on first inspection of pressure equipment
according to Directive 2014/68/EU Modules B / F / G

TÜV THÜRINGEN

5.5	Module B[B1]: Certificate by Notified Body	---
5.6	The documents are suitable for the evaluation of the pressure equipment.	
6	**Intermediate inspections [Annex I para. 3]**	
6.1	Preparation of materials for joining [Annex I, 3.1.1.]	not applicable
6.2	Internal visual inspection	acceptable, see section 11
7	**Final examination [Annex I para. 3]**	
7.1	Visual inspection and dimensional check	considered, acceptable
7.2	Material test reports and traceability	considered, acceptable
7.3	Approvals for procedures (permanent joining, forming)	considered, acceptable
7.4	Approvals for personnel (permanent joining)	considered, acceptable
7.5	Approvals for NDE-personnel	considered, acceptable
7.6	NDE-personnel - Approval according to PED, Annex I, 3.1.3	considered, acceptable
7.7	Heat treatment	not applicable
7.8	Marking [Annex I, 3.3]	considered, acceptable
8	**Calibration of measuring tools & test resources**	
8.1	Manometer / pressure probe [33866; 33867]	considered, acceptable
8.2	Heat treatment devices [---]	not applicable
8.3	Others [---]	not applicable
9	**Pressure test [Annex I para. 3]**	
9.1	Test pressure, test fluid	considered, acceptable
10	**Examination of fundamental documentary requirements**	
10.1	Declaration of conformity of manufacturer	considered, acceptable
10.2	Reference of declaration to pressure equipment	considered, acceptable
10.3	Operating instructions of manufacturer	considered, acceptable
10.4	Examination of instruction regarding technical parameters	considered, acceptable

11 Remarks

(1) to 1.3: Serial numbers have been specified on the as-built drawing according to the realized state.
(2) to 3.7: Simplified fatique analysis acc. to EN 13445-3 point 17
(3) to 6.2: Internal visual inspection: only nozzles circumferential welding seams randomly during manufacturing on 13.03.2024 and on 26.03.2024 at final examination.
(4) to 9.1: executed on 26.03.2024 at final examination, result acceptable.
(5) Name plate rivet, detachable parts (blind flanges, nozzles N1, N4) and flange N1 (Item No. 8.) stamped with:

MEGJEGYZÉSEK:
- A csonkok külső erőből adódó terhelésekre nincsenek méretezve.
- Csonk hegesztési varratok az MSZ EN 13445-3:2021 szerint.
- Karima csavarfuratok fő síkba nem eshetnek.
- Felületkikészítés: -
- A 21, 22-es tételeket a megrendelő (AQUAGAS) biztosítja!
- A 21, 22-es tételeket a fenék behegesztése előtt beszerelni!
- A készülék a gyártóműben hőszigetelés nélkül készül.
- Készül: 3 db.
  (típusonként 1)
- A tervhez tartozó tételjegyzék száma: PL-GYP-243013-01

Note:
- External loads on nozzles are not taken into account
- Nozzles welding seams according to MSZ EN 13445-3:2021.
- Flange bolting holes shall not lie in principal planes
- Surface treatment: -
- Items 21, 22 supplied by AQUAGAS
- Items 21, 22 shall be installed before welding the vessel ends
- The vessel is manufactured without thermal insulation.
- 3 pcs to be made (1 of each)
- Parts list no. associated with the plan: PL-GYP-243013-01

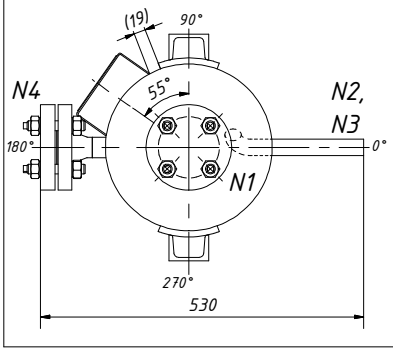
MEGJEGYZÉSEK:

- A csonkok külső erőből adódó terhelésekre nincsenek méretezve.
- Csonk hegesztési varratok az MSZ EN 13445-3:2021 szerint.
- Karima csavarfuratok fő síkba nem eshetnek.
- Felületkikészítés: -
- A 21, 22-es tételeket a megrendelő (AQUAGAS) biztosítja!
- A 21, 22-es tételeket a fenék behegesztése előtt beszerelni!
- A készülék a gyártóműben hőszigetelés nélkül készül.
- Készül: 3 db.
  (típusonként 1)
- A tervhez tartozó tételjegyzék száma: PL-GYP-243013-01



Note:

- External loads on nozzles are not taken into account
- Nozzles welding seams according to MSZ EN 13445-3:2021.
- Flange bolting holes shall not lie in principal planes
- Surface treatment: -
- Items 21, 22 supplied by AQUAGAS
- Items 21, 22 shall be installed before welding the vessel ends
- The vessel is manufactured without thermal insulation.
- 3 pcs to be made (1 of each)
- Parts list no. associated with the plan: PL-GYP-243013-01

Report
for the examination of a pressure equipment design according to Directive 2014/68/EU Modules B / G / H1

TÜV THÜRINGEN

1	General Information for Certification Body / Testing Laboratory		Insp. No.	HU04/62978/24
1.1	Applicant, address	Gyémánt-Pirazol Kft.		
1.2	Manufacturer, address	Gyémánt-Pirazol Kft.; 4031 Debrecen, Nívó u.11.		
1.3	Order no. / Com. no.	TTHU-TE-24-3019		
1.4	Equipment designation	DE-250/40; DR-250/40 vessel		
1.5	Drawing no.	DG-GYP-243013-01-00	Revision	0

2	Design code	2014/68/EU, EN 13445:2021	Module	G
2.1	Type of equipment	pressure vessel		
2.2	Remarks	---		

3	Operational limits	Chamber 1	Chamber 2	Chamber 3	Chamber 4
3.1	Designation of pressure chamber	workchamber	---	---	---
3.2	PS [bar]	+39,0/-1,0	---	---	---
3.3	TS [°C]	+270/-20	---	---	---
3.4	PT [bar]	68,8	---	---	---
3.5	Test fluid	water	---	---	---
3.6	Corrosion allowance [mm]	1,0	---	---	---
3.7	Number of allowable load cycles	20 000*	---	---	---
3.8	Allowable load cycle range [bar]	0/+38,0	---	---	---
3.9	Volume [L] / DN	86,0 / 76,0*	---	---	---
3.10	Fluid group	1	---	---	---
3.11	Category according to Annex II	IV	---	---	---

4	Additional loads	---
4.1	Position first pressure test	vertical
4.2	Seismic	---
4.3	Wind	---
4.4	Nozzles	---
4.5	Others	---

5	Completeness and adequacy of technical documents	
5.1	Exclusive statement of manufacturer	considered, acceptable
5.2	Equipment description / functional description	considered, acceptable
5.3	Description of type range (for type approvals only)	not applicable
5.4	Drawing(s)	considered, acceptable

Report
for the examination of a pressure equipment design
according to Directive 2014/68/EU Modules B / G / H1

TÜV THÜRINGEN

5.5	Part list(s): Instructions to applied standards and design codes	considered, acceptable
5.6	Part list(s): Instructions to manufact.& delivery terms, measure tolerances	not applicable
5.7	Design calculation(s): traditional design by formula	considered, acceptable
5.8	Design calculation(s): design by analysis (FEA, FDA, BEA)	not applicable
5.9	Test results of experimental design	not applicable
5.10	Approvals for procedures for permanent joining	acceptable, see section 11
5.11	Approvals for personnel for permanent joining	acceptable, see section 11
5.12	Approvals for NDE-personnel	acceptable, see section 11
5.13	Risk analysis	considered, acceptable
5.14	Operating instructions	considered, acceptable
5.15	The submitted documents are --- for the design evaluation.	
6	**Examination of documents concerning materials [Annex I 4]**	
6.1	Materials according to harmonized standards	considered, acceptable
6.2	European approval of materials (EAM)	not applicable
6.3	Particular material appraisal (PMA)	not applicable
7	**Examination of documents concerning design [Annex I 2]**	
7.1	Strength - internal pressure / add. loads	considered, acceptable
7.2	Strength - external pressure / support	acceptable, see section 11
7.3	Strength - fatigue, cyclic loading(s)	acceptable, see section 11
7.4	Strength - time depending behaviour, creep	not applicable
7.5	Experimental design method (test programme)	not applicable
7.6	Inspection, vent and drain openings	considered, acceptable
7.7	Corrosion, chemical attack	Resistance acc. to user specificatior
7.8	Wear (also other measures)	not applicable
7.9	External fire	not applicable
7.10	Additional requirements for piping	not applicable
7.11	Additional requirements for equipment with risk of overheating	not applicable
7.12	Deep cold service with the risk of brittle fraction	acceptable, see section 11
8	**Examination of documents concerning manufacturing [Annex I 3]**	
8.1	Forming operations	not applicable
8.2	Heat treatment (caused by forming: normalization / sol. annealing)	not applicable
8.3	Permanent joining	considered, acceptable
8.4	Nondestructive examinations: scope and location	considered, acceptable

Report
for the examination of a pressure equipment design
according to Directive 2014/68/EU Modules B / G / H1

TÜV THÜRINGEN

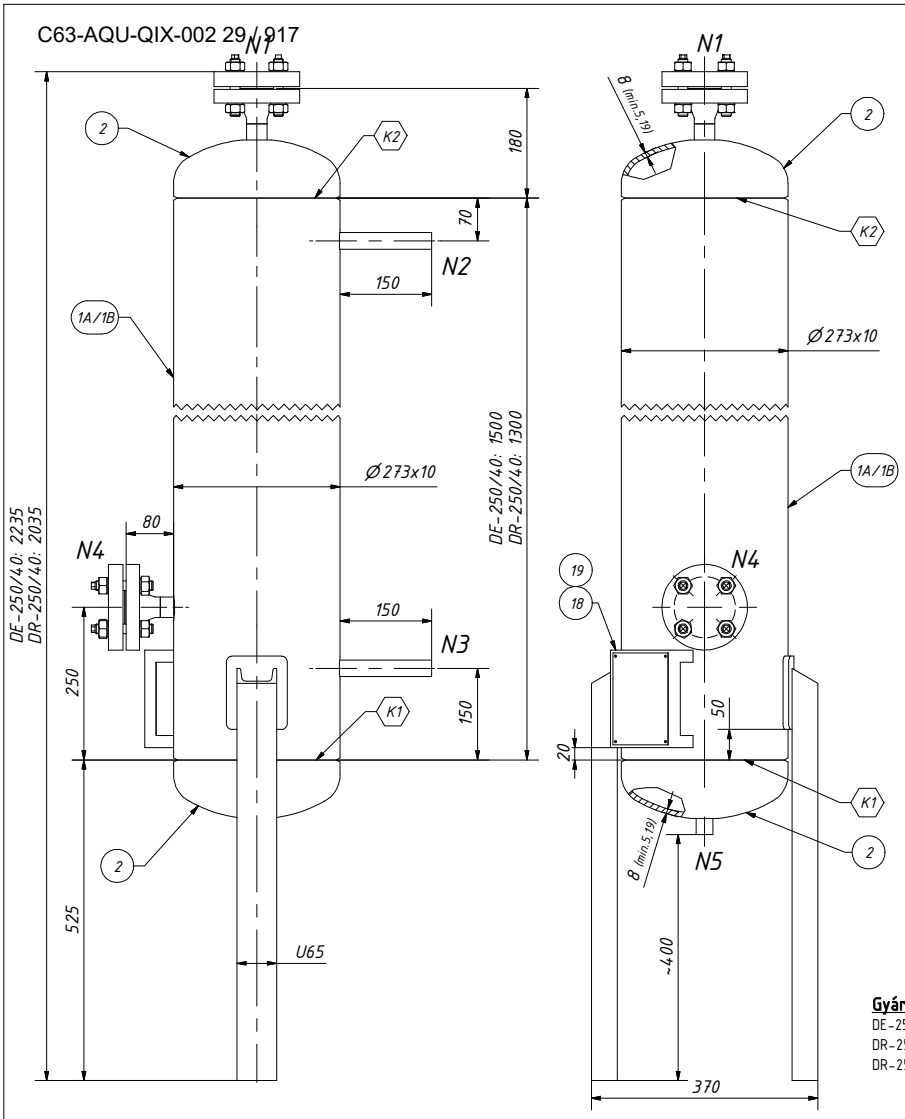
8.5	Heat treatment (before / after welding)	not applicable
9	**Examination of documents concerning safety equipment [Annex I 3]**	
9.1	Examination of safety accessories	not applicable
10	**Examination of documents concerning final examination [Annex I 3]**	
10.1	Test pressure [Annex I, Para. 3.2.2, 7.4]	considered, acceptable
10.2	Marking [Annex I, Para. 3.3]	considered, acceptable

11 Remarks

(1) to 3.7; 7.3 : Simplified fatigue analysis acc. to EN13445-3 point 17.
(2) to 3.9 : DE vessel type has shell L=1500 and V=86,0 lit; DR vessel type has shell L=1300 and V=76,0 lit.
(3) to 5.10 : During final inspection the relevant WPQR's will be checked by our expert.
(4) to 5.11 : During final inspection welders' certificates will be checked by our expert.
(5) to 5.12 : During final inspection the qualification of the NDT-personnel will be checked by our expert.
(6) to 6.1 : Materials for pressurized items shall be certified 3.1/EN10204+PED.
(7) to 7.2 : The vessel will be connected to steel structure, so that the stability is ensured.
(8) to 7.12: Minimum allowable temperature is -20 C° , so that the requirements acc.to EN13445-2 appendix B shall be taken into account.
(9) to 8.3 : Welding details shall be made acc. to EN1708-1.
(10) to 8.4 : All NDT have to be carried out according to the requirements of EN 13445 part 5.
(11) to 10.2: The pressure equipment must be marked in accordance with PED Annex I. point 3.3 and EN13445-5 point 11.
(12) Installed fittings and pressure accessories shall be designed for the intended use (pressure, temperature, fluid).

12 Result of examination

The design is considered as finally approved.



Testing Laboratory	Date	25-03-2024	Place	Budapest
for Pressure Equipment **Notified Body 0090** **TÜV Thüringen e.V.** **Konrad-Zuse-Straße 21** **D-99099 Erfurt** **ped@tuev-thueringen.de**	Ilona Gál Name / Signature			Stamp

Validity note for modules G and H1: Two years, for Modules B Ten years (monitored) from the day of issue.

Megjegyzés:
Az N2 és N3 csonkok Pos.4 és Pos.5 csöveit a gyártás során hosszabra kell hagyni! A sikeres nyomáspróbát követően a csonkokat a rajzon megadott méretekre kell visszavágni!

Note:
Pos.4 & 5 shall be installed with allowance for closure during pressure test. After passing the pressure test, nozzle pipes shall be cut back to the protrusion length indicated in the drawing.

Härteprüfung am Stab / Durete Sur Barres / Hardness an bars : **215 - 219 HB**

Zusätzliche Angaben – Additional remarks – Autres remarques

Die gestellten Anforderungen sind erfüllt – The requirements are fullfilled – Les conditions imposées sont satisfaites

Die Prüfergebnisse entsprechen auch dem Werkstoff 1.7258(24CrMo5) nach DIN 17240–07/76 und Werkstoff 1.7219(26CrMo4) nach DIN 17280–07/85
Les résultats obtenue correspondent aussi avec le matiere 1.7258(24CrMo5) selon DIN 17240–07/76 et le matiere 1.7219(26CrMo4) selon DIN 17280–07/85
The obtained results are also in accordance with material 1.7258(24CrMo5) acc. DIN 17240–07/76 and material 1.7219(26CrMo4) acc. DIN 17280–07/85

Das Zeugnis entspricht einem Zeugnis 3.1 C nach DIN EN 10204, Ausgabe August 1995

Unsere Produkte sind frei von radioaktiven Stoffen. Der Freigabegrenzwert von 100 Bq/kg, der die Einhaltung der Grenzwerte der Strahlenschutzverordnung(StrlSchV) für die uneingeschränkte Freigabe von festen oder flüssigen Stoffen(StrlSchV Anlage 4, Spalte 3) für eisenverwandte Nuklide gewährleistet, wird nicht überschritten.

Our products are free of radioactive substances and do not exceed the clearing limit value of 100 Bq/kg, which guarantees the compliance with limit values given in the Radiation Protection Ordinance(StrlSchV) for the unrestricted clearance of solid material(StrlSchV Annex III, Section 5) for ferrous nuclides.

Nos produits ne contiennent aucun élément radioactif. La limite de 100 Bq/kg fixée par le décret concernant la protection contre la radioactivité (Strl SchV annexe III, colonne 5) pour les produits sidérurgiques n´est pas dépassée.

Es wird bestätigt, daß die Lieferung den Anforderungen der Lieferbedingung entspricht.
We hereby certify that the delivered material complies with the terms of the order.
Nous certifions que la fourniture répond aux conditions de livraison.

MEGJEGYZÉSEK:
- A csonkok külső erőből adódó terhelésekre nincsenek méretezve.
- Csonk hegesztési varratok az MSZ EN 13445-3:2021 szerint.
- Karima csavarfuratok fő síkba nem eshetnek.
- Felületkikészítés: -
- A 21, 22-es tételeket a megrendelő (AQUAGAS) biztosítja!
- A 21, 22-es tételeket a fenék behegesztése előtt beszerelni!
- A készülék a gyártóműben hőszigetelés nélkül készül.
- Készül: 3 db.
  (típusonként 1)
- A tervhez tartozó tételjegyzék száma: PL-GYP-243013-01

Note:
- External loads on nozzles are not taken into account
- Nozzles welding seams according to MSZ EN 13445-3:2021.

KALIBRÁLÓLABORATÓRIUM

Location: 6750 Algyő, Külterület Hrsz.: 01884/17. Mailing address: 6750 Algyő, Pf. 16
Tel./Fax: (62) 267-424 e-mail: info@pannonmuszer.hu http://www.pannonmuszer.hu

Certificate number: **MM-84202/24**

CERTIFICATE OF CALIBRATION

PM job number: PM-24-125 **Customer job number:** 999-ST-2024

Customer name: Gyémánt-Pirazol Kft. (admin: László Fekete)
Customer address: 3100 Salgótarján, Fülemüle út 9.
Calibration place, date: PANNONMŰSZER LTD Calibration laboratory, 2024. february 2.
Method of calibration: calibration was performed using direct comparison according to **KE-MM-01/2020** calibration process of manometers operating on indirect principle with ethalons selected properly to prescribed accuracy tolerances.

Calibrated measuring instrument: **Manometer**

Manufacturer:	Type:	Serial number:	Measuring range:	Resolution:	Accuracy class:	Measuring medium:	Condition:
Suku	*4451*	*33866*	*0...160 bar*	*5 bar*	*1,6*	*oil*	*appropriate*

Standard used for calibration: **Dead Weight Tester**

Manufacturer:	Type:	Serial number:	Measuring range:	Certificate number:	Validity:
OMIKSZ	*M8*	*7942*	*25.....250 bar*	*81796*	*11/20/2026*

Other measuring instrument: **Temperature and humidity sensor**

Manufacturer:	Type:	Serial number:	Measuring range:	Resolution:	Measurement uncertainty:	Certificate number:
DOSTMAN	*KVDLOG220*	*22019070006*	*-10...+60 °C*	*0,1*	*0,1 °C*	*H108003 R017007 N034044*

The measurements could be originate to the national ethalons based on calibration certifications of in-use ethalons and gauges.

Ambient temperature: 22,2 – 22,1 °C
Measurement results: (during preloading, the calibrated measuring instrument conformed):

Reference value [bar]	Measured value [bar]				Error (of measurement) [bar]				Expanded measurement uncertainty [bar]
	Increasing load	Decreasing load	Increasing load	Decreasing load	Increasing load	Decreasing load	Increasing load	Decreasing load	
0	0,0	0,0	0,0	0,0	0	0	0	0	0,6
30	30,0	30,0	30,0	30,0	0	0	0	0	0,6
60	60,0	60,0	60,0	60,0	0	0	0	0	0,6
90	90,0	90,0	90,0	90,0	0	0	0	0	0,6
120	120,0	120,0	120,0	120,0	0	0	0	0	0,6
160	160,0	160,0	160,0	160,0	0	0	0	0	0,6

Maximum permissible absolute error; $|h_{op}|$: 2,56 bar
Maximum measured absolute error; $|h_i|$: 0 bar

The reported expanded measurement uncertainty is the value of standard uncertainty multiplied by k=2 factor that means 95% reliability probability in case of normal distribution. The standard uncertainty of measurement has been determined in accordance to Publication EA-4/02 (Expression of the Uncertainty of Measuremen in Calibration).

Certification: according to ILAC G8:09/2019 using safety lanes.
Based on the metrological characteristics found, the measuring instrument:

Accepted: ☒ Not accepted: ☐ - the requirements of the specification (accuracy class).

The measurement results and the determination of compliance with the specification apply only to the calibrated measuring instrument.

Note: Please pay attention to the fact, that identifying and supervising a re-calibration date is basically the task of the owner of the measuring instrument.
The reported data refer to the metrological specifications of the calibrated measuring instrument.
Certificate can be issued.

III.	Általános megjegyzések General remarks
1	*Az Üzemeltető a felelős azért, hogy a szerelést, üzemeltetést és karbantartást végző személyzet ismerje ezeket az utasításokat.* *The Operator is responsible that these instructions are known to the erection, operating and maintaince personnel.*
2	*A gyártó azokért a károkért nem vállal felelősséget, amelyek ezen utasítások be nem tartásából származnak.* The Manufacturer disavows any responsibility for damages resulting from inobservance of these instructions.
3	*Az utasítások a gyártó gyakorlati és elméleti tapasztalataiból származnak. Azonban nem mentesítik az üzemeltetőt az üzemeltetésre, a nyomástartó készülék biztonságára és a személyzet oktatására vonatkozó felelőssége alól.* The instructions derive from practical and theoretical experience of the manufacturer. They, however, do not relieve the operator of his responsibility for the operation, for the safety of the pressure apparatus and for personnel schooling.
4	*Az üzemeltetőnek kell biztosítania megfelelő és alkalmas biztonsági intézkedésekkel, hogy a megengedett üzemi feltételeket és/vagy terhelési ciklusokat ne lépjék túl.* The Operator is to ensure through suitable and functionable safety measures that the allowable operation conditions and/or load cycles are not exceeded.
5	*A meghatározott üzemi feltételektől, a gyártó jóváhagyása nélküli bármilyen eltérés vagy a jelen utasítások figyelembe nem vétele érvényteleníti a gyártó felelősségét.* Any deviation from the specified operation conditions without the manufacturer's approval or nonobservance of these instructions nullifies the manufacturer's responcibility.
IV.	Szállítási és beszerelési megjegyzések Remarks on shipment and installation
1	*A szállítást, tárolást és beszerelést úgy kell végezni, hogy sem a nyomástartó részek, sem a tartozékok ne sérüljenek, sem pedig a belső és külső felületek állagmegóvása ne károsodjon.* The transport, storage and installation shall be done so that neither the pressure parts and attachments are damaged nor that the inner or outer surfaces respective preservation impaired.
2	*Szállításnál és beszerelésnél a készülék emelését a szállítási utasítás szerint kell végezni. A beszerelést szakképzett személyzetnek kell végezni, megfelelő emelőgépekkel és -kötelekkel, eszközökkel, stb.* The lifting of apparatus for transport or installation shall be made according to the transport-instructions. Installation shall be done with suitable lifting machines and lines, tools etc and by trained personnel.
3	*Az alaphoz vagy konstrukcióhoz történő helyes rögzítést ellenőrizni kell .* The correct anchoring to the foundation or construction is to be checked.
4	*A csővezetékeket csak a hozzájuk meghatározott csonkokra lehet csatlakoztatni.* Piping is to be attached only to their designated nozzles.
5	*A karimák újra lezárása előtt a használt tömítéseket le kell cserélni. A tömítőfelületeket le kell tisztítani, és ellenőrizni kell, hogy van-e rajtuk sérülés, szükség esetén újra kell őket forgácsolni. Szerelés után tömörségvizsgálatot kell végezni.* Used gaskets are to be replaced before re-closing flanges. Gasket surfaces are to be cleaned and checked for damage and re-machined if necessary. New leek test shall be performed.
6	*A készülék belsejének állapotát ellenőrizni kell közvetlenül lezárás előtt.* The condition inside the apparatus is to be checked just before closing.
7	*A készülék nyomástartó részein tilos a hegesztés vagy a hőkezelés.* No welding or heat treating is allowed on the pressurized parts of the apparatus.
8	*Csak a pótalkatrészlistán és/vagy a darabjegyzékben meghatározott anyagokat lehet beépíteni vagy beszerelni a készülékbe.* Only material as specified in the spare parts list and / or parts lists may be installed or mounted in the apparatus.
9	*A sikeres felállítást, beszerelést, rögzítést, csőcsatlakoztatást, a készülék belsejének vizsgálatát és a készülék lezárását jegyzőkönyvezni kell, és felhatalmazott személyeknek kell az átvételt végezniük.* The satisfactory erection, alignment, attachment, piping attachment, inspection of the equipment interior and closing of the equipment are to be recorded and accepted by authorized persons.
10	*A pótalkatrészeket, különösen a tömítéseket, zárt helységben, gondosan, vízszintes pozícióban kell tárolni.* *Spare parts, particularly gaskets, are to be stored carefully in the horizontally position in a closed room.*

GYÉMÁNT-PIRAZOL KFT.

Üzemeltetési utasítás
Operating instructions

Felhasználó / User:	Aquagas Sweden AB.	Gyári szám / Serial No.:	**GYP-2430131 - GYP-2430133**

V.	Üzemeltetési megjegyzések Remarks to operation
1	*Ügyelni kell az üzemeltetési paraméterekben történő hirtelen ingadozások elkerülésére.* *A következő értékeket nem szabad túllépni: Nyomás: 1 bar/min.* Care is to be taken to avoid surges in the operation parameters. The following values are not to be exceeded: Pressure: 1 bar/min.
2	*Ha üzemelés közben abnormális körülmények jelentkeznek, pl. nyomásnövekedés, akkor az üzemeltetőnek meg kell állapítani az okot, és ki kell javítania, szükség esetén pedig le kell állítania a készüléket.* Should abnormal conditions appear in operation, e.g. pressure increases, the operator is to determine the cause and correct or, if necessary, shut down the apparatus.
3	*A tervezett leállítások során is kerülni kell az üzemeltetési paraméterekben történő hirtelen ingadozásokat.* Also during planned shut downs, surges in the operation parameters are to be avoided.
4	*Tartós üzemszünet esetén javasolt a készülék nitrogénnel történő védelme. A tömítő felületeket állagmegóvó szerrel kell bevonni és óvni a mechanikai sérülésektől.* By extended shut downs, it is recommended to protect the apparatus with nitrogen. Gasket surfaces are to be coated with a preservation agent and protected from mechanical damage.
5	*Mielőtt újra üzembe helyeznék, a készüléken ellenőrizni kell a szivárgásokat, nyomáspróbával vagy tömörségvizsgálattal.* The apparatus is to be checked for leaks, e.g. hydrotest or leaktest, before placing in operation again.
VI.	Karbantartás Maintenance
1	*Amenyiben a készülék hosszabb ideig üzemen kívül van, pl. 6 hónapig, akkor a puha (soft) anyagból készült tömítéseket le kell cserélni.* If the apparatus has been out of operation for extended periods, e.g. 6 months, as can occur by delayed start-ups or longer shut down - renewed start-up interruptions, soft material gaskets should be replaced.
2	*A készülékben vagy a készüléken használandó tisztító anyagoknak a környezetet vagy a készüléket károsító vagy a személyzetre veszélyes anyogoktól mentesnek kell lenniük. Szükség esetén védőruhát és -felszerelést kell viselni.* Cleaning materials for use in or on the apparatus are to be free of substances damaging to the environment or the apparatus or injurious to personnel. If necessary, protective clothing and gear are to be worn.
3	*A készülék belsejét meg kell vizsgálni, hogy vannak-e rajta mechanikai, korróziós, vagy egyéb sérülések.* The interior of the apparatus is to be inspected for mechanical and corrosion damage etc.
4	*Lezárás előtt ellenőrizni kell a tömítő felületeket és a csavarkötéseket. Új tömítéseket kell használni.* Gasket surfaces and bolting are to be checked before closing. New gaskets are to be used.
5	*Próba utáni leürítés során biztosítani kell a rendszer vagy a készülék megfelelő mértékű légzését.* A sufficient venting of the system or apparatus is to be provided during draining after hydrotest.
6	*Keverős tartályok, készülékek esetében a hajtómű és a hozzá tartozó részek legalább negyedévente való karbantartása és ellenőrzése szükséges.* *A karbantartást és ellenőrzést a gyártó által készített kezelési, karbantartási utasításban megfogalmazottaknak megfelelően kell elvégezni, ellenkező esetben a készülék meghibásodásával, garanciavesztéssel járhat.* That vessels which have agitators, the mixer and its parts (gearbox, shafts, etc.) need to mantenance and inspection at least quarterly every year. Maintenance and inspection must be carried out in accordance with the instructions for use and maintenance prepared by the manufacturer, otherwise the device may malfunction and void the warranty.
7	*A karbantartási intézkedéseket jegyzőkönyvezni kell.* Maintaince measures are to be recorded.
VII.	Rendszeres vizsgálatok Regularity inspections
1	*Az illetékes hatóság határozza meg a rendszeres vizsgálatok közti időszakokat a veszélyanalízis és az alkalmazandó törvények alapján.* The responsible authority determines the intervals between regulatory inspections based on the hazard analysis and applicable laws.
2	*A gyártó 5 évente belső vizsgálatokat javasol, és 10 évente pedig nyomáspróbát.* Manufacturer recommends internal inspections every 5 years and every 10 years for pressure tests.

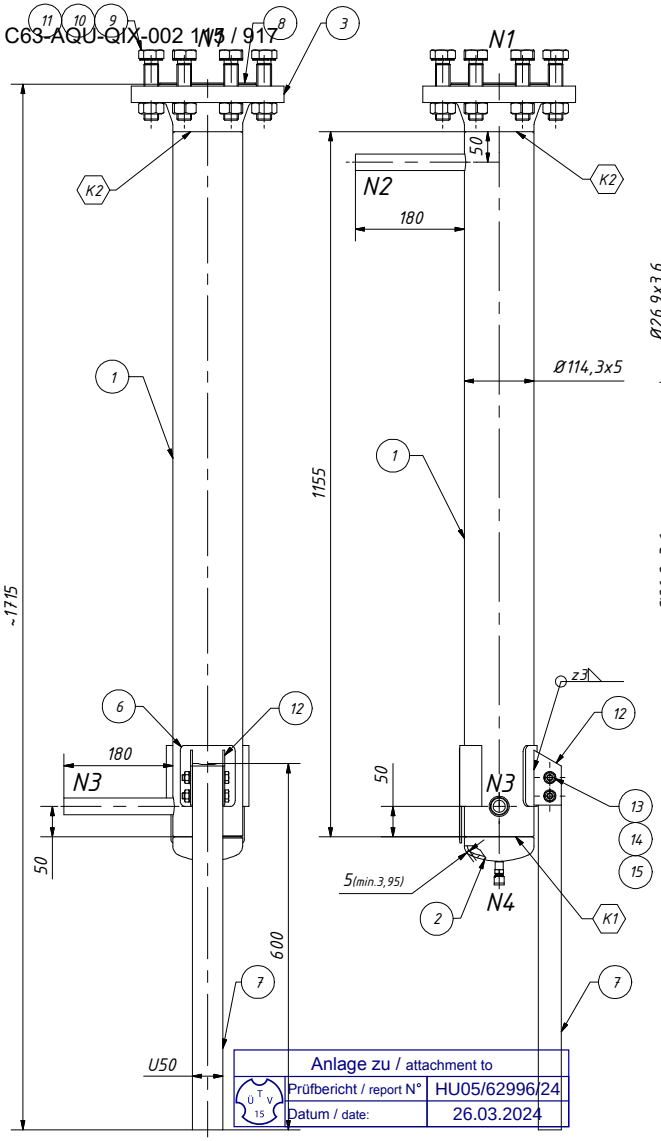
5.5	Module B[B1]: Certificate by Notified Body	---
5.6	The documents are suitable for the evaluation of the pressure equipment.	
6	**Intermediate inspections [Annex I para. 3]**	
6.1	Preparation of materials for joining [Annex I, 3.1.1.]	not applicable
6.2	Internal visual inspection	acceptable, see section 11
7	**Final examination [Annex I para. 3]**	
7.1	Visual inspection and dimensional check	considered, acceptable
7.2	Material test reports and traceability	considered, acceptable
7.3	Approvals for procedures (permanent joining, forming)	considered, acceptable
7.4	Approvals for personnel (permanent joining)	considered, acceptable
7.5	Approvals for NDE-personnel	considered, acceptable
7.6	NDE-personnel - Approval according to PED, Annex I, 3.1.3	considered, acceptable
7.7	Heat treatment	not applicable
7.8	Marking [Annex I, 3.3]	considered, acceptable
8	**Calibration of measuring tools & test resources**	
8.1	Manometer / pressure probe [33866; 33867]	considered, acceptable
8.2	Heat treatment devices [---]	not applicable
8.3	Others [---]	not applicable
9	**Pressure test [Annex I para. 3]**	
9.1	Test pressure, test fluid	considered, acceptable
10	**Examination of fundamental documentary requirements**	
10.1	Declaration of conformity of manufacturer	considered, acceptable
10.2	Reference of declaration to pressure equipment	considered, acceptable
10.3	Operating instructions of manufacturer	considered, acceptable
10.4	Examination of instruction regarding technical parameters	considered, acceptable



11	**Remarks**
	(1) to 1.3: Serial number has been specified on the as-built drawing according to the realized state. (2) to 3.7: Simplified fatique analysis acc. to EN 13445-3 point 17 (3) to 6.2: Internal visual inspection: only nozzle N1 circumferential welding seam on 26.03.2024 at final examination. (4) to 9.1: executed on 26.03.2024 at final examination, result acceptable. (5) Name plate rivet and nozzle N1 flange stamped with: 
12	**Result of inspection**
	The inspection of pressure equipment is finished.

MEGJEGYZÉSEK:
- A csonkok külső erőből adódó terhelésekre nincsenek méretezve.
- Csonk hegesztési varratok az MSZ EN 13445-3:2021 szerint.
- Karima csavarfuratok fő síkba nem eshetnek.
- Felületkikészítés: -
- Az 5-ös tételt a megrendelő (AQUAGAS) biztosítja.
- A készülék a gyártóműben hőszigetelés nélkül készül.
- Készül: 1 db
- A tervhez tartozó tételjegyzék száma: PL-GYP-243013-02

Note:
- External loads on nozzles are not taken into account
- Nozzles welding seams according to MSZ EN 13445-3:2021.
- Flange bolting holes shall not lie in principal planes
- Surface treatment: -
- Item 5 supplied by AQUAGAS
- The vessel is manufactured without thermal insulation.
- 1 pc. to be made
- The parts list number associated with the plan: PL-GYP-243013-02

A jelen dokumentumban megtestesülő eljárás, műszaki megoldások, ismeretek és gyakorlat a tervező tulajdona. A szolgáltatás alapját képző szerződés értelmében védett, és kizárólag annak korlátai között használható fel. A szerződéstől eltérő felhasználása, másolása, közlése, hozzáférhetővé tétele TILOS!

Report
for the examination of a pressure equipment design according to Directive 2014/68/EU Modules B / G / H1

TÜV THÜRINGEN

1	General Information for Certification Body / Testing Laboratory		Insp. No.	HU04/62979/24
1.1	Applicant, address	Gyémánt-Pirazol Kft.		
1.2	Manufacturer, address	Gyémánt-Pirazol Kft.; 4031 Debrecen, Nívó u.11.		
1.3	Order no. / Com. no.	TTHU-TE-24-3019		
1.4	Equipment designation	HP-100/40 vessel		
1.5	Drawing no.	DG-GYP-243013-02-00	Revision	0

2	Design code	2014/68/EU, EN 13445:2021	Module	G
2.1	Type of equipment	pressure vessel		
2.2	Remarks	---		

3	Operational limits	Chamber 1	Chamber 2	Chamber 3	Chamber 4
3.1	Designation of pressure chamber	workchamber	---	---	---
3.2	PS [bar]	+39,0/-1,0	---	---	---
3.3	TS [°C]	+270/-20	---	---	---
3.4	PT [bar]	69,7	---	---	---
3.5	Test fluid	water	---	---	---
3.6	Corrosion allowance [mm]	1,0	---	---	---
3.7	Number of allowable load cycles	20 000*	---	---	---
3.8	Allowable load cycle range [bar]	0/+38,0	---	---	---
3.9	Volume [L] / DN	10,0	---	---	---
3.10	Fluid group	1	---	---	---
3.11	Category according to Annex II	III	---	---	---

4	Additional loads	---
4.1	Position first pressure test	vertical
4.2	Seismic	---
4.3	Wind	---
4.4	Nozzles	---
4.5	Others	---

5	Completeness and adequacy of technical documents	
5.1	Exclusive statement of manufacturer	considered, acceptable
5.2	Equipment description / functional description	considered, acceptable
5.3	Description of type range (for type approvals only)	not applicable
5.4	Drawing(s)	considered, acceptable

Report
for the examination of a pressure equipment design
according to Directive 2014/68/EU Modules B / G / H1

TÜV THÜRINGEN

5.5	Part list(s): Instructions to applied standards and design codes	considered, acceptable
5.6	Part list(s): Instructions to manufact.& delivery terms, measure tolerances	not applicable
5.7	Design calculation(s): traditional design by formula	considered, acceptable
5.8	Design calculation(s): design by analysis (FEA, FDA, BEA)	not applicable
5.9	Test results of experimental design	not applicable
5.10	Approvals for procedures for permanent joining	acceptable, see section 11
5.11	Approvals for personnel for permanent joining	acceptable, see section 11
5.12	Approvals for NDE-personnel	acceptable, see section 11
5.13	Risk analysis	considered, acceptable
5.14	Operating instructions	considered, acceptable
5.15	The submitted documents are --- for the design evaluation.	
6	**Examination of documents concerning materials [Annex I 4]**	
6.1	Materials according to harmonized standards	considered, acceptable
6.2	European approval of materials (EAM)	not applicable
6.3	Particular material appraisal (PMA)	not applicable
7	**Examination of documents concerning design [Annex I 2]**	
7.1	Strength - internal pressure / add. loads	considered, acceptable
7.2	Strength - external pressure / support	acceptable, see section 11
7.3	Strength - fatigue, cyclic loading(s)	acceptable, see section 11
7.4	Strength - time depending behaviour, creep	not applicable
7.5	Experimental design method (test programme)	not applicable
7.6	Inspection, vent and drain openings	considered, acceptable
7.7	Corrosion, chemical attack	Resistance acc. to user specification
7.8	Wear (also other measures)	not applicable
7.9	External fire	not applicable
7.10	Additional requirements for piping	not applicable
7.11	Additional requirements for equipment with risk of overheating	not applicable
7.12	Deep cold service with the risk of brittle fraction	acceptable, see section 11
8	**Examination of documents concerning manufacturing [Annex I 3]**	
8.1	Forming operations	not applicable
8.2	Heat treatment (caused by forming: normalization / sol. annealing)	not applicable
8.3	Permanent joining	considered, acceptable
8.4	Nondestructive examinations: scope and location	considered, acceptable

Report
for the examination of a pressure equipment design
according to Directive 2014/68/EU Modules B / G / H1

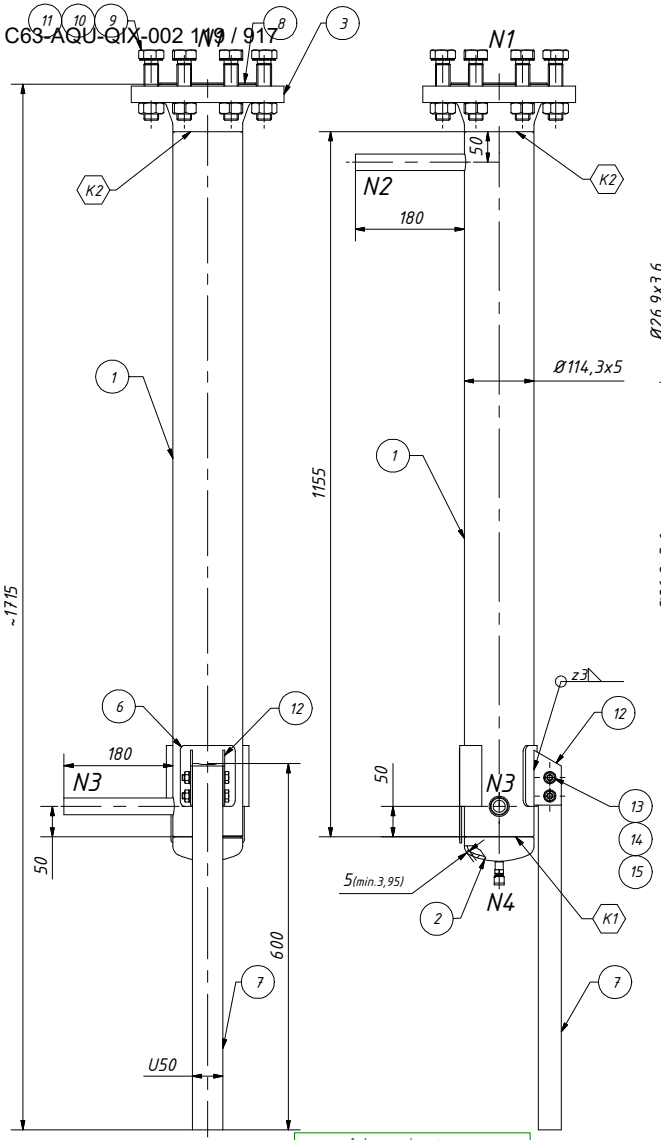
TÜV THÜRINGEN

8.5	Heat treatment (before / after welding)	not applicable
9	**Examination of documents concerning safety equipment [Annex I 3]**	
9.1	Examination of safety accessories	not applicable
10	**Examination of documents concerning final examination [Annex I 3]**	
10.1	Test pressure [Annex I, Para. 3.2.2, 7.4]	considered, acceptable
10.2	Marking [Annex I, Para. 3.3]	considered, acceptable

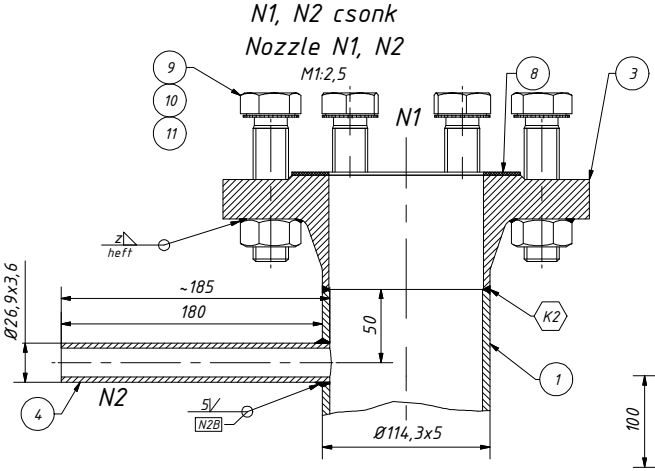
11 Remarks

(1) to 3.7; 7.3 : Simplified fatigue analysis acc. to EN13445-3 point 17.
(2) to 5.10 : During final inspection the relevant WPQR's will be checked by our expert.
(3) to 5.11 : During final inspection welders' certificates will be checked by our expert.
(4) to 5.12 : During final inspection the qualification of the NDT-personnel will be checked by our expert.
(5) to 6.1 : Materials for pressurized items shall be certified 3.1/EN10204+PED.
(6) to 7.2 : The vessel will be connected to steel structure, so that the stability is ensured.
(7) to 7.12: Minimum allowable temperature is -20 C° , so that the requirements acc.to EN13445-2 appendix B shall be taken into account.
(8) to 8.3 : Welding details shall be made acc. to EN1708-1.
(9) to 8.4 : All NDT have to be carried out according to the requirements of EN 13445 part 5.
(10) to 10.2: The pressure equipment must be marked in accordance with PED Annex I. point 3.3 and EN13445-5 point 11.
(11) Installed fittings and pressure accessories shall be designed for the intended use (pressure, temperature, fluid).

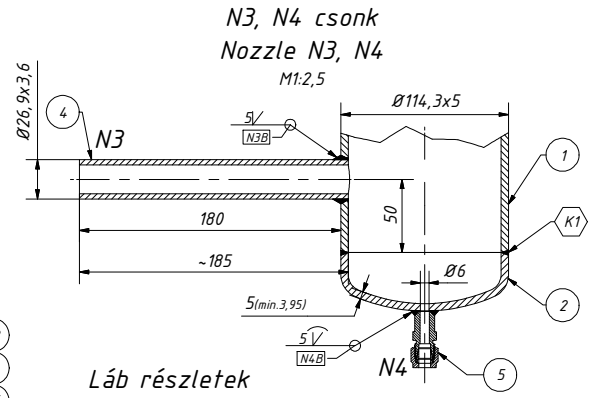
12 Result of examination



The design is considered as finally approved.



Testing Laboratory for Pressure Equipment Notified Body 0090 TÜV Thüringen e.V. Konrad-Zuse-Straße 21 D-99099 Erfurt ped@tuev-thueringen.de	Date	25-03-2024	Place	Budapest
	Ilona Gál Name / Signature			Stamp



Validity note for modules G and H1: Two years, for Modules B Ten years (monitored) from the day of issue.

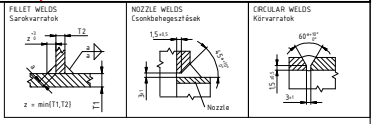
Gyári számok / Serial No.:
HP-100/40: GYP-2430134

MEGJEGYZÉSEK:
- A csonkok külső erőből adódó terhelésekre nincsenek méretezve.
- Csonk hegesztési varratok az MSZ EN 13445-3:2021 szerint.
- Karima csavarfuratok fő síkba nem eshetnek.
- Felületkikészítés: -
- Az 5-ös tételt a megrendelő (AQUAGAS) biztosítja.
- A készülék a gyártóműben hőszigetelés nélkül készül.
- Készül: 1 db
- A tervhez tartozó tételjegyzék száma: PL-GYP-243013-02



Note:
- External loads on nozzles are not taken into account
- Nozzles welding seams according to MSZ EN 13445-3:2021.
- Flange bolting holes shall not lie in principal planes
- Surface treatment: -
- Item 5 supplied by AQUAGAS
- The vessel is manufactured without thermal insulation.
- 1 pc. to be made
- The parts list number associated with the plan: PL-GYP-243013-02

MŰSZAKI ADATOK (TECHNISCHE DATEN) [TECHNICAL DATA]

CERTIFICATE

Quality-Assurance System for material manufacturer according to Pressure Equipment Directive 2014/68/EU

Certificate no.: 07/202/9190/WZ/0807/21

Name and address of the manufacturer:	**Liberty Ostrava a.s.** **Plant 15 Tube plant** **Vratimovská 689/117, Kunčice** **719 00 OSTRAVA, CZ**

Herewith we certify that the manufacturer has established and applies a **quality-assurance system related to the material.** This QA System has been subjected to a specific assessment acc. to directive 2014/68/EU, annex I, point 4.3 with regard to the materials mentioned in the scope of approval.

Approved acc. to directive 2014/68/EU:	**QA-System in relation to materials, EN 764-5, section 4.2**
Certification file no.:	9190/WP/0807/21
Audit report file no.:	4318311/04
Scope of approval: *(product / material)*	Seamless and Helically submerged arc-welded steel tubes Non-alloy and alloy steel, Alloy fine grain steel
Production site:	Vratimovská 689/117, Kunčice 719 00 OSTRAVA, CZ
The certificate is valid until:	10/2024

Only valid in conjunction with a valid certificate acc. to EN ISO 9001.

ISD DUNAFERR Zrt. Certifies and guarantees by present Certification that the above mentioned product meets the requirements of the AD 2000 W0 specification as well as the requirements of 2014/68/EU (PED) specification. The producer is certified according to ISO 9001:2015 and the tests were made at the accredited laboratories of Dunaferr Labor Nonprofit Kft.

Die ISD DUNAFERR Zrt. teilt mit dieser Bestätigung mit und garantiert, dass obiges Produkt den Vorschriften der AD 2000 W0 und den Anforderungen der Vorschrift 2014/68/EU (PED) gerecht wird. Der Hersteller ist nach ISO 9001:2015 qualifiziert, die Prüfungen werden in den akkreditierten Laboren der Dunaferr Labor Nonprofit Kft. durchgeführt.

Radioaktivity: We verify that the produced and delivered products don t increase the radioactivity in environment, the radioactivity is under the normal value of 100 Bq/kg.

Radioaktivität: Wir Bestätigen, das die von uns hergestellten und gelieferten Produkte in der Umwelt keine schädlichen Strahlenbelastungen verursachen, der spezifische Gammaaktivitätswert des Produktes befindet sich unter dem akzeptieren Wert von 100Bq/kg.

Číslo / *Number* / *Nummer* **57186/1/2020**

Skuška vírivými prúdmi vyhovela
Eddy current test without objections
Wirbelstromprüfung ohne Beanstandung
EN ISO 10893 -1 100 %

Material nie je kontaminovany ortut'ou
Material has no contamination by mercury
Material ist nicht kontaminiert mit Quecksilber

System kvality vyrobcu je certifikovany fy SGS podľa ISO 9001, číslo certifikatu HU95/4628 platnosť certifikatu je do 15 6 2023
Producer s Quality Assurance Sytem is certified according to ISO 9001 by SGS certificate no HU95/4628 validity 15 6 2023
Das Qualitatssystem des Herstellers ist nach ISO 9001 von SGS zertifiziert Zertifikatsnummer HU95/4628 Gultigkeit bis 15 6 2023

Rury su normalizačne valcovane podľa EN 10210-1-6 4
Tubes are normalized rolled under EN 10210-1-6 4
Rohren sind normalisierend gewalzt nach EN 10210-1-6 4

Radioizotopicka aktivita je max 100 Bq/kg
Radioisotopic activity is max 100 Bq/kg
Radioisotopische Aktivitat ist max 100 Bq/kg

Skušky ťahom za tepla podľa AD 2000-Merkblatt W4, časť 3 3 neboli vykonane so suhlasom TUV NORD Systems, TUV-file 18B03/012
With the approval of TUV NORD Systems TUV-file 18B03/012 hot tensile tests according to AD 2000-Merkblatt W4 section 3 3 have not been carried out
Verzicht auf Warmzugversuche gemass AD 2000-Merkblatt W4 Abschnitt 3 3 mit Zustimmung der TUV NORD Systems TUV-Az 18B03/012

Inšpekčny certifikat EN 10204 3 1 podľa AD 2000 W4 , časť 5 1, vydany na zaklade pisomneho suhlasu TUV NORD System, TUV–dokument 1326W133360
Inspection certificate EN 10204-3 1 acc to AD 2000-Guideline W4 sec 5 1 letter of agreement by TUV NORD Systems TUV-file 1326W133360
Abnahmeprüfzeugnis EN 10204-3 1 gemaß AD 2000-Merkblatt W4 Abs 5 1 Zustimmungsschreiben der TUV NORD Systems TUV-Az 1326W133360

System kvality vyrobcu bol podrobeny špecifickemu hodnoteniu pre materialy (Článok 4 3 a 7 5, Priloha I Smernice PED 2014/68/EU) Certifikat 07/202/9150/WZ/0915/20 vydalo notifikovane miesto 0045 TUV NORD Systems GmbH s platnosťou do 02/2023 Rozsah platnosti certifikatu zahŕňa predmetne vyrobky
The producer has a specific reviewed quality system for materials according to the Article 4 3 and 7 5 Annex I of the Directive PED 2014/68/EU
The certificate 07/202/9150/WZ/0915/20 with the validity till 02/2023 was issued by the Notified Body TUV NORD Systems GmbH Code 0045
The mentioned products belong to the certificate validity range
Der Hersteller hat ein spezifisch beurteiltes Qualitatssystem für die Werkstoffe nach dem Artikel 4 3 und 7 5 Anhang I der Direktive DGRL 2014/68/EU Das Zertifikat 07/202/9150/WZ/0915/20 gultig bis 02/2023 wurde von der Benannten Stelle TUV NORD Systems GmbH Kennummer 0045 erstellt Die aufgeführten Produkte sind im Geltungsbereich des Zertifikates eingeschlossen

Rury su vhodne na žiarovu galvanizaciu v zmysle EN 10025-2, tabuľka 1, trieda 3
Tubes are suitable for hot dip galvanizing acc to EN 10025 Table No 1 Class 3
Die Rohren sind für das Feuerverzinken nach EN 10025-2 die Tabelle Nr 1 die Klasse 3 geeignet

CERTIFICATE OF MATERIAL

* According to EN 10204:2004 (E) 3.1

Specification : ASTM A479 TYPE316/316L (STRAIN-HARDENED 2)
Material Mfr. : YAMASHIN STEEL CO., INC.
Customer : HY-LOK EUROPE
Project Name :

CAS No. :
Certificate No. : HD202304-2275
PO No. : 202240847
POR No. : -
Date of issue : Apr-17-2023

HCD No	Description (Part Name)	Q'ty
DZN	Male Pipe Weld Connector 8mmOD-1/4"NPS(ACWC8M-4P)	8 EA

Chemical Composition(%)

C	Si	Mn	P	S	Ni	Cr	Mo								
0.030 max	1.00 max	2.00 max	0.045 max	0.030 max	10.00-14.00	16.00-18.00	2.00-3.00								
0.010	0.22	1.65	0.038	0.024	10.12	16.19	2.69								

Mechanical Properties

Yield Strength MPa	Tensile Strength MPa	Elongation (%)	Reduction of Area (%)	Hardness ( )
515 min	655 min	25 min	40 min	
622	701	47	78	

Remarks
* Visual & Dimensional Inspection : Good
* Mechanical Tested According to ASTM A370
* Grain Size Result : 5
* Solution Treatment 1060°C WQ
* Intergranular Corrosion Test : Good

ISSUE No. : -

We hereby certify that the material herein has been made and tested in accordance with the above specification and also with the requirements called for by the above order.

Unsere Produkte sind frei von radioaktiven Stoffen. Der Freigabegrenzwert von 100 Bq/kg, der die Einhaltung der Grenzwerte der Strahlenschutzverordnung (StrlSchV) für die uneingeschränkte Freigabe von festen oder flüssigen Stoffen (StrlSchV Anlage 4, Spalte 3) für eisenverwandte Nuklide gewährleistet, wird nicht überschritten.

Our products are free of radioactive substances and do not exceed the clearing limit value of 100 Bq/kg, which guarantees the compliance with limit values given in the Radiation Protection Ordinance (StrlSchV) for the unrestricted clearance of solid material (StrlSchV Annex III, Section 5) for ferrous nuclides.

Nos produits ne contiennent aucun élément radioactif. La limite de 100 Bq/kg fixée par le décret concernant la protection contre la radioactivité (Strl SchV annexe III, colonne 5) pour les produits sidérurgiques n´est pas dépassée.

Es wird bestätigt, daß die Lieferung den Anforderungen der Lieferbedingung entspricht.
We hereby certify that the delivered material complies with the terms of the order.

MEGJEGYZÉSEK:
- A csonkok külső erőből adódó terhelésekre nincsenek méretezve.
- Csonk hegesztési varratok az MSZ EN 13445-3:2021 szerint.
- Karima csavarfuratok fő síkba nem eshetnek.
- Felületkikészítés: -
- Az 5-ös tételt a megrendelő (AQUAGAS) biztosítja.
- A készülék a gyártóműben hőszigetelés nélkül készül.
- Készül: 1 db
- A tervhez tartozó tételjegyzék száma: PL-GYP-243013-02

Note:
- External loads on nozzles are not taken into account
- Nozzles welding seams according to MSZ EN 13445-3:2021.
- Flange bolting holes shall not lie in principal planes
- Surface treatment: -
- Item 5 supplied by AQUAGAS
- The vessel is manufactured without thermal insulation.
- 1 pc. to be made
- The parts list number associated with the plan: PL-GYP-243013-02

Certificate number: **MM-84202/24**

CERTIFICATE OF CALIBRATION

PM job number: PM-24-125 **Customer job number:** 999-ST-2024

Customer name: Gyémánt-Pirazol Kft. (admin: László Fekete)
Customer address: 3100 Salgótarján, Fülemüle út 9.
Calibration place, date: PANNONMŰSZER LTD Calibration laboratory, 2024. february 2.
Method of calibration: calibration was performed using direct comparison according to **KE-MM-01/2020** calibration process of manometers operating on indirect principle with ethalons selected properly to prescribed accuracy tolerances.

Calibrated measuring instrument: Manometer

Manufacturer:	Type:	Serial number:	Measuring range:	Resolution:	Accuracy class:	Measuring medium:	Condition:
Suku	*4451*	*33866*	*0...160 bar*	*5 bar*	*1,6*	*oil*	*appropriate*

Standard used for calibration: Dead Weight Tester

Manufacturer:	Type:	Serial number:	Measuring range:	Certificate number:	Validity:
OMIKSZ	*M8*	*7942*	*25.....250 bar*	*81796*	*11/20/2026*

Other measuring instrument: Temperature and humidity sensor

Manufacturer:	Type:	Serial number:	Measuring range:	Resolution:	Measurement uncertainty:	Certificate number:
DOSTMAN	*KVDLOG220*	*22019070006*	*-10...+60 °C*	*0,1*	*0,1 °C*	*H108003 R017007 N034044*

The measurements could be originate to the national ethalons based on calibration certifications of in-use ethalons and gauges.

Ambient temperature: 22,2 – 22,1 °C
Measurement results: (during preloading, the calibrated measuring instrument conformed):

Reference value [bar]	Measured value [bar]				Error (of measurement) [bar]				Expanded measurement uncertainty [bar]
	Increasing load	Decreasing load	Increasing load	Decreasing load	Increasing load	Decreasing load	Increasing load	Decreasing load	
0	0,0	0,0	0,0	0,0	0	0	0	0	0,6
30	30,0	30,0	30,0	30,0	0	0	0	0	0,6
60	60,0	60,0	60,0	60,0	0	0	0	0	0,6
90	90,0	90,0	90,0	90,0	0	0	0	0	0,6
120	120,0	120,0	120,0	120,0	0	0	0	0	0,6
160	160,0	160,0	160,0	160,0	0	0	0	0	0,6

Maximum permissible absolute error; $|h_{op}|$: 2,56 bar
Maximum measured absolute error; $|h_i|$: 0 bar

The reported expanded measurement uncertainty is the value of standard uncertainty multiplied by k=2 factor that means 95% reliability probability in case of normal distribution. The standard uncertainty of measurement has been determined in accordance to Publication EA-4/02 (Expression of the Uncertainty of Measuremen in Calibration).

Certification: according to ILAC G8:09/2019 using safety lanes.
Based on the metrological characteristics found, the measuring instrument:

Accepted: ☒ Not accepted: ☐ - the requirements of the specification (accuracy class).

The measurement results and the determination of compliance with the specification apply only to the calibrated measuring instrument.

Note: Please pay attention to the fact, that identifying and supervising a re-calibration date is basically the task of the owner of the measuring instrument.
The reported data refer to the metrological specifications of the calibrated measuring instrument.
Certificate can be issued.

III.	Általános megjegyzések General remarks
1	*Az Üzemeltető a felelős azért, hogy a szerelést, üzemeltetést és karbantartást végző személyzet ismerje ezeket az utasításokat.* *The Operator is responsible that these instructions are known to the erection, operating and maintaince personnel.*
2	*A gyártó azokért a károkért nem vállal felelősséget, amelyek ezen utasítások be nem tartásából származnak.* The Manufacturer disavows any responsibility for damages resulting from inobservance of these instructions.
3	*Az utasítások a gyártó gyakorlati és elméleti tapasztalataiból származnak. Azonban nem mentesítik az üzemeltetőt az üzemeltetésre, a nyomástartó készülék biztonságára és a személyzet oktatására vonatkozó felelőssége alól.* The instructions derive from practical and theoretical experience of the manufacturer. They, however, do not relieve the operator of his responsibility for the operation, for the safety of the pressure apparatus and for personnel schooling.
4	*Az üzemeltetőnek kell biztosítania megfelelő és alkalmas biztonsági intézkedésekkel, hogy a megengedett üzemi feltételeket és/vagy terhelési ciklusokat ne lépjék túl.* The Operator is to ensure through suitable and functionable safety measures that the allowable operation conditions and/or load cycles are not exceeded.
5	*A meghatározott üzemi feltételektől, a gyártó jóváhagyása nélküli bármilyen eltérés vagy a jelen utasítások figyelembe nem vétele érvényteleníti a gyártó felelősségét.* Any deviation from the specified operation conditions without the manufacturer's approval or nonobservance of these instructions nullifies the manufacturer's responcibility.
IV.	Szállítási és beszerelési megjegyzések Remarks on shipment and installation
1	*A szállítást, tárolást és beszerelést úgy kell végezni, hogy sem a nyomástartó részek, sem a tartozékok ne sérüljenek, sem pedig a belső és külső felületek állagmegóvása ne károsodjon.* The transport, storage and installation shall be done so that neither the pressure parts and attachments are damaged nor that the inner or outer surfaces respective preservation impaired.
2	*Szállításnál és beszerelésnél a készülék emelését a szállítási utasítás szerint kell végezni. A beszerelést szakképzett személyzetnek kell végezni, megfelelő emelőgépekkel és -kötelekkel, eszközökkel, stb.* The lifting of apparatus for transport or installation shall be made according to the transport-instructions. Installation shall be done with suitable lifting machines and lines, tools etc and by trained personnel.
3	*Az alaphoz vagy konstrukcióhoz történő helyes rögzítést ellenőrizni kell .* The correct anchoring to the foundation or construction is to be checked.
4	*A csővezetékeket csak a hozzájuk meghatározott csonkokra lehet csatlakoztatni.* Piping is to be attached only to their designated nozzles.
5	*A karimák újra lezárása előtt a használt tömítéseket le kell cserélni. A tömítőfelületeket le kell tisztítani, és ellenőrizni kell, hogy van-e rajtuk sérülés, szükség esetén újra kell őket forgácsolni. Szerelés után tömörségvizsgálatot kell végezni.* Used gaskets are to be replaced before re-closing flanges. Gasket surfaces are to be cleaned and checked for damage and re-machined if necessary. New leek test shall be performed.
6	*A készülék belsejének állapotát ellenőrizni kell közvetlenül lezárás előtt.* The condition inside the apparatus is to be checked just before closing.
7	*A készülék nyomástartó részein tilos a hegesztés vagy a hőkezelés.* No welding or heat treating is allowed on the pressurized parts of the apparatus.
8	*Csak a pótalkatrészlistán és/vagy a darabjegyzékben meghatározott anyagokat lehet beépíteni vagy beszerelni a készülékbe.* Only material as specified in the spare parts list and / or parts lists may be installed or mounted in the apparatus.
9	*A sikeres felállítást, beszerelést, rögzítést, csőcsatlakoztatást, a készülék belsejének vizsgálatát és a készülék lezárását jegyzőkönyvezni kell, és felhatalmazott személyeknek kell az átvételt végezniük.* The satisfactory erection, alignment, attachment, piping attachment, inspection of the equipment interior and closing of the equipment are to be recorded and accepted by authorized persons.
10	*A pótalkatrészeket, különösen a tömítéseket, zárt helységben, gondosan, vízszintes pozícióban kell tárolni.* *Spare parts, particularly gaskets, are to be stored carefully in the horizontally position in a closed room.*

V.	Üzemeltetési megjegyzések Remarks to operation
1	*Ügyelni kell az üzemeltetési paraméterekben történő hirtelen ingadozások elkerülésére.* *A következő értékeket nem szabad túllépni: Nyomás: 1 bar/min.* Care is to be taken to avoid surges in the operation parameters. The following values are not to be exceeded: Pressure: 1 bar/min.
2	*Ha üzemelés közben abnormális körülmények jelentkeznek, pl. nyomásnövekedés, akkor az üzemeltetőnek meg kell állapítani az okot, és ki kell javítania, szükség esetén pedig le kell állítania a készüléket.* Should abnormal conditions appear in operation, e.g. pressure increases, the operator is to determine the cause and correct or, if necessary, shut down the apparatus.
3	*A tervezett leállítások során is kerülni kell az üzemeltetési paraméterekben történő hirtelen ingadozásokat.* Also during planned shut downs, surges in the operation parameters are to be avoided.
4	*Tartós üzemszünet esetén javasolt a készülék nitrogénnel történő védelme. A tömítő felületeket állagmegóvó szerrel kell bevonni és óvni a mechanikai sérülésektől.* By extended shut downs, it is recommended to protect the apparatus with nitrogen. Gasket surfaces are to be coated with a preservation agent and protected from mechanical damage.
5	*Mielőtt újra üzembe helyeznék, a készüléken ellenőrizni kell a szivárgásokat, nyomáspróbával vagy tömörségvizsgálattal.* The apparatus is to be checked for leaks, e.g. hydrotest or leaktest, before placing in operation again.
VI.	Karbantartás Maintenance
1	*Amenyiben a készülék hosszabb ideig üzemen kívül van, pl. 6 hónapig, akkor a puha (soft) anyagból készült tömítéseket le kell cserélni.* If the apparatus has been out of operation for extended periods, e.g. 6 months, as can occur by delayed start-ups or longer shut down - renewed start-up interruptions, soft material gaskets should be replaced.
2	*A készülékben vagy a készüléken használandó tisztító anyagoknak a környezetet vagy a készüléket károsító vagy a személyzetre veszélyes anyogoktól mentesnek kell lenniük. Szükség esetén védőruhát és -felszerelést kell viselni.* Cleaning materials for use in or on the apparatus are to be free of substances damaging to the environment or the apparatus or injurious to personnel. If necessary, protective clothing and gear are to be worn.
3	*A készülék belsejét meg kell vizsgálni, hogy vannak-e rajta mechanikai, korróziós, vagy egyéb sérülések.* The interior of the apparatus is to be inspected for mechanical and corrosion damage etc.
4	*Lezárás előtt ellenőrizni kell a tömítő felületeket és a csavarkötéseket. Új tömítéseket kell használni.* Gasket surfaces and bolting are to be checked before closing. New gaskets are to be used.
5	*Próba utáni leürítés során biztosítani kell a rendszer vagy a készülék megfelelő mértékű légzését.* A sufficient venting of the system or apparatus is to be provided during draining after hydrotest.
6	*Keverős tartályok, készülékek esetében a hajtómű és a hozzá tartozó részek legalább negyedévente való karbantartása és ellenőrzése szükséges.* *A karbantartást és ellenőrzést a gyártó által készített kezelési, karbantartási utasításban megfogalmazottaknak megfelelően kell elvégezni, ellenkező esetben a készülék meghibásodásával, garanciavesztéssel járhat.* That vessels which have agitators, the mixer and its parts (gearbox, shafts, etc.) need to mantenance and inspection at least quarterly every year. Maintenance and inspection must be carried out in accordance with the instructions for use and maintenance prepared by the manufacturer, otherwise the device may malfunction and void the warranty.
7	*A karbantartási intézkedéseket jegyzőkönyvezni kell.* Maintaince measures are to be recorded.
VII.	Rendszeres vizsgálatok Regularity inspections
1	*Az illetékes hatóság határozza meg a rendszeres vizsgálatok közti időszakokat a veszélyanalízis és az alkalmazandó törvények alapján.* The responsible authority determines the intervals between regulatory inspections based on the hazard analysis and applicable laws.
2	*A gyártó 5 évente belső vizsgálatokat javasol, és 10 évente pedig nyomáspróbát.* Manufacturer recommends internal inspections every 5 years and every 10 years for pressure tests.

MultiCert Europe

CERTIFICATE

Hereby we certify that

GYÉMÁNT-PIRAZOL KFT.

Headquarters: H-4031 Debrecen, Nívó u. 11.
Locations: 4031 Debrecen, Nívó u. 10; 4032 Debrecen, Pallagi út 13; 4026 Debrecen, Péterfia utca 13-19. 5. em. 505; 2220 Vecsés, Dózsa György u. 86; 3100 Salgótarján, Fülemüle u. 9.

within the scope

design, manufacturing, installation, maintenance and repair activities of pressure equipment, storage tanks, facilities for storing dangerous liquids and molten material, equipment intended for use in potentially explosive environments (EX operating area), unique machines, metal structures, industrial technological systems and pipelines

has implemented and applied a quality management system, which meets the requirements of the standard

MSZ EN ISO 9001:2015

The certificate is valid until 23. 02. 2025.

The certificate remains valid subject to annual audit reports.

Certificate registration No.: 1 2004 22

OBJECT INFORMATION

Inspected object	DEDR 500/36 acc. to PED
P&ID	20230440 Rev.3 Note 1.1
GA drawing	21231803 Note 1.1
Customer Order No.	BC0006223
Aquagas order No.	A-23/24 140
Manufacturer	AQUAGAS Sweden AB

VESSEL INFORMATION

Type of vessel	Deoxo vessel
Pressure vessel No.	GYP-2430131
Equipment category/Module	IV/G
Design pressure min/max	-1 / +39 bar(g)
Design temperature min/max	-20 / +270°C
Fluid	Group 1 (Hydrogen)
Drawing number	DG-GYP-233013-01-00
Design reviewer / Notified body	TÜV Thüringen e.V.
Statement of design examination no.	HU05/62993/24
Certificate	Declaration of conformity

Type of vessel	Dryer vessels
Pressure vessel No.	A: GYP-2430132 / B: GYP-2430133
Equipment category/Module	IV/G
Design pressure min/max	-1 / +39 bar(g)
Design temperature min/max	-20 / +270°C
Fluid	Group 1 (Hydrogen)
Drawing number	DG-GYP-233031-02-00
Design reviewer / Notified body	TÜV Thüringen e.V.
Statement of design examination no.	HU05/62994/24 - HU05/62995/24
Certificate	Declaration of conformity

Type of vessel	Heat Exchanger Coolers
Serial No.	
Equipment category/Module	II/A2
Design pressure	+45 bar(g) gas side / +16 bar(g) water side
Design temperature min/max	-20 / +270°C gas side ; -20 / +90°C water side
Fluid	Group 1 gas side / Group 2 water side
Drawing number	21231851
Design reviewer / Notified body	KIWA
Statement of design examination no.	N/A
Certificate	Declaration of conformity

Type of vessel	Particle filter from Classic Filters
Pressure vessel No.	SS 425.621 -Batch No 68305
Equipment category/Module	SEP
Design pressure min/max	0/100 bar(g)
Design temperature min/max	-20/200°C
Fluid	Group 1
Drawing number	N/A
Certificate	N/A

Type of vessel	Heater pipe
Pressure vessel No.	GYP-2430134
Equipment category/Module	III / G
Design pressure	-1 / +39 bar(g)
Design temperature min/max	-20 / +270°C
Fluid	Group 1
Drawing number	DG-GYP-243013-02-00
Design reviewer / Notified body	Kiwa Sweden AB
Certificate	Declaration of conformity

PRESSURE TEST INFORMATION

Tested object	DEDR 500/36 acc. to PED / Sr. no. A-23/24 140
Test fluid	Tapped water
Fluid temperature	Approx. 10°C
Ambient temperature	15°C
Test method	Hydrostatic
Technician	Richard P-Rimgaard

PRESSURE TEST RESULTS

	Gas Side	Water Side
Test date	2024-06-03	2024-06-03
Start pressure	69,7 bar(g)	15 bar(g)
Finish pressure after >1 hour	69,7 bar(g)	15 bar(g)

PRESSURE TEST ACCEPTANCE

Wittness	Kasim Aytekin
Inspector / Notified body	/ Kiwa Sweden AB
EU certificate of conformity no.	

Note 1.1 Excluding non-welded parts like pneumatic tubes, fittings etc.

Scotch-joke Pneumatic Actuators HT70 - APG - RGP500/250 series DA and SR versions

ai quali questa dichiarazione si riferisce, sono conformi alla direttiva:
to which this declaration relates, comply with the following directive:

2014/34/UE - ATEX (annex VIII - Non electric devices and components group II)
"Apparecchiature o Sistemi di Protezione o Componenti destinati ad essere utilizzati in atmosfere potenzialmente esplosive.
"Equipment or Protective System intended for use in Potentially Explosive Atmospheres"

La conformità è stata verificata sulla base dei requisiti delle norme seguenti:
The conformity is under observance of the following standards:

EN1127-1 : 2011 / EN13463-1 : 2009 / EN13463-5 : 2011

Marcatura delle apparecchiature sopra elencate:
Marking of the above mentioned products:

CE Ex **II 2 GD c TX**

destinate quindi ad essere utilizzate esclusivamente nelle zone **1,2** per gas e zone **21,22** per polveri
*Intended for use only in **1,2** zone for Gas and **21,22** zone for Dust*

File tecnico di riferimento */ Technical file of riferiment:*
TF-94/9-AP-001/14

In accordo all'articolo 8 b) ii) della Direttiva 2014/34/UE
il fascicolo è stato depositato presso l'organismo notificato:
In according to the article 8 b) ii) of the 2014/34/UE Directive, the technical documentation was consigned to the notified body:

TUV Italia s.r.l. - Gruppo TUV SUD
Via Carducci 125 pal. 23
20099 Sesto S. Giovanni (Mi)

L'ente notificato ha emesso l'avviso di ricevimento n°
The notified body has issued the acknowledgement n°

TUV IT 14 ATEX 022

Le apparecchiature elencate sono inoltre conformi alle seguenti norme tecniche:
The above mentioned equipments are in according to the following technical standards:

ISO 5211 : 2003 - VDI / VDE 3845 : 2010 - EN 15714-3 : 2009

Trezzano Rosa, 20TH April, 2016

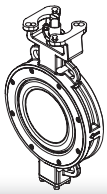
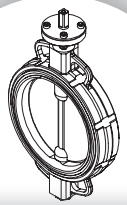
JIRCA INTERNATIONAL S.p.a.

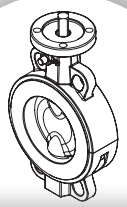
SIRCA INTERNATIONAL S.P.A.



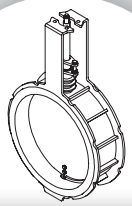
AP/APM series
Pneumatic Rotary Actuators



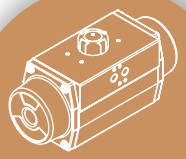
OUR PRODUCTION



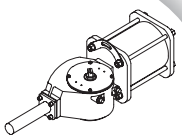
501M series - Triple Eccentric Metal Seated Butterfly Valves



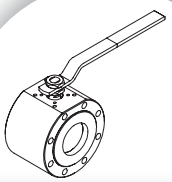
401N series - Double Eccentric Butterfly Valves



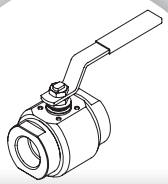
301 / 301E series - Butterfly Valves with Rubber Seat



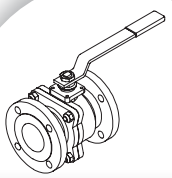
301TSS / 301TT series - Butterfly Valves with PTFE Lined



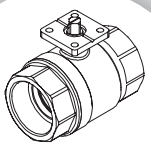
HT600 series - Damper Valves for High Temperature



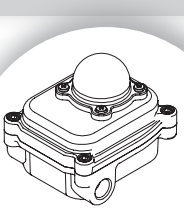
AP / APM series - Pneumatic Rotary Actuators



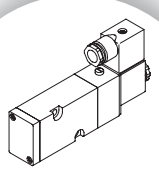
APG series - Scotch Yoke Pneumatic Actuators



S10 series - Wafer Flat Body Ball Valves



S20 series - Two-pieces 800 p.s.i. Ball Valves



S30 series - Split Body Ball Valves / **S30T series** - Trunnion Ball Valves

S40, S50, S60, S70, S80 series - Threaded Actuated and Manual Ball Valves

MBX Series - Limit Switch Box

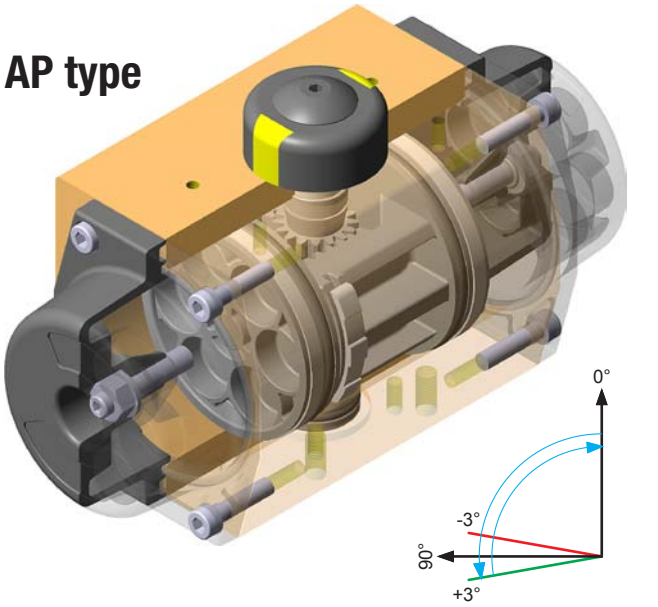
SVS Series - Solenoid Valves 5/2 or 3/2 way

ACCESSORIES

JIRCA INTERNATIONAL S.P.A.

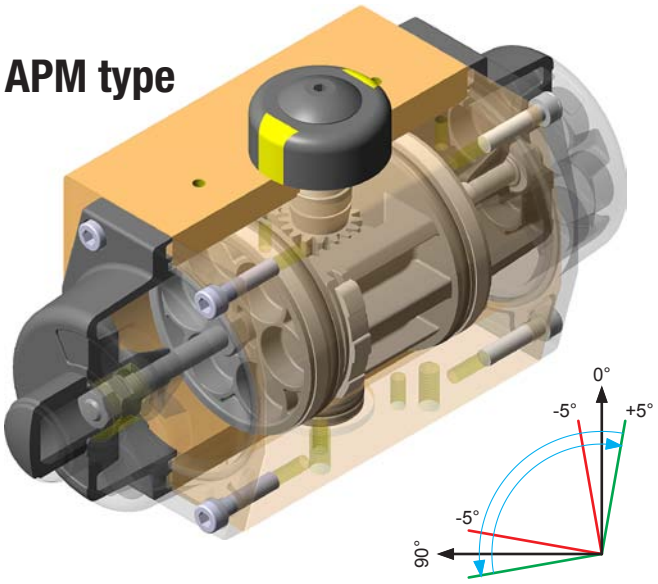
COMPANY PROFILE

Sirca International SpA was founded in the late seventies, and started doing business as a manufacturer of complete automation and pneumatic regulation systems.
Our flagship product is rotating pneumatic quarter-turn actuators which are compact, lightweight and highly reliable.



Subsequently, our company entered the Italian market with the production and sale of rubber-seated butterfly valves, double eccentric butterfly valves, ball valves and check valves.
In time at Sirca International we began marketing and producing accessories to actuate, control and regulate valves. These were installed on our own valves and actuators in order to offer our customers complete “assemblies” that are capable of meeting the most varied system requirements.

Beginning in the 1990s, our company began looking at foreign markets and in a short time we started exporting more than 60% of our production.
This type of market development requires continuous product innovation as well as continuous effort to maintain product competitiveness and quality.
With this motivation and these objectives, with the arrival of the new millenium we at Sirca International began designing and producing the triple eccentric butterfly valve metal-seated that are currently top of the range of the valves produced at Sirca.



The main strong points of Sirca International SpA lie in our product quality, competitive price, large warehouse stocks and in the reliability of our services. These confirm our status as a Leading Company on the national and international markets.

Constructive features

AP type

APM type

Two type of model: **AP** and **APM** series.

AP series, with single adjustment, allows only the adjustment of the stroke of the pistons in opening position 90° ± 3°.

