022/1632, and Italian Legislative Decree 27 of 03/04/2014.
. WEEE Directive 2012/19/EU and all subsequent updates, including the M1 amendment through Directive 2018/849.
. ELV (End-of-Life Vehicles) Directive 2000/53/EC and all subsequent updates, including the modification M15 through Directive 2020/363
. Radioactive Contamination, Directive 2013/59/EURATOM and Italian Legislative Decree No. 101 of 31 July 2020.
. Canadian List 168 updated 03/16/2022.
. Conflict Minerals, Regulation (EU) 2017/821 and all subsequent updates, including amendment M1 through Delegated Regulation 2020/1588, and Dodd-Frank Wall Street Reform and Consumer Protection Act Section 1502.

Corrosion test in 16% sulfuric acid and copper sulfate solutions

Test standard: ASTM A262-Practice E

Test	Heat treatment before test	Length of Period (h)	Test temp (°C)	Bend Angle (°)	Ø spindle (mm)	Result of visual inspection at 20 x magnification after bend test	Result
Intergranular corrosion	Sensitization	15	boil	180	5	Absence of cracks	**SATISFACTORY**

Corrosion test in 16% sulfuric acid and copper sulfate solutions

Test standard: UNI EN ISO 3651-2 Method A

Test	Heat treatment before test	Length of Period (h)	Test temp (°C)	Bend Angle (°)	Ø spindle (mm)	Result of visual inspection at 20 x magnification after bend test	Result
Intergranular corrosion	Sensitized T1	20	boil	90	5	Absence of cracks	**SATISFACTORY**

Reduction ratio = 4,4 : 1
Solution annealed 1080°C for 6 h /water cooled.
SURFACE QUALITY WITH MAX DEFECT DEPTH 1% DIAMETER
UT ACC. TO ASTM A388

Sono state soddisfatte tutte le condizioni richieste
Die gestellen Anforderungen sind it. Anlage erfüllt
The material has been furnished in accordance with the requirements
Le materiel à été trouvé conforme aux exigences
El material cumple de acuerdo a los requisitos

Controllo antimiscelanza con tecnica XRF/OES portatile : OK
Verwechslungprüfung: durch XRF/OES Gerät geführt : OK
Antimixing testing performed with XRF/OES portable : OK
Contrôle antimélange avt technique XRF/OES portable : OK
Prueba de anti mezcla con técnica XRF/OES portátil: OK

Controllo visivo e dimensionale: soddisfa le esigenze
Besichtigung und Ausmessung: ohne Beanstandung
Visual inspection and dimensional checks:satisfactory
Contrôle visuel et dimensions: satisfaisant
Inspección visual y dimensional: cumple los requisitos

Melted, poured and manufactured in Italy No welding or weld repair Material free from Mercury contamination

We declare that the finished product is checked for radioactive contamination by the portal system when it leaves the production plant.

The Quality Management System is also Certified according to Pressure Equipment Directive 2014/68/EU Annex 1,chapt.4.3 by TÜV and LLOYD`S
The Quality Management System is also Certified according to PER 2016/1105, Schedule 2, Part 4, Para 31 (8) by Competent Body TÜV SUD BABT Unlimited.
Any act of tampering, modification, alteration, counterfeiting and/or falsification and/or any other action which modifies the contents of this test certificate shall constitute a violation of applicable civil and criminal laws. Acciaierie Valbruna shall protect its rights and interests before any competent court, authority and jurisdiction.
Maxival and/or Valplus grades/products are manufactured with ladle techniques to control composition, distribution, size and shape of non-metallic inclusions for improved machinability.
The supplied product conforms to requirements expressly requested by the purchaser and conforms to requirements specified by certified norms and standards. Should the product be used for more severe, critical and/ or in any case different applications than those the material is generally intended for, any different and/or supplementary requirements shall be specifically demanded, at least, upon order of the Product by the Purchaser. Acciaierie Valbruna SpA shall not be responsible for any improper use of the Products.

Melted, poured and manufactured in Italy No welding or weld repair Material free from Mercury contamination

We declare that the finished product is checked for radioactive contamination by the portal system when it leaves the production plant.