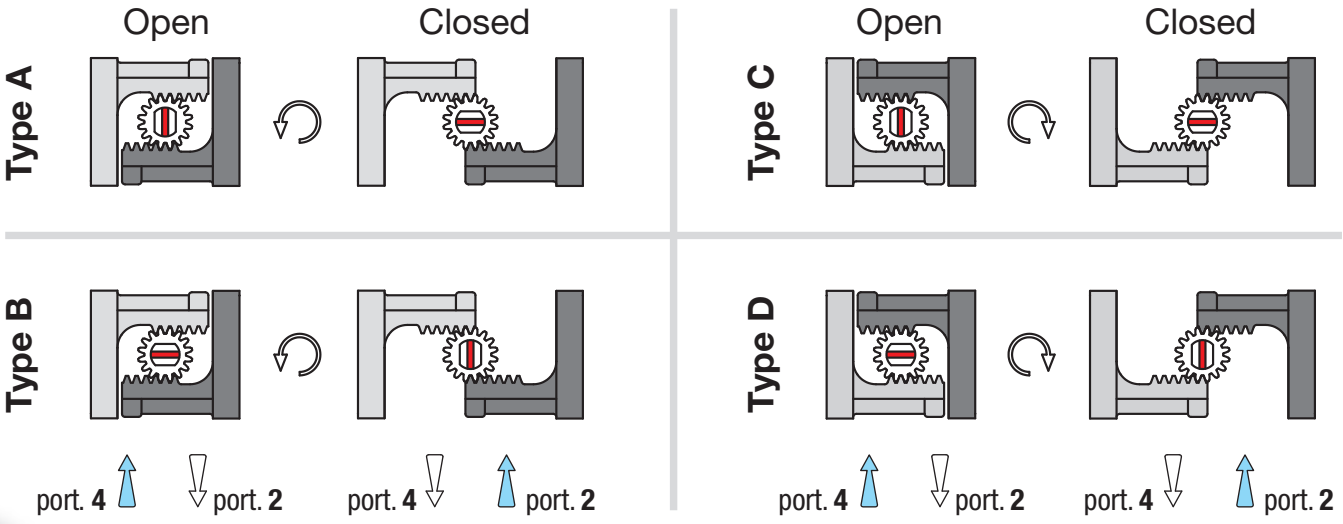
APM series, with double adjustment, allows to adjust the stroke of the pistons in closing and opening of ± 5°.

Dual piston rack and pinion design for compact construction, symmetric mounting piston. One compact design with identical body and end caps for double acting and spring return model.

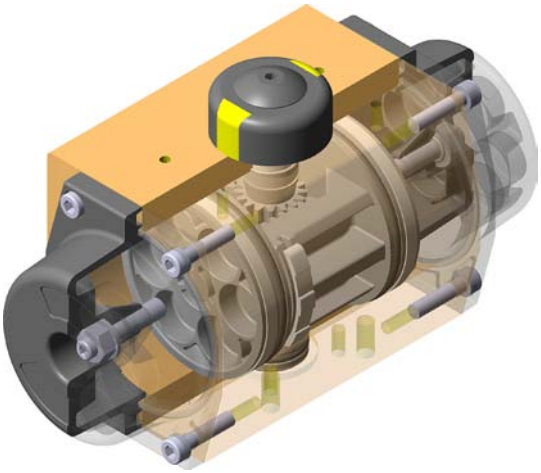
Extruded aluminium body, available with two types of corrosion protection, gold anodised or hard anodised. All bodies are machined with CNC controlled machines in order to obtain the highest quality and precision.

End caps and pistons are made of die-cast aluminum. End caps are painted.

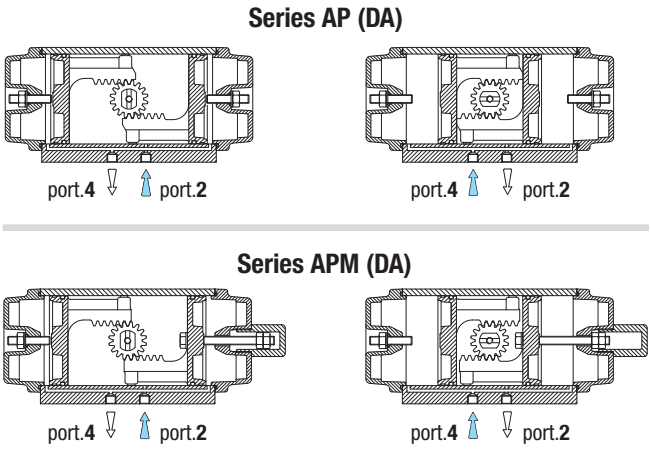
Pinion is made in nickel plated steel alloy. An anti-blowout system prevents the stem from slipping out of the actuator body.



All moving components, are equipped with special anti-friction rings or bearing.



All springs are made with an encapsulated system that avoids the risk of accidents during the disassembly phases of the actuator.



Internal and external stainless steel fasteners for long term corrosion resistance.

Conform to technical specifications:
ISO 5211, DIN3337 and VDI / VDE 3845 NAMUR for product interchangeability and easy mounting of solenoids valve, limit switches and other accessories.

Mounting variation

DOUBLE ACTING ACTUATOR (DA)

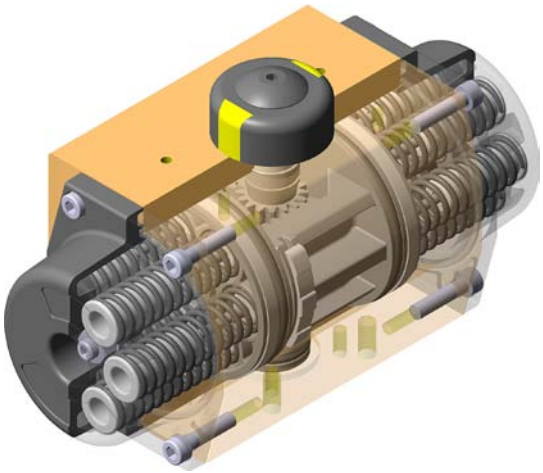
Counter clockwise output operation is achieved by inserting pressure into **Port '2'**, to force the pistons apart thus rotating the actuator pinion counter clockwise. During the operation, air from the outer chambers is exhausted through **Port '4'**. Clockwise output operation is achieved by reverse of the above and inserting pressure into **Port '4'**.

DATA REQUIRED FOR ACTUATOR SIZING

1) Valve torque (min. 25% safety recommended).
2) Double acting or spring return operation.
3) Minimum available operating pressure.

SELECTION OF DOUBLE ACTING ACTUATORS (DA)

Determine the required valve torque, this should include 25% safety margin, and the minimum operating pressure available. Refer to the pressure/torque table abd select the minimum pressure column applicable. Follow this column down until a value not less than that required is found. Next read across to the left hand column and read the model number to be ordered.
EXAMPLE: Valve torque 80Nm plus 25% = 100 Nm Minimum operating pressure 5 bar. By reading the 5 bar column, nearest value greather than 100 Nm is 119 Nm. The model number therefore shown in the left hand column is AP4DA.



REMARK: the chosen torque valve, which fixes the type of actuator, has never to be lower than the requested torque value of the valve.

DOUBLE ACTING TORQUE RATINGS (DA)

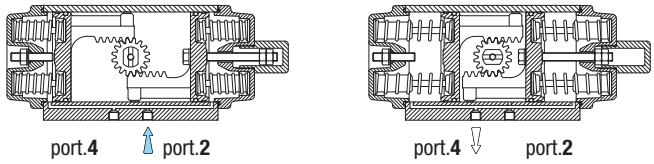
NOTE: The output torque of selected actuator mentioned in the table are suitable also for APM series and the value should never be less the required valve torque.



Principle of operation SR

Series AP (SR)

Series APM (SR)

SPRING RETURN ACTUATORS (SR)

Pressure applied to **Port '2'** will cause the inner chambers to be pressurised, forcing the pistons outward to compress the spring. The pinion is rotated counter counteil clockwise. Upon release of pressure through **Port '2'** the springs will exert pressure to close the pistons and rotate the pinion clockwise rapidly. This action will often be used to close a 90° turn valve in shutdown mode.

SELECTION OF SPRING RETURN ACTUATORS (SR)

Determine the required valve torque (this should include 25% safety margin), andthe minimum operating pressure available. Select from the **"SPRING STROKE /"0"** table a value that s not less than the required valve torque (including safety margin). Next refer to the pressure table and select under your minimum pressure and **"90"** torque column a figure not less than required (including safety margin).

EXAMPLE: Valve torque 60 Nm plus 25% = 75 Nm. Checking the **"SPRING STROKE /"0"** column, it will be noted that the nearest value is 108 Nm. By following the line across to the vertical 5 bar **"90"** torque column, a figure of 109 Nm is shown therefore, the suitable actuators is the **AP5SR5**. In a normal valve shut-down situation the actuator would operate the valve to break out a less than 108 Nm. If the **"90"** torque at operating pressure is too low, continue down the column until an acceptable vlua is found, compare with the corresponding **"SPRING STROKE /"0"** column to ensure that this also is adeguate. This model may be used.

RIGHT ARRANGEMENT OF SPRINGS

NOTE: The output torque of selected actuator mentioned in the table are suitable also for APM series and the value should never be less the required valve torque.

Technical features Pneumatic Actuator AP0÷AP12

Series	AP / APM DA Double Acting / SA Single Acting
Size range	AP0 ÷ AP12 (Ø32 mm to Ø330 mm)
Stroke	90° with single travel adjustment ±3° (AP series) 90° with double travel adjustment ±5° (APM series)
Pressure range	2 bar ÷ 8 bar for Double Acting 3 bar ÷ 8 bar for Single Acting
Torque range	2,4 ÷ 7500 Nm (21,4 ÷ 66875 lbf.in)
Operating temperature	-20 °C ÷ +80 °C (-4 °F ÷ +175 °F) standard
Design reference	UNI EN 15714-3, ISO 5211, VDI / VDE 3845
Flange interface	ISO 5211
Stem connection	Square or polygonal shape ISO 5211
Interface for pilot valve	NAMUR type
Accessories flange	VDI / VDE 3845, UNI EN 15714-3
Applications	They find their best application for actuation of quarter turn valves, such as: ball valve, butterfly valve, plug valve
Certifications	2014/34//UE ATEX, SIL IEC 61508 - IEC 61511 GOST-R, CU TR 10 CU TR 32

HABONIM
Industrial Valves & Actuators

Inspired By Challenge

Pneumatic actuator

Introduction

Proven advantage

The COMPACT actuator is a quarter-turn rack & pinion pneumatic actuator that doubles the torque of standard pneumatic actuators. The superior performance is achieved by Habonim's patented four piston design, which generates torque around a centrally located piston. This translates into double the power for the same size actuator or half the size for the same amount of power.

Space saving, fast acting

The COMPACT has four small cylinders, each located on one of the four sides of the cube.
The smaller pinion and shorter travel distance of the pistons in the COMPACT require less air pressure than a larger double-piston actuator to produce the same torque output. The end result is faster response times for emergency shutdown, lower air pressure for operation and reduced maintenance.

Technical summary

Pressure range	20-120 PSI (1.5 - 8 bar) for Double Acting (DA) actuators 30-120 PSI (2- 8 bar) for Spring Return (SR) actuators		
Size range	C15, C20, C25, C30, C30M, C35, C35M, C45, C45M, C60, C60M, C75, C75M		
Operating temperature	NBR	-20 °C to 80 °C	(-4 °F to 176 °F)
	Viton	-20 °C to 120 °C	(-4 °F to 250 °F)
	EPDM	-40 °C to 80 °C	(-40 °F to 176 °F)
	NBR FX428	-53 °C to 100 °C	(-63 °F to 213 °F)
Compressed gas	Air, Nitrogen, CO_2, Natural gas (sweet)		

Standards of compliance

Factory certification	ISO 9001:2015	Quality management system
Actuator design	ISO 5211:2017	Industrial valves - part-turn actuator attachments
	VDI/VDE 3845:2010 (NAMUR)	Industrial process control - pneumatic control valves - Interfaces of valves and auxiliary equipment
Certifications	ATEX 2014/34/EU	Equipment and protective systems intended for use in potentially explosive atmospheres
	DNV	Rules of classification of ships 'Det Norske Veritas' offshore standards
	IEC 61508-2/3:2010 SIL2/3	Safety integrity level - functional safety of electrical/ electronic/programmable electronic safety-related systems (optional for actuated unit only)
Documentation	EN 10204:2004 2.2/3.1/3.2	Metallic materials - types of inspection documents

Main pneumatic actuator features

Balanced forces

The cube-shaped configuration positions the pistons in a way that allows each piston to develop thrust along its own axis with zero side load. This efficient design eliminates the use of guide rods and thrust bearings. The result is less stress on the seals than off-axis piston thrust, which is caused by the piston side loading that is inherent in the geometry of traditional actuator configurations.

Less air consumption

Fast action is one of the most attractive features of the COMPACT 4-piston actuator. The distinctive four-piston design allows for a smaller diameter actuator pinion that significantly shortens piston travel and response time.

Less wear

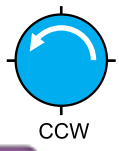
The COMPACT's unique 4-piston design achieves a more uniform load distribution than standard single- or double-piston actuators, therefore greatly reducing the wear on gears at the points of contact between rack and pinion. The force-balanced, shorter-stroke piston prevents uneven wear of O-rings, gears and pistons. This design eliminates the need for bearings and guiding rods and reduces the number of soft parts, thereby resulting in longer maintenance schedules and lower cost of repair kits. The surface of the four cylinders is hardened by an anodizing treatment, which protects their high surface finish.

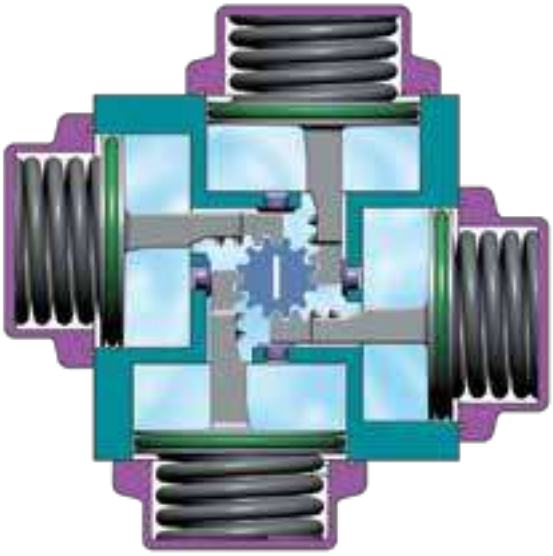
Fast action

Fast action is one of the most attractive features offered by the COMPACT 4-piston actuator. The unique four-piston design allows for a smaller diameter actuator pinion that significantly shortens piston travel, resulting in a shorter response time.

Superior corrosion resistance

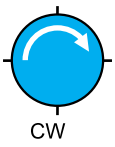
The body and covers are anodized internally and externally to protect against corrosive atmospheres tested to more than 336 hours of life in a salt spray bath. An external epoxy base layer and a second layer of polyurethane paint provide additional protection against aggressive environments. Optional: Electroless-Nickel (EN) coating of body, covers and pistons.



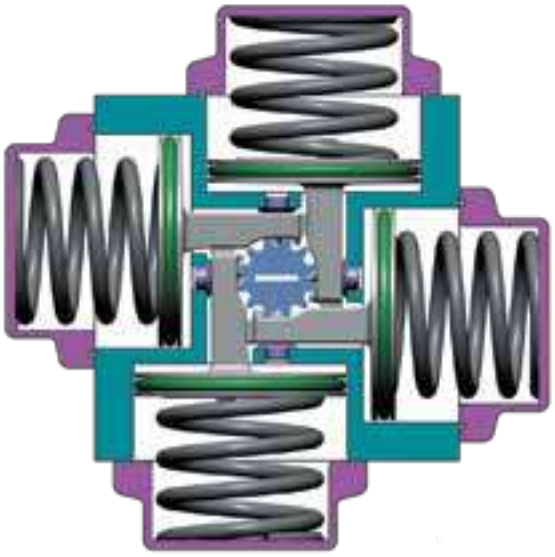


Spring return and double acting configurations

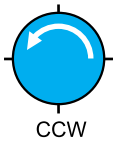
The COMPACT can be configured for either spring return or double-action operation. In both cases the air supply to drive the pistons flows into Port A of the NAMUR cover. Port A is connected to the center chamber, and Port B is connected to the four outside chambers.



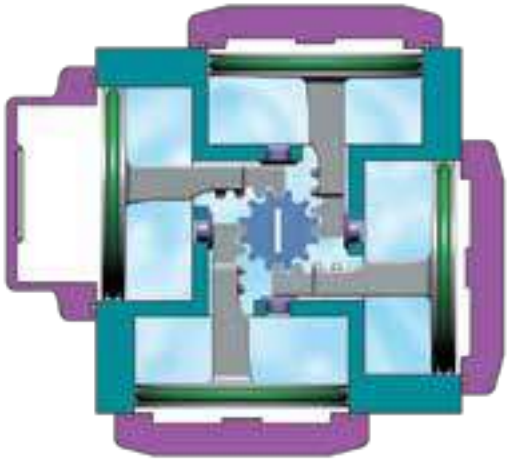
Spring return (fail-safe)

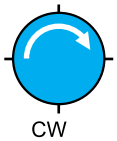


Pressure entering Port A to open:
Center chamber is pressurized and pistons move outward
Springs are compressed
Pinion rotates counterclockwise

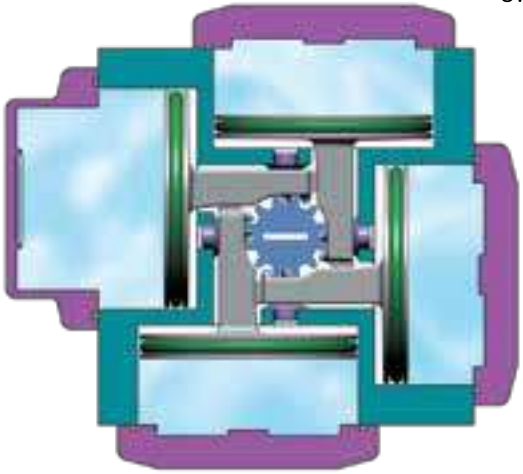


Pressure exiting Port A to close:
Air released from center chamber
Springs drive pistons inward
Pinion rotates clockwise





Double action (increased torque)



Pressure entering Port A to open:
Center chamber is pressurized
Pistons move outward
Pinion rotates counterclockwise

Pressure entering Port B to close:
Outside chambers are pressurized
Pistons move inward
Pinion rotates clockwise

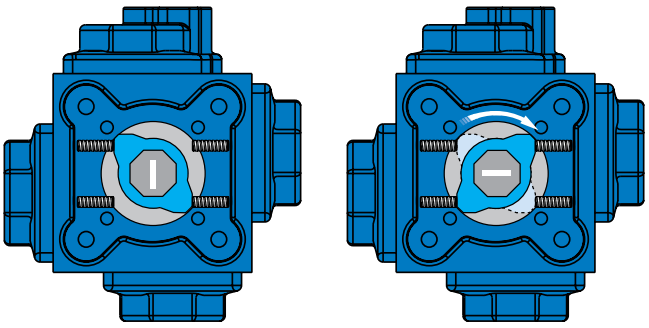
Main pneumatic actuator components

Pinion

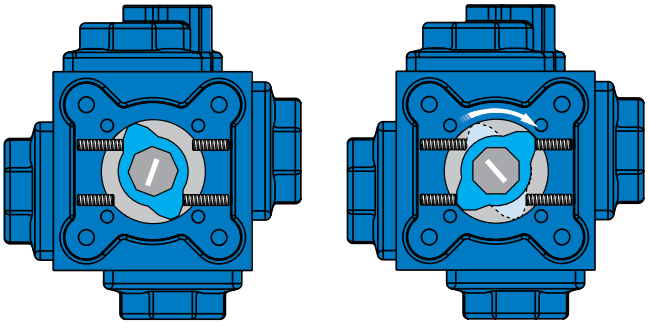
The pinion has a double-square female drive on its bottom plane that complies with ISO 5211 standard. The top plane has the NAMUR slot for attachment to switches or positioners. There is a machined flat below the NAMUR interface to enable manual operation of the actuator with a wrench. The pinion is made from carbon steel with Electroless-Nickel (EN) plating that results in a hard-wearing surface with added protection against corrosive environments.

Limit stop

The pinion and stop rotation can be adjusted by four large-diameter, diametrically-opposed adjustable set-screws that are threaded into the actuator body.
Each opposing pair of screws exerts simultaneous and equal force on opposite sides of the stop when the rotation limit is reached, thus preventing the generation of off-center forces.
The stop screws allow for +/-5° rotation adjustment in both directions of travel. Larger span can be achieved with a longer set of stop screws. This feature is built into the actuator stop mechanism and eliminates the need for additional plates and screws. The stop material is stainless steel for better wear and corrosion resistance.



Indicator & puck



A highly visible indicator with flow direction arrows is snapped on to the pinion, to provide easy identification of the valve position. These indicator arrows allow true positioning of any type of valve porting. The modular design makes it easy to change the indicator to match various flow pattern.

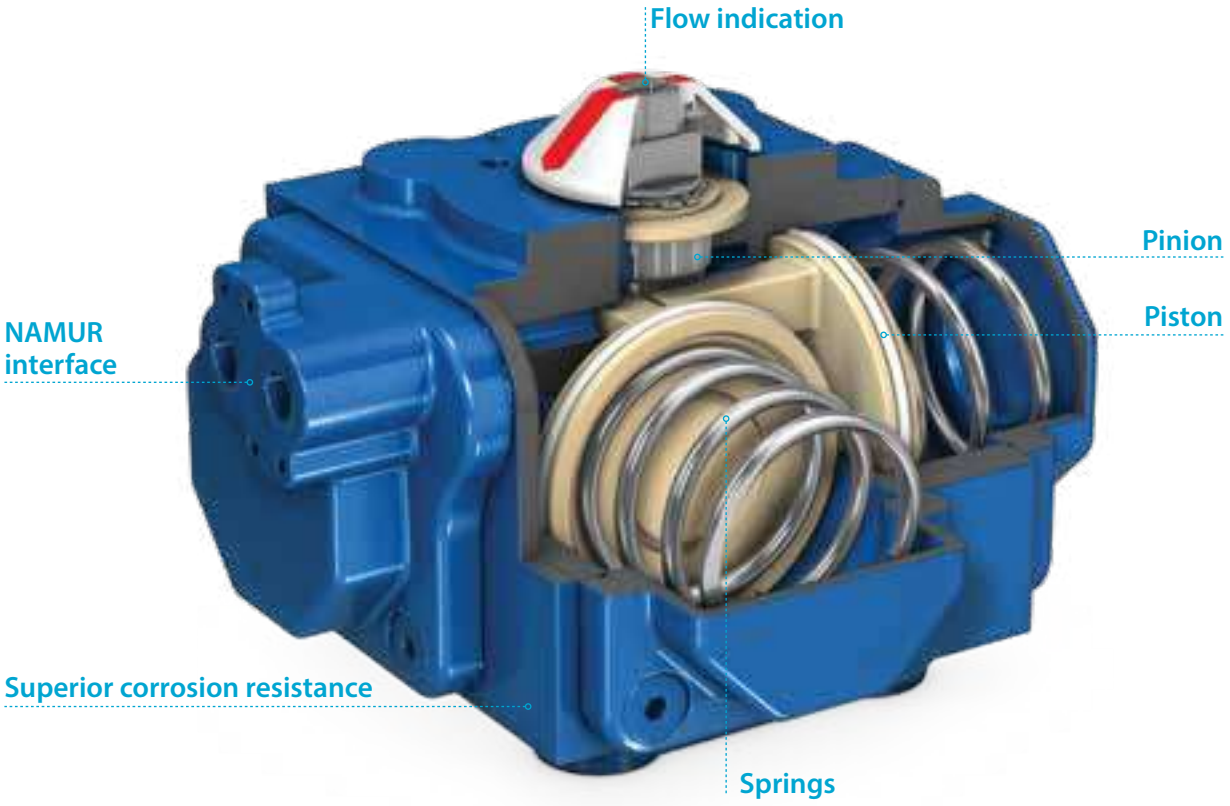
Safety features

The COMPACT's built-in safety features ensure secure and safe operation.
Assembly and dismantling of the actuator are simple tasks. Long cover-bolts for spring return actuators relieve the spring load before they disengage from their threads.
Before the pistons can be removed, the stop screw must be released and the pinion removed thus ensuring that any trapped and potentially hazardous pressure in the body will escape.

Close | Open

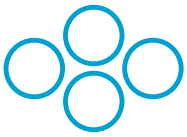
Partially closed | Partially open

Nested springs



The COMPACT can be used with up to three different spring sizes for the spring that, in each of the four cylinders, is nested between the cover and the piston and aligned by a centering ring. Each spring is wound in the opposite direction to its neighbor to avoid entanglement. All the springs act at the piston center axis so that no side load will occur if one spring fails to operate. By virtue of the four-cylinder design, there are many more spring combination possibilities than with double piston actuators, providing superior solutions for any air supply pressure required. Special painting of the springs provides higher corrosion resistance to the environment, resulting in more than 250 hours of life in a salt spray bath.

Spring cartridge



Using a modified spring set in a cartridge improves the torque characteristics of the COMPACT actuator. A spring cartridge is available only in the C30M, C35M, C45M, C60M and C75M actuators. Modifications include deeper covers to allow sufficient volume for the spring cartridge, thereby increasing the overall dimensions of the actuator. The spring cartridge is comprised of a shaped tube in which the extended springs have been preloaded and are held safely in place by two rigid discs. Changing a spring set configuration in this design requires changing the complete cartridge.

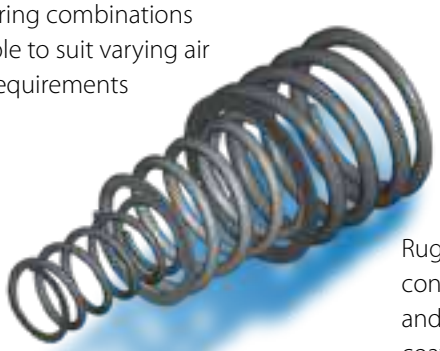
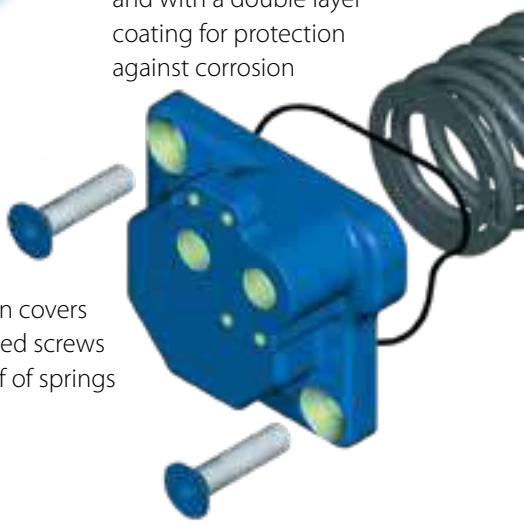
Sizing a spring return actuator requires that the torque output at the start and end of both the spring and air drive strokes is greater than the valve torque at that position.



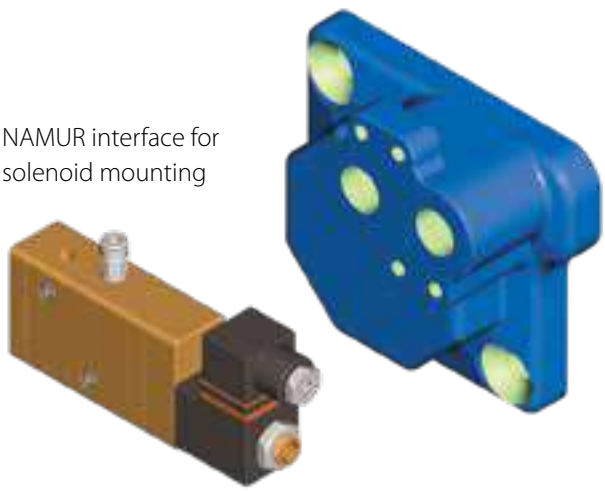
NAMUR output drive for limit switches and positioners

NAMUR VDI/VDE 3845 connection to limit switches

Springs painted for protection and fitted coaxially in a chamber. Various spring combinations are available to suit varying air pressure requirements

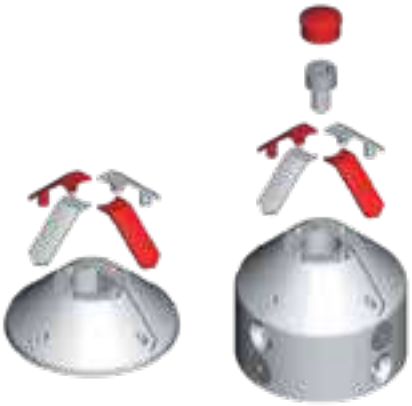


Smaller in the overall size compared to double piston actuators



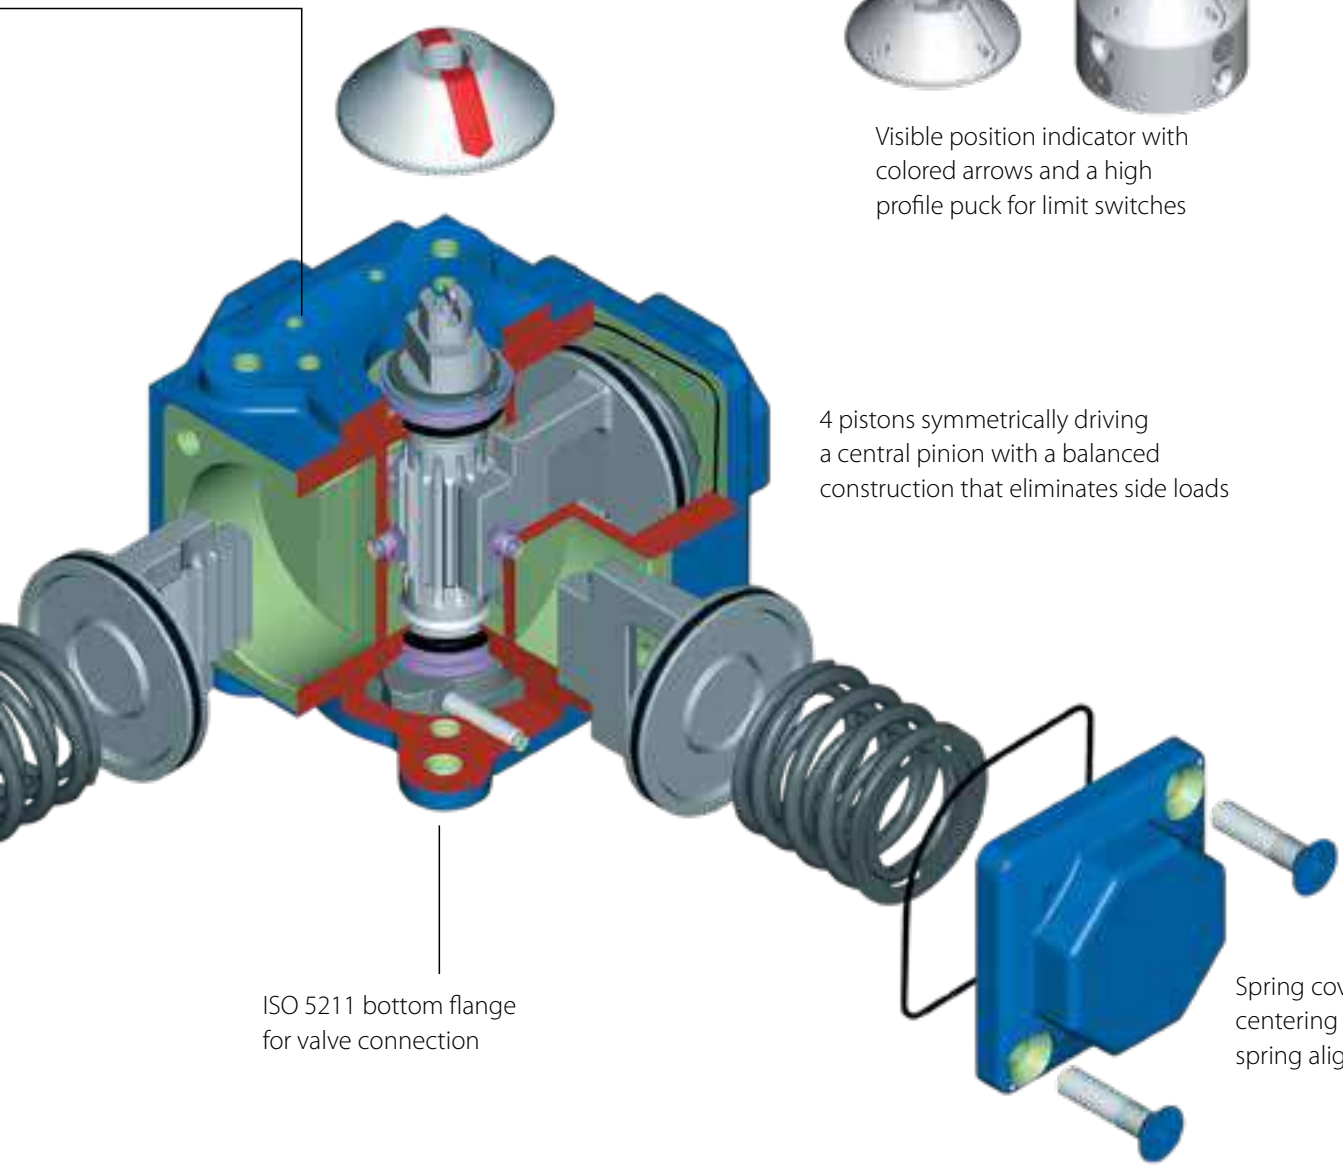
Spring cartridge:
The modified spring set design improves the torque characteristics of the COMPACT actuator

Rugged body construction, anodized and with a double layer coating for protection against corrosion



Spring return covers with extended screws for safe relief of springs

NAMUR interface for solenoid mounting



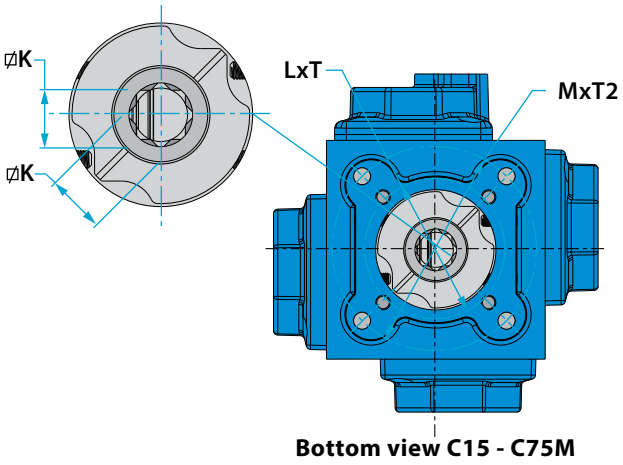
Limit stop for open-close and intermediate positions

Visible position indicator with colored arrows and a high profile puck for limit switches

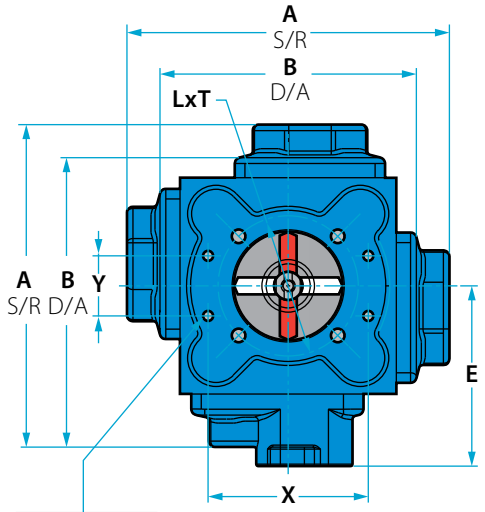
4 pistons symmetrically driving a central pinion with a balanced construction that eliminates side loads

ISO 5211 bottom flange for valve connection

Spring covers with centering rings for spring alignment



Patented 4-piston actuator provides double the torque output of a double piston actuator



Compact size with flat covers for double acting applications and minimum air consumption

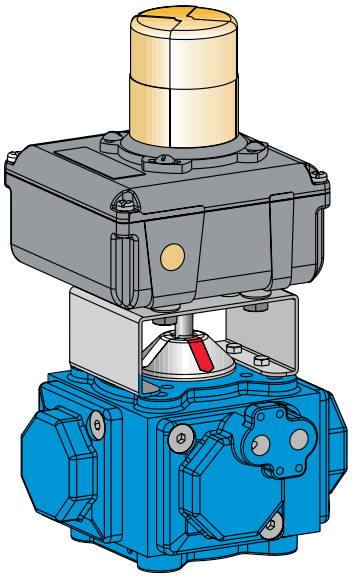
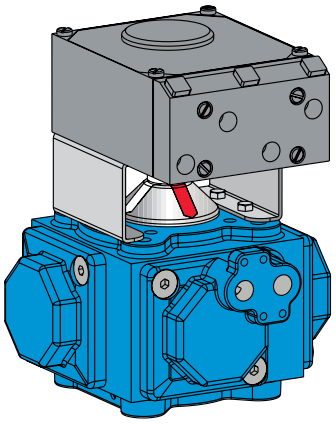
NAMUR & ISO interface

An extensive range of accessories such as solenoids, positioners and limit switches are available for direct mounting to the COMPACT actuator. Any accessory whose connections comply with ISO 5211 and VDI/VDE 3845 (NAMUR) mounting can be connected to the actuator.

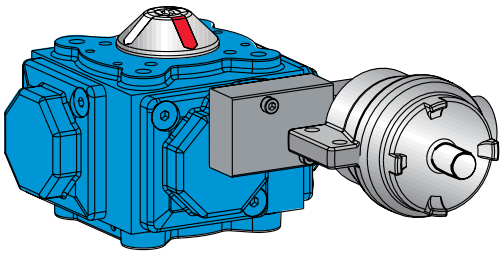
NAMUR VDI/VDE 3845



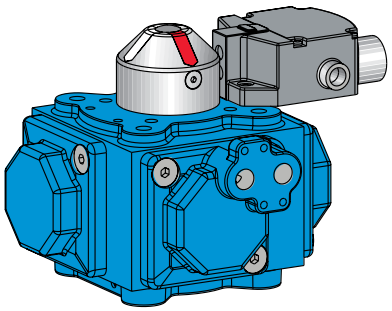
This standard provides for a range of accessories such as limit switches, pucks, indicators and positioners with a VDI/VDE interface so that they can be easily mounted onto the actuator top face.



NAMUR solenoid mounting



One of the four available actuator covers incorporates a pad for solenoid mounting according to the NAMUR international standard. Any solenoid that conforms to the NAMUR interface can be directly mounted to the actuators, thus simplifying the installation of solenoids and eliminating additional piping. It also allows quick actuation response as pressurized air supply is available at the port entrance.



ISO 5211

The actuator bottom flange is in accordance with the ISO 5211 international standard and incorporates a star-shaped female drive to flexibly fit a variety of valve output shafts. The valve can be attached by a bracket or mounted directly onto the actuator, using one of the various ISO hole patterns.

Emergency Shut-Down system (ESD)

Short response time

A short response time is essential for valves operating in Emergency Shut Down (ESD) systems such as in refineries, power stations, mining and other applications where Safety Integrity Level (SIL) loops are a mandatory requirement.
The values in the table below indicate the closing time (seconds) of an unloaded actuator and a loaded actuator with torque values simulating real-life situations. The stroke time measures the actual movement of the actuator without a solenoid or any other accessory delay.

COMPACT actuator stroking time (sec.)

¼" NAMUR solenoid valve

Compact actuator closing time (sec.)					
Compact Actuator for Emergency Shut-Down (ESD) Systems		Normal		Improved	Fast
		¼" Namur solenoid valve Cv = 0.9		¼" Namur solenoid valve Cv = 0.9, & Breather Block	¼" Non-Namur Solenoid valve Cv = 1, & ¼" quick exhaust

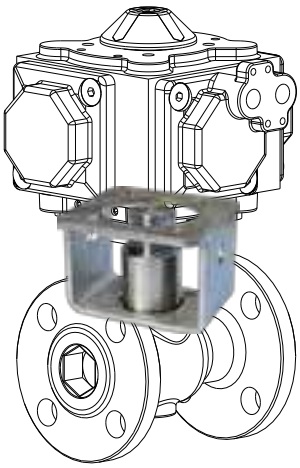
Mounting kits

Mounting kits play a major role in the proper functioning of an automated unit. A rigid bracket must connect the actuator to the valve so they become a single unit with zero movement between the three components. The coupler is an element that transfers the torque from the actuator to the valve shaft. It must fit tightly and accurately so as to minimize hysteresis and to turn the valve shaft on its center axis without side loading.

The mounting kit is designed for safe installation and operation of the complete unit, having rigid construction and no sharp corners. This well-engineered product provides a wide range of movement for the spanner, allowing for easy installation and maintenance, as well as maximum worker safety.

Whether pairing Habonim valves with the Habonim Compact™ actuators, customizing a mounting kit to pair the Habonim Compact™ actuator with other valve brands or mounting Habonim valves on a wide variety of other actuator brands; Habonim is a one stop shop, offering valve automation linkage hardware for a wide range of applications.

Cast brackets



Habonim's rigid cast bracket, has a unique shape and precise construction with dual ISO 5211 standard hole patterns on both the top and bottom. The cast bracket is designed for installation on all Habonim valves, and the Compact™ pneumatic actuator which conform to ISO 5211 standard.

An aesthetic shape and rounded corners, allow clear visibility of the valve stem and coupler from all directions. This well-engineered product provides a wide range of movement for the spanner, allowing for easy installation and maintenance, as well as maximum worker safety.

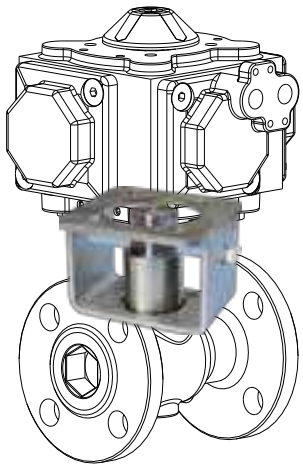
The cast bracket is made from cast grade CF8 (AISI304) stainless steel for better corrosion resistance. Each pad is marked with the relevant ISO "F" number for clear identification. The coupler is made from stainless steel 303 as standard, and the fasteners are from stainless steel 304. Other materials are available upon special request.

Sample MK code description 'MK47C-25-C35'

'Closed box' mounting kit

The 'closed box' mounting kit design is used mainly for Non-ISO 5211 compliant top pads, platforms larger than ISO 5211 F14 PCD, or for unique applications which are not covered by the cast bracket.

A 'closed box' bracket is comprised of a top and bottom element connected by a precisely welded tongue and groove construction. This configuration delivers the load from the actuator to the valve mainly through this latch mechanism and less is applied through the welding seam.



The Closed box bracket is made from stainless steel sheet AISI 304, however, for off-shore applications, desalination plants and applications exposed to corrosive environments stainless steel 316/316L is used.

An epoxy painted carbon steel bracket is used to connect large scotch-yoke actuators to large high pressure valves or trunnion mounted valves.

As standard the coupler is made from stainless steel 303, and the fasteners are made from stainless steel 304. Other materials are also available upon special request.

Sample MK code description 'MK47-25-C35'

'Lock Pin' mounting kit

To enhance site safety by preventing unintentional remote operation of an automated valve, Habonim provides a special lockable mounting kit.

The '-LP' mounting kit consists of a special bracket and coupler. A concentric hole drilled through the coupler and bracket allows a rigid stainless steel pin to be slid through both elements, blocking the valve stem and actuator pinion.

The '-LP' mounting kit does not include the lock pin itself, only the preparation to fit the lock pin as lock pins are normally part of maintenance toolbox.

Sample MK code description 'MK47-25-C35-LP'

Sample Lock pin kit codes:
LOCK PIN KIT C15/C30
LOCK PIN KIT C35/C45
LOCK PIN KIT C60/C75

'IFM' mounting kit

When a small footprint automated valve is required, Habonim provides a special mounting kit to allow easy installation of a barrel type proximity switch between the valve and actuator.

The '-IFM' mounting kit consist of a special bracket drilled to match the proximity switch OD, and a unique coupler with two ferromagnetic pin targets connected to it. The targets are aligned with the proximity switch unit so that when the actuator turns the valve to the open or closed position, the proximity switch signals the valve's position. This solution is an ideal non-contact detection of metal targets in position sensing applications, combined with smaller footprint allows for reduced space on the plant floor, but also minimizes the mounting space for sensors used for position control.

Sample MK code description 'MK47-10/12-C25-IFM12'

IFM shows the proximity switch type, followed by a number (8, 12, 18 or 30 mm) which indicates the outside diameter of the proximity switch cylinder.

'MOL' mounting kit

Manual operation of an automated valve is necessary during commissioning of a plant when an energy source is not stable, in case of an emergency, when there is a power outage and the valve must remain in the open or closed position, or due to an actuator malfunction.

Normally a declutchable gear would be used to integrate human intervention in an automated loop, however for small size valves up to 1 1/2" (DN40), Habonim recommends a cost effective mounting kit that allows the operator to turn the valve manually.

The 'MOL' mounting kit consists of a unique coupler with milled flats, and a drilled hole in its center. The 'MOL' closed box bracket is designed with an additional groove that allows a full quarter turn of a spanner. The kit also includes a lock pin and 19 mm spanner chained to the bracket. To rotate the pneumatically automated valve, disconnect the air pressure from the actuator. Hold the coupler flats with the spanner, and turn the drive train to its counter position, slide the lock pin all the way through the bracket and coupler to hold the valve and actuator in the new position.

Sample MK code description 'MK47-10/12-C25-MOL'

HABONIM Industrial Valves & Actuators	ATEX	REV date	09/2020
ATEX	DECLARATION OF CONFORMITY IN ACCORDANCE WITH EUROPEAN DIRECTIVE 2014/34/EU Ball Valves & Actuators	REV number	05
First Issue: 04/2003		Page 1 of 1	

Equipment Type: Range of 1-, 2- & 3-Piece Ball Valves, Compact II Range of Spring Return & Double Acting Actuators

Manufacturer: Habonim Industrial Valves & Actuators

Address: Kfar Hanassi, M.P Upper Galilee 1, 1230500, Israel

This declaration of conformity is issued under the sole responsibility of the manufacturer.

This declaration relates to the Valves and related variations as described in the certificate, coded:	Group II, Category 2GD c/g T1-T6 XTR202980.01
This declaration relates to the Actuators and related variations as described in the certificate, coded:	Group II, Category 2GD c/g T4-T6 XTR202980.01
The object of the declaration described above is in conformity with the relevant Union harmonisation legislation:	2014/34/EU

The following harmonised standards and other technical specifications were used in support of this declaration:

Harmonised Standards:	EN ISO 80079-36:2016 EN ISO 80079-37:2016

Notified body Kiwa Nederland B.V (number 0063) holds a copy of Audit Report No. 191000892 created by the manufacturer in accordance with Annex IV and VII of the directive, and deposited in accordance with article 16 (3) of Directive 2014/34/EU, and has issued receipt number: KIWA 20ATEXQ0055

Signed for and on behalf of : Habonim Industrial Valves & Actuators	Place and date of issue: Habonim, Kfar Hanassi 24/06/2020	Yoel Hadar, Engineering Manager

5 The equipment is specified in the description of this certificate and the documents to which it refers.

6 Eurofins E&E CML Limited, Newport Business Park, New Port Road, Ellesmere Port, CH65 4LZ, United Kingdom, certifies that this equipment has been found to comply with the Essential Health and Safety Requirements relating to the design and construction of equipment intended for use in potentially explosive atmospheres given in Schedule 1 of the Regulations.

The examination and test results are recorded in the confidential reports listed in Section 12.

7 If an 'X' suffix appears after the certificate number, it indicates that the equipment is subject to specific conditions of use (affecting correct installation or safe use). These are specified in Section 14.

8 This Type Examination certificate relates only to the design and construction of the specified equipment. Further requirements of the Regulations apply to the manufacturing process and supply of the product. These are not covered by this certificate.

9 Compliance with the Essential Health and Safety Requirements, with the exception of those listed in the confidential report, has been demonstrated through compliance with the following documents:

EN ISO 80079-36:2016 EN ISO 80079-37:2016

10 The equipment shall be marked with the following:

11 Description

C15-C100 actuator series

The Habonim Industrial Valves and Actuators Ltd Quarter Turn COMPACT Pneumatic Actuators - series C15-C90 are pneumatic quarter-turn rack & pinion actuators. Air pressure (maximum 8 bar) applied to the piston surface area generates thrust which transforms linear motion to rotary motion of the pinion. Both actuator types consist of a main aluminium body (complete with four aluminium covers with O-rings). Four pistons (each complete with a rack and O-ring) and one pinion/shaft (complete with O-ring). At the top of the actuator, there is a plastic indicator beacon complete with indicator arrows; this is secured to the pinion for easy indication of the valve position. There are two sizes of the beacon; a small 56mm x 19mm and a large 56mm x 41 mm. The external aluminium components are anodized then coated with two layers of paint. Snap

The actuator air connections are marked A and B. Port B connects via a series of holes to all the four pistons. The air passes into the Namur cover (or insert) and through holes which are connected to the two neighbouring pistons.

The spring return models are fitted with a Namur breather block, which is connected to both port A and B. The breather block prevents any external atmosphere from entering the internal parts of the actuator and prevents any explosive atmosphere from being pressurised.

The Quarter Turn COMPACT Pneumatic Actuators - series C15-C100 comprise uniform mechanical structure throughout all the series. The difference in the method of transferring the linear force from the pistons to the rotational torque of the operating shaft, can be found in C100 model. The C100 model comprises a scotch yoke mechanism, while the rest of the series from C15 to C90 are based on a rack and pinion mechanism.

The C100 actuator is a pneumatic quarter-turn (90°) scotch yoke actuator. Air pressure applied to the piston surface area generates thrust which transforms linear motion to rotary motion of the yoke. The Compact SY has four pistons centrally located around one yoke. When the pistons move away from the yoke, the yoke rotates counter-clockwise (CCW) – CCW stroke. When the pistons move towards the yoke, the yoke rotates clockwise (CW) – CW stroke.

Ball Valves – H29 and H99 series

The H29 and H99 series high pressure ball valves can come in a range of sizes and have a metallic construction with a PVC sleeve that is located on the handle of the valve. The Ball Valves are connected in series with the pipes that supply the actuators with compressed air. The valves are comprised of the following critical parts: valve body, rotary ball, stem seats and slide bearing. The valve body contains the integral components that allow on/off control. The rotatory ball valve is designed with a centre bore that the compressed medial flows through and permits or blocks its passage. The stem of the valve connects the ball to the external control mechanism which allows the valve/ball to be moved into the on/off position. The seats allow the ball to stay in position, ensuring that the on/off position is maintained. They also permit free movement of ball between the 2 positions, reducing wear of the parts.

The ball valves can be separately used with other suitably certified equipment or as an integral part of the actuator range listed in this evaluation certificate.

Note: Drawings that describe the equipment are listed in the Annex.

13 Conditions of Manufacture

***Only Applicable to Range of pneumatic actuators (C15 – C100)**

The following conditions are required of the manufacturing process for compliance with the certification.

i. It is the manufacturer's responsibility to ensure that all electrical equipment/devices fitted to the equipment are suitably certified and meet the ATEX/UKEX marking requirements of the equipment. In addition, the separately certified equipment, devices/ parts incorporated into the equipment shall be installed on the equipment and commissioned in accordance with the OEM instructions and recommendations.

ii. The manufacturer shall provide the end-user and/or installer with an appropriate copy of the certificate for each separately certified product that is fitted to the equipment.

iii. The manufacturer shall provide the end-user with the necessary operating instructions, settings, and operating parameters as appropriate for all non-electrical and electrical parts fitted to the equipment.

14 Specific Conditions of Use

The following conditions relate to safe installation and/or use of the equipment.

C15-C100 Actuator Series

i. The manufacturer marks the Temperature Classification/Maximum Surface Temperature as T6…T4 (T85°C to T135°C). This is because the maximum surface temperature of the equipment depends on the temperature of the process in which it is employed; refer to table below. It is therefore the responsibility of the user/installer to determine which values are applicable to their particular application:

Process temperature (Tp)	Temperature classification (maximum surface temperature)
Tp ≤ 80°C	T6 and T85°C
80°C ≤ Tp ≤ 95°C	T5 and T100°C
95°C ≤ Tp ≤ 130°C	T4 and T135°C

ii. For any electrical equipment (e.g., solenoid valves, limit switches) that may be incorporated with the equipment, the user shall ensure that they are suitably certified and meet the ATEX/UKEX marking requirements of the equipment. In addition, any separately certified equipment, devices/ parts incorporated into the equipment shall be installed on the equipment, commissioned and operated in accordance with the OEM instructions.

iii. The air compressor must incorporate a filter on the intake system and contain only lubricants that are resistant to ignition or carbonisation at anticipated temperatures.

iv. The air delivery must not be provided by hoses that are manufactured from elastomeric materials that can carbonise and/or form glow particles in anticipated temperatures.

v. It is the user's responsibility to ensure that the supplied air is from a non-hazardous area, and that it is clean, dry, oil free and dust free.

vi. At regular intervals, cleaning cycles shall be carried out to avoid deposit of a dust layer.

vii. The actuators must have a cycle rate of ≤1 cycle per minute.

viii. Prior to putting the equipment into operation, the internal chambers of the actuator shall be purged with clean, dry air from a non-hazardous area or an inert gas; refer to equipment IOM manual.

ix. All spring return actuator models shall have the Namur breather block fitted to both port A and B as shown in the manufacturer's drawings at all times.

x. Any lubricant(s) used with the equipment shall have an auto-ignition temperature 50K above the marked maximum surface temperature and shall be resistant to carbonisation.

xi. It is the user's responsibility to ensure that any conditions and/or limitations specified by the manufacturer regarding the use and operation of the equipment, are observed prior to installing and commissioning the products and during service as appropriately.

xii. It is the user's responsibility to ensure that the equipment is connected to earth appropriately. Electrical continuity shall be checked at regular intervals.

xiii. The equipment shall be protected from mechanical impact in service by location or suitable guarding.

xiv. The bearings and springs used with the equipment shall be maintained in accordance with the manufacturer's instructions, and shall not be exposed to liquids, solvents or vapours that are likely to cause damage. Checks must be carried out at appropriate intervals as specified in the IOM manual of the equipment; if excessive noise, vibration, heat is experienced the equipment must be stopped and examined until the fault is found and rectified.

Ball Valves – H29 and H99 Series

i. The manufacturer marks the Temperature Classification/Maximum Surface Temperature as T6…T3. This is because the maximum surface temperature of the equipment depends on the temperature of the process in which the valves are employed; refer to table below. It is therefore the responsibility of the user/installer to determine which values are applicable to their particular application:

Process temperature (Tp)	Temperature classification (maximum surface temperature)
Tp ≤ 80°C	T6 and T85°C
80°C ≤ Tp ≤ 95°C	T5 and T100°C
95°C ≤ Tp ≤ 130°C	T4 and T135°C
130°C ≤ Tp ≤ 145°C	T3 and 150°C

ii. It is the user's responsibility to ensure that any conditions and/or limitations specified by the manufacturer regarding the use and operation of the equipment, are observed prior to installing and commissioning the products and during service as appropriately.

iii. It is the user's responsibility to ensure that the equipment is connected to earth appropriately. Electrical continuity shall be checked at regular intervals.

iv. The equipment comprises a non-metallic sleeve; care shall be taken to avoid potential electrostatic charging hazards – wipe only with a damp cloth.

v. At regular intervals, cleaning cycles shall be carried out to avoid deposit of a dust layer.

vi. The equipment shall be protected from mechanical impact in service by location or suitable guarding.

Certificate Annex

Certificate Number	**CML 22UKEX6258X**
Equipment	**Range of pneumatic actuators and mechanical ball valves**
Manufacturer	**Habonim Industrial Valves & Actuators Ltd**

Certificate / Certificat

Zertifikat / 合格証

BUE 2006049 P0042 C002

exida hereby confirms that the:

Pilot-operated solenoid valves:

2/2 way 0290-A-*, 2/2 way 5404-A-***,
3/2 way 6518-C-***, 3/2 way 6518-D-***,
3/2 way and 5/2 way 6519-W-***,
5/2 way 6519-H-***, 4/2 way 5470-G-***

Bürkert Werke GmbH & Co. KG
Ingelfingen, Germany

Have been assessed per the relevant requirements of:

IEC 61508 : 2010 Parts 1-7

and meets requirements providing a level of integrity to:

Systematic Capability: SC 3 (SIL 3 Capable)

Random Capability: Type A, Route 2_H Device

PFH/PFD_{avg} and Architecture Constraints must be verified for each application

Safety Function:
The Valve will move to the designed safe position within the specified safety time.

Application Restrictions:
The unit must be properly designed into a Safety Instrumented Function per the Safety Manual requirements.

The manufacturer may use the mark:

CERTIFIED • IEC 61508 • SIL 3 CAPABLE • exida

BUE 2006049 P0042 C002

Systematic Capability: SC 3 (SIL 3 Capable)

Random Capability: Type A, Route 2_H Device

PFH/PFD_{avg} and Architecture Constraints must be verified for each application

Pilot-operated solenoid valves:
2/2 way 0290-A-*,**
2/2 way 5404-A-*,**
3/2 way 6518-C-*,**
3/2 way 6518-D-*,**
3/2 way and 5/2 way 6519-W-*,**
5/2 way 6519-H-*,**
4/2 way 5470-G-*

ABD 1000490849 EN Version: - Status: RL (released freigegeben) printed: 07.06.2021

Systematic Capability:

The products have met manufacturer design process requirements of Safety Integrity Level (SIL) 3. These are intended to achieve sufficient integrity against systematic errors of design by the manufacturer.

A Safety Instrumented Function (SIF) designed with this product must not be used at a SIL level higher than stated.

Random Capability:

The SIL limit imposed by the Architectural Constraints must be met for each element. This element meets *exida* criteria for Route 2_H.

IEC 61508 Failure Rates in FIT*

Device	λ_{Safe}	λ_{Dang}
2/2 way 0290-A-***	52	87
2/2 way 5404-A-***	87	66
3/2 way 6518-C-***	62	277
3/2 way 6518-D-***	62	287
5/2 way 6519-H-***	62	425
3/2 way and 5/2 way 6519-W-***	62	421
4/2 way 5470-G-***	55	231

* FIT = 1 failure / 10^9 hours

SIL Verification:

The Safety Integrity Level (SIL) of an entire Safety Instrumented Function (SIF) must be verified via a calculation of PFH/PFD_{avg} considering redundant architectures, proof test interval, proof test effectiveness, any automatic diagnostics, average repair time and the specific failure rates of all products included in the SIF. Each element must be checked to assure compliance with minimum hardware fault tolerance (HFT) requirements.

DATA SHEET
CATALYST DEOXO DSL2
CODE:4593

Metal Content (wt/wt)	0.2% Pd (Not less than 0.15% Pd)
Support	activated alumina spheres
Dimensions Smaller than 3mm Greater than 5mm	3 to 5mm diameter spheres < 5% < 5%
Colour	Grey
Tapped bulk density	Approx 0.6 kg/litre
Side crushing strength	> 10 daN
Porosity of unconsolidated bed	40% free space
Surface area	> 200 m2/gm
Pore volume	Approx 0.45 ml/gm
General Application	(1) Removal of O2 in H2 or CO to less than 1 ppm (2) Removal of CO (3) Removal of NOx (4) Removal of C2H2
Advantages	(1) Pressure drop marginally lower than cylinders (2) Strong support,low dusting (3) Resistance to poisoning (4) Good uniform activity (5) More economic than Type DS2 due to its lower density.

I:DATASHEET.DSL2

SAFETY DATA SHEET	Page: 1 of 5 Date: 16.03.2022 Issue no: 7 **Doc.no:SDS-DSL2-16/03/2022**

SECTION 1: IDENTIFICATION OF THE SUBSTANCE
1.1 PRODUCT NAME: DEOXO DSL2 CATALYST
PRODUCT CODE: 4593
REACH No: This product is a mixture.REACH Registration Number see section 3
1.2 TRADE NAME: 0.2% Palladium, on 3 to 5 mm alumina spheres, reduced
1.3 MANUFACTURER/SUPPLIER : ANCO CATALYSTS LTD
ADDRESS : GLENFIELD HOUSE, WORCESTER ROAD,
UPTON WARREN, WORCESTERSHIRE, B61 7EP
ENGLAND
1.4 TELEPHONE : 01527 861 535
EMERGENCY PHONE NUMBER : 01527 861 535

SECTION 2: HAZARDS IDENTIFICATION
2.1 Classification of the substance or mixture
Classification according to Regulation (EC) No 1272/2008 The product is not classified as hazardous to health or environment according to CLP Regulation.
Classification according to Directive 67/548 / EEC or Directive 1999/45 / EC Void.
Information concerning particular hazards for human and environment:
The product is labeled due to the calculation procedure of the "General Classification guideline for preparations of the EU", DIR.
Other hazards which do not result in classification No information known.
2.2 Label elements
Labelling according to Regulation (EC) No. 1272/2008 Not applicable
Indication of danger Not applicable
Signal word Not applicable
Hazard statements Not applicable
2.3 Other risks
This substance/mixture does not meet the PBT criteria of REACH regulation, annex XIII
This substance/mixture does not meet the vPvB criteria of REACH regulation, annex XIII

SECTION 3: COMPOSITION/INFORMATION ON INGREDIENTS
3.2

COMPONENT	PRODUCT IDENTIFIER	CONCENTRATION (%)	REACH REGISTRATION NO.
Palladium	**CAS-No.** 7440-05-3 **EC-No.** 231-115-6	Less than 0.2%	01-2120140175-66-0007
Aluminium oxide	CAS-No. 1344-28-1 EC-No. 215-691-6	Greater than 99.8%	01-2119529248-35

SECTION 4: FIRST AID MEASURES
4.1 Description of first aid measures
After Inhalation: In dust form, somewhat annoying eyes and respiratory system. Move to fresh air. Finding if necessary doctor.
After skin contact: Wash with soap and water
After eye contact: Rinse immediately with plenty of water for at least 15 minutes with eyelids open
Ingestion: Rinse mouth with water. Drink lots of water
4.2 Most important symptoms and effects, both acute and delayed
No further relevant information available.

4.3 Indication of immediate medical attention and special treatment needed
No further relevant information available.
After swallowing Seek immediate medical advice

SECTION 5: FIRE-FIGHTING MEASURES
5.1 Extinguishing
Suitable extinguishing agents Use firefighting measures to the surroundings.
5.2 Special hazards arising from the substance or mixture
If this product is involved in a fire the following can be released:
alumina
Palladium oxide
5.3 Advice for firefighters
Protective equipment:
Use pressurized air mask fighting if necessary
Additional information: The residue remaining after a fire can have catalytic properties and can promote the re-ignition of combustible materials.

SECTION 6: ACCIDENTAL RELEASE MEASURES
6.1 Personal precautions: Avoid contact with eyes
Avoid breathing dust
6.2 Environmental precautions: Prevent product from reaching sewage waters or water
6.3 Methods for cleaning up: Sweep up and shovel. Keep in suitable, closed containers for disposal
6.4 Reference to other sections: For waste, refer to Section 13

SECTION 7: HANDLING AND STORAGE
7.1 Precautions for safe handling
Keep container tightly closed.
Store in cool, dry conditions in well-sealed containers.
Information about fire and explosion protection: The product is not flammable.
Upon removal from the process, the catalyst can be self-heating when it is contacted with air after it has been in contact previously with H2 or organic compounds.
7.2 Conditions for safe storage, including any incompatibilities
Storage:
Requirements for storage areas and containers: No special requirements.
Further information about storage: Do not store with organic materials.
Keep away from flammable substances.
Further information about storage conditions: Keep container tightly closed.
Store in cool, dry conditions in well-sealed containers.
7.3 Specific end uses: No further relevant information available.

SECTION 8: EXPOSURE / PERSONAL PROTECTION
8.1 Control parameters
Ingredients with occupational exposure limits to be monitored
1344-28-1 aluminum oxide (98.0%)
(OEL) value: 10 * 4 ** mg / m³
Al: * total dust
** respirable dust
Additional information: No data
Palladium compounds: 0.002 mg / m3
Biological limit values
This product does not contain any hazardous materials with biological limits established by the region specific regulatory bodies.
8.2 Exposure
Personal protective equipment: Respiratory design with particulate filters. Use a respirator with type N95 (US) or PE (EN 143) cartridges as a backup to engineering controls.
Hand protection: Wear gloves (EU standard EN374)
Eye protection: Safety goggles (EU standard EN166)
Hygiene measures: Wash hands and face after contact with soap and warm water.

SECTION 9 : PHYSICAL AND CHEMICAL PROPERTIES
9.1 Information on basic physical and chemical properties
General information:
Appearance: Spherical pellets 3mm to 5 mm
Form: light grey pellets
Odour: none
pH: Not applicable
Melting point: > 2000°C
Boiling point: Not applicable
Bulk density: approx 0.8 Kg/l
Solubility: insoluble
Auto ignition temperature: Not applicable
9.2 Other information: No further relevant information available

SECTION 10: STABILITY AND REACTIVITY
10.1 Reactivity: No information known.
10.2 Chemical stability: Stable under recommended storage conditions.
Thermal decomposition / conditions to be avoided: No decomposition if used and stored.
10.3 Possibility of hazardous reactions: The catalytic properties of this product can promote the oxidation and combustion of organic materials.
10.4 Conditions to avoid: No further relevant information available.
10.5 Incompatible materials: Combustible substances
10.6 Hazardous decomposition products: Aluminum oxide
Palladium oxide

SECTION 11: TOXICOLOGICAL INFORMATION
11.1 Information on toxicological effects
Acute toxicity: Registry of toxic effects of chemical substances (RTECS) contains data on acute toxicity of the components of this product.
LD / LC50 values: No information
Skin irritation or corrosion: May cause irritations
Eye irritation or corrosion: May cause irritation
Sensitization: No sensitizing effects known.
Germ cell mutagenicity: No known side effects.
Carcinogenic effects:
ACGIH A4: Not possible to make a classification of the carcinogenicity to humans: Inadequate data on which to classify the agent
the basis of its carcinogenic effects in humans and / or animals.
Registry of Toxic Effects of Chemical Substances (RTECS) contains tumorigenic and / or carcinogenic and / or neoplastic data concerning this product.
Reproductive toxicity: No effects known.
Specific target organ systemic toxicity - repeated exposure: No known side effects.
Specific target organ systemic toxicity - single exposure: No known side effects.
Aspiration Hazard: No effects known.
Subacute to chronic toxicity: The Registry of Toxic Effects of Chemical Substances (RTECS) contains several tasks dosage for this topic.
Additional toxicological information:
To our knowledge this substance is acute and chronic toxicity is not fully known.
The product is not subject to classification according to the calculation method of the General EC Classification Guidelines for Preparations as issued in the latest version.

SECTION 12: ECOLOGICAL INFORMATION
12.1 Toxicity
Aquatic toxicity: No further relevant information available.
12.2 Persistence and degradability: No further relevant information available.
12.3 Bio accumulative: potential No further relevant information available.
12.4 Mobility in soil: No further relevant information available.
Additional ecological information:
General information:
Water hazard class 1 (Self-assessment): hazardous for water.
Do not allow product to reach ground water, water course or sewage system in small quantities in larger quantities.
Avoid transfer into the environment.
12.5 Results of PBT and vPvB assessment
PBT: Not applicable.
vPvB: Not applicable.
12.6 Other adverse effects: No further relevant information available.

SECTION 13 : DISPOSAL
13.1 Waste treatment
Recommendation:
Waste from residues: This safety data sheet does not apply to used DSL2 catalyst as they may have different hazards or properties than the original product.
See Anco for advice on disposal.
Can be provided as a solid waste.

SAFETY DATA SHEET	Page: 5 of 5 Date: 16.03.2022 Issue no: 7 **Doc.no:SDS-DSL2-16/03/2022**

14.TRANSPORT INFORMATION **UN-NUMBER**	
ADR, IMDG, IATA	Not applicable
14.2 UN proper shipping name	
ADR, IMDG, IATA	Not applicable
14.3 Transport hazard class(es) **ADR, IMDG, IATA**	
Class	Not applicable
Packing group	
ADR, IMDG, IATA	Not applicable
14.5 Environmental hazards:	
Marine pollutant	No
14.6 Special precautions for user	Not applicable
14.7 Transport in bulk according to Annex II of MARPOL 73/78 and the IBC Code	Not applicable
Transport/Additional information	Not dangerous according to the above specifications

SECTION 15: REGULATORY

15.1 Regulations / legislation for the substance or mixture Safety, health and environment

National regulations:

Information about limitation of use: For use only by technically qualified personnel.

Classification according to VbF (Regulations on flammable substances):
Not applicable

Water pollution - class 1 (Self-assessment): hazardous for water.

Substances of very high concern (SVHC) according to REACH Regulation (EC) No 1907/2006.
None of the ingredients are listed.

Terms of limitations in accordance with Article 67 and Annex XVII to Regulation (EC) No. 1907/2006 (REACH) for the manufacture, placing on the market and use shall be considered.
None of the ingredients are listed.

Annex XIV of the REACH regulations (which requires permits for use)
None of the ingredients are listed.

REACH - pre-registered substances
All ingredients are listed.

15.2 Chemical Safety Assessment: A Chemical Safety Assessment has not been made.

16.OTHER INFORMATION

The information given in this safety data sheet is based on our knowledge of this product, at the time of publication. It is given in good faith. However, no representation, warrant or guarantee is made to the accuracy, liability or completeness and we assume no responsibility therefore, and disclaim any liability for any loss, damage or injury howsoever arising using this information.

Certificate

Quality-Assurance System

acc. to Directive 2014/68/EU

Certificate no.: **01 202 ROK/Q-02 0017**

Name and address of the manufacturer:

Hy-Lok Corporation
Head office & 1st factory: 97,
Noksansandan 27-Ro, Gangseo-gu,
Busan, 46751, Korea

Herewith we certify that the above -mentioned manufacturer operates a quality system according to the European Directive 2014/68/EU. The manufacturer has the permission to affix the following CE marking to pressure equipment described and manufactured in accordance to the scope covered by this Quality-Assurance System:

CE 0035

Tested acc. to Directive 2014/68/EU: **QA-System (Module H)**
(the QA-Modules E1, E, D1, D are covered by Module H)

Audit report no.: ROK/Q-02 0017

Area of validity: Design and Manufacturing of Industrial Valves and Filters, see annex to certificate

Manufacturing plant: 2nd factory: 176, Dadae-Ro, Saha-gu, Busan, 49444, Korea

Valid until: November 30, 2023

Cologne, November 13, 2020

Safety Valve Durgo SV55 (4155) DN25 Set pressure 6.0 bar (0.60 MPa)

Durgo Safety Valve, or Pressure Relief Valve, type SV55 (4155) operates progressively and can be used in pressurised systems with cold and hot water, air, oils and other media. The valve housing, nipple and cone are in dezincification resistant brass with seal material of fluorinated rubber (FPM/FKM) or EPDM. Durgo Safety Valves are Class 4 categorized and CE labelled in accordance with the Pressure Equipment Directive (PED 2014/68/EU).

Model	SV55 (4155)
Article Number	SV-55-G25/G32-0600
RSK No	5002696
GTIN-13	7392948506038
Connection	G25 / G32
Connection type	Threaded external/external (ISO-G)
Set Pressure	6.0 bar(g)
Temperature range	-30°C to +125°C
Type	Progressive, soft sealing
Material	Brass / FKM seal
Function	Pressure relief valve
Approval / standard	Approved PED 2014/68/EU Class 4
Operation and Care Manual	OCM-SV-55-FKM_EN-2020-r1
Product brochure	Brochure SV Eng
Height	192 mm
Net weight	1.5 kg
Drawing (External dimensions)	SV55 DN25_32 Dimension drawing
Customs Stat No	81814090
REACH - info ENG	The valve is made of brass with more than 0.1% by weight of lead; CAS No. 7439-92-1 a substance listed on the EC Candidate List of Substances of Very High Concern, SVHC

About BASF

BASF Catalysts is the Global Leader in Catalysis, and is part of BASF - The Chemical Company. By leveraging our industry-leading R&D platforms, BASF's global research infrastructure and our passionate pursuit of innovation, we develop unique, proprietary technologies that drive customer success. Our catalytic solutions cover a wide range from chemical and refinery processes, to adsorbents and mobile emissions. In addition, we offer broad experience in trading base and precious metals.

BASF - The Chemical Company

Service

At BASF, we know that our success is dependent upon your success. That is why we are dedicated to offering intelligent system solutions, supported by our outstanding customer and technical assistance. An analysis of your current processes will reveal the BASF products and services that will greatly improve your efficiency and bottom line.

Sorbead®/ KC-Trockenperlen® Adsorbents

We make adsorbents differently

BASF
The Chemical Company

Sorbead® Product Suite

Properties and Benefits of BASF's Sorbead Adsorbents

Sorbead Properties	Benefits
Low regeneration temperatures	■ Reduced energy consumption ■ Minimal hydrothermal aging ■ Lower operational costs
Bead shape	■ High abrasion resistance ■ Low pressure drop ■ Reduction of energy and operational costs
Long-life	■ Decreased adsorbent replacement expense ■ Lower service and operational costs
Large specific surface area	■ Greater adsorption capacity ■ Increased drying performance ■ Low pressure dew points (minus 70°C)
High bulk density/high loading capacity	■ Reduction of plant size ■ Increased capacity of existing equipment ■ Substantial savings in both construction and operational costs ■ Improved operational benefits due to longer regeneration cycles

For over 50 years, BASF has been a leading supplier of adsorbents for a wide-range of industries. We help companies to meet and exceed demanding environmental and government standards with solutions tailored to companies' specific needs.

At BASF, we do this by thinking differently. We control all aspects of product development from design to packaging and quality control. We provide customized products to meet specific production requirements. We offer highly-reliable technical service that incorporates the skills, expertise, and knowhow found throughout BASF.

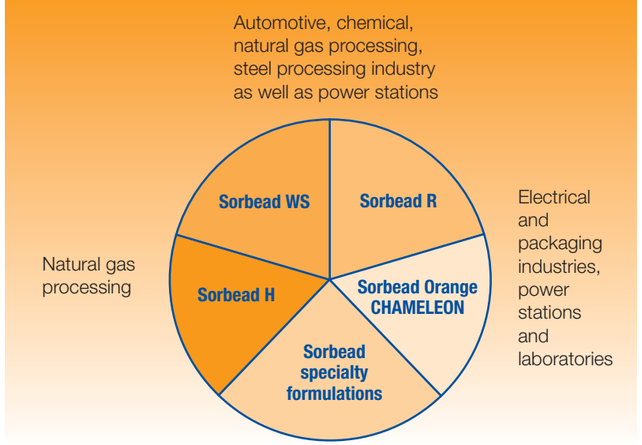
** In Europe, Sorbead adsorbents are also known by the registered trade name KC-Trockenperlen®*

Sorbead H

- Reduces the hydrocarbon and water dew point of natural gas to levels lower than those achieved by most other technologies
- Like other Sorbead adsorbents, it is regenerated by applying heat
- Adding a 10 – 20% protective layer of Sorbead WS to Sorbead H for protection against liquid carry-over is recommended

Sorbead R

- Widest range of adsorptive drying applications
- Economical to use with an above-average drying capacity and low regeneration temperature demands
- Best suited for drying compressed air, technical gases (e.g. N_2, O_2, CO_2), liquefied gases, and natural gas
- Durable and dependable with high mechanical strength and low product loss
- Can be regenerated by applying heat or pressure swing



Sorbead WS

- The only water-resistant, high-capacity, porous silica gel
- Ideal for applications where adsorbent regeneration with humid gas occurs such as with Heat-of-Compression and Blower-Purge air dryers and air separation plants
- High resistance against hydrothermal aging and low regeneration temperature
- Protects other adsorbents and catalysts from water and moisture in a broad range of applications

Sorbead Orange CHAMELEON®

- Offers maximum moisture monitoring process assurance
- Used in:
  - Drying plants
  - Transformer air-dehumidifiers
  - Laboratory drying towers, U-tubes, and desiccators
- Environmentally friendly indicator which provides safe moisture indication without any concerns regarding carcinogenic ingredients
  - Sorbead pearls change color from orange to translucent when the adsorbent captures a certain amount of moisture
  - Water adsorption continues beyond the threshold point until maximum capacity is reached
  - Regains its orange color and is fully functional after regeneration

Sorbead Portfolio and Various Applications

Comprehensive Technical Services

Customized Sorbead Formulations

BASF can design and supply a variety of specialty Sorbead formulations to conform to specific production requirements, such as:

- Grain size
- Pore volume
- Pore diameter
- Chemical compositions

Technical Support

- Comprehensive support and advice for operating existing plants
- Assessment support in the planning of new drying units, particularly in the selection of appropriate adsorbents
- Sizing, from adsorbent inventory to fully operational plants
- Determining the optimum regeneration conditions to reduce energy consumption
- On-site supervision and service during fill-in, commissioning and startups
- In-house analysis of adsorbent samples, followed by technical recommendations

With superior design, diligent monitoring and regular maintenance, the potential operational lifetimes of adsorptive units can be fully maximized.

The Chemical Company

Safety data sheet

BASF Safety data sheet according to Regulation (EC) No. 1907/2006
Date / Revised: 22.11.2010 Version: 4.1
Product: **KC-Trockenperlen® WS 2050**
(ID no. 30516263/SDS_GEN_EU/EN)
Date of print 23.11.2010

1. Identification of the substance/mixture and of the company/undertaking

Product identifier

KC-Trockenperlen® WS 2050

Relevant identified uses of the substance or mixture and uses advised against

Relevant identified uses: Solid material for drying of liquids and gases

Details of the supplier of the safety data sheet

Company:
BASF SE
67056 Ludwigshafen
GERMANY
Operating Division Catalysts

Telephone: +49 621 60-42587
E-mail address: product-safety-catalysts@basf.com

Emergency telephone number

International emergency number:
Telephone: +49 180 2273-112

2. Hazards Identification

Label elements

According to Regulation (EC) No 1272/2008 [CLP]

The product does not require a hazard warning label in accordance with GHS criteria.

According to Directive 67/548/EEC or 1999/45/EC

Directive 1999/45/EC ('Preparation Directive')

The product does not require a hazard warning label in accordance with EC Directives.

Classification of the substance or mixture

According to Regulation (EC) No 1272/2008 [CLP]

No need for classification according to GHS criteria for this product.

According to Directive 67/548/EEC or 1999/45/EC

Possible Hazards:
The product does not require a hazard warning label in accordance with EC Directives.

Other hazards

According to Regulation (EC) No 1272/2008 [CLP]

Other Hazards (GHS):
No specific dangers known, if the regulations/notes for storage and handling are considered.

Assessment PBT / vPvB:
Not applicable for inorganic substances.

3. Composition/Information on Ingredients

Substances

Chemical nature

Contains: mineral salts

Hazardous ingredients (GHS)
according to Regulation (EC) No. 1272/2008

No particular hazards known.

4. First-Aid Measures

Description of first aid measures

Remove contaminated clothing.

If inhaled:
Keep patient calm, remove to fresh air.

On skin contact:
Wash thoroughly with soap and water.

On ingestion:
Rinse mouth and then drink plenty of water.

Most important symptoms and effects, both acute and delayed
Symptoms: No significant reaction of the human body to the product known.

Indication of any immediate medical attention and special treatment needed
Treatment: Symptomatic treatment (decontamination, vital functions).

5. Fire-Fighting Measures

Extinguishing media
Suitable extinguishing media:
carbon dioxide, dry powder, foam, water spray

Special hazards arising from the substance or mixture

No particular hazards known.

Advice for fire-fighters
Special protective equipment:
Wear a self-contained breathing apparatus.

Further information:
Product itself is non-combustible; fire extinguishing method of surrounding areas must be considered.

6. Accidental Release Measures

Personal precautions, protective equipment and emergency procedures
Avoid dust formation. Do not breathe dust. Avoid contact with the skin, eyes and clothing. Use personal protective clothing. Information regarding personal protective measures see, chapter 8.

Environmental precautions
Discharge into the environment must be avoided.

Methods and material for containment and cleaning up
Avoid raising dust. Sweep/shovel up. Dispose of absorbed material in accordance with regulations. Reclaim for processing if possible.

Reference to other sections
Information regarding exposure controls/personal protection and disposal considerations can be found in section 8 and 13.

7. Handling and Storage

Precautions for safe handling
Avoid the formation and deposition of dust. Ensure adequate ventilation.

Protection against fire and explosion:
The product does not contribute to the spreading of flames, nor is it self combustible, not explosive.

Conditions for safe storage, including any incompatibilities

Suitable materials for containers: carbon steel (iron), Low density polyethylene (LDPE)
Further information on storage conditions: Containers should be stored tightly sealed in a dry place.

Storage stability:
Contents are stable at room temperature.

Specific end use(s)

For the relevant identified use(s) listed in Section 1 the advice mentioned in this section 7 is to be observed.

8. Exposure Controls/Personal Protection

Control parameters

Components with workplace control parameters

The general dust limit value is to be kept.

Exposure controls

Personal protective equipment

Respiratory protection:
Breathing protection if dusts are formed. Particle filter with low efficiency for solid particles (e.g. EN 143 or 149, Type P1or FFP1)

Hand protection:
Suitable chemical resistant safety gloves (EN 374) also with prolonged, direct contact (Recommended: Protective index 6, corresponding > 480 minutes of permeation time according to EN 374): E.g. nitrile rubber (0.4 mm), chloroprene rubber (0.5 mm), butyl rubber (0.7 mm) and other

Eye protection:
Safety glasses with side-shields (frame goggles) (e.g. EN 166)

Body protection:
Body protection must be chosen depending on activity and possible exposure, e.g. apron, protecting boots, chemical-protection suit (according to EN 14605 in case of splashes or EN ISO 13982 in case of dust).

General safety and hygiene measures
When using, do not eat, drink or smoke. Hands and/or face should be washed before breaks and at the end of the shift.

9. Physical and Chemical Properties

Information on basic physical and chemical properties

Form:	beads
Colour:	light brown to brown
Odour:	odourless
pH value:	4
Freezing point:	> 1,000 °C
Boiling point:	2,980 °C

Flash point:
not applicable
Evaporation rate:
not applicable
Flammability: does not ignite
Lower explosion limit:
not applicable
Upper explosion limit:
not applicable
Vapour pressure:
not applicable
Solubility in water: not soluble
Partitioning coefficient n-octanol/water (log Kow):
The value has not been determined
because the substance is inorganic.
Self ignition: not self-igniting

Thermal decomposition: No decomposition if correctly stored and handled.
Viscosity, dynamic:
not applicable
Explosion hazard: not explosive
Fire promoting properties: not fire-propagating

Other information

Bulk density: 400 - 900 kg/m3

10. Stability and Reactivity

Reactivity
No hazardous reactions if stored and handled as prescribed/indicated.

Corrosion to metals: No corrosive effect on metal.

Chemical stability

The product is chemically stable.

Possibility of hazardous reactions
No hazardous reactions known.
The product is chemically stable.

Conditions to avoid
Avoid dust formation. Avoid deposition of dust. Avoid humidity.

Incompatible materials

Substances to avoid:
No substances known that should be avoided.

Hazardous decomposition products

Hazardous decomposition products:

No hazardous decomposition products known.

11. Toxicological Information

Information on toxicological effects

Acute toxicity

Assessment of acute toxicity:
Virtually nontoxic after a single ingestion.

Experimental/calculated data:
LD50 rat (oral): > 5,000 mg/kg (OECD Guideline 401)
The product has not been tested. The statement has been derived from the properties of the individual components.

Irritation

Assessment of irritating effects:
Not irritating to the eyes. Not irritating to the skin.

Experimental/calculated data:
Skin corrosion/irritation rabbit: non-irritant (OECD Guideline 404)
The product has not been tested. The statement has been derived from the properties of the individual components. Literature data.

Serious eye damage/irritation rabbit: non-irritant (OECD Guideline 405)
The product has not been tested. The statement has been derived from the properties of the individual components. Literature data.

Respiratory/Skin sensitization

Assessment of sensitization:
Skin sensitizing effects were not observed in animal studies.

Experimental/calculated data:
Guinea pig maximization test guinea pig: Non-sensitizing.
The product has not been tested. The statement has been derived from products of a similar structure or composition.

Germ cell mutagenicity

Assessment of mutagenicity:
The substance was not mutagenic in bacteria.

Carcinogenicity

Assessment of carcinogenicity:
No data available.

Reproductive toxicity

Assessment of reproduction toxicity:
No data available.

Developmental toxicity

Assessment of teratogenicity:
Lack of data.

Repeated dose toxicity and Specific target organ toxicity (repeated exposure)

Assessment of repeated dose toxicity:
No data available.

Aspiration hazard

No data available.

Other relevant toxicity information

Because of the product's consistency and low water solubility, bioavailability is improbable.

12. Ecological Information

Toxicity

Assessment of aquatic toxicity:
There is a high probability that the product is not acutely harmful to aquatic organisms.

Toxicity to fish:
No observed effect concentration (96 h) 10,000 mg/l, Brachydanio rerio (Fish test acute)
The product has not been tested. The statement has been derived from products of a similar structure or composition.

Aquatic invertebrates:
No observed effect concentration (24 h) 1,000 mg/l, Daphnia magna (OECD Guideline 202, part 1)
The product has not been tested. The statement has been derived from products of a similar structure or composition.

Aquatic plants:
No observed effect concentration (72 h) 10,000 mg/l (growth rate), Scenedesmus subspicatus (Algal growth inhibition test)
The product has not been tested. The statement has been derived from products of a similar structure or composition.

Persistence and degradability

Assessment biodegradation and elimination (H2O):
Not applicable for inorganic substances.

Bioaccumulative potential

Assessment bioaccumulation potential:
Accumulation in organisms is not to be expected.

Mobility in soil (and other compartments if available)

Assessment transport between environmental compartments:
Adsorption to solid soil phase is not expected.

Results of PBT and vPvB assessment

Not applicable for inorganic substances.

Additional information

Other ecotoxicological advice:
The product has not yet been fully tested.

13. Disposal Considerations

Waste treatment methods

Observe national and local legal requirements.
Contact specialized companies about recycling.

Contaminated packaging:
Dispose of in accordance with national, state and local regulations.
Contaminated packaging should be emptied as far as possible and disposed of in the same manner as the substance/product.

14. Transport Information

Land transport

ADR

Not classified as a dangerous good under transport regulations

RID

Not classified as a dangerous good under transport regulations

Inland waterway transport
ADNR

Not classified as a dangerous good under transport regulations

Sea transport
IMDG

Not classified as a dangerous good under transport regulations

Air transport
IATA/ICAO

Not classified as a dangerous good under transport regulations

15. Regulatory Information

Safety, health and environmental regulations/legislation specific for the substance or mixture

16. Other Information

Vertical lines in the left hand margin indicate an amendment from the previous version.

The data contained in this safety data sheet are based on our current knowledge and experience and describe the product only with regard to safety requirements. The data do not describe the product's properties (product specification). Neither should any agreed property nor the suitability of the product for any specific purpose be deduced from the data contained in the safety data sheet. It is the responsibility of the recipient of the product to ensure any proprietary rights and existing laws and legislation are observed.

HY-LOK CORPORATION

Manufacturer`s Declaration

Manufacturer`s name: HY,LOK CORPORATION
Manufacturer`s address: 1467-1, Songjeong-Dong, Gangseo-Gu
Busan, 618-270
Korea

Description of product:

Tube Fittings	H200TF	Super Duplex Tube Fittings	H-200TF-SD
Fitting Din 2353	H-230CF	Clean Fittings(Weld & ZCR)	H-250CF
ZCO-Fittings	H-260CF	Instrument Thread & Weld Fittings	H-300PF
Calibration Fittings	H-CF100	Hose connectors (metric sizes)	H-CF100

Applied EU directive: 2016/34/EU
Equipment intended for use in potentially explosive atmospheres

Applied standards: EN 1127-1: 1997
Explosive atmospheres

EN 13463-1: 2001
Non-electrical equipment for potentially explosive atmospheres

Hy-Lok fittings are manufactured in accordance with ISO 9001 Quality Systems and appropriated National and International product standards.

Accordingly to a performed assessment of Hy-Lok Corporation we have determined that the product mentioned above does not have any own potentional source of ignition. As such the product is not covered by the Directive 2016/34/EU, must not be CE marked and must be used within the scope of intended use only as described in data

sheet and the operating and maintenance instructions.

Important note:
The fittings must be hooked up into the tubing system in electrically conducting manner to ensure proper grounding. The environmental neighborhood was not subject to Hy-Lok`s assessment is within the responsibility of the plants owner, designer, commissioner or user.

This declaration does not pertain to atmospheres outside of the scope on its validity, such as oxygen enriched atmospheres. When selecting a product, the total system design must be considered to ensure safe, trouble-free performance. Function, material compatibility, adequate ratings, proper installation, operation and maintenance are the responsibilities of the system designer and user.

HY-LOK CORPORATION

Applied EU directive: 2016/34/EU
Equipment intended for use in potentially explosive atmospheres

Applied standards: EN 1127-1: 1997
Explosive atmospheres

EN 13463-1: 2001
Non-electrical equipment for potentially explosive atmospheres

The above mentioned valves are manufactured in accordance with ISO 9001 Quality Systems and appropriate National and International product standards.

Accordingly to a performed assessment of Hy-Lok Corporation we have determined that the product mentioned above does not have any own potentional source of ignition. As such the product is not covered by the Directive 2016/34/EU, must not be CE marked and must be used within the scope of intended use only as described in data sheet and the operating and maintenance instructions.

Important note:
The valves must be hooked up into the piping/tubing system in electrically conducting manner to ensure proper grounding. Since some valves provided with non-conductive handles, special system design must be considered if the use of the product is intended in hazardous areas (particular zones), environments, or use with cetain system fluids. Stem grounding and Conductive bar assessment. This assessment is within the responsibility of the plants owner, designer, commissioner or user.

This declaration does not pertain to atmospheres outside of the scope on its validity, such as oxygen enriched atmospheres. When selecting a product, the total system design must be considered to ensure safe, trouble-free performance. Function, material compatibility, adequate ratings, proper installation, operation and maintenance are the responsibilities of the system designer and user.

	M	-4N-		1/4" Male NPT	25.5	25.5			
	F	-4N-		1/4" Female NPT	27.0	27.0			
	F	-6N-		3/8" Female NPT			41.0	12.7	
	F	-8N-		1/2" Female NPT	31.0	31.0	44.0	15.8	31.75

All dimensions are in millimeters.

Features

- **SS316 body** material as standard
- **Replacement of filter elements** with body in line
- **Compact and robust** integral union bonnet design
- **Particle trapping for clean fluid**

Technical Data

- **Maximum Operating Pressure:**
  6000 psig @ 70°F(21°C)for Stainless Steel
  3000 psig @ 70°F(21°C)for Brass
- **Operating Temperature:** -60°F to 400°F (-51°C to 204°C)
- **Effective Filteration Area:**
  1.73 sq. in. (0.0011 sq. meter) for all sizes.

Materials of Construction

Description	Material / ASTM Specification	
Body	SS 316 / A479	Brass / B16
Cap		
Bypass Cap		
Nut		
Sintered Element	316 Stainless Steel	
Seat Packing	PTFE	
Seal	Viton	
Spring	SS 302	

Filter Element and Cv

Element Micron Rating	Filtered Particle Size	Cv
1	1 micron	0.01
10	10 micron	0.02
50	50 micron	0.11
100	100 micron	0.30
150	150 micron	0.42

Operation and Filter Replacement

The filter element, which is made of sintered stainless steel, is porous and has lots of tiny holes. The particles bigger than the holes are not allowed to pass through, hence clean fluid. After certain period, the holes may be blocked by particles and pressure drop will increase. This depends upon the total flow through elements and cleanliness of upstream flow. The element needs to be replaced for clean fluid with minimum pressure drop.

HY-LOK CORPORATION

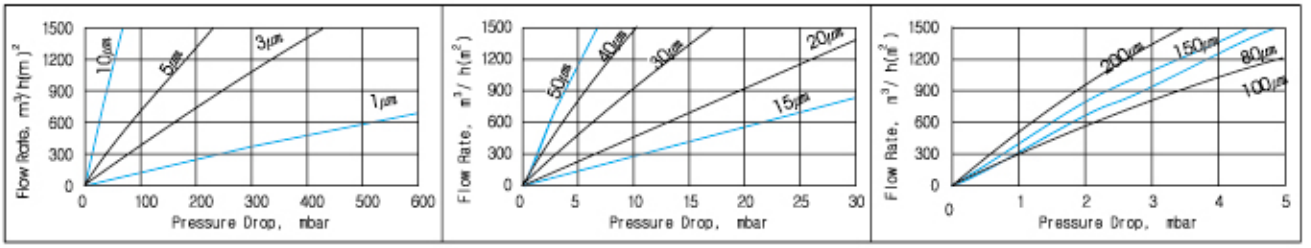
© 1998, 2000, 2002, 2003 HY-LOK CORPORATION All rights reserved

Hy-Lok Tee Filters FT Series

How to Replace the Element

1. Bleed the line to remove system pressure.
2. Unscrew the nut while holding the body steady with back-up wrench.
3. Remove the nut, cap, spring, and seal all together.
4. Remove the element out of the body and pull out the seat packing with care. It is recommeneded to replace the seat packing and seal at the same time.
5. Clean metal parts if necessary.
6. Insert new element into tapered bore with smooth faced tool until it seats firmly.
7. Put the seal back in place.
8. Place the spring on the cap and retighten the nut.

Bypass Cap



For sampling and purging, bypass cap is available with 1/4" female NPT threaded port.

Spares

For maintenance and changeover to bypass, the following spares are available.

Part No.	Description	Q'ty / Pack
KFT - F	Filter	1 pc
KFT - P	Seat Packing	1 pc
KFT - S	Seal	1 pc
KFT - B	Bypass Cap	1 pc

Pressure Drop vs Flow Rate of Air

Please note the above Flow Rate is elements' co-efficient in cubic meters per hour per square meter. To get the flow rate of FT series filter, find the flow rate in the graph and then multiply it with effective filtration area on previous page.

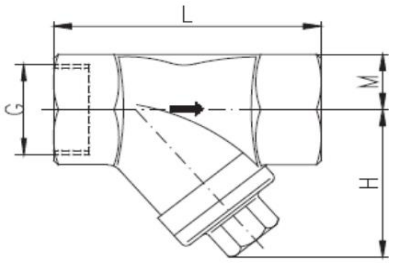
Strainers Y-Type Stainless steel AISI 316 with Stainless steel filter
Applications: water, heating, air conditioning,
compressed air and fuel systems.
Only to be use in horizontal systems.
Body - End adapter - Drain plug Stainless steel AISI 316,
filter Stainless steel AISI 316, seal and ring PTFE.
Temperature resistant from -20º to +110ºC.
Both sides BSP female thread. Mesh 12MESH



Number	Size	PN	L mm	H mm

Strainers Y-Type Stainless steel AISI 316 with Stainless steel filter
Applications: water, heating, air conditioning, compressed air and fuel systems.
Mounting position; bonnet upside down, please refer to flow direction.
Body consist of two screwed parts.
Connection Female Thread 1/2" - 3" (DIN ISO 228 T1).
Pressure range: Max. 40 Bar.
Temperature resistant from -30º to +180ºC. (tested and guaranteed)
PTFE withstand temperatures up to +260ºC and disintegrate above +350ºC
into a harmful gas. (temperature not guaranteed by manufacturer strainers).
Body-bonnet-Drain plug Stainless steel 1.4408
Mesh stainless steel 1.4301
Seal PTFE
Mesh DN15-DN50 / 1/2" - 2"
Standard filter 0.50 mm, Fine filter 0.25 mm
Mesh DN65-DN80 / 2.1/2" - 3"
Standard filter 1.00 mm, Fine filter 0.50 mm

Number	Size	DN	PN	L mm	H mm

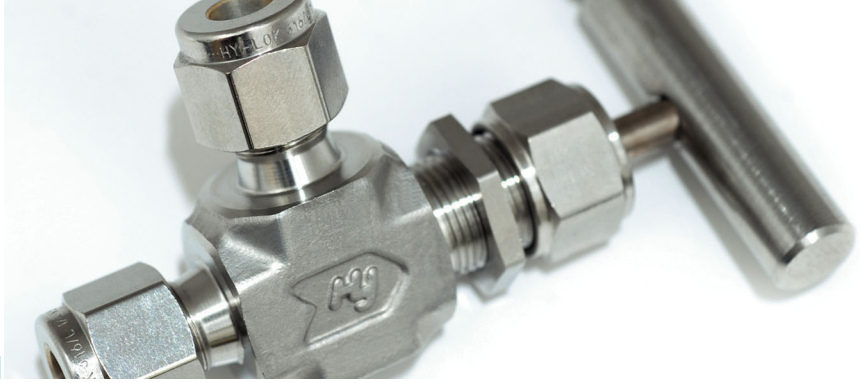
43A42519	3"	80	55	40	128

To order always provide the required mesh size.



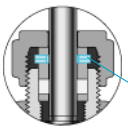
Many other ball valves, check valves and strainers on request availble.

C63-AQU-QIX-002 279 / 917

Integral Bonnet Needle Valves

NV & SV Series

- Pressure up to 6000psig (413bar)
- Temperature up to 600°F (316°C)
- Sizes from 1/8" to 3/4" (3mm-18mm)
- Positive leak tight shut-off
- Metal to metal and soft seat tip
- Straight & Angle pattern body



HY-LOK CORPORATION

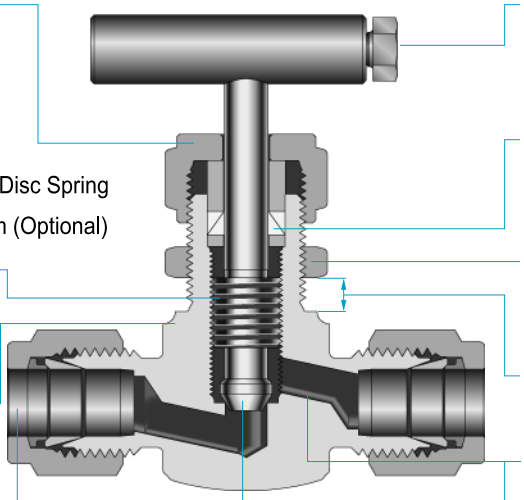
Integral Bonnet Needle Valves

Features

Packing Nut
• allows smooth packing adjustment.



Disc Spring

* Live-Loaded Packing System (Optional)

Stem Threads
• rolled threads provides improved cycle life.

Integral Bonnet
• is available with straight and angle pattern.

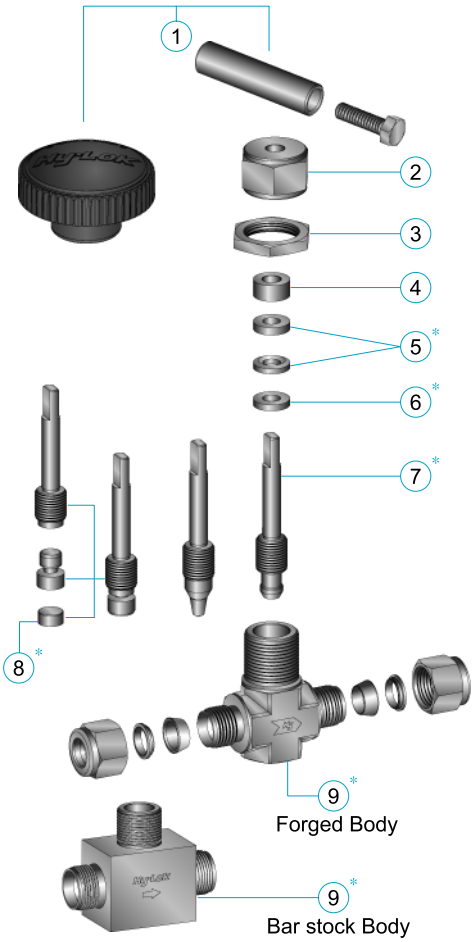
Variety of End Connections
• include Hy-Lok tube fittings, male/female NPT threads, male/female ISO threads.

Best Suited Standard Handles
• stainless steel bar handle
• black phenolic round handle

Packing Materials
• are available in PTFE (standard) and PEEK.(option)

Panel Mounting Nut
• allows easy mounting. (NV series standard)
• is optional at SV Series.

Panel Mount Thickness
• 3.2 min. to 6.4 max. (1/8 min. to 1/4 max.)



Orifice sizes
• From 0.08 to 0.375 in. (2.0 to 9.5mm)

Flow coefficients (Cv)
• From 0.09 to 1.80

Variety of Stem Tips
• include vee, regulating, and soft seat with PCTFE

Vee Tip | Regulating Tip | Soft Seat Tip

Materials of Construction

Description			Grade / ASTM Specification			
			Valve Body Materials			
			SS 316	Brass	Carbon Steel	Alloy 400
1	Handle		Stainless Steel	Black Phenolic Knob	Aluminum Bar	Stainless Steel
2	Packing Nut		SS316 / A479	C 360 / B16	1020 / A108	Alloy 400 / B164

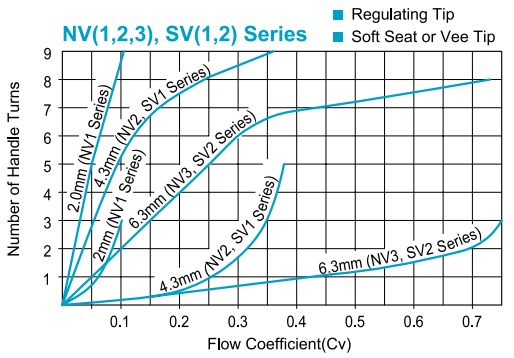
4	Gland					SS 316 / A479
5	Packing*		PTFE			
6	Packing Washer*		SS316 / A479			Alloy 400 / B164
7	Stem*	Vee	SS316 / A479	C 360 / B16	SS316 / A479	Alloy 400 / B164
		Regulating				
		Soft Seat				
8	Soft Seat Tip*		PCTFE			
9	Body*	NV	SS316 / A182	C 377 / B283	S20C or A105	Alloy 400 / B564
		SV	SS316 / A479	-	-	-

Note : " * "marked are wetted parts.
Panel nut is optional at SV Series.
Soft Seat is only available on NV Series.

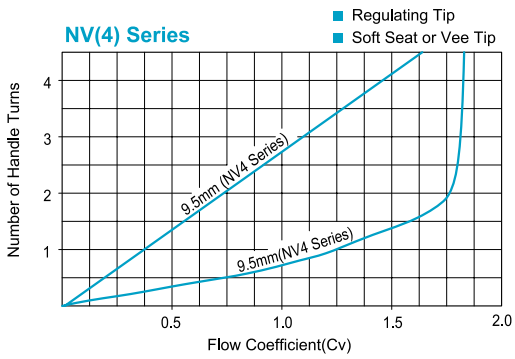
Technical Data

Pressure-Temperature Ratings

- PTFE (Standard) used up to 450°F (232°C)
- PEEK (Optional) used up to : 316 Stainless Steel 600°F (316°C) / Alloy 400 500°F (260°C)



ASME Class	2500	N/A		2500
Material Group	2.2	N/A		3.4
Materials	316 SS	Brass	Carbon Steel	Alloy 400
Temperature	Working Pressure (psig)			
-65°F (-54°C) to -20°F (-29°C)	6000 (413)	3000 (206)	-	5000 (344)
100°F (38°C)	6000 (413)	3000 (206)	6000 (413)	5000 (344)
200°F (93°C)	5160 (355)	2600 (179)	5420 (373)	4380 (301)
300°F (148°C)	4660 (321)	2210 (152)	5320 (366)	4080 (281)
350°F (176°C)	4470 (308)	1470 (101)	5230 (360)	4010 (276)
400°F (204°C)	4280 (295)	740 (51)	-	3940 (271)
450°F (232°C)	4130 (284)	-	-	3940 (271)
500°F (260°C)	3980 (274)	-	-	3940 (271)
600°F (316°C)	3760 (259)	-	-	3940 (271)



- To determine kPa, multiply psig by 6.89 and bar by 0.0689
- When valves with Hy-Lok Fitting end connections are connected to tubing, the working pressure of tubing must be the considered in the calculation of total system working pressure
- Extreme temperature fluctuations may require packing adjustment

Stem

- Vee & Regulating stem can be used up to 450°F (232°C)
- Vee & Regulating stem in Brass can be used up to 400°F (204°C)
- Soft seat stem with PCTFE stem tip can be used up to 200°F (93°C)
- Carbon steel is rated at a low temperature of -20°F (-29°C)

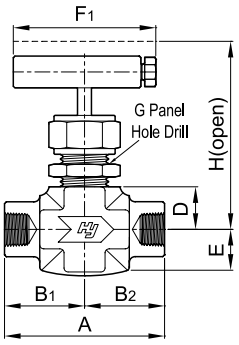
Flow Data

Handle

- Stainless steel bar is standard on all SS316 and alloy 400 body valves.
- Black phenolic knob is standard for brass body and soft seat stem valves.
- Black aluminum bar handles are basically carbon steel on standard. Other materials are available as an option.

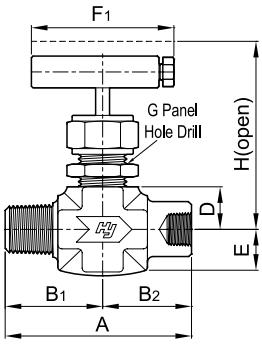
Testing

- Each valve is tested with nitrogen @ 1000psig (69bar) to max leak rate of 0.1SCCM.
- Hydrostatic shell test is performed at 1.5 times the working pressure
- Optional tests are available upon request.



Sour Gas Service

- This service is provided to meet NACE Standard MR-0175 & MR-0103.



Cleaning and Packaging

- All integral bonnet needle valves are cleaned and packaged in accordance with Hy-Lok standard cleaning and packaging.
- A special cleaning and packaging are available as an option.

- MF : Male Pipe Thread and Female Pipe Thread
- MH : Male Pipe Thread and Hy-Lok Tube Fitting

Stem Tip Designator
- Nil : Vee (Standard)
- R : Regulating
- S : Soft Seat with PCTFE

Material Designator
- S316 : 316 Stainless Steel
- BRAS : Brass
- STEL : Carbon Steel
- MONE : Alloy 400 (Monel)

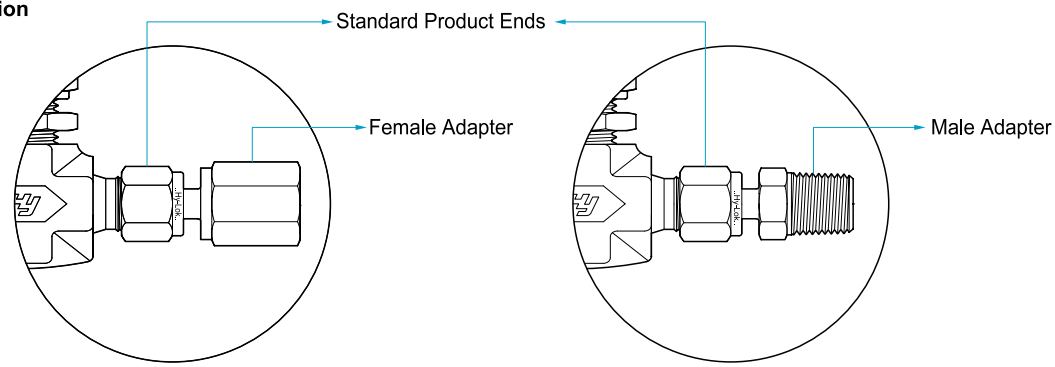
- Nil : without (Standard)
- FE : Live Loaded System

Handle Designator
- Nil : Stainless Steel Bar (Standard)
- K : Black Phenolic Knob
  Available only with Soft Seat Tip

Pipe Thread Designation NPT (ISO / BSP)

Nom. Size	1/8"	1/4"	3/8"	1/2"	3/4"
Designator	2N(R)	4N(R)	6N(R)	8N(R)	12N(R)

Tube O.D. Designation



Inch Tube	Tube O.D.	1/8"	1/4"	3/8"	1/2"	3/4"
	Designation	2T	4T	6T	8T	12T
Metric Tube	Tube O.D.	3mm	6mm	10mm	12mm	18mm
	Designation	3M	6M	10M	12M	18M

Note †: No designator is required for standard
e.g. NV3F-6N-S316

Use of Non-Standard Products

For non-standard not shown in dimension table, it can be used by assembling Hy-Lok tube fittings to standard products.
This use of way is easily available to the construction of system, especially it is more reasonable in aspects of delivery and purchasing costs. For the more information and types of connector, please refer to the Hy-Lok Tube Fitting Catalog.

Example of Connection

Note :This figure is only for reference, please refer to Hy-Lok tube fittings catalog for varios connection.

SAFETY in VALVE SELECTION

Proper installation, materials compatibility, operation and maintenance of these valves are the responsibility of the user. The total system design must be taken into consideration to ensure optimal performance and safety

Catalog No, H-100NV Jul. 2017

Filter Elements
Disposable Grades & Dimensions

All disposable filter elements have a part number arranged in three sections, for example 25.64.7K

The first part refers to the inside diameter of the element in millimetres, the second figure refers to the overall length in millimetres and the third part is the designation for the grade and binder.

Standard Sizes

Filter Elements are available inn a wide range of standard diameters and lengths. These are based on traditional industry standard sizes and allow the elements to be installed in other proprietary equipment.

12.32.☐ 12.57.☐ 25.64.☐ 25.127.☐ 25.178.☐ 38.58.☐ 38.152.☐ 45.127.☐ 51.230.☐ 51.89.☐ 51.476.☐ 63.762.☐

Replace the ☐ in the part numbers shown with the grade selected from the tables below. More information about the binder types can be found on page CF/2.0/021.

Efficiency

Each filter element type is available in a selection of grades covering a efficiency range from coarse bulk contamination removal and the essentially complete removal of submicron particles.

The standard grades are shown in the tables below.

Particulate Applications - Gas								
% Removal of 0.1 micron particles								
Binder		**Max. Temp.**	**+99.99998%**	**+99.9999%**	**+99.99%**	**+99.5%**	**+95%**	**+75%**
E	Epoxy Ester	150ºC	3E	4E	5E	6E	7E	8E
K	PVDF Flourocarbon	150ºC	3K	4K	5K	6K	7K	8K
S	Silica Inorganic	500ºC	3S	4S	5S	6S	7S	8S
L	Silicone	200ºC		4L		6L		

Coalescing Applications - Gas						
% Removal of 0.1 micron particles & aerosols						
Binder		**Max. Temp.**	**+99.99%**	**+99.5%**	**+95%**	**+75%**
CE	Epoxy Ester	150ºC	5CE	6CE	7CE	8CE
CK	PVDF Flourocarbon	150ºC	5CK	6CK	7CK	8CK
CR	PVDF Flourocarbon	150ºC	5CR	6CR	7CR	8CR
CS	Silica Inorganic	500ºC	5CS	6CS	7CS	8CS
W	Silicone	200ºC	5W	6W	7W	8W

Particulate Applications - Liquid								
+98% Removal of particles at stated size								
Binder		**Max. Temp.**	**0.3 µm**	**1 µm**	**2 µm**	**8 µm**	**25 µm**	**75 µm**
E	Epoxy Ester	150ºC	3E	4E	5E	6E	7E	8E
K	PVDF Flourocarbon	150ºC	3K	4K	5K	6K	7K	8K
S	Silica Inorganic	500ºC	3S	4S	5S	6S	7S	8S

Special Sizes

Special size filter elements can also be manufactured in a wide range of different diameters and lengths.

Inside Diameters - 7mm to 150mm

Lengths - 9mm to 1000mm

Please enquire with any specific requirements.

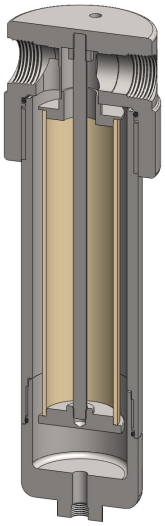
SS425 & SHS425
Filter Housing



Materials 316L Stainless Steel
Pressure 1500 psi
Ports 1” to 2"
Element 51.230.☐

SS425 series filter housings are specified for 1" line size applications up to 1500 psi. The SHS425 series are for 1&1/2" and 2" applications and are designed to have a full bore flow path to give higher flow rates. For applications over 1500 psi high pressure versions are available, see the SS426 and SS428 filter housings.

Standard housings have NPT ports and Viton seals. Other seal types are available as an option. BSPT and BSPP port types are also available.

The housings are free from welds and comply with NACE MR-01-75 and are CE marked in accordance with PED 97/23/EC.

These housings can also be supplied in a wide range of exotic materials, such as Hastelloy, Monel, Titanium etc.

Technical Specifications

Notes

(1) Above 390ºF the pressure rating is reduced, consult us for the exact rating at any specific temperature

(2) Maximum temperature 390ºF using standard seal. For temperatures up to 615ºF use a Chemraz seal

(3) Material abbreviations, 316L SS = 316L Stainless Steel

(4) Add suffix for other seal types, Chemraz = .C, Nitrile = N, Kalrez = .K, EPDM = .E, Silicone = .S, (e.g. SS425.621.N)

(5) Replace the ☐ with the grade required, e.g. 51.230.5CK, 51.230.S20V, 51.230.T20

(6) Replace the ☐ with the type required, e.g. 51.230.AD01

CERTIFICATO
CERTIFICATE

(di conformità) / (of conformity)

Conformità basata sulla garanzia totale di qualità
Conformity based on full quality assurance

In accordo alla direttiva 2014/68/UE / according to directive 2014/68/EU

Certificato-Nr. / Certificate No.: H – 2021/L/1153

Nome ed Indirizzo del Fabbricante
Name and address of bearer/ manufacturer:

Classic Filters Limited
16 Sextant Park, Neptune Close,
Rochester, Kent, ME2 4LU (England)

Si certifica che il fabbricante ha istituito un sistema di qualità per la fabbricazione, progettazione e prove di attrezzature a pressione in accordo alla direttiva 2014/68/UE. Il costruttore è autorizzato a contrassegnare le attrezzature a pressione prodotte all'interno della gamma di sistema di qualità con il seguente marchio:
We hereby certify that the manufacturer has established a quality system for the manufacturing, design and testing of pressure equipment according to directive 2014/68/EU. The manufacturer is entitled to mark the pressure equipment produced within the range of the quality system with the following mark:

CE 2580

Verificato in accordo alla dir. 2014/68/UE *Tested according to dir. 2014/68/EU*	**Conformità basata sulla garanzia totale di qualità (Modulo H)** **Conformity based on full quality assurance *(module H)***
Rapporto Nr. / Test No.:	**921/P/2021/L/1303; 921/P/2021/L/1303 Supplement 1**
Gamma di prodotti: / Range of product.:	**Progettazione, fabbricazione, ispezione, prova e fornitura di filtri realizzati in acciaio inossidabile 316L senza saldatura e classificati come categoria di rischio II e III *I Design, manufacture, inspection, testing and supply of Filter Housings manufactured from grade 316L stainless steels without welding and classified as hazard category II and III* (dettagli in Allegato 1 *I details in Annex 1*)**

ATEX Directive (2014/34/EU) Declaration

Equipment Intended for Use in Potentially Explosive Atmospheres (ATEX)

Product Group	Series	Category
Filters Housings	SS325, SiS325, SS326, SiS326	for Zone 1, 21
Filters Housings	SS337, S328, SIS328, SG421	for Zone 1, 21
Filters Housings	SS424, SS425, SHS425, SS426	for Zone 1, 21
Filters Housings	SHS426, SS428, SHS428, SS434	for Zone 1, 21
Filters Housings	SS435, SHS435, SS436, SHS436	for Zone 1, 21
Filters Housings	SS438, SHS438	for Zone 1, 21

This declaration is issued following Ignition Hazard Assessments performed on the non-electrical products listed above in accordance with the requirements of EN 13463-1:2009 and it is considered that the products do not contain any source of ignition and therefore not within the scope of directive 2014/34/EU.

The products can be used in a Group II Category 2 environment assuming that ATEX directive is complied with, the equipment is installed by qualified personnel and they are mounted in an area where impact cannot occur.

Directive 2014/34/EU provides for the first time harmonised requirements for non-electrical equipment, equipment intended for use in environments which are potentially explosive due to dust hazards and protective systems. Safety devices intended for use outside explosive atmospheres which are required for or contribute to the safe functioning of equipment or protective systems with respect to risks of explosion are also included. This is an increase in scope compared to former national regulations for equipment and systems intended for use in potentially explosive atmospheres.

The manufacturer, his authorised representative or the person who first places a product on the EU market or puts a product into service in the EU market has to decide whether it is covered by the Directive 2014/34/EU and, if so, apply its provisions. The manufacturer must therefore make an ATEX analysis on the basis of Directive 2014/34/EU.

Directive 2014/34/EU also covers equipment not included the scope. In general, many simple mechanical products do not fall under the scope of Directive 2014/34/EU as they do not have their own source of ignition (see chapter 3.7.3 of the directive for more information about this).

DURGO

SAFETY VALVES

THE TRUSTED LINK

SINCE 1921

DURGO SAFETY VALVES

Durgo safety valves have a unique design and functionality. The safety valves we produce today are still based on our patented 1930s design of a compression spring in a dry spring housing. Strict requirements on material standards and manufacturing precision, assembly and testing are the key elements in producing a good reliable safety valve.

We use state-of-the-art machinery and testing equipment in combination with solid craftsmanship to make safety valves of the highest capacity and precision, safety valves that open at the set pressure to prevent injury and costly damage to property.

Durgo safety valves can be used on pressurised systems with cold and hot water, air, oils and other media, and as overflow valves in pressurised systems or pumping plants.

Durgo safety valves have a high blow-off capacity and precise opening and shutting pressure. All our safety valves have a dry spring housing and a Teflon®-coated cone to prevent adhesion and ensure a high level of reliability. The safety valve's opening pressure is set according to the customer's request adapted to existing installation and pressure level. After individual testing in calibrated test rig, the valve is sealed and marked with its set pressure and unique serial number.

Durgo's safety valves are CE labelled and classed as category 4 valves in compliance with AFS 2016:1; Pressure Equipment Directive (PED 2014/68/EU). A declaration of conformity is enclosed with all safety valves.

Durgo Safety Valve 4155 / Overflow Valve 4156 in brass

Durgo safety valve 4155 and overflow valve 4156, in brass. The valves operate progressively and can be used in installations with e.g. air, water or oil. The valve housing, nipple and cone are in dezincification resistant brass with seal material of fluorinated rubber (FPM/FKM) or EPDM.

- Connection (Inlet/Outlet) 15/20, 20/25, 25/32, 32/40, 40/50 and 50/65, male thread (ISO-G)
- Set pressure 0.05 – 2.0 MPa for DN15-25 and 0,05-1,6 MPa for DN32-50. Can be ordered with optional set pressure within the given interval.
- Temperature range -30°C to +125°C.

Blow-off capacity without discharge pipe. Litres of cold water per minute at a 10% pressure increase.

Durgo Safety Valve 4165 / Overflow Valve 4166 in stainless steel

Durgo safety valve 4165 and overflow valve 4166, in non-corrosive stainless steel. The valves operate progressively and can be used in installations with e.g. air, water, oil, and other aggressive media. The valve housing, nipple and cone are in non-corrosive steel with seal material in fluorinated rubber (FPM/FKM) or EPDM, alternatively perfluor rubber (ISOLAST®).

- Connection (Inlet/Outlet) 15/25, 20/25, 25/32, 32/40, 40/50 and 50/65, male thread (ISO-G)
- Opening pressure 0.05 – 2.2 MPa. Can be ordered with optional opening pressure within the given intervals.
- Temperature range
  - EPDM: -30°C to +180°C
  - Fluorinated rubber: -30°C to +200°C, (water max. +125°C)
  - Perfluor rubber: -25°C to +220°C

Blow-off capacity without discharge pipe. Litres of cold water per minute at a 10% pressure increase.

Durgo GT-77 – Safety Valve in brass

Durgo safety valve GT-77 in brass The valves are progressive and can be used in installations with e.g. water and oil. The valve housing, nipple and cone are in dezincification resistant brass with seal material of fluorinated rubber (FPM/FKM).

- Connection (Inlet/Outlet)
  - 15/22, 20/22, inlet male thread (ISO-G), outlet compression fitting.
  - 15/20, 20/20, inlet and outlet male thread (ISO-G).
- Opening pressure 0.1 – 1.0 MPa. Can be ordered with optional opening pressure within the given intervals.
- Temperature range -30°C to +125°C.

Blow-off capacity without discharge pipe. Litres of cold water per minute at a 10% pressure increase.

DURGO

THE TRUSTED LINK

SINCE 1921

DURGO – TOP QUALITY RIGHT DOWN TO THE FINEST DETAIL

Because Durgo's products are vital parts of a larger system, we always strive to be the strongest link in the chain. As we have done since 1921. Our craftsmanship tradition is close to our hearts, but only in combination with modern technology can we guarantee compliance with the highest demands on safety and quality.
That is the secret behind the renowned Durgo quality.

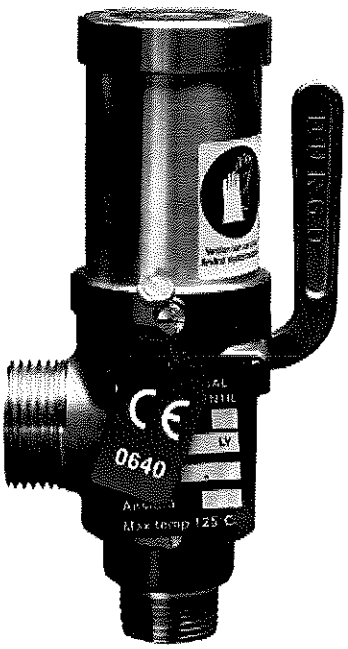
Durgo Säkerhetsventil 4155 / Överströmningsventil 4156 i mässing

Durgo säkerhetsventil typ 4155 och överströmningsventil typ 4156 i mässing. Ventilerna arbetar progressivt, är mjukstängande och kan användas i anläggningar med bland annat luft, vatten eller olja. Ventilhus, nippel och kägla i avzinkningshärdig mässing, packningsmaterial i fluorgummi (FPM/FKM) alternativt EPDM.



- Anslutning (Inlopp/Utlopp) 15/20, 20/25, 25/32, 32/40, 40/50 och 50/65, utvändig gänga (ISO-G)
- Öppningstryck 0,05 – 2,0 MPa för DN15-25 och 0,05-1,6 MPa för DN32-50. Kan beställas med valfritt öppningstryck inom intervallet.
- Temperaturområde -30°C till +125°C.

Avblåsningskapacitet utan spillvattenrör. Liter kallvatten per minut vid 10 % tryckökning.

Safety Valve Durgo SV55 (4155) DN25 Set pressure 6.0 bar (0.60 MPa)

Durgo Safety Valve, or Pressure Relief Valve, type SV55 (4155) operates progressively and can be used in pressurised systems with cold and hot water, air, oils and other media. The valve housing, nipple and cone are in dezincification resistant brass with seal material of fluorinated rubber (FPM/FKM) or EPDM. Durgo Safety Valves are Class 4 categorized and CE labelled in accordance with the Pressure Equipment Directive (PED 2014/68/EU).

Model	SV55 (4155)
Article Number	SV-55-G25/G32-0600

EU-DECLARATION OF CONFORMITY

DURGO PRESSURE RELIEF VALVE TYPE SV-55 (4155),
DN15/20, DN20/25, DN25/32, DN32/40, DN40/50, DN50/65
BRASS, WITH FKM (FLUOROCARBON RUBBER) WASHER

The manufacturer, AB Durgo, hereby certifies that the pressure relief valve complies with the basic safety requirements of the pressure equipment directive 2014/68/EU, converted to Swedish regulations as AFS 2016:1, Pressure containing devices.

Manufacture has taken place through module combination B + D.

The following standards are fully or partly complied with:

SS-EN 12165-CW602N, SS-EN 12164-CW602N, ISO 4126-1, SS-EN 10204, SS-EN 1655

EC type approval certificate:	K1204735
Modul D certificate:	K1902534

This EU Declaration of Conformity has been issued on the sole responsibility of the manufacturer.

OPERATION AND CARE MANUAL

DURGO PRESSURE RELIEF VALVE TYPE SV-55 (4155) DN15/20, DN20/25, DN25/32, DN32/40, DN40/50, DN50/65 BRASS, WITH FKM (FLUOROCARBON RUBBER) WASHER

The Durgo pressure relief valve (PRV) type SV-55 (4155) operates progressively. It is designed to open at the specified set pressure and ensure that the plant is not subjected to a short pressure increase greater than 10%. When the pressure is reduced, the valve will return to being fully closed at the specified opening pressure minus 5%.
The PRV set pressure is fixed in accordance with customer order, and is adjusted to suit the existing installation and pressure used.
The label attached to the valve shows the valve type [Type], year of manufacture and serial number [Year/Id.no.], set pressure [Set pressure], connection [Conn. In/Out], maximum allowable pressure [PS], test pressure [PT], fluid category [Fluid cat.] and temperature range [Max/Min temp].

Märkskylt

Applications:

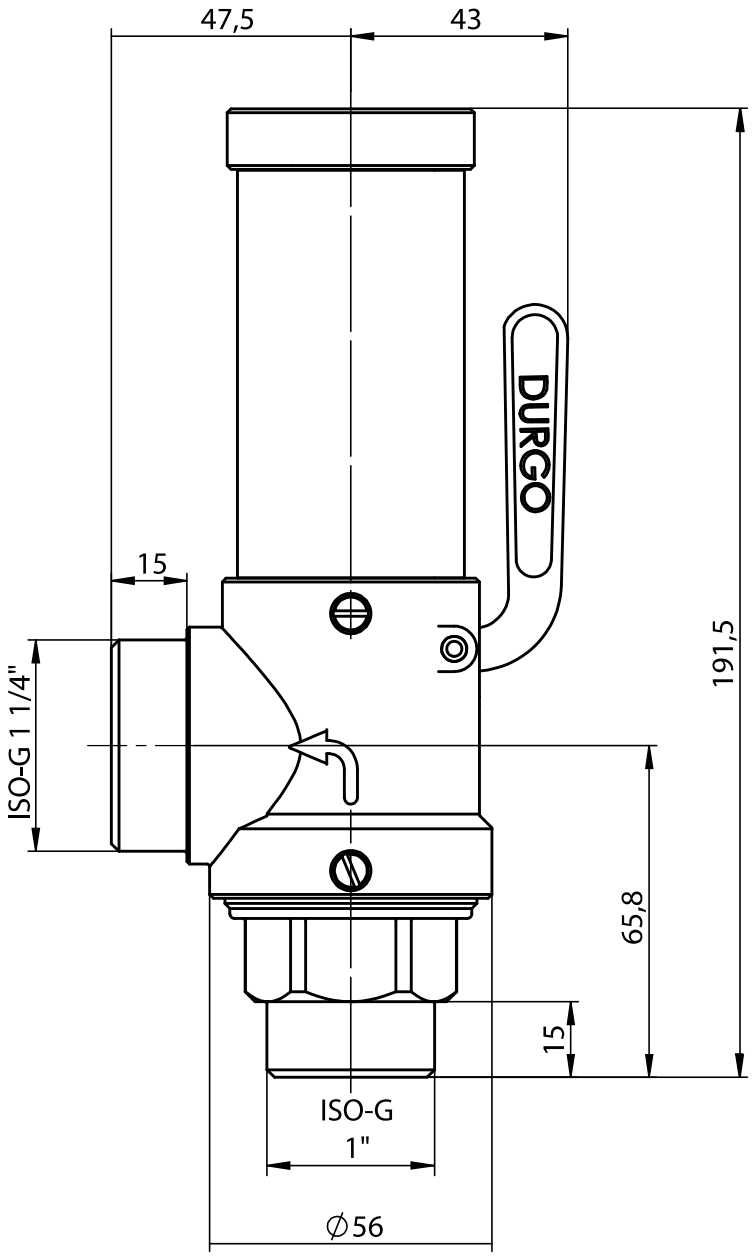
Durgo pressure relief valve (PRV) type SV-55 (4155) in brass, with FKM (fluorocarbon rubber) washer, is intended for use with installations containing air, water or oil.
Max temperature 125°C, min temperature -30°C. If the medium contains anything apart from pure air or water, the resistance of the sealing and valve material must be verified, to avoid compromising the sealing / durability of the valve. If there is any uncertainty, please contact Durgo.

Maintenance instruction:

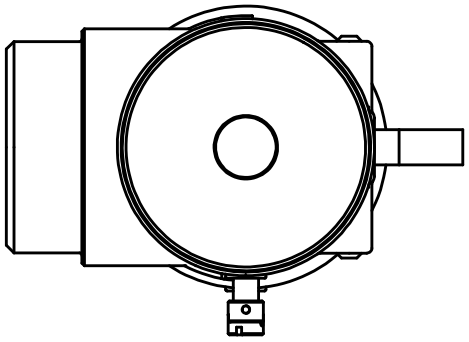
Regular function checks must be done on the PRV at least once every 3 months. The valve can be hot, be careful and use protective gloves if necessary. The function check is done by firmly pulling the pressure relief handle and allowing the PRV to blow out medium for about 2 seconds, then release the handle. If the PRV does not open during the function check, it must be exchanged as soon as possible. If the PRV leaks after the function check, this is probably caused by particles which have got stuck between the washer and the sealing surface. Pull the handle again to clear any particles out. The seal must be checked at the same time as the function check. If the seal is broken, the valve must be exchanged. Renovation or service of the PRV must only be done by AB Durgo.

Installation:

Valves used for pressure relief during thermal expansion can be installed in any position, since the valve is designed to have its spring housing isolated from the medium.
The PRV valve outlet pipe must be terminated in such a manner that medium which blows out can be discharged without risk of personal injury or property damage.
When installed in a facility where the valve may be exposed to freezing, the valve must be placed or protected so that freezing media can not enter the valve's spring housing.



Approval:



Durgo's PRVs are classified as class 4 valves and are CE marked in accordance with AFS 2016:1; Pressure Containing Devices (PED 2014/68/EU).
A EU-declaration of conformity is supplied with all valves.

Herstellerprüfungen ***/ Manufacturer's Tests / Tests du fabricant***

Das Sicherheitsventil wurde durch den Hersteller gemäß DIN EN ISO 4126-1 auf Druckfestigkeit und Dichtheit geprüft. Die Prüfanforderungen sind eingehalten.
Der Einstelldruck wurde auf einem überwachten Prüfstand mit kalibrierten Feinmessmanometern justiert. Die Ventile sind gegen Verstellung durch eine Werksplombierung gesichert.

The safety valve was tested by the manufacturer according to DIN EN ISO 4126-1 for resistance to pressure and tightness. The test requirements were complied with.
The set pressure was adjusted on a monitored test rig with calibrated precision pressure gauges. The valves are protected against adjustment by means of a factory seal.

Le fabricant a testé la résistance à la pression et l'étanchéité de la soupape selon DIN EN ISO 4126-1. Les exigences pour le test ont été respectées.
Le tarage a été réalisé sur un banc d'éssai contrôlé à l'aide de manomètres calibrés de haute précision. Les soupapes sont protégées du déréglage par un capuchon de plombage.

Die Produkte wurden zusammen mit der TÜV SÜD Product Service GmbH einer Gefahrenanalyse nach der Richtlinie 2014/34/EU unterzogen mit folgendem Ergebnis:
Der oben angeführte Ventiltyp in der geprüften Ausführung ist gemäß technischem Bericht der TÜV SÜD Product Service GmbH zu Bescheinigung Nr. 713082362 vom 14.04.16 für die Verwendung in der Gerätegruppe I Kategorie M2 und Gerätegruppe II Zonen 1, 21 und 2, 22 verwendbar.

In co-operation with the TÜV SÜD Product Service GmbH, the products were subject to a hazard analysis according to Directive 2014/34/EU with the following result:
The valve type specified above in the tested version, is according to the technical report of the TÜV SÜD Product Service GmbH relating to Attestation No. 713082362 dd. 14.04.16 suitable for use in Group I category M2 and Equipment Group II zones 1, 21 and 2, 22.

Les produits ont été soumis à une procédure d 'évaluation de risque de danger selon la directive 2014/34/EU en collaboration avec le TÜV SÜD Product Service GmbH, dont le résulat est le suivant:
Le type de robinettrie specifiée ci-dessus est dans la version contrôlée, selon le rapport téchnique en relation de l'attestation no. 713082362 dd. 14.04.16 du TÜV SÜD Product Service GmbH, convenable pour utilisation dans les Groupes des Appareils I catégorie M2 et Groupes des Appareils II zones 1, 21 et 2, 22.

Montage-, Wartungs- und Betriebsanleitung

Sicherheitsventil 851/451, 852/452/352, 652mFK, 652sGK, 861/461, 420, 460

1 Allgemeine Sicherheitshinweise

de

Originalsprache

- Benutzen Sie das Ventil nur:
  - bestimmungsgemäß
  - in einwandfreiem Zustand
  - sicherheits- und gefahrenbewusst
- Die Einbauanleitung ist zu beachten.
- Störungen, welche die Sicherheit beeinträchtigen können, sind umgehend zu beseitigen.
- Das Sicherheitsventil ist ausschließlich für den in dieser Einbauanleitung angeführten Verwendungsbereich bestimmt. Eine andere oder darüber hinausgehende Benutzung gilt als nicht bestimmungsgemäß.
- Mit dem Entfernen der Plombierung erlischt die Werksgarantie.
- Alle Montagearbeiten sind durch autorisiertes Fachpersonal durchzuführen.

2 Allgemeine Hinweise

Sicherheitsventile sind hochwertige Armaturen, die besonders sorgfältig behandelt werden müssen. Die Dichtflächen sind an Sitz und Kegel feinstbearbeitet, dadurch wird die notwenidge Dichtheit erreicht. Das Eindringen von Fremdkörpern in das Ventil ist bei Montage und während des Betriebs zu vermeiden. Die Dichtheit eines Sicherheitsventils kann durch Hanf, Teflonband oder anderen Dichtmitteln sowie durch Schweißperlen u.ä. beeinträchtigt werden. Auch eine raue Behandlung des fertigen Sicherheitsventils während Lagerung, Transport und Montage kann ein Sicherheitsventil undicht werden lassen. Werden die Sicherheitsventile mit einem Farbanstrich versehen, so ist darauf zu achten, dass die gleitenden Teile nicht mit Farbe in Berührung kommen.

3 Verwendungsbereich

Einzelheiten zum Verwendungsbereich der einzelnen Ausführungen sind den Datenblättern des Herstellers zu entnehmen.

4 Einbau und Montage

Feder-Sicherheitsventile sind mit senkrecht nach oben stehender Federhaube einzubauen. Um eine einwandfreie Funktion der Sicherheitsventile zu gewährleisten, müssen diese so montiert werden, dass keine unzulässigen statischen, dynamischen oder thermischen Beanspruchungen auf das Sicherheitsventil wirken können. Wenn durch das Gehäuse im Ansprechfalle austretende Medium direkt oder indirekt Gefahren für Personen oder die Umgebung entstehen können, so müssen geeignete Schutzmaßnahmen getroffen werden. Dabei sind auch Ausschwadungen durch die Entlastungsbohrungen der Federhaube zu berücksichtigen.

Zuleitung

Zuleitungsstutzen für Sicherheitsventile sollen so kurz wie möglich sein und sind so zu gestalten, dass bei voller Ventilleistung keine höheren Druckverluste als max. 3% vom Ansprechdruck auftreten können.

Kondensatableitung

Die Leitungen oder die Ventile selbst (bei Flanschausführung) müssen bei möglichem Kondensatabfall an ihrem tiefsten Punkt mit einer ständig wirkenden Einrichtung zu Kondensatabführung versehen sein. Für gefahrenlose Abführung des Kondensats oder austretenden Mediums ist zu sorgen. Die Gehäuse, Leitungen und Schalldämpfer sind gegen Einfrieren zu sichern.

Abblaseleitung / Gegendruck

Die Abblaseleitung der Sicherheitsventile sind so auszuführen, dass beim Abblasen der erforderliche Massestrom drucklos abgeführt werden kann. Bei Sicherheitsventilen mit Metall-Faltenbalg beeinträchtigt ein beim Abblasen auftretender Gegendruck bis max. 4 bar den Ansprechdruck des Sicherheitsventils nicht.

5 Betriebsweise / Wartung

Der Arbeitsdruck der Anlage soll mindestens 5% unter dem Schließdruck des Sicherheitsventils liegen. Dadurch wird erreicht, dass das Sicherheitsventil nach dem Abblasen wieder einwandfrei schließen kann. Bei kleineren Undichtheiten, die durch Verunreinigungen zwischen den Dichtflächen hervorgerufen werden können, kann das Ventil zur Reinigung durch Anlüftung zum Abblasen gebracht werden. Kann dadurch die Undichtheit nicht beseitigt werden, liegt wahrscheinlich eine Beschädigung der Dichtfläche vor, die nur in unserem Werk oder durch autorisierte Fachleute repariert werden kann.
Die Anlüftung erfolgt ausführungsspezifisch entweder über eine Rändelmutter oberhalb der Federhaube (Abb. a) durch Drehen gegen den Uhrzeigersinn (anschließend ist die Rändelmutter wieder bis zum Anschlag zurück zu drehen) oder durch Betätigen des Anlüfthebels am Oberteil des Ventils (Abb. b). Der Anlüfthebel ist bei Auslieferung mit einem Band arretiert, welches für die Betätigung der Anlüftung entfernt werden muss.

Sicherheitsventile ohne Faltenbalg und ohne gasdichte Kappe (Abb. c)

Bei Sicherheitsventilen ohne Faltenbalg und ohne gasdichte Kappe kann zusätzlich durch Abschrauben des Oberteils mit entsprechendem Werkzeug das gesamte Oberteil aus dem Gehäuse genommen und eventueller Rückstand auf Sitz und Sitzdichtung entfernt werden.

Vor Demontage ist darauf zu achten, dass das Sicherheitsventil nicht mit Druck beaufschlagt ist. Durch wieder Anbringen des Oberteils in das Gehäuse hat sich der Ansprechdruch des Sicherheitsventils nicht geändert.

Sicherheitsventile mit Metall-Faltenbalg (Abb. d)

Bei den Sicherheitsventilen mit Faltenbalg darf das Oberteil vom Gehäuse nicht getrennt werden, da sonst eine Dichtheit bei auftretendem Gegendruck nicht mehr gewährleistet ist.

Sicherheitsventile mit gasdichter Kappe (Abb. f) oder gasdichter Hebelanlüftung (Abb. g)

Bei Sicherheitsventilen mit gasdichter Kappe oder gasdichter Hebelanlüftung darf das Oberteil nicht vom Gehäuse getrennt werden, da sonst die Gasdichtheit nicht mehr gewährleistet ist. Sollte für Reparaturzwecke ein Abschrauben des Oberteiles dennoch notwendig sein, so ist darauf zu achten, dass vor der Demontage die Feder entspannt wird. Vor der Demontage ist ebensfalls zu kontrollieren, ob und welches Medium sich in der Haube befinden könnte. Es besteht die Gefahr einer möglichen Verätzung oder Vergiftung.

Anlüftung zu Wartung

Bei Sicherheitsventilen mit Anlüftvorrichtung ist zu empfehlen und anlagenspezifisch auch Vorschrift, das Sicherheitsventil von Zeit zu Zeit durch Anlüften zum Abblasen zu bringen, um sich von der Funktion des Sicherheitsventils zu überzeugen. Sie lassen sich daher spätestens ab einem Betriebsdruck von ≥85% des Ansprechdruckes zum Öffnen bringen. Die Anlüftung sollte nicht im drucklosen Zustand erfolgen. Eine Prüfung auf Gängigkeit der Sicherheitsventile hat nach TRD 601 bei Dampferzeugern mindestens in Abständen von 4 Wochen zu erfolgen. Sicherheitsventile stellen die letzte Sicherheit für den Behälter bzw. das System dar. Sie sollen in der Lage sein, einen unzulässigen Überdruck auch dann zu verhindern, wenn alle anderen vorgeschalteten Regel-, Steuer- und Überwachungsgeräte versagen. Um diese Funktionseigenschaften sicherzustellen, bedürfen Sicherheitsventile einer regelmäßigen und wiederkehrenden Wartung. Die Wartungsintervalle sind entsprechend den Einsatzbedingungen vom Betreiber festzulegen.

6 Demontage der Armatur

Zusätzlich zu den allgemein gültigen Montagerichtlinien ist zu beachten, dass vor Demontage des Sicherheitsventils die Anlage drucklos gemacht werden muss.

7 Reparaturen

Reparaturen an Sicherheitsventilen dürfen nur von der Firma Goetze KG Armaturen oder durch autorisierte Fachwerkstätten, unter ausschließlicher Verwendung von Originalersatzteilen, durchgeführt werden.

8 Gewährleistung

Dieses Ventil wurde vor Verlassen des Werkes geprüft. Für unsere Produkte leisten wir in der Weise Garantie, dass wir die Teile gegen Rückgabe kostenlos instand setzen, die nachweislich infolge Werkstoff- oder Fabrikationsfehlern vorzeitig unbrauchbar werden sollten. Leistung von Schadenersatz und dergleichen andere Verpflichtungen übernehmen wir nicht. Bei Beschädigungen der Werksplombierung, unsachgemäßer Behandlung bzw. Installation, Nichtbeachtung dieser Montage- ,Wartungs- und Betriebsanleitung, Verschmutzung oder normalem Verschleiß erlischt die Werksgarantie.

9 Kennzeichnung / Prüfung

D/G/H vorgesehen für Heizungsanlagen
D/G vorgesehen für Dämpfe/Gase
F vorgesehen für Flüssigkeiten
F/K/S vorgesehen zum Abblasen von Luft aus Behältern für flüssige, körnige oder staubförmige Medien

Sicherheitsventile werden von uns auf Druckfestigkeit und Dichtheit geprüft, auf den gewünschten Einstelldruck einjustiert und plombiert.
Die Kennzeichnung erfolgt unauslöschlich auf dem Typenschild, bzw. auf der Federhaube des Ventils. Zusätzlich enthält die Kennzeichnung die notwendigen Angaben gemäß DIN EN ISO 4126-1.

Assembly and maintenance instructions

Safety valve 851/451, 852/452/352, 652mFK, 652sGK, 861/461, 420, 460

1 General Notes of Safety

en

- Only use the valve:
  - for the specified purpose
  - in satisfactory condition
  - with respect for safety and potential hazards
- Always observe the installation instructions.
- Faults that may impair safety must be addressed immediately.
- The valves are exclusively intended for the application area stated in these installation instructions. Any other or further use is not valid as the intended use.
- The manufacturer´s warranty shall be null and void if the sealed cover is removed.
- All assembly work is to be carried out by authorized specialist staff.

2 General Notes

Safety valves are high-quality fittings which require a particularly careful handling. The sealing surfaces are precision-machined at the seat and cone to attain the required tightness. Always avoid the penetration of foreign particles into the valve during assembly and during the operation. The tightness of a safety valve can be impaired when using hemp, Teflon tape, as well as through welding beads, among other things. Also rough handling of the finished valve during storage, transport and assembly can result in a safety valve leaking. If the safety valves are painted, make sure that the sliding parts do not come into contact withe the paint.

3 Range of Application

For details on the range of application of the individual versions please refer to the datasheets of the manufacturer.

4 Installation and Assembly

Spring-loaded safety valves are to be installed with the spring bonnet pointing vertically upward. To ensure a satisfactory operation of the safety valves they must be installed in such a way that the safety valve is not exposed to any impermissible static, dynamic or thermal loads. Appropriate protection devices must be applied if the medium that discharges upon actuation of the valve can lead to direct or indirect hazards to people or the environment. Always pay attention to possible fumes discharging from the relief bores in the spring bonnet.

Supply

Supply connection pieces for safety valves are to be kept as short as possible and are to be designed in such a way that there can be no pressure loss greater than max. 3% of the response pressure.

Removal of condensate discharge

In the event of possible condensate formation the pipes or the valves themselves (in flanged version) must be fitted at their lowest point with a continuously operating condensate discharge device. Hazard-free removal of the condensate or medium discharge must be ensured. The body, pipes and silencers must be protected against freezing.

Blowing-off pipe / backpressure

The blow-off pipe of the safety valves must be designed to ensure that the required mass flow can be discharged pressure-free during the blowing-off process. In safety valves with metal bellows a backpressure of up to max. 4 bar has no impact on the response pressure of the safety valve.

5 Operation/maintenance

The operating pressure of the plant is to be least 5% lower than the closing pressure of the safety valve. In this way, the valve can satisfactorily close again after blowing off. In the event of minor leaks, which may be caused by contamination between the sealing surfaces, the valve can be made to blow off through lifting, for cleaining purposes. If this does not remove the leak, the sealing surface is probably damaged and this can only be repaired at our factory or by authorized specialists. Depending on the version, lifting is either carried out by means of a knurled nut above the spring bonnet (Fig. a) which is turned counterclockwise (afterwards the knurled nut has to be turned back to the stop) or by actuating the lifting lever on the upper part of the valve (Fig. b). For delivery purposes the lifting lever is blocked by means of strap which has to be removed for actuating the lifting device.

Safety valves without bellows and without gastight cap (Fig. c)

In addition, in the case of safety valves without bellows and without gastight cap, the entire upper part can be unscrewed from the housing using appropriate tools and any residue removed from the seat and the seat sealing.

Prior to removal make sure that the safety valve is not under pressure.

The response pressure of the safety valve is not altered through the reassembly of the upper part in the housing.

Safety valve with metal bellows (Fig. d)

In the case safety valves with metal bellows the upper part is not to be separated from the housing, because otherwise tightness is no longer guaranteed in the event of backpressure occurring.

Safety valves with gas-tight cap (Fig. f) or gastight lifting (Fig. g)

On safety valves with gas-tight cap or gastight lifting lever, the top part may not be separated from the housing as this compromises gas tightness. However, if the top part does have to be unscrewed for a repair, it should be ensured that the tension on the spring is released before dismantling. You should also check before dismantling the valve whether there is any medium in the cap and if so, what it is. Potential risk of chemical burns or poisoning.

Lifting for maintenance purposes

In the case of safety valves with a lifting device it is recommended, and in certain plant-specific cases even stipulated that the valves from time to time must be made to blow-off by lifting the seal off the seat, in order to assure the correct functioning of the safety valve. This is why they can be made to open at the latest as from an operating pressure of ≥ 85% of the response pressure. The lifting device is not to be operated when in a pressure-free state. In steam generating equipment, testing the ease of movement of safety valves must be carried at least every 4 weeks in compliance with TRD 601. Safety valves are the ultimate safety device for the tank or system. They must be able to prevent impermissible overpressure even when all other upstream control and monitoring equipment fail. To ensure these functional characteristics safety valves require regular and recurring maintenance. The maintenance intervals are determined by the operator in dependence of the operating conditions.

6 Dismantling the fitting

In addition to the general installation instructions it must be ensured that the system is made pressure free prior to disassembly of the safety valve.

7 Repairs

Repair work on safety valves is only to be carried out by Goetze KG Armaturen or by officially approved specialist workshops authorized by Goetze KG Armaturen using original spare parts only.

8 Warranty

Every valve is tested prior to leaving the factory. We grant a warranty for our products which entails the repair, free of charge, of any parts that are returned and verified as being prematurely unsuitable for use due to defective material or manufacturing. We shall not assume any liability for any damage ar other such obligations. If the factory seal is damaged, in the event of any incorrect handling or installation, non-observance of there operating and maintenance instructions, contamination or normal wear, warranty claims shall be null and void.

Fig. c): Safety valve without bellows and without diaphragm

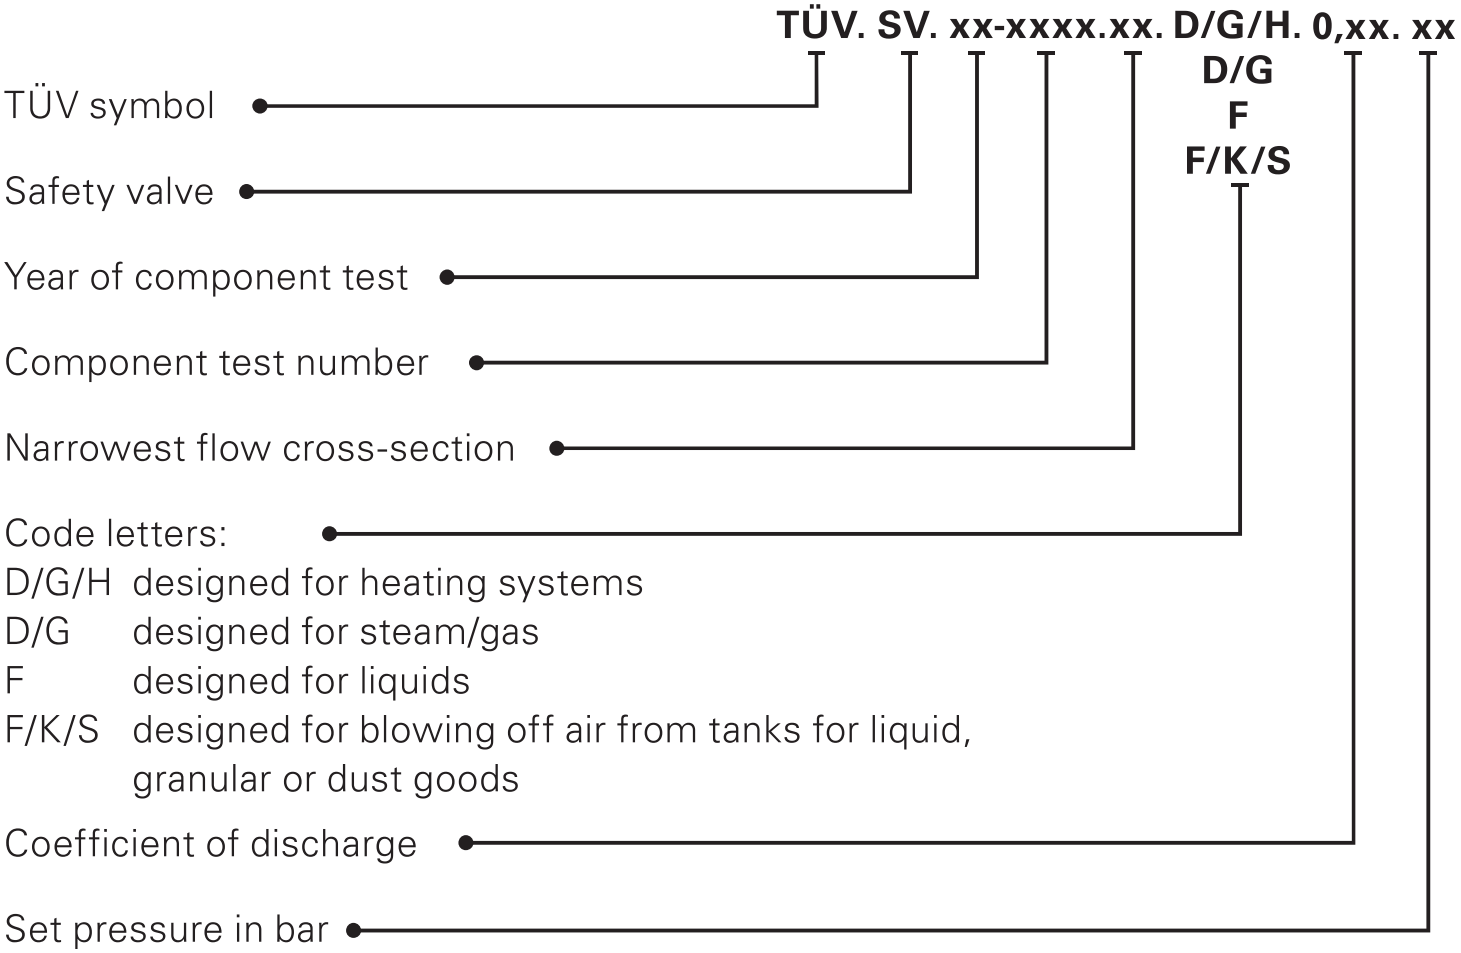

Fig. d): Safety valve with bellows

Fig. e): Safety valve with diaphragm

Fig. f): Safety valve with gastight cap

Fig. g): Safety valve with gastight lifting lever

9 Marking/testing

We check the safety valves for pressure resistance and tightness, adjust the requested set pressure and seal them. The identification on the type plate or on the spring bonnet of the valve is applied using a permanent marking system.
The type plate is additionally marked with identification codes and technical data in compliance with DIN EN ISO 4126-1.

Instructions de montage, d'utilisation et d'entretien

Soupape de sûreté 851/451, 852/452/352, 652mFK, 652sGK, 861/461, 420, 460

1 Conseils de sécurité – Généralités

fr

- La soupape doit être utilisée uniquement :
  - aux fins auxquelles elle est destinée
  - en parfait état de fonctionnement
  - en connaissance des règles de sécurité et des dangers qu'elle comporte
- Respecter les instructions de montage.
- Remédier immédiatement à tout défaut susceptible de nuire à la sécurité.
- Les soupapes sont destinées exclusivement au domaine d'application indiqué dans la présente notice de montage. Toute utilisation différente ou toute utilisation allant au-delà de celle recommandée est considérée comme non conforme.
- La suppression du plombage d'usine fait perdre le bénéfice de la garantie.
- Les travaux de montage doivent uniquement être confiés au personnel qualifié autorisé.

2 Recommandations générales

Les soupapes de sureté sont des appareils de grande qualité qui demandent à être manipulées avec soin. Les surfaces du siège et du clapet ont subi un usinage minutieux propre à leur confèrer l'étanchéité nécessaire. Eviter la pénétration de corps étrangers durant le montage et le fonctionnement de l'appareil. Son étanchéité peut être endommagée par l'utilisation de chanvre, de ruban de Teflon ou d'autres matériaux d'étanchéité, ainsi que par des perles de soudure, etc. De même, une manipulation peu précautionneuse de la soupape de sécurité au cours du stockage, du transport et du montage peut être à l'origine d'un défaut d'étanchéité. Si les soupapes de sûreté doivent être mises en peinture, veiller à ce que les éléments mobiles ne reçoivent pas de traces de peintures.

3 Domaine d'utilisation

Pour tous details concernant le domaine d'application des différentes versions d'appareil, veuillez consulter les fiches techniques du fabricant.

4 Installation et montage

Les soupapes de sûreté à ressort doivent être montée e position verticale, le chapeau à ressort vers le haut. Monter la soupape de sécurité de telle façon qu'elle ne soit exposée à aucune contrainte non admissible que ce soit statique, dynamique ou thermique. Sur les sites où l'échappement du fluide par le corps de l'appareil peut constituer un danger direct ou indirect pour le personnel, il est indispensable de prévoir les mesures de protection qui s'imposent. Ceci est valable également pour les exsudations de vapeur qui peuvent se produire à travers les perçages de décharge du chapeau à ressort.

Adductions

Les manchons d'adductions des soupapes de sûreté doivent être le plus court possible et être conçus de façon à éviter que les pertes de charge à plein débit de la soupape ne dépassent pas plus de 3% de la pression de réglage.

Purge des condensats

Les conduites ou les soupapes elles-mêmes (pour les versions à brides) qui sont susceptibles de générer des condensats doivent être dotées au point le plus bas d'un dispositif de purge automatique. Veiller à une élimination des produits de condensation ou du fluide exsudé en toute sécurité. Protéger les corps de la soupape, conduites et silencieux contre le gel.

Conduite de décharge / contrepression

La conduite de décharge d'une soupape de sécuité doit être installée de telle manière qu'en cas d'échappement le fluide puisse être évacué sans pression. Pour les soupapes de sûreté avec soufflet métallique, une contrepression jusqu'à 4 bar maxi qui peut apparaître au moment de l'échappement, n'influe pas sur la pression de réglage de l'appareil.

5 Fonctionnement / Entretien

La pression de service de l'installation doit être au moins de 5% inférieure à la pression de fermeture de la soupape de sécurité. On parvient ainsi à une parfaite fermeture de la soupape de sécurité après l'opération de décharge. En cas d'apparition de légères fuites pouvant être causées par la pénétration d'impuretés entre les surfaces d'étanchéité, la soupape peut être nettoyée par un essai de décharge.
Si après cette opération la fuite persiste, la surface d'étanchéité est sans doute endommagée et ne peut être réparée que dans notre usine ou par des spécialistes autorisés. L'opération de décharge se fait, selon le type de soupape, soit par une molette au-dessus du chapeau de ressort (fig. a) en tournant l'écrou cranté dans le sens contraire aux aiguilles d'une montre (ensuite faire revenir la molette jusqu'à l'arrêt), soit en soulevant le levier de décharge de la soupape (fig. b). Lorsque la soupape quitte l'usine, le levier de décharge est immobilisé par un ruban de fixation qui doit être supprimé pour l'opération de décharge.

Soupapes de sûreté sans soufflet et sans bonnet étanche (fig. c)

Dans le cas des soupapes de sécurité sans soufflet et sans bonnet étanche,

l'élément supérieur de l'appareil peut être dévissé en entier du corps avec un outillage adéquat afin de débarrasser le siège et les surfaces d'étanchéité d'éventuelles impuretés.
Avant le démontage, veiller à ce que la soupape de sécurité ne soit pas sous pression. Le fait de réinsérer l'élément supérieur dans le corps de l'appareil ne modifie pas la pression de réglage.

Soupape de sécurité avec soufflet métallique (fig. d)
Dans le cas des soupapes de sécurité avec soufflet métallique, l'élément supérieur ne doit pas être désolidarisé du corps, car l'étanchéité ne pourrait plus être garantie dès l'apparition d'une contrepression.

Soupapes de sûreté avec clapet étanche au gaz (fig. f) ou avec levier comme dispositif de décharge étanche au gaz (fig. g)
Dans le cas de soupapes de sûreté avec clapet étanche au gaz ou levier comme dispositif de décharge étanche au gaz, ne pas désolidariser la partie supérieure du corps car l'étanchéité au gaz ne pourrait plus être garantie. Cependant si à des fins de réparations, il faut en dévisser la partie supérieure, veiller à ce que les ressorts soient détendus avant d'exécuter le démontage. De même qu'avant le démontage, contrôler le chapeau pour constater s'il y a un fluide et de quel fluide il s'agit. Il existe un danger de brûlure par acide ou un risque d'intoxication.

Essai de décharge pour entretien
Dans le cas de soupapes de sûreté avec dispositif de décharge, il est recommandé et même obligatoire selon les directives en vigeur, de vérifier de temps en temps le bon fonctionnement de la soupape de sûreté en purgeant la soupape par le devis de décharge. Il faut alors qu'elle ouvre sans moyen auxiliaire à partir de ≥ 85% de la pression de réglage. Ne pas effectuer l'opération de décharge en absence de pression. Selon TRD 601 le contrôle de bon fonctionnement des soupapes de sûreté utilisées dans les générateurs de vapeur doit avoir lieu à intervalles d'au moins 4 semaines. Les soupapes de sécurité sont l'ultime sécurité du réservoir ou du système de production. Elles doivent permettre d'empêcher l'apparition d'une pression non admissible même si tous les autres appareils de commande, de régulation et de contrôle installés en amont tombent en panne. Les soupapes de sécurité nécessitent un entretien regulier et répetitif afin de garantir cette disponibilité opérationnelle. Les intervalles d'entretien sont à définier par l'exploitant en fonction des conditions de service.

6 Démontage

En complément des directives de montage généralement applicables, vérifier avant le démontage des soupapes de sécurité si l'installation est bien mise hors pression.

7 Réparation

La réparation des soupapes peut être effectuée exclusivement par la société Goetze KG Armaturen elles-même ou par un atelier de réparation qualifié, qui n'utilisera que des pièces de réchange d'origine.

8 Garantie

Cette soupape a été contrôlée avant de quitter l'usine. La garantie que nous offrons sur nos produits couvre la remise en état gratuite des pièces retournées dont il peut être prouvé qu'elles sont devenues prématurément inutilisables suite à des défauts de fabrication ou de matériau. Nous ne prendrons en charge aucun dédommagement ou autre obligation de cette sorte. La garantie du fabricant ne peut être invoquée en cas d'endommagement du plombage d'usine, manipulation ou installation inadéquates, non-observation des présentes instructions de montage et d'entretien.

9 Marquage / contrôle

D/G/H pour installations de chauffage
D/G pour vapeurs et gaz
F pour liquides
F/K/S pour la décharge d'air sur réservoirs contenant des liquides, des granulés ou des fluides pulvérulents

Nos soupapes de sécurité sont contrôlées quant à leur résistance à la pression et à leur étanchéité; elles sont réglées à la pression de tarage souhaitée et dotées d'un plombage. Le marquage est indiqué de façon indélébile sur une plaquette attachée à chaque appareil, ou sur le chapeau à ressort de la soupape. Sur la plaquette d'identification figurent de plus des marquages et informations techniques requises suivant la DIN EN ISO 4126-1.

Instrucciones de servicio, montaje y mantenimiento

Válvula de seguridad 851/451, 852/452/352, 652mFK, 652sGK, 861/461, 420, 460

1 Indicaciones generales de seguridad

es

- Solo utilice esta válvula:
  - para la finalidad de uso prevista
  - estando en perfecto estado
  - con conciencia de la seguridad y peligros
- Tenga en cuenta las instrucciones de montaje.
- Todos los fallos que puedan afectar la seguridad, deben eliminarse de inmediato.
- La válvula se destina exclusivamente para la finalidad de uso indicada en estas instrucciones de montaje. Cualquier otra utilización, o su uso más allá de la finalidad indicada, se considerará como no conforme a lo prescrito.
- En el caso de que se quite el precinto de fábrica, la garantía de regulación de la válvula quedará cancelada.
- Los trabajos de montaje sólo podrán ser realizados por personal técnico autorizado.