The Quality Management System is also Certified according to Pressure Equipment Directive 2014/68/EU Annex 1,chapt.4.3 by TÜV and LLOYD`S
The Quality Management System is also Certified according to PER 2016/1105, Schedule 2, Part 4, Para 31 (8) by Competent Body TÜV SUD BABT Unlimited.
Any act of tampering, modification, alteration, counterfeiting and/or falsification and/or any other action which modifies the contents of this test certificate shall constitute a violation of applicable civil and criminal laws. Acciaierie Valbruna shall protect its rights and interests before any competent court, authority and jurisdiction.
Maxival and/or Valplus grades/products are manufactured with ladle techniques to control composition, distribution, size and shape of non-metallic inclusions for improved machinability.
The supplied product conforms to requirements expressly requested by the purchaser and conforms to requirements specified by certified norms and standards. Should the product be used for more severe, critical and/ or in any case different applications than those the material is generally intended for, any different and/or supplementary requirements shall be specifically demanded, at least, upon order of the Product by the Purchaser. Acciaierie Valbruna SpA shall not be responsible for any improper use of the Products.

Certifichiamo che i materiali sono stati fabbricati, campionati, testati e ispezionati in conformità alle specifiche e conformi alle prescrizioni degli ordini.
We certify that the fasteners were manufactured, sampled, tested and inspected in accordance with the specification and are consistent with order prescriptions.

Corrosion test in 16% sulfuric acid and copper sulfate solutions

Test standard: UNI EN ISO 3651-2 Method A

Test	Heat treatment before test	Length of Period (h)	Test temp (°C)	Bend Angle (°)	Ø spindle (mm)	Result of visual inspection at 20 x magnification after bend test	Result
Intergranular corrosion	Sensitized T1	20	boil	90	5	Absence of cracks	**SATISFACTORY**

Corrosion test in 16% sulfuric acid and copper sulfate solutions

Test standard: ASTM A262-Practice E

Test	Heat treatment before test	Length of Period (h)	Test temp (°C)	Bend Angle (°)	Ø spindle (mm)	Result of visual inspection at 20 x magnification after bend test	Result
Intergranular corrosion	Sensitization	15	boil	180	5	Absence of cracks	**SATISFACTORY**

Furnace calibrated according to API 6A REV 21th ED ANNEX M.
Furnace calibrated according to API 6D REV 25th ED ANNEX H.
Macroetch test per ASTM E381: acceptable.
Reduction ratio = 20,2 : 1
Solution annealed 1080°C for 180'(total time)/water cooled.
Treatment made on date 10/05/24 in continuous furnace
FCB calibration expiry date 08/06/24.
SURFACE QUALITY GUARANTEE BY ET INSPECTION (max defect depth 1% DIAMETER)

Melted, poured and manufactured in Italy No welding or weld repair Material free from Mercury contamination

We declare that the finished product is checked for radioactive contamination by the portal system when it leaves the production plant.

The Quality Management System is also Certified according to Pressure Equipment Directive 2014/68/EU Annex 1,chapt.4.3 by TÜV and LLOYD`S
The Quality Management System is also Certified according to PER 2016/1105, Schedule 2, Part 4, Para 31 (8) by Competent Body TÜV SUD BABT Unlimited.
Any act of tampering, modification, alteration, counterfeiting and/or falsification and/or any other action which modifies the contents of this test certificate shall constitute a violation of applicable civil and criminal laws. Acciaierie Valbruna shall protect its rights and interests before any competent court, authority and jurisdiction.
Maxival and/or Valplus grades/products are manufactured with ladle techniques to control composition, distribution, size and shape of non-metallic inclusions for improved machinability.
The supplied product conforms to requirements expressly requested by the purchaser and conforms to requirements specified by certified norms and standards. Should the product be used for more severe, critical and/ or in any case different applications than those the material is generally intended for, any different and/or supplementary requirements shall be specifically demanded, at least, upon order of the Product by the Purchaser. Acciaierie Valbruna SpA shall not be responsible for any improper use of the Products.

Melted, poured and manufactured in Italy No welding or weld repair Material free from Mercury contamination

We declare that the finished product is checked for radioactive contamination by the portal system when it leaves the production plant.

The Quality Management System is also Certified according to Pressure Equipment Directive 2014/68/EU Annex 1,chapt.4.3 by TÜV and LLOYD'S
The Quality Management System is also Certified according to PER 2016/1105, Schedule 2, Part 4, Para 31 (8) by Competent Body TÜV SUD BABT Unlimited.
Any act of tampering, modification, alteration, counterfeiting and/or falsification and/or any other action which modifies the contents of this test certificate shall constitute a violation of applicable civil and criminal laws. Acciaierie Valbruna shall protect its rights and interests before any competent court, authority and jurisdiction.
Maxival and/or Valplus grades/products are manufactured with ladle techniques to control composition, distribution, size and shape of non-metallic inclusions for improved machinability.
The supplied product conforms to requirements expressly requested by the purchaser and conforms to requirements specified by certified norms and standards. Should the product be used for more severe, critical and/ or in any case different applications than those the material is generally intended for, any different and/or supplementary requirements shall be specifically demanded, at least, upon order of the Product by the Purchaser. Acciaierie Valbruna SpA shall not be responsible for any improper use of the Products.

Surface quality condition 2H conforming also to EN 10277 class 3

We certify hereby, that the above mentioned products are consistent with the order prescriptions.
This certificate was generated by data system acc. to EN 10204, it is not necessary to be signed for validity.

Materiale conforme alle seguenti direttive/regolamenti europee:
- Regolamento REACH 2006/1907/CE e tutti successivi aggiornamenti, compresa la modifica M80 Direttiva Delegata 2022/1632, e SVHC Candidate List aggiornata al 17/01/2023.
- Direttiva ROHS 2011/65/UE e tutti i successivi aggiornamenti, compresa la modifica M80 attraverso la Direttiva Delegata 2022/1632, e Decreto Legislativo 27 del 04/03/2014.
- Direttiva RAEE 2012/19/UE e tutti successivi aggiornamenti, compresa la modifica M1 attraverso la Direttiva 2018/849.
- Direttiva ELV (End-of-Life Vehicles) 2000/53/CE e tutti i successivi aggiornamenti, compresa la modifica M15 attraverso la Direttiva 2020/363
- Contaminazione Radioattiva, Direttiva 2013/59/EURATOM e Decreto Legislativo N.101 del 31 Luglio 2020.
- Canadian List 168 aggiornata al 16/03/2022.
- Minerali di Conflitto, Regolamento (UE) 2017/821 e tutti i successivi aggiornamenti, compresa la modifica M1 attraverso il Regolamento Delegato 2020/1588, e Dodd-Frank Wall Street Reform and Consumer Protection Act Section 1502.

Material conforming to the following European directives/regulation:
- REACH regulation 2006/1907/EC and all subsequent updates, including modification M80 Delegate Directive, and SVHC Candidate List updated to 01/17/2023.
- ROHS Directive 2011/65/EU and all subsequent updates, including the M80 amendment through the Delegated Directive 2022/1632, and Italian Legislative Decree 27 of 03/04/2014.
- WEEE Directive 2012/19/EU and all subsequent updates, including the M1 amendment through Directive 2018/849.
- ELV (End-of-Life Vehicles) Directive 2000/53/EC and all subsequent updates, including the modification M15 through Directive 2020/363
- Radioactive Contamination, Directive 2013/59/EURATOM and Italian Legislative Decree No. 101 of 31 July 2020.
- Canadian List 168 updated 03/16/2022.
- Conflict Minerals, Regulation (EU) 2017/821 and all subsequent updates, including amendment M1 through Delegated Regulation 2020/1588, and Dodd-Frank Wall Street Reform and Consumer Protection Act Section 1502.

Melted, poured and manufactured in Italy No welding or weld repair Material free from Mercury contamination

We declare that the finished product is checked for radioactive contamination by the portal system when it leaves the production plant.

The Quality Management System is also Certified according to Pressure Equipment Directive 2014/68/EU Annex 1,chapt.4.3 by TÜV and LLOYD'S
The Quality Management System is also Certified according to PER 2016/1105, Schedule 2, Part 4, Para 31 (8) by Competent Body TÜV SUD BABT Unlimited.
Any act of tampering, modification, alteration, counterfeiting and/or falsification and/or any other action which modifies the contents of this test certificate shall constitute a violation of applicable civil and criminal laws. Acciaierie Valbruna shall protect its rights and interests before any competent court, authority and jurisdiction.
Maxival and/or Valplus grades/products are manufactured with ladle techniques to control composition, distribution, size and shape of non-metallic inclusions for improved machinability.
The supplied product conforms to requirements expressly requested by the purchaser and conforms to requirements specified by certified norms and standards. Should the product be used for more severe, critical and/ or in any case different applications than those the material is generally intended for, any different and/or supplementary requirements shall be specifically demanded, at least, upon order of the Product by the Purchaser. Acciaierie Valbruna SpA shall not be responsible for any improper use of the Products.