2 Indicaciones generales

Las válvulas de seguridad son accesorios de alta calidad que requieren ser manejados con especial cuidado. Las superficies de sellado se han maquinado con precisión en el asiento y el cono para conseguir la estanqueidad exigida. Evite siempre la entrada de partículas extrañas en la válvula durante el montaje y durante su funcionamiento. Se puede afectar la estanqueidad de una válvula de seguridad cuando se usa cáñamo, cinta de teflón, y a través de las bolas de soldadura, entre otras cosas. Del mismo modo, si se maneja bruscamente la válvula terminada durante el almacenamiento, transporte o montaje, se pueden ocasionar fugas en la válvula de seguridad. Si las válvulas de seguridad están pintadas, asegúrese de que las partes deslizantes no entren en contacto con la pintura.

3 Campo de aplicación

Para información sobre el campo de aplicación de las versiones individuales, le rogamos consulte la ficha técnica del fabricante.

4 Instalación y montaje

Las válvulas de seguridad de resorte cargado deben ser instaladas con el sombrerete de resorte apuntando verticalmente hacia arriba. Para asegurar el funcionamiento satisfactorio de la válvula de seguridad debe instalarse de tal modo que la válvula

de seguridad no esté expuesta a ninguna carga que no esté permitida, bien sea estática, dinámica o térmica. Deben aplicarse dispositivos de protección adecuados si el material que se descarga con la operación de la válvula puede crear peligros directos o indirectos a personas o al medio ambiente. Preste atención siempre a los posibles gases que se despidan de los orificios de alivio en el sombrerete de resorte.

Suministro

Las piezas de conexión de suministro para válvulas de seguridad deben mantenerse lo más cortas posibles y deben diseñarse de tal modo que no se produzca una pérdida de la presión superior a un máximo de un 3% de la presión de respuesta.

Eliminación de la emisión de condensado

En el caso de la posible formación de condensado, se debe colocar en las tuberías o las válvulas mismas (en versión de pestaña), en su punto más bajo, un dispositivo de emisión de condensado de funcionamiento continuo. Se debe asegurar que la eliminación del condensado o de la emisión de materiales no acarree ningún peligro. La carcasa, las tuberías y los silenciadores deben protegerse contra la congelación.

Tubería de expulsión / contrapresión

La tubería de expulsión de las válvulas de seguridad debe estar diseñada de modo que se asegure la expulsión sin presión del flujo de masa requerido durante el proceso de expulsión. En las válvulas de seguridad con muelles de metal una contrapresión de hasta un máximo de 4 bar no tiene impacto sobre la presión de respuesta de la válvula de seguridad.

5 Operación /Mantenimiento

La presión de trabajo de la planta debe ser por lo menos un 5% inferior a la presión de cierre de la válvula de seguridad. De este modo, la válvula puede cerrarse satisfactoriamente otra vez tras el proceso de expulsión. En el caso de que haya pequeñas fugas, las que pueden ser causadas por contaminación entre las superficies de sellado, se puede hacer que la válvula expulse a través de su levantamiento, y así efectuar su limpieza. Si esto no detiene la fuga, es posible que la superficie del sello esté dañada, y sólo se podrá arreglar en nuestra fábrica o con especialistas autorizados. Dependiendo de la versión, el levantamiento se efectúa bien a través de una tuerca estriada encima del sombrerete de resorte (Fig. a), la que se gira en sentido contrario a las agujas del reloj (a continuación la tuerca estriada se debe girar de vuelta al punto de parada) o bien accionando la palanca de levantamiento en la parte superior de la válvula (Fig. b). Para la seguridad en la entrega del producto, la palanca de levantamiento está bloqueada a través de una correa que hay que quitar para accionar el dispositivo de levantamiento.

Válvulas de seguridad sin fuelles y sin caperuza estanca al gas (fig.c)

Adicionalmente, en el caso de las válvulas de seguridad sin fuelles y sin caperuza estanca al gas, la parte superior entera de la válvula se puede desenroscar de la carcasa usando las herramientas correspondientes y para eliminar todo residuo del asiento de la válvula y de la junta del asiento.

Antes de eliminar residuos asegúrese de que la válvula de seguridad no esté bajo presión.

La presión de respuesta de la válvula de seguridad no se modifica al volver a montar la parte superior de la carcasa.

Válvulas de seguridad con fuelles de metal (fig. d)

En el caso de válvulas de seguridad con fuelles de metal, la parte superior no se separa de la carcasa porque de otro modo no podría garantizarse la estanqueidad de las válvulas en el caso de que se produzca una contrapresión.

Válvulas de seguridad con caperuza estanca al gas (fig. f) y con sistema de palanca estanca al gas (fig. g)

En las válvulas de seguridad con caperuza estanca al gas o sistema de palanca estanca al gas la parte superior no se debe separar de la carcasa ya que, de lo contrario, no está garantizada ya la estanqueidad al gas. Si resulta necesario desatornillar la parte superior para fines de reparación, hay que tener que cuenta que el muelle se destense antes del desmontaje. Asimismo, hay que controlar antes del desmontaje si hay algún medio en la caperuza y, en caso dado, cuál. Existe peligro de quemadura por ácido o envenenamiento.

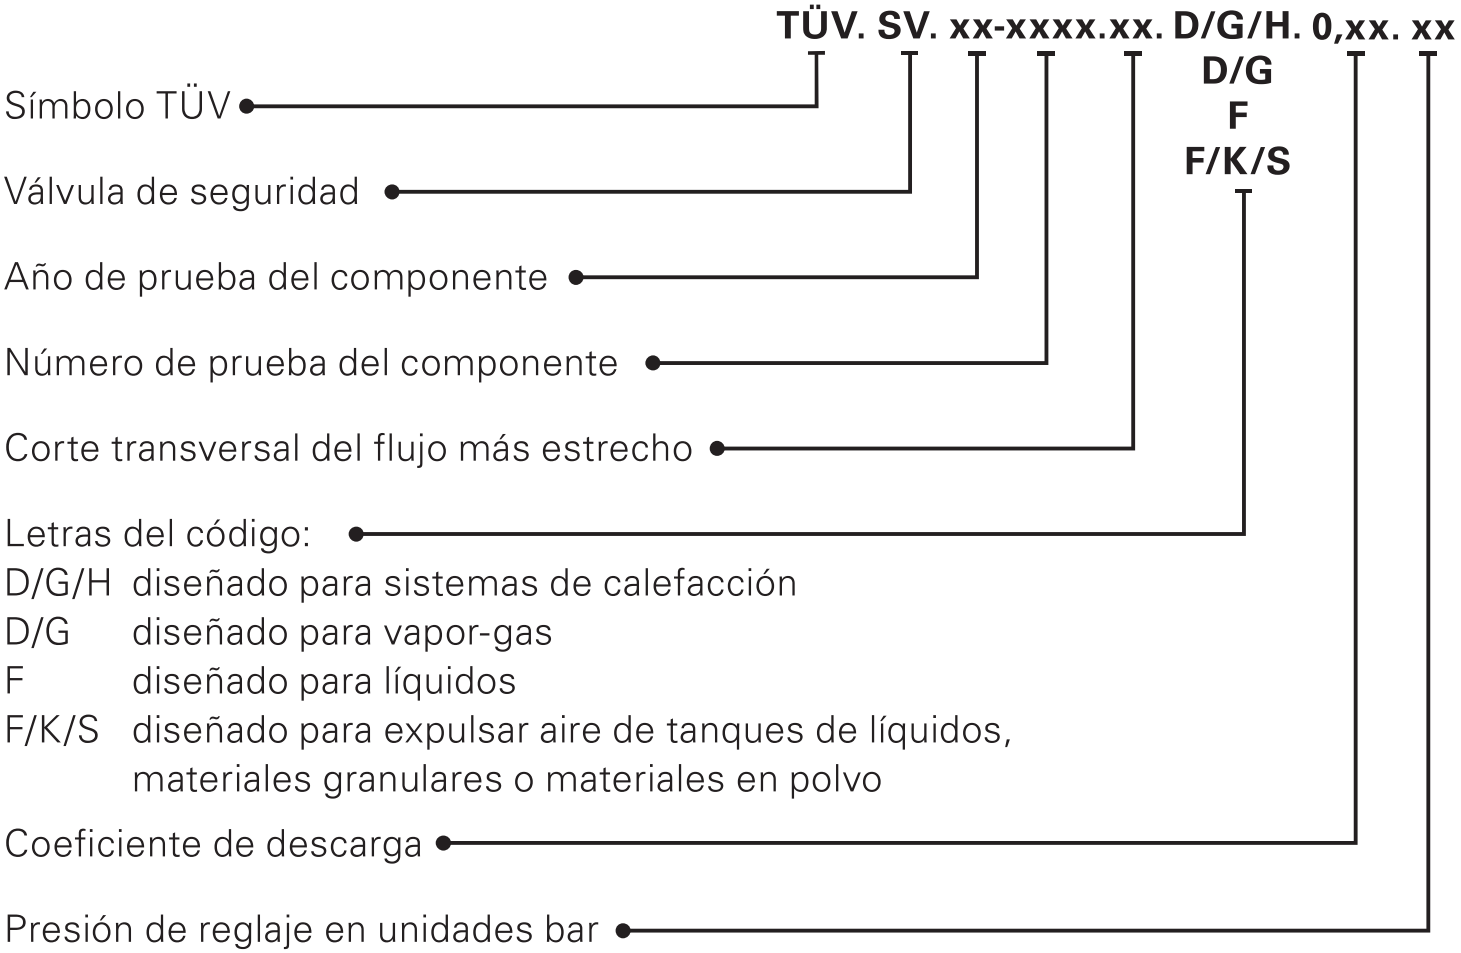
Levantamiento para realizar mantenimiento

En las válvulas de seguridad con dispositivo para levantar el cono se recomienda, y ségun las disposiciones relevantes es también obligatorio purgar la válvula de seguridad regularmente activándola brevemente de forma especifica de la instalacón para cerciorarse asì del funcionamiento de la válvula de seguridad. Es por este motivo por el que pueden abrirse por último a una presión de trabajo de ≥ 85% de la presión de respuesta. El dispositivo de levantamiento no debe operarse cuando la válvula no tenga presión alguna. En maquinaria de generación de vapor, la facilidad de movimiento de la válvula de seguridad debe ponerse a prueba por lo menos cada cuatro semanas, de conformidad con TRD 601. La válvula de seguridad es el último dispositivo de seguridad de un tanque o sistema y por lo tanto debe ser capaz de evitar que se produzca una sobrepresión inadmisible incluso en el caso de que fallase todo el otro equipo de control y monitorización preconectado. Para garantizar un tal funcionamiento de las válvulas de seguridad, deben someterse a mantenimiento con regularidad y de repetición. La frecuencia de los servicios de mantenimiento será determinada por el operador dependiendo de las condiciones de funcionamiento.

6 Desmontaje del accesorio

Además de las instrucciones generales para el desmontaje, se debe asegurar que el sistema no tenga presión alguna antes de desmontar la válvula de seguridad.

7 Reparaciones



Las reparaciones que deban realizarse en las válvulas de seguridad solo deben ser efectuadas por Goetze KG Armaturen o por talleres especializados aprobados, usando sólo piezas de recambio originales.

8 Garantía

Cada válvula es puesta a prueba antes de salir de la fábrica. La garantía de nuestros productos cubre la reparación libre de cargo de toda pieza que se devuelva y quede comprobado que es prematuramente inadecuada para su uso debido a un defecto en el material o en la fabricación. No somos responsables de ningún daño ni estamos sujetos a ninguna otra obligación. Las reclamaciones a la garantía no serán válidas en los siguientes casos: el sello o precinto de fábrica ha sido violado, el manejo o la instalación son incorrectos, no se ha cumplido con estas instrucciones de funcionamiento y mantenimiento, se ha producido una contaminación, o por el desgaste normal de la válvula.

9 Identificación / Verificación

D/G/H diseñado para sistemas de calefacción
D/G diseñado para vapor-gas
F diseñado para líquidos
F/K/S diseñado para expulsar aire de tanques de líquidos, materiales granulares o materiales en polvo

Revisamos las válvulas de seguridad para comprobar la resistencia a la presión y la estanqueidad, ajustamos la presión de reglaje requerida y las sellamos. La identificación en la placa del tipo o en el sombrerete de resorte de la válvula se aplica mediante un sistema de marcado permanente. La placa del tipo se marca adicionalmente con códigos de identificación y datos técnicos de conformidad con DIN EN ISO 4126-1.

安装、保养与使用说明书

安全阀 851/451, 852/452/352, 652mFK, 652sGK, 861/461, 420, 460

zh

1 通用安全提示

- 使用本型号阀门只在以下情况：
  - 符合预期规划
  - 在良好状态下
  - 具备安全与危险意识
- 请注意组装说明书信息。
- 凡影响安全的故障，请务及时排除。
- 本安全阀仅限于本使用说明书中罗列的使用范围。任何其他用途一律 视为违反符合预期规划。
- 拆除铅封，即视为自动解除保修。
- 所有安装工作必须由授权的专业人员进行。

2 一般提示

安全阀属于高值组件，务必格外谨慎对待。阀座和阀锥之间经过精加工的密封面能保障足够的的密封性。安装和使用中避免异物侵入阀门内部。印度大麻纤维、特氟龙胶带或其他密封物品以及焊瘤等这些物质会影响安全阀的密封性能。另外，粗鲁地仓储、运输和安装安全阀，也会造成该安全阀密封性能失效。如安全阀上要喷涂彩色涂料，请注意滑动部件不可接触涂料。

3 使用范围

关于本型号范围内各个安全阀使用范围的详尽信息，请参照制造商技术指标执行。

4 安装和组装

弹簧式安全阀应和垂直向上的弹簧腔阀盖一起安装。这种朝向安装是为了确保安全阀完美的工作性能，防止运行中不允许的静态、动态或者热力学载荷干扰安全阀功能。如发生介质通过阀体泄漏而可能直接或者间接造成人身危险或环境污染，务必采取适当的保护措施。在此，也不要忽视透过弹簧腔阀盖上的卸载孔排出的间断性微弱气流喷发。

入口接管

用于安全阀的入口连接管件应尽可能短。同时该入口连接管件设置上也要确保安全阀处于最大功率，不出现超过整定压力3%的压力损耗。

冷凝水排放

安装安全阀的管道以及安全阀本身（法兰连接方式）必须考虑到可能出现的冷凝水沉积而为此在管件系统最低点安置可持续性排放冷凝水的装置。要安全地排放冷凝水或者渗出的介质。谨防阀体、管道和消音器结冰。

泄压排放与背压

安全阀的泄压排放管道，必须确保泄压排放时所要求的介质流能在无压状态下排出。配有金属波纹管的安全阀，在泄压排放中，当背压不超过4bar时，不会影响安全阀的整定压力。

5 作业模式与维护

设备的工作压力应至少低于安全阀回座压力的5%。这样保证了泄压排放后，安全阀又能完全回座。如果密封面之间的脏污引起微量泄漏，可以利用透气排泄方式对阀门进行清洁。如果还是不能消除泄漏，则可能是密封面受损，这种情况下就必须在我们的工厂或者被授权的专业人员进行修理。

视阀门型号配置而定，或者通过逆时针旋转弹簧腔阀盖上(插图a)的滚花螺母(然后旋回滚花螺母，直至撞击处)进行透气泄压，或者通过操作阀门 上部件上 的透气拉杆(图b)来进行透气。出 厂 时 ，如果透气拉杆使 用 金 属 丝 线 铅 封过，操作阀门透气前需拆除该铅封丝线。

无波纹管和无气密阀帽的安全阀（插图c）

无波纹管和无气密阀帽的安全阀的上部件，可以使用相应的工具将上部件从阀体上卸下来。如有必要，清除阀座和密封件上的残留物。

小心拆卸安全阀，之前确认，在安全阀上不可加压。通过重新将上部件装入阀体后，能确保安全阀的整定压力保持不变。

带金属波纹管的安全阀（插图d）

对于带金属波纹管的安全阀，其阀体上部件不可与阀体分离，否则出现背压时再也无法保障其密封性。

带气密帽的安全阀（插图f)或者带气密透气拉杆的安全阀（插图g）

对于带气密帽或带气密透气拉杆的安全阀， 其阀体上部件不可与阀体分离，否则时再也无法保障其气密性。如因维修有必要卸下阀体上部件，那么拆卸法体上部件之前一定让弹簧卸载。同时，阀门拆卸前要留意查看，弹簧腔阀盖内是否以及会存有哪种介质。这里有腐蚀和中毒危险!

维护的透气泄压

为了确保安全阀的功能正常，对于带透气装置的安全阀，建议视设备具体情形而定，要按规定要求，时不时地对安全阀进行透气泄压事宜。必须保障阀门最迟的开启压力在工作压力达到整定压力值85 %。透气泄压不可在零压力状 态下进行。根据（德国蒸汽锅炉技术规范）TRD 601对锅炉设备运行的要求，至 少 每 隔 4个月检查一次蒸汽发生器的安全阀是否处于运行平稳状态。安全阀是容器和系统的最后安全防线。即使在所有其他的前置调节、控制和监控器件都失灵的状态下，安全阀也要能够阻止不允许过压的出现。为了确保这一功能，需要定期并反复维护安全阀。 安全阀维护的周期取决于用户具体使用环境。

6 阀门拆卸

拆卸阀门时，除了要遵守通用的安装指令外，务必在开始阀门拆卸之前使设备系统达到零压状态。

7 修理

安全阀的修理，只允许Goetze KG Armaturen（高策阀门责任无限公司）或者经高策阀公司授权的专业公司完成，而且仅限于使用高策原装配件进行作业。

8 保修

出厂前，本阀门已通过检验合格。本公司对产品保修模式是：凡确因材料缺陷或制造缺陷致使过早怠工的阀门，本公司承诺收到客户寄回的阀门后免费维修。本公司恕不承担赔偿损失以及类似其他义务。因出厂封口损坏、产品安装及使用不当、忽视本安装保养与使用说明书提示、污垢或正常性的磨损均不属保修之列。

9 标记与检验

出厂前，所有安全阀通过了抗压强度试验和密封性试验，按客户需求调试好了设置压力并予以铅封。

上述检验标记已经永久性印制在安全阀产品铭牌或者弹簧腔阀盖上。此外，根据DIN EN ISO 4126-1要求，标记上附有必要的参数信息。

Instruções de montagem, manutenção e operação

Válvula de segurança 851/451, 852/452/352, 652mFK, 652sGK, 861/461, 420, 460

1 Indicações gerais de segurança

br

- Use a válvula somente:
  - para o fim a que se destina,
  - em condições impecáveis,
  - em plena consciência dos aspectos de segurança e dos riscos
- As instruções de instalação devem ser observadas.
- Falhas que possam prejudicar a segurança devem ser eliminadas imediatamente.
- A válvula de segurança destina-se exclusivamente ao uso pretendido especificado nestas instruções de instalação. Qualquer outro uso ou uso posterior é considerado impróprio.
- A remoção do lacre anula a garantia de fábrica.
- Todo o trabalho de montagem deve ser realizado por pessoal especializado autorizado.

2 Informações gerais

Válvulas de segurança são válvulas de alta qualidade que devem ser manuseadas com cuidado especial. As superfícies de vedação são finamente trabalhadas na sede e disco, assim, o aperto necessário é alcançado. A penetração de corpos estranhos na válvula deve ser evitada durante a montagem e durante a operação. A vedação de uma válvula de segurança pode ser afetada por cânhamo, fita de teflon ou outros selantes e por respingos de solda. Mesmo o manuseio agressivo da válvula de segurança acabada durante o armazenamento, transporte e instalação pode causar vazamento da válvula. Se as válvulas de segurança forem pintadas, certifique-se de que as partes deslizantes não entrem em contato com a tinta.

3 Área de aplicação

Os detalhes sobre a área de aplicação das versões individuais podem ser encontrados nas folhas de dados do fabricante.

4 Instalação e montagem

As válvulas de segurança de mola devem ser instaladas com o castelo apontando para cima. Para garantir que as válvulas de segurança funcionem corretamente, elas devem ser montadas de modo que nenhuma carga estática, dinâmica ou térmica possa agir sobre elas. Se puderem surgir, direta ou indiretamente, riscos para as pessoas ou para o meio ambiente através do corpo em casos de abertura, devem ser tomadas medidas de proteção. Também devem ser consideradas as eliminações pelos orifícios de alívio do castelo.

Alimentação

Os bocais de alimentação para as válvulas de segurança devem ser os mais curtos possíveis e devem ser projetados de tal forma que, no desempenho total da válvula, não haja perdas de pressão maiores do que 3% da pressão de abertura.

Drenagem do condensado

As linhas ou as próprias válvulas (na versão com flange) devem ser fornecidas com um dispositivo de descarga de condensado, de ação constante, em seu ponto mais baixo, no caso de uma possível condensação. Deve-se assegurar uma drenagem segura do condensado ou do meio derramado. Os corpos, linhas e silenciadores devem ser protegidos contra congelamento.

Linha de descarga/contrapressão

A linha de descarga das válvulas de segurança deve ser projetada de modo que o fluxo de massa necessário possa ser dissipado sem pressão durante a descarga. No caso de válvulas de segurança com fole de metal, uma contrapressão que ocorre durante a descarga não afeta a pressão de abertura da válvula até no máx. 4 bar.

5 Modo de operação/manutenção

A pressão de trabalho do sistema deve estar pelo menos 5% abaixo da pressão de fechamento da válvula de segurança. Isso garante que a válvula de segurança possa fechar corretamente novamente após a descarga. Para vazamentos menores, que podem ser causados por sujeira entre as superfícies de vedação, a válvula pode ser retirada para limpeza na ventilação para descarga. Se o vazamento não puder ser eliminado, provavelmente haverá danos na superfície de vedação que só poderão ser reparados em nossa fábrica ou por profissionais autorizados. A ventilação é feita por meio de uma porca serrilhada sobre o castelo (fig. a), rodando-o no sentido anti-horário (depois a porca serrilhada deve voltar a girar até o batente) ou acionando a alavanca de ventilação na parte superior da válvula (fig. b). Na entrega, a alavanca está travada com uma correia, que deve ser removida para o acionamento da ventilação.

Válvulas de segurança sem fole e sem tampa estanque a gás (fig. c)

No caso de válvulas de segurança sem fole e sem tampa estanque a gás, toda a parte superior pode ser removida do corpo desparafusando-a com a ferramenta apropriada e qualquer resíduo na sede e na vedação da sede pode ser removido.

Antes da desmontagem, certifique-se de que a válvula de segurança não esteja pressurizada. Ao recolocar a parte superior no corpo, a pressão de abertura

da válvula de segurança não foi alterada.

Válvulas de segurança com fole metálico (fig. d)

Para as válvulas de segurança com foles, a parte superior do corpo não deve ser separada, caso contrário, não haverá garantia de vedação se ocorrer contrapressão.

Válvulas de segurança com tampa impermeável aos gases (fig. f) ou ventilação com alavanca estanque ao gás (fig. g)

Para válvulas de segurança com tampa estanque a gás ou ventilação com alavanca estanque ao gás, a parte superior não deve ser separada do corpo, pois caso contrário, a estanqueidade do gás não é mais garantida. Se ainda for necessário desaparafusar a parte superior para fins de reparo, certifique-se de que a mola seja liberada antes da desmontagem. Antes da desmontagem, também deve ser verificado se e qual meio pode estar no castelo. Existe o risco de possíveis queimaduras químicas ou envenenamento.

Dispositivo de ventilação para manutenção

No caso de válvulas de segurança com dispositivo de ventilação, é recomendado e também regra específica para o sistema que a válvula de segurança seja purgada de tempos em tempos pela descarga, a fim de garantir seu funcionamento. Por conseguinte, elas podem ser abertas no máximo com uma pressão de funcionamento igual ou superior a 85% da pressão de abertura. A ventilação não deve ocorrer no estado despressurizado. Deve ser realizado um teste de abertura das válvulas de segurança de acordo com a TRD 601 para geradores de vapor pelo menos a cada 4 semanas.
As válvulas de segurança representam a última segurança para o reservatório ou o sistema. Eles devem ser capazes de evitar uma sobrepressão inadmissível, mesmo se todos os outros dispositivos reguladores, de monitoramento e controle a montante falharem. Para garantir essas características funcionais, as válvulas de segurança exigem manutenção regular e periódica. Os intervalos de manutenção devem ser determinados pelo operador de acordo com as condições de uso.

6 Desmontagem da válvula

Além das diretrizes de instalação geralmente válidas, deve ser observado que o sistema deve ser despressurizado antes de desmontar a válvula de segurança.

7 Reparos

Os reparos nas válvulas de segurança só podem ser realizados pela Goetze KG Armaturen ou por oficinas especializadas autorizadas, utilizando apenas peças de reposição originais.

8 Garantia

Esta válvula foi testada antes de sair da fábrica. Fornecemos, para os nossos produtos, garantia de reparo gratuito contra devolução, de peças que estejam comprovadamente inutilizadas como resultado de defeitos de fabricação ou de material. Não assumimos indenização por danos e outras obrigações. Danos ao selo de fábrica, tratamento ou instalação inadequados, falha em seguir estas instruções de montagem, manutenção e operação, sujeira ou desgaste normal anularão a garantia de fábrica.

9 Identificação/inspeção

D/G/H destinado a sistemas de aquecimento
D/G destinado a vapores/gases
F destinado a líquidos
F/K/S destinada à descarga de ar dos reservatórios para meios líquidos, granulados ou em pó

As válvulas de segurança são testadas por nós para resistência à pressão e estanqueidade, ajustadas à pressão de ajuste desejada e vedadas. A identificação está marcada de maneira indelével na placa de identificação ou no castelo da válvula. Além disso, a identificação contém as informações necessárias de acordo com a DIN EN ISO 4126-1.

Pokyny pro instalaci, údržbu a provoz

Pojistný ventil 851/451, 852/452/352, 652mFK, 652sGK, 861/461, 420, 460

1 Všeobecná bezpečnost

CS

- Ventil používejte pouze:
  - jak je zamýšleno
  - v perfektním stavu
  - bezpečně a obezřetně
- Instalační pokyny se musí dodržovat.
- Poruchy, které mohou ovlivnit bezpečnost, musí být ihned odstraněny.
- Pojistný ventil je určen pouze pro použití v rozsahu uvedeném v těchto pokynech pro instalaci. Jakékoli jiné použití nebo použití nad rámec specifikací je nevhodné.
- Při odstranění plomby pozbývá záruka platnost.
- Všechny instalační práce musí provádět autorizovaní pracovníci.

2 Všeobecné informace

Pojistné ventily jsou armatury s vysokou kvalitou, které vyžadují obzvlášť pečlivé zacházení. Těsnicí povrchy jsou přesně obráběny v místě sedla a kuželu, takže je dosahována potřebná těsnost. Během montáže a provozu se musí zabránit vniknutí cizorodých těles do ventilu. Těsnost pojistných ventilu může být ovlivněna nečistotou, teflonovou páskou nebo jinými způsoby utěsnění, například návary, kovovými odštěpky apod. Při hrubém zacházení se sestaveným pojistným ventilem během skladování, přepravy nebo montáže může dojít k tomu, že bude pojistný ventil netěsný. Pokud jsou pojistné ventily chráněny nátěrem, musí se zajistit, aby posuvné části nepřišly s tímto nátěrem do styku.

3 Oblast použití

Podrobnosti o oblasti použití jednotlivých verzí jsou uvedeny v datových listech výrobce.

4 Instalace a montáž

Pružinové pojistné ventily se montují s krytem pružiny ve svislé pozici. Pro zajištění správné funkce musí být pojistné ventily instalovány tak, aby nebyly vystaveny nadměrném statickému, dynamickému nebo tepelnému namáhání. V případě, že při aktivaci ventilu mohou být ohroženy osoby nebo prostředí unikajícím médiem, musí se přijmout vhodná ochranná opatření. Rovněž je možné zvážit odvod přes odvětrávací otvory krytu pružiny.

Vedení

Přívodní vedení k pojistným ventilům musí být co nejkratší a navrženo tak, aby při plném otevření ventilu nedošlo k vyššímu poklesu tlaku než max. 3 % tlaku odezvy.

Odvod kondenzátu

Vedení nebo samotný ventil (s přírubou) musí být opatřeny odvodem případného kondenzátu v nejnižším bodě s kontinuálním způsobem odvodu kondenzátu. Musí být zajištěno bezpečné odvádění kondenzátu nebo vypouštění média. Těleso ventilu, vedení a tlumiče musí být chráněny proti zamrzání.

Odpouštění / protitlak

Odpouštěcí potrubí pojistných ventilů musí být navrženo tak, aby odpouštění požadovaného hmotnostního průtoku probíhalo bezpečně. U pojistných ventilů s kovovými vlnovci nemá protitlak při odfukování o velikosti až 4 bary vliv na nastavení tlaku pojistného ventilu.

5 Provoz / údržba

Pracovní tlak zařízení by měl být přinejmenším o 5 % nižší než uzavírací tlak pojistného ventilu. Zajistí to, že se pojistný ventil po odpuštění znovu správně zavře. V případě drobných netěsností, které mohou být způsobeny kontaminací těsnicích povrchů, je možné vyčistit pojistný ventil přes odfuk. Pokud nedojde k odstranění netěsnosti, je pravděpodobně poškozený těsnicí povrch, který je možné opravit pouze ve výrobním závodu nebo autorizovanými specialisty.

Spuštění odfuku se provádí otočením drážkované matice umístěné nad krytem pružiny (obr. a), otočením proti směru hodinových ručiček (a následně opětovným otočením až k zarážce) nebo páčkou v horní části ventilu (obr. b). Zvedací páka je při dodání zajištěna páskou, kterou je nutnou odstranit, aby bylo možné ovládat odfukovací mechanismus.

Pojistné ventily bez vlnovců a bez plynotěsného krytu (obr. c)

U pojistných ventilů bez vlnovců a bez plynotěsného krytu je možné navíc odšroubovat horní část vhodnými nástroji, vyjmout celou horní část z tělesa ventilu a odstranit nečistoty ze sedla a těsnění sedla.

Před demontáží je třeba ověřit, zda není ventil pod tlakem. Po opětovném umístění horní části tělesa se nastavený tlak pojistných ventilů nezmění.

Pojistné ventily s kovovými vlnovci (obr. d)

U pojistných ventilů s vlnovci nesmí být horní část oddělena od tělesa, protože v takovém případě by nadále nebylo možné zaručit těsnost při protitlaku.

Pojistné ventily s plynotěsným víčkem (obr. f) nebo plynotěsnou ruční páčkou (obr. g)

U pojistných ventilů s plynotěsným víčkem nebo plynotěsnou ruční páčkou by horní část neměla být odstraněna z tělesa ventilu, protože v takovém případě nelze plynotěsnost nadále zaručit. Pokud je pro účely oprav odšroubování horní části přesto nezbytné, musí být před demontáží uvolněna pružina. Před demontáží je třeba zkontrolovat, které médium může být v tělese ventilu. Hrozí nebezpečí poleptání nebo otravy.

Odfuk pro údržbu

Pro pojistné ventily s odfukem se v rámci konkrétních instalací doporučuje čas od času pojistný ventil nechat spustit a odfouknout, aby se ověřila funkce pojistného ventilu. To by mělo proběhnout při vyšším tlaku než je 5 % minimálního provozního tlaku pro otevření. Odfuk by se neměl provádět v odtlakovaném stavu. Kontrolu správné funkce pojistných ventilů je třeba provádět podle TRD 601 pro parní generátory v intervalech nejméně 4 týdny. Pojistné ventily jsou posledním bezpečnostním prvkem nádoby nebo systému. Měly by být schopny zabránit nadměrnému zvýšení tlaku i v případě, že selžou všechny ostatní regulační, kontrolní a sledovací prvky zapojené před nimi. Pro zajištění těchto funkčních charakteristik vyžadují pojistné ventily pravidelnou údržbu. Intervaly údržby určuje operátor podle podmínek použití.

6 Demontáž ventilu

Kromě všeobecných principů řídicích instalaci je třeba uvést, že před. Před demontáží pojistných ventilů musí být systém odtlakován.

7 Opravy

Opravy pojistných ventilů smí provádět pouze společnost Goetze KG Armaturen nebo autorizovaná servisní střediska za použití originálních náhradních dílů.

8 Záruka

Před odesláním ze závodu byl tento ventil testován. Pro naše uvedené produkty zaručujeme, že uvedeme součásti od opětovně provozuschopného stavu, bezplatně, v případě, že dojde k jejich předčasnému selhání z důvodu materiálové nebo výrobní vady. Odpovědnost za následné škody ani jiné závazky nepřijímáme. V případě poškození plomby z výroby, nesprávné manipulace nebo instalace, nedodržení těchto pokynů pro instalaci, údržbu a provoz, kontaminace nebo běžného opotřebení tato záruka pozbývá platnost.

Obr. a): Odfuk drážkovanou maticí

Obr. e): Pojistný ventil s membránou

Obr. f): Pojistný ventil s plynotěsným víčkem

Obr. g): Pojistný ventil s plynotěsnou páčkou

9 Značení / kontrola

Pojistné ventily jsou zkoušeny na pevnost a těsnost a seřízeny a zaplombovány na požadovaný nastavený tlak.

Značení je nesmazatelně vyznačeno na typovém štítku nebo na krytu pružiny ventilu. Kromě toho štítek obsahuje všechny potřebné informace podle DIN EN ISO 4126 -1.

Monterings-, og vedligeholdelses-, og driftsvejledning

Sikkerhedsventil 851/451, 852/452/352, 652mFK, 652sGK, 861/461, 420, 460

1 Generelle sikkerhedsinformationer

da

- Brug kun ventilen:
  - formålsbestemt
  - i upåklagelig tilstand
  - sikkerheds- og farebevidst
- Følg monteringsvejledningen.
- Fejl, der kan påvirke sikkerheden, skal omgående afhjælpes.
- Ventilerne er udelukkende beregnet til det i denne monteringsvejledning anførte anvendelsesområde. En anden eller derudover gående anvendelse anses som ikke-formålsbestemt.
- Fabriksgarantien bortfalder, hvis plomberingen fjernes.
- Alle montagearbejder skal udføres af autoriseret fagpersonale.

2 Generelle informationer

Sikkerhedsventiler er anordninger af høj kvalitet, som kræver særlig omhyggelig håndtering. Tætningsfladerne på sæde og kegle er præcisions-bearbejdet, hvorigennem man opnår den nødvendige tæthed. Undgå, at der kommer fremmedlegemer ind i ventilen under montage og drift. Tætheden af en sikkerhedsventil kan blive forringet, hvis der bruges hamp, teflontape, svejseperler eller andet. Den færdige ventil kan også blive utæt af en hårdhændet behandling under opbevaring, transport og montage. Bliver ventilen malet, skal man være opmærksom på, at der ikke kommer maling på de bevægelige dele.

3 Anvendelsesområder

Enkeltheder om anvendelsesområdet for de enkelte udførelser kan ses i producentens datablade.

4 Installation og montage

Fjederbelastede sikkerhedsventiler skal installeres med fjederkappen pegende lodret op. For at sikre, at ventilerne fungerer korrekt, skal disse monteres således, at de ikke udsættes for utilladelige statiske, dynamiske eller termiske kræfter. Hvis der pga. huset i tilfælde af en reaktion kan opstå direkte eller indirekte fare for personer eller omgivelser pga. det udtrædende medium, skal der træffes egnede beskyttelses-foranstaltninger. Vær altid opmærksom på eventuelle dampe, som kan strømme ud fra udslipshullerne i fjederkappen.

Tilførsel

Tilførselsstudser til sikkerhedsventiler skal være så korte som muligt og skal udformes således, at der ved fuld ventilydelse ikke kan opstå et større tryktab end max. 3 % af reaktionstrykket.

Kondensatafløb

Ved mulighed for kondensdannelse skal selve rørene eller ventilerne (i flangeversionen) på deres laveste sted påmonteres en kondensudledningsanordning. Man skal sørge for et ufarligt afløb af kondensatet eller det udtrædende medium. Huse, ledninger og lyddæmpere skal sikres mod frysning.

Udblæsningsledning / modtryk

Sikkerhedsventilernes udblæsningsledning skal udformes således, at den nødvendige massestrøm kan afledes trykløst ved udblæsning. Ved sikkerhedsventiler med metalbælg påvirker et ved udblæsning optrædende modtryk op til max. 4 bar ikke ventilens reaktionstryk.

5 Driftsmåde / vedligeholdelse

Anlæggets arbejdstryk bør ligge mindst 5% under sikkerhedsventilens lukketryk. Derved opnår man, at sikkerhedsventilen lukker korrekt igen efter udblæsningen. Ved mindre utætheder, der kan skylles urenheder mellem tætningsfladerne, kan ventilen bringes til udblæsning via ventilering. Kan utætheden ikke fjernes ved dette, er der sandsynligvis en beskadigelse af tætningsoverfladerne, som kun kan repareres på vores fabrik eller af autoriserede fagfolk.
Afhængigt af versionen udføres løftning enten ved hjælp af en fingermøtrik over fjederkappen (fig. a), som drejes mod uret (bagefter skal fingermøtrikken drejes tilbage til stoppet) eller ved at aktivere løftestangen på ventilens øverste del (fig. b). Af hensyn til levering er løftestangen blokeret med et bånd, som skal fjernes for at aktivere løfteanordningen.

Sikkerhedsventiler uden harmonikabælg og uden gastæt kappe (figur c)

Ved sikkerhedsventiler uden harmonikabælg og uden gastæt kappe, kan hele overdelen desuden tages ud af huset ved at skrue overdelen af med relevant værktøj, så eventuelle rester på sæde og sædepakning kan fjernes.

Inden afmontering skal man være opmærksom på, at ventilen ikke står under tryk. Sikkerhedsventilens reaktionstryk ændres ikke ved genmontering af husets øverste del.

Sikkerhedsventiler med metalbælge (fig. d)

Ved sikkerhedsventiler med metalbælge (fig. d), må den øverste del ikke adskilles fra huset, da tæthed i forbindelse med forekomst af bagtryk da ikke længere kan garanteres.

Sikkerhedsventiler med gastæt kappe (figur f) eller gastæt udluftningsfunktion (figur g)

Ved sikkerhedsventiler med gastæt kappe eller gastæt udluftningsfunktion, må overdelen ikke adskilles fra huset, da gastætheden ellers ikke kan garanteres mere. Skulle det til reperationsmæssige formål være nødvendigt at skrue overdelen af, skal det påagtes, at fjederen før demonteringen skal være afspændt. Før demonteringen skal det ligeledes kontrolleres, om og hvilke medier, der befinder sig i motorhjelmen. Der er en mulig fare for ætsning eller forgiftning.

Ventilering til vedligeholdelse

Ved sikkerhedsventiler med trykaflastningsanordning anbefales det, og er også anlægsspecifikt foreskrevet, at bringe sikkerhedsventilen til udblæsning fra tid til anden ved at lette trykket for at sikre, at sikkerhedsventilen fungerer. Den kan senest bringes til at åbne fra et driftstryk på ≥85 % af reaktionstrykket. Løfteanordningen må ikke betjenes i trykfri tilstand. Iht. TRD 601 skal der ved dampgeneratorer foretages en funktionskontrol af sikkerhedsventilerne mindst en gang om måneden. Sikkerhedsventiler udgør den sidste sikkerhed for beholderen hhv. systemet. De bør også være i stand til at forhindre et utilladeligt overtryk, hvis alle andre forudgående regulerings-, styre- og overvågningsenheder svigter. For at sikre disse funktionsegenskaber har sikkerhedsventiler brug for regelmæssigt og tilbagevendende eftersyn. Vedligeholdelsesintervallerne til disse ventiler skal fastlægges af den driftsansvarlige iht. anvendelses-betingelserne.

6 Afmontering af ventilen

Foruden de generelt gyldige montageretningslinjer skal man være opmærksom på, at anlægget principielt skal gøres trykløst inden afmontering af ventilen.

7 Reparationer

Reparationer på sikkerhedsventiler må kun udføres af firmaet Goetze KG Armaturen eller af autoriserede værksteder, udelukkende med brug af originale reservedele.

8 Garantie

Denne ventil blev afprøvet inden den forlod fabrikken. På vores produkter yder vi garanti på den måde, at vi gratis istandsætter indsendte dele, som påviseligt er blevet førtidigt ubrugelige på grund af materiale- eller fabrikationsfejl. Skadeserstatning og lignende forpligtelser er udelukket. Fabriksgarantien bortfalder/dækker ikke ved beskadigelse af fabriksplomberingen, usagkyndig behandling hhv. installation, ignorering af denne montage- og vedligeholdelsesvejledning, tilsmudsning eller normalt slid.

Fig. a): Løftning ved hjælp af fingermøtrik

Fig. b): Løftning ved hjælp af stang

Fig. c): Sikkerhedsventil uden bælge + uden membran

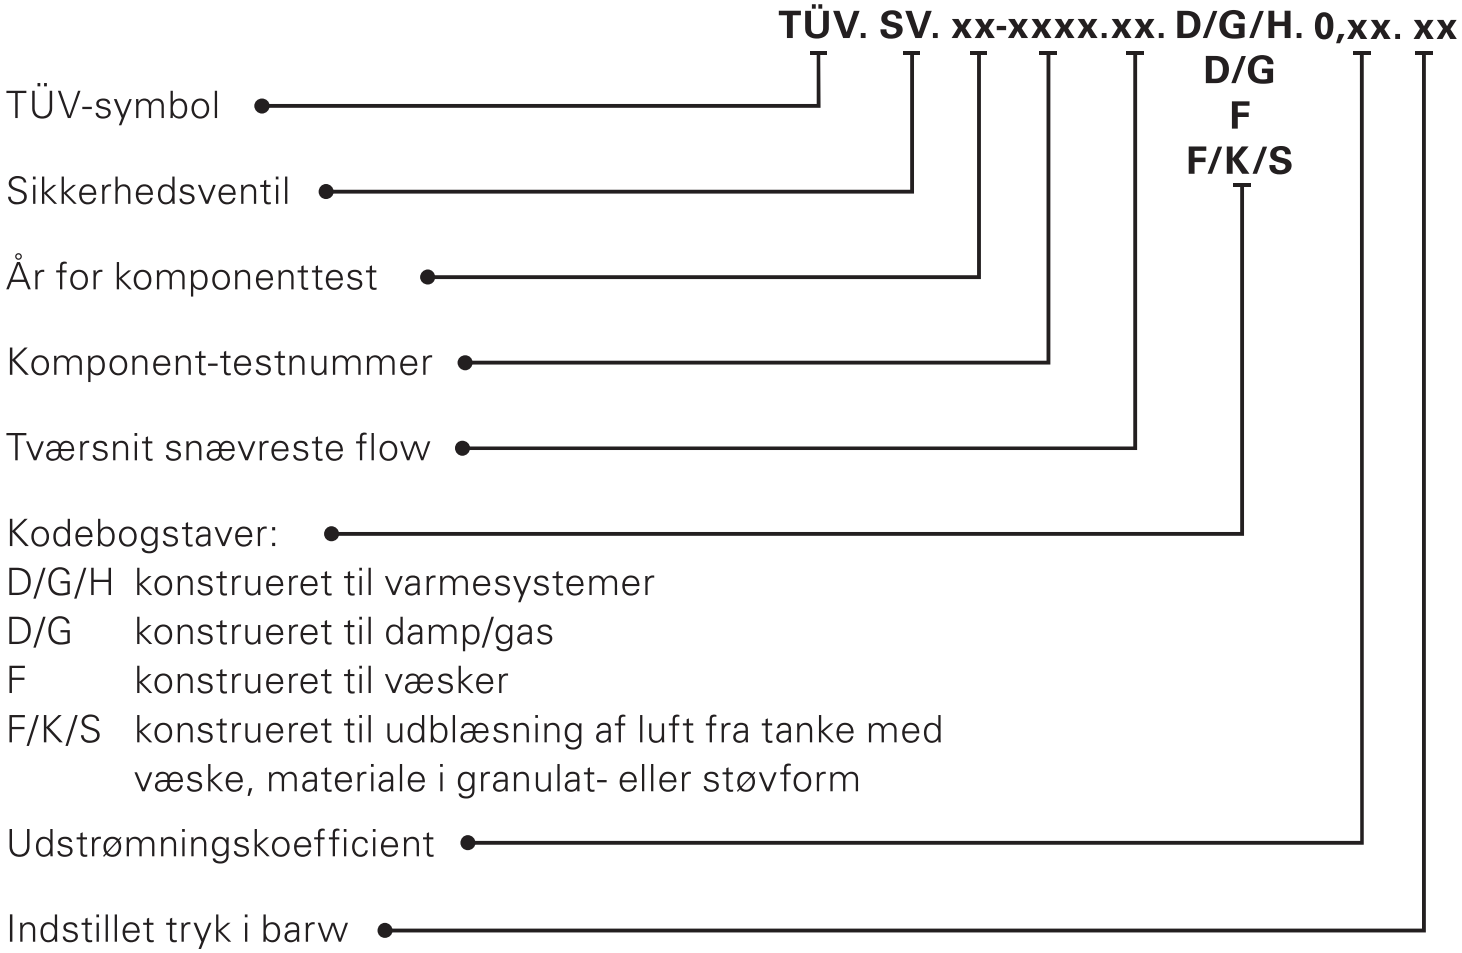

Fig. d): Sikkerhedsventil med bælge

Fig. e): Sikkerhedsventil med membran

Fig. f): Sikkerhedsventil med gastæt kappe

Fig. g): Sikkerhedsventil med gastæt udluftningsfunktion

9 Mærkning / afprøvning

D/G/H konstrueret til varmesystemer
D/G konstrueret til damp/gas
F konstrueret til væsker
F/K/S konstrueret til udblæsning af luft fra tanke med væske, materiale i granulat- eller støvform

Vi kontrollerer sikkerhedsventilerne for trykstyrke og tæthed, justerer det krævede indstillede tryk og forsegler dem.

Identifikationen på typeskiltet eller på ventilens fjederkappe er anført med et permament afmærkningssystem. Desuden indeholder mærkningen de nødvendige data iht. DIN EN ISO 4126-1.

Asennus-, huolto- ja käyttöohje

Varoventtiili 851/451, 852/452/352, 652mFK, 652sGK, 861/461, 420, 460

1 Yleiset turvallisuusohjeet

fi

- Käytä venttiiliä vain:
  - määräysten mukaisesti
  - moitteettomassa kunnossa
  - turvallisuuden ja vaarat huomioon ottaen
- Asennusohjetta on noudatettava.
- Turvallisuuden vaarantavat häiriöt on korjattava välittömästi.
- Venttiilit on tarkoitettu ainoastaan tässä asennusohjeessa mainittuun käyttöalueeseen. Muunlainen tai tämän ylittävä käyttö katsotaan määräystenvastaiseksi.
- Jos sinetit poistetaan, tehdastakuu ei ole enää voimassa.
- Valtuutetun ammattitaitoisen henkilöstön on tehtävä kaikki asennustyöt.

2 Yleiset ohjeet

Varoventtiilit ovat korkealaatuisia laitteita, joita on käsiteltävä erityisen varovasti. Tiivistepinnat ovat istuvuudeltaan ja muodoltaan mitä tarkimmin viimeisteltyjä niin, että ne saavat aikaan tarvittavan tiiviyden. Roskien pääsyä venttiiliin on asennuksen ja käytön aikana vältettävä. Varoventtiilin tiiviys voi kärsiä hampun, teflonteipin ja muiden tiivisteaineiden tai hitsaushelmien vaikutuksesta. Valmiin venttiilin kovakourainen käsittely varastoinnin, kuljetuksen ja asennuksen aikana voi myös saada sen vuotamaan. Jos venttiili maalataan, on varmistettava, etteivät liukuvat osat joudu kosketuksiin maalin kanssa.

3 Käyttöalue

Valmistajan dokumenteissa on tarkempia tietoja eri toteutusten käyttöalueesta.

4 Kokoonpano ja asennus

Jousitetut varoventtiilit on asennettava jousen hatun ollessa pystysuorassa. Jotta venttiilit toimivat moitteettomasti, on ne asennettava niin, ettei niihin vaikuta mitkään kielletyt staattiset, dynaamiset tai termiset kuormitukset. Jos pesän läpi käynnistystilassa purkautuva aine voi aiheuttaa suoraan tai epäsuorasti vaaran ihmisille tai ympäristölle, on sen varalta suojauduttava sopivilla toimenpiteillä. Myös jousen hatussa olevien kevennysporausten päästöt on otettava huomioon.

Tulojohto

Varoventtiilien tulojohtoyhteiden tulee olla niin lyhyet kuin vain mahdollista, ja ne on muotoiltava niin, että täydellä venttiiliteholla ei voi syntyä suurempaa painehäviötä kuin 3 % vastepaineesta.

Lauhteen poistojohto

Putkien ja itse venttiilien (laippamalleissa) on oltava varustettu matalimmalla kohdalla olevalla pysyvällä lauhteenpoistolla. Lauhdeveden ja vuotavan aineen vaarattomasta johtamisesta pois on huolehdittava. Venttiilinpesä, johdot ja äänenvaimentimet on suojattava jäätymiseltä.

Tyhjennysjohto / vastapaine

Varoventtiilien tyhjennysjohto, ulospuhallusjohto, on asennettava niin, että puhallukseen tarvittava massavirta voidaan johtaa paineettomasti pois. Varoventtiileissä, joissa on metallinen palje, ei puhalluksessa esiintyvä korkeintaan 4 baarin vastapaine heikennä varoventtiilin vastepainetta.

5 Käyttötapa / huolto

Laitteiston työpaineen tulee olla vähintään 5 % varoventtiilin sulkupaineen alapuolella. Tällä varmistaan, että varoventtiili sulkeutuu puhalluksen jälkeen jälleen kunnolla. Pienemmissä epätiiviyksissä, jotka ovat aiheutuneet tiivistepintojen väliin jääneestä liasta, voidaan venttiili ilmavirralla tehtävää puhdistusta varten käynnistää puhaltamaan ulos. Mikäli vuotoa ei saada korjattua näillä toimenpiteillä, syynä on luultavasti tiivistyspinnan vioittuminen.
Tämä vika on annettava kunnostaa joko valmistajan tehtaalla tai valtuutetun huoltoliikkeen toimesta. Puhallus tapahtuu mallista riippuen joko jousen hatun päällä olevan pyöritettävän mutterin avulla (kuva a) kiertämällä sitä vastapäivään (sen jälkeen mutteri on kierrettävä takaisin loppuun asti) tai käyttämällä venttiilin yläpuolella olevaa puhallusvipua (kuva b). Puhallusvipu on tehtaalla kiinnitetty nauhalla, joka on poistettava puhallusta varten.

Varoventtiili, jossa ei ole paljesuojainta eikä kaasutiivistä suojusta (kuva c)

Varoventtiileissä, joissa ei ole paljesuojainta eikä kaasutiivistä suojusta, voidaan lisäksi koko yläosa irrottaa suojuksesta ruuvaamalla se irti oikeita työkaluja käyttäen ja poistaa istukassa ja istukan tiivisteessä olevat mahdolliset jäämät.

Ennen irrotusta on varmistettava, ettei venttiilissä ole painetta. Varoventtiilin aukeamispaine on sama kuin ennen, kun yläosa on asennettu paikalleen koteloon.

Varoventtiilit, joissa on metallinen palje (kuva d)
Jos varoventtiilissä on metallinen palje (kuva d), sen yläosaa ei saa irrottaa kotelosta, muutoin tiiviys ei ole enää taattu vastapaineen esiintyessä.

Varoventtiilit, joissa on kaasutiivis suojus (kuva f) tai vipukäyttöinen kaasutiivis ilmanvaihto (kuva g)
Kaasutiiviyden takaamiseksi ei varoventtiileissä, joissa on kaasutiivis suojus tai vipukäyttöinen kaasutiivis ilmanvaihto saa yläosaa irrottaa kotelosta. Mikäli kunnostustöiden takia on kuitenkin välttämätöntä irrottaa yläosa, on katsottava, että ennen purkamista löysätään jousi. Ennen purkamista on niinikään tarkastettava, onko venttiilikopassa vielä väliainetta. Mikäli näin on, sitä on varottava – syöpymis- tai myrkytysvaara.

Huoltoa varten tehtävä ilmaus
Järjestelmästä riippuen on suositeltavaa tai jopa välttämätöntä, että varoventtiilejä, joissa on nostokiinnike, on nostettava ajoittain ylöspäin, jotta paine purkautuu. Näin varmistetaan varoventtiilien toimivuus. Ne voidaan siksi saada aukeamaan viimeistään, kun käyttöpaine on ≥85 % vastepaineesta. Puhallusta ei saa suorittaa paineettomassa tilassa. Varoventtiilien liikkuvuuden tarkastus on TRD 601:n mukaan tehtävä höyrykattiloissa vähintään 4 viikon välein. Varoventtiilit muodostavat säiliössä tai järjestelmässä viimeisen varokeinon. Niiden tulee pystyä estämään liian suuri ylipaine myös silloin, kun kaikki muut niiden eteen kytkettyinä olevat säätö-, ohjaus- ja valvontalaitteet ovat pettäneet. Varoventtiilit vaativat säännöllistä huoltoa, jotta niiden toimivuus voidaan aina taata. Toimenharjoittajan on määritettävä näiden putkivarusteiden huoltovälit käyttöolosuhteiden mukaan.

6 Putkivarusteen irrotus

Yleisesti voimassa olevien asennusohjeiden lisäksi on otettava huomioon, että ennen kuin venttiiliä aletaan irrottaa, laitteistosta on aina poistettu paine.

7 Korjaukset

Varoventtiilejä saavat korjata vain Goetze KG Armaturen tai valtuutetut korjaamot. Vain alkuperäisten varaosien käyttö on sallittua.

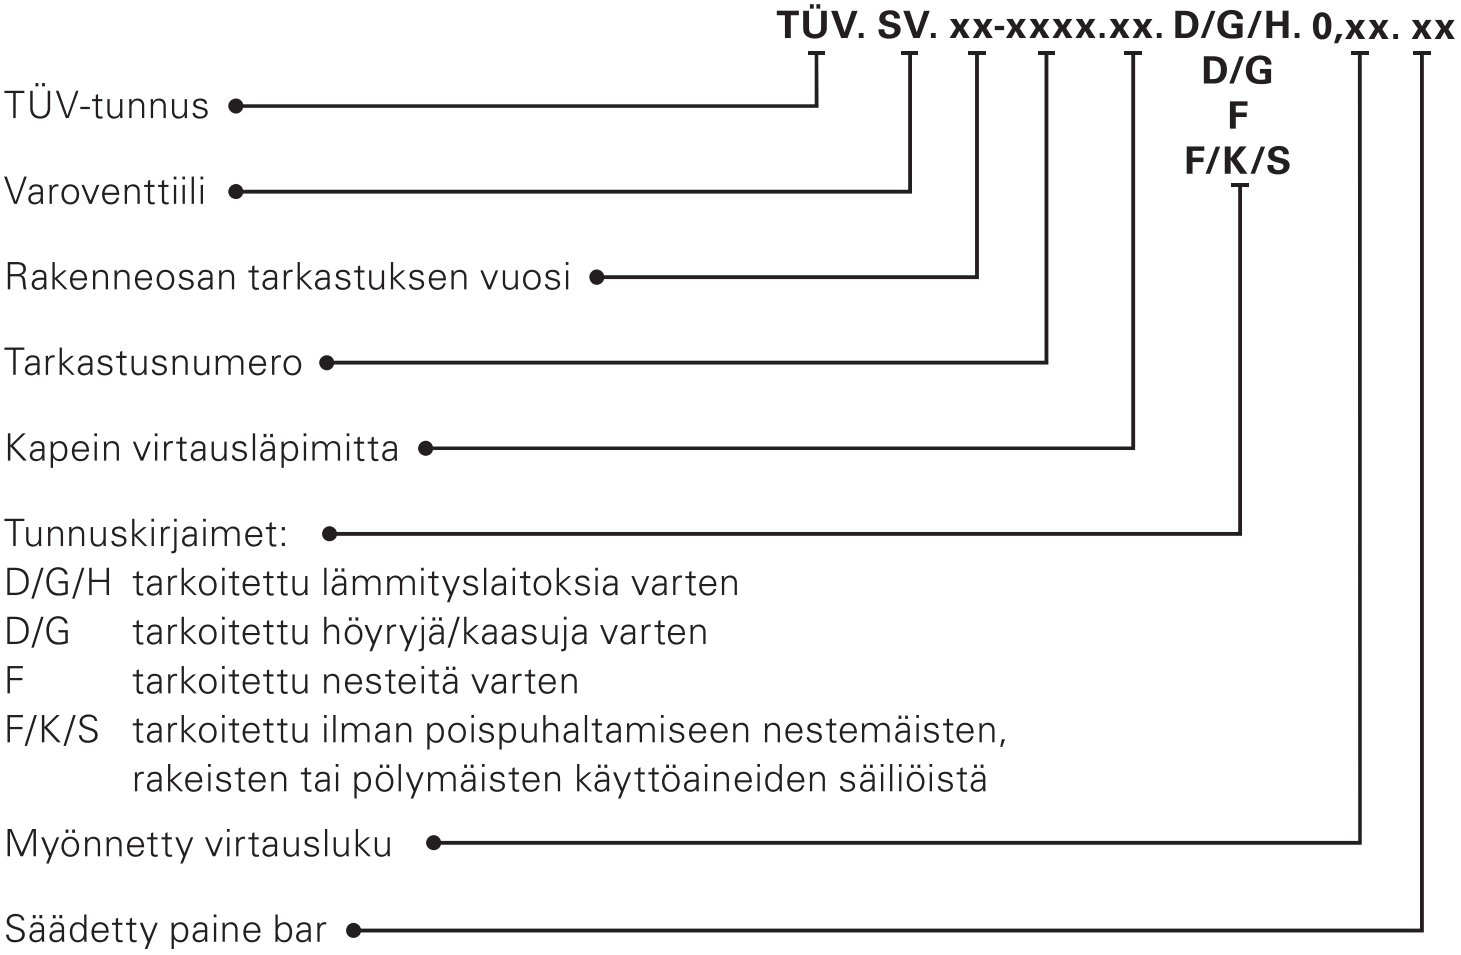
8 Takuu

Tämä venttiili on tarkastettu, ennen kuin se lähti tehtaalta. Tuotteillemme annamme takuun siinä muodossa, että kunnostamme palautettaessa sellaiset osat ilmaiseksi, jotka materiaali- tai valmistusvirheen vuoksi ovat ennenaikaisesti tulleet käyttökelvottomiksi. Emme myönnä vahingonkorvausta tai vastaa muista samankaltaisista velvollisuuksista. Tehtaan takuu ei ole voimassa, jos tehtaan sinetti on rikottu, venttiiliä on käsitelty tai se on asennettu epäasianmukaisesti, tätä asennus- ja huolto-ohjetta ei ole noudatettu tai kun venttiili on normaalisti kulunut.

Kuva a): Puhallus pyöritettävän mutterin avulla

Kuva b): Puhallus vivun avulla

Kuva c): Varoventtiili ilman paljetta + ilman kalvoa



Kuva d): Varoventtiili, jossa on palje

Kuva e): Varoventtiili, jossa on kalvo

Kuva f): Varoventtiili, jossa on kaasutiivis suojus

Kuva g): Varoventtiili, jossa on kaasutiivis vipukäyttöinen ilmanvaihto

9 Merkintä / tarkastus

Tunnuskirjaimet:

D/G/H tarkoitettu lämmityslaitoksia varten
D/G tarkoitettu höyryjä/kaasuja varten
F tarkoitettu nesteitä varten
F/K/S tarkoitettu ilman poispuhaltamiseen nestemäisten, rakeisten tai pölymäisten käyttöaineiden säiliöistä

Tehtaalla tarkastetaan varoventtiilien paineenkestävyys ja tiiviys, säädetään ne haluttuun säätöpaineeseen ja sinetöidään.

Tunnukset ovat kestävässä muodossa tyyppikilvessä tai venttiilin jousen hatussa. Merkintä sisältää lisäksi tarpeelliset tiedot DIN EN ISO 4126-1 mukaisesti.

Istruzioni per l'assemblaggio, la manutenzione e l'uso

Valvola di sicurezza 851/451, 852/452/352, 652mFK, 652sGK, 861/461, 420, 460

1 Avvertenze generali sulla sicurezza

it

- Usare la valvola esclusivamente:
  - per il suo scopo specifico
  - in condizioni perfette
  - prestando attenzione a sicurezza e possibili rischi
- Attenersi sempre alle istruzioni per l'installazione.
- Eliminare immediatamente eventuali difetti che possono pregiudicare la sicurezza.
- Le valvole sono progettate esclusivamente per il campo d'impiego indicato in queste istruzioni per l'installazione. Qualsiasi uso diverso o che esuli da questo campo d'impiego viene considerato come improprio.
- Con la rimozione della piombatura, la garanzia del fabbricante decade.
- Tutti i lavori di montaggio devono essere eseguiti da personale specializzato appositamente autorizzato.

2 Avvertenze generali

Le valvole di sicurezza sono componenti di alta qualità e vanno maneggiate con particolare cura. Le superfici di tenuta su sede e cono sono state lavorate con macchinari di massima precisione per raggiungere l'ermeticità richiesta. Durante il montaggio e il funzionamento evitare l'infiltrazione di corpi estranei nella valvola. L'ermeticità della valvola di sicurezza può essere compromessa se si fa uso di canapa, nastri di teflon, cordoni di saldatura e alcuni altri tipi di materiale e dispositivi. Anche un handling non accurato della valvola finita durante lo stoccaggio, il trasporto e il montaggio può comprometterne l'ermeticità. Se la valvola viene verniciata, assicurarsi che le parti scorrevoli non vengano in contatto con la vernice.

3 Gamma di applicazione

I dettagli relativi all'ambito di utilizzo delle singole applicazioni sono riportati nelle schede di dati del produttore.

4 Installazione e assemblaggio

Le valvole di sicurezza caricate a molla vanno installate con il coperchio a molla rivolto verticalmente verso l'alto. Per assicurare un funzionamento perfetto delle valvole, montarle in modo da evitare l'azione di sollecitazioni statiche, dinamiche o termiche non consentite. Se in caso di attivazione, il mezzo fuoriuscente dalla cassa può rappresentare un pericolo diretto o indiretto per le persone o l'ambiente, adottare misure di protezione adatte. Prestare sempre attenzione a eventuali effluvi provenienti dai fori di sfiato del coperchio a molla.

Tubo di alimentazione

I raccordi per le valvole di sicurezza devono essere possibilmente corti e strutturati in modo che a piena capacità della valvola non possano verificarsi perdite di pressione superiori al 3% della pressione di risposta.

Scarico della condensa

Qualora sia possibile la formazione di condensa, i tubi o le stesse valvole (nella versione a flangie) vanno dotate nel punto più basso di un dispositivo di scarico della condensa a funzionamento continuo. Assicurare uno scarico sicuro della condensa o del mezzo fuoriuscente. Le casse, tubazioni e silenziatori devono essere protetti contro il congelamento.

Tubo di scarico / contropressione

Il tubo di scarico delle valvole di sicurezza deve essere realizzato in modo che durante lo scarico il flusso di massa necessario possa essere fatto defluire senza pressione. In caso di valvole di sicurezza con soffietto metallico, una contropressione fino a max. 4 bar durante lo scarico non ne influenza la pressione di risposta.

5 Modo di funzionamento / manutenzione

La pressione d'esercizio dell'impianto deve essere di almeno il 5% inferiore a quella di chiusura della valvola di sicurezza. Questo fa sì che dopo lo scarico, la valvola di sicurezza possa di nuovo chiudere perfettamente. In caso di piccole anermeticità, che possono essere causate da sporco tra le superfici di tenuta, per la pulizia la valvola può essere fatta scaricare mediante aerazione. Se ciò non elimina la fuoriuscita, ciò significa probabilmente che la superficie di sigillatura è danneggiata. La riparazione di questa superficie può essere effettuata solamente presso la nostra fabbrica da specialisti autorizzati.

Secondo la versione, il sollevamento avviene tramite un dado zigrinato posto sopra il coperchio a molla (Fig. a) che viene ruotato in senso antiorario (successivamente il dado dev'essere riavvitato fino alla battuta) oppure attuando la leva di sollevamento sulla parte superiore della valvola (Fig. b). Ai fini della consegna la leva di sollevamento viene bloccata tramite una cinghia che deve essere rimossa per attuare il dispositivo di sollevamento.

Valvole di sicurezza senza mantici e senza calotta a tenuta di gas (Fig. c)

Inoltre, in caso di valvole di sicurezza senza mantici (Fig. c) e senza calotta a tenuta di gas, l'intera parte superiore può essere svitata dall'involucro tramite utensili idonei per poi rimuovere eventuali residui dalla sede e dalla guarnizione.

Prima dello smontaggio assicurarsi che la valvola non sia sotto pressione. La pressione di sollecitazione della valvola di sicurezza non viene alterata attraverso il riassemblaggio della parte superiore con l'involucro.

Valvole di sicurezza con mantici metallici (Fig. d)

In caso di valvole di sicurezza con mantici metallici (Fig. d), la parte superiore non dovrà essere separata dall'involucro, poiché in caso contrario l'ermeticità non sarebbe più garantita in caso di contropressione.

Valvole di sicurezza con coperchio a tenuta di gas (Fig. f) o dispositivo di ventilazione a leva a tenuta di gas (Fig. g)

Nelle valvole di sicurezza con coperchio o dispositivo di ventilazione a leva a tenuta di gas, la parte superiore non deve essere separata dall'involucro, in quanto altrimenti non è più garantita la tenuta ai gas. Qualora, a scopi di riparazione, dovesse comunque rendersi necessario svitare la parte superiore, occorre assicurare che prima dello smontaggio venga allentata la molla. Prima dello smontaggio va altrettanto verificata l'eventuale presenza di un mezzo di scarico nella calotta e la natura di tale mezzo, in quanto potrebbe sussistere il rischio di intossicazione o ustioni da agenti chimici.

Aerazione per la manutenzione

Nelle valvole di sicurezza con dispositivo di ventilazione è consigliabile, e a seconda del tipo di impianto può essere obbligatorio, far scaricare di tanto in tanto la valvola di sicurezza tramite ventilazione, al fine di accertare il funzionamento della valvola di sicurezza. Al più tardi a partire da una pressione d'esercizio del ≥85 % della pressione di risposta, possono quindi essere aperte. Il dispositivo di sollevamento non dovrà essere azionato in assenza di pressione. Un controllo della funzionalità delle valvole di sicurezza nei generatori di vapore, conf. TRD 601 deve essere eseguito almeno a intervalli di 4 settimane.

Le valvole di sicurezza rappresentano l'ultima protezione per il serbatoio e il sistema. Devono essere in grado di impedire una sovrappressione non consentita anche quando tutte le altre apparecchiature di regolazione, comando e monitoraggio installate a monte falliscono. Al fine di garantire queste proprietà di funzionamento, le valvole di sicurezza devono essere regolarmente e periodicamente sottoposte a manutenzione. Gli intervalli di manutenzione di questo valvolame devono essere fissati dall'utente in base alle condizioni d'impiego.

6 Smontaggio della valvola

Oltre alle disposizioni per il montaggio generalmente valide si deve considerare che prima dello smontaggio della valvola l'impianto deve sempre essere depressurizzato.

7 Riparazioni

Le riparazioni alle valvole di sicurezza devono essere eseguite esclusivamente dalla ditta Goetze KG Armaturen o da officine specializzate autorizzate, utilizzando esclusivamente ricambi originali.

8 Garanzia

Questa valvola è stata controllata prima di lasciare la fabbrica. La garanzia per i nostri prodotti prevede una riparazione gratuita delle parti restituite di cui venga accertata la prematura inadeguatezza all'uso in seguito a difetti di materiale o fabbricazione. Non ci assumiamo alcuna responsabilità per eventuali danni né obblighi di qualsiasi altro tipo. In caso di danneggiamento della piombatura della fabbrica, handling e/o installazione inappropriati, inosservanza di queste istruzioni per l'assemblaggio e la manutenzione, contaminazione o normale usura, la garanzia decade.

Fig. c): Valvola di sicurezza senza mantici e senza diaframma

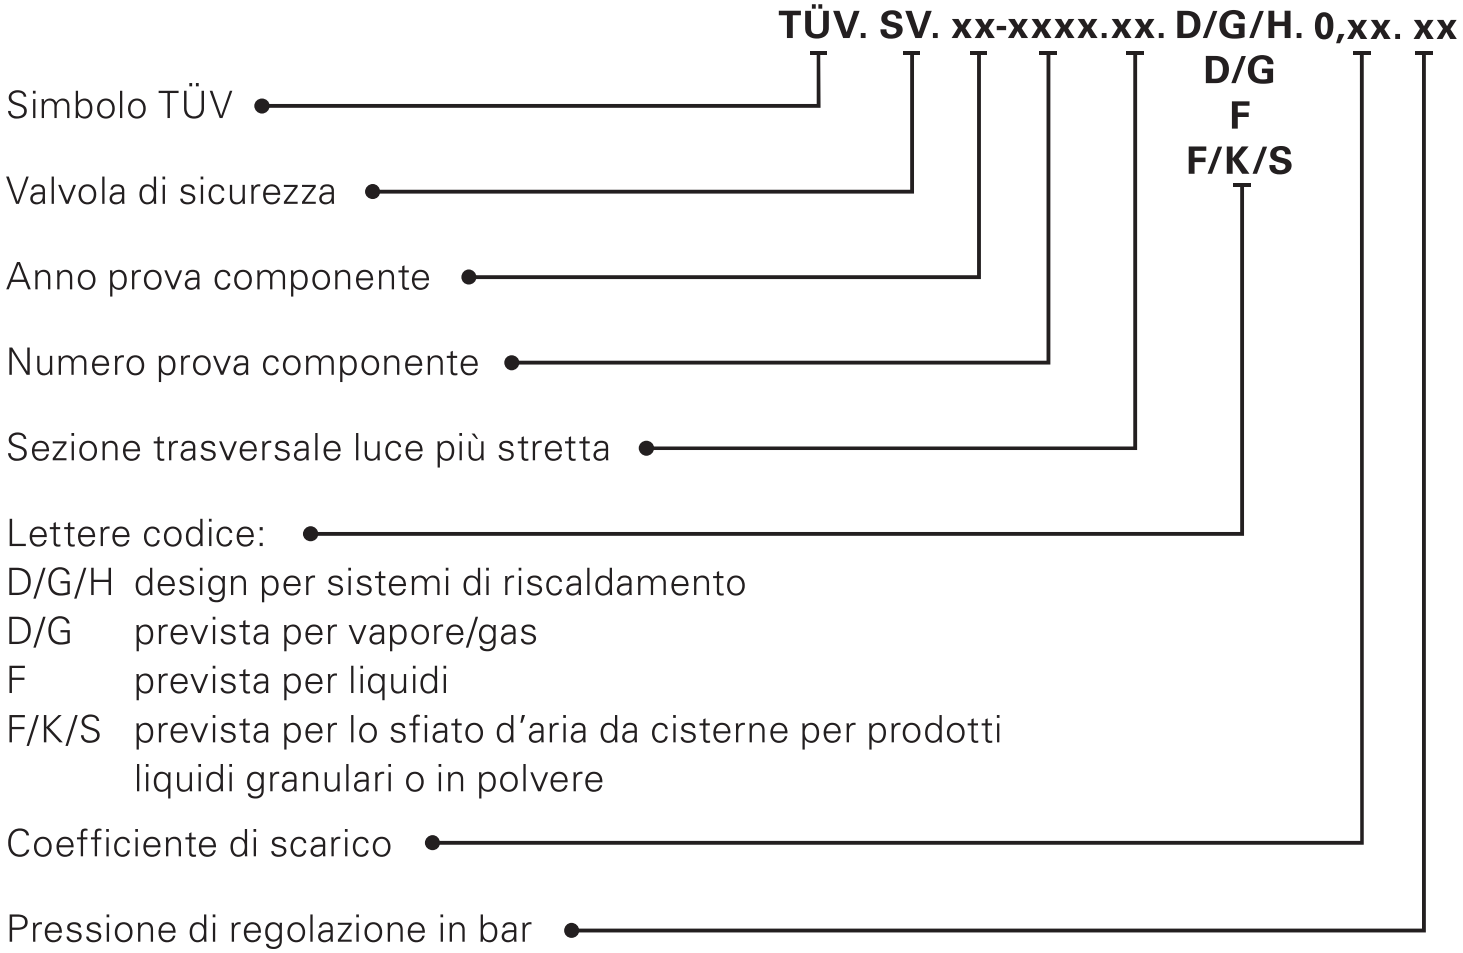

Fig. d): Valvola di sicurezza con mantici

Fig. e): Valvola di sicurezza con diaframma

Fig. f): Valvola di sicurezza con coperchio a tenuta di gas

Fig. g): Valvola di sicurezza con dispositivo di ventilazione a leva a tenuta di gas

9 Identificazione / Controllo

D/G/H design per sistemi di riscaldamento
D/G prevista per vapore/gas
F prevista per liquidi
F/K/S prevista per lo sfiato d'aria da cisterne per prodotti liquidi granulari o in polvere

L'azienda verifica le caratteristiche di resistenza alla pressione ed ermeticità delle valvole di sicurezza, procede alle regolazioni secondo la pressione richiesta e sigilla le valvole.
L'identificazione sulla targhetta tipologica o sul coperchio a molla della valvola è eseguita usando una stampa indelebile. L'identificazione contiene inoltre le indicazioni necessarie conf. DIN EN ISO 4126-1.

어셈블리 및 유지 보수 지침

안전밸브 851/451, 852/452/352, 652mFK, 652sGK, 861/461, 420, 460

1 안전 일반 사항

ko

- 다음의 경우에만 밸브를 사용합니다.
  - 의도된 목적을 위해
  - 만족스러운 조건에서
  - 안전 및 잠재적 위험과 관련하여.
- 항상 설치 지침을 준수합니다.
- 안전을 해칠 수 있는 결함은 즉시 해결되어야 합니다.
- 밸브는 본 설치 지침에 명시된 적용 분야에만 사용해야 합니다. 모든 기타 또는 추가 사용은 사용 용도로 유효하지 않습니다.
- 밀봉된 덮개가 제거되어 있는 경우 제조사의 품질보증은 무효가 됩니다.
- 모든 어셈블리 작업은 공인 전문가 직원이 수행해야 합니다.

2 일반 사항

안전밸브는 특별히 신중하게 취급해야 하는 고품질 부속품입니다. 실링 표면은 필요한 기밀성을 확보하기 위해 시트(seat) 및 콘(cone)에서 정밀하게 제작되었습니다. 항상 어셈블리 및 작동 중에는 이물질이 밸브에 침투하지 않도록 합니다. 무엇보다 헴프, 테플론 테이프뿐 아니라 용접 비드 사용 시 안전밸브의 기밀성이 손상될 수 있습니다. 마무리된 밸브를 보관, 운송 및 어셈블리 중 거칠게 취급하면 안전밸브 누출을 초래할 수 있습니다. 안전밸브에 페인트를 칠할 경우 슬라이딩 부분이 페인트에 닿지 않도록 합니다.

3 적용 범위

각 버전의 적용 범위에 대한 상세 내용은 제조사의 데이터시트를 참조하십시오.

4 설치 및 어셈블리

스프링 장착 안전밸브는 스프링 보닛이 수직 상향이 되도록 설치해야 합니다. 안전밸브가 순조롭게 작동하려면 안전밸브가 용인할 수 없는 정전기, 동적 또는 열 부하에 노출되지 않는 방법으로 설치해야 합니다. 밸브 작동 시 방출되는 매질로 인해 사람이나 환경에 직간접적인 위험을 초래할 수 있는 경우 적절한 보호 장치를 적용해야 합니다. 스프링 보닛의 릴리프 보어에서 연기가 방출될 수 있다는 점을 항상 유의하십시오.

공급

안전밸브의 공급 연결 부분은 가능한 한 짧게 유지하고 압력 손실이 반응 압력의 최대 3%보다 크지 않도록 할 수 있는 방법으로 설계되어야 합니다.

응축물이 형성될 가능성이 있는 경우, 응축물 방출 장치를 계속 작동하면서 파이프나 밸브 자체(플랜지형 버전)를 가장 낮은 지점에 설치해야 합니다. 응축물 또는 매질 방출을 위험하지 않게 제거해야 합니다. 본체, 파이프 및 소음기가 얼지 않도록 보호해야 합니다.

블로우 오프 파이프 / 배압

안전밸브의 블로우 오프 파이프는 필요한 질량 흐름이 블로우 오프(분출) 과정 중에 압력이 없는 상태로 방출될 수 있도록 설계되어야 합니다. 금속 벨로우즈가 장착된 안전밸브에서 배압은 최대 4bar까지 안전밸브의 반응 압력에 영향을 미치지 않습니다.

5 작동 모드/유지 보수

공장의 작동 압력은 안전밸브의 분출정지압력보다 적어도 5%는 낮아야 합니다. 이렇게 하면 블로우 오프 후 밸브가 순조롭게 다시 닫힐 수 있습니다. 실링 표면 사이의 오염으로 일어날 수 있는 경미한 누출의 경우, 세척 목적을 위해 리프팅을 통해 밸브를 블로우 오프하도록 만들 수 있습니다. 이렇게 해서도 누출을 제거하지 못하는 경우 실링 표면이 손상되었을 수 있으며 이는 당사 공장이나 공인 전문가를 통해서만 수리할 수 있습니다. 버전에 따라 스프링 보닛 위의 널드 너트(knurled nut)(그림 a)를 시계 반대 방향으로 돌리거나(이후 널드 너트를 다시 정지 상태로 돌려놓아야 함) 밸브 위에 위치한 리프팅 레버(그림 b)를 작동시켜 리프팅을 수행합니다. 배송 목적을 위해 리프팅 레버를 끈으로 막아 놓았지만 리프팅 장치를 작동시키기 위해서는 이를 제거해야 합니다.

벨로우즈와 가스차단 뚜껑이 장착되지 않은 안전밸브(그림 c)
벨로우즈(bellows)와 가스차단 뚜껑(gastight cap)이 장착되지 않은 안전밸브의 경우 상단부 전체를 적절한 도구를 사용하여 하우징에서 떼어 내고 시트와 시트 실링에서 모든 잔류물을 제거할 수 있습니다. 제거하기 전에 안전밸브에 압력이 가해지고 있지는 않은지 확인합니다. 안전밸브의 반응 압력은 하우징의 상단부를 다시 어셈블리해도 바뀌지 않습니다.

금속 벨로우즈가 장착된 안전밸브(그림 d)
금속 벨로우즈가 장착된 안전밸브에서 배압이 발생한 경우 기밀성을 보장할 수 없기 때문에 상단부를 하우징에서 분리하지 않도록 합니다.

가스차단 뚜껑(그림 f) 또는 가스차단 리프팅(그림 g)이 장착된 안전밸브
가스차단 뚜껑이나 가스차단 리프팅 레버가 장착된 안전밸브의 경우 기밀성(gas tightness)에 문제가 생길 수 있으므로 상단부를 하우징에서 분리하지 않을 수 있습니다. 하지만, 수리를 위해 상단부를 떼어 내야 하는 경우, 분해하기 전에 스프링의 장력을 풀어주어야 합니다. 밸브를 분해하기 전에 뚜껑에 매질이 있는지, 있다면 무엇인지 확인해야 합니다. 화학 화상 또는 중독의 위험 가능성.

유지 보수 목적을 위한 리프팅
리프팅 장치가 장착된 안전밸브의 경우, 안전밸브가 올바르게 기능하도록 하기 위해 가끔 시트에서 실(seal)을 들어 올려 밸브가 블로우 오프하도록 해야 한다고 권장되며, 특정 공장별 사례에 규정되어 있습니다. 그렇기 때문에 늦어도 작동 압력이 반응 압력의 ≥85%

에서 안전밸브가 열릴 수 있습니다. 리프팅 장치는 압력이 없는 상태에서는 작동되지 않습니다. 증기가 생성되는 장비의 경우, TRD 601에 따라 안전밸브의 움직임 용이성 검사를 최소 4주에 한 번 실시해야 합니다. 안전밸브는 탱크나 시스템을 위한 최고의 안전장치입니다. 모든 다른 업스트림 컨트롤과 모니터링 장비가 작동이 되지 않더라도 안전밸브가 허용할 수 없는 초과 압력을 방지할 수 있어야 합니다. 이러한 기능적 특성을 보장하기 위해 안전밸브는 정기적 및 순환적 유지 보수가 필요합니다. 유지 보수 간격은 작동 조건에 따라 작동자가 결정합니다.

Ch3-Aqua-Dok-Bed-851_917

6 부속품 해체

일반 설치 지침 외에도 안전밸브의 분해 전에 시스템이 압력이 없는 상태가 되도록 해야 합니다.

7 수리

안전밸브에 대한 수리 작업은 Goetze KG Armaturen 또는 Goetze KG Armaturen에서 공식적으로 승인한 전문 작업장에서 정품 예비 부품만 사용하여 수행되어야 합니다.

8 품질보증

이 밸브는 공장을 떠나기 전에 테스트를 받았습니다. 당사는 모든 제품에 대한 품질을 보증하며 반송되었거나 이른 시기에 발생한 자재 결함 또는 제조적 결함으로 인해 사용하기에 적합하지 않은 것으로 검증된 모든 부품에 대한 무료 수리가 수반됩니다. 당사는 모든 손상에 대해 어떠한 책임이나 기타 이러한 의무를 지지 않습니다. 공장의 실이 손상된 경우(압력 제한 밸브의 경우) 올바르지 않은 취급 또는 설치, 오염 또는 정상적인 마모의 경우 품질 보증이 무효가 됩니다.

배출 계수

설정 압력(bar)

압력 저항 및 기밀성에 대해 안전밸브를 확인하고 요청된 설정 압력을 조정하여 밀봉합니다. 영구 마킹 시스템을 이용해 타입 플레이트 또는 밸브의 스프링 보닛에 식별 ID를 적용합니다. 타입 플레이트는 DIN EN ISO 4126-1에 따라 식별 코드와 기술자료를 이용해 추가로 표시합니다.

Montage-, onderhouds- en bedieningshandleiding

Veiligheidsklep 851/451, 852/452/352, 652mFK, 652sGK, 861/461, 420, 460

1 Algemene veiligheidsinformatie

nl

- Gebruik de klep alleen:
  - voor het gespecificeerde doel
  - in een onberispelijke toestand
  - met inachtneming van de veiligheid en de mogelijke gevaren
- Volg altijd de montage-instructies.
- Eventuele defecten die van invloed kunnen zijn op een veilige werking van de klep moeten onmiddellijk worden verholpen.
- De kleppen zijn exclusief ontwikkeld voor de toepassingen die in deze installatie-intructies zijn beschreven. Gebruik dat afwijkt van of zich verder uitstrekt dan de genoemde toepassingen wordt beschouwd als oneigenlijk gebruik.
- De fabrieksgarantie vervalt als de afdichting wordt verwijderd.
- Alle montagewerkzaamheden dienen te worden uitgevoerd door daartoe bevoegd gespecialiseerd personeel.

2 Algemene aanwijzingen

Veiligheidskleppen zijn hoogwaardige armaturen die bijzonder, zorgvuldig behandeld moeten worden. Om de vereiste dichtheid te verkrijgen, zijn de afdichtingsoppervlakken van de zitting en de kegel fijn bewerkt. Voorkom dat er tijdens de montage en de bediening vreemde deeltjes in de klep komen. De afdichting van een veiligheidsklep kan belemmerd worden door hennep, teflontape, andere afdichtingsmiddelen of lasparels enz. Een ruwe behandeling van de gemonteerde klep tijdens de opslag, het transport en de montage kan eveneens leiden tot een lekkende klep. Als de klep moet worden geverfd, moet er worden vermeden dat de glijdelen met de verf in contact komen.

3 Toepassingsgebied

Raadpleeg voor bijzonderheden aangaande het toepassingsgebied van de afzonderlijke uitvoeringen de gegevensbladen van de fabrikant.

4 Installatie en montage

Veer-veiligheidskleppen moeten ingebouwd worden met verticaal naar boven gerichte veerkap. Om te verzekeren dat de kleppen onberispelijk functioneren, moeten deze zodanig worden gemonteerd dat er geen ontoelaatbare statische, dynamische of thermische belastingen kunnen ontstaan. Als het medium, dat uit de behuizing stroomt, direct of indirect gevaren voor personen of de omgeving kan veroorzaken, dan moeten er geschikte veiligheidsmaatregelen worden genomen. Daarbij moeten ook uitwasemingen door de ontlastingsboringen van de veerkap in acht worden genomen.

Toevoer

De toevoerstompen voor de veiligheidskleppen dienen zo kort mogelijk te zijn en moeten zodanig zijn gevormd dat bij volledig klepvermogen geen hogere drukverliezen dan max. 3% van de aanspreekdruk kunnen optreden.

Condensafvoer

De leidingen of de kleppen zelf (bij flensuitvoering) moeten voor het afvoeren van eventueel optredend condensatievocht op het laagste punt worden uitgerust met een permanent actieve inrichting voor het afvoeren van condensatievocht. Het condensaat of het naar buiten stromende medium moet zonder gevaar worden afgevoerd. De behuizingen, de leidingen en de geluiddempers moeten tegen bevriezing worden beschermd.

Afblaasleiding / tegendruk

De afblaasleiding van de veiligheidskleppen moet zodanig worden uitgevoerd dat bij het afblazen de vereiste massastroom drukloos kan worden afgevoerd. Bij veiligheidskleppen met metalen vouwbalg beïnvloedt een bij het afblazen optredende tegendruk van max. 4 bar de aanspreekdruk van de veiligheidklep niet.

5 Bediening / onderhoud

De werkdruk van de installatie moet minstens 5% lager zijn dan de sluitdruk van de veiligheidsklep. Dit zorgt ervoor dat de veiligheidsklep na het afblazen weer onberispelijk kan sluiten. Bij kleine lekkages, die veroorzaakt kunnen worden door verontreinigingen tussen de afdichtingsoppervlakken, kan de klep voor de reiniging worden afgeblazen door het openen van de klepschotel. Als daarmee de lekkage niet is verholpen, dan is waarschijnlijk het oppervlak van de afdichting beschadigd; dit kan alleen in onze fabriek of door erkend personeel worden gerepareerd. Het openen gebeurt afhankelijk van de uitvoering door de kartelmoer boven de veerkap (fig. a) tegen de klokrichting in te draaien (vervolgens moet de kartelmoer tot tegen de aanslag teruggedraaid worden) of met behulp van de openingshendel aan de bovenkant van de klep (fig. b). De openingshendel is bij levering bevestigd met een band, die voor de bediening moet worden verwijderd.

Veiligheidskleppen zonder balg en zonder gasdichte kap (Afb. c)

Bij veiligheidskleppen zonder balg en zonder gasdichte kap kan bovendien door het afschroeven van het bovenstuk met een passend gereedschap het volledige bovenstuk uit de behuizing worden genomen en kan eventuele aanslag van de zitting

en afdichting worden verwijderd.

Voor de demontage moet u erop letten dat de klep niet onder druk staat.

Door het aanbrengen van het bovenste gedeelte in de behuizing is de aanspreekdruk van de veiligheidsklep niet gewijzigd.

Veiligheidskleppen met metaal-vouwbalg (fig. d)

Bij de veiligheidskleppen met vouwbalg mag het bovenste gedeelte niet van de behuizing gescheiden worden, daar de dichtheid bij optredende tegendruk anders niet meer verzekerd is.

Veiligheidskleppen met gasdichte kap (Afb. f) of met een gasdichte hendel bedienbare veiligheidskleppen (Afb. g)

Bij veiligheidskleppen met gasdichte kap, of bij met een gasdichte hendel bedienbare veiligheidskleppen, mag het bovenstuk niet van de behuizing worden gescheiden, omdat anders de gasdichtheid niet meer kan worden gegarandeerd. Indien voor reparatiedoeleinden het losschroeven van het bovengedeelte toch nodig is, moet erop worden gelet dat voor de demontage de veer wordt ontspannen. Voor de demontage moet bovendien gecontroleerd worden of en welk medium zich in de kap zou kunnen bevinden. Er bestaat gevaar voor een eventuele brandwonden of vergiftiging.

Openen voor het onderhoud

Bij veiligheidsventielen met een verluchtingsinrichting strekt het tot aanbeveling, en kan het naargelang de installatie ook voorgeschreven zijn, van tijd tot tijd het veiligheidsventiel tot uitblazen te brengen door het te verluchten, teneinde zich te vergewissen van het functioneren van het veiligheidsventiel. Ze kan ten laatste worden geopend vanaf een bedrijfsdruk van ≥85 % van de aanspreekdruk. Deze opening mag niet in drukloze toestand gebeuren. Overeenkomstig TRD 601 moet bij stoomketels minstens om de 4 weken worden gecontroleerd of de veiligheidskleppen goed functioneren.

Veiligheidskleppen zijn de laatste veiligheid voor de tank resp. het systeem. Zij moeten een ontoelaatbare druk kunnen verhinderen ook als alle andere voorgeschakelde regel- en bedieningsapparaten alsook monitoren weigeren. Om deze functie-eigenschappen veilig te stellen, hebben veiligheidsventielen een regelmatig en herhaaldelijk onderhoud van doen. De onderhoudsintervallen voor deze kleppen moeten worden vastgelegd overeenkomstig de gebruiksomstandigheden van de exploitant.

6 Demontage van de klep

Naast de algemeen geldige montagerichtlijnen moet erop worden gelet dat de klep voor de demontage van de installatie drukloos wordt gemaakt.

7 Reparaties

Herstellingen aan veiligheidsventielen mogen enkel door de firma Goetze KG Armaturen of door geautoriseerde werkplaatsen worden uitgevoerd, met exclusief gebruik van originele vervangingsonderdelen. Daarbij moeten uitsluitend originele reservedelen worden gebruikt.

8 Wettelijke garantie

Deze klep werd gecontroleerd voor het verlaten van de fabriek. De garantie op onze producten omvat een kosteloze reparatie van ingestuurde producten, waarvoor aangetoond kan worden dat ze als gevolg van materiaal- of fabricagefouten voortijdig onbruikbaar werden. Eisen tot schadevergoeding of andere verplichtingen aanvaarden wij niet. Bij beschadiging van de fabrieksafdichting, ondeskundig gebruik resp. ondeskundige installatie, niet-inachtneming van deze montage- en onderhoudsaanwijzing, vervuiling of normale slijtage vervalt de fabrieksgarantie.

Fig. c): Veiligheidskleppen zonder vouwbalg + zonder membraan

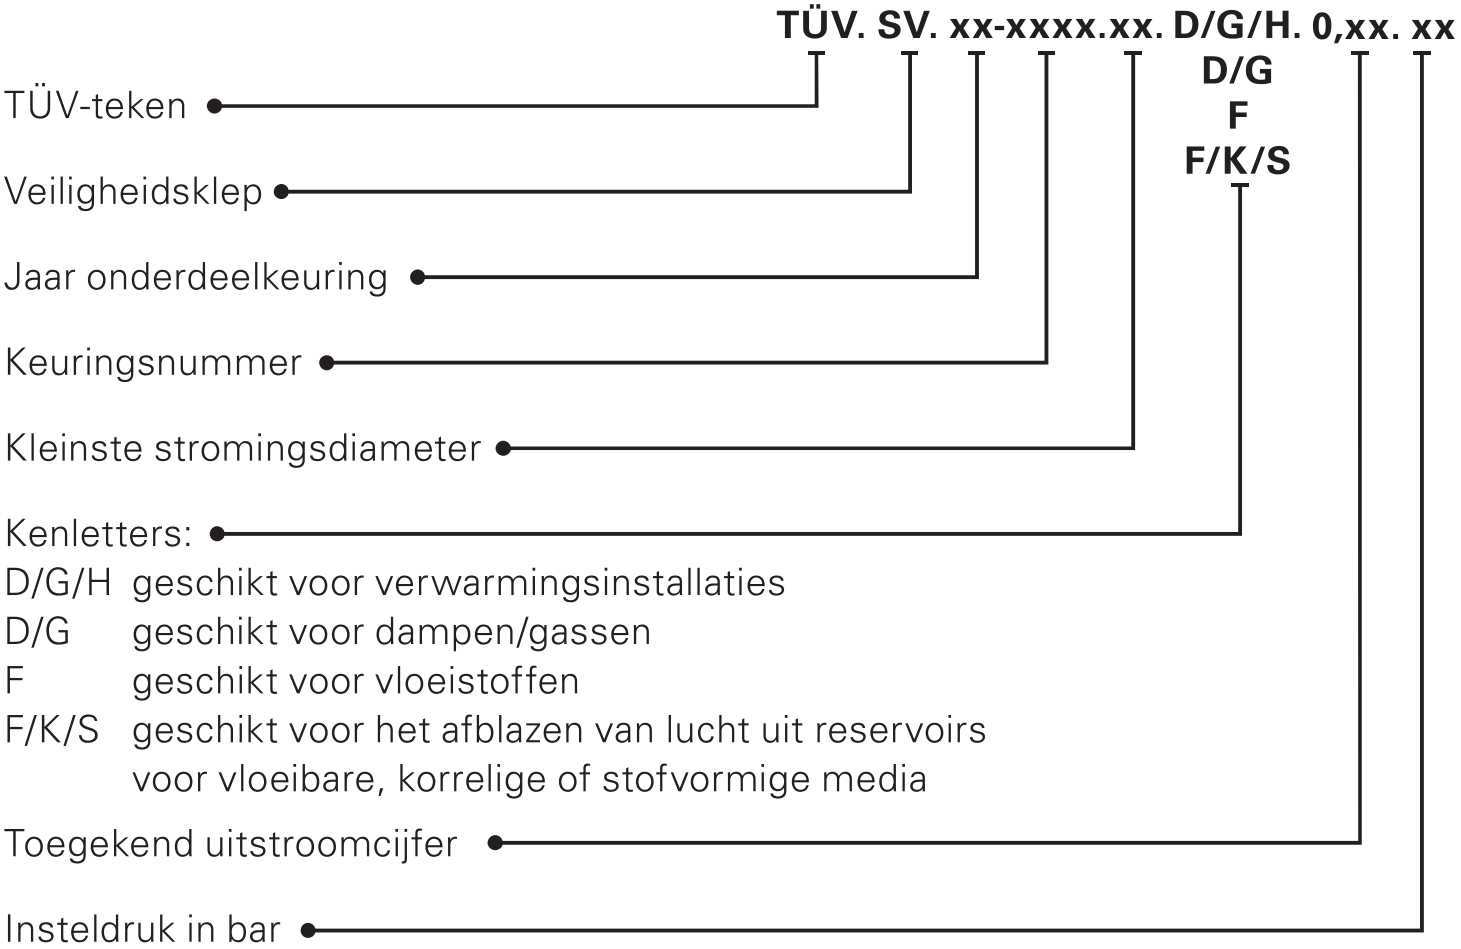

Fig. d): Veiligheidsklep met vouwbalg

Fig. e): Veiligheidsklep met membraan

Fig. f): Veiligheidsklep met gasdichte kap

Fig. g): Met een gasdichte hendel bedienbare veiligheidsklep

9 Identificatie / controle

D/G/H geschikt voor verwarmingsinstallaties
D/G geschikt voor dampen/gassen
F geschikt voor vloeistoffen
F/K/S geschikt voor het afblazen van lucht uit reservoirs voor vloeibare, korrelige of stofvormige media

Veiligheidskleppen worden door ons gecontroleerd op drukvastheid en dichtheid en op de gewenste insteldruk ingeregeld en verzegeld.
De markering is onwisbaar aangebracht op het typeplaatje resp. op de kap van de klep. De identificatie bevat bovendien de noodzakelijke gegevens overeenkomstig DIN EN ISO 4126-1.

Monterings-, vedlikeholds- og bruksanvisning

Sikkerhetsventil 851/451, 852/452/352, 652mFK, 652sGK, 861/461, 420, 460

1 Generelle sikkerhetsanvisninger

no

- Bruk ventilen kun:
  - som tiltenkt
  - i feilfri tilstand
  - sikkerhets- og farebevisst
- Det skal tas hensyn til monteringsanvisningene.
- Forstyrrelser som kan påvirke sikkerheten, skal utbedres omgående.
- Ventilene er utelukkende ment for det bruksområdet som er oppført i denne monteringsanvisningen. All annen bruk eller bruk utover dette gjelder som feil bruk.
- Når plomberingen fjernes, opphører fabrikkgarantien.
- Alle monteringsarbeider skal gjennomføres av autorisert fagpersonell.

2 Generelle anvisninger

Sikkerhetsventiler er rørdeler av høy kvalitet som krever særlig forsiktig behandling. Tetningsflatene er finbearbeidet på sete og kjegle, på den måten oppnås den nødvendige tettheten. Under montering og drift må det unngås at det trenger inn fremmedlegemer i ventilen. Tetningen på en sikkerhetventil kan forringes ved å bruke hamp, teflonteip i tillegg til sveisestrenger, med mer. Også røff behandling av den ferdige ventilen under lagring, transport og montering kan gjøre armaturen utett. Dersom ventilen skal overmales, må det påses at glidende deler ikke kommer i berøring med malingen.

3 Bruksområder

Se produsentens datablad for detaljer om utvalget for individuelle versjoner.

4 Innbygging og montering

Sikkerhetsventiler med fjær skal monteres med fjærkappen vendt opp. For å garantere at ventilene fungerer helt korrekt må de monteres slik at ingen ulovlige statiske, dynamiske eller termiske innvirkninger kan oppstå. Dersom personer eller omgivelser kan komme direkte eller indirekte i fare på grunn av at medium utløper under start, skal det treffes egnede beskyttelsestiltak. Følg alltid nøye med på mulig dunst som kan komme ut av fjærkappens avlastningsåpninger.

Tilførselsledning

Tilførselsstussene for sikkerhetsventilene skal være så korte som mulig og skal arrangeres slik at det ikke kan oppstå høyere trykktap enn maks. 3 % fra starttrykket ved full ventilytelse.

Kondensatavledning

Hvis det dannes kondensat, må rørene eller ventilene (på de versjonene som har flens) utstyres med en avløpsinnretning for kondensat som er i kontinuerlig drift, på det laveste punktet. Det skal sørges for at kondensat eller utløpende medium bortledes på forsvarlig måte. Hus, ledninger og lyddempere skal sikres mot frost.

Utblåsningsledning / mottrykk

Sikkerhetsventilenes utblåsningsledning skal arrangeres slik at den nødvendige massestrømmen kan føres trykkløst bort ved utblåsning. På sikkerhetsventiler med metallbelg blir ikke starttrykket i sikkerhetsventilen negativt påvirket når mottrykket på maks. 4 bar som dannes blir utblåst.

5 Driftsmåte / vedlikehold

Anleggets arbeidstrykk skal ligge minst 5 % under sikkerhetsventilens stengetrykk. På den måten oppnår man at sikkerhetsventilen kan stenges skikkelig igjen etter utblåsning. Ved mindre lekkasjer som kan være forårsaket av forurensninger mellom tetningsflatene, kan ventilen stilles på utblåsning for rengjøring med påluftning. Hvis utettheten ikke kan fjernes, er sannsynligvis tetningsflaten skadet. Denne kan bare repareres i vår fabrikk eller av autoriserte fagfolk.
Løfteteknikken avhenger av versjon. Det gjøres enten ved hjelp av en serratert skrue ovenfor fjærkappen (fig. a) som skrus mot klokken (den serraterte skruen må deretter skrus tilbake til startstilling) eller ved å bruke løftespaken på ventilens øvre del (fig. b). Løftespaken er blokkert med en snor som må fjernes før løftingen kan foretas.

Sikkerhetsventiler uten belg og uten gasstett hette (Fig.c)

Ved sikkerhetsventiler uten belg og uten gasstett hette kan man også skru av hele overdelen med egnet verktøy fra dekselet og fjerne eventuelle rester og setetetning på stedet.

Før demontering må du kontrollere at ventilen ikke er trykkpåsatt. Sikkerhetsventilens responstrykk endres ikke gjennom at den øvre delen monteres tilbake i huset.

Sikkerhetsventiler med metallbelg (fig. d)

På sikkerhetsventiler med metallbelg (fig. d) kan ikke den øvre delen fjernes fra huset fordi tetningen ikke lenger kan garanteres hvis det skulle oppstå mottrykk.

Sikkerhetsventiler med gasstett hette (Fig.f) eller gasstett løfteventilasjon (Fig.g)

Ved sikkerhetsventiler med gasstett hette eller gasstett løfteventilasjon, må ikke overdelen fjernes fra dekselet da gasstettheten ikke lengre er garantert. Hvis det for reparasjonen likevel skulle være nødvendig å skru ut overdelen, må man passe på at fjæren avspennes før demonteringen. Det må før demonteringen likeledes kontrolleres at det finnes medium i hetten og hvilket medium det er. Det er fare for mulige etseskader eller forgiftning.

Påluftning for vedlikehold

For sikkerhetsventiler med en løfteinnretning anbefales det for spesifikke installasjoner at sikkerhetsventilen justeres fra tid til annen for å sørge for at den fortsatt er i god stand. Derfor kan de åpnes senest fra og med et driftstrykk på ≥85 % av starttrykket. Løfteinnretningen skal ikke benyttes mens ventilen ikke er trykksatt. Minst hver 4. uke skal det kontrolleres at sikkerhetsventilen går lett ifølge TRD 601 for dampgeneratorer.
Sikkerhetsventilene utgjør den siste sikringen for beholderne eller systemet.
De skal være i stand til å kunne forhindre et ulovlig overtrykk selv om alle andre formonterte regulerings-, styre- og overvåkningsenheter svikter. Sikkerhetsventiler krever jevnlig og periodisk vedlikehold for å sikre at utstyret er i god stand. Vedlikeholdsintervallene til disse armaturene skal fastsettes av operatøren i samsvar med bruksbetingelsene.

6 Demontere armaturen

I tillegg til generelle, gjeldende monteringsdirektiver skal det sikres at anlegget gjøres trykkløst før ventilen demonteres.

7 Reparasjoner

Reparasjoner av sikkerhetsventilene må kun utføres av firmaet Goetze KG Armaturen eller av autoriserte servicesenter som kun bruker originale reservedeler ved behov for erstatningsdeler.

8 Garantie

Denne ventilen ble kontrollert før den forlot fabrikken. Vi tilbyr garanti for våre produkter ved at vi gratis setter i stand deler som beviselig grunnet materialfeil eller fabrikasjonsfeil ikke er brukbare. Vi overtar ingen ytelser om skadeserstatning eller liknende. Fabrikkgarantien opphører ved skader på fabrikkplomberingen, feil behandling eller installasjon, dersom det ikke har vært tatt hensyn til denne monterings- og vedlikeholdsanvisningen eller ved forurensning eller normal slitasje.

Fig. a): Løfting med serratert skrue

Fig. b): Løfting med spak

Fig. c): Sikkerhetsventil uten belg + uten membran

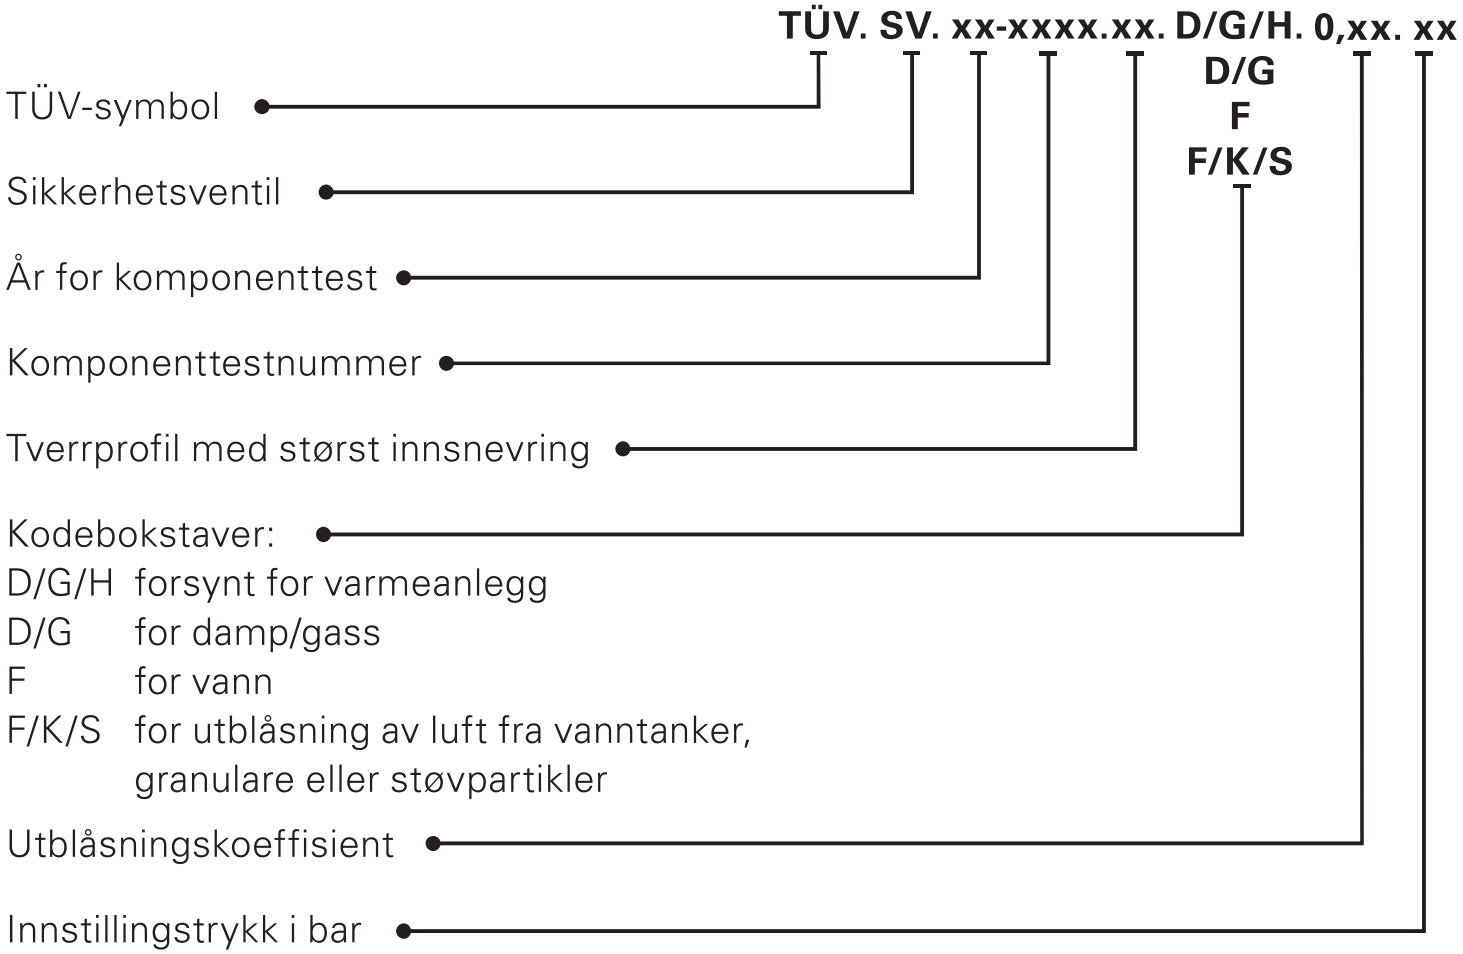

Fig. d): Sikkerhetsventil med belg

Fig. e): Sikkerhetsventil med membran

Fig. f): Sikkerhetsventil med gasstett hette

Fig. g): Sikkerhetsventil med gasstett løfteventilasjon

9 Merking / kontroll

D/G/H forsynt for varmeanlegg
D/G for damp/gass
F for vann
F/K/S for utblåsning av luft fra vanntanker, granulare eller støvpartikler

Vi kontrollerer sikkerhetsventilene for trykkmotstand og stramhet, justerer påkrevd innstillingstrykk og forsegler dem.
Angivelsen på typeplaten eller på sikkerhetsventilens fjærkappe påføres med et permanent merkesystem. I tillegg inneholder merkingen de nødvendige angivelsene i samsvar med DIN EN ISO 4126-1.

Instrukcja montażu, konserwacji i eksploatacji

Zawór bezpieczeństwa 851/451, 852/452/352, 652mFK, 652sGK, 861/461, 420, 460

1 Informacje ogólne na temat bezpieczeństwa

pl

- Zawór należy stosować wyłącznie:
  - w sposób zgodny z przeznaczeniem
  - jeśli znajduje się w nienagannym stanie
  - przy uwzględnieniu bezpieczeństwa i zagrożeń
- Przestrzegać instrukcji montażu.
- Niezwłocznie usuwać usterki, które mogą zagrażać bezpieczeństwu.
- Zawory są przeznaczone wyłącznie do użytku w zakresie zastosowania określonym w niniejszej instrukcji montażu. Inne lub wykraczające poza ten zakres użycie jest użyciem niezgodnym z przeznaczeniem.
- Usunięcie plomby skutkuje wygaśnięciem gwarancji udzielonej przez producenta.
- Wszystkie prace montażowe należy zlecać autoryzowanemu, specjalistycznemu personelowi.

2 Informacje ogólne

Zawory bezpieczeństwa są delikatnymi podzespołami, wymagającymi szczególnie ostrożnego postępowania. Powierzchnie uszczelniające przy gnieździe i grzybku stożkowym są poddawane precyzyjnej obróbce umożliwiającej uzyskanie niezbędnej szczelności. Podczas montażu i eksploatacji należy zapobiegać przedostawaniu się do wnętrza zaworu ciał obcych. Negatywny wpływ na szczelność zaworu mają między innymi pakuły, taśma teflonowa i pozostałości po pracach spawalniczych. Nieostrożne postępowanie z gotowym zaworem podczas przechowywania, transportu i montażu może prowadzić do powstania nieszczelności. W przypadku malowania zaworu należy uważać, by części ruchome nie stykały się z malowaną powierzchnią.

3 Zakres stosowania

Szczegółowe informacje dotyczące zastosowania poszczególnych wersji są dostępne w kartach danych producenta.

4 Instalacja i montaż

Zawory bezpieczeństwa ze sprężyną muszą być montowane tak, by pokrywa sprężyny była w pionowej pozycji i znajdowała się na górze. Aby zapewnić nienaganne działanie zaworów, zamontować zawory w sposób wykluczający oddziaływanie niedopuszczalnych obciążeń statycznych, dynamicznych lub termicznych. Jeśli medium wydostające się z obudowy w momencie zadziałania zaworu może stanowić bezpośrednie lub pośrednie zagrożenia dla osób lub otoczenia, należy przedsięwziąć właściwe środki bezpieczeństwa. Zawsze należy zwrócić uwagę na możliwość uwalniania oparów przez otwory w pokrywie sprężyny.

Przewód doprowadzający

Króćce przewodu doprowadzającego zaworów bezpieczeństwa powinny być jak najkrótsze oraz muszą mieć taką formę, by przy pełnym obciążeniu zaworu nie występowały straty ciśnienia wyższe od maks. 3% wartości ciśnienia uruchamiającego zawór.

Odprowadzanie kondensatu

W przypadku możliwości gromadzenia się wykroplonej substancji rury lub same zawory (wersja wyposażona w kołnierze) w najniższym miejscu muszą być zaopatrzone w ciągle działające elementy odprowadzające kondensat. Zadbać o bezpieczne odprowadzanie kondensatu lub wydostającego się medium. Zabezpieczyć obudowę, przewody i tłumiki przed zamarznięciem.

Przewód odprowadzający / przeciwciśnienie

Przewód odprowadzający zaworów bezpieczeństwa musi umożliwiać bezciśnieniowe odprowadzenie wymaganego przepływu masowego. W zaworach bezpieczeństwa z metalowym mieszkiem sprężystym powstające podczas odprowadzania przeciwciśnienie o wartości maks. 4 bar nie wpływa negatywnie na ciśnienie uruchamiające zawór.

5 Eksploatacja / konserwacja

Wartość ciśnienia roboczego instalacji powinna być co najmniej 5% niższa od ciśnienia zamykania zaworu bezpieczeństwa. Dzięki temu po odprowadzeniu wody zawór bezpieczeństwa może się swobodnie zamknąć. W razie pomniejszych nieszczelności, które mogą powstać na skutek zanieczyszczeń pomiędzy powierzchniami uszczelniającymi, można oczyścić zawór, napowietrzając go w celu odprowadzenia wody. Jeżeli w ten sposób nieszczelność nie może być usunięta, prawdopodobnie ma miejsce uszkodzenie powierzchni uszczelniającej, które może być naprawione tylko w naszym zakładzie lub przez autoryzowany personel specjalistyczny.

W zależności od wersji zaworu grzybek można podnieść obracając moletowaną nakrętkę nad pokrywą sprężyny w kierunku przeciwnym do ruchu wskazówek zegara (rys. a), przy czym po tej operacji nakrętkę należy obrócić w przeciwnym kierunku, by zamknąć zawór, albo podnosząc dźwignię zamontowaną w górnej części zaworu (rys. b). Na czas transportu dźwignia jest przymocowana opaską do korpusu, opaskę te należy zdjąć przed użyciem dźwigni.

Zawory bezpieczeństwa bez osłony mieszkowej i bez gazoszczelnej pokrywy (rys. c)

W przypadku zaworów bezpieczeństwa bez osłony mieszkowej i bez gazoszczelnej pokrywy

można dodatkowo ściągnąć całą górną część z obudowy przez odkręcenie jej za pomocą odpowiedniego narzędzia i usunąć ewentualne pozostałości z gniazda i uszczelki gniazda.

Przed demontażem sprawdzić, czy do zaworu nie jest doprowadzone ciśnienie. Ciśnienie zadziałania i zamykania zaworu nie zmienia się po ponownym skręceniu górnej części z korpusem.

Zawory bezpieczeństwa z mieszkami metalowymi (rys. d)

W przypadku zaworów bezpieczeństwa z mieszkami metalowymi (rys. d) nie wolno odkręcać górnej części od korpusu, gdyż po odkręceniu nie można gwarantować szczelności w przypadku wystąpienia wzrostu ciśnienia w rurze odprowadzającej.

Zawory bezpieczeństwa z gazoszczelną pokrywą (rys. f) lub gazoszczelnym mechanizmem napowietrzenia obrotowego (rys. g)

W przypadku zaworów bezpieczeństwa z gazoszczelną pokrywą lub gazoszczelnym mechanizmem napowietrzenia z dźwignią nie wolno oddzielać górnej części od obudowy, w przeciwnym razie bowiem szczelność gazowa nie jest gwarantowana. Jeżeli w celach remontowych odkręcenie górnej części jest jednak konieczne, należy pamiętać o odprężeniu sprężyny przed demontażem. Przed demontażem należy również sprawdzić, czy i jakie medium może się znajdować pod kołpakiem. Istnieje niebezpieczeństwo ewentualnego sparzenia środkiem żrącym lub zatrucia.

Napowietrzanie w celu konserwacji

W przypadku zaworów bezpieczeństwa z mechanizmem napowietrzania zaleca się zgodnie z przepisami dla danego urządzenia, co pewien czas napowietrzyć, a następnie odpowietrzyć zawór bezpieczeństwa, aby przekonać się o jego sprawności. Z tego względu zawory bezpieczeństwa otwierają się najpóźniej przy ciśnieniu roboczym ≥ 85% ciśnienia uruchamiającego. Grzybka nie wolno podnosić, gdy w instalacji brak ciśnienia. Zgodnie z regulacjami technicznymi w zakresie kotłów parowych TRD 601 kontrolę działania zaworów bezpieczeństwa w wytwornicach pary należy przeprowadzać co najmniej co 4 tygodnie. Zawory bezpieczeństwa są ostatnim zabezpieczeniem zbiornika lub systemu. Powinny uniemożliwiać powstanie niedozwolonego nadciśnienia również w sytuacji, gdy zawiodą wszystkie pozostałe zamontowane urządzenia regulacyjne, sterujące i nadzorcze. W celu zapewnienia właściwego funkcjonowania zawory bezpieczeństwa wymagają regularnej i stałej konserwacji. Częstotliwość konserwacji zaworów określa użytkownik odpowiednio do warunków użytkowania.

6 Demontaż zaworu

Oprócz ogólnie obowiązujących wytycznych montażowych należy pamiętać, że zasadniczo przed demontażem zaworu w instalacji należy zredukować ciśnienie.

7 Naprawy

Napraw zaworów bezpieczeństwa może dokonywać wyłącznie firma Goetze KG Armaturen lub mogą je też wykonywać specjalistyczne autoryzowane warsztaty, pod warunkiem stosowania oryginalnych części zamiennych.

8 Gwarancja

Przed opuszczeniem fabryki niniejszy zawór został poddany kontroli. Nasze produkty objęte są gwarancją polegającą na bezpłatnej naprawie zwróconych części, które w potwierdzony sposób przedwcześnie stały się bezużyteczne na skutek błędów materiałowych lub fabrycznych. Nie realizujemy roszczeń odszkodowawczych i innych tego typu zobowiązań. Uszkodzenie fabrycznej plomby, nieprawidłowe postępowanie lub instalacja, nieprzestrzeganie niniejszej instrukcji montażu i konserwacji, zanieczyszczenie lub standardowe zużycie powoduje wygaśnięcie gwarancji producenta.

D/G/H zaprojektowany do systemów ogrzewania
D/G zaprojektowany dla pary wodnej / gazu
F zaprojektowany dla cieczy
F/K/S zaprojektowany do upuszczania powietrza ze zbiorników cieczy, granulatu lub artykułów sypkich

Współczynnik uwalniania

Ciśnienie robocze w barach
(1 bar = 100 kPa)

Sprawdzamy zawory bezpieczeństwa pod kątem odporności na ciśnienie i szczelność, ustawiamy ciśnienie robocze według wymagań klienta i plombujemy je. Kod identyfikacyjny na tabliczce znamionowej lub pokrywie sprężystej zaworu jest nanoszony z użyciem systemu permanentnego oznaczania. Dodatkowo oznaczenie zawiera informacje wymagane normą DIN EN ISO 4126-1.

Navodila za sestavljanje, vzdrževanje in uporabo

Varnostni ventil 851/451, 852/452/352,
652mFK, 652sGK, 861/461, 420, 460

1 Splošne varnostne informacije

sl

- Ventil uporabljajte le:
  - če ustreza predvidenemu namenu
  - če je v neoporečnem stanju
  - z ozirom na zagotavljanje varnostni in na možne nevarnosti
- Vedno upoštevajte navodila za namestitev.
- Vse napake, ki bi lahko ogrožale varno delovanje ventila, je treba nemudoma odpraviti.
- Ventili so projektirani izključno za področje uporabe, opisano v teh navodilih za namestitev. Vsaka druga uporaba, ali uporaba, ki presega opisano področje uporabe, se smatra kot neprimerna uporaba.
- Z odstranitvijo plombe tovarniška garancija preneha veljati.
- Vsa monterska dela mora opraviti pooblaščeno, strokovno sposobljeno osebje.

2 Splošne informacije

Varnostni ventili so visoko kakovosten pribor, ki zahteva posebej skrbno ravnanje. Tesnilni površini sedeža in konusa sta precizno strojno obdelani, da se doseže zahtevana tesnost. Med montažo in med delovanjem ventila preprečite vstop tujkov v njegovo notranjost. Tesnjenje varnostnega ventila se lahko poslabšča zaradi konoplje, teflonskega traku ali drugih tesnilnih sredstev, pa tudi zaradi ostankov varjenja. Tudi grobo ravnanje z že nameščenim ventilom med skladiščenjem, prevozom ali montažo lahko povzroči puščanje ventila. V primeru pobarvanja ventila je treba paziti na to, da barva ne pride v neposreden stik z gibljivimi sestavnimi deli.

3 Možna uporaba

Za podrobnosti o področju uporabe posamičnih izvedb glejte podatkovne liste proizvajalca.

4 Namestitev in sestavljanje

Vzmetne varnostne ventile je potrebno namestiti s pokrovom vzmeti, usmerjenim navpično navzgor. Za zagotovitev brezhibnega delovanja ventilov, je treba le-te namestiti tako, da niso izpostavljeni nobenim nedopustnim statičnim, dinamičnim ali termičnim obremenitvam. Če bi lahko prišlo pri delovanju zaradi medija, ki izteka iz ohišja, do neposredne ali posredne nevarnosti za osebe ali okolico, potem je treba sprejeti ustrezne varnostne ukrepe. Vedno bodite pozorni na možne dime, ki se sproščajo iz razbremenilnih odprtin pokrova ventila.

Dovod

Dovodni priključki za varnostne ventile naj bodo kar se da kratki in narejeni tako, da pri polni zmogljivosti ventila ne bo moglo prihajati do izgub tlaka večjih od 3 % odzivnega tlaka.

Odvod kondenzata

V primeru možnega pojava kondenzata, je potrebno cevi ventila (v pririobnični izvedbi) oskrbeti na najnižji točki z napravo za stalni izpust delovnega kondenzata. Poskrbeti je treba za nenevarno odvajanje kondenzata ali iztekajočega se medija. Ohišje, napeljavo in dušilce zvoka je treba zavarovati proti zamrznitvi.

Oddušna napeljava / protitlak

Oddušno napeljavo varnostnih ventilov je treba izvesti tako, da se lahko pri sproščanju potrebni masni pretok odvaja brez tlaka. Pri varnostnih ventilih s kovinskim nagubanim mehom protitlak do največ 4 barov pri sproščanju ne vpliva na delovanje varnostnega ventila.

5 Delovanje / vzdrževanje

Delovni tlak naprave mora biti vsaj 5 % nižji od zapiralnega tlaka varnostnega ventila. S tem je zagotovljeno, da se lahko varnostni ventil po sproščanju ponovno uspešno zapre. V primeru manjših netesnosti, ki so posledica umazanije med tesnilnimi površinami, je možno ventil očistiti preko oddušnika s sproščanjem. Če vam ne uspe odpraviti netesnost, je verjetno poškodovana tesnilna površina, ki jo lahko popravijo samo v naši tovarni ali v pooblaščenem servisu.

Odvisno od izvedbe, se dviganje izvede z narebričeno matico nad pokrovom vzmeti (slika a), ki se obrne v nasprotni smeri urinega kazalca (potem je treba narebričeno matico vrniti v zaustavitveno lego) ali s sproženjem dvižnega vzvoda na zgornjem delu ventila (slika b). Med prevozom je dvižni vzvod blokiran s trakom, ki ga je potrebno odstraniti, če želite, da dvižna naprava deluje.

Varnostni ventili brez nagubanega meha in brez pokrova, neprepustnega za plin (Slika c)

Pri varnostnih ventilih brez nagubanega meha in brez pokrova, neprepustnega za plin, je mogoče dodatno s privijanjem zgornjega dela z ustreznim orodjem vzeti iz ohišja celoten zgornji del in odstraniti morebitne ostanke na sedežu in sedežnem tesnilu.

Pred montažo je treba paziti na to, da ventil ni pod tlakom. Tlak pri katerem se sproži varnostni ventil, se s ponovnim sestavljanjem zgornjega dela v ohišju ne spremeni.

Varnostni ventili s kovinskim mehom (slika d)

V primeru varnostnih ventilov s kovinskim mehom (slika d) se zgornji del ne sme ločiti od ohišja, ker sicer tesnjenje v primeru povratnega tlaka ni več zajamčeno.

Varnostni ventili s pokrovom, neprepustnim za plin (slika f) ali dvižnim mehanizmom z vzvodom, neprepustnim za plin (slika g)

Pri varnostnih ventilih s pokrovom, neprepustnim za plin ali dvižnim mehanizmom z vzvodom, neprepustnim za plin, zgornjega dela ni dovoljeno ločiti od ohišja, saj neprepustnost za plin v nasprotnem primeru ni več zagotovljena.Če je zaradi popravila nujno potrebno odviti zgornji del, bodite pozorni na to, da pred odstranitvijo sprostite vzmet. Pred odstranitvijo je potrebno preveriti, če je prisoten medij oz. kateri medij je pristoten v pokrovu. Obstaja nevarnost razjed ali zastrupitve!.

Odzračenje za vzdrževanje

Pri varnostnih ventilih z zračno napravo se priporoča in je tudi predpisano, da je treba varnostni ventil glede na specifično napravo občasno prezračiti in izpustiti zrak, da se prepričate o pravilnem delovanju varnostnega ventila. S tem ga je možno odpreti najpozneje pri delovnem tlaku ≥85 % odzivnega tlaka. Dvižnega mehanizma ne smete uporabiti v breztlačnem stanju. Kontrole delovanje varnostnih ventilov so v skladu s TRD 601 pri razvijalcih pare potrebne najmanj v časovnih intervalih 4 tednov.

Varnostni ventili predstavljajo zadnjo zaščito posode oz. sistema. Ventili morajo biti v položaju, da preprečijo nedopusten nadtlak tudi takrat, ko odpovejo vse druge prednameščene regulirne, krmilne in nadzorne naprave. Za zagotovitev teh lastnosti delovanja je treba varnostne ventile redno in periodično vzdrževati. Intervale vzdrževanja teh armatur mora določiti upravljavec skladno s pogoji uporabe.

6 Demontaža armature

Dodatno k splošno veljavnim montažnim smernicam je treba upoštevati, da mora biti pred demontažo poskrbljeno za to, da je naprava brez tlaka.

7 Popravila

Popravila varnostnih ventilov sme izvajati samo podjetje Goetze KG Armaturen ali pooblaščeni servis z uporabo izključno originalnih nadomestnih delov.

8 Garancija

Preden je ta ventil zapustil tovarno, je bil testiran. Za naše proizvode zagotavljamo garancijo, ki vključuje brezplačno popravilo vseh tistih delov, ki so bili vrnjeni v tovarno in za katere se ugotovi, da so postali predčasno neuporabni zaradi defektnega materiala ali napak pri izdelavi. Plačila odškodnine in drugih podobnih obveznosti ne prevzemamo. Pri poškodbi tovarniške plombe, nepravilni uporabi ali instalaciji, neupoštevanju teh navodil za montažo in vzdrževanje, onesnaženju ali običajni obrabi tovarniška garancija preneha veljati.

Koeficient praznjenja

Nastavljeni tlak v barih

Preizkusili smo tlačno odpornost in tesnjenje ventilov, nastavili zahtevani tlak in jih zatesnili.
Za oznake na napisni ploščici ali na pokrovu vzmeti ventila se uporablja stalni sistem oznak. Dodatno vsebuje oznaka vse potrebne podatke ustrezno DIN EN ISO 4126-1.

Monterings-, underhålls- och bruksanvisning

Säkerhetsventil 851/451, 852/452/352, 652mFK, 652sGK, 861/461, 420, 460

1 Allmänna säkerhetsanvisningar

SV

- Ventilen får endast användas:
  - för avsett syfte
  - i felfritt skick
  - säkerhets- och riskmedvetet
- Beakta alltid monteringsanvisningen.
- Fel som kan påverka säkerheten negativt ska åtgärdas omedelbart.
- Ventilerna är avsedda endast för det användningsområde som anges i den här bruksanvisningen. Ventilerna får inte användas för något annat ändamål.
- När plomberingen brutits upphör fabriksgarantin att gälla.
- Monteringsarbeten får endast utföras av behörig fackpersonal.

2 Allmän information

Säkerhetsventiler är armaturer som måste hanteras varsamt. För att uppnå den nödvändiga tätheten har tätytor på fäste och kona polerats. Undvik att främmande föremål hamnar i ventilen under montering och drift. Säkerhetsventilernas täthet kan påverkas av hampa, teflonband eller andra tätningsmedel samt svettdroppar el.dyl. Även oaktsam hantering av den färdiga ventilen under lagring, transport och montering kan påverka armaturens täthet. Om du målar ventilen ska du se till att de glidande delarna inte kommer i kontakt med målarfärg.

3 Användningsområde

I databladen från tillverkaren kan du hitta detaljer om användningsområdet för de enskilda utföranden.

4 Inbyggnad och montering

Fjädersäkerhetsventiler ska byggas in lodrätt med fjäderhuven uppåt. För att ventilerna ska fungera korrekt ska de installeras så att de inte utsätts för statiska, dynamiska eller termiska belastningar. Om det kan uppstå direkt eller indirekt fara för personer eller omgivningen när produkt rinner ut ur huset vid aktivering av ventilen måste lämpliga skyddsåtgärder vidtas. Observera även att ånga kan strömma ut genom fjäderhuvens avlastningshål.

Tilledning

Tilledningsanslutningar för säkerhetsventiler ska vara så korta som möjligt och utformas så att tryckförlusten vid full ventileffekt inte överstiger tre procent av aktiveringstrycket.

Kondensatutloppsledning

Ledningarna eller själva ventilerna (vid flänsmodeller) måste på sin lägsta punkt vara försedda med en anordning för avledning av kondensat vid möjligt kondensatfall. Se till att kondensat eller läckande medium leds bort på ett säkert sätt. Hus, ledningar och ljuddämpare ska skyddas mot frost.

Avluftningsledning / mottryck

Säkerhetsventilernas avluftningsledningar ska utformas så att det nödvändiga massflödet kan ledas bort utan tryck vid avluftning. På säkerhetsventiler med metallbälgar påverkar ett mottryck på högst 4 bar vid avluftning inte säkerhetsventilens aktiveringstryck.

5 Driftsätt / underhåll

Anläggningens arbetstryck ska vara minst fem procent lägre än säkerhetsventilens stängningstryck. Detta säkerställer att säkerhetsventilen fungerar korrekt efter avluftning. Vid mindre otätheter som kan orsakas av smuts mellan tätytorna kan ventilen avluftas genom ventilering för att få bort smutsen. Om läckaget inte kan avhjälpas med denna åtgärd är troligen tätningsytan skadad. En sådan skada kan bara repareras på vår fabrik eller av auktoriserad fackman.
Tilluftning sker (beroende på typ) antingen via en profilmutter ovanför fjäderhuven (bild a) som vrids motsols (sedan ska profilmuttern vridas tillbaka till anslaget) eller med hjälp av lättverket på ventilens överdel. Lättverksarmen är fäst med ett snöre vid leverans, detta måste avlägsnas före en funktionstest.

Säkerhetsventil utan skyddsbälg och utan gastätt lock (bild c)

Hos säkerhetsventiler utan skyddsbälg och gastätt lock kan även hela överdelen tas ut ur kapslingen om man skruvar loss överdelen med rätt verktyg, och eventuella rester kan tas bort från fäste och sätestätning.
Kontrollera att ventilen är trycklös innan du demonterar den. Efter återmontering av överdelen i kapslingen är säkerhetsventilens öppningstryck oförändrat.

Om säkerhetsventil med skyddsbälg i metall (bild d) används, får överdelen inte separeras från kapslingen eftersom en täthet vid uppkomst av mottryck inte längre kan garanteras i så fall.

Säkerhetsventiler med gastätt lock (bild f) eller gastät lyft (bild g)

Hos säkerhetsventiler med gastätt lock eller gastät lyft får inte överdelen separeras från kapslingen eftersom gastätheten inte längre kan garanteras i så fall. Skulle det ändå bli nödvändigt att skruva av överdelen vid en reparation, ska man ge akt på att fjädern avlastas före demonteringen. Före demonteringen ska man likaså kontrollera, om och vilket medium som kan befinna sig i huven. Eventuellt består risk för frätskador eller förgiftning.

Ventilering för underhåll

För säkerhetsventiler med ventilationsanordningen rekommenderas det och på vissa specifika anläggningar är det även föreskrivet att säkerhetsventilen blåses ut emellanåt genom ventilering för att vara övertygad om att säkerhetsventilen fungerar. Detta är också föreskrift enligt gällande bestämmelser. Den går därför att öppna senast från och med ett drifttryck på ≥85 % av aktiveringstrycket. Funktionstest får därför inte ske när ventilerna är trycklösa. Enligt de tyska tekniska reglerna TRD 601 ska säkerhetsventiler i ånggeneratorer kontrolleras minst var fjärde vecka så att de går lätt.
Säkerhetsventiler är det sista säkerhetssteget i en behållare eller ett system. De måste motverka otillåtet höga tryck även om övriga förkopplade regler-, styr- och övervakningsenheter skulle sluta fungera. Säkerhetsventilerna behöver ett regelbundet och upprepat underhåll för att kunna säkerställa dessa funktionsegenskaper. Underhållsintervallerna för ventilerna ska fastställas av operatören med utgångspunkt i ventilernas driftvillkor.

6 Demontering

Utöver de allmänna riktlinjerna för montering är det viktigt att tänka på att hela anläggningen ska göras trycklös innan ventilen demonteras.

7 Reparationer

Endast företaget Goetze KG Armaturen eller fackverkstäder som auktoriserats genom detta får genomföra reparationer på säkerhetsventilerna och endast genom att använda originalreservdelar. Reparationer får endast ske med originalreservdelar.

8 Garanti

Alla ventiler kontrolleras innan de lämnar fabriken. Vår garanti innebär att vi utför gratis reparation av delar som lämnas in till oss, om dessa bevisligen blivit funktionsodugliga i förtid till följd av material- eller fabrikationsfel. Vi betalar inte skadestånd eller liknande skadeersättning. Fabriksgarantin gäller inte om plomberingen skadats, om produkten hanterats eller installerats på felaktigt sätt, om anvisningarna i den här monterings- och bruksavisningen inte har beaktas samt om produkten smutsas ned eller slits ner normalt.

Bild a): Funktionstest med en profilmutter

Bild b): Funktionstest med lättverksarm

Bild c): Bild d) Säkerhetsventil utan skyddsbälg + utan Membrane

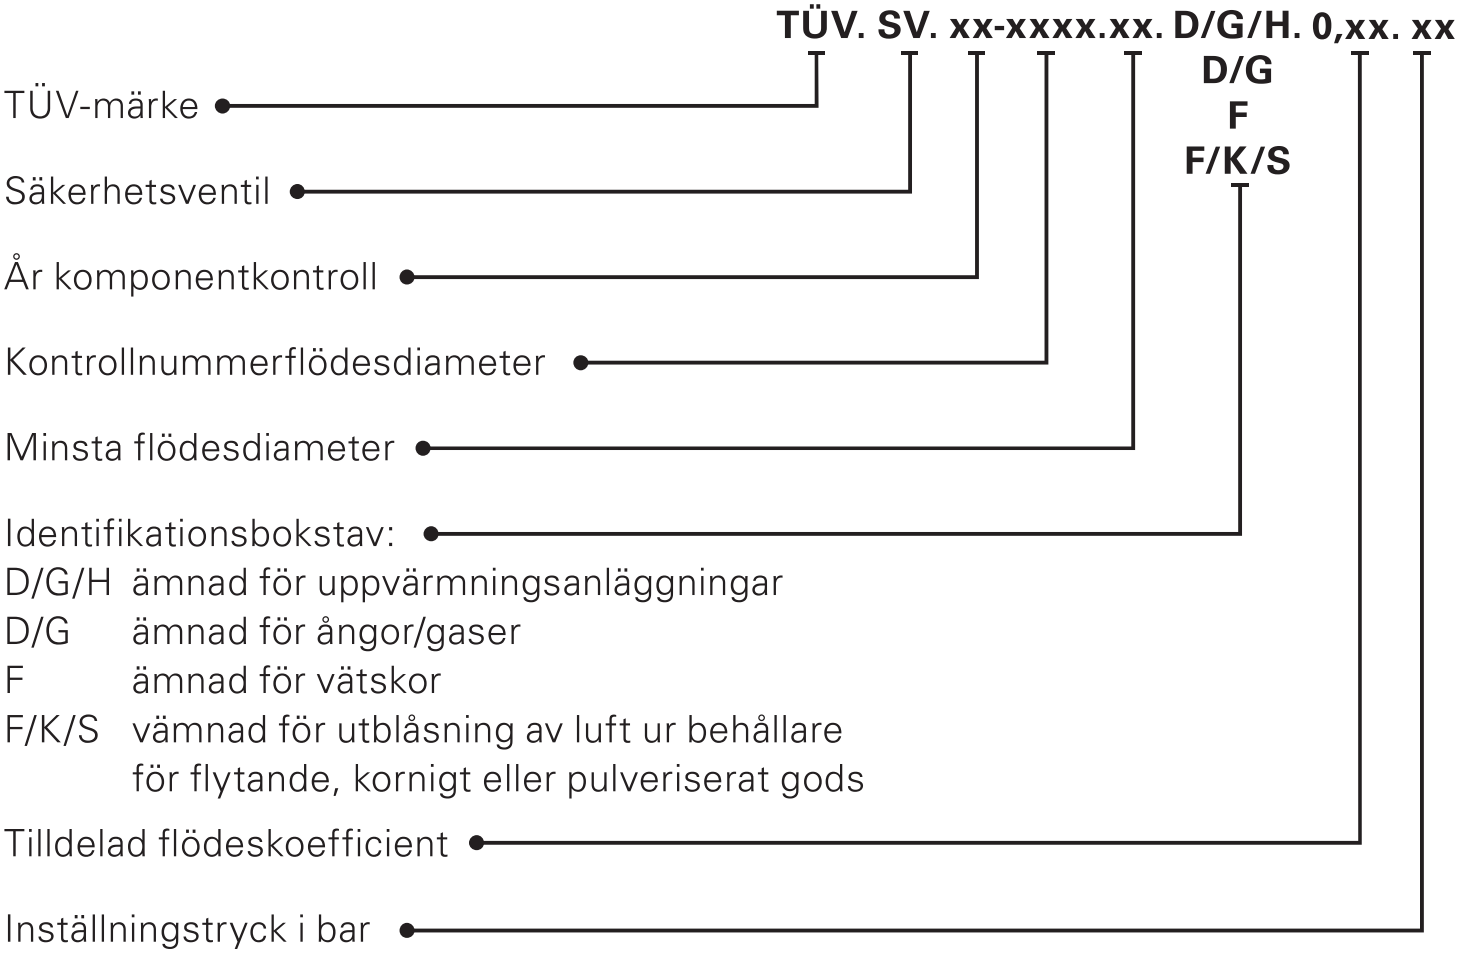

Bild d): Säkerhetsventil med skyddsbälg

9 Märkning / kontroll

D/G/H ämnad för uppvärmningsanläggningar
D/G ämnad för ångor/gaser
F ämnad för vätskor
F/K/S vämnad för utblåsning av luft ur behållare för flytande, kornigt eller pulveriserat gods

Säkerhetsventilerna kontrolleras på tryckhållfasthet och täthet, justeras in på önskat inställningstryck och plomberas.
Märkningen på typskylten resp. ventilens fjäderhuv är outplånlig. Dessutom omfattar märkningen de nödvändiga uppgifterna enligt SS-EN ISO 4126-1.

Общи указания за безопасност

bg

- Използвайте вентила само:
  - по предназначение
  - в безупречно състояние
  - с осъзнаване на безопасността и опасностите
- Да се спазва ръководството за монтаж.
- Неизправности, които могат да влошат безопасността, трябва незабавно да се отстраняват.
- Вентилите са предназначени за използване само в посочената в това ръководство за монтаж област на използване. Друго или надхвърлящо това използване се счита за не по предназначение.
- С отстраняването на пломбата се губи фабричната гаранция.
- Всички монтажни работи трябва да се извършват от оторизирани специалисти.

Všeobecné bezpečnostní pokyny

cs

- Používejte ventil pouze:
  - v souladu s určením
  - v bezvadném stavu
  - bezpečně a s ohledem na možné nebezpečí
- Dodržujte pokyny uvedené v návodu na montáž.
- Poruchy, které mohou omezit bezpečnost, se musí okamžitě odstranit.
- Ventily jsou určeny pouze pro oblast použití uvedenou v tomto návodu na montáž. Jiné použití nebo použití přesahující stanovený rozsah je v rozporu s určením.
- Odstraněním plomby zaniká záruka výrobce.
- Všechny montážní práce musí provádět autorizovaný odborný personál.

Generelle sikkerhedsanvisninger

da

- Brug kun ventilen:
  - formålsbestemt
  - i upåklagelig tilstand
  - sikkerheds- og farebevidst
- Følg monteringsvejledningen.
- Fejl, der kan påvirke sikkerheden, skal omgående afhjælpes.
- Ventilerne er udelukkende beregnet til det i denne monteringsvejledning anførte anvendelsesområde. En anden eller derudover gående anvendelse anses som ikke-formålsbestemt.
- Fabriksgarantien bortfalder, hvis plomberingen fjernes.
- Alle montagearbejder skal udføres af autoriseret fagpersonale.

Γενικές υποδείξεις ασφαλείας

el

- Να χρησιμοποιείτε αυτή τη βαλβίδα μόνο:
  - με τον ενδεδειγμένο τρόπο
  - εφόσον βρίσκεται σε άψογη κατάσταση
  - με γνώση της ασφάλειας και των κινδύνων
- Πρέπει να λαμβάνετε υπόψη τις οδηγίες τοποθέτησης.
- Βλάβες οι οποίες θα μπορούσαν να επηρεάσουν δυσμενώς την ασφάλεια, πρέπει να εξαλείφονται αμέσως.
- Οι βαλβίδες προορίζονται αποκλειστικά για τον τομέα χρήσης που αναφέρεται στις παρούσες οδηγίες τοποθέτησης. Άλλη χρήση θεωρείται ως μη ενδεδειγμένη.
- Αφαιρώντας την εργοστασιακή σφράγιση παύει να ισχύει η εργοστασιακή εγγύηση.
- Όλες οι εργασίες συναρμολόγησης πρέπει να εκτελούνται από ιαπιστευμένο εξειδικευμένο προσωπικό.

Üldised ohutusjuhised

et

- Kasutage klappi ainult:
  - nagu ettenähtud
  - kui see on töökorras
  - ohutust ja ohtusid teadvustades
- Jälgida tuleb paigaldamisjuhiseid.
- Vead, mis võivad mõjutada ohutust, tuleb koheselt kõrvaldada.
- Klapid on valmistatud kasutamiseks ainult käesolevates paigaldamisjuhistes toodud kasutuspiirkondades. Kogu muud kasutamist või laiendatud kasutamist loetakse vääraks.
- Plommi eemaldamine toob kaasa tehasepoolse garantii lõppemise.
- Kogu paigaldustöö tuleb läbi viia selleks volitatud professionaalide poolt.

Yleiset turvallisuusohjeet

fi

- Käytä venttiiliä vain:
  - määräysten mukaisesti
  - moitteettomassa kunnossa
  - turvallisuuden ja vaarat huomioon ottaen
- Asennusohjetta on noudatettava.
- Turvallisuuden vaarantavat häiriöt on korjattava välittömästi.
- Venttiilit on tarkoitettu ainoastaan tässä asennusohjeessa mainittuun käyttöalueeseen. Muunlainen tai tämän ylittävä käyttö katsotaan määräystenvastaiseksi
- Jos sinetit poistetaan, tehdastakuu ei ole enää voimassa.
- Valtuutetun ammattitaitoisen henkilöstön on tehtävä kaikki asennustyöt.

General safety instructions

ga

- Only use the valve:
  - as intended
  - in proper condition
  - with safety- and danger awareness
- The installation instructions are to be observed.
- Faults that could affect safety must be rectified immediately.
- Valves are exclusively designed for the areas of use listed in these installation instructions. Any other use or extended use is considered improper.
- Removal of the seal will void the factory warranty.
- All installation work is to be performed by authorized professionals.

Opće sigurnosne napomene

hr

- Ventil koristiti samo:
  - za navedenu namjenu
  - u besprijekornom stanju
  - uzimajući u obzir sigurnost i moguće opasnosti
- Uvijek poštujte upute za postavljanje.
- Sve smetnje koje bi mogle ugroziti sigurnost, moraju se odmah otkloniti.
- Ventili su namijenjeni isključivo za raspon primjene, opisan u ovim uputama za postavljanje. Druga ili posredna mogućnost uporabe smatra se nepropisnom.
- Jamstvo proizvođača za podešenost ventila postaje ništavno i nevažeće ako se ukloni zapečaćena kapa.
- Sve montažne radove mora obaviti ovlašteno stručno osoblje.

Avvertenze generali sulla sicurezza

it

- Usare la valvola esclusivamente:
  - per il suo scopo specifico
  - in condizioni perfette
  - prestando attenzione a sicurezza e possibili rischi
- Attenersi sempre alle istruzioni per l'installazione.
- Eliminare immediatamente eventuali difetti che possono pregiudicare la sicurezza.
- Le valvole sono progettate esclusivamente per il campo d'impiego indicato in queste istruzioni per l'installazione. Qualsiasi uso diverso o che esuli da questo campo d'impiego viene considerato come improprio.
- Con la rimozione della piombatura, la garanzia del fabbricante decade.
- Tutti i lavori di montaggio devono essere eseguiti da personale specializzato appositamente autorizzato.

Pagrindiniai saugaus darbo nurodymai

lt

- Vožtuvą naudokite tik:
  - pagal paskirtį
  - geros būklės
  - laikydamiesi saugos taisyklių ir žinodami apie gresiantį pavojų.
- Būtina vadovautis montavimo nurodymais.
- Saugai įtakos galinčius turėti gedimus būtina nedelsiant pašalinti.
- Vožtuvai yra išskirtinai pagaminti tik šiose montavimo instrukcijose nurodytoms naudojimo paskirtims. Bet koks kitas jų naudojimas yra netinkamas.
- Pašalinus sandariklį, garantija nebegalioja.
- Visus montavimo darbus turi atlikti tik įgalioti specialistai.

Vispārīgie drošības norādījumi

lv

- Lietojiet ventili tikai:
  - atbilstoši priekšrakstiem
  - nevainojamā stāvoklī
  - atbilstoši drošības noteikumiem un apdraudējumu brīdinājumiem
- Jāņem vērā montāžas instrukcija.
- Traucējumi, kuri var ietekmēt drošību, nekavējoties jānovērš.
- Ventiļi ir paredzēti tikai montāžas instrukcijā paredzētajai lietojuma jomai. Cita, tajā neminēta izmantošana uzskatāma par priekšrakstiem neatbilstošu.
- Noņemot plombu, zūd rūpnīcas garantija.
- Visi montāžas darbi jāveic autorizētiem speciālistiem.

Struzzjonijiet ġenerali dwar is-sikurezza

mt

- Uża biss il-valv:
  - kif maħsub
  - f'kundizzjoni xierqa
  - b'għarfien dwar is-sikurezza u l-periklu
- L-istruzzjonijiet tal-installazzjoni għandhom jiġu obduti.
- Ħsarat li jistgħu jaffettwaw is-sikurezza għandhom jiġu kkoreġuti minnufih.
- Il-valvi huma ddisinjati esklussivament għaż-żoni ta' użu elenkati f'dawn l-istruzzjonijiet ta' installazzjoni. Kwalunkwe użu ieħor jew kwalunkwe użu estiż huwa meqjus mhux xieraq.
- It-tneħħija tas-siġill irendi l-garanzija tal-fabbrika nulla.
- Ix-xogħol kollu ta' installazzjoni għandu jsir minn professjonisti awtorizzati.

Algemene veiligheidsinformatie

nl

- Gebruik de klep alleen:
  - voor het gespecificeerde doel
  - in een onberispelijke toestand
  - met inachtneming van de veiligheid en de mogelijke gevaren
- Volg altijd de montage-instructies.
- Eventuele defecten die van invloed kunnen zijn op een veilige werking van de klep moeten onmiddellijk worden verholpen.
- De kleppen zijn exclusief ontwikkeld voor de toepassingen die in deze installatie-intructies zijn beschreven. Gebruik dat afwijkt van of zich verder uitstrekt dan de genoemde toepassingen wordt beschouwd als oneigenlijk gebruik.
- De fabrieksgarantie vervalt als de afdichting wordt verwijderd.
- Alle montagewerkzaamheden dienen te worden uitgevoerd door daartoe bevoegd gespecialiseerd personeel.

Generelle sikkerhetsanvisninger

no

- Bruk ventilen kun:
  - som tiltenkt
  - i feilfri tilstand
  - sikkerhets- og farebevisst
- Det skal tas hensyn til monteringsanvisningene.
- Forstyrrelser som kan påvirke sikkerheten, skal utbedres omgående.
- Ventilene er utelukkende ment for det bruksområdet som er oppført i denne monteringsanvisningen. All annen bruk eller bruk utover dette gjelder som feil bruk.
- Når plomberingen fjernes, opphører fabrikkgarantien.
- Alle monteringsarbeider skal gjennomføres av autorisert fagpersonell.

Informacje ogólne na temat bezpieczeństwa

pl

- Zawór należy stosować wyłącznie:
  - w sposób zgodny z przeznaczeniem
  - jeśli znajduje się w nienagannym stanie
  - przy uwzględnieniu bezpieczeństwa i zagrożeń
- Przestrzegać instrukcji montażu.
- Niezwłocznie usuwać usterki, które mogą zagrażać bezpieczeństwu.
- Zawory są przeznaczone wyłącznie do użytku w zakresie zastosowania określonym w niniejszej instrukcji montażu. Inne lub wykraczające poza ten zakres użycie jest użyciem niezgodnym z przeznaczeniem.
- Usunięcie plomby skutkuje wygaśnięciem gwarancji udzielonej przez producenta.
- Wszystkie prace montażowe należy zlecać autoryzowanemu, specjalistycznemu personelowi.

Indicações gerais de segurança

pt

- A válvula só pode ser utilizada:
  - de acordo com a finalidade prevista
  - se estiver em perfeitas condições
  - de forma consciente em relação à segurança e aos perigos
- É obrigatório observar as instruções de instalação.
- As anomalias que possam comprometer a segurança têm de ser reparadas de imediato.
- As válvulas destinam-se exclusivamente à área de aplicação especificada nestas instruções de instalação. Utilizações diferentes daquelas referidas não correspondem à finalidade prevista.
- A remoção do selo resulta na anulação da garantia da fábrica.
- Todos os trabalhos de montagem têm de ser realizados por técnicos autorizados.

Instrucţiuni generale de siguranţă

ro

- Utilizaţi supapa doar:
  - în mod conform
  - în stare ireproşabilă
  - cu conştientizarea problemelor de siguranţă şi a pericolelor
- Se vor respecta instrucţiunile de montare.
- Defecţiunile ce pot afecta siguranţa trebuie remediate imediat.
- Supapele au fost construite exclusiv în scopul descris în aceste instrucţiuni. Orice altă utilizare este considerată neconformă.
- Îndepărtarea sigiliului duce la pierderea garanţiei.
- Toate lucrările de montaj se vor face de către personal de specialitate.

Общая информация по технике безопасности

ru

- Клапан нужно использовать только:
  - в предусмотренных целях
  - если клапан находиться в безупречном состоянии
  - учитывая меры безопасности и возможные опасности
- Всегда соблюдайте инструкцию по установке.
- Любые дефекты, которые могут повлиять на безопасную работу клапана, необходимо незамедлительно устранять.
- Клапаны предназначены исключительно для области применения, описанной в инструкции по установке. Использование в любых других целях либо вне установленного диапазона считается несоответствующим.
- Гарантия производителя аннулируется при нарушении пломбы.
- Все работы по сборке должен выполнять только авторизованный персонал.

Полное техническое руководство по эксплуатации можно скачать здесь:
http://www.goetze-armaturen.de/ru/servisskachivanie/instrukcii-po-ehkspluatacii/

Všeobecné bezpečnostné pokyny

sk

- Používajte ventil iba:
  - podľa predpisov
  - v bezchybnom stave
  - s uvedomovaním si bezpečnosti a nebezpečenstiev
- Dodržiavajte montážny návod.
- Poruchy, ktoré by mohli negatívnym spôsobom ovplyvniť bezpečnosť, sa musia bezodkladne odstrániť.
- Ventily sú určené výlučne na používanie uvedené v tomto montážnom návode. Iné používanie alebo používanie nad rámec návodu sa považuje za používanie proti predpisom.
- Ak odstránite plombu, zaniká akýkoľvek nárok na záruku od našej firmy.
- Všetky montážne činnosti musí vykonať autorizovaný kvalifikovaný personál.

Splošne varnostne informacije

sl

- Ventil uporabljajte le:
  - če ustreza predvidenemu namenu
  - če je v neoporečnem stanju
  - z ozirom na zagotavljanje varnostni in na možne nevarnosti
- Vedno upoštevajte navodila za namestitev.
- Vse napake, ki bi lahko ogrožale varno delovanje ventila, je treba nemudoma odpraviti.
- Ventili so projektirani izključno za področje uporabe, opisano v teh navodilih za namestitev. Vsaka druga uporaba, ali uporaba, ki presega opisano področje uporabe, se smatra kot neprimerna uporaba.
- Z odstranitvijo plombe tovarniška garancija preneha veljati.
- Vsa monterska dela mora opraviti pooblaščeno, strokovno sposobljeno osebje.

Allmänna säkerhetsanvisningar

sv

- Ventilen får endast användas:
  - för avsett syfte
  - i felfritt skick
  - säkerhets- och riskmedvetet
- Beakta alltid monteringsanvisningen.
- Fel som kan påverka säkerheten negativt ska åtgärdas omedelbart.
- Ventilerna är avsedda endast för det användningsområde som anges i den här bruksanvisningen. Ventilerna får inte användas för något annat ändamål.
- När plomberingen brutits upphör fabriksgarantin att gälla.
- Monteringsarbeten får endast utföras av behörig fackpersonal.

Genel emniyet bilgileri

tr

- Vanayı sadece:
  - amacına uygun
  - hatasız ve arızasız bir durumda
  - emniyet ve tehlike bilinci ile kullanınız
- Kurulum talimatına dikkat edilmelidir.
- Emniyeti olumsuz etkileyebilecek arızaların derhal giderilmesi gerekmektedir.
- Vanalar sadece bu kurulum talimatında belirtilen kullanım sahası için öngörülmüştür. Başka bir amaçla veya bunun dışındaki kullanım amacına uygun kullanım olarak geçerli değildir.
- Kurşun mühürün çıkartılması durumunda fabrika tarafından verilen garanti ortadan kalkmaktadır.
- Bütün montaj çalışmalarının sadece yetkili uzman personel tarafından yapılması gerekmektedir.

461

Safety valves made of stainless steel, angle-type with threaded connections

SUITABLE FOR

Liquids	neutral and non-neutral	
Air, gases and vapours	neutral and non-neutral	
Steam		

EXAMPLES OF USE

For the protection of:
- pressure tanks and -systems for neutral / non-neutral vapours, gases and liquids
- steam boilers and steam plants

Please observe plant-specific regulations and use of appropriate valve version and sealing material.

- chemical plants, biogas plants
- desalination plants
- process equipment construction and medical technology
- shipbuilding industry and marine equipment
- secondary areas in the food-, beverage-, pharmaceutical- and cosmetics-industries
- offshore-applications

Safety valves are set and sealed at the factory.

CE 0035 UKCA 0168 TS EAC

MATERIAL

EDELSTAHL Rostfrei

SPECIFICATION

1/4“ – 1/2“	– 60°C to + 225°C depending on version	0,5 – 70 bar

APPROVALS

TÜV-Type test approval 2061	**D/G, F**
EU type examination	**S/G, L**
TSG ZF001-2006	**D/G (S/G), F (L)**
TR ZU 032/2013 - TR ZU 010/2011	**D/G (S/G), F (L)**

Requirements

AD 2000 Data sheet A2	PED 2014/68/EU
TRD 421	UK PESR 2016 No. 1105
DIN EN ISO 4126-1	

Classification society

DNV	DNV

MATERIALS

Component	Material	DIN EN	ASME
Inlet body	Stainless steel	1.4404	316 L
Outlet body	Stainless steel	1.4408	CF8M
Internal parts	Stainless steel	1.4404	316 L
Spring	Stainless steel	1.4310	302

C63-AQU-QIX-002 398 / 917

s	Standard, non-gastight version of the spring housing	for neutral media without counter pressure, not for medium in combination GF
t	gastight version of spring housing	for neutral and non-neutral media, not counter pressure compensated. The environment is protected from being affected by the medium.

■ MEDIUM

G	gaseous	Air, vapours, gases and steam
F	liquid	The temperature of the medium under atmospheric pressure must not reach boiling point
GF	gaseous and liquid	Air, vapours, gases, steam and liquids Only available as gastight version of the spring housing

■ TYPE OF LIFTING MECHANISM

K	Standard with twist-type lifting mechanism, non-gastight version
L	Lifting lever, non-gastight version
O	without lifting device, standard for gastight version

■ AVAILABLE NOMINAL DIAMETERS AND CONNECTION SIZES

Nominal diameter DN		**8**	**10**	**15**
Inlet		1/4“ (8)	3/8“ (10)	1/2“ (15)
Outlet	1/2“ (15)	■	■	■

■ TYPE OF CONNECTION INLET / OUTLET THREADED CONNECTIONS

m / f	Standard	Male thread BSP-P / Female thread BSP-P	DIN EN ISO 228-1 / DIN EN ISO 228-1

Other connection types possible on request

■ SEALS

PTFE	Polytetrafluoroethylene	Flat seal up to 25 bar	–60°C to +225°C
PTFE+Kohle	Polytetrafluoroethylene + carbon	Flat seal from 25,1 bar	–60°C to +225°C

Coefficient of discharge α_w i.e. K_{dr} as a function of the relation between the pressures p_{a0} / p_0 of vapours and gases

$$\frac{p_{a0}}{p_0} = \frac{\text{counter pressure bar(a)}}{\text{blow-off pressure bar(a)}}$$

p_{atm} = ambient i.e. atmospheric pressure = 1,01325 bar(a)

Example to determine the coefficient of discharge α_w i.e. K_{dr} in relation to the set-pressure p_{set}

Set-pressure	Blow-off pressure
p_{set} bar(g)	p_0 bar(a)
≤ 1	p_{set} + p_{atm} + 0,1 bar
> 1	p_{set} x 1,1 + p_{atm}

For a safety valve set at = 0,5bar(g) and blowing-off into the enviroment the blow-off pressure is determined as follows:

Set-pressure	0,5	bar(g)
+ Atmospheric pressure	1,01325	bar(a)
+ permissable overpressure	0,1	bar(g)
~ Blow-off pressure	1,61	bar(a)

Consequently:

$$\frac{p_{a0}}{p_0} = \frac{1{,}01325 \text{ bar(a)}}{1{,}61 \text{ bar(a)}} = 0{,}72$$

and extracted from the chart α_w i.e. K_{dr} = 0,56 at d_0=8,0mm

Units:
bar(a) ≙ absolute pressure - pressure in relation to absolute vacuum (zero), e.g. p_{atm} = 1,01325 bar(a)
bar(g) ≙ overpressure - pressure above i.e. in relation to p_{atm} = 1,01325 bar(a)

Discharge pipe

☐ Discharge pipe

Errors:

✖ Back pressure - pb cannot be computed reliably. Please enter Back pressure - pb manually.

Hint:

- Narrowest flow cross-section - A0 (28.27 mm^2) is at least 50% higher than Required flow cross-section for Kdr - A0,min (14.91 mm^2). If necessary, select a smaller valve.
- Due to the high flow velocity, the pressure at the valve outlet is higher than the superimposed back pressure.

Confirmation:

- The calculation of the fluid data is done thermodynamically by means of NIST-REFPROP

Missing input data:

- Missing parameter: Operating temperature - tOp
- Missing parameter: Operating pressure - pOp

Additional information for use in the hazardous area (ATEX Directive 2014/34/EU)

For Bürkert devices with code **PX04 ATEX II 3 GD** follow the instructions in this additional information as well as the respective operating instructions concerning use in the potentially explosive area.

Devices for installation in control cabinet or housing

The control cabinet or the additional housing must satisfy the mechanical strength in accordance with EN 60079-0 and IP protection class in accordance with EN 60529 for the application area:

- Category 3G: at least protection class IP54.
- Category 3D, non-conductive dust: at least protection class IP5X.
- Category 3D, conductive dust: at least protection class IP6X.

(Basic Safety Instructions, see page 2).

Zusatzinformation für den Einsatz im Ex-Bereich (ATEX Richtlinie 2014/34/EU)

Bei Bürkert Geräten mit dem Code **PX04 ATEX II 3 GD** müssen beim Einsatz im explosionsgefährdeten Bereich zusätzlich zur jeweiligen Bedienungsanleitung die Hinweise dieser Zusatzinformation beachtet werden:

Geräte zum Einbau in Schaltschrank oder Gehäuse

Der Schaltschrank oder das Gehäuse muss die für den Einsatzbereich geforderte mechanische Festigkeit nach EN 60079-0 und IP-Schutzart nach EN 60529 erfüllen:

- Kategorie 3G: mindestens Schutzart IP54.
- Kategorie 3D, nicht leitfähige Stäube: mindestens Schutzart IP5X.
- Kategorie 3D, leitfähige Stäube: mindestens Schutzart IP6X.

(Grundlegende Sicherheitshinweise, siehe Seite 3).

Information supplémentaire concernant l'utilisation dans une zone à risque d'explosion (Directive ATEX 2014/34/UE)

Pour les appareils Bürkert avec le code **PX04 ATEX II 3 GD** vous devez, en cas d'utilisation dans des zones à risque d'explosion, respecter, en plus du manuel d'utilisation correspondant, également les indications de cette information supplémentaire.

Appareils pour montage dans une armoire électrique ou dans un boîtier

L'armoire électrique ou le boîtier supplémentaire doit satisfaire à la résistance mécanique exigée pour le domaine d'application selon EN 60079-0 et au type de protection IP selon EN 60529:

- Catégorie 3G : au moins type de protection IP54.
- Catégorie 3D, poussières non conductibles : au moins type de protection IP5X.
- Catégorie 3D, poussières conductibles : au moins type de protection IP6X.