NACE MR-103/ISO 17495-1:2016
Intergranular Corrosion according to EN ISO 3651-2:98 Met.A

Surface quality condition 2H conforming also to EN 10277 class 3

We certify hereby, that the above mentioned products are consistent with the order prescriptions.
This certificate was generated by data system acc. to EN 10204, it is not necessary to be signed for validity.

Materiale conforme alle seguenti direttive/regolamenti europee:
. Regolamento REACH 2006/1907/CE e tutti successivi aggiornamenti, compresa la modifica M80 Direttiva Delegata 2022/1632, e SVHC Candidate List aggiornata al 17/01/2023.
. Direttiva ROHS 2011/65/UE e tutti i successivi aggiornamenti, compresa la modifica M80 attraverso la Direttiva Delegata 2022/1632, e Decreto Legislativo 27 del 04/03/2014.
. Direttiva RAEE 2012/19/UE e tutti successivi aggiornamenti, compresa la modifica M1 attraverso la Direttiva 2018/849.
. Direttiva ELV (End-of-Life Vehicles) 2000/53/CE e tutti i successivi aggiornamenti, compresa la modifica M15 attraverso la Direttiva 2020/363
. Contaminazione Radioattiva, Direttiva 2013/59/EURATOM e Decreto Legislativo N.101 del 31 Luglio 2020.
. Canadian List 168 aggiornata al 16/03/2022.
. Minerali di Conflitto, Regolamento (UE) 2017/821 e tutti i successivi aggiornamenti, compresa la modifica M1 attraverso il Regolamento Delegato 2020/1588, e Dodd-Frank Wall Street Reform and Consumer Protection Act Section 1502.

Material conforming to the following European directives/regulation:
. REACH regulation 2006/1907/EC and all subsequent updates, including modification M80 Delegate Directive, and SVHC Candidate List updated to 01/17/2023.
. ROHS Directive 2011/65/EU and all subsequent updates, including the M80 amendment through the Delegated Directive 2022/1632, and Italian Legislative Decree 27 of 03/04/2014.
. WEEE Directive 2012/19/EU and all subsequent updates, including the M1 amendment through Directive 2018/849.
. ELV (End-of-Life Vehicles) Directive 2000/53/EC and all subsequent updates, including the modification M15 through Directive 2020/363
. Radioactive Contamination, Directive 2013/59/EURATOM and Italian Legislative Decree No. 101 of 31 July 2020.
. Canadian List 168 updated 03/16/2022.
. Conflict Minerals, Regulation (EU) 2017/821 and all subsequent updates, including amendment M1 through Delegated Regulation 2020/1588, and Dodd-Frank Wall Street Reform and Consumer Protection Act Section 1502.

Melted, poured and manufactured in Italy No welding or weld repair Material free from Mercury contamination

We declare that the finished product is checked for radioactive contamination by the portal system when it leaves the production plant.

The Quality Management System is also Certified according to Pressure Equipment Directive 2014/68/EU Annex 1,chapt.4.3 by TÜV and LLOYD`S
The Quality Management System is also Certified according to PER 2016/1105, Schedule 2, Part 4, Para 31 (8) by Competent Body TÜV SUD BABT Unlimited.
Any act of tampering, modification, alteration, counterfeiting and/or falsification and/or any other action which modifies the contents of this test certificate shall constitute a violation of applicable civil and criminal laws. Acciaierie Valbruna shall protect its rights and interests before any competent court, authority and jurisdiction.
Maxival and/or Valplus grades/products are manufactured with ladle techniques to control composition, distribution, size and shape of non-metallic inclusions for improved machinability.
The supplied product conforms to requirements expressly requested by the purchaser and conforms to requirements specified by certified norms and standards. Should the product be used for more severe, critical and/ or in any case different applications than those the material is generally intended for, any different and/or supplementary requirements shall be specifically demanded, at least, upon order of the Product by the Purchaser. Acciaierie Valbruna SpA shall not be responsible for any improper use of the Products.

Melted, poured and manufactured in Italy No welding or weld repair Material free from Mercury contamination

We declare that the finished product is checked for radioactive contamination by the portal system when it leaves the production plant.

The Quality Management System is also Certified according to Pressure Equipment Directive 2014/68/EU Annex 1,chapt.4.3 by TÜV and LLOYD`S
The Quality Management System is also Certified according to PER 2016/1105, Schedule 2, Part 4, Para 31 (8) by Competent Body TÜV SUD BABT Unlimited.
Any act of tampering, modification, alteration, counterfeiting and/or falsification and/or any other action which modifies the contents of this test certificate shall constitute a violation of applicable civil and criminal laws. Acciaierie Valbruna shall protect its rights and interests before any competent court, authority and jurisdiction.
Maxival and/or Valplus grades/products are manufactured with ladle techniques to control composition, distribution, size and shape of non-metallic inclusions for improved machinability.
The supplied product conforms to requirements expressly requested by the purchaser and conforms to requirements specified by certified norms and standards. Should the product be used for more severe, critical and/ or in any case different applications than those the material is generally intended for, any different and/or supplementary requirements shall be specifically demanded, at least, upon order of the Product by the Purchaser. Acciaierie Valbruna SpA shall not be responsible for any improper use of the Products.

Melted, poured and manufactured in Italy No welding or weld repair Material free from Mercury contamination

We declare that the finished product is checked for radioactive contamination by the portal system when it leaves the production plant.

The Quality Management System is also Certified according to Pressure Equipment Directive 2014/68/EU Annex 1,chapt.4.3 by TÜV and LLOYD`S
The Quality Management System is also Certified according to PER 2016/1105, Schedule 2, Part 4, Para 31 (8) by Competent Body TÜV SUD BABT Unlimited.
Any act of tampering, modification, alteration, counterfeiting and/or falsification and/or any other action which modifies the contents of this test certificate shall constitute a violation of applicable civil and criminal laws. Acciaierie Valbruna shall protect its rights and interests before any competent court, authority and jurisdiction.
Maxival and/or Valplus grades/products are manufactured with ladle techniques to control composition, distribution, size and shape of non-metallic inclusions for improved machinability.
The supplied product conforms to requirements expressly requested by the purchaser and conforms to requirements specified by certified norms and standards. Should the product be used for more severe, critical and/ or in any case different applications than those the material is generally intended for, any different and/or supplementary requirements shall be specifically demanded, at least, upon order of the Product by the Purchaser. Acciaierie Valbruna SpA shall not be responsible for any improper use of the Products.

remarks: chemical and mechanical values, at delivery condition, are quoted by the relevant steel work certificate. VISUAL AND DIMENSIONAL TEST SATISFACTORY
According to: ASME II part. A ed. 2021. Macroetch test according to ASTM E381 result: S1; R1; C1.

If not mentioned the above test are performed at room temperature.
We certify that the fasteners were manufactured, sampled, tested and inspected in accordance with the specification and are consistent with order prescriptions.
Quality assurance system in accordance to European Directive 2014/68/EU annex I par. 4.3 (PED) and AD 2000 Merkblatt W0.
Certificates 0045/202/WZ1921/23 and TN/AD2000-W0/1921/23 TÜV NORD Systems GmbH & Co. KG.

Corrosion test in 16% sulfuric acid and copper sulfate solutions

Test standard: UNI EN ISO 3651-2 Method A

Test	Heat treatment before test	Length of Period (h)	Test temp (°C)	Bend Angle (°)	Ø spindle (mm)	Result of visual inspection at 20 x magnification after bend test	Result
Intergranular corrosion	Sensitized T1	20	boil	90	5	Absence of cracks	**SATISFACTORY**

Corrosion test in 16% sulfuric acid and copper sulfate solutions

Test standard: ASTM A262-Practice E

Test	Heat treatment before test	Length of Period (h)	Test temp (°C)	Bend Angle (°)	Ø spindle (mm)	Result of visual inspection at 20 x magnification after bend test	Result
Intergranular corrosion	Sensitization	15	boil	180	5	Absence of cracks	**SATISFACTORY**

Furnace calibrated according to API 6A REV 21th ED ANNEX M.
Furnace calibrated according to API 6D REV 25th ED ANNEX H.
Macroetch test per ASTM E381: acceptable.
Reduction ratio = 28,8 : 1
SURFACE QUALITY GUARANTEE BY ET INSPECTION (max defect depth 1% DIAMETER)
UT ACC. TO A388/API 6A PSL3-EN 10308cl.3-ASME B16.34/IV
Treatment made on date 11/11/2023 in continuous
furnace FCB calibration expiry date 18/01/2024.
Solution annealed 1080°C for 160'(total time)/water cooled.
"Issued in agreement with TÜV SÜD Industrie Service GMBH
(07/1972)"
"Qs approved according to PED, Annex I, Para. 4.3 by
Notified Body 0036"
"(Certification no. DGR-0036-QS-W 23/2002/MUC)"

Melted, poured and manufactured in Italy No welding or weld repair Material free from Mercury contamination

We declare that the finished product is checked for radioactive contamination by the portal system when it leaves the production plant.