(Consignes de sécurité fondamentales voir page 4).

Supplement 1702/03_EU-ML_00809637 / Original: DE

MAN 1000159578 ML Version: E Status: RL (released | freigegeben) printed: 04.03.2019

Basic Safety Instructions

DANGER!

Risk of explosion!

To avoid the risk of explosion, follow not only the basic safety instructions in the respective operating instructions, but also observe the following information concerning operation in the hazardous area:

- Installation, operation and maintenance may be performed by qualified technicians only.
- Observe the applicable safety regulations (also national safety regulations) as well as the general regulations of technology concerning installation and operation.
- Do not repair the device yourself, but replace it with an equivalent device. Repairs may be performed by the manufacturer only.
- Do not expose the device to mechanical and/or thermal stresses/influences which exceed the limits described in the operating instructions.

Observe the specifications relating to temperature class and ambient temperature on the rating plate.

Do not use the devices with gases or dust which have a lower ignition temperature than specified on the rating plate

Safety instructions for installation and maintenance

DANGER!

Risk of explosion!

To avoid the risk of explosion, observe the following information when performing installation and maintenance in the hazardous area:

- Do not open the housing of the device when hazardouse atmosphere exist.
- To avoid an electrostatic charge, wipe the housing surface with a damp cloth only.
- Use only device sockets, cable and line entries which are authorized for the particular application area and are screwed together according to the appropriate installation instructions.
- If the cable gland is pre-assembled, install it according to the installation instructions supplied by the manufacturer of the screw connection.
  Before start-up, check whether the cable gland was installed in the hazardous area as described in the appropriate installation instructions.
- Seal all cable glands which are not required with ex-approved screw plugs.
- Do not open the housing of the device for operating inside switches when hazardous atmosphere exist.
  While bringing into service no hazardous atmosphere shall exist.

MAN 1000159578 ML Version: E Status: RL (released | freigegeben) printed: 04.03.2019

Grundlegende Sicherheitshinweise

GEFAHR!

Explosionsgefahr!

Zur Vermeidung der Explosionsgefahr muss für den Betrieb im Ex-Bereich zusätzlich zu den grundlegenden Sicherheitshinweisen in der jeweiligen Bedienungsanleitung Folgendes beachtet werden:

- Installation, Bedienung und Wartung darf nur qualifiziertes Fachpersonal durchführen.
- Die geltenden Sicherheitsvorschriften (auch nationale Sicherheitsvorschriften) sowie die allgemeinen Regeln der Technik beim Errichten und Betreiben einhalten.
- Das Gerät nicht selbst reparieren, sondern durch ein gleichwertiges Gerät ersetzen. Reparaturen darf nur der Hersteller durchführen.
- Das Gerät keinen mechanischen und/oder thermischen Beanspruchungen/Einflüssen aussetzen, welche die in der Bedienungsanleitung beschriebenen Grenzen überschreiten.

Die Angaben zu Temperaturklasse und Umgebungstemperatur auf dem Typschild beachten.

Die Geräte nicht bei Gasen bzw. Stäuben einsetzen, die eine niedrigere Zündtemperatur besitzen als auf dem Typschild angegeben.

Sicherheitshinweise für die Montage und Wartung

GEFAHR!

Explosionsgefahr!

Zur Vermeidung der Explosionsgefahr muss bei der Montage und Wartung im Ex-Bereich Folgendes beachtet werden:

- Das Gehäuse des Geräts nur öffnen, wenn keine Ex-Atmosphäre vorhanden ist.
- Zur Vermeidung elektrostatischer Aufladung die Gehäuseoberfläche nur mit einem feuchten Tuch reinigen.
- Nur Gerätesteckdosen, Kabel- und Leitungseinführungen verwenden, die für den jeweiligen Einsatzbereich zugelassen und entsprechend der dazugehörigen Montageanleitung verschraubt sind.
- Vormontierte Kabelverschraubungen entsprechend der vom Hersteller der Verschraubung mitgelieferten Montageanleitung einbauen.
  Vor der Inbetriebnahme im Ex-Bereich prüfen, ob die Kabelverschraubung wie in der dazugehörigen Montageanleitung beschrieben eingebaut wurde.
- Alle nicht benötigten Kabelverschraubungen mit Ex-zugelassenen Verschlussschrauben verschließen.
- Das Öffnen des Gehäuses, um innenliegende Schalter zu bedienen, ist innerhalb des Ex-Bereichs nicht zulässig. Während der Inbetriebnahme darf keine Ex-Atmosphäre vorhanden sein.

MAN 1000159578 ML Version: E Status: RL (released | freigegeben) printed: 04.03.2019

Consignes de sécurité fondamentales

DANGER!

Risque d'explosion !

Afin d'éviter tout risque d'explosion, vous devez respecter, pour l'utilisation en zone à risque d'explosion, en plus des consignes de sécurité fondamentales notées dans le manuel d'utilisation correspondant, les consignes suivantes :

- L'installation, la commande et la maintenance doivent être effectuées exclusivement par un personnel spécialisé et qualifié.
- Respecter les consignes de sécurité en vigueur (y compris les consignes de sécurité nationales) ainsi que les règles techniques générales lors de la configuration et de la conduite.
- Ne jamais réparer l'appareil vous même, mais le remplacer par un appareil de même type. Seul le fabricant est habilité à effectuer les réparations.
- Ne pas exposer l'appareil à des contraintes/influences mécaniques et/ou thermiques supérieures aux limites figurant dans les instructions de service.

Respecter les indications relatives à la classe de température et à la température ambiante figurant sur la plaque signalétique.

Ne pas utiliser les appareils en présence de gaz ou de poussières présentant une température d'inflammation inférieure à celle figurant sur la plaque signalétique.

Consignes de sécurité relatives au montage et à la maintenance

DANGER!

Risque d'explosion !

Afin d'éviter tout risque d'explosion, vous devez respecter, lors du montage et de la maintenance en zone à risque d'explosion, les indications suivantes :

- Ne pas ouvrir le boîtier de l'appareil en presence d'atmosphère explosive.
- Nettoyer la surface du boîtier à l'aide d'un chiffon humide exclusivement afin d'éviter toute charge électrostatique.
- N'utiliser que des prises d'appareil, des passages de câbles et de conducteurs autorisés pour les domaines d'utilisation correspondants et vissés conformément aux instructions de montage fournies.
- Monter les raccords de câbles prémontés, le cas échéant, conformément aux instructions de montage du fabricant des raccords.
- Vérifier, avant toute mise en service en zone à risque d'explosion, que les raccords vissés ont été montés conformément à la description du manuel d'utilisation correspondant.
- Obturer tous les raccords vissés non utilisés avec des embouts de fermeture homologués Ex.
- Ne pas ouvrir le boîtier de l'appareil pour manipuler les switchs en presence d'atmosphère explosive. Faire la mise en service hors atmosphère explosive.

bürkert
FLUID CONTROL SYSTEMS

Type 6516 – 6519

3/2, 5/2 or 5/3 way solenoid valve
3/2-, 5/2- bzw. 5/3-Wege-Magnetventil
Électrovanne 3/2, 5/2 ou 5/3 voies

Operating Instructions

Bedienungsanleitung
Manuel d'utilisation

MAN 1000292404 EN Version: AStatus: RL (released | freigegeben) printed: 22.09.2017

1 THE OPERATING INSTRUCTIONS

C63-AQU-QIX-002 412 / 917

The operating instructions contain important information.

- Read the operating instructions carefully and follow the safety instructions in particular.
- The operating instructions must be available to every user.
- The liability and warranty for Type 6516 – 6519 are not applicable if the operating instructions are not followed.

1.1 Symbols

- Designates instructions for risk prevention.

→ Designates a procedure which you must carry out.

Warning of serious or fatal injuries:

DANGER!
In case of imminent danger.

WARNING!
In case of potential danger.

Warning of minor or moderately severe injuries:

CAUTION!

Warning of damage:

NOTE!

1.2 Definition of the term "device"

The term "device" used in the instructions always refers to the Type 6516 – 6519.

2 INTENDED USE

Incorrect use of the solenoid valve Type 6516 – 6519 may be a hazard to people, nearby equipment and the surrounding area.

- The device is used exclusively as 3/2, 5/2 or 5/3-way solenoid valve for the media permitted according to the data sheet of the corresponding type.
- Provided the cable plug is connected and installed correctly, e.g. Bürkert Type 2506 (for Type 6516/6517) or Type 2508 (for Type 6518/6519), the device satisfies degree of protection IP65 in accordance with DIN EN 60529 / IEC 60529.
- In a hazardous area, the device may be used only in accordance with the specification on the separate Ex type label. For the use, observe the additional information enclosed with the device with safety instructions for the EX area.
- Devices without a separate Ex type label may not be used in a potentially explosive area.
- Use according to the authorized data, operating conditions and conditions of use specified in the contract documents, the data sheet and the operating instructions.
- Correct transport, correct storage and installation as well as careful use and maintenance are essential for reliable and problem-free operation.
- Use the device only for its intended purpose.

3 BASIC SAFETY INSTRUCTIONS

C63-AQU-QIX-002 413 / 917

These safety instructions do not make allowance for any contingencies and events which may arise during assembly, operation and maintenance.

Danger – high pressure!

- Turn off the pressure and vent the lines before loosening lines or valves.

Risk of electric shock!

- Before reaching into the device or the equipment, switch off the power supply and secure to prevent reactivation!
- Observe applicable accident prevention and safety regulations for electrical equipment!

Risk of injury from greatly accelerated device parts!

- Before pressurizing the valve, check that all screw connections and screw joints are tight and secure.

Risk of burns/danger of fire during long-term operation due to hot device surface!

- Keep the device away from highly flammable substances and media and do not touch with bare hands.

Risk of injury due to malfunction of valves with alternating current (AC)!

Sticking core causes coil to overheat, resulting in a malfunction.

- Monitor process to ensure flawless functioning.

To prevent injuries/damage:

- Never adjust the screws which are locked with red paint.
- Do not make any internal or external changes to the device and safeguard against unintentional actuation.
- Installation and maintenance work may be carried out only by authorized technicians with the appropriate tools.
- After an interruption in the electrical or pneumatic supply, ensure that the process is restarted in a defined or controlled manner.
- Do not subject the housing to mechanical loads.
- Observe the general accepted technical rules.

3.1 Restrictions

If exporting the device, observe any existing restrictions.

4 STRUCTURE AND FUNCTION

The valves can be mounted in blocks on the modular pneumatic base rail Type MP07.

4.1 Structure of the standard designs

4.1.1 Connections

All connections are identified by numbers on the valve surface. These refer to the following functions:

Number	Function
1	Pressure inlet port
2 and 4	Outlet port
3 and 5	Exhaust port
12 and 14	Control pressure port

4.1.2 Type 6516 (3/2-way), Type 6517 (5/2-way)

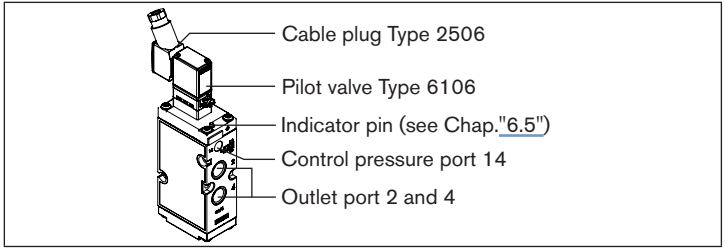

Fig. 1: Valve structure Type 6516/6517 (in the example Type 6517)

4.1.3 Type 6518 (3/2-way), Type 6519 (5/2-way)

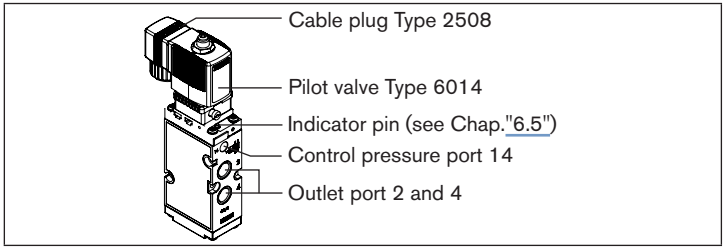

Fig. 2: Valve structure Type 6518/6519 (in the example Type 6519)

4.1.4 5/3-way function, 5/2-way function impulse

C63-AQU-QIX-002 415 / 917

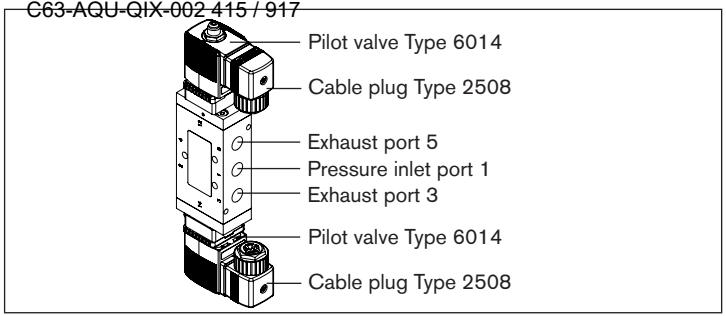

Fig. 3: Valve structure 5/3-way function, 5/2-way function impulse

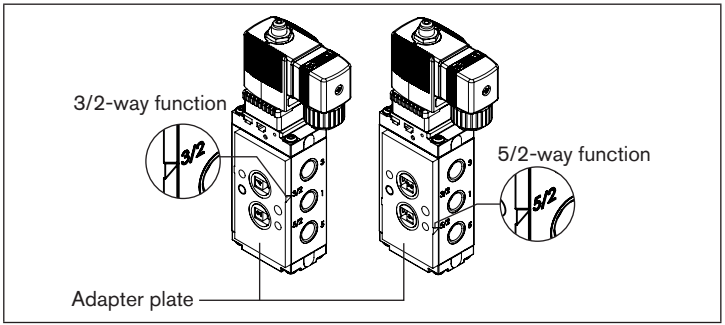
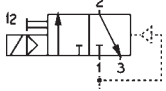
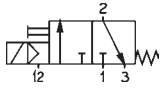
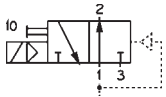
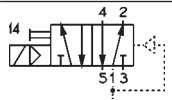
4.1.5 Type 6517 and 6519 with plastic body and NAMUR flange with adapter plate

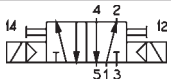


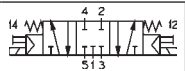












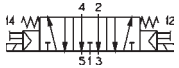


Fig. 4: Valve structure NAMUR in the example Type 6519

The valves Type 6517 and 6519 Namur with plug tabs at the side are supplied ex works, 5/2-way function. The 3/2 way function is set by turning the adapter plate 180°.

When using as 3/2-way valve, close port 3 with supplied sealing plug G1/4. When using on large actuators with fast outlet time, use a silencer instead of the sealing plug.

4.2 Operating principles

C63-AQU-QIX-002 416 / 917

C		**3/2-way valve** Normally inlet port 1 (P/NC) closed, outlet port 2 (A/OUT) conected with exhaust port 3 (R/NO).
C (MP07)		**3/2-way valve for vacuum*, with auxiliary control air** Normally inlet port 1 (P/NC) closed, outlet port 2 (A/OUT) conected with exhaust port 3 (R/NO).
D		**3/2-way valve** Normally inlet port 1 (P/NO) connected with outlet port 2 (B/OUT), exhaust port 3 (R/NC) closed.
H		**5/2-way valve** Normally inlet port 1 (P) connected with outlet port 2 (A), outlet port 4 (B) connected with exhaust port 5 (S), exhaust port 3 (R) closed.
Z		**5/2-way valve** Pulse version (2 coils)
L		**5/3-way valve** Middle position all port connections closed, inlet port 1, outlet port 4 and 2, vent of outlet ports to 5 respectively 3.
N		**5/3-way valve** Middle postion pressure inlet port 1 (P) closed, outlet ports 2 (A) and 4 (B) connected with exhaust ports 3 (R) respectively 5 (S).

* The vacuum generator must be connected to port 1.

5 TECHNICAL DATA

C63-AQU-QIX-002 417 / 917

5.1 Conformity

The solenoid valve Type 6516 – 6519 is compliant with EC directives as stated in the EC Declaration of Conformity.

5.2 Standards

The applied standards which are used to demonstrate compliance with the EC Directives are listed in the EC Prototype Examination Certificate and/or the EC Declaration of Conformity.

5.3 Type label

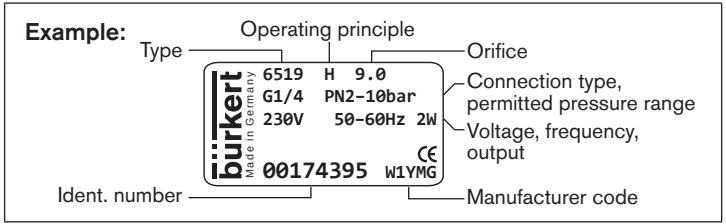

Fig. 5: Example of type label on the pilot-controlled solenoid valve Type 6519

5.4 Operating conditions

Please observe the specifications on the data sheet and on the type label.

	Types 6516 – 6519	Type 6519 for extended temperature range
Ambient temperature[1)]	–25 °C ... +55 °C	Aluminum ematalized: –40 ... + 80 °C Stainless steel: –30 ... + 80 °C
Permitted medium temp.	–10 ... +50 °C	–30 ... +80 °C
Compressed air quality	ISO 8573-1:2010, Class 7.4.4[2)]	ISO 8573-1:2010, Class 7.2.4[2)]
Permitted pressure range	Observe specifications on type label Pressure difference at least 2 bar between ports 1 and 3/5	

C63-AQU-QIX-002 418 / 917	Types 6516 – 6519	Type 6519 for extended temperature range
Degree of protection	IP65 as per DIN EN 60529 / IEC 60529 with correctly connected and fitted cable plug, e.g. Bürkert Type 2506 (Type 6516/6517) or Type 2508 (Type 6518/6519)	
Permitted media	Filtered compressed air oiled and unoiled, neutral gases	
Operating duration	Unless otherwise indicated on the type label, the solenoid system is suitable for continuous operation	

The following values must also be observed for valves with UL/UR approval:

Valve types	Fluid temperature	Ambient temperature	Fluid
6518	–10 °C...+55 °C	–10 °C...+55 °C	Air
6519			

1) *Observe temperature restrictions on account of approvals.*
2) *To prevent the expanded compressed air from freezing, its pressure dew point **must** be **at least 10 K lower than the medium temperature**.*

Important information for functional reliability during continuous operation!
If the equipment is switched off for a long period, it is recommended to activate the valves at least 1-2 per day.

Service life:
High switching frequency and high pressures reduce the service life.
The valves operate maintenance-free.

5.5 Materials

The seal materials depend on the housing materials:

Housing material	PA	AL anodized	AL ematalized	VA
Seal material	NBR, PUR	NBR	FKM, NBR	PU, NBR, FKM

5.6 External control pressure

If valves are designed for auxiliary control air, the compressed air supply must be connected to port 12 or 14 (control pressure port).
Control pressure: at least 70 % of the operating pressure to port 1 (minimum control pressure 2.5 bar)

6 ASSEMBLY

C63-AQU-QIX-002 419 / 917

6.1 Safety instructions

DANGER!

Risk of injury from high pressure in the system!

- Turn off the pressure and vent the lines before loosening lines or valves.

Risk of injury due to electrical shock!

- Before reaching into the device or the equipment, switch off the power supply and secure to prevent reactivation!
- Observe applicable accident prevention and safety regulations for electrical equipment!

WARNING!

Risk of injury from greatly accelerated device parts and unconnected whiplashing compressed air hoses!

- Before pressurizing the valve, check that all screw connections and screw joints are tight and secure.

Risk of injury from improper assembly!

- Assembly may only be carried out by authorized technicians and with the appropriate tools!

Risk of injury from unintentional activation of the system and uncontrolled restart!

- Secure system against unintentional activation.
- Following assembly, ensure a controlled restart.

6.2 Installation of the pilot valve

WARNING!

Risk of injury from leaking valve.

- Ensure that the O-rings/seals are correctly seated in the valve.

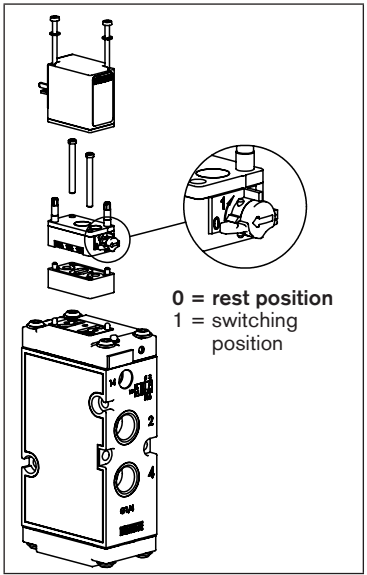
Overheating, risk of fire!

Connection of the coil without pre-assembled valve will result in overheating and destroy the coil.

- Connect the coil with pre-assembled valve only.

Danger due to electrical shock if coil incorrectly installed!

- During installation ensure that the coil is situated firmly on the housing cover so that the protective conductor connection of the coil is connected to the valve housing.



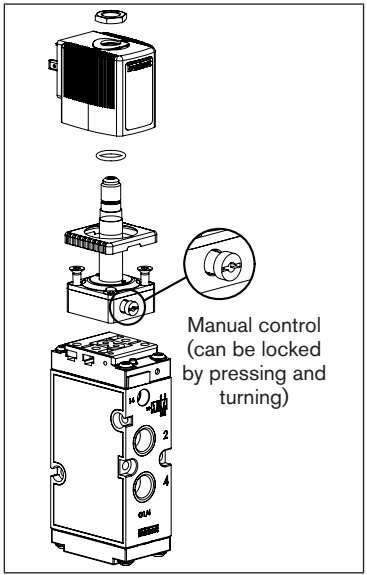
NOTE!

Caution risk of breakage!

- Do not used coil as a lever arm.

6.2.1 Installation of the pilot valve Type 6106 (for valve type 6516/6517)

C63-AQUIQX-602420517



→ Installation always in the position shown; if required, turn coil by 180°.

→ Screw the housing of the pilot valve to the housing of the main valve using 2 screws. Observe tightening torque of max. 0.5 Nm.

→ Mount solenoid coil and screw down using M2 screws. Observe tightening torque of max. 0.15 Nm.

6.2.2 Installation of the pilot valve Type 6014 (for valve type 6518/6519)

→ Screw the housing of the pilot valve to the main valve. Observe tightening torque of max. 1.5 Nm.

→ Connect the coil to the core guide tube. The coil can be turned by 4 x 90° (for block assembly only 2 x 180°).

→ Screw down the coil with a nut **using an open-end wrench** (the device may be damaged if other tools are used, e.g. pliers). Observe tightening torque of max. 5 Nm.

6.3 Pneumatic connection

WARNING!

Risk of injury from greatly accelerated device parts and unconnected whiplashing compressed air hoses!

- Before pressurizing the valve, check that all screw connections and screw joints are tight and secure.

Installation position: any, preferably with solenoid system face up.

Before connecting:

→ Check whether hose lines are dirty and clean.

→ If required, install a dirt filter upstream of the valve inlet (≤ 500 µm).

Pneumatic connection:

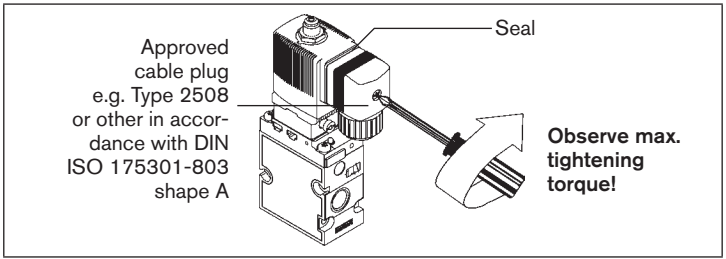
→ Hold the device by hand **on the housing** and connect to the hose line. Do not exceed the standard screw-in depth.

→ Seal with PTFE tape or elastomer seal.

→ Observe allocation of the connections (see Chapter "4.1.1 Connections", page 4).

→ Align hose lines.

6.4 Connection of cable plug to the power supply



WARNING

Risk of injury due to electrical shock!

- Before reaching into the system, switch off the electrical power supply and secure to prevent reactivation!
- Observe applicable accident prevention and safety regulations for electrical equipment!

If the protective conductor contact between the coil and housing is missing, there is a danger of electric shock!

- Always connect protective conductor.
- Check electrical continuity between coil and housing.

→ Tighten cable plug (for authorized types see data sheet), observing [illegible] (see "Tab. 1").

→ Check that seal is fitted correctly.

→ Connect protective conductor and check electrical continuity between coil and housing (see "Tab. 2").

NOTE!

If the cable plug EN 175-301-803 is designed in such a way that the screw is pointing upwards, insert a seal made of a material compatible with your process under the screw head.

Note the voltage and current type as specified on the type label.

Valve type	6516/6517	6518/6519
Cable plug Type	2506	2508
Tightening torque max. (Nm)	0.3	1

Tab. 1: Maximum tightening torque of cable plug

Pesistor	Test voltage	Test current
max. 0.1 Ω	12 V	1 A

Tab. 2: Test values protective conductor function

6.5 Pneumatic position indicator

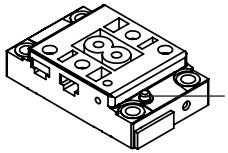


Fig. 6: Pneumatic position indicator

When the valve is switched off, the red indicator pin can be pressed in without any resistance. When the valve is actuated, the indicator pin moves out and there is perceptible resistance to pressing it in.

NOTE!

Whenever performing a function test, press in the indicator pin again.

7 DISASSEMBLY

C63-AQU-QIX-002 423 / 917

Disassembly is in reverse sequence to assembly.

8 MAINTENANCE, TROUBLESHOOTING

If the valve is used according to these operating instructions, the valve will operate maintenance-free.

8.1 Safety instructions

WARNING!

Risk of injury from improper maintenance!

- Maintenance may only be carried out by authorized technicians and with the appropriate tools!

Risk of injury due to electrical shock!

- Before reaching into the device or the equipment, switch off the power supply and secure to prevent reactivation!

Danger – high pressure!

- Turn off the pressure and vent the lines before loosening lines or valves.

Risk of injury from unintentional activation of the system and uncontrolled restart!

- Secure system against unintentional activation.
- Following maintenance, ensure a controlled restart.

8.2 Malfunctions

If malfunctions occur, check whether:

- the device has been installed according to the instructions,
- the electrical and pneumatic connections are correct,
- the device is not damaged,
- all screws have been tightened,
- the voltage and pressure have been switched on,
- the pipelines are clean.

Valve does not switch

Possible causes:

- short circuit or coil interrupted,
- core or core area dirty,
- medium pressure outside the permitted pressure range.

Valve does not close

Possible causes:

- inner compartment of the valve is dirty.

9 SPARE PARTS

CAUTION!

Risk of injury and/or damage by the use of incorrect parts!

Incorrect accessories and unsuitable spare parts may cause injuries and damage the device and the surrounding area.

▸ Use original accessories and original spare parts from Bürkert only.

9.1 Ordering spare parts

When ordering spare parts, quote the number of the spare part set (SET 1, SET 2, SET 3 – see "Fig. 7: Spare part sets", page 15) as well as the order number of your complete device.

9.2 Overview of spare part sets

C63-AQU-QIX-002 425 / 917

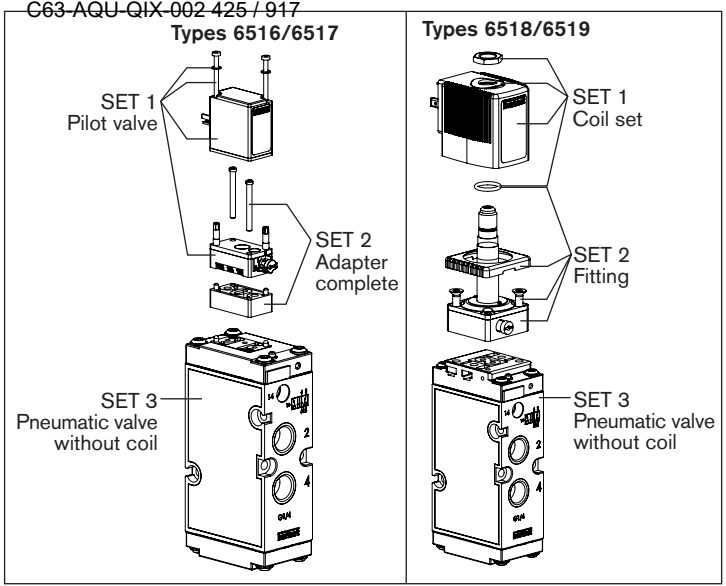

Fig. 7: Spare part sets

10 TRANSPORTATION, STORAGE, DISPOSAL

NOTE!

Transport damage!

Inadequately protected devices may be damaged during transportation.

- Protect the device against moisture and dirt in shock-resistant packaging during transportation.
- Prevent the temperature from exceeding or dropping below the permitted storage temperature.
- Protect the electrical interfaces of the coil and the pneumatic connections from damage by placing protective caps on them.

Incorrect storage may damage the device.

- Store the device in a dry and dust-free location!
- Storage temperature –40 °C ... +80 °C.

Damage to the environment caused by device components contaminated with media.

- Dispose of the device and packaging in an environmentally friendly manner!
- Observe applicable disposal and environmental regulations.

C63-AQU-QIX-002 426 / 917

EU Konformitäts-erklärung	EU Declaration of Conformity	Déclaration UE de Conformité
Originaldokument	Original document	Document original

Hersteller / Manufacturer / Constructeur:

Bürkert Werke GmbH & Co. KG
Werk 10
Christian-Bürkert-Straße 13-17
74653 Ingelfingen
www.burkert.com

Hiermit erklären wir, dass das unten beschriebene Produkt in seiner Konzipierung und Bauart sowie in der von uns in Verkehr gebrachten Ausführung den einschlägigen Harmonisierungsvorschriften der EU entspricht. Die Anhänge, die wesentlicher Bestandteil dieser Erklärung sind, enthalten weitere Angaben zur Einhaltung dieser Richtlinie(n).	We hereby declare that the product described below, in its design and construction as well as in the version that we have placed on the market, is in conformity with the relevant EU harmonization legislation. The annexes, which are an integral part of this declaration of conformity, contain further information about the conformity to this Directive(s).	Nous déclarons par la présente que le produit spécifié ci-dessous, dans son développement et sa fabrication tel que mis sur le marché par nous, est conforme à la législation d'harmonisation de l'UE applicable. Les annexes, qui font partie intégrante de cette déclaration, contiennent des informations supplémentaires sur le respect de la ou des directives.

Applied EU directive: 2016/34/EU
Equipment intended for use in potentially explosive atmospheres

Applied standards: EN 1127-1: 1997
Explosive atmospheres

EN 13463-1: 2001
Non-electrical equipment for potentially explosive atmospheres

Hy-Lok fittings are manufactured in accordance with ISO 9001 Quality Systems and appropriated National and International product standards.

Accordingly to a performed assessment of Hy-Lok Corporation we have determined that the product mentioned above does not have any own potentional source of ignition. As such the product is not covered by the Directive 2016/34/EU, must not be CE marked and must be used within the scope of intended use only as described in data

sheet and the operating and maintenance instructions.

Important note:
The fittings must be hooked up into the tubing system in electrically conducting manner to ensure proper grounding. The environmental neighborhood was not subject to Hy-Lok`s assessment is within the responsibility of the plants owner, designer, commissioner or user.

This declaration does not pertain to atmospheres outside of the scope on its validity, such as oxygen enriched atmospheres. When selecting a product, the total system design must be considered to ensure safe, trouble-free performance. Function, material compatibility, adequate ratings, proper installation, operation and maintenance are the responsibilities of the system designer and user.

HY-LOK CORPORATION

Applied EU directive: 2016/34/EU
Equipment intended for use in potentially explosive atmospheres

Applied standards: EN 1127-1: 1997
Explosive atmospheres

EN 13463-1: 2001
Non-electrical equipment for potentially explosive atmospheres

The above mentioned valves are manufactured in accordance with ISO 9001 Quality Systems and appropriate National and International product standards.

Accordingly to a performed assessment of Hy-Lok Corporation we have determined that the product mentioned above does not have any own potentional source of ignition. As such the product is not covered by the Directive 2016/34/EU, must not be CE marked and must be used within the scope of intended use only as described in data sheet and the operating and maintenance instructions.

Important note:
The valves must be hooked up into the piping/tubing system in electrically conducting manner to ensure proper grounding. Since some valves provided with non-conductive handles, special system design must be considered if the use of the product is intended in hazardous areas (particular zones), environments, or use with cetain system fluids. Stem grounding and Conductive bar assessment. This assessment is within the responsibility of the plants owner, designer, commissioner or user.

This declaration does not pertain to atmospheres outside of the scope on its validity, such as oxygen enriched atmospheres. When selecting a product, the total system design must be considered to ensure safe, trouble-free performance. Function, material compatibility, adequate ratings, proper installation, operation and maintenance are the responsibilities of the system designer and user.

Hy-Lok 105 Series

High Pressure Ball Valves for General Service

Catalog No. H-105BV
Dec. 2012

Handle with PVC Color Coat
- allows easy and quick operation with low torque and 1/4 turn to open and close
- can be operated by pneumatic actuator.

Panel Mounting and Locking Devices
- are available as options

Internally Loaded Stem with Shoulder
- prevents stem blow - out

Robust Body
- is best suited for high pressure application
- is available in diverse patterns including ; 2 - way straight, 2 - way angle, bottom entry 3 - way and side entry 3 - way.

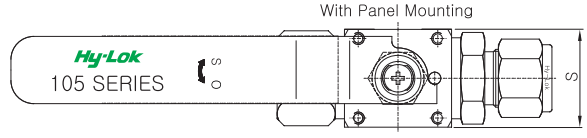
Max Orifice
- minimizes the pressure drop

Variety of End Connections
- include fractional / metric Hy - Lok tube fittings, male / female NPT, male / female ISO / BSP threads

Floating Ball Design
- ensures leak proof shut - off at high pressure

Seats and Packings
- are replaceable

Features



- **Pressure rating** up to 10,000 psig (690bar) @ 70°F(21°C)
- **Temperature rating** from -22°F to 265°F(-30°C to 130°C) with PVDF seat or from-65°F to 500°F (-54°C to 260°C) with PEEK seat
- **Small and compact design**
- **Materials available** in 316 stainless steel and alloy 400
- **100% factory tested.**

Technical Data

Materials of Construction

Description	Grade/ASTM Specification	
	Valve Body Material	
	SS316	Alloy 400
Handle	Stainless Steel with PVC Coating	
Lock Nut	Stainless Steel with Washer	
Pin	Stainless Steel	
Stem	SS316/A276	Alloy 400/B164
Stem Packing*	PTFE	
Ball*	SS316/A276	Alloy 400/B164
Seats*	PVDF (standard)	
End Connector	SS316/A276	Alloy 400/B164
End Seals*	PTFE/Viton	
Body	SS316/A479	Alloy 400/B164

Note : "*" marked are wetted parts.
Lubricant is silicone based.

Handle

- Handle is made of stainless steel with PVC coat in yellow.
- Other colors are available upon request.

Sour Gas Service

- is provided to meet NACE Standard MR - 01 - 75.

Testing

- Each valve is tested with nitrogen @ 1000psig(69bar) to max leak rate of 0.1SCCM.
- Hydrostatic shell test is performed at 1.5 times the working pressure.
- Optional tests are available upon request.

Pressure and Temperature Rating

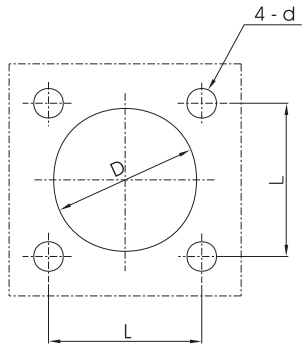
■ H1B Types

Materials			Pressure Rating @ -65°F ~ 70°F (-54°C ~ 21°C)	Temperature Rating
Seat	Stem Packing	End Seal		
PVDF (standard)	PTFE		6,000 psig (410 bar)	-22°F~265°F (-30°C~130°C)
PCTFE				-22°F~355°F (-30°C~180°C)
PEEK			10,000 psig (690 bar)	-65°F~500°F (-54°C~260°C)

■ H2B, H3B Types

Materials			Pressure Rating @ -65°F ~ 70°F (-54°C ~ 21°C)	Temperature Rating
Seat	Stem Packing	End Seal		
PVDF (standard)	PTFE	Viton	5,000 psig (340 bar)	-10°F~375°F (-23°C~191°C)
PCTFE				
PEEK			6,000 psig (410 bar)	

Note



1. The above pressure rating is for 2 - way straight pattern valves. 80% of the above rating shall be applicable to 2 - way angle pattern valves and 3 - way valves.
2. The rated pressure shown above is the maximum allowable pressure to the seat. If the system requires higher pressure to test, the valve must be in open position before and during test so as not to damage the seat.
3. When valves with Hy - Lok Fitting end connections are connected to tubing, the working pressure of tubing must be considered in the calculation of total system working pressure.

High Pressure Ball Valves 105 Series

Panel Mounting

Valve Type	Orifice	d	D	L×L
H1B	10.0	5.0	30.0	26×26
H2B	12.7	5.0	38.0	34×34
H3B	19.0	5.0	38.0	44×44

All dimensions in millimeters.

Screw Holes in valves are M4 x 6mm Depth

FLOWSERVE®

Worcester Controls

Standard 3-Piece Ball Valves

Experience In Motion

The Flowserve Worcester Controls three-piece ball valve delivers rugged, high performance reliability for a range of applications, all in an easy-to-maintain design.

A variety of pipe ends, including socket weld, screwed or butt weld ends enables these valves to be adapted to fit both standard and more unusual piping specifications while the range of seat materials handles steam, chemicals, cryogenic gases, petroleum products, caustics, abrasive materials or fluids containing solids.

As you would expect, Worcester has developed and improved the Series 44/459 over the years to maintain its position as the 8-150mm valve design which others strive to equal. The 59 and 599 series full bore versions complete the range of 3-piece valves.

Wrench

Ergonomically designed for ease of operation (locking handle available)

Actuator Mounting

Conforms to ISO 5211 for ease of actuation (smaller sizes use Worcester two hole pattern)

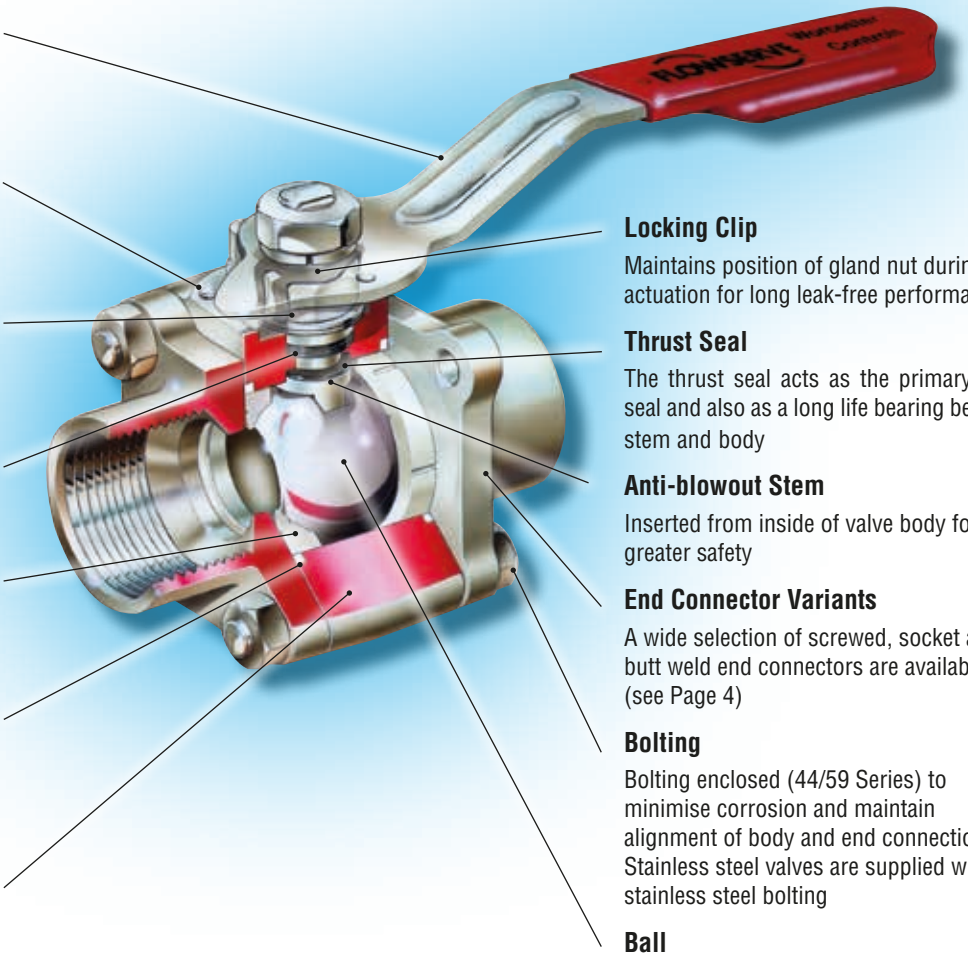
Gland Nut

Does not need to be removed for actuator mounting thereby maintaining valve integrity

Anti-static Stem Design

Ensures electrical continuity between ball and body

Seats



Wide range of seat materials to suit customer applications (see Pages 8 and 9)

Body Seals

PTFE as standard for media compatibility but can be interchanged for alternative applications

Materials of Construction

Cast body and end connectors in carbon or stainless steel (sizes 65mm and above are suitable for applications to -46 °C as standard)

Locking Clip

Maintains position of gland nut during actuation for long leak-free performance

Thrust Seal

The thrust seal acts as the primary stem seal and also as a long life bearing between stem and body

Anti-blowout Stem

Inserted from inside of valve body for greater safety

End Connector Variants

A wide selection of screwed, socket and butt weld end connectors are available (see Page 4)

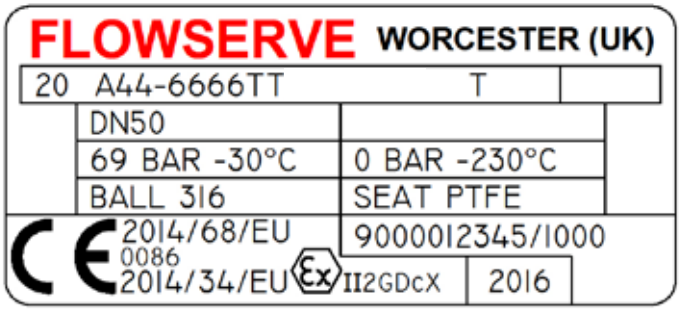
Bolting

Bolting enclosed (44/59 Series) to minimise corrosion and maintain alignment of body and end connections. Stainless steel valves are supplied with stainless steel bolting

Ball

316 stainless steel as standard with pressure equalising hole to balance cavity pressure with line pressure when valve is open.

Standards of Compliance



Worcester have always taken the lead when it comes to standards of compliance and the 3-piece valve is no exception, meeting all the mandatory requirements along with a number of others relating to product for use in the process industry.

PED 2014/68/EU

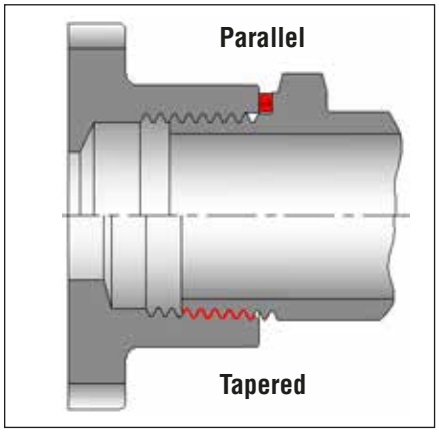
The Pressure Equipment Directive was introduced to ensure the safety and integrity of pressure containing equipment used within Europe. The Directive requires design files including calculations to ASME BPVC Sect. VIII, risk assessments, Product testing, Pressure containing components with 3.1 Certification along with supporting QA certification validated by a Notified Body.
CE marking for PED only applies to valves greater than DN25 nominal bore. Below that design files are still maintained but classified as SEP.

Atex 94/9/EC

The Atex Directive was established to prevent explosive atmospheres forming, prevent ignition and control the effect of explosions. Valves complying with the Atex requirement are CE marked with the standard designation. Worcester valves carry a rating Ex II2GDcX due to the anti-static devices used in the build.

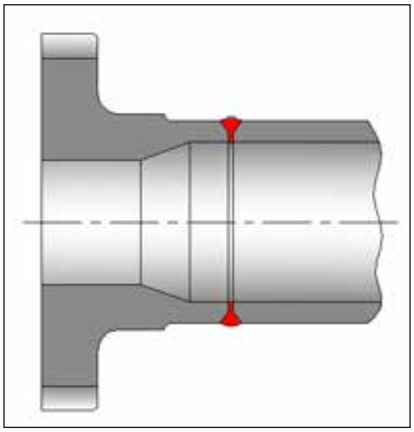
SIL (Safety Integrity Level) IEC61508

Safety Integrity is now an essential part of many process plants allowing assessments to be made based on the reliability of the equipment used within it. Worcester valves have been independently reviewed and assessed and given the rating of SIL ‘SC 3’. This allows an assembly utilising a Worcester valve to carry a maximum overall rating of SIL 3 or less if other equipment has a lower rating



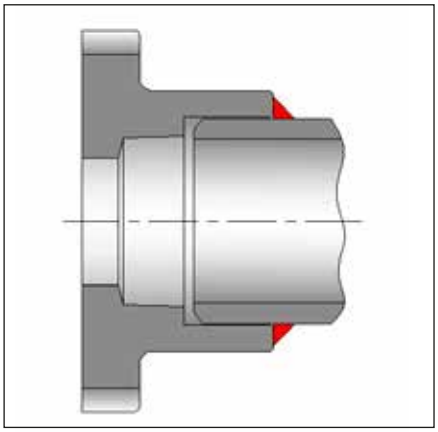
Fugitive Emission ISO15848

Introduced to ensure that product used in process plants can maintain a specified level of integrity based on service conditions. The Worcester 44 Series now has a combined class rating as follows;



Tightness Class: BH (Helium)
Endurance Class: C01 (500 cycles)
Test Pressure: 69 Bar
Test temperature: Ambient 20 °C & 120 °C
Stem seal Adjustments (SSA): 0 (No adjustments)
ISO FE BH-C01-SSA 0-t(-29 °C to 120 °C)-69 bar

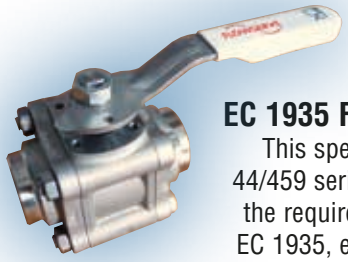
End Connector Variants



Worcester offers a wide range of end connector variants to meet international, European and regional standards. The variety of connectors is shown below with their reference standard against the Worcester 3-digit product code designation.

Threaded

Butt Weld



Socket Weld

Type	Code	Reference	Standard of Compliance
Threaded	SEP	BSPP / G	BS EN ISO 228-1

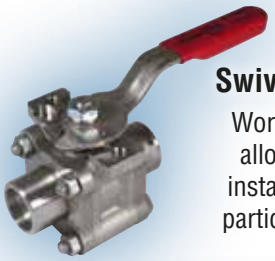
	SWC	Schedule 80	Pipe to BS1600, ASME B36.10/B36.19 (Not available on A44)

Alternative end connectors such as extended or Tri-clamp are available upon request.

Application Variants

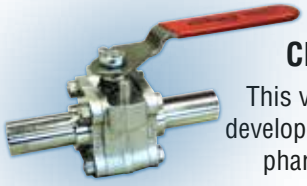


EC 1935 Food Contact Valve

This special variation of the 44/459 series fully complies with the requirements of Regulation EC 1935, enabling it to be safely installed on applications involving direct food contact.

Cryogenic Valves C44/59/459/599

The cryogenic valve is suitable for low temperature applications, including CO2, N2, Ar, O2, LNG and other liquid gases. It is available in stainless steel or brass.



Swivel Ended Valves AS44/59

Worcester's swivel-end connector allows for simple orientation and installation of butt welded valves, particularly when long, complicated sections of pre-fabricated pipework are used.

High Integrity Valve E44

The unique dual stem sealing design of the Worcester Enviro-Safe valve makes it ideal for toxic media and high cycling applications.

Clean Valves WK70

This valve has been specifically developed for use in semi-conductor, pharmaceutical and bio-tech applications.

Control Valves V44/459

Worcester's versatile rotary V-Flow control valve offers accurate control through a range of V-ported, characterized seats, providing a compact control valve for a variety of applications (Also available in firesafe version).

High Pressure Valves 5HP44

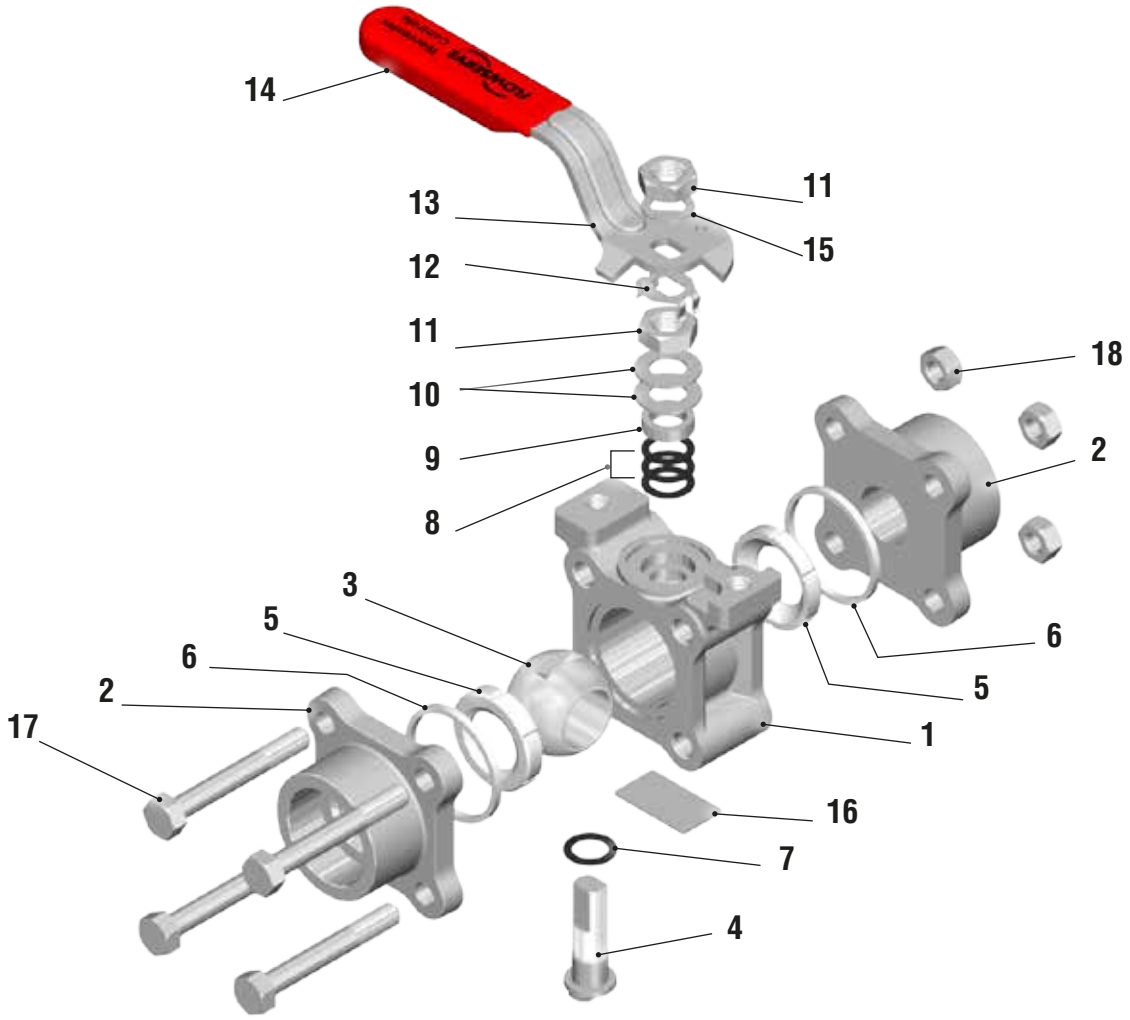
The 5HP44 is Worcester's three-piece ball valve for high pressure hydraulic systems up to 345 Bar (5000 psi).

Steam and Thermal Fluid Valves AW44/59

Specifically designed for on/off steam applications in conditions up to 250 psi (continuous saturated steam) or 1500 psi (thermal fluids), the AW44 is available in stainless or carbon steel.

Firesafe Valves F44/59/459/599

This firesafe design is particularly suitable for hazardous areas in hydrocarbon and chemical process lines.



Diverter Valves 13/14

Worcester Series 13/14 range of three-way valves has been designed for diverting and mixing process media, and features a number of variants which provide a range of operational solutions. Available in bottom entry and side entry configurations

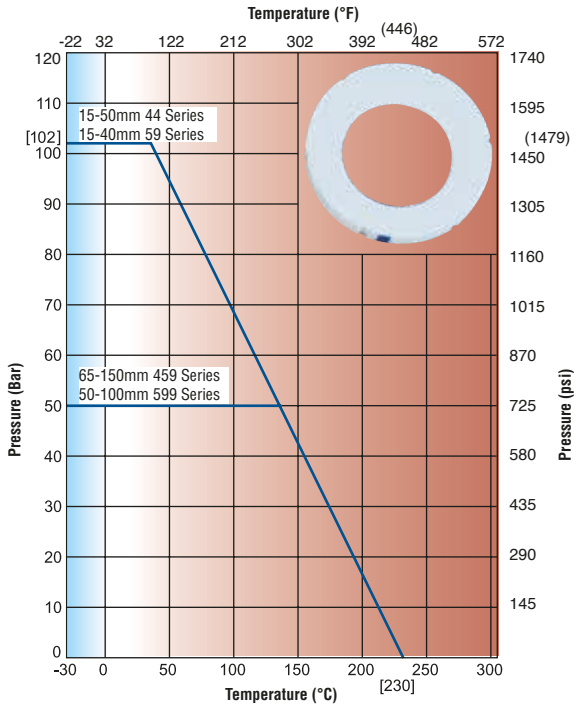
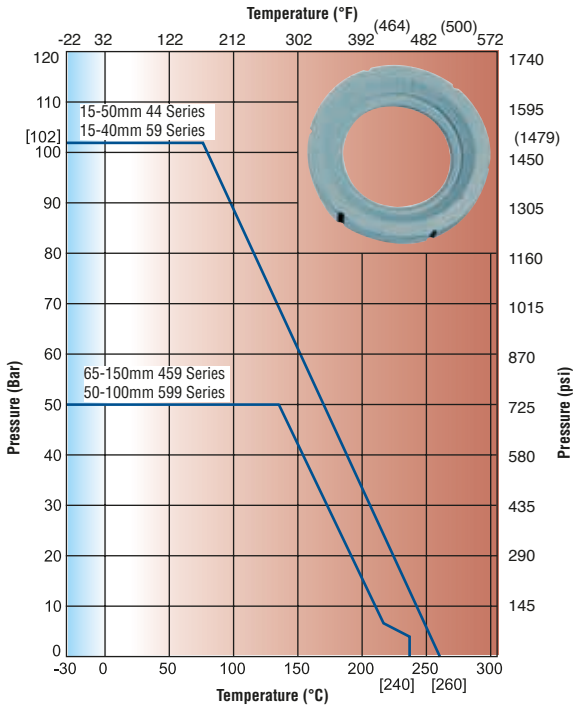
Pressure Temperature Ratings

PTFE based seats



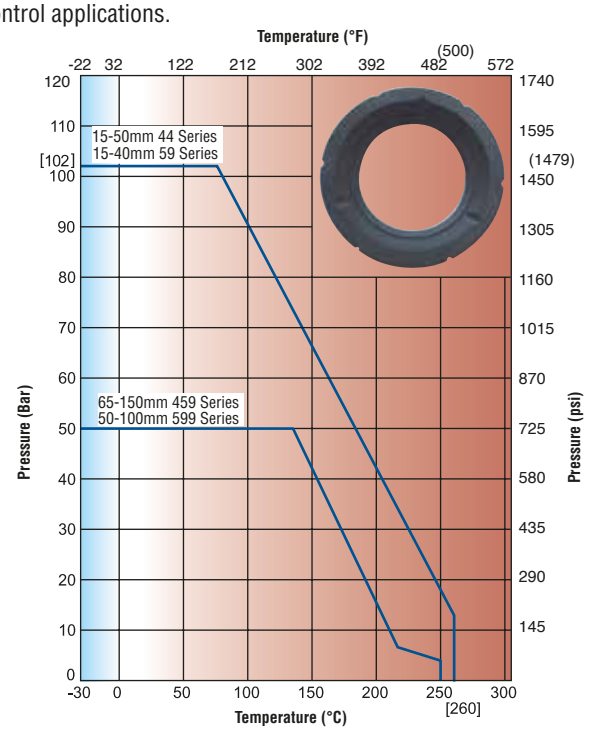
VIRGIN PTFE (T)

Virgin PTFE is the most common sealing material and is suitable for almost all media as it has excellent chemical resistance.



15% GLASS FILLED PTFE (R)

Glass re-inforced PTFE seats are stronger than virgin and have higher pressure/temperature ratings. Chemical resistance as per virgin PTFE.

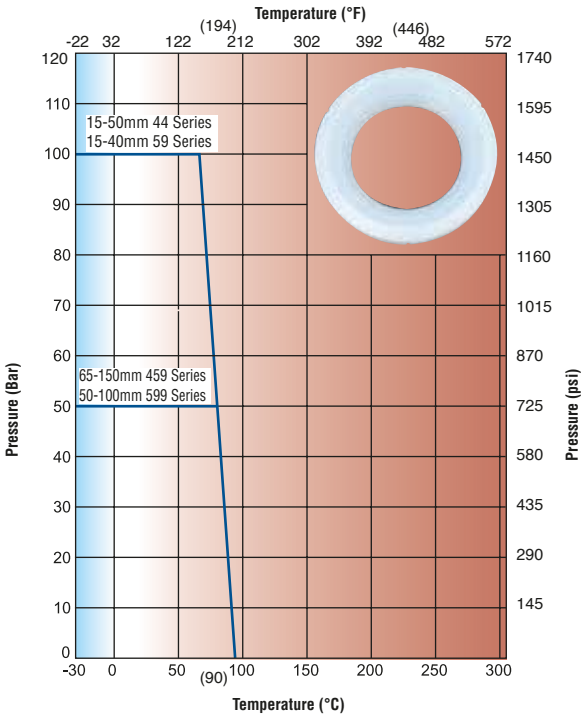


25% GLASS FILLED PTFE (H)

Glass re-inforced PTFE material offering a greater pressure / temperature capability than the R seat.

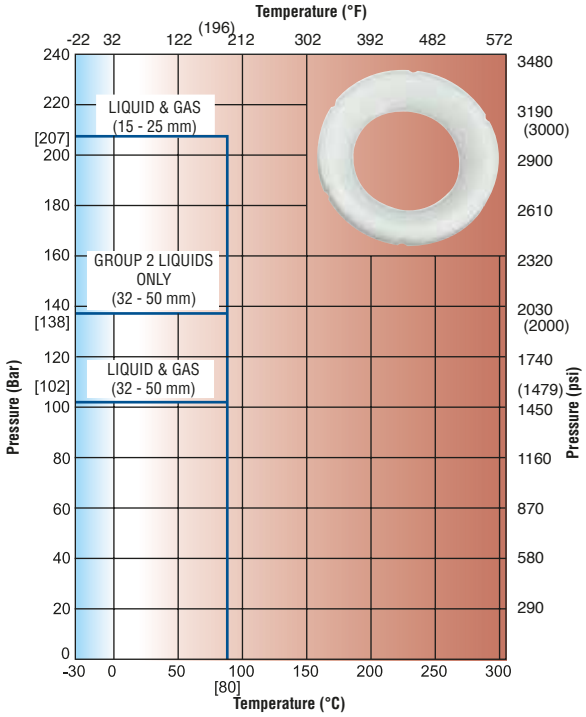
FLUOROFILL (P)

Carbon, glass and graphite filled PTFE material, an excellent seat material for steam and thermal services. Due to its high cycling capabilities, it is the recommended soft seat for modulating control applications.



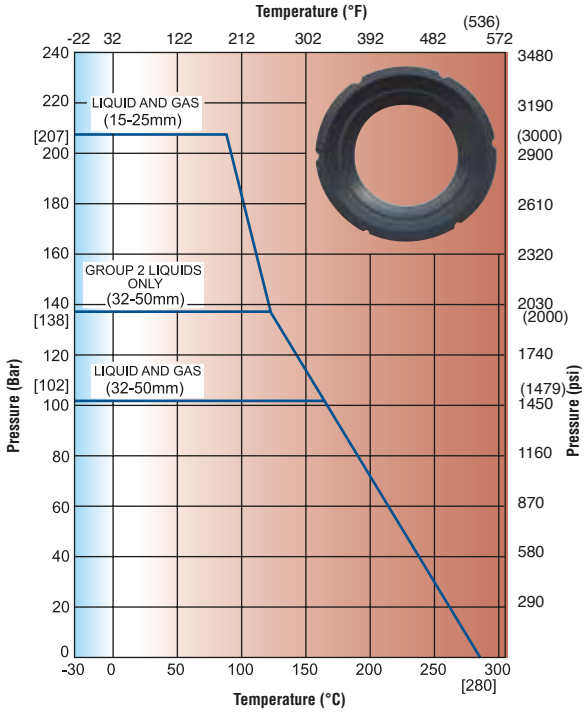
Pressure Temperature Ratings

Non PTFE seats



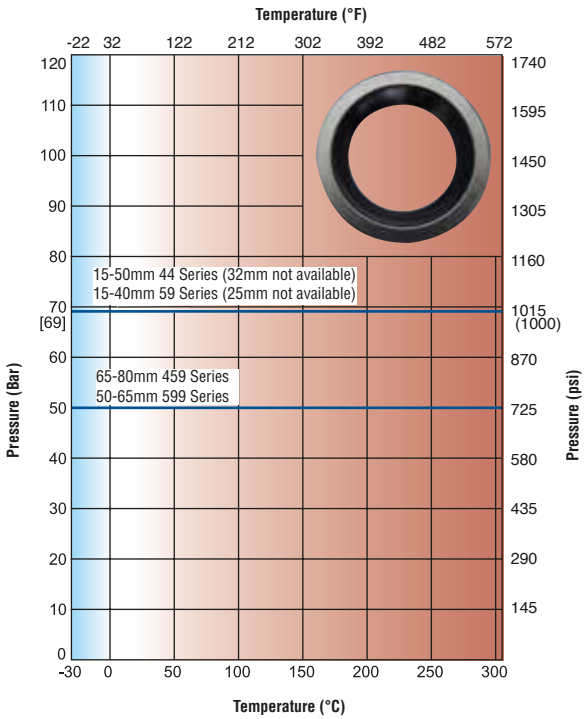
UHMWPE (U)

Ultra High Molecular Weight Polyethylene offers good performance characteristics in applications where PTFE is not suitable (for example on tobacco duty). It also has good abrasion resistance.



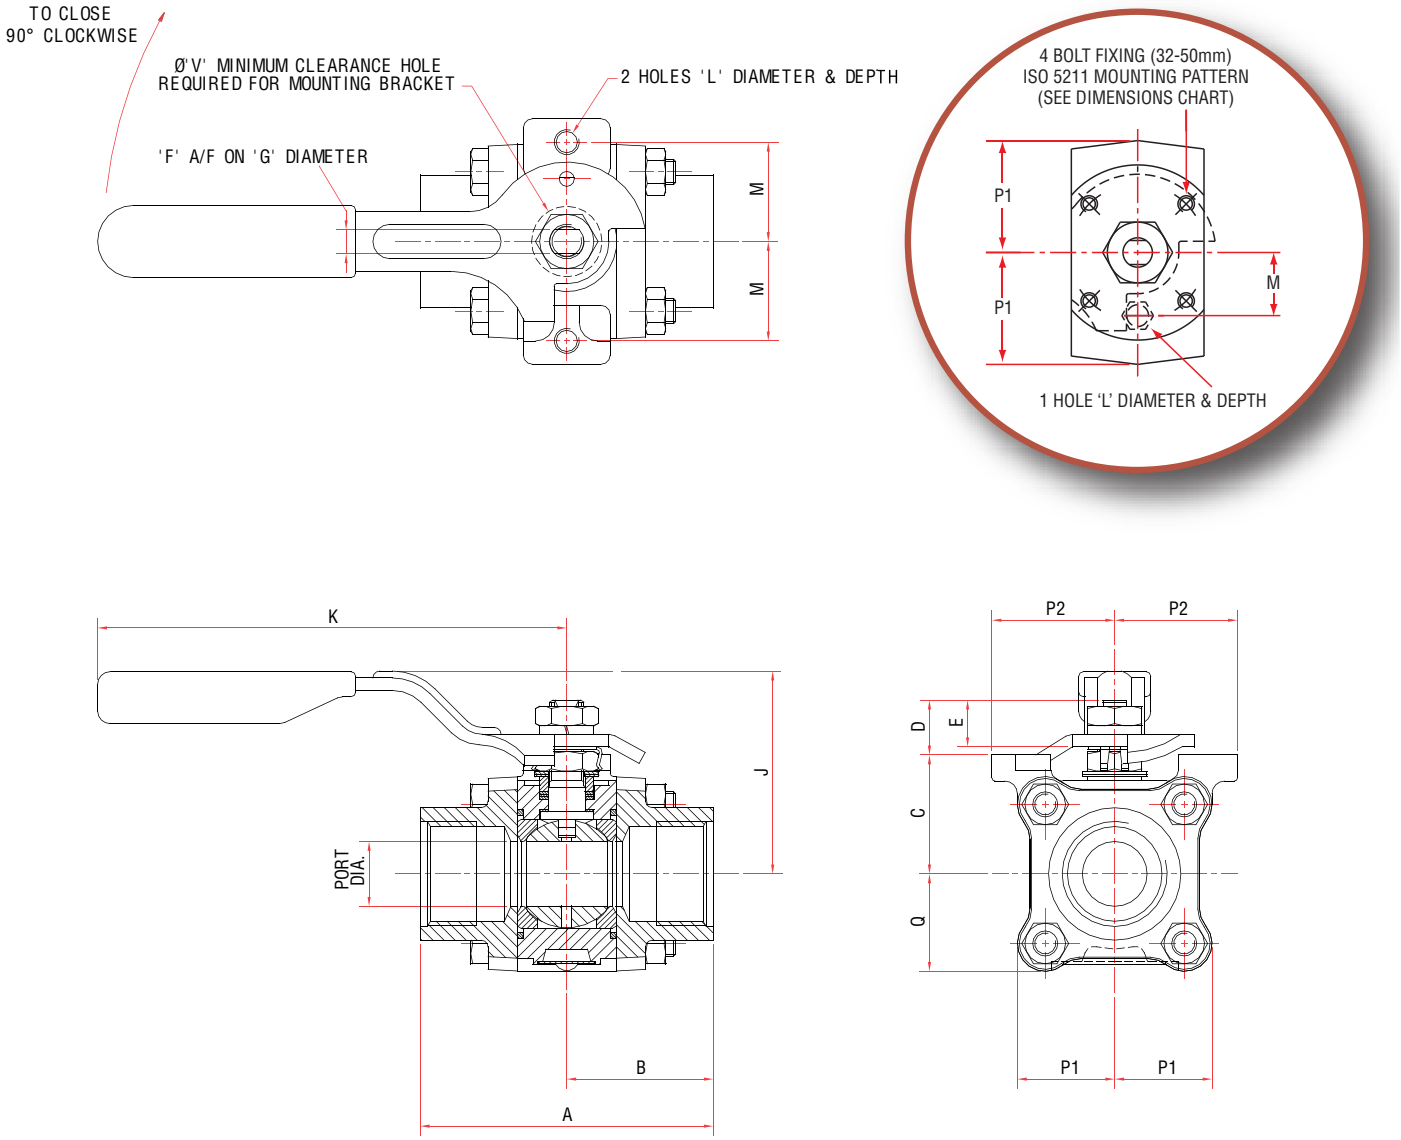
ACETAL (Y)

Machined from acetal homopolymer, these seats are capable of handling extremely high pressures.



PEEK (A - DN15-25) (X - DN32-150)

PEEK is Poly Ether Ether Ketone, a material which demonstrates outstanding pressure capabilities at elevated temperatures. PEEK has excellent chemical and abrasion resistance.



METAL – ALPHA (N) / GAMMA (G)

A 316L sintered metal seat impregnated with PTFE - Alpha (N) or graphite - Gamma (G) improves the strength and abrasion resistance of metal.

1) *The maximum pressure ratings of 44 series valves with O-ring seals and PED SEP are: DN8 to DN25 = 207 bar, DN32 to DN50 = 138 bar

2) **Note:** All 459 series seals have a limit of 250 °C max even though the body rating is 300 °C.

The valve pressure and temperature ratings are made up from a combination of the body/end connector material, seat material and body seal material. The seat ratings are shown graphically on pages 8 and 9 but they need to be used in conjunction with the maximum and minimum ratings shown opposite.

Flow Coefficients / Limiting Stem Input Torque (reduced bore)

Valve Size		Flow Coefficients		Equivalent Length of pipe		Limiting Stem Input torque Nm

150	6	675	585	41	12.47	1138	7758

Notes:

1. When wrench is not fitted the flats on the stem, when parallel to the pipeline axis, denote ball open
2. All 44/59 weld end valves are assembled with Buna O-ring body seals with the correct body seals supplied loose. See IOM
3. For temperatures below -50 °C consult Flowserve
4. Alternative materials are available on request. These include NAB, Duplex, Monel, Hastelloy, 254 SMO for either body, connector, ball or stem
5. Valves containing PEEK, Delrin, or Metal seats are fitted with 17/4-PH stems as standard

Flowserve Corporation has established industry leadership in the design and manufacture of its products. When properly selected, this Flowserve product is designed to perform its intended function safely during its useful life. However, the purchaser or user of Flowserve products should be aware that Flowserve products might be used in numerous applications under a wide variety of industrial service conditions. Although Flowserve can (and often does) provide general guidelines, it cannot provide specific data and warnings for all possible applications. The purchaser/user must therefore assume the ultimate responsibility for the proper sizing and selection, installation, operation, and maintenance of Flowserve products. The purchaser/user should read and understand the Installation Operation Maintenance (IOM) instructions included with the product, and train its employees and contractors in the safe use of Flowserve products in connection with the specific application.

While the information and specifications contained in this literature are believed to be accurate, they are supplied for informative purposes only and should not be considered certified or as a guarantee of satisfactory results by reliance thereon. Nothing contained herein is to be construed as a warranty or guarantee, express or implied, regarding any matter with respect to this product. Because Flowserve is continually improving and upgrading its product design, the specifications, dimensions and information contained herein are subject to change without notice. Should any question arise concerning these provisions, the purchaser/user should contact Flowserve Corporation at any one of its worldwide operations or offices.

FLOWSERVE

EU DECLARATION OF CONFORMITY
WORCESTER VALVES

CE

The Technical Authority & Manufacturer,

Flowserve Flow Control GB,
Burrell Road, Haywards Heath
West Sussex, RH16 1TL, United Kingdom

Declares that the construction, manufacturing and testing of the following pressure equipment:

Product Series	13, 14, 18, 19, 22, 44, 459, 51, 52, 53, 54, 55, 56, 59, 599, 519, 529, 81, 819, 829, 859, 911
Variants	A, B, C, E, F, K, V
Type Of Equipment	Pressure Accessory, Group 1 Gas, Category III, as per Pressure Equipment Directive 2014/68/EU

is in accordance with the following EU Directives:

1. Pressure Equipment Directive 2014/68/EU

Size Range	DN32 – DN250
Pressure Rating	Flanged Valves – As per pressure classes: CL150, 300, 600; PN10, 16, 25, 40; BS10 Tables D, E, F, H 3-Piece Valves – PN102 (DN32 – DN50 Reduced Bore/DN32 – DN40 Full Bore), PN69 (DN65 Reduced Bore/DN50 Full Bore), PN50 (DN80 Reduced Bore and above/DN65 Full Bore and above)
Conformity Assessment Module	Conformity based on full quality assurance module 'H'. Certificate Number: CE 54844
Notified Body	**BSI** (Notified Body Reference Number: 0086) Kitemark Court, Davy Avenue, Milton Keynes, MK5 8PP, United Kingdom
References	BS EN ISO 9001:2008 Quality Management System: Requirements BS ISO 5351:1986 BS EN ISO 10497:2010 BS EN 1092-1:2007 + A1:2013, BS EN 12266-1:2012 BS EN 12516-3:2002, 2015 ASME BPVC Section VIII, Division 1 & 2 2015 ASME BPVC Section II, Part A, B & C 2015 ASME BPVC Section IX 2013 ASME B16.34

NOTE: All valves sized DN25 and below have been designed using the same analytical techniques referenced above, although they do not bear the CE mark as the PED does not apply.

2. ATEX Directive 2014/34/EU

Size Range	DN8 – DN300
Equipment Marking	Ⓔx **II 2 GD c IIA X**
Product Classification	Equipment Group **II**, Category **2**, Gas Zones **1** & **2** and Dust Zones **21** & **22** – **GD**, Protection **c** – constructional safety, Explosion Group **IIA**, Temperature Class **X** – Media temperature restricted
Control of Internal Production Compliance	BS EN ISO 9001:2008 BSI Certificate of Registration: FM 00707
Notified Body	**Element Materials Technology** Unit 1, Pendle Place, Skelmersdale, WN8 9PN, United Kingdom

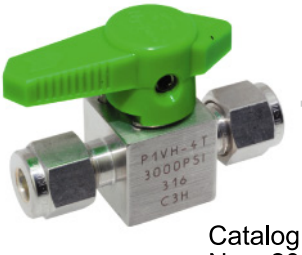
Manufacturer's Declaration

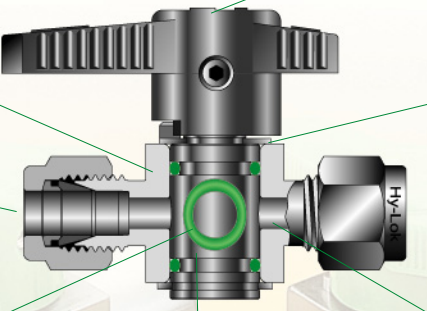
Manufacturer's name :	Hy-Lok CORPORATION
Manufacturer's address:	97, Noksansandan 27-ro, Gangseo-Gu Busan, 618-817 Korea
Description of product:	Plug Valve Data Sheet: H-P100
Applied EU directive:	2014/34/EU Equipment intended for use in potentially explosive atmospheres
Applied standards:	EN 1127-1: 1997 Explosive atmospheres EN 13463-1: 2001 Non-electrical equipment for potentially explosive atmospheres

Plug valves are manufactured in accordance with ISO 9001 Quality System and appropriate National and International product standards.



Accordingly to a performed assessment of Hy-Lok Corporation we have determined that the product mentioned above does not have any own potential source of ignition. As such the product is not covered by the Directive 2014/34/EU, must not be CE marked and must be used within the scope of intended use only as described in the data sheet and the operating and maintenance instructions.

Important note:
The valves must be hooked up into the piping/tubing system in electrically conducting manner to ensure proper grounding. Since some valves are provided with non-conductive handles, special
System design must be considered if the use of the product is intended in hazardous areas (particular zones), environments, or use with certain system fluids. Stem grounding and Conductive bar handles are available as an option. The environmental neighbourhood was not subject to Hy-Lok's assessment. This assessment is within the responsibility of the plants owner, designer, commissioner or user.



This declaration does not pertain to atmospheres outside of the scope of its validity, such as oxygen enriched atmospheres. When selecting a product, the total system design must be considered to ensure safe, trouble-free performance. Function, material compatibility, adequate ratings, proper installation, operation and maintenance are the responsibilities of the system designer and user.

Hy-Lok P Series

Plug Valves

Catalog No. H-P100
Nov. 2013

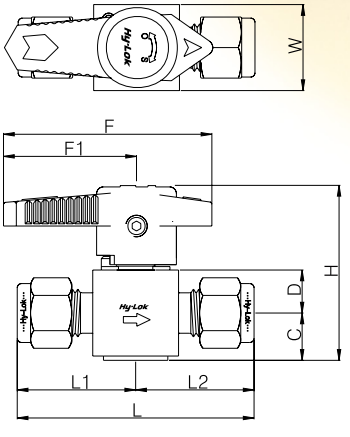
Rugged Body
• is machined from bar stock

Handle with Arrow
• indicates flow direction.
• allows quick operation with 1/4 turn.
• requires minimum torque.
• is available in Black(standard) and colored nylon(option).

Stainless Steel Retaining Ring
• installed in both top & bottom.
• prevents plug blow out.

Variety of End Connections
• include Hy-Lok tube fittings, Male & Female ISO theads, Male & Female NPT.

Orifice for Cv 1.4 to 7.0
• is maximized for minimum pressure drop.



PTFE Coated Viton Seal
• is used for maximum service life.
• is replaceable.

PTFE Coated Plug
• is replaceable.
• has throtting function.

Features

- **Pressure rating** up to 3000psig(206 bar) @70°F(21°C)
- **Temperature rating** from -10°F to 400°F(-23°C to 204°C) with PTFE coated Viton Seal
- **Small and compact design**
- **Easy maintenance and cleaning**
- **Sizes** available up to 1/2" tube and pipe
- **Body materials** available in 316 stainless steel and brass
- **100% factory tested**

03 - INSTRUMENTS AND ELECTICAL EQUIPMENT DATA SHEETS & CERTIFICATES

(2) **Equipment and protective systems intended for use in potentially explosive atmospheres Directive 94/9/EC**

(1) # EC-TYPE EXAMINATION CERTIFICATE

(3) Number of the EC type examination certificate: **INERIS 12ATEX0030X**

(4) Equipment or protective system:

ELECTRO-PNEUMATIC POSTIONER TYPE EPL/EPR...

(5) Manufacturer: **POWER-GENEX Ltd.**

(6) Address: 44B9L, 434-9, Nonhyun-Dong, Namdong-Gui
Incheon, 405-848 KOREA

(7) This equipment or protective system and any other acceptable alternative of this one are described in the annex of this certificate and the descriptive documents quoted in this annex.

(8) INERIS, notified body and identified under number 0080, in accordance with article 9 of Council Directive 94/9/EC of the 23rd March 1994, certifies that this equipment or protective system fulfils the Essential of Health and Safety Requirements relating to the design and construction of equipment and protective systems intended for use in potentially explosive atmospheres, described in annex II of the Directive.

The examinations and the tests are consigned in report No 026098/12.

(9) The respect of the Essential Health and Safety Requirements is ensured by:

- conformity with:

EN 60079-0	:	2009
EN 60079-11	:	2007
EN 13463-1	:	2009
EN 13463-5	:	2010

- specific solutions adopted by the manufacturer to meet the Essential Health and Safety Requirements described in the descriptive documents.

Only the entire document including annexes may be reprinted. IM1337AC

Parc Technologique Alata BP 2 F-60550 Verneuil-en-Halatte

Etablissement public à caractère industriel et commercial - RCS Senlis B 381 984 921 - Siret 381 984 921 00019 - APE 7120B

(10) Sign X, when it is placed following the Number of the EC type examination certificate, indicates that this equipment and protective system is subjected to the special conditions for safe use, mentioned in the annex of this certificate.

(11) This EC type examination certificate relates only to the design, examination and tests of the specified equipment or protective system in accordance to the directive 94/9/EC. Further requirements of the Directive apply to the manufacturing process and supply of this equipment or protective system, these are not covered by this certificate.

(12) The marking of the equipment or the protective system will have to contain:

Verneuil-en-Halatte, 2012.07.18

Director of the Certifying Body,
By delegation
T. HOUEIX
Certification Officer
Certification Division

(13) # ANNEX

(14) EC TYPE EXAMINATION CERTIFICATE N°INERIS 12ATEX0030X

(15) DESCRIPTION OF THE EQUIPMENT OR THE PROTECTIVE SYSTEM

Electro-Pneumatic Positioner is a valve control device made in Aluminum and protected by intrinsic security "Ex i" and constructional safety "c" for the mechanical part.

The equipment comprises the following major parts:

- Torque motor with 4-20 mA input signal
- Pilot Valve
- Gauge
- Dome indicator (only for EPR)

The equipment gets the protection degrees IP66 according to EN 60529.