The Quality Management System is also Certified according to Pressure Equipment Directive 2014/68/EU Annex 1,chapt.4.3 by TÜV and LLOYD`S
The Quality Management System is also Certified according to PER 2016/1105, Schedule 2, Part 4, Para 31 (8) by Competent Body TÜV SUD BABT Unlimited.
Any act of tampering, modification, alteration, counterfeiting and/or falsification and/or any other action which modifies the contents of this test certificate shall constitute a violation of applicable civil and criminal laws. Acciaierie Valbruna shall protect its rights and interests before any competent court, authority and jurisdiction.
Maxival and/or Valplus grades/products are manufactured with ladle techniques to control composition, distribution, size and shape of non-metallic inclusions for improved machinability.
The supplied product conforms to requirements expressly requested by the purchaser and conforms to requirements specified by certified norms and standards. Should the product be used for more severe, critical and/ or in any case different applications than those the material is generally intended for, any different and/or supplementary requirements shall be specifically demanded, at least, upon order of the Product by the Purchaser. Acciaierie Valbruna SpA shall not be responsible for any improper use of the Products.

The Quality Management System is also Certified according to Pressure Equipment Directive 2014/68/EU Annex 1,chapt.4.3 by TÜV and LLOYD`S
The Quality Management System is also Certified according to PER 2016/1105, Schedule 2, Part 4, Para 31 (8) by Competent Body TÜV SUD BABT Unlimited.
Any act of tampering, modification, alteration, counterfeiting and/or falsification and/or any other action which modifies the contents of this test certificate shall constitute a violation of applicable civil and criminal laws. Acciaierie Valbruna shall protect its rights and interests before any competent court, authority and jurisdiction.
Maxival and/or Valplus grades/products are manufactured with ladle techniques to control composition, distribution, size and shape of non-metallic inclusions for improved machinability.
The supplied product conforms to requirements expressly requested by the purchaser and conforms to requirements specified by certified norms and standards. Should the product be used for more severe, critical and/ or in any case different applications than those the material is generally intended for, any different and/or supplementary requirements shall be specifically demanded, at least, upon order of the Product by the Purchaser. Acciaierie Valbruna SpA shall not be responsible for any improper use of the Products.

SURFACE FINISH:	2B Cold Finished		
PRODUCT DELIVERY CONDITION:	RS SOLUTION ANNEALED		
PRODUCT DIMENSIONS (mm):	45,000 (1,772 in)	LENGTH (mm)	06000 06200 (00236 00244 in)
GRADE:	AISI 316/316L EN1.4401/4404	INTERNAL GRADE:	F316L IMCO
IDENTIFICATION HEAT NO:	072244	IDENTIFICATION LOT NO:	201970
MARKING OF THE PRODUCT:	1.4404	TEST PIECE N:	197

REFERENCE NORMS: EN 10088-3 2014, EN 10272 2016, ASTM A276/A276M, ASTM A479/A479M, ASTM A193 B8MCLASSE 1D, ASME SA276/SA276M, ASME SA479/SA479M, AMS 5653J, AMS 5648M, ISO15156-3/NACE MR0175 2015, NACE MR0103/ISO 17945, NORSOK M630 MDSS01 REV5.
REFERENCE NORMS FOR CHEMICAL COMPOSITION AND MECHANICAL PROPERTIES: ASTM A182, ASME SA182.
REFERENCE NORMS ONLY FOR CHEMICAL COMPOSITION: EN 10222-5 2017,ASTM A403-07a, ASTM A484-18a,ASTM A314-08, AMS-QQ-S-763D.
ASME SECT.II PART A EDITION 2015-2017-2019
THE PRODUCT IS CONFORMING TO THE CONTRACT AGREEMENT AND TO THE RULE AD2000-MERKBLATT W0/W2.
ASTM A484 DOES NOT APPLY FOR SIZE AND LENGTH TOLERANCES.
STEELMAKING EAF + AOD + CONTINUOUS CASTING
REFERENCE NORM ASME BPVC.II.A-2015.
HOT ROLLED
REDUCTION RATIO 14,8

CHEMICAL LADLE ANALYSIS ACCORDING TO ASTM A751 - EN ISO 14284