PARAMETERS RELATING TO THE SAFETY

Ui : 28V
Ii : 100mA
Pi : 1W
Ci = 0
Li = 2µH

MARKING

Marking has to be readable and indelible; it has to include the following indications:

POWER-GENEX Ltd.
Incheon, 405-848 KOREA
EPL/EPR...(*)
INERIS 12ATEX0030X
(Serial number)
(Year of construction)
Ⓔx II 2 G
Ex ia IIC T6 Ga
c IIC T6
T.Amb : -20°C to + 70°C

WARNING : POTENTIAL ELECROSTATIC CHARGING HAZARD - SEE INTRUCTIONS

WARNING : POTENTIAL ELECROSTATIC CHARGING HAZARD - SEE INTRUCTIONS

(*) The dots are replaced by a codification according to the manufacturing variations. The different types are indicated in the descriptive documents.

Marking may be carried out in the language of the country of use.

The protective system or equipment has also to carry the marking normally stipulated by its construction standards.

ROUTINE EXAMINATIONS AND TESTS

None.

(16) DESCRIPTIVE DOCUMENTS

The descriptive document quoted hereafter constitutes the technical documentation of the equipment, subject of this certificate.

- Certification file EPL/EPR dated and signed on 2011.08.30

(17) SPECIAL CONDITIONS FOR SAFE USE

For the risk of electrostatic discharge, the user will have to read the instructions.

(18) ESSENTIAL SAFETY AND HEALTH REQUIREMENTS

The respect of the Essential Health and Safety Requirements is ensured by:

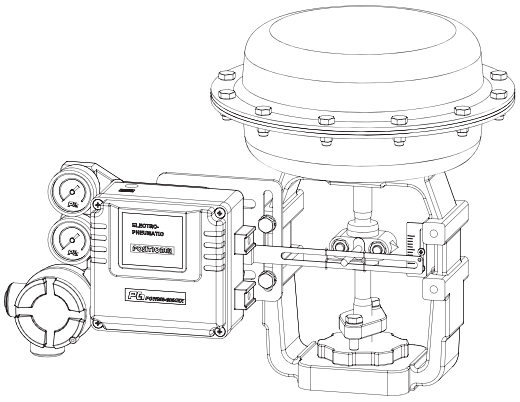
- Conformity to the standards quoted in clause (9).
- All provisions adopted by the manufacturer and defined in the descriptive documents.

Electro-Pneumatic Positioner

EPL

Robust valve control device giving a confidence in reliable performance and outstanding durability under harsh working environments

Features

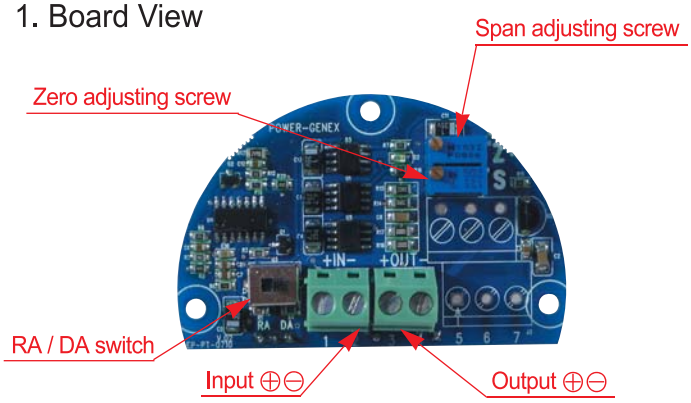


- Easy maintenance
- Precise calibration with simple SPAN and ZERO adjustments
- Simple conversion to direct acting or reverse acting
- 1/2 split range available
- Rugged aluminum housing with corrosion-resistant coating
- Vibration resistant design
- Stainless steel gauges standard
- Restricted pilot valve orifice kit for small actuators included
- KC-certified flameproof Ex dmb IIB+H_2 T6
- NEPSI-certified flameproof Ex dmb IIB+H_2 T6
- IECEx-certified flameproof Ex dmb IIC T6/T5
- ATEX / TR-CU-certified flameproof Ex dmb IIC T6/T5
- KC-certified flameproof Ex dmb IIC T6/T5
- IECEx-certified intrinsically safe Ex ia IIC T6
- ATEX / TR-CU-certified flameproof Ex ia IIC T6
- KC-certified intrinsically safe Ex ia IIC T6

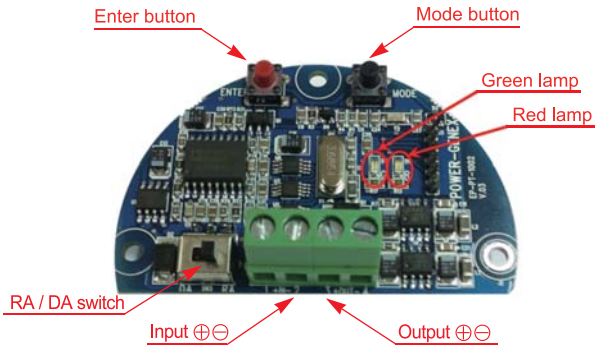
Specifications

	EPL	
	Linear Type (Lever Feedback)	
	Single	Double
Input Signal	4~20 mA DC (Note. 1)	
Input Resistance	235±15Ω	
Air Supply	Max. 7.0 bar (100 psi) free of oil, water, and moisture	
Standard Stroke	10~80mm (Note. 2)	
Pneumatic Connections	PT(Rc) 1/4 or NPT 1/4	
Electrical Connections	PF(G) 1/2 or NPT 1/2	
Protection Class	Ex dmb IIB+H_2 T6 / Ex dmb IIC T6/T5 Ex ia IIC T6 / IP66	
Ambient Temperature	-20 ~ +70℃ (Note. 3)	
Pressure Gauge	Stainless steel	
Output Characteristics	Linear	
Linearity	Within ±1.0 % F.S	Within ±1.5 % F.S
Sensitivity	Within ±0.2 % F.S	Within ±0.5 % F.S
Hysteresis	Within 1.0 % F.S	
Repeatability	Within ±0.5 % F.S	
Air Consumption	5 LPM (Sup. 1.4 kgf/㎠)	
Flow Capacity	80 LPM (Sup. 1.4 kgf/㎠)	
Material	Aluminum die-cast	
Weight	3.3 kg (with terminal box) 3.0 kg (without terminal box)	

Options



- Position transmitter (4...20 mA ouput signal)
- High temperature (+120℃)
- Low temperature (-40℃)



Note : 1) 1/2 spilt range is available for 4~12mA input signal or 12~20mA input signal
2) Feedback lever can be extended to stroke 80 ~ 150mm
3) Temperature option : up to +120℃ without feedback options
up to +85℃ with feedback options
up to -40℃ without feedback options

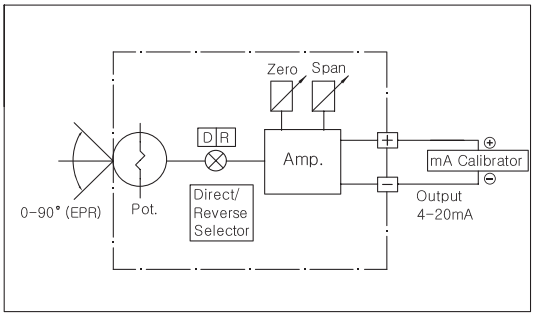
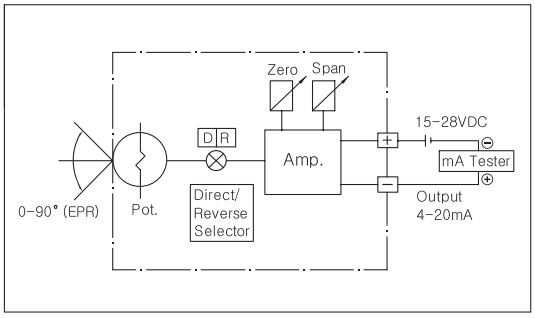
3. Wiring Diagram



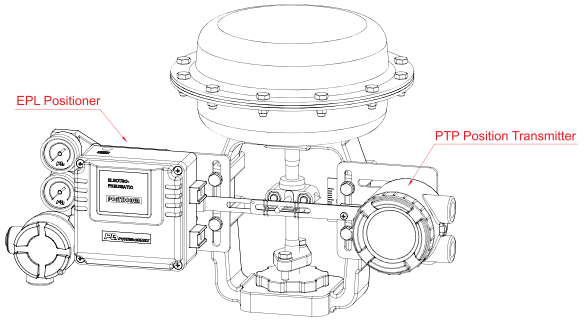
2. Position Transmitter (4-20mA output signal)



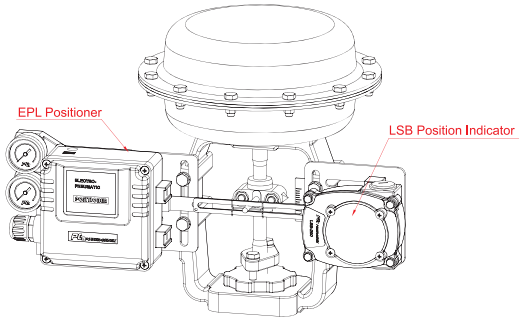
a. Specifications

Power Supply Rating	5.5 - 30 VDC loop power
Recommended Power Supply	24 VDC
Output Signal	4 - 20 mA, 2-wire
Operating Temperature	-20℃ ~ +85℃
Load Impedance	0 ~ 600 ohms
Max. Output	30 mA DC
Linearity	±1.0 %
Hysteresis	1.0 % of full scale
Repeatability	±0.5 % of full scale
Adjustment	Zero and Span in terminal box

b. with mA calibrator

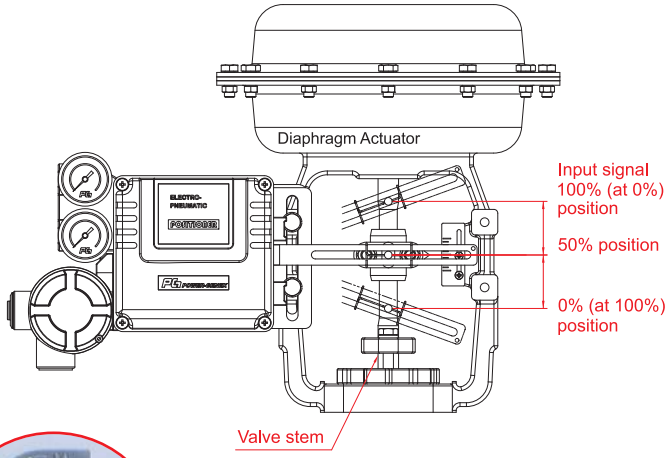


c. with multimeter

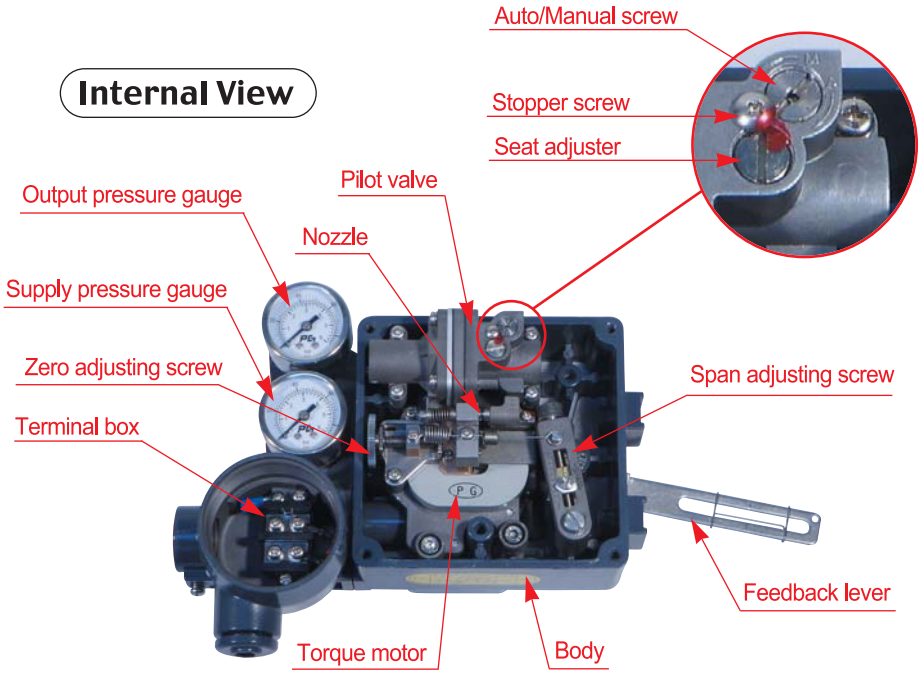


Application for Limit Switches (External Type)

1) With explosion proof PTP-L



2) With non-explosion proof LSB-200



Mounting

1. Install the EPL positioner so that the angle between the valve stem and the feedback lever can be 90° at 12mA input signal (50%) as shown to the right.
2. The operating angle of the EPL feedback lever is minimum 10° to maximum 30°.

HAX

MINERALISOLERAD (MI) VÄRMEKABEL AV ALLOY 825

VÄRMEKABELKONSTRUKTION

nVent RAYCHEM HAx mineralisolerade (MI) serieresistiva värmekablar med alloy 825 är lämpliga för användning i explosionsfarliga områden. De har utformats för användning i applikationer för frostskydd och varmhållning av rörledningar, tankar och annan utrustning.

MI-värmekablarna i HAx-serien erbjuder en idealisk kombination av robusthet, hög temperaturtålighet och korrosionsresistens och kan därför användas i ett stort antal applikationer för varmhållning, särskilt för applikationer med krav på höga effekter och för temperaturer som överskrider kapaciteten hos polymerisolerade (PI) serieresistiva värmekablar.

Värmekablarna kan användas för exponeringstemperaturer upp till 700°C och en typisk uteffekt upp till 270 W/m. Högre temperaturer och uteffekter är möjliga. Kontakta nVent för mer information.

HAx mineralisolerade (MI) värmekablar finns med en eller två ledare och i ett mycket brett urval av resistanser. Användningen av värmekablar med två ledare kan i hög grad reducera den totala installationskostnaden, och förenklar även installationen, särskilt när det gäller klena rör och instrumentrör.

Värmekablarna erbjuds som såväl bulkkabel som fabriksterminerade värmeenheter som är hårdlödda eller lasersvetsade. Utbudet omfattar ett komplett sortiment av komponenter för installation, anslutning och skarvning av värmekablarna.

Värmeenheterna är också godkända för dammiga miljöer. Temperaturklassificering (T-klassificering) måste fastställas med hjälp av principerna för stabiliserad konstruktion eller användning av en temperaturbegränsande anordning. Använd TraceCalc designprogramvara eller kontakta nVent

TEKNISKA DATA

Material kabelmantel	Alloy 825		
Ledarmaterial	Olika legeringar och koppar		
Max. exponeringstemperatur	550°C (lödda värmeenheter) 700°C (lasersvetsade värmeenheter) * Högre temperaturer är möjliga. Kontakta nVent för mer information.		
Min. installationstemperatur	–60°C		
Min. böjningsradie	6 x OD kabeldiameter vid –60°C		
Max. matningsspänning och effekt	Spänning (U_0/U)	Max. uteffekt*	Typ av värmekabel
	600/600 Vac	210 W/m	HAx1N enledarkabel, 600 V
	300/300 Vac	200 W/m	HAx2M tvåledarkabel, 300 V
	600/600 Vac	270 W/m	HAx2N tvåledarkabel, 600 V
		* Typiskt värde, beroende på applikation	
Läckström	3 mA /100 m (nominellt vid 20°C, 230 Vac, 50-60 Hz)		
Min. kabelavstånd	25 mm för explosionsfarliga områden

* Mer information om de olika konstruktionerna av värmekablar finns i kapitlet MI-värmekablar i Teknisk Handbok (referens DOC2210)

Nickelpläterade mässingsförskruvningar är standard på alla våra värmekablar. Andra material är tillgängliga, kontakta nVent för mer information.

Kallkablar anslutna till HAx-värmekablar har en Alloy 825-mantel. Eftersom kallkabeln är utsatt för omgivningen och dess eventuella kemikalier och inte har någon yttre plastisolering som korrosionsskydd, kan den utsättas för extremt varierande korrosiva miljöer. Alloy 825-manteln ger då en förbättrad livslängd med ett överlägset korrosionsskydd mot ett stort antal förhållanden och kemikalier.

Som standard levereras alla kallkablar med M25-förskruvningar avsedda att användas tillsammans med Raychem kopplingsboxar med integrerad jordplatta.

Leveranslängd för bulkkabel beror på resistans och är begränsad av maximal spollängd som anges i tabellen ovan.

Fabriksterminerade värmekablar är begränsade till en max. vikt på 50 kg. För att säkerställa praktisk och säker hantering på plats rekommenderar vi att värmekabellängden begränsas till 25 - 30 kg. Alla resistenser är inte standardartiklar och kan vara beställningsvara. Kontakta nVent för att bekräfta leveranstid. nVent kräver användning av en 30 mA jordfelsbrytare för att ge maximal säkerhet och brandskydd. Där konstruktionen resulterar i högre läckström, är den föredragna utlösningsnivån för justerbara jordfelsbrytare 30 mA över de kapacitiva läckströmmar som specificeras av värmekabelleverantören eller alternativt nästa tillgängliga nivå för icke justerbara enheter, men max 300 mA. Alla säkerhetsaspekter måste styrkas.

TABELL 5: KEMISK RESISTENS

Legering	Maximal mantel-temp. (°C)	Beskrivning	Nominell kemisk sammansättning, % (huvudsakliga ämnen)				Hög-temperatur-tålighet (+540°C)		Korrosionsresistens									
			Nickel (+kobolt)	Järn	Krom	Övriga	Oxidering	Karbonisation	Svavelsyra	Saltsyra	Fluorvätesyra	Fosforsyra	Salpetersyra	Organisk syra	Alkalier	Salter	Havsvatten	Kloridkrackning
INCOLOY Alloy 825 nickel-järn-krom	550°C*	Utmärkt beständighet mot många korrosiva ämnen. Motstår olika typer av korrosion, reduktionssyror och oxiderande kemikalier.	42,0	30,0	21,5	Mo 3.0 Cu 2.2	G-E	G-E	G-E	G-E	G-E	G-E	G-E	G-E	G-E	G-E	G-E	G-E

Från Huntington Alloys Publication 78-348-2.
Anmärkning: NR = Rekommenderas ej, A = Acceptabelt, GE = Bra till utmärkt, X = Kontrollera specifika data.
* Temperaturbegränsning baserad på värmeelementets konstruktion.
Data om korrosionsresistens beror på temperatur och koncentration.

IBExU Institut für Sicherheitstechnik GmbH
An-Institut der TU Bergakademie Freiberg

[1] # EC-TYPE EXAMINATION CERTIFICATE

according to Directive 94/9/EC, Annex III
(Translation)

[2] Equipment and Protective Systems intended for use in Potentially Explosive Atmospheres, Directive 94/9/EC

[3] EC-Type Examination Certificate Number: **IBExU15ATEX1019 X**

[4] Equipment: **Heater for gases** type DHG…,
Heater for liquids type DHF… and
Heater in a solid body type DHK…

[5] Manufacturer: ELMESS Thermosystemtechnik GmbH & Co. KG

[6] Address: Nordallee 1
29525 Uelzen
GERMANY

[7] The design of the equipment mentioned under [4] and any acceptable variations thereto are specified in the schedule to this EC-Type Examination Certificate.

[8] IBExU Institut für Sicherheitstechnik GmbH, Notified Body number 0637 in accordance with article 9 of the Directive 94/9/EC of the European Parliament and the Council of 23 March 1994, certifies that the equipment mentioned under [4] has been found to comply with the Essential Health and Safety Requirements relating to the design and construction of equipment intended for use in potentially explosive atmospheres given in Annex II to the Directive.
The test results are recorded in the test report IB-13-3-077/1 of 19 March 2015.

[9] Compliance with the Essential Health and Safety Requirements has been assured by compliance with EN 60079-0:2012+A11:2013, EN 60079-1:2014, EN 60079-7:2007, EN 60079-11:2012 and EN 60079-31:2014.

[10] If the sign „X" is placed after the certificate number, it indicates that the equipment is subject to special conditions for safe use specified under [17] in the schedule to this EC-Type Examination Certificate.

[11] This EC-Type Examination Certificate relates only to the design and construction of the specified equipment. If applicable, further requirements of this Directive apply to the manufacture and supply of this equipment.

[12] The marking of the equipment mentioned under [4] shall include the following:

II 2G Ex db e IIB/IIC T6…T1 Gb	or	**II 2G Ex db eb IIB/IIC T6…T1**
II 2G Ex db IIB/IIC T6…T1 Gb	or	**II 2G Ex db IIB/IIC T6…T1**
II 2G Ex db e ib IIB/IIC T6…T1 Gb	or	**II 2G Ex db eb ib IIB/IIC T6…T1**
II 2G Ex db ib IIB/IIC T6…T1 Gb	or	**II 2G Ex db ib IIB/IIC T6…T1**
II 2D Ex tb IIIC TX Db	or	**II 2D Ex tb IIIC TX**
II 2D Ex tb ib IIIC TX Db	or	**II 2D Ex tb ib IIIC TX**

Annex

IBExU Institut für Sicherheitstechnik GmbH
An-Institut der TU Bergakademie Freiberg

[13] **Annex**

[14] **to the EC-TYPE EXAMINATION CERTIFICATE IBExU15ATEX1019 X**

[15] **Description of equipment**

The Heaters for gases, liquids and in a solid body type DHG..., DHF... and DHK... serve for the direct or indirect heating of non-flammable fluids or non-explosive gases under operating conditions. They are intended for installation in containers (tank, flow pipe, machine, metal body e.g.).

The Heaters consist of a flameproof enclosure and terminal compartment in type of protection increased safety. The flameproof enclosures are made of grey cast iron or they consist of a welded construction from steel or stainless steel. The terminal compartment in type of protection increased safety may optionally be omitted at the welded enclosures. In this case the flameproof enclosure serves also as electric terminal compartment with direct cable entry.

The Heater enclosures can be complemented with suitable and certified Ex e or Ex i terminal boxes, which are fixed to a holder (i. e. pipe or clamp ring) with the heater enclosure.

Technical data:

Heaters current circuit

- Rated voltage:	max. 800 V
- Nominal voltage:	max. 690 V AC / DC
- Rated current:	max. 63 A (DH..B03, DH..B03St and DH..B03V) max. 35 A (DH..A01, DH..A02 and DH..B01)
- Connection cross-section:	max. 25 mm² (DH..B03, DH..B03St and DH..B03V) max. 6 mm² (DH..A01 , DH..A02 , DH..B01)

Control circuit

- Rated voltage:	440 V AC / 250 V DC
- Rated current:	max. 16 A
- Connection cross-section:	max. 6 mm²
- IP-Degree of protection acc. to EN 60529:	max. IP 66
- Property class of the fastening screws:	8.8
- Ambient temperature range:	-20 °C up to +40 °C (standard) -40 °C up to +60 °C (special version grey cast iron) -50 °C up to +60 °C (special version steel) -60 °C up to +60 °C (special version stainless steel)
- Max. service temperature in the enclosure:	+80 °C
- Surface temperature TX:	+80 °C up to +440 °C

Further details are specified in the operation manual as well as in the documents of the manufacturer which are part of the test report.

The respective operating parameters for the design of the Heaters have to be taken from the name plate and the supplementary documentation.

[16] **Test report**

The test results are recorded in the test report IB-13-3-077/1 of 19 March 2015. The test documents are listed in the annex to the test report.

Summary of the test results

The Heaters for gases, liquids and in a solid body type DHG..., DHF... and DHK... fulfil the requirements of explosion protection for equipment of Group II, Category 2G, type of protection flameproof enclosure „d" respectively flameproof enclosure „d" in combination with increased safety „e" and intrinsic safety „ib" and Category 2D, type of protection dust ignition protection by enclosure „tb".

IBExU Institut für Sicherheitstechnik GmbH
An-Institut der TU Bergakademie Freiberg

[17] **Special conditions for safe use**

- The Heater must be operated in the specified mounting position and under the specified ambient temperature conditions. It should be ensured that the heat emission is evenly distributed and not obstructed operation of the Heater.
- The Heater may only be operated in conjunction with a protective system. Function and reliability tested variations in accordance with the relevant rules and regulations are to use as safety device for temperature, flow, level etc.
- The position of the temperature sensors of the temperature limiters required for the explosion protection must include the changed operating conditions caused by a phase failure in three-phase systems.
- Heating of liquids is only allowed with enough liquid overlap. That can be fulfilling by level monitoring device or comparable protective measures.
- For flushing medium, additionally a flow monitoring device may be necessary to secure a minimum flow.
- When use in explosive dust atmospheres, adequate measures must be taken to prevent dust deposits on the heated part of the heaters.
- Repairs of the flameproof joints must be made in compliance with the constructive specifications provided by the manufacturer. A repair according to the values specified in tables 2 and 3 of EN 60079-1 is not permitted.
- The Heater is equipped as standard with cable gland by the manufacturer. The cable gland may be used only for fixed installation; the operating company has to ensure an appropriate clamping method.
- Cables specified by the manufacturer in the operating instructions have to be used in the heater design with direct Ex d cable entry (without Ex e connection box). If the supplied cable glands and cables are not being used the corresponding requirements in EN 60079-14, Paragraph 10.6.2 have to be noticed. The direct cable glands in the heater enclosure DH..A0... have to be tested with 45 bar at minimum at use in explosion group IIC and below -20 °C.
- The maximum operating temperature on ex-relevant components (seals, cable bushings, connection terminals) must not exceed 80 °C. At operation with lower ambient temperature less than -20 °C down to -60 °C the cable gland and the connection cables must be suitable for the appropriate operating temperature.
- Unused openings for cable entries must be closed durably with suitable screw plugs, which are certified for explosion protection in the corresponding type of protection.
- The special conditions contained in the respective certificate have to be noticed at use of certified components or devices in type of protection Ex i.

[18] **Essential Health and Safety Requirements**

Confirmed by compliance with standards (see [9]).

1. Wichtige Informationen und Warnhinweise

Diese Betriebsanleitung muss unbedingt der eigentlichen Bedienungsperson der Heizung ausgehändigt werden. Bitte lesen Sie diese Betriebsanleitung aufmerksam durch, bevor Sie anfangen, die Heizung zu installieren bzw. anzuschließen. Berücksichtigen Sie alle sicherheitsbezogenen Punkte und Anweisungen im Text.

Zum Schutz vor Verletzungen an Personen oder Beschädigungen des Produkts stellen Sie sicher, dass Sie diese wichtigen Informationen und Warnhinweise lesen und verstehen. Verwenden Sie das Produkt niemals für etwas anderes als für den vorgesehenen Zweck.

Die Heizung und diese Betriebsanleitung sind vorgesehen für die Verwendung durch Personal, das im sicheren Umgang mit elektrischen Heizeinrichtungen erfahren ist. Unerfahrenes Personal muss vor der Verwendung des Produkts entsprechend geschult werden.

Bitte wenden Sie sich bei Unklarheit über Teile dieser Betriebsanleitung oder bezüglich Auskunft über die Heizung direkt an ELMESS-Thermosystemtechnik GmbH & Co. KG.

Stellen Sie sicher, dass Installation, Bedienung und Wartung nur von qualifiziertem Personal ausgeführt werden.

Geht diese Betriebsanleitung verloren oder wird beschädigt, wenden Sie sich an ELMESS-Thermosystem-technik GmbH & Co. KG.

Während des Betriebs können funktionsbedingt an den Oberflächen der Heizungen hohe Temperaturen auftreten. Es besteht eine Verbrennungsgefahr.
Durch bauseitige geeignete Maßnahmen ist auf die Verbrennungsgefahr, z.B. durch Warnschilder, hinzuweisen, bzw. kann die Verbrennungsgefahr durch eine zuverlässige und geeignete Dämmung der heißen Oberflächen verhindert werden.

Unbeheizte Oberflächen, z.B. Gehäuse, elektr. Anschlussräume, Gehäuseteile, Enden von Heizelementen usw. müssen in freier Konvektion mit der Umgebungsluft sein.

Um elektrische Schläge zu vermeiden, berühren Sie niemals die Ein-oder Ausgangsklemmen oder die elektrischen Komponenten im Innern der Heizung.

Stellen Sie sicher, dass die Netzversorgungsspannung für die Heizung der DIN EN 50160 insbesondere dem Kapitel 4.2.5 entspricht.

2. Aufbau und Verwendung

Die Heizung ist in explosionsgeschützter Ausführung für den Betrieb in Kategorie Ⓔx II 2 G oder 3 G bzw. 2 D oder 3 D gebaut, aber nicht zum Erwärmen von hybriden Gemischen geeignet.

Die Heizungen Typ **DH...** sind in Zündschutzart Ex d oder Ex de ausgeführt, die Heizungen Typ **EH...** in Zündschutzart Ex e. Die Heizungen Typ **NAH...** sind für Kategorie 3G, Typ **TDH...** für Kategorie 3D geeignet.

Die Heizungen Typ ***HF…** dienen zur direkten Erwärmung von betriebsmäßig nicht brennbaren **Flüssigkeiten** innerhalb der in der Spezifikation angegebenen Kategorie.

Die Heizungen Typ ***HG…** dienen zur direkten Erwärmung von betriebsmäßig nicht explosionsfähigen **Gasen** innerhalb der in der Spezifikation angegebenen Kategorie.

Die Heizungen Typ ***HK…** sind unverlierbar in einem festen Körper eingebaut und dienen zur indirekten Erwärmung von betriebsmäßig nicht brennbaren **Flüssigkeiten** oder von betriebsmäßig nicht explosionsfähigen **Gasen** innerhalb der in der Spezifikation angegebenen Kategorie.

Die Heizungen Typ ***H..41…** und ***H..42…**, ***H..81…** und ***H..82…** dienen zur Erwärmung von nicht brennbaren oder explosionsfähigen Medien in einem geschlossenen System, in dem zu keiner Zeit explosionsfähige Gase oder Stäube auftreten. Die sichtbaren oder außen liegenden Teile der Heizung, wie zum Beispiel der Flansch und das Gehäuse, können innerhalb des explosionsgefährdeten Bereiches liegen.

Die Heizung muss für die Anwendung geeignet sein und darf nur bestimmungsgemäß verwendet werden. Bei Veränderungen am Aufbau und der Konstruktion einschließlich z.B. einer Wärmedämmung, der Lackierung oder den Betriebsbedingungen sind erneute Prüfungen beim Hersteller erforderlich.

Der Typ der Heizung, die technischen Daten, die Kategorie und die Zündschutzart sind in der Spezifikation und teilweise auf dem Typschild, Anschlussschaltplan und Maßbild eingetragen.

Beschichtete Geräte dürfen nicht in der Nähe von hochaufladbaren Prozessen betrieben werden.

Externe, leitungsgebundene Wärmequellen bzw. Strahlungswärme von außen müssen am Errichtungsort und während des Betriebes ausgeschlossen werden.

Heizungen ohne geprüfte Temperaturklasse

Die Heizung Typ ***H.00…** ist ohne einen Temperaturfühler oder einen Schutztemperaturbegrenzer mit Kapillarrohrfühler ausgerüstet.

Die Heizung Typ ***H.01…** , ***H.05…** ist mit einem Temperaturfühler oder einem Schutztemperaturbegrenzer mit Kapillarrohrfühler wirksam auf Oberfläche der Heizung ausgerüstet.

Die Heizung Typ ***H.02…** ist mit einem Temperaturfühler oder einem Schutztemperaturbegrenzer mit Kapillarrohrfühler wirksam auf Mediumtemperatur ausgerüstet.

Für die Heizungen Typ ***H.0…** ist das Schutzsystem bauseits zu errichten und die Temperaturklasse bauseits durch eine benannte Stelle zu prüfen.

Heizungen mit geprüfter Temperaturklasse

Für die Heizung Typ ***HF11…** , ***HF23…** und ***HF81…** sowie ***HG11…** und ***HG81…** sowie ***HK15…** und ***HK16…**,***HK85…** und ***HK86…** besteht das Schutzsystem mindestens aus einem auf die zuverlässige Funktion beurteilten Temperaturbegrenzungssystem und einer Isolations- bzw. Fehlerstromüberwachungseinrichtung.

Für die Heizung Typ ***HF21…**, ***HF22…**, ***HF41…** und ***HF42…** besteht das Schutzsystem mindestens aus einem auf die zuverlässige Funktion beurteilten Temperaturbegrenzungssystem, einer auf die zuverlässige Funktion beurteilten Niveauüberwachungseinrichtung und einer Isolations- bzw. Fehlerstromüberwachungseinrichtung.

Für die Heizung Typ ***HF77…** besteht das Schutzsystem mindestens aus einer auf die zuverlässige Funktion beurteilten Niveauüberwachungseinrichtung und einer Isolations- bzw. Fehlerstromüberwachungseinrichtung.

Für die Heizung Typ ***HF31…** und ***HF32…** sowie ***HG31…**, ***HG32…** , ***HG41…** und ***HG42…** besteht das Schutzsystem mindestens aus einem auf die zuverlässige Funktion beurteilten Temperaturbegrenzungssystem, einer auf die zuverlässige Funktion beurteilten Strömungsüberwachungseinrichtung und einer Isolations- bzw. Fehlerstromüberwachungseinrichtung.

Für die Heizung Typ ***HF57…** , ***HF58…** und ***HF60…** sowie ***HG57…** , ***HG58…** und ***HG60…** sowie ***HK57…** , ***HK58…** und ***HK60…** besteht das Schutzsystem mindestens aus einer Isolations- bzw. Fehlerstrom-überwachungseinrichtung und einem Schutzschalter.

Der Betrieb der Heizung ist nur unter Anwendung eines auf die zuverlässige Funktion beurteilten Schutzsystems und bei Einhaltung der in der Spezifikation angegebenen technischen Daten zulässig.

Vom Hersteller eingebaute Kapillarrohrfühler mit Schaltkontakt bzw. Temperaturfühler zusammen mit einem mitgelieferten elektronischen Schutz-Temperatur-Begrenzer sind entsprechend ATEX Richtlinie geprüft und geeignet.

Alle Überwachungsgeräte müssen durch andere Schutzeinrichtungen, z.B. Sicherungen und Schaltschütze, Isolations- bzw. Fehlerstromüberwachungseinrichtungen zu einem kompletten Schutzsystem ergänzt werden. Ein Ansprechen einer oder mehrerer Schutzeinrichtungen muss direkt und zwangsweise zu einem potentialfreien Trennen der Heizung vom Netz führen.

Zusätzlich kann die Heizung mit anderen Temperaturbegrenzungs- oder Regeleinrichtungen bzw. Temperatur-messfühlern ausgerüstet sein. Dienen diese Geräte ebenfalls zur Überwachung der Heizung, sind sie in das Schutzsystem zu integrieren.

3. Bedingungen für den sicheren Betrieb der Heizung

- **Die Festlegung der Temperaturklasse bzw. der maximalen Oberflächentemperatur muss vor Inbetriebnahme unter Beachtung der örtlichen und betrieblichen Bedingungen durch den Hersteller oder eine benannte Stelle erfolgen. Für Heizungen mit geprüfter Temperaturklasse ist die Temperaturklasse bereits durch den Hersteller festgelegt.**
- Die Heizung ist nur in der vorgegebenen Gebrauchslage und in dem vorgegebenen Umgebungs-temperaturbereich zu betreiben. Beim Betrieb der Heizung ist eine ungehinderte und gleichmäßige Wärmeabgabe sicherzustellen.
- Die Heizung darf nur unter Anwendung eines Schutzsystems betrieben werden. Als Sicherheitseinrichtungen für die Temperatur, Strömung, Niveau usw. sind auf die Funktion bzw. Zuverlässigkeit zertifizierte Geräte entsprechend den einschlägigen Bestimmungen und nach RL 2014/34/EU harmonisierten Normen, z.B. der EN 50495 zu verwenden.
- Wenn kein Schutz-Temperatur-Begrenzer vom Hersteller verwendet wird, ist das Abschalten, d.h. die Trennung der Heizung vom Netz bei Überschreitung der in der Spezifikation angegebenen Temperatur in der Verantwortung des Betreibers zu realisieren.
- Die Anordnung der für den Explosionsschutz notwendigen Fühler der Temperaturbegrenzer muss die durch einen Phasenausfall bei Drehstromnetzen geänderten Betriebsbedingungen mit einschließen.
- Die Beheizung von Flüssigkeiten ist nur mit genügender Überdeckung aller beheizten Flächen zulässig. Das kann durch eine Niveauüberwachungseinrichtung oder vergleichbare Schutzmaßnahmen erfüllt werden.
- Für strömende Medien kann eine Überwachung durch einen Strömungswächter erforderlich sein, der einen Mindestdurchsatz an allen beheizten Oberflächen sicherstellt.
- Bei Einsatz im Staub-Ex-Bereich sind Staubablagerungen auf heißen Oberflächen der Heizungen durch geeignete Maßnahmen zu vermeiden, bei beschichteten Gehäusen sind hochaufladende Prozesse zu vermeiden.
- Eine Reparatur an den zünddurchschlagsicheren Spalten darf nur durch den Hersteller erfolgen. Eine Reparatur entsprechend den Werten von Tabelle 2 und 3 der IEC/EN 60079-1 ist nicht zulässig.
- Die Heizung wird vom Hersteller mit Kabel- und Leitungseinführungen für eine feste Installation bestückt. Durch den Betreiber ist eine entsprechende Zugentlastung zu gewährleisten. Bei der Ausführung mit direkter druckfester Kabel- und Leitungseinführung (ohne Ex e Anschlussraum) sind die vom Hersteller in der Betriebsanleitung festgelegten Kabel zu verwenden. Wenn die vom Hersteller gelieferten bzw. vorgeschriebenen Kabel- und Leitungseinführungen und festgelegten Kabel nicht verwendet werden, sind die Anforderungen der IEC/EN 60079-14, Abschnitt 10.6.2 zu beachten. Die direkten Kabel- und Leitungseinführungen in das Gehäuse Typ DH..A01… und DH..A02… müssen bei Verwendung innerhalb der Gasgruppe IIC und unter -20 °C mit mindestens 45 bar geprüft worden sein. Nicht verwendete Kabel- und Leitungseinführungen bzw. Öffnungen müssen entsprechend IEC/EN 60079-14 verschlossen sein.
- Bei Geräten für Kategorie M2 sind entsprechende Kabel- und Leitungseinführungen und Anschlusskabel zu verwenden, die EN 50628 ist zu beachten.
- Die maximale Betriebstemperatur an ex-relevanten Komponenten (Dichtungen, Leitungsdurchführungen, Anschlussklemmen) darf 80 °C nicht überschreiten. Bei Verwendung im verringerten Temperaturbereich von unter -20 °C bis zu -60 °C müssen die Kabel- und Leitungseinführung und die Anschlussleitung für die entsprechende Einsatztemperatur geeignet sein.
- Bei Verwendung von zertifizierten Teilen bzw. Geräten mit der Zündschutzart Ex i, sind die in dem entsprechenden Zertifikat genannten besonderen Bedingungen einzuhalten.
- Die Heizung darf niemals bei geöffnetem Gehäuse betrieben werden.
- Die Heizung ist unverlierbar und so zu montieren, dass sie gegen mechanische Beanspruchung geschützt ist.
- Die Einbindung in den äußeren Potenzialausgleich erfolgt über die Ex e Potenzialausgleichsklemme. Wenn diese nicht vorhanden ist, erfolgt der Potenzialausgleich über den Einbaustutzen, den Flansch oder die Passhülse.
- Eine eingebaute Antikondensationsheizung darf nur im Stillstand der Heizung betrieben werden.

4. Montage, Errichtung und Installation

Wird die Heizung nicht sofort errichtet und betrieben, sind die jeder Heizung beiliegenden Lagerungsvorschriften zu beachten. Besonders ist die Heizung vor eindringender Feuchtigkeit, z.B. durch den Betrieb einer Stillstandheizung, zu schützen.

Für die Errichtung und Installation ist für diese Kategorie geeignetes Material zu verwenden. Bei Außenaufstellung ist als dauerhafter Schutz gegen Witterungseinflüsse (Sonneneinstrahlung, Regen, Schnee) die Errichtung unter einem Schutzdach empfohlen.

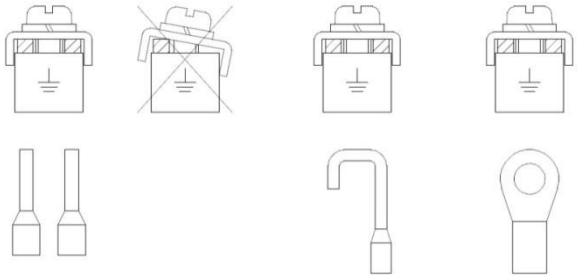
Für die Errichtung, Installation und den Betrieb sind die jeweils gültigen Vorschriften z.B. DIN IEC 60364 zu beachten. Es gilt die Norm IEC/EN 60079-14 und in Europa die Richtlinie 1999/92/EG. In Deutschland gelten zusätzlich die Ex-Regeln der Berufsgenossenschaft Chemie, sowie die Betriebssicherheitsverordnung.

Die Aufstellung/Errichtung der Heizung muss gemäß den Angaben auf dem Maßbild und geschützt vor direkter Sonneneinstrahlung erfolgen. Besonders ist die auf dem Maßbild vorgegebene Gebrauchslage zu beachten. Flansche, ggf. Ein- und Austrittsstutzen müssen mit für den Verwendungszweck geeigneten Befestigungselementen und Dichtungen spannungsfrei und geschützt gegen mechanische Beanspruchung, ggf. unter Beachtung der Strömungsrichtung an das bauseitige Rohrsystem montiert werden.

Das druckfeste Gehäuse muss mit Schrauben der Festigkeitsklasse von mindestens 8.8 bzw. A*-70 verschlossen werden. Das Anzugsdrehmoment beträgt 10 Nm.

Der elektrische Anschluss der Heizung erfolgt im Anschlussraum im spannungslosen Zustand.

Die elektrische Installation im Ex e-Anschlussgehäuse erfolgt an den vorgesehenen Klemmen unter Einhaltung von mindestens 12 mm Luftstrecke. Dazu dient unter anderem eine mitgelieferte Abdeckplatte, die verwendet werden muss.
Wenn die Heizung kein Ex e Anschlussgehäuse hat, erfolgt die Installation direkt im druckfesten Gehäuse an den vorgesehenen Klemmen.
Das Anzugsdrehmoment für Klemmen beträgt 2 Nm.



In diesem Anschlussraum erfolgt ebenfalls der Anschluss der vom Hersteller eingebauten Temperaturfühler, Kapillarrohrschaltgeräte und die Bedienung der vom Hersteller eingebauten Kapillarrohrfühler mit Schaltkontakt.

Vom Hersteller mitgelieferte Kabel- und Leitungseinführungen und bereits installierte Anschlusskabel sind zu verwenden.

Der Anschluss muss mit fest verlegten Kabeln bzw. Leitungen entsprechend harmonisierter Normen mit dem in der Spezifikation angegebenen Querschnitt erfolgen. Verwenden Sie niemals abgenutzte oder beschädigte Kabel oder Kabel ohne Schutzleiter. Bei Anwendung von mehr- oder feindrahtigen Leitungen sind Aderendhülsen zu verwenden. Die Heizung ist mit der entsprechenden Vorsicherung zu sichern.

Für jede eingeführte Leitung ist ein Schutzleiter-anschluss vorhanden. Sorgen Sie dafür, dass die Heizung von einem qualifizierten Elektriker entsprechend den gültigen Vorschriften geerdet wird.

Nicht verwendete Kabeleinführungen bzw. Öffnungen müssen entsprechend IEC/EN 60079-14 verschlossen werden.

5. Einstellungen

Die im Rahmen der thermischen Stückprüfung für die Temperaturklasse festgelegte Arbeitstemperatur der Temperaturbegrenzungseinrichtung darf nicht verändert werden.

Im Fehlerfall, z. B. bei Erreichen der Temperaturklasse, muss die Temperaturbegrenzungseinrichtung bleibend abschalten. Die Temperaturbegrenzungseinrichtung kann durch „Reset“ zurückgesetzt werden. Davor muss die Heizung um mindestens 20 K abkühlen und die Ausschaltursache muss ermittelt und beseitigt werden. Das Rücksetzen erfolgt durch kurzzeitiges Drücken des Rückstellknopfes im Anschlussgehäuse oder am mitgelieferten Schutz-Temperatur-Begrenzer. Bei Ausführung der Heizung mit einem externen Reset ist darauf zu achten, dass dieser durch die Kappe abgedeckt ist.

Der Arbeitspunkt eines Temperaturreglers ist entsprechend der Skala frei wählbar. Er sollte jedoch mindestens 10 K unterhalb des Arbeitspunktes der Temperaturbegrenzungseinrichtung liegen. Ein kurzes Abschalten des Reglers ist normal, wenn von der Umgebungstemperatur ausgehend geheizt wird. Der Temperaturregler kann im Anschlussgehäuse oder am mitgelieferten Schutz-Temperatur-Begrenzer eingestellt werden.

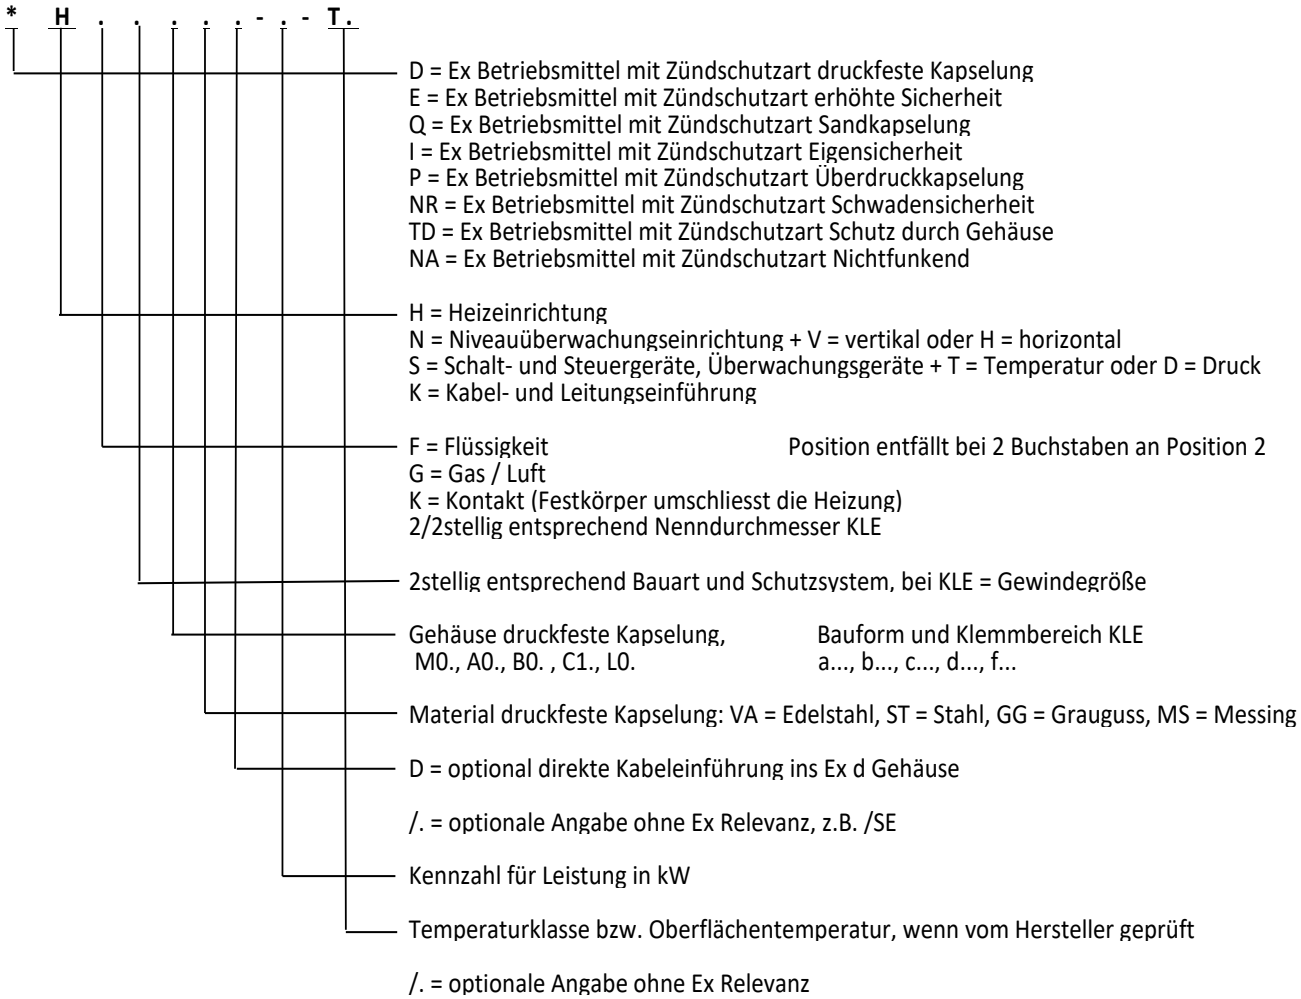
Der Arbeitspunkt einer erforderlichen Niveauüberwachungseinrichtung ist entsprechend dem in der Spezifikation angegebenen Wert zu justieren. Dabei ist zu berücksichtigen, dass zu jedem Zeitpunkt auch bei bewegten Flüssigkeitsoberflächen, die minimale Überdeckung aller heißen Oberflächen und Temperaturfühler sichergestellt ist.

Der Arbeitspunkt einer erforderlichen Strömungsüberwachungseinrichtung ist entsprechend dem in der Spezifikation angegebenen Wert zu justieren. Dabei ist zu berücksichtigen, dass zu jedem Zeitpunkt die minimale Strömung an allen heißen Oberflächen und an dem für die Einhaltung des Explosionsschutzes erforderlichen Temperaturfühler sichergestellt ist.

6. Wartung, Austausch von Ersatzteilen und Fehlerfall

Arbeiten, Wartungen und Reparaturen an der Heizung haben entsprechend IEC/EN 60079-17 durch fachkundiges Personal unter dessen Verantwortung zu erfolgen. Arbeiten an elektrischen Komponenten sind nur im spannungslosen Zustand und unter Tragen einer persönlichen Schutzausrüstung, z.B. Sicherheitsschuhe, Handschuhe etc., durchzuführen.

Die Wirksamkeit des Schutzsystems, das heißt die Abschaltung der Heizung bei der vorgegebenen Temperatur, ist bei der Inbetriebnahme und danach spätestens alle zwei Jahre zu prüfen. Bei ungenügender Funktion auch von einzelnen Komponenten sind diese Teile durch Original Ersatzteile auszutauschen.



Der Heizeinsatz ist frei von Ablagerungen zu halten. Das ist in regelmäßigen Abständen zu überprüfen.

Bei der Demontage ist zu beachten, dass druckfeste Gehäuse unter einem leichten Unter- oder Überdruck stehen können.

Von außen sichtbare Beschädigungen bzw. Korrosion an Gehäuseteilen sowie an Anschlussteilen sind umgehend mit Hersteller-Originalersatzteilen durch den Hersteller oder durch fachkundiges Personal (IEC/EN 60079-19, Anhang B) unter dessen Verantwortung nach Montageanleitung zu beheben.

Im Fehlerfall oder beim Ansprechen einer Schutzeinrichtung ist die Ausfallursache zu ermitteln und zu beseitigen, ggf. ist eine Rücksprache mit dem Hersteller erforderlich.

1. Important information and warning

This operating manual must be issued to the person actually using the heater. Please read this operating manual carefully before starting to install and/or connect the heater. Please note all points and instructions concerning safety.

To prevent injuries to persons or equipment damage, ensure that you read and understand this important information and warning. The product is to be used for its intended purpose only.

The heater and this manual are intended for use by persons with experience of working with electrical heating devices. Inexperienced persons must be trained before using the product.

Please contact ELMESS-Thermosystemtechnik GmbH & Co. KG if you have any questions on parts of this user manual or for information on the heater.

The installation, use and maintenance of the equipment must be carried out by authorised and qualified personnel only.

In the event this operating manual is damaged or lost, please contact ELMESS-Thermosystemtechnik GmbH & Co. KG.

Heater surfaces may reach high temperatures during operation, depending on use. There is a risk of burns. The customer can prevent this risk by displaying the warning signs and/or by reliable and suitable insulation of the hot surfaces.

Unheated surfaces including connection box, electrical terminal compartments, connection box components, ends of heating elements etc. must not be covered to enable heat convection.

To prevent electric shocks, never touch the input or output terminals or electrical components inside the heater.

The mains supply voltage for the heater has to comply with DIN EN 50160, in particular chapter 4.2.5.

2. Design and usage

The heater has an explosion-proof design for operation in Category Ex II 2 G or 3 G resp. 2 D or 3 D but is not suitable for heating hybrid mixtures.

Heaters type **DH...** are available in type of protection Ex d or Ex de, heaters type **EH...** in type of protection Ex e. Heaters type **NAH...** are suitable for category 3G, type **TDH...** for category 3D.

The ***HF…** type heaters are used for direct heating of non-flammable **liquids** during operation in the category indicated in the specifications.

The ***HG…** type heaters are used for direct heating of non-explosive **gases** during operation in the category indicated in the specifications.

The ***HK...** type heaters are permanently embedded in a fixed object and are used for indirect heating of non-flammable **liquids** during operation or non-explosive **gases** during operation, in the category indicated in the specifications.

The ***H..41…** and ***H..42…** and ***H..81…** and ***H..82…** type heaters are used for heating non-flammable or non-explosive media in a closed system in which explosive gases or dust can never occur. The visible or external parts of the heater, such as the flange and the casing, can be within explosion hazardous areas.

The heater must be suitable for the specified application and may only be used in a manner appropriate to its purpose. New tests at the manufacturer are required in the event of any modifications to construction and design including e.g. heat insulation, varnishing or operating conditions.

The type of heater, the technical data, the category and the type of protection are recorded in the specification and to some extent on the name plate, connection diagram and dimension sheet.

Coated devices may not be operated near high-charging processes.

External, piped heat sources or radiant heat from outside must be excluded at the installation site and during operation.

Heaters without certified temperature class

The heater type ***H.00…** is equipped without any kind of temperature sensor or limiter with capillary temperature probes.

The heater type ***H.01…** , ***H.05…** is equipped with a temperature sensor or limiter with capillary temperature probe effective on heater surface temperature.

The heater type ***H.02…** is equipped with a temperature sensor or limiter with capillary temperature probe effective on medium temperature.

For heater types ***H.0…** the protection system must be installed by the customer and the temperature class has to be tested by a Notified Body.

Heaters with certified temperature class

For heater types ***HF11…** , ***HF23…** and ***HF81…** as well as ***HG11…** and ***HG81…** as well as ***HK15…** and ***HK16…**,***HK85…** and ***HK86…** the protection system comprises of at least a temperature limiting system assessed for reliability and an isolating or fault current monitoring device.

For heater types ***HF21…**, ***HF22…**, ***HF41…** and ***HF42…** the protection system comprises at least a temperature limiting system assessed for reliability, a level monitoring system assessed for reliability and an isolating or fault current monitoring device.

For heater type ***HF77…** the protection system comprises at least a level monitoring system assessed for reliability and an isolating or fault current monitoring device.

For heater types ***HF31…** and ***HF32…** as well as ***HG31…**, ***HG32…**, ***HG41…** and ***HG42…**, the protection system comprises at least a temperature limiting system assessed for reliability, a flow monitoring device assessed for reliability and an isolating or fault current monitoring device.

For heater types ***HF57…** , ***HF58…** and ***HF60…** including ***HG57…** , ***HG58…** and ***HG60…** including ***HK57…** , ***HK58…** and ***HK60…** the protection system comprises at least an insulation and fault current monitoring device and a protective switch.

It is only permitted to operate the heater in conjunction with a safety system acknowledged to be reliable in its function and according to the conditions stated in specification.

Capillary temperature probes with a switching contact installed by the manufacturer or temperature sensors, together with a thermal cut-out, supplied with the heater, have been inspected and approved according to ATEX guidelines.

All monitoring devices must be fitted with other protection devices, e.g. fuses and relays or contactors, RCD’s, to form a complete safety system. Should one or more of the protection devices be activated, the heater must, without exception, be immediately physically disconnected from the electrical mains supply.

The heater can also be equipped with other temperature limiters or regulators, resp. temperature sensors. If these devices are also used for monitoring purposes, they should be integrated into the safety system.

3. Conditions for safe operation of the heater

- **The individual thermal test to determine the temperature class respectively maximal surface temperature is to be carried out on site before commissioning by consideration of the local and operating conditions by manufacturer or a notified body. For heaters with certified temperature class, the thermal test has been done by manufacturer.**
- The heater may only be operated in the specified mounting position and under the specified ambient temperature conditions. It should be ensured that the heat emission is evenly distributed and not obstructed during operation.
- The heater may only be operated in conjunction with a safety system. As safety devices for temperature, flow, level, etc., devices certified for function and reliability in accordance with the relevant regulations and according directive 2014/34/EU harmonized standards, e.g. of EN 50495 must be used.
- If no thermal cut-out as supplied from the manufacturer is used, it is the responsibility of the operator to assure the trip function, i.e. the disconnection of the heater from mains supply when the temperature, indicated in the specification, is exceeded.
- The position of the temperature sensors of the temperature limiters must include the changed operating conditions caused by a phase failure in a three-phase system.
- Heating of liquids is only allowed with enough liquid overlap at all heated surfaces. That can be fulfilled by a level monitoring device or comparable protective measures.
- For flowing media, a flow monitoring device may be necessary to secure a minimum flow on all heated surfaces.
- When used in explosive dust atmospheres, adequate measures must be taken to prevent dust deposits on hot surfaces of the heater, in case of coated enclosures high charging processes must be taken to prevent.
- Only the manufacturer is permitted to carry out repairs on the flame-proof gaps or openings. A repair according values of table 2 and 3 of IEC/EN 60079-1 is not permitted.
- The heater is, as manufacturer standard, equipped with cable glands for fixed installation. Cable relief has to be assured by the operator.
  Cables as specified by the manufacturer in the operating instructions have to be used for heater design with direct Ex d cable entry (without Ex e connection box). If the supplied or specified cable glands and cables are not being used, requirements of IEC EN 60079-14, paragraph 10.6.2, have to be observed. The direct cable glands in the heater enclosure DH..A01... and DH..A02… for use in gas group IIC and below -20°C have to be tested with 45 bar at minimum. Unused openings for cable entries must be closed durably with certified screw plugs according to IEC/EN 60079-14.
- Devices for erection in category M2 must have certified respectively appropriate cable glands and cables, EN 50628 must be observed.
- The maximum operating temperature on ex-relevant components (seals, cable bushings, connection terminals) must not exceed +80°C. At operation with ambient temperature less than -20°C down to -60°C, the cable gland and connecting cable must be suitable for the operating temperature.
- When using certified components or devices with type of protection Ex i, the special conditions specified in the corresponding certificate must be observed.
- The heater must never be used with open casing.
- The heater must be installed captive and in a way that it is protected against mechanical stress.
- The integration in the external potential equalisation is made via the Ex e potential equalisation terminal. If this is not available, potential equalisation is assured via the inlet connector, flange or adapter sleeve.
- A built in anti-condensation heater must only be operated if the heater is at standstill.

4. Mounting, fitting and installation

If the heater is not to be immediately fitted and operated, the storage instructions included with every heater delivery must be observed. The heater must be protected from moisture entering the device in particular, e.g. via the use of an anti-condensation heater.

Material appropriate to the category is to be used when fitting and installing the device. In case of outdoor mounting, the erection under a protective roof against weather influences (sunshine, rain, snow) is recommended.

Applicable regulations, e.g. DIN IEC 60364 must be observed when fitting, installing and operating the device. IEC/EN 60079-14 and in Europe the EC directive 1999/92/EC are applicable. Furthermore, local regulations, such as the explosion protection regulations of the Chemical Industry Employer's Liability Insurance Association and the Ordinance on Industrial Safety and Health for Germany, have to be observed.

The erection of the heater is to be done in accordance to the dimensional drawing and protected against solar radiation. Especially the specified mounting position has to be considered. Flanges, respectively in- and outlet nozzles must be mounted with suitable bolts, nuts and sealing without tension. They have to be protected against any kind of mechanical stress. If applicable, the flow direction of the piping system has to be observed.

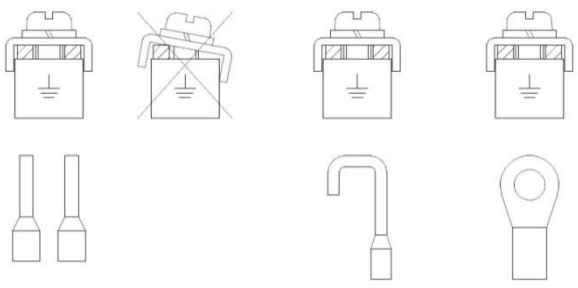
Flameproof enclosure must be closed with screws by strength category at least 8.8 resp. A*-70. The tightening torque is 10 Nm.

The electrical connection of the heater has to be done in the connection box with the power disconnected.

The electrical installation in an Ex e connection box with type of protection increased safety must be done on the provided terminals and observing at minimum 12 mm air distance in between. The supplied cover plate has to be used.

If the heater has no Ex e connection box, the electrical installation must be done directly inside the flameproof enclosure on the provided terminals.

The tightening torque of terminals is about 2 Nm.



This connection box serves also for connecting the built-in temperature sensors and operation of capillary probes with switching contact.

Delivered cable glands and already installed connection cable must be used.

The connection must be made with permanently installed cables or lines in accordance with harmonized standards with the cross section specified in the specification. Never use worn or damaged cables or cables without a protective conductor. Use wire end ferrules when using multi- or fine-wire cables.

The heater must be protected with an appropriate back-up fuse.

For each cable leading in there is an earth conductor, which must be connected. Ensure that the heater is grounded by a qualified electrician, in line with applicable regulations.

Cable entries respectively open holes, which are not used, must be safely closed in accordance to IEC/EN 60079-14.

5. Adjustments

The set point for the temperature limiting system, which has been adjusted during the thermal test according to the temperature class, must not be manipulated.

In the event of a malfunction, e.g. if the temperature class is reached, the temperature limiting system has to cut off. The temperature limiting system can be reset using the "Reset" button. The heater must cool off by at least 20 K before this is done and the reason for the shut-down must be determined and remedied. The reset function can be done by a short push of the Reset button inside the heater connection box or at the separately delivered Thermal cut-out. If the heater has an external reset button, the protection cap has to be closed again after reset.

The operating value of the temperature regulator can be selected depending on the scale. It should, however, be at least 10 K below the set point of the temperature limiting system. It is perfectly normal for the regulator to shut down for a brief moment while the heater is being heated up. The temperature regulator can be adjusted inside the heater connection box or at the separately delivered Thermal cut-out.

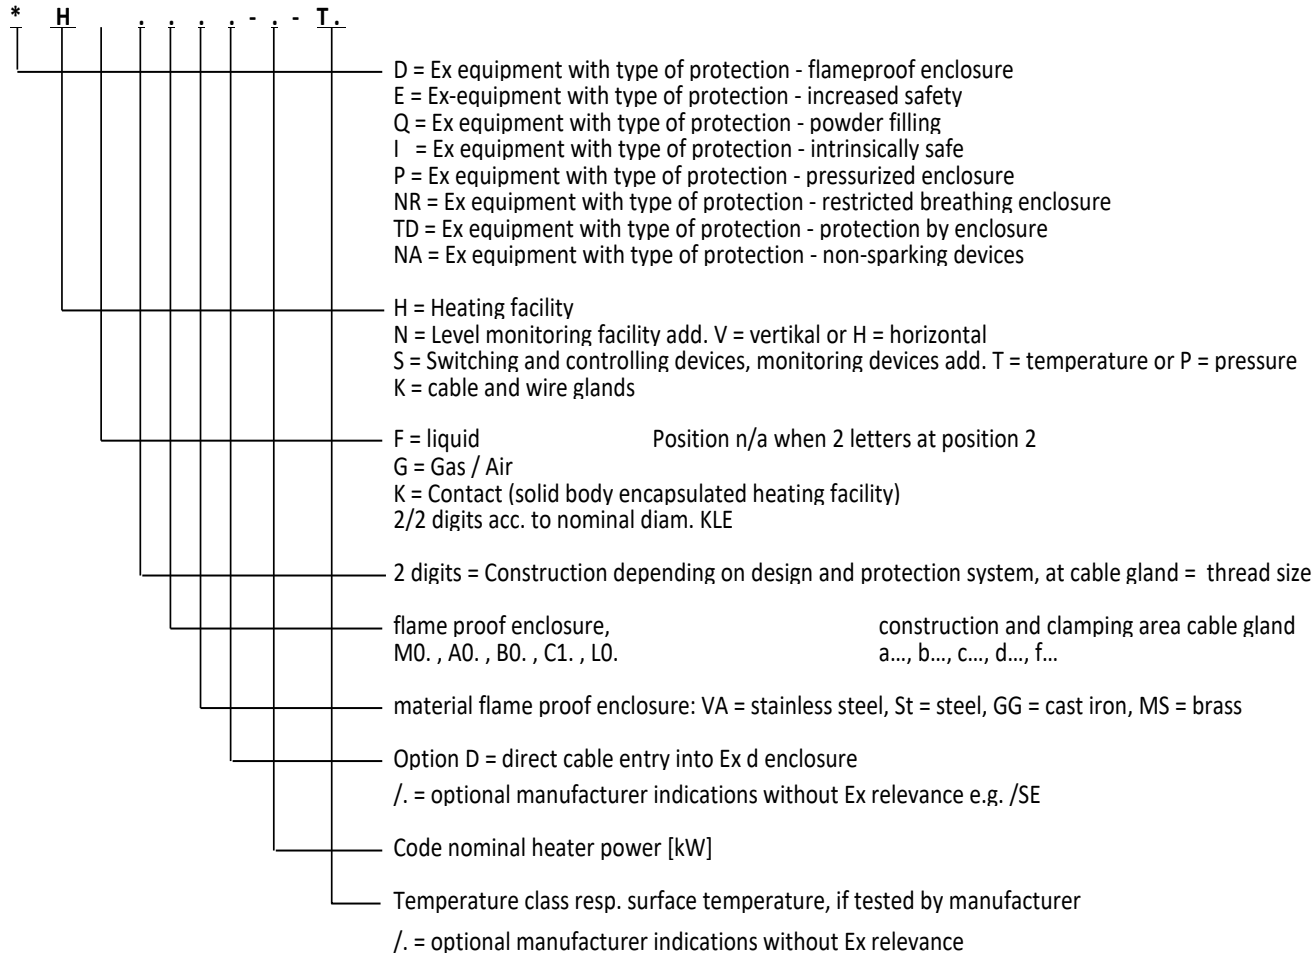
If a level monitoring system is necessary, the operating point has to be adjusted according to the value specified in the specification. It has to be taken into account that all heated surfaces and temperature sensors have to be covered by a minimum of fluid at all times, even if the position of the fluid surface has changed.

If a flow monitoring system is necessary, the working point has to be adjusted according the value specified in the specification. It has to be taken into account that all heated surfaces and temperature sensors are submerged by a minimum of flow at all times.

6. Maintenance, exchange of spare parts and faults

Work, maintenance and repairs on the heater must be in accordance with IEC EN 60079-17 by and in responsibility of qualified personnel. All work on electrical components must be carried out with power disconnected and personal protective equipment must be worn e.g. safety shoes, gloves etc.

The effectiveness of the protective system, i.e. the shutdown of the heater at the specified temperature, must be checked during commissioning and thereafter at least every two years. If even individual components do not function properly, these parts must be replaced with original spare parts.



Deposits must not be allowed to build up on the heating unit. Regular checks must be carried out.

When dismantling, please note that the flameproof enclosure may be under slight positive or negative pressure.

Externally visible damage or corrosion of components of the flame proof enclosure or of connector components must be repaired immediately with original spare parts made by the manufacturer, ELMESS-Thermosystemtechnik GmbH & Co. KG, Nordallee 1, D-29525 Uelzen, Germany, or by qualified personnel (IEC EN 60079-19, app. B) at their own responsibility acc. to mounting instructions.

In the event of a fault or if a protective device responds, the cause of the failure must be determined and eliminated; if necessary, the manufacturer must be consulted.

7. Type key

9. Mitgeltende Unterlagen

Beschreibung des Druckgerätes / Description of pressure equipment

1. Verwendungszweck

Der bestimmungsgemäße Verwendungszweck ist die Erwärmung eines Mediums unter Beachtung der Betriebsbedingungen, die innerhalb der vorgesehenen Grenzen der beigefügten Spezifikation liegen müssen.

Das Druckgerät ist ausgelegt, gebaut und geprüft in Übereinstimmung mit dem für dieses Druckgerät geltenden Auslegungscode.

2. Lieferumfang

Druckgerät mit Prozessanschlüssen sowie dazugehörige Dokumentation (ELMESS Standard).

3. Transport und Lagerung

Das Druckgerät darf nur im drucklosen Zustand transportiert werden.

Ausnahme: Lieferung mit Stickstofffüllung

Bei der Lieferung mit Stickstofffüllung sind die Prozessanschlüsse entsprechend verschlossen und mit einem Manometer versehen. Folgende Kennzeichnung ist an dem Druckgerät anzubringen:

„Achtung! Innerer Überdruck unter 0,5 bar!“

„Achtung! Stickstofffüllung! Erstickungsgefahr! Lüften vor dem Betreten!“

Durch geeignete Anschlagmittel ist sicherzustellen, dass beim Transport keine Verformungen oder sonstige Beeinträchtigungen der Oberflächen/Dichtflächen entstehen.

Der Transport darf nur am liegenden Druckgerät an den dafür vorgesehenen Anschlagpunkten vorgenommen werden. Das Ablegen und Lagern des Behälters darf nur auf geeigneten und mitgelieferten Auflagen (Holzsättel) erfolgen. Punktförmige Belastung der Behälterwand kann zu unzulässigen Deformierungen führen. Ein Abstützen oder Anheben des Druckgerätes über Anbauteile (z. B. el. Anschlussgehäuse oder Wärmedämmungen) ist nicht zulässig.

Alle Öffnungen wie Stutzen, Flansche usw. sind mit geeigneten Mitteln zu verschließen und dürfen nur durch fachkundiges Personal entfernt werden (Achtung: Dichtflächen nicht beschädigen!).

4. Montage

4.1. Aufstellungsbedingungen

Das Druckgerät ist so aufzustellen, dass Beschäftigte oder Dritte nicht gefährdet werden. Erforderliche Schutzabstände sind entsprechend den anwendbaren nationalen gesetzlichen Bestimmungen des Aufstellungslandes einzuhalten.

Das Druckgerät ist so aufzustellen bzw. zu montieren, dass

- es für ggf. notwendige Besichtigungen und Inspektionen zugänglich ist,

- das Kessel-/ Typschild gut erkennbar ist,

- die Bedienung des Druckgerätes und seiner Ausrüstung von einem sicheren Stand aus möglich ist.

Das Druckgerät ist so zu gründen, dass

- durch die Gründung selbst,

- durch das Eigengewicht des Druckgerätes einschließlich des Betriebsmediums oder des Druckprüfungsmediums (bei einer späteren Druckprüfung) und

- durch äußere Kräfte

keine unzulässigen Verlagerungen oder Neigungen eintreten können.

Das Druckgerät muss gegen mechanische Einwirkung von außen soweit geschützt sein, dass keine Beschädigungen an dem Druckgerät zu erwarten sind.

Das Druckgerät und seine Anbauteile sind vor Eingriffen Unbefugter zu schützen.

Besteht im Brandfall die Möglichkeit des Versagens drucktragender Wandungsteile, sicherheitstechnisch relevanter Ausrüstungsteile oder tragender Bauteile (Stahlstützen, Standzargen, Tragpratzen) vom Druckgerät durch unzulässige Erwärmung, sind entsprechende Schutzmaßnahmen (Brandverhütung, Brandschutz oder Brandbekämpfungsmaßnahmen) vorzusehen.

4.2 Anschluss des Druckgerätes

Das Druckgerät ist an den vorgesehenen Stutzen und Anschlüssen anzuschließen. Zusätzliche Einleitung von Kräften, Biegemomenten oder Schwingungen an Anschlussstutzen durch Rohrleitungsanschlüsse oder ähnliches sind zu vermeiden. Schweißtechnisch herzustellende Verbindungsnähte an Stutzen sind nach gültigen und anerkannten Schweißverfahren herzustellen und zu prüfen.

Zu verwendende Dichtungen müssen für den Betriebsfall geeignet sein.

Alle Schraubenbolzen mit Muttern müssen mit den dafür vorgesehenen Anzugsmomenten angezogen werden.

Es liegt in der Verantwortung des Betreibers, die Verträglichkeit zwischen Medium und Behälter- bzw. Dichtungswerkstoff zu gewährleisten.

5. Ausrüstung des Druckgerätes mit Begrenzungseinrichtungen

Um zu verhindern, dass die zulässigen Betriebsgrenzwerte wie z.B. Druck, Temperatur, Füllstand überschritten werden, muss das Druckgerät mit folgenden Begrenzungseinrichtungen ausgerüstet werden:

5.1 Regeleinrichtungen

Geeignete, von Hand bediente oder automatisch arbeitende Regel- und Steuereinrichtungen für die Einhaltung der Betriebsparameter, wie z.B. Mess-, Steuer- und Regeleinrichtungen (MSR). Druck-, Temperatur-, Standschalter, um die Betriebsbedingungen, während des bestimmungsgemäßen Betriebes innerhalb der zulässigen Minimal-/ Maximalgrenzwerte zu halten.

5.2 Überwachungseinrichtungen

Angemessene Überwachungseinrichtungen zur Überwachung der Betriebsparameter, wie z.B. Mess-, Steuer- und Regeleinrichtungen (MSR), Messwertanzeigen, Alarmeinrichtungen, Druck-, Temperatur- und Standschalter, die angemessenes manuelles oder automatisches Eingreifen ermöglichen, Korrekturmaßnahmen auslösen und/oder für das Abfahren und Verriegeln sorgen, um das Druckgerät innerhalb zulässiger Betriebsgrenzwerte zu halten.

5.3 Sicherheitseinrichtungen

Angemessene Sicherheitseinrichtungen wie z. B. Sicherheitsventile usw. oder sicherheitsrelevante MSR-Einrichtungen, die als letzte Gefahrenabwehrmaßnahme sicherstellen, dass die zulässigen Betriebsgrenzwerte nicht überschritten werden.

6. Inbetriebnahme

Die Inbetriebnahme darf erst erfolgen, wenn das Druckgerät

- ordnungsgemäß in eine Anlage montiert und entsprechende Begrenzungseinrichtungen vorgesehen und eingestellt sind,

- gemäß seinen Aufstellungsbedingungen errichtet wurde,

- auf seinen ordnungsgemäßen Zustand hinsichtlich der Montage, den Aufstellungsbedingungen und der sicheren Funktion geprüft wurde.

Die Prüfung vor Inbetriebnahme ist durch den Betreiber der Anlage zu veranlassen und in Deutschland in Übereinstimmung nach §14 der Betriebssicherheitsverordnung durchzuführen. In anderen Aufstellungsländern sind die entsprechenden nationalen Vorschriften für die Prüfung vor Inbetriebnahme zu beachten.

7. Betrieb

7.1. Allgemeine Hinweise

Der Betreiber hat das Druckgerät mit seinen Anbauteilen durch fachkundiges und unterwiesenes Personal zu betreiben und zu überwachen, so dass Beschäftigte oder Dritte nicht gefährdet werden. Schutzzonen sind einzuhalten. Der Betreiber muss entsprechende Betriebsanweisungen erstellen, damit das Bedien- und Wartungspersonal über den Betrieb des Druckgerätes bzw. der Anlage alle notwendigen Anweisungen erhält.

Entsprechende nationale Bestimmungen des Aufstellungslandes über den Betrieb des Druckgerätes sind zu beachten. Die spezifizierten max. zulässigen Temperaturen und / oder Drücke dürfen nicht überschritten werden.

7.2. Anfahrbetrieb

Das Druckgerät ist so anzufahren, dass sich aus dem Temperaturanstieg und / oder Druckanstieg keine unzulässigen Spannungserhöhungen ergeben.

Im Anfahrbetrieb ist das Druckgerät ständig zu beobachten und auf mögliche Leckagen hin zu überprüfen.

7.3 Normalbetrieb

Druckgeräte dürfen nur betrieben werden, wenn die sicherheitstechnisch erforderlichen Ausrüstungsteile auf Dauer wirksam sind und während des Betriebes nicht außer Funktion gesetzt werden oder in ihrer bestimmungsgemäßen Wirkung geändert werden.

7.4 Außerbetriebnahme

Das Druckgerät ist so abzufahren, dass sich aus dem Temperaturabfall und / oder Druckabfall keine unzulässigen Spannungserhöhungen ergeben.

7.5 Unsachgemäße Verwendung

Ergibt sich während des Betriebes des Druckgerätes ein unmittelbarer Gefahrenzustand z.B. durch einen unvorhergesehenen Reaktionsablauf oder durch eine gefährliche Einwirkung von außen, so sind die erforderlichen Gegenmaßnahmen zu ergreifen und ggf. das Druckgerät außer Betrieb zu nehmen.

Eine besondere Prüfung des Druckgerätes ist erforderlich, wenn bei der Betriebsstörung der zulässige Druck überschritten wurde und / oder die zulässige Betriebstemperatur überschritten bzw. unterschritten wurde oder das Druckgerät bzw. seine Anbauteile beschädigt worden sind.

8. Wartung und Instandhaltung

8.1 Allgemeine Angaben

Alle erforderlichen Maßnahmen für Inspektion, Wartung und Instandsetzung sind in Übereinstimmung mit den nationalen Bestimmungen des Aufstellungslandes sowie des Herstellers durchzuführen.

8.2 Schließen und Öffnen des Druckgerätes

Druckgeräte müssen so verschlossen werden, dass alle konstruktiv vorgesehenen Verschlüsse bestimmungsgemäß verwendet werden. Dichtflächen müssen sauber und unbeschädigt sein.

Verschlussschrauben dürfen nur vorsichtig und gleichmäßig so weit angezogen werden, wie es zum Abdichten erforderlich ist. Angegebene Anzugsmomente sind einzuhalten.

An unter Druck stehenden Druckgeräten dürfen Verschlussschrauben nur von hierfür unterwiesenem Personal unter Beachtung besonderer Vorsichtsmaßnahmen nachgezogen werden.

An dem unter Druck stehenden Druckgerät dürfen die Verschlussschrauben nicht gelöst werden.

Verschlüsse und Besichtigungsöffnungen am Druckgerät dürfen erst geöffnet werden, wenn der Druckausgleich mit der Atmosphäre hergestellt ist. Der Druckausgleich mit der Atmosphäre ist nach dem Schließen der Druckzuleitung und durch Entspannen bzw. Belüften unter Beobachtung des Druckmessgerätes herzustellen. Danach sind die Verschlussschrauben derart zu lockern, dass sie den Verschlussdeckel noch halten können. Anschließend ist dieser leicht anzulüften und so weit zu lockern, dass er nicht mehr auf seinem Sitz haftet.

Ist beim Öffnen von Verschlüssen mit einer Gefährdung durch austretendes Medium zu rechnen, sind besondere Schutzmaßnahmen, z.B. persönliche Schutzausrüstung erforderlich. Das Schließen oder Öffnen des Druckgerätes ist unter hohen Temperaturen verboten.

8.3 Wartung und Inspektion

Das Druckgerät ist regelmäßig durch fachkundiges Personal so zu warten, dass es bei den aufgrund der vorhergesehenen Betriebsweise zu erwartenden mechanischen, chemischen und thermischen Beanspruchungen auf Dauer dicht bleibt.

Entsprechend den Betriebsbedingungen und Erfahrungen sind vom Betreiber durch Betriebsanweisungen die notwendigen Maßnahmen für die Wartung und Inspektion festzusetzen.

Zu den Inspektions- und Wartungsarbeiten gehören insbesondere die Überwachung und Sicherstellung der

- Dichtheit
- Aufstellungsbedingungen und Schutzzonen
- Kennzeichnung
- ordnungsgemäßen Funktionsweise der Sicherheits-, Überwachungs- und Warneinrichtungen
- ordnungsgemäßer Zustand und Funktion der Anbauteile
- Zustand der Schweißnähte
- Wanddicke bei Korrosionsbeanspruchung.

8.4 Wiederkehrende Prüfung durch zugelassene Überwachungsstellen

Der Betreiber hat das Druckgerät bei Aufstellung in Deutschland nach der BetrSichV wiederkehrend einer Prüfung auf seinen ordnungsgemäßen Zustand zu unterziehen. In anderen Aufstellungsländern sind die jeweiligen anwendbaren nationalen Bestimmungen zu beachten.

Bei der Auslegung des Druckbehälters wurde ein statischer Betrieb angenommen.

Nach AD2000 S1 (Abschnitt 1.4) dürfen beliebig viele Teillastwechsel als Schwingbreite eine Druckschwankung von 10% des Designdrucks nicht übersteigen.

Nach DIN EN 13445-3 ist die Höhe beliebig vieler Teillastwechsel gemäß Formel 5.4-2 zu bewerten.

8.5 Instandsetzung / Reparatur

Alle schadhaften Verschlusselemente z.B. abgenutzte, rissige und verbogene Schrauben, ausgebrochene oder sonst beschädigte Muttern sowie beschädigte Dichtungen dürfen nicht mehr verwendet werden und sind durch gleichartige zu ersetzen.

Instandsetzungen, die die Sicherheit des Druckgerätes beeinträchtigen können, wie Maßnahmen, die die Werkstoffeigenschaften z.B. durch Schweißen, Kalt- und Warmverformungen verändern, dürfen nur in Übereinstimmung mit den nationalen Bestimmungen des Aufstellungslandes durchgeführt werden.

Sämtliche Instandsetzungen oder Reparaturen sind ausschließlich von qualifiziertem Fachpersonal durchzuführen und ggf. von einer autorisierten Stelle überprüfen zu lassen.

9. Applicable Documents

1. Intended Use

The intended use relates to heating up a medium with consideration given to the operating conditions which need to lie within the prescribed limits of the attached specification.

The pressure equipment is designed, built and tested in compliance with the design code applying to this pressure equipment.

2. Scope of Delivery

Pressure equipment with both process connections and the attendant documentation (ELMESS Standard).

3. Handling and Storage

The pressure equipment is only to be handled in a de-pressurised state.

Exception: Delivery with a nitrogen filling

In the event of a delivery with a nitrogen filling the process connections are to be securely closed and provided with a pressure gauge. The following labelling is to be attached to the pressure equipment:

"Caution! Internal gauge pressure under 0.5 bar!“

"Caution! Nitrogen filling! Risk of suffocation! Ventilate before entering!“

Suitable attachment devices are to ensure that the surfaces/sealing surfaces are not deformed or adversely impaired during handling.

Handling is only to be undertaken on the flat-lying pressure equipment at the envisaged attachment points. The vessel is only to be lowered and stored on suitable supports provided with delivery (wooden bolsters). Concentrated loading of the vessel wall may give rise to non-permitted deformations. Using add-on parts (e.g. el. terminal connection housings or thermal insulation) to prop up or lift the pressure equipment is not permitted.

All openings such as nozzles, flanges etc. are to be closed with suitable appliances and are only to be removed by personnel with the required knowledge (Note: do not damage the sealing surfaces!).

4. Mounting

4.1. Installation requirements

The pressure equipment is to be installed such that there is no danger to either those employed or third parties. Requisite safe distances are to be kept to in keeping with the applicable, national statutory requirements of the country of installation.

The pressure equipment is to be installed and or mounted such that

- it can be accessed for any required inspections and examinations

- the boiler/name plate can be readily seen

- it is possible to operate the pressure equipment and its fittings from a safe distance.

The pressure equipment is to be set down such that

- on account of the setting down itself

- on account of the intrinsic weight of the pressure equipment inclusive of the operating media or the pressure testing medium) and

- on account of external forces

no non-permitted displacements or inclinations arise

The pressure equipment needs to be protected from external mechanical action to the extent that no damage is expected at the pressure equipment.

The pressure equipment and its add-on parts are to be protected from the tampering of unauthorised persons.

Given the risk of failure of pressure-bearing wall parts, safety-relevant equipment parts or structural parts (steel girders, upright frames, supporting outriggers) of the pressure equipment due to non-permitted heating in the event of fire, then appropriate protective steps (fire prevention, fire protection or fire-fighting measures) are to be provided.

4.2 Connecting the pressure equipment

The pressure equipment is to be connected to the envisaged nozzles and connectors. Bringing in additional forces, bending moments and oscillations at connection nozzles from piping connections or the like is to be avoided. Connection welds at nozzles are to be undertaken and examined in line with the valid and accepted welding procedures.

Seals to be used must be for the operating case in point.

All stud bolts with nuts must be tightened to the tightening torques envisaged for this.

The operator is responsible for ensuring that the medium and the container or sealing substance are compatible.

5. Fitting Out the Pressure Equipment with Limiters

The pressure equipment needs to be fitted out with the following limiters to prevent the permitted operating limits such as pressure, temperature and filling level from being exceeded:

5.1 Control equipment

Suitable controlling equipment either manually or automatically operated for keeping to the operating parameters - such as instrumentation & control systems. Pressure, temperature and level switches to keep the operating conditions within the permitted minimum/maximum limits during the intended operation.

5.2 Monitoring equipment

Appropriate monitoring equipment for monitoring operating parameters such as instrumentation & control systems, measured value indicators, alarms, pressure, temperature and levels switches. They, in turn, provide for appropriate manual or automatic access, trigger corrective steps and/or ensure shut down and locking so as to keep the pressure equipment within the permitted operating limits.

5.3 Safety equipment

Suitable safety equipment such as safety valves or safety-relevant instrumentation & control equipment which - as a final step warding off hazards - ensures that the permitted operating limits are not exceeded.

6. Commissioning

Commissioning is only to be undertaken when the pressure equipment

- is properly fitted in a plant and the appropriate limiters are both provided and set

- has been set up in keeping with its conditions of installation

- has been checked as to a proper state in terms of mounting, conditions of installation and an assured function.

The plant operator is to arrange for the pre-commissioning inspection . In Germany it is to be carried out in accordance with §14 of the Operating Safety Ordinance. In other countries where installation is undertaken, a note is to be made of the national provisions for pre-commissioning inspection.

7. Operation

7.1. General pointers

Making use of competent and instructed personnel, the plant operator is to both operate and monitor the pressure equipment inclusive of its add-on parts such that those employed or thirdparties are not faced with hazards. Safety zones are to be adhered to. The plant operator needs to prepare all requisite operating instructions on the operation of the pressure equipment and/or plant for the operating and maintenance personnel

Attention is to be given to the national requirements of the country of installation in question on operating the pressure equipment. The specified max. permitted temperatures and/or pressures must not be exceeded.

7.2. Startup operation

Starting up the pressure equipment is to be such that no non-permitted stress peaks develop from the rise in temperature and/or pressure.

During startup the pressure equipment is to be constantly monitored and checked as to possible leakage.

7.3 Normal operations

Pressure equipment is only to be operated when the safety-relevant required equipment parts remain constantly effective, are not placed out of service during the operation or their intended action is not modified.

7.4 Taking out of operation

Shutting down the pressure equipment is to be such that no non-permitted stress peaks arise from the drop in temperature and/or pressure.

7.5 Incorrect use

If an immediate hazardous situation comes to light when the pressure equipment is operated - due, for instance, to an unscheduled reaction sequence or a hazardous intervention from outside - then the required counter measures are to intervene and the pressure equipment is possibly to be taken out of service.

The pressure equipment is to be subjected to a particular inspection should the permitted pressure in the event of operating trouble be exceeded and/or the permitted operating temperature be exceeded or fallen short of or damage be incurred by the pressure equipment and/or its add-on parts.

8. Maintenance and Upkeep

8.1 General particulars

All requisite steps for inspection, maintenance and corrective maintenance are to be implemented in accordance with the national specifications of the country of installation and of the manufacturer.

8.2 Opening and closing the pressure equipment

Pressure equipment is to be securely closed such that all the design-envisaged closure plugs are used as intended. Sealing surfaces must be clean and undamaged.

Screw plugs are only to be tightened both carefully and uniformly to the extent as is required for sealing purposes. The specified tightening torques are to be adhered to.

Screw plugs on pressurized pressure equipment are only to be tightened by personnel instructed to do this and with attention paid to any particular precautionary steps.

Screw plugs must not be undone on pressurized pressure equipment.

Only when the pressure is at the atmospheric pressure level are closure plugs and inspection ports to be opened. Once the pressure supply line is closed, matching the pressure to that of the atmosphere is done by de-pressurizing and /or venting. The screw plugs are then to be slackened such that they still hold the cap plug. This cap plug is then to be slightly vented and loosened such that it no longer adheres to its fitting.

Specific protective measures such as personal protective gear, are needed if a hazard is posed by fluid emerging when the closure plugs are opened. The pressure equipment must not be closed or opened under high temperatures.

8.3 Maintenance and inspection

Regular maintenance undertaken on the pressure equipment by competent personnel is to be such that it remains constantly seal-tight under the mechanical, chemical and thermal stresses and loads associated with the envisaged mode of operation.

In keeping with the operating conditions and findings made, the plant operator is to establish the required maintenance and inspection steps in the operating instructions.

In particular, inspection and maintenance includes ensuring and monitoring

- seal-tightness
- conditions of installation and safety zones
- labelling
- proper functioning of the safety, monitoring and warning equipment
- proper condition and functioning of the adds-on parts
- state of the welds
- wall thickness if subject to corrosion.

8.4 Recurrent testing by authorized monitoring agencies

According to §15 of the BetrSichV (Operating Safety Ordinance) the plant operator is to subject the pressure equipment installed in Germany to a recurrent test as to being in a proper condition. The respective national requirements are to be applied in other countries where installation has taken place.

The pressure vessel was designed, assuming static operation.

According to AD2000 S1 (section 1.4), any number of partial load changes as the vibration width must not exceed a pressure fluctuation of 10% of the design pressure.

According to DIN EN 13445-3, the height of any number of partial load changes shall be evaluated in accordance with Formula 5.4-2.

8.5 Corrective maintenance / Repairs

All faulty closure elements such as worn, cracked and bent screws, broken or otherwise damaged nuts and damaged seals must cease to be used and are to be replaced.

Corrective maintenance possibly adversely affecting the safety of the pressure equipment, such as steps which change material properties through, for instance, welding and cold and heat deformation , is only to be carried out in compliance with the national requirements of the country of installation.

Only qualified technical staff are to carry out corrective maintenance and repairs which, if need be, are to be inspected by an authorised agency.

ERGEBNIS:
RESULT:

Die vorgenannten Prüfungen erfolgten in Übereinstimmung mit den Anforderungen der RL 2014/68/EU sowie den o.g. Prüfgrundlagen und ergaben keine Beanstandung.

The aforementioned tests were carried out in accordance with Directive 2014/68/EU as well as the aforementioned test specifications and did not result in any objections.

Hinweise: Notes:

1. Die Prüfergebnisse beziehen sich ausschließlich auf den beschriebenen Prüfgegenstand. Eine auszugsweise Vervielfältigung des Prüfberichtes ohne schriftliche Freigabe der notifizierten Stelle ist nicht zulässig.
   All test results apply exclusively to the equipment described above. Duplication of parts of the test report is not permitted without the express written approval of the Notified Body.
2. An den Prüfgegenstand können weitere Anforderungen gestellt sein, wie z.B. Prüfungen vor Inbetriebnahme am Aufstellungsort oder die Einhaltung weiterer EU-Richtlinien.
   There may be additional requirements for example inspection before putting into service on site, or the fulfilment of further EU Directives.

Sub : Approval of Flame Proof Type Electrical Equipments under Petroleum Rules 2002- Regarding.

Sir(s),

Please refer to your letter No. **OIN1346392** dated **27/04/2023** on the subject.

The following Ex electrical equipment(s) manufactured by you according to **IEC 60079-0 : 2017, IEC 60079-1 : 2014-06,** standards and covered under **IBExU Institut für Sicherheitstechnik GmbH** Test reports mentioned below is/are approved for use in **Zone 1** of Gas **IIC** hazardous areas coming under the the Petroleum Rules, 2002 administered by this Organization.

Sr. No	Description	Safety Protection	Equipment reference Number	Test Agency			Drawing no
				Name	Certificate No.	Certificate Date	
1	Heater for gases type DHG... and EHG..., Heater for liquids type DHF... and EHF...and Heater in solid body type DHK... and EHK...	Ex db IIC or IIB or IIB+H2 T6.. T1 Gb	**P551433/1**	IBExU Institut für Sicherheitstechnik GmbH	IECEx IBE 15.0003X Issue No. 2	18/05/2020	As per Test Report

This Approval is granted subject to observance of the following conditions:-

1)The design and construction of the equipment shall be strictly in accordance with description, condition and drawings as mentioned in the IBExU Institut für Sicherheitstechnik GmbH Test Reports referred to above.

2)The equipment shall be used only with approved type of accessories and associated apparatus.

3)Each equipment shall be marked either by raised lettering cast integrally or by plate attached permanently to the main structure to indicate conspicuously:-
(a) Name of the manufacturer
(b) Name and number by which the equipment is identified.
(c) Number & date of the test report of the IBExU Institut für Sicherheitstechnik GmbH applicable to the equipment.
(d) Equipment reference number of this letter by which use of apparatus is approved.
(e) Protection level.

4) A certificate to the effect that the equipment has been manufactured strictly in accordance with the drawing referred to in the IBExU Institut für Sicherheitstechnik GmbH Test report and is identical with the one tested and certified at IBExU Institut für Sicherheitstechnik GmbH shall be furnished with each equipment.
5) The customer shall be supplied with a copy of this letter, an extract of the conditions and maintenence schedule, if any, recommended by IBExU Institut für Sicherheitstechnik GmbH in their test reports and copy of instructions booklet detailing operation & maintenance of the equipment so as to maintain its Flame Proof characterestics.
6) The After sales service and maintanance of subject equipment shall be looked after by your representative Absolute Expansion Engineering, Gut no.830,Near to Mahindra CIE, Ambethan, Phase-4, MIDC, Chakan, Maharashtra 410501

This approval also covers the permissible variations as approved under the IBExU Institut für Sicherheitstechnik GmbH test reports referred above. This approval is liable to be cancelled if any of the conditions of the approval is violated or not complied with . The approval may also be amended or withdrawn at any time, if considered necessary in the interest of safety.

The field performance report from actual users/your customers of the subject equipment may please be collected and furnished to this office for verification and record on annual basis.
The Approval is Valid upto **31/12/2027**

Yours faithfully,

(K. Thiagarajan)

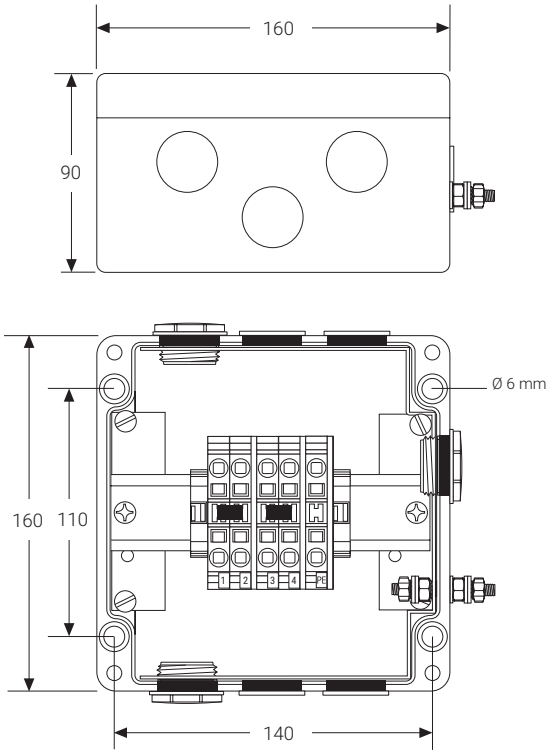
CONNECT AND PROTECT

Multi purpose junction box

PRODUCT OVERVIEW

Industrial polyester junction box with earth plate for use in hazardous areas. This box can be used to make connections between power cables, heating cables and cold lead cables using M25 metallic connection kits or glands. Earthing of the connections is realized via the earth plate

Depending on the configuration of the system, the box can accommodate 6 cold lead entries and/or a power cable.



M25 connection kits have to be ordered separately or are integrated in the heating unit (eg MI heating units), depending on the type of heating cable being used. Cable connection is accomplished via DIN rail mounted spring-type terminals.

The box can be either wall or pipe mounted via the four holes moulded in the base of the box. For pipe mounting use one of the standard support bracket.

Typical use	
	Power supply box, (power) splice box, (power) tee box, marshalling box.
Entries	
	6 x M25 1 x M25
Kit contents	
	1 x junction box with terminals on DIN rail
	3 x M25 stopping plugs
	4 x M25 rain plug (temporary)

PRODUCT SPECIFICATION

Dimensions (in mm)

Materials of construction

Box & lid	Electrostatic charge-resistant glass-filled engineered polymer, black
Sealing gasket	Silicone rubber
Lid fixing screws	Stainless steel (captive)

Technical details

Ingress protection	IP66
Ambient temperature range	–55°C to +55°C

Terminals

Quantity	5 pcs, bridged per 2
Type	Spring-type
Labeling	1, 2, 3, 4, PE
Maximum conductor size	10 mm^2 (solid & stranded)
Maximum operating voltage	550 Vac
Maximum operating current	53 A

APPROVALS

For use in ordinary and hazardous area Zone 1 and Zone 2 (Gas), Zone 21 and Zone 22 (Dust)

Temperature classification

T6

Product certification

Present logos of available certificates

More details about product certification, approvals and conditions of safe use are available in the installation manual at www.nVent.com/RAYCHEM.

ORDERING INFORMATION

Order reference	JB-EX-41-EP
Part number (Weight)	1244-020506 (1.9 kg)

(*) in total no more than 7 terminals should be installed.

Accessories (to be ordered separately)

Support bracket	SB-100, SB-101, SB-130 (for fixation to cable tray)
Gland for MI cold leads	Integrated in MI heating unit or contact nVent for more information
Gland for power cable	GL-55-M25 (Polyamide) up to −55°C, 8-15 mm GL-38-M25-METAL (Ni plated brass) up to −60°C, inner diam. 10-13.5 mm, outer diam. 13.5-21 mm
Loose terminals (*)	Phase/neutral terminal: HWA-WAGO-PHASE Earth terminal: HWA-WAGO-EARTH End plate: HWA-WAGO-ENDPLATE Terminal jumper: HWA-WAGO-JUMPER

PTB 20 ATEX 1008 U **Ausgabe: 1**

(4) Produkt: Integriertes Begleitheizungs-Anschlusssystem Typ JBx-100-xx-xx und T-100

(5) Hersteller: nVent Thermal Belgium LLC

(6) Anschrift: Romeinse straat 14, 3001 Leuven, Belgien

(7) Die Bauart dieses Produkts sowie die verschiedenen zulässigen Ausführungen sind in der Anlage und den darin aufgeführten Unterlagen zu dieser Baumusterprüfbescheinigung festgelegt.

(8) Die Physikalisch-Technische Bundesanstalt, notifizierte Stelle Nr. 0102 gemäß Artikel 17 der Richtlinie 2014/34/EU des Europäischen Parlaments und des Rates vom 26. Februar 2014, bescheinigt, dass dieses Produkt die grundlegenden Sicherheits- und Gesundheitsanforderungen für die Konzeption und den Bau von Produkten zur bestimmungsgemäßen Verwendung in explosionsgefährdeten Bereichen gemäß Anhang II der Richtlinie erfüllt.

Die Ergebnisse der Prüfung sind in dem vertraulichen Prüfbericht PTB Ex 21-10134 festgehalten.

(9) Die grundlegenden Sicherheits- und Gesundheitsanforderungen werden erfüllt durch Übereinstimmung mit

EN IEC 60079-0:2018; EN IEC 60079-7:2015/A1:2018-01; EN 60079-18:2015; EN 60079-31:2014

(10) Falls das Zeichen „X" hinter der Bescheinigungsnummer steht, wird auf besondere Bedingungen für die sichere Anwendung des Produkts in der Anlage zu dieser Bescheinigung hingewiesen.

(11) Diese EU-Baumusterprüfbescheinigung bezieht sich nur auf Konzeption und Prüfung des festgelegten Produkts gemäß Richtlinie 2014/34/EU. Weitere Anforderungen dieser Richtlinie gelten für die Herstellung und das Bereitstellen auf dem Markt. Diese Anforderungen werden nicht durch diese Bescheinigung abgedeckt.

(12) Die Kennzeichnung des Produkts muss die folgenden Angaben enthalten:

(15) Beschreibung des Produkts

Die JBx-100-xx-xx und T-100 Anschlusskasten-Serie ist ein Anschlusssystem für elektrische Begleitheizungssysteme. Die Anschlusskastenserie JBx-100-xx-xx ist in vier verschiedene Versionen unterteilt (JBS-100-xx-xx, JBM-100-xx-xx und T-100). Diese Anschlusskastenserie ist auf einem integrierten Rohrträger montiert, um elektrische Heizkabel an das Stromnetz anzuschließen oder um eine Verbindung zwischen 2 oder 3 Heizkabeln herzustellen. Die verschiedenen Modelle der Serie umfassen Optionen wie: Kästen mit einer Offshore-Platte (Erdungsplatte) und Kästen mit einem optionalen Lichtmodul. Die vierte Version der Anschlusskasten-Serie ist JBU-100-xx-xx. Diese Version hat die gleichen Eigenschaften, wird jedoch anstelle des Rohrträgers mit einer Halterung direkt an der Rohrleitung montiert.

Typ JBS-100-xx-xx
Der Anschlusskasten ist auf einem integrierten Rohrträger installiert. Im Inneren des Anschlusskastens JBS-100-xx-xx befindet sich eine DIN-Schiene auf der zertifizierte Klemmen installiert sind. Zusätzliche Klemmen können hinzugefügt werden, um den Anschluss eines externen Thermostaten zu ermöglichen. Der Anschlusskasten ist für den Anschluss eines Heizkabels an ein Stromkabel (mit oder ohne Thermostat) ausgelegt. Die Stromkabel werden im Anschlusskasten durch ein Loch in der Seitenwand des Kastens und eine zertifizierte Kabelverschraubung eingeführt.

Typ JBM-100-xx-xx
Der Anschlusskasten ist auf einem integrierten Rohrträger installiert. Der Anschlusskasten JBM-100-xx-xx ist für die Aufnahme von bis zu maximal drei Heizkabeln ausgelegt. Daher sind drei Paare von zertifizierten Klemmen vorgesehen. Gelegentlich können weitere Klemmen installiert werden, um die Verkettung der Stromversorgung zu unterstützen. Das Stromkabel wird über ein Loch in der Seitenwand des Kastens und eine zertifizierte Kabelverschraubung in den Kasten eingeführt. Für die Heizkabel ist eine zusätzliche Zugentlastung vorgesehen. Die Zugentlastung verhindert, dass die Heizkabel beim Ziehen verrutschen.

Typ JBU-100-xx-xx
Die JBU-100-xx-xx ist nicht auf einem integrierten Rohrträger installiert. Der Anschlusskasten kann auf einer stabilen Struktur wie z.B. einem Rohrgestell, einer Wand über die M6-Schrauben oder über eine optionale Halterung direkt auf dem Rohr installiert werden. Der Anschlusskasten ist so ausgelegt, dass bis zu maximal vier Heizkabel an das Stromnetz installiert werden können. Die elektrischen Verbindungen werden mit Hilfe von Klemmen hergestellt, die auf einer DIN-Schiene im Inneren des Anschlusskastens installiert sind.
Alternativ kann JBU-100-xx-xx als Verteilerkasten für Leistungs- und Steuerkabel verwendet werden. Es dürfen nur Leitungseinführungen verwendet werden, die für den Bereich entsprechend zertifiziert sind und die den Abmessungen des Kabels entsprechen.

EU-Baumusterprüfbescheinigungen ohne Unterschrift und ohne Siegel haben keine Gültigkeit.
Diese EU-Baumusterprüfbescheinigung darf nur unverändert weiterverbreitet werden.
Auszüge oder Änderungen bedürfen der Genehmigung der Physikalisch-Technischen Bundesanstalt.

Anlage zur EU-Baumusterprüfbescheinigung PTB 20 ATEX 1008 U, Ausgabe: 1

Typ T-100
Der T-100 ist ein Kasten, der als Anschlusskasten (Verbindungskasten) für den Anschluss von bis zu maximal 3 Heizkabeln verwendet wird. Die Box wird auf einem Rohrständer installiert, der die Eingänge und den Schutz für die installierten Heizkabel bietet. Für die Heizkabel ist eine zusätzliche Zugentlastung vorgesehen. Die Zugentlastung verhindert, dass die Heizkabel beim Ziehen verrutschen. Die Verbindung zwischen den Leitern der Heizkabel wird über Aderendhülsen hergestellt. Nach der Installation werden die Leiter mit Schutzkappen aus temperaturbeständigem Silikon elektrisch isoliert.

	JBU-100-xx-xx	0.5 mm² bis 10 mm²
	T-100	max. 3,3 mm²
Bemessungsspannung**	Abhängig vom verwendeten Heizkabeltyp	
	BTV1, QTVR1, XTV1, KTV1, HTV1	max. 120 V
	BTV2, QTVR2, XTV2, KTV2, HTV2	max. 277 V
	VPL1	max. 120 V
	VPL2	max. 230 / 254 V
	VPL4 + FHPC	max. 480 V
Bemessungsstrom	JBS-100-xx-xx	Max. 53 A
	JBM-100-xx-xx	Max. 53 A
	JBU-100-xx-xx	Max. 53 A
	T-100	Max. 40 A

* Weitere Klemmen sind zulässig, solange der Gesamtstrom durch das Gehäuse 40 A nicht übersteigt.

** abhängig von Absicherung bzw. max. zulässigem Bemessungsstrom, max. zulässiger Temperatur der zu beheizenden Oberfläche; siehe hierzu Datenblätter bzw. Betriebsanleitung des Herstellers.

Hinweise zur Herstellung

1. Die maximal zulässige Temperatur für die zu beheizende Fläche (Rohrtemperatur) ist auf der Grundlage der spezifischen Leistungsklasse, der max. zulässigen Betriebstemperatur der Heizbänder, der Nennspannung und der max. zulässigen Strombelastbarkeit zu bestimmen.
2. Anwendungen, für die wärmebeständige Zuleitungen inkl. Kabelverschraubungen aus Metall verwendet werden müssen, sind vom Hersteller anzugeben und vom Errichter/Anwender zusammenzustellen.
3. Einschränkungen bezüglich der Verwendung der Typen JBS-100-L-x, JBM-100-L-x und JBU-100-L-x (mit Kontrollleuchte) sind vom Hersteller anzugeben und vom Installateur/Benutzer zu beachten.

EU-Baumusterprüfbescheinigungen ohne Unterschrift und ohne Siegel haben keine Gültigkeit.
Diese EU-Baumusterprüfbescheinigung darf nur unverändert weiterverbreitet werden.
Auszüge oder Änderungen bedürfen der Genehmigung der Physikalisch-Technischen Bundesanstalt.

Nationales Metrologieinstitut

Anlage zur EU-Baumusterprüfbescheinigung PTB 20 ATEX 1008 U, Ausgabe: 1

4. Die Parallelheizbänder vom Typ VPL und FHPC müssen so installiert werden, dass ihre kalten Enden außerhalb des Klemmenkastens beginnen.
5. Wenn JBU-100-xx-x mit Spannungseinspeisung installiert wird, müssen bei 40 °C < Ta < 56 °C eine ausreichende hitzebeständige Einspeisung und Metall-Verschraubungen, inkl. Dichtung, verwendet werden. Für die Metallverschraubungen inkl. Dichtung muss ein separates IECEx-Zertifikat ausgestellt und von nVent Thermal verifiziert worden sein.
6. Für Heizkabel müssen zertifizierte nVent Thermal Verschraubungen vom Typ C25-100-METAL bei 40 °C < Ta < 56 °C verwendet werden.
7. Die Ausführung des Anschlusskastens mit Belüftungsstopfen muss am Rohr aufgehängt werden, um eine einwandfreie Funktion zu gewährleisten.

(16) Prüfbericht PTB Ex 21-10134

(17) Besondere Bedingungen

Die Verwendung von alternativen Heizbändern ohne Freigabe durch den Hersteller ist nicht zulässig.

(18) Grundlegende Sicherheits- und Gesundheitsanforderungen

Erfüllt durch Übereinstimmung mit den vorgenannten Normen.

Konformitätsbewertungsstelle, Sektor Explosionsschutz

(1) EU-TYPE EXAMINATION CERTIFICATE
(Translation)

(2) Equipment or Protective Systems Intended for Use in Potentially Explosive Atmospheres - **Directive 2014/34/EU**

(3) EU-Type Examination Certificate Number:

PTB 20 ATEX 1008 U **Issue: 1**

(4) Product: Integrated Heat Tracing Connection System
Type JBx-100-xx-xx and T-100

(5) Manufacturer: nVent Thermal Berlgium NV

(6) Address: Romeinse straat 14, 3001 Leuven, Belgium

(7) This product and any acceptable variation thereto is specified in the schedule to this certificate and the documents therein referred to.

(8) The Physikalisch-Technische Bundesanstalt, notified body No. 0102 in accordance with Article 17 of the Directive 2014/34/EU of the European Parliament and of the Council, dated 26 February 2014, certifies that this product has been found to comply with the Essential Health and Safety Requirements relating to the design and construction of products intended for use in potentially explosive atmospheres, given in Annex II to the Directive.

The examination and test results are recorded in the confidential Test Report PTB Ex 21-10134.

(9) Compliance with the Essential Health and Safety Requirements has been assured by compliance with:

EN IEC 60079-0:2018; EN IEC 60079-7:2015/A1:2018-01; EN 60079-18:2015; EN 60079-31:2014

(10) If the sign "X" is placed after the certificate number, it indicates that the product is subject to the Specific Conditions of Use specified in the schedule to this certificate.

(11) This EU-Type Examination Certificate relates only to the design and construction of the specified product in accordance to the Directive 2014/34/EU. Further requirements of the Directive apply to the manufacturing process and supply of this product. These are not covered by this certificate.

(12) The marking of the product shall include the following:

(13) # SCHEDULE

(14) **EU-Type Examination Certificate Number PTB 20 ATEX 1008 U, Issue: 1**

(15) Description of Product

The JBx-100-xx-xx and T-100 Connection box series is a connection system for electrical trace heating systems. The JBx-100-xx-xx Connection box series is subdivided in four different versions (JBS-100-xx-xx, JBM-100-xx-xx and T-100). This junction box series is mounted on an integrated pipe stand for the connection of electrical heating cables to the mains supply or to provide a splice between 2 or 3 heating cables. The different models of the series include options such as: boxes equipped with an offshore plate (earth plate) and boxes with an optional light module and lens. Another part of the Connection box series is JBU-100-xx-xx. This version has the same features, but is mounted directly on the pipeline with a support bracket instead of the pipe stand.

Product type JBS-100-xx-xx

The junction box is installed on an integral pipe support. Inside the JBS-100-xx-xx junction box there is installed one DIN rail on which are installed a number of certified terminals. Additional terminals can be added to allow an external thermostat to be connected. The junction box is designed to connect one heating cable to one power cable (with or without thermostat). Power cables are fed in the junction box by means of a hole in the sidewall of the box and a certified cable gland.

Product type JBM-100-xx-xx

The junction box is installed on an integral pipe support. The JBM-100-xx-xx junction box is designed to accommodate up to a maximum of three heating cables. Therefore, there are three pairs of certified terminals provided. Occasionally more terminals can be installed to support daisy chaining of the power supply. The power cable will be fed in the box via a hole in the sidewall of the box and a certified cable gland. Additional strain relief is provided for the heating cables. The strain relief is avoiding that the heating cables will slip when pulled.

Product type JBU-100-xx-xx

The JBU-100-xx-xx is not installed on an integral pipe support. The junction box can be installed on a stable structure such as a pipe rack; a wall via the M6 screws or can be installed via an optional support bracket directly on the pipe. The junction box is designed to accommodate up to a maximum of four heating cables to the mains supply. The electrical connections are established by means of terminals that are installed on a DIN rail inside the junction box.
Alternatively, the JBU type boxes can be used as a marshalling box for power and control cables. Use glands that are suitably certified for the area and that meet the dimensions of the cable.

EU-Type Examination Certificates without signature and official stamp shall not be valid. The certificates may be circulated only without alteration. Extracts or alterations are subject to approval by the Physikalisch-Technische Bundesanstalt.
In case of dispute, the German text shall prevail.

Nationales Metrologieinstitut

SCHEDULE TO EU-TYPE EXAMINATION CERTIFICATE PTB 20 ATEX 1008 U, Issue: 1

Product type T-100
The T-100 is a box used as a connection (Splice) box for connecting up to maximum 3 heating cables. The Box is installed on a pipe stand providing the entries and protection for the installed heating cables. Additional strain relief is provided for the heating cables. The strain relief is avoiding that the heating cables will slip when pulled. The connection between the conductors of the heating cables is established via ferrules. Once installed the conductors are electrically isolated using protective caps made out of temperature resistive silicone.

Nomenclature

JB	x	-	100		-	xx	-	xx
	1		2			3		4

1	S	JBS – for connection of one heating cable
	M	JBM – for connection of up to three heating cables.
	U	JBU – universal
2	100	Above installation
3	A	version with unthreaded holes
	L	model with optional Light module
	E	version with threaded metric holes
	P	model with optional off shore plate
	D	model with optional drain plug
4	E	version with threaded metric holes
	A	version with unthreaded holes
	P	model with optional off shore plate

Technical data

Ambient temperature range	Standard version	-55°C to +56°C
	With pilot lamp	-40°C to +40°C
Max. number of heating cables	JBS-100-xx-xx	1
	JBM-100-xx-xx	3
	JBU-100-xx-xx	3 (4 without power cable)
	T-100	3
Standard number of terminals*	JBS-100-xx-xx	L+N+PE
	JBM-100-xx-xx	2xL + 2xN + 2xPE
	JBU-100-xx-xx	2xL + 2xN + 2xPE

EU-Type Examination Certificates without signature and official stamp shall not be valid. The certificates may be circulated only without alteration. Extracts or alterations are subject to approval by the Physikalisch-Technische Bundesanstalt.
In case of dispute, the German text shall prevail.

	T-100	-
Max. wire cross section	JBS-100-xx-xx	0.5 mm² to 10 mm²
	JBM-100-xx-xx	0.5 mm² to 10 mm²
	JBU-100-xx-xx	0.5 mm² to 10 mm²
	T-100	max. 3.3 mm²
Rated voltage**	Depends on the heating cable type used	
	BTV1, QTVR1, XTV1, KTV1, HTV1	max. 120 V
	BTV2, QTVR2, XTV2, KTV2, HTV2	max. 277 V
	VPL1	max. 120 V
	VPL2	max. 230 / 254 V
	VPL4 + FHPC	max. 480 V
Rated current	JBS-100-xx-xx	max. 53 A
	JBM-100-xx-xx	max. 53 A
	JBU-100-xx-xx	max. 53 A
	T-100	max. 40 A

* More terminals are permitted as long as the total current trough the enclosure is not exceeding 40A

**subject to protection and max. permissible rated current, max. permissible temperature of the surface to be heated; see data sheets and operating instructions of the manufacturer.

Notes for manufacturing

1. The temperature accepted as a maximum for the surface to be heated (tube temperature) shall be determined on the basis of the specific performance category, the max. admissible operating temperature of the parallel strip heaters, the voltage rating and the max. admissible current carrying capacity.
2. Applications for which heat-resistant incoming cables incl. cable glands from metal have to be used, have to be specified by the manufacturer and must be compiled with the installer/user.
3. Restrictions regarding the use of type JBS-100-L-x, JBM-100-L-x and JBU-100-L-x (with pilot lamp) have to be specified by the manufacturer and must be complied with the installer/user.
4. The parallel strip heaters, type VPL and FHPC, have to be installed so that their cold ends start outside the terminal box.
5. If JBU-100-xx-xx with voltage infeed is installed, an adequate heat-resistant feeder and screwed metal glands, incl. gasket, must be used at 40 °C < Ta < 56 °C. For the screwed

EU-Type Examination Certificates without signature and official stamp shall not be valid. The certificates may be circulated only without alteration. Extracts or alterations are subject to approval by the Physikalisch-Technische Bundesanstalt.
In case of dispute, the German text shall prevail.

JBU-100

CONNECT AND PROTECT

Junction box for modular system

PRODUCT OVERVIEW

JBU-100-L-E

The nVent JBU-100 kit is designed to connect power to up to three nVent RAYCHEM BTV, QTVR, XTVR, HTV or VPL industrial parallel heating cables.

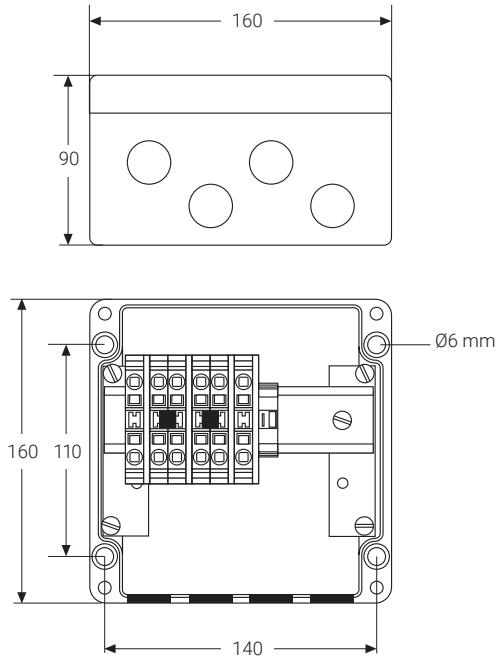
Innovative Spring-type terminals provide fast installation and safe, reliable, maintenance-free operation.

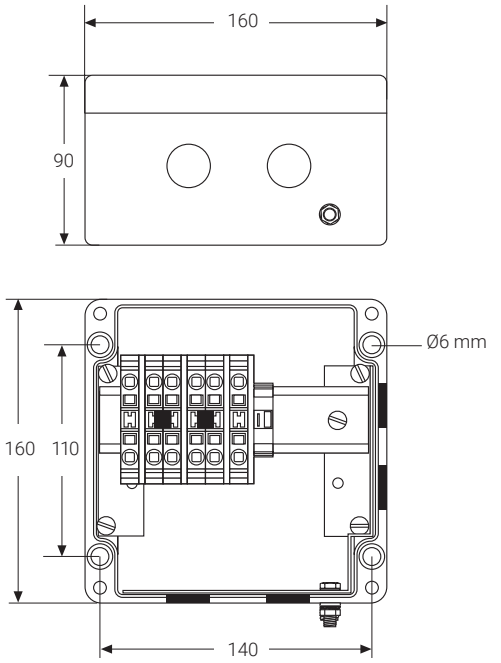
The box is part of the modular component system, it allows for maximum flexibility and can be either wall or pipe mounted.

Connection kits (M25) and insulation entry kits have to be ordered separately. The box is offered in two basic versions customised to local installation practices.

All kits are also available as a lighted version (-L). These include a unique light module with a superbright green LED that simply plugs into the terminals, and a lens in the lid. This provides indication that power is available in the box.

Description





JBU-100-E JBU-100-L-E	JBU-100-EP JBU-100-L-EP
This box is certified for use in IEC regions and provides four M25 threaded entries, stopping plugs and one plastic power cable gland.	This box is certified for use in IEC regions and provides four M25 threaded entries, an earthing plate and an external earth stud. It is designed for use with armoured power cables.

Kit contents

1 junction box with terminals	1 junction box with terminals with earth plate and external earth stud
1 light module (for -L only)	1 light module (for -L only)
1 M25 gland for power cable 8-15 mm in diameter (temperature range −55°C to +70°C)	2 M25 stopping plugs
2 M25 stopping plugs

Ex Component(s) covered by this certificate is described below:

The JBx-100-xx-xx and T-100 Connection box series is a connection system for electrical trace heating systems. The JBx-100-xx-xx Connection box series is subdivided in four different versions (JBS-100-xx-xx, JBM-100-xx-xx and T-100). This junction box series is mounted on an integrated pipe stand for the connection of electrical heating cables to the mains supply or to provide a splice between 2 or 3 heating cables. The different models of the series include options such as: boxes equipped with an offshore plate (earth plate) and boxes with an optional light module and lens. Another part of the Connection box series is JBU-100-xx-xx. This version has the same features, but is mounted directly on the pipeline with a support bracket instead of the pipe stand.

Technical data and nomenclature see Annex.

SCHEDULE OF LIMITATIONS:

Alternative strip heaters must not be used, unless the manufacturer's approval has been obtained.

Electrical Apparatus: Integrated Heat Tracing Connection System
Type JBx-100-xx-xx and T-100

Description

The JBx-100-xx-xx and T-100 Connection box series is a connection system for electrical trace heating systems. The JBx-100-xx-xx Connection box series is subdivided in four different versions (JBS-100-xx-xx, JBM-100-xx-xx and T-100). This junction box series is mounted on an integrated pipe stand for the connection of electrical heating cables to the mains supply or to provide a splice between 2 or 3 heating cables. The different models of the series include options such as: boxes equipped with an offshore plate (earth plate) and boxes with an optional light module and lens. Another part of the Connection box series is JBU-100-xx-xx. This version has the same features, but is mounted directly on the pipeline with a support bracket instead of the pipe stand.

Product type JBS-100-xx-xx

The junction box is installed on an integral pipe support. Inside the JBS-100-xx-xx junction box there is installed one DIN rail on which are installed a number of certified terminals. Additional terminals can be added to allow an external thermostat to be connected. The junction box is designed to connect one heating cable to one power cable (with or without thermostat). Power cables are fed in the junction box by means of a hole in the sidewall of the box and a certified cable gland.

Product type JBM-100-xx-xx

The junction box is installed on an integral pipe support. The JBM-100-xx-xx junction box is designed to accommodate up to a maximum of three heating cables. Therefore, there are three pairs of certified terminals provided. Occasionally more terminals can be installed to support daisy chaining of the power supply. The power cable will be fed in the box via a hole in the sidewall of the box and a certified cable gland. Additional strain relief is provided for the heating cables. The strain relief is avoiding that the heating cables will slip when pulled.

Product type JBU-100-xx-xx

he JBU-100-xx-xx is not installed on an integral pipe support. The junction box can be installed on a stable structure such as a pipe rack; a wall via the M6 screws or can be installed via an optional support bracket directly on the pipe. The junction box is designed to accommodate up to a maximum of four heating cables to the mains supply. The electrical connections are established by means of terminals that are installed on a DIN rail inside the junction box.
Alternatively, the JBU type boxes can be used as a marshalling box for power and control cables. Use glands that are suitably certified for the area and that meet the dimensions of the cables.

Product type T-100

The T-100 is a box used as a connection (Splice) box for connecting up to maximum 3 heating cables. The Box is installed on a pipe stand providing the entries and protection for

the installed heating cables. Additional strain relief is provided for the heating cables. The strain relief is avoiding that the heating cables will slip when pulled. The connection between the conductors of the heating cables is established via ferrules. Once installed the conductors are electrically isolated using protective caps made out of temperature resistive silicone.

Technical data

Ambient temperature range	Standard version	-55°C to +56°C
	With pilot lamp	-40°C to +40°C
Max. number of heating cables	JBS-100-xx-xx	1
	JBM-100-xx-xx	3
	JBU-100-xx-xx	3 (4 without power cable)
	T-100	3
Standard number of terminals*	JBS-100-xx-xx	L+N+PE
	JBM-100-xx-xx	2xL + 2xN + 2xPE
	JBU-100-xx-xx	2xL + 2xN + 2xPE
	T-100	-
Max. wire cross section	JBS-100-xx-xx	0.5 mm² to 10 mm²
	JBM-100-xx-xx	0.5 mm² to 10 mm²
	JBU-100-xx-xx	0.5 mm² to 10 mm²
	T-100	max. 3.3 mm²
Rated voltage**	Depends on the heating cable type used	
	BTV1, QTVR1, XTV1, KTV1, HTV1	max. 120 V
	BTV2, QTVR2, XTV2, KTV2, HTV2	max. 277 V
	VPL1	max. 120 V
	VPL2	max. 230 / 254 V
	VPL4 + FHPC	max. 480 V
Rated current	JBS-100-xx-xx	max. 53 A
	JBM-100-xx-xx	max. 53 A
	JBU-100-xx-xx	max. 53 A
	T-100	max. 40 A

* More terminals are permitted as long as the total current trough the enclosure is not exceeding 40A

**subject to protection and max. permissible rated current, max. permissible temperature of the surface to be heated; see data sheets and operating instructions of the manufacturer.

4	E	version with threaded metric holes
	A	version with unthreaded holes
	P	model with optional off shore plate

Notes for manufacturing

1. The temperature accepted as a maximum for the surface to be heated (tube temperature) shall be determined on the basis of the specific performance category, the max. admissible operating temperature of the parallel strip heaters, the voltage rating and the max. admissible current carrying capacity.
2. Applications for which heat-resistant incoming cables incl. cable glands from metal have to be used, have to be specified by the manufacturer and must be compiled with the installer/user.
3. Restrictions regarding the use of type JBS-100-L-xx, JBM-100-L-xx and JBU-100-L-xx (with pilot lamp) have to be specified by the manufacturer and must be complied with the installer/user.
4. The parallel strip heaters, type VPL and FHPC, have to be installed so that their cold ends start outside the terminal box.
5. If JBU-100-xx-x with voltage infeed is installed, an adequate heat-resistant feeder and screwed metal glands, incl. gasket, must be used at 40 °C < Ta < 56 °C. For the screwed metal glands, incl. gasket a separate IECEx Certificate must have been issued and they must have been verified by nVent Thermal.
6. For heating cables, certified nVent Thermal LLC glands of type C25-100-METAL must be used at 40 °C < Ta < 56 °C.
7. The version of the connection box with a drain plug must be suspended on the pipe to ensure proper function.

Schedule of Limitations

Alternative strip heaters must not be used, unless the manufacturer's approval has been obtained.

⚠ **Warning:** The purchaser should make the manufacturer aware of any external effects or aggressive substances that the equipment may be exposed to.

⚠ **Caution:** Prolonged or repeated contact with the sealant in the core sealer may cause skin irritation. Wash hands thoroughly. Overheating or burning the sealant will produce fumes that may cause polymer fume fever. Avoid contamination of cigarettes or tobacco. Consult MSDS VEN 0033 for further information.

Specific conditions for use using ATEX or IECEx approvals:

For ambient temperatures >+40°C:

Use a power cable with continuous temperature resistance of minimum +90°C.

Use a metallic power cable gland approved for use in hazardous areas (for example GL-38-M25-METAL) and heating cable gland (C25-100-METAL).

For voltages >254 Vac and BTV, QTVR, XTV(R), KTV or HTV heating cables:

Use a power cable with continuous temperature resistance of minimum +90°C.

Use a metallic power cable gland approved for use in hazardous areas (for example GL-38-M25-METAL) and heating cable gland (C25-100-METAL).

For pipe temperature > 150°C and XTV(R), KTV or HTV heating cables, the maximum operating current shall be reduced to maximum 20 A.

Rated voltage:	JBU-100-E(P): 480 Vac** JBU-100-L-E(P): 277 Vac
Ambient temperature:	JBU-100-E(P): −55°C to +56°C** JBU-100-L-E(P): −40°C to +40°C, except when used with VPL : in that case ambient temperatures can be up to +56˚C

** Specific conditions for use may apply for ATEX and IECEx.

For proper installation, follow carefully the installation instructions of the applicable connection kits: C25-100, C25-21, C25-100-METAL or CCON25-100

Maximum pipe temperature:

⚠ **Achtung:** Der Käufer sollte den Hersteller auf etwaige äußere Einwirkungen oder aggressive Substanzen, denen das Gerät ausgesetzt sein könnte, aufmerksam machen.

⚠ **Vorsicht:** Ein längerer oder wiederholter Kontakt mit der Dichtmasse der Heizelementabdichtung kann Hautirritationen auslösen. Waschen Sie Ihre Hände daher gründlich. Durch Überhitzen oder Verbrennen der Dichtmasse entstehen Dämpfe, die zu Polymerfieber führen können. Achten Sie darauf, dass Zigaretten oder Tabak nicht kontaminiert werden. Weitere Informationen können Sie dem US-Sicherheitsdatenblatt MSDS VEN 0033 entnehmen.

Besondere Vorschriften bei Verwendung in Ex-Bereichen (ATEX/IECEx):

Umgebungstemperatur > +40°C:

Netzanschlusskabel mit Dauer-Temperaturbeständigkeit von mindestens +90°C verwenden.

Für Anschlussleitung und Heizband Metallverschraubungen mit Ex-Zulassung verwenden (z. B. GL-38-M25-METAL und C25-100-METAL).

Bei Spannung > 254 V AC und Heizband-Typenreihen BTV, QTVR, XTV(R), KTV oder HTV:

Netzanschlusskabel mit Dauer-Temperaturbeständigkeit von mindestens +90°C verwenden.

Für Anschlussleitung und Heizband Metallverschraubungen mit Ex-Zulassung verwenden (z. B. GL-38-M25-METAL und C25-100-METAL).

Bei Rohrtemperaturen > 150°C sowie bei den Heizbändern XTV(R), KTV oder HTV ist der maximale Betriebsstrom auf 20 A zu begrenzen.

Bemessungsspannung:	JBU-100-E(P): 480 V AC** JBU-100-L-E(P): 277 V AC
Umgebungstemperatur:	JBU-100-E(P): −55°C bis +56°C** JBU-100-L-E(P): −40°C bis +40°C, bei Verwendung mit VPL kann die Umgebungstemperatur bis zu +56°C betragen.

** Ggf. besondere Vorgaben für den Gebrauch in Ex-Bereichen (ATEX und IECEx).

Für die ordnungsgemäße Montage folgen Sie bitte genau den Montageanleitungen der entsprechenden Anschlussgarnituren: C25-100, C25-21, C25-100-METAL bzw. CCON25-100

⚠ **Attention :** L'acheteur doit informer le fabricant de tous les effets externes ou substances agressives auxquels l'équipement peut être exposé.

⚠ **Attention :** Tout contact prolongé ou répété avec le gel contenu dans l'embout d'étanchéité peut provoquer une irritation de la peau. Se laver soigneusement les mains. La surchauffe ou la combustion du gel produira des émanations pouvant entraîner la fièvre des polymères. Éviter toute contamination des cigarettes ou du tabac. Pour de plus amples informations, consulter la fiche de données de sécurité MSDS VEN 0033.

Conditions spécifiques d'utilisation en conformité avec les certifications ATEX ou IECEx :

Pour températures ambiantes >+40°C :

Use Utiliser un câble d'alimentation avec une résistance de température constante de +90°C minimum.

Utiliser un presse-étoupe métallique du câble d'alimentation agréé pour zones explosibles (par exemple GL-38-M25-METAL) et un presse-étoupe du câble chauffant (C25-100-METAL).

Pour des tensions >254 V ca et des câbles chauffants BTV, QTVR, XTV(R), KTV ou HTV :

Utiliser un câble d'alimentation avec une résistance de température constante de +90°C minimum.

Utiliser un presse-étoupe métallique du câble d'alimentation agréé pour zones explosibles (par exemple GL-38-M25-METAL) et un presse-étoupe du câble chauffant (C25-100-METAL).

Pour une température de conduite > 150°C et des câbles chauffants XTV(R), KTV ou HTV le courant de service maximal doit être réduit à 20 A maximum.

Tension maximale :	JBU-100-E(P) : 480 V ca** JBU-100-L-E(P) : 277 V ca
Température ambiante :	JBU-100-E(P) : −55°C à +56°C** JBU-100-L-E(P) : −40°C à +40°C , sauf en cas d'utilisation avec VPL: dans ce cas, la température ambiante peut aller jusqu'à +56°C

** des conditions spécifiques d'utilisation peuvent s'appliquer pour ATEX et IECEx.

Pour que l'installation soit correcte, respecter scrupuleusement les instructions d'installation des kits de connexion applicables : C25-100, C25-21, C25-100-METAL ou CCON25-100

NEDERLANDS

⚠ **Opgelet:** De koper dient de fabrikant op de hoogte te stellen van eventuele externe effecten of agressieve stoffen waaraan de produkten kunnen worden blootgesteld.

⚠ **Waarschuwing:** Langdurig of herhaald contact met de kit in de kernafdichters kan huidirritatie veroorzaken. Was uw handen zorgvuldig. Oververhitting of verbranding van de kit produceert dampen die teflonkoorts kunnen veroorzaken. Vermijd contact met sigaretten- of tabaksrook. Raadpleeg MSDS VEN 0033 voor meer informatie.

Specifieke voorwaarden voor gebruik met ATEX- of IECEx-goedkeuring:

Voor omgevingstemperatuur > +40°C:

Gebruik een voedingskabel met continue temperatuurweerstand van minimaal +90°C. Gebruik een metalen kabelwartel die is goedgekeurd voor gevaarlijke omgevingen (bv. GL-38-M25-METAL) en een kwartel voor verwarmingskabels (C25-100-METAL).

Voor voltages > 254 Vac en BTV-, QTVR-, XTV(R)-, KTV- of HTV- verwarmingskabels:

Gebruik een voedingskabel met continue temperatuurweerstand van minimaal +90°C. Gebruik een metalen kabelwartel die is goedgekeurd voor gevaarlijke omgevingen (bv. GL-38-M25-METAL) en een kwartel voor verwarmingskabels (C25-100-METAL).

Voor pijptemperaturen > 150°C en XTV(R), KTV of HTV verwarmingskabels moet de maximale bedrijfsstroom tot maximaal 20 A worden verlaagd.

Nominale spanning:	JBU-100-E(P): 480 Vac** JBU-100-L-E(P): 277 Vac
Omgevingstemperatuur:	JBU-100-E(P): –55°C tot +56°C** JBU-100-L-E(P): –40°C tot +40°C, behalve bij gebruik met VPL: in dat geval kan de omgevingstemperatuur oplopen tot +56°C.

** Mogelijk gelden specifieke voorwaarden voor gebruik voor ATEX en IECEx.

Voor een juiste installatie moeten de installatie-instructies van de desbetreffende aansluitkit zorgvuldig worden opgevolgd: C25-100, C25-21, C25-100-METAL of CCON25-100

Maximumleidingtemperatuur:

NORSK

⚠ **Advarsel:** Kjøperen skal gjøre produsenten oppmerksom på eksterne påkjenninger eller aggressive stoffer som utstyret kan bli utsatt for.

⚠ **Fadvarsel:** Langvarig eller gjentatt kontakt med tettningsmassen i kabelskrittet, kan irritere huden. Ved kontakt, vask hendene grundig. Overoppheting eller brenning av tetningsmassen kan føre til røykforgiiftning. Unngå at tetningsmassen kommer på sigaretter og tobakk. Konsulter sikkerhetsdatablad VEN 0033 for nærmere informasjon.

Spesielle vilkår for bruk med ATEX- eller IECEx-godkjenning:

For omgivelsestemperaturer > +40°C:

Bruk en strømkabel med en kontinuerlig temperaturmotstand på minimum +90°C. Bruk en kabelnippel av metall som egner seg for bruk

Bruk en kabelnippel av metall som egner seg for bruk i risikoområder (for eksempel GL-38-M25-METAL) og varmekabelnippel (C25-100-METAL).

For spenninger >254 V AC og BTV-, QTVR-, XTV(R)-, KTV- eller HTV-varmekabler:

Bruk en strømkabel med en kontinuerlig temperaturmotstand på minimum +90°C. Bruk en kabelnippel av metall som egner seg for bruk i risikoområder (for eksempel GL-38-M25-METAL) og varmekabelnippel (C25-100-METAL).

For rørtemperatur> 150°C og XTV(R), KTV eller HTV varmekabler skal den maksimale driftsstrømmen reduseres til maksimalt 20 A.

Nominell spenning:	JBU-100-E(P): 480 V AC** JBU-100-L-E(P): 277 V AC
Omgivelsestemperatur:	JBU-100-E(P): −55°C til +56°C** JBU-100-L-E(P): −40 °C til +40 °C, unntatt når det brukes med VPL: i så fall kan omgivelsestemperaturen være opp til + 56°C.

** Spesielle vilkår for bruk gjelde for ATEX og IECEx.

For riktig installasjon, følg nøye installasjonsanvisningene for de aktuelle koblingssettene: C25-100, C25-21, C25-100-METAL eller CCON25-100

20VPL4-CT	150°C	150°C	150°C

⚠ **Varning:** Köparen ska göra tillverkaren medveten om extern påverkan eller aggressiva ämnen som utrustningen kan utsättas för.

⚠ **Försiktighet:** Långvarig eller upprepad kontakt med tätningsmedlet i förseglingen kan orsaka hudirritation. Tvätta händerna noga. Överhettning eller brännning av tätningsmedlet producerar rök som kan orsaka polymerröksfeber. Undvik kontaminering av cigarretter eller tobak. Se materialsäkerhetsdatablad MSDS VEN 0033 för mer information.

Specifika förhållanden för användning av ATEX- eller IECEx-godkännanden:

För omgivningstemperaturer > +40°C:

Använd en spänningskabel med en kontinuerlig temperaturresistens på minst +90°C.

Använd en metallisk spänningskabelbussning som är godkänd för användning inom riskområden (till exempel GL-38-M25-METAL) och värmekabelbussning (C25-100-METAL).

För spänningar >254 Vac och BTV-, QTVR-, XTV(R)-, KTV- eller HTV- värmekablar:

Använd en spänningskabel med en kontinuerlig temperaturresistens på minst +90°C.

Använd en metallisk spänningskabelbussning som är godkänd för användning inom riskområden (till exempel GL-38-M25-METAL) och värmekabelbussning (C25-100-METAL).

För rörtemperatur > 150°C og XTV(R)-, KTV- eller HTV- värmekablar ska den maximala driftsströmmen reduceras till maximalt 20 A.

Nominell spänning:	JBU-100-E(P): 480 Vac** JBU-100-L-E(P): 277 Vac
Omgivningstemperatur:	JBU-100-E(P): −55 till +56°C** JBU-100-L-E(P): −40 till +40°C, utom när det används med VPL: i så fall kan omgivningstemperaturen vara upp till + 56°C.

** Specifika förhållanden för användning vara tillämpliga för ATEX och IECEx.

För korrekt installation, följ noga installationsanvisningarna i de tillämpliga anslutningssatserna: C25-100, C25-21, C25-100-METAL eller CCON25-100.

DANSK

⚠ **Advarsel:** Køberen skal gøre producenten opmærksom på eksterne påvirken eller aggressive stoffer, som udstyret kan udsættes for.

⚠ **Forsigtig:** Langvarig eller gentagen kontakt med tætningsmidlet kan forårsage hudirritation. Vask hænderne grundigt. Overophedning eller afbrænding af tætningsmidlet vil medføre røg, der kan forårsage polymerrøgfeber. Undgå kontaminering med cigaretter eller tobak. Konsulter MSDS VEN 0033 for at få yderligere oplysninger.

Specifikke betingelser for brug med ATEX- eller IECEx-certificeringer:

Ved omgivende temperaturer >+40°C:

Anvend et strømkabel med vedvarende temperaturbestandighed på minimum +90°C.

Anvend en strømkabelafslutning af metal, der er godkendt til brug i risikoområder (f.eks. GL-38-M25-METAL) og varmekabelafslutning (C25-100-METAL).

Til spændinger >254 Vac og BTV-, QTVR-, XTV(R)-, KTV- eller HTV-varmekabler:

Anvend et strømkabel med vedvarende temperaturbestandighed på minimum +90°C.

Anvend en strømkabelafslutning af metal, der er godkendt til brug i risikoområder (f.eks. GL-38-M25-METAL) og varmekabelafslutning (C25-100-METAL).

Ved rørstemperatur > 150°C og XTV(R), KTV eller HTV varmekabler reduceres den maksimale driftsstrøm til maksimalt 20 A.

Mærkespænding:	JBU-100-E(P): 480 Vac** JBU-100-L-E(P): 277 Vac
Omgivende temperatur:	JBU-100-E(P): −55°C til +56°C** JBU-100-L-E(P): −40°C til +40°C, undtagen når de bruges sammen med VPL: i dette tilfælde kan omgivende temperaturer være op til + 56°C.

** Der gælde specifikke betingelser vedrørende brug for ATEX og IECEx.

Følg omhyggeligt monteringsvejledningerne til de pågældende sæt for at kunne foretage korrekt montering: C25-100, C25-21, C25-100-METAL eller CCON25-100

SUOMI

⚠ **Varoitus:** Ostajan tulisi tiedottaa valmistajalle kaikista ulkopuolisista haittatekijöistä tai agressiivisista aineista joille laitteisto voi altistua.

⚠ **Huomio:** Pitkä tai toistuva kosketus tiivisteaineeseen voi aiheuttaa ihoärsytystä. Pese kädet huolellisesti. Tiivisteaineen ylikuumeneminen tai palaminen kehittää höyryjä, jotka voivat aiheuttaa polymeerihöyrykuumeen. Varo savukkeiden tai tupakan kontaminoitumista aineella. Lisätietoja on käyttöturvallisuustiedotteessa VEN 0033.

Turvallisen käytön erityisehdot sovellettaessa ATEX- ja IECEx-hyväksyntiä:

Ympäristön lämpötilassa >+40°C:

Käytä virtakaapelia, jonka jatkuva lämpötilan kestävyys on vähintään +90°C.

Käytä metallista virtakaapelin tiivisteholkkia, joka on hyväksytty käytettäväksi vaarallisilla alueilla (esimerkiksi GL-38-M25-METAL), sekä lämmityskaapelin tiivisteholkkia (C25-100-METAL).

Koskee jännitteitä >254 Vac ja lämmityskaapeleita BTV, QTVR, XTV(R), KTV ja HTV:

Käytä virtakaapelia, jonka jatkuva lämpötilan kestävyys on vähintään +90°C.

Käytä metallista virtakaapelin tiivisteholkkia, joka on hyväksytty käytettäväksi vaarallisilla alueilla (esimerkiksi GL-38-M25-METAL), sekä lämmityskaapelin tiivisteholkkia (C25-100-METAL).

Putken lämpötilan ollessa > 150°C, XTV(R)- KTV- tai HTV-lämmityskaapeleiden enimmäisvirta saa olla maksimissaan 20 A.

Nimellisjännite:	JBU-100-E(P): 480 Vac** JBU-100-L-E(P): 277 Vac
Ympäristön lämpötila:	JBU-100-E(P): −55°C – +56°C** JBU-100-L-E(P): −40°C – +40°C, paitsi käytettynä VPL: n kanssa: tällöin ympäristölämpötila voi olla jopa + 56˚C

** ATEX ja IECEx -tiloissa voidaan joutua soveltamaan turvallisen käytön erityisehtoja.

Noudata asennuksessa huolellisesti liitäntäsarjojen asennusohjeita: C25-100, C25-21, C25-100-METAL tai CCON25-100

⚠ **Attenzione:** L'acquirente deve informare il produttore di eventuali effetti esterni o sostanze aggressive a cui l'apparecchiatura può essere esposta.

⚠ **Attenzione:** Il contatto prolungato o ripetuto con il sigillante delle guaine può causare irritazioni cutanee. Lavarsi accuratamente le mani. Il surriscaldamento o la combustione del sigillante producono fumi che possono causare febbre da fumi di polimeri. Evitare la contaminazione di sigarette o tabacco. Per maggiori informazioni, consultare MSDS VEN 0033.

Condizioni specifiche per un utilizzo con approvazioni ATEX o IECEx:

Per temperature ambiente >+40°C:

Utilizzare un cavo di alimentazione con resistenza a temperatura continua minima di +90°C.

Utilizzare un pressacavo metallico approvato per l'uso in aree pericolose (per esempio GL-38-M25-METAL) e un pressacavo per cavo scaldante (C25-100-METAL).

Per tensioni >254 Vac e cavi scaldanti BTV, QTVR, XTV(R), KTV o HTV:

Utilizzare un cavo di alimentazione con resistenza a temperatura continua minima di +90°C.

Utilizzare un pressacavo metallico approvato per l'uso in aree pericolose (per esempio GL-38-M25-METAL) e un pressacavo per cavo scaldante (C25-100-METAL).

Per temperature delle tubazioni > 150°C e cavi riscaldanti XTV(R), KTV o HTV, la corrente massima di esercizio deve essere ridotta a un massimo di 20 A.

Tensione nominale:	JBU-100-E(P): 480 Vac** JBU-100-L-E(P): 277 Vac
Temperatura ambiente:	JBU-100-E(P): da –55°C a +56°C** JBU-100-L-E(P): da –40°C a +40°C, tranne quando usato con VPL : in questo caso la temperatura ambiente può raggiungere i +56°C.

** Condizioni d'uso specifiche per ATEX e IECEx.

Per una corretta installazione, seguire attentamente le istruzioni d'installazione dei relativi kit di connessione: C25-100, C25-21, C25-100-METAL o CCON25-100

⚠ **Atencion:** El comprador debe poner en conocimiento del fabricante los efectos externos o las sustancias agresivas a las que puede estar expuesto el equipo.

⚠ **Precaución:** El contacto prolongado o frecuente con el sellador de núcleo puede irritar la piel. Lávese bien las manos. El sobrecalentamiento o la quema de sellador genera humos que pueden provocar fiebre por vapores de polímeros. Evite la contaminación de cigarrillos o tabaco. Consulte MSDS VEN 0033 para obtener más información.

Condiciones específicas de uso utilizando certificados ATEX o IECEx:

Para temperatura ambiente >+40°C:

Utilice un cable de alimentación con resistencia térmica continua de +90°C como mínimo.

Utilice un prensaestopas de cable de alimentación metálico aprobado para su uso en zonas peligrosas (por ejemplo, GL-38-M25-METAL) y prensaestopas de cable de calentamiento (C25-100-METAL).

Para voltajes >254 V CA y cables de calentamiento BTV, QTVR, XTV(R), KTV o HTV:

Utilice un cable de alimentación con resistencia térmica continua de +90°C como mínimo.

Utilice un prensaestopas de cable de alimentación metálico aprobado para su uso en zonas peligrosas (por ejemplo, GL-38-M25-METAL) y prensaestopas de cable de calentamiento (C25-100-METAL).

Para temperaturas de tubería > 150°C y cables calefactores XTV(R), KTV o HTV, la intensidad máxima de operación debe reducirse a un máximo de 20 A.

Voltaje nominal:	JBU-100-E(P): 480 V CA** JBU-100-L-E(P): 277 V CA
Temperatura ambiente:	JBU-100-E(P): de −55°C a +56°C** JBU-100-L-E(P): de −40°C a +40°C, excepto cuando se utiliza con VPL: en este caso la temperatura ambiente puede ser de hasta +56˚C

** Se aplican condiciones específicas para su uso en zonas ATEX y IECEx.

Para una instalación correcta, siga atentamente las instrucciones de instalación de los kits de conexión correspondientes: C25-100, C25-21, C25-100-METAL o CCON25-100

POLSKI

⚠ **Uwaga:** Kupujący powinien poinformować producenta o wszelkich czynnikach zewnętrznych lub agresywnych substancjach, na które mogą być narażone urządzenia.

⚠ **Ostrzeżenie:** Długotrwały lub powtarzający się kontakt z preparatem uszczelniającym w uszczelniaczu rdzenia, może powodować podrażnienia skóry. Dokładnie umyć ręce. Przegrzany lub palący się preparat uszczelniający wytwarza opary, mogące wywołać gorączkę polimerową. Nie dopuszczać do skażenia papierosów lub tytoniu. Więcej informacji zawiera karta charakterystyki substancji arkusze MSDS VEN 0033.

Szczególne warunki użytkowania zgodnie z ATEX lub IECEx:

Dla temperatur otoczenia >+40˚C:

Używać przewodu zasilającego z odpornością na wysokie temperatury przy ciągłej ekspozycji wynoszącą min. +90°C.

Używać metalowego przepustu przewodu zasilającego zatwierdzonego do użytkowania w strefach niebezpiecznych (na przykład GL-38-M25-METAL) oraz przepustu przewodu grzewczego (C25-100-METAL).

Dla napięć >254 VAC oraz przewodów grzewczych BTV, QTVR, XTV(R), KTV lub HTV:

Używać przewodu zasilającego z odpornością na wysokie temperatury przy ciągłej ekspozycji wynoszącą min. +90°C.

Używać metalowego przepustu przewodu zasilającego zatwierdzonego do użytkowania w strefach niebezpiecznych (na przykład GL-38-M25-METAL) oraz przepustu przewodu grzewczego (C25-100-METAL).

W przypadku temperatury rur > 150°C oraz kabli grzejnych XTV(R), KTV lub HTV, maksymalny prąd roboczy powinien być ograniczony do maksimum 20 A.

Napięcie znamionowe:	JBU-100-E(P): 480 Vac** JBU-100-L-E(P): 277 VAC
Temperatura otoczenia:	JBU-100-E(P): od −55°C do +56°C** JBU-100-L-E(P): od −40°C do +40°C, z wyjątkiem zastosowania z VPL : w tym przypadku temperatura otoczenia może wynosić do +56˚C.

** Mieć zastosowanie szczególne warunki użytkowania dla ATEX i IECEx.

W celu dokonania prawidłowego montażu należy postępować zgodnie z instrukcją stosowną dla danego zestawu podłączeniowego: C25-100, C25-21, C25-100-METAL lub CCON25-100

Максимальная температура рубашки:

РУССКИЙ

⚠ **Предупреждение:** Покупатель должен уведомить производителя о любых внешних воздействиях или агрессивных средах, которым может подвергаться оборудование.

⚠ **Меры Предосторожности:** Продолжительное или многократное контактирование с герметиком изолирующей жилы кабеля манжеты может вызвать раздражение кожи. Тщательно мойте руки. В случае перегрева или возгорания герметик выделяет дым, который может вызвать поражение дыхательных путей. Не допускайте попадания на сигареты или в табак. Дополнительную информацию см. в сертификате безопасности материала MSDS VEN 0033.

Особые указания по использованию согласно ATEX или IECEx:

Для температур окружающей среды > +40°C:
Использовать кабель питания, имеющий постоянное сопротивление до температуры не менее +90°C.

Использовать металлические кабельные вводы для взрывоопасных зон (например, GL-38-M25-METAL) и вводы греющего кабеля (C25-100-METAL).

Для напряжений > 254 В перем. тока и греющих кабелей BTV, QTVR, XTV(R), KTV или HTV:

Использовать кабель питания, имеющий постоянное сопротивление до температуры не менее +90°C.

Использовать кабельные вводы для взрывоопасных зон (например, GL-38-M25-METAL) и вводы греющего кабеля (C25-100-METAL).

При температуре труб > 150°C и греющих кабелей XTV(R), KTV или HTV максимальный рабочий ток должен быть снижен до макс.20 A.

Номинальное напряжение:	JBU-100-E(P): 480 В перем.** JBU-100-L-E(P): 277 В перем.
Температура окр. среды:	JBU-100-E(P): от −55°C до +56°C** JBU-100-L-E(P): от −40°C до +40°C, кроме случаев использования с VPL: в этом случае температура окружающей среды может достигать +56˚C.

** ATEX, МЭК по сертификации электрооборудования для взрывоопасных сред.

При выполнении монтажа соблюдайте указания, приведенные в инструкциях для соответствующих комплектов подсоединения: C25-100, C25-21, C25-100-METAL или CCON25-100

СВЕДЕНИЯ О ТРАНСПОРТИРОВКЕ И ХРАНЕНИИ

Транспортировать в упаковке можно всеми видами крытых транспортных средств (автомобильным, железнодорожным, речным, авиационным и др.) в соответствии с действующими на данном виде транспорта правилами перевозок при температуре воздуха от −50°C до + 50°C. Транспортная упаковка предохраняет корпус от прямого воздействия атмосферных осадков, пыли и ударов при транспортировании.

Материалы и оборудование должны храниться в сухих и чистых закрытых помещениях при температуре от −20°C до +40°C и быть защищены от механических повреждений.

⚠ **Upozornění:** Kupující by měl informovat výrobce o jakýchkoli vnějších účincích nebo agresivních látkách, kterým může být zařízení vystaveno.

⚠ **Upozornění:** Dlouhodobý nebo opakovaný kontakt s těsnicím prostředkem v těsnění jádra může vést k podráždění pokožky. Pečlivě si umyjte ruce. Při přehřívání nebo spalování těsnicího prostředku se vytvářejí plyny, jež mohou vyvolat horečku z polymerových výparů. Dávejte pozor, aby nedošlo ke kontaminaci cigaret nebo tabáku. Více informací viz MSDS VEN 0033.

Specifické podmínky pro použití na základě schválení ATEX a IECEx:

Pro okolní teplotu >+40°C:

Použijte přívodní kabel s minimální trvalou tepelnou odolností +90°C.

Použijte kovovou průchodku přívodního kabelu schválenou pro použití v prostředích s nebezpečím výbuchu (například GL-38-M25-METAL) a průchodku topného kabelu (C25-100-METAL).

Pro napětí >254 Vac a topné kabely BTV, QTVR, XTV(R), KTV nebo HTV:

Použijte přívodní kabel s minimální trvalou tepelnou odolností +90°C.

Použijte kovovou průchodku přívodního kabelu schválenou pro použití v prostředích s nebezpečím výbuchu (například GL-38-M25-METAL) a průchodku topného kabelu (C25-100-METAL).

Pro teplotu potrubí > 150°C a topné kabely XTV(R), KTV nebo HTV se maximální provozní proud sníží na maximálně 20 A.

Jmenovité napětí:	JBU-100-E(P): 480 Vac** JBU-100-L-E(P): 277 Vac
Okolní teplota:	JBU-100-E(P): −55°C až +56°C** JBU-100-L-E(P): −40°C až +40°C, s výjimkou použití s VPL: v tomto případě mohou být okolní teploty až +56°C.

** Pro ATEX a IECEx vztahovat zvláštní podmínky použití.

Má-li být montáž správně provedena, je třeba postupovat podle montážních návodů příslušných připojovacích souprav: C25-100, C25-21, C25-100-METAL nebo CCON25-100

Maximální teplota potrubí:

Typ topného kabelu	T_{max} souvisle	T_{max} přerušovaně, celkem 1000 h	T_{max} vypnuto

MAGYAR

⚠ **Figyelmeztetés:** A vevőnek tájékoztatni kell a gyártót minden olyan külső hatásról vagy agresszív anyagról, amelyek a készülék ki lehet téve.

⚠ **Figyelem:** A magtömítésben lévő tömítőanyaggal való hosszan tartó vagy ismételt érintkezés bőrirritációt okozhat.Mosson alaposan kezet A tömítőanyag túlhevülése vagy égése olyan füstöket hoz létre, amelyek polimer füst lázat okozhatnak. Kerülje a cigaretták vagy a dohány szennyeződését. További információkért forduljon az MDS VEN 0033 anyagbiztonsági adatlaphoz.

Az ATEX és az IECEx jóváhagyások használatának különleges feltételei:

+40°C-nál magasabb környezeti hőmérséklet esetén:

Minimum +90°C-os folyamatos hőmérséklet-ellenállással rendelkező hálózati tápkábelt használjon.

A hálózati tápkábelhez, illetve a fűtőkábelhez veszélyes területen való alkalmazásra jóváhagyott fém szorítóhüvelyt (például GL-38-M25-METAL), illetve szorítóhüvelyt (C25-100-METAL) használjon.

254 V-nál magasabb feszültség és BTV, QTVR, XTV(R), KTV vagy HTV fűtőkábelek esetén:

Minimum +90°C-os folyamatos hőmérséklet-ellenállással rendelkező hálózati tápkábelt használjon.

A hálózati tápkábelhez, illetve a fűtőkábelhez veszélyes területen való alkalmazásra jóváhagyott fém szorítóhüvelyt (például GL-38-M25-METAL), illetve szorítóhüvelyt (C25-100-METAL) használjon.

Csőhőmérséklet > 150°C és XTV(R), KTV vagy HTV fűtővezetékek esetén a maximális üzemi áramot legfeljebb 20 A-ra kell csökkenteni.

Névleges feszültség:	JBU-100-E(P): 480 V~** JBU-100-L-E(P): 277 V~
Környezeti hőmérséklet:	JBU-100-E(P): −55°C – +56°C** JBU-100-L-E(P): −40°C – +40°C, kivéve, ha VPL-vel használják: ebben az esetben a legmagasabb környezeti hőmérséklet + 56˚C lehet.

** A biztonságos használat feltételei az ATEX-re és az IECEx-re vonatkoznak.

A helyes szereléshez kövesse körültekintően az alkalmazásra kerülő csatlakoztató készletek szerelési utasításait: C25-100, C25-21, C25-100-METAL vagy CCON25-100

Maximális csőhőmérséklet:

Fűtőkábel típusa	T_{max} folyamatos üzemben	T_{max} szakaszos üzemben, összesen 1000 óra	T_{max} kikapcsolva

HRVATSKI

⚠ **Upozorenje:** Kupujúci by mal informovať výrobcu o akýchkoľvek vedľajších účinkoch alebo agresívnych látkach, ktorým môže byť zariadenie vystavené.

⚠ **Oprez:** Produženi ili ponovljeni kontakt s brtvenom smjesom u brtvilu jezgre može izazvati nadražaj kože. Temeljito operite ruke. Pregrijavanje ili paljenje brtvene smjese prouzročiti će dim koji može rezultirati groznicom izazvanom dimom polimera. Izbjegavajte kontaminaciju cigareta i duhana. Više informacija možete pronaći u MSDS VEN 0033.

Posebni uvjeti za upotrebu kod primjene ATEX i IECEx odobrenja:

Za okolne temperature >+40°C:

Koristiti napojni kabel konstantnog temperaturnog otpora mimalno +90°C.

Koristiti metalne kabelske uvodnice odobrene za uporabu na opasnim lokacijama (na primjer: GL-38-M25-METAL) i uvodnicu grijaćeg kabela (C25-100-METAL).

Za napone >254 Vac i BTV, QTVR, XTV(R), KTV ili HTV grijaće kabele:

Koristiti napojni kabel konstantnog temperaturnog otpora mimalno +90°C.

Koristiti metalne kabelske uvodnice odobrene za uporabu na opasnim lokacijama (na primjer: GL-38-M25-METAL) i uvodnicu grijaćeg kabela (C25-100-METAL).

Za temperaturu cjevovoda> 150°C i XTV(R), KTV ili HTV grijaće kabele, maksimalna radna struja smanjuje se na maksimalno 20 A.

Nazivni napon:	JBU-100-E(P): 480 Vac** JBU-100-L-E(P): 277 Vac
Okolna temperatura:	JBU-100-E(P): −55°C do +56°C** JBU-100-L-E(P): −40°C do +40°C, osim ako se koristi s VPL grijaćim kabelom: u tom slučaju temperatura okoline može biti i do +56˚C.

** Za ATEX i IECEx odobrenja primjenjuju se posebni uvjeti upotrebe.

Za pravilnu montažu, pažljivo slijedite upute za montažu primjenjivih

C63-AQ-QIX-00257001-17

(1) # EU-Baumusterprüfbescheinigung

(2) Geräte oder Schutzsysteme zur bestimmungsgemäßen Verwendung in explosionsgefährdeten Bereichen - **Richtlinie 2014/34/EU**

(3) EU-Baumusterprüfbescheinigungsnummer

PTB 01 ATEX 1016 **Ausgabe: 1**

(4) Produkt: Klemmenkasten Typ 8146/1***-* und 8146/2***-*

(5) Hersteller: R. STAHL Schaltgeräte GmbH

(6) Anschrift: Am Bahnhof 30, 74638 Waldenburg (Württ.), Deutschland

(7) Die Bauart dieses Produkts sowie die verschiedenen zulässigen Ausführungen sind in der Anlage und den darin aufgeführten Unterlagen zu dieser Baumusterprüfbescheinigung festgelegt.

(8) Die Physikalisch-Technische Bundesanstalt, notifizierte Stelle Nr. 0102 gemäß Artikel 17 der Richtlinie 2014/34/EU des Europäischen Parlaments und des Rates vom 26. Februar 2014, bescheinigt, dass dieses Produkt die grundlegenden Sicherheits- und Gesundheitsanforderungen für die Konzeption und den Bau von Produkten zur bestimmungsgemäßen Verwendung in explosionsgefährdeten Bereichen gemäß Anhang II der Richtlinie erfüllt.

Die Ergebnisse der Prüfung sind in dem vertraulichen Prüfbericht PTB Ex 21-10099 festgehalten.

(9) Die grundlegenden Sicherheits- und Gesundheitsanforderungen werden erfüllt durch Übereinstimmung mit
EN IEC 60079-0:2018, EN 60079-1:2014, EN 60079-7:2015+A1:2018, EN 60079-11:2012, EN 60079-18:2015+A1:2017, EN 60079-28:2015, EN 60079-31:2014

(10) Falls das Zeichen „X" hinter der Bescheinigungsnummer steht, wird auf besondere Bedingungen für die sichere Anwendung des Produkts in der Anlage zu dieser Bescheinigung hingewiesen.

(11) Diese EU-Baumusterprüfbescheinigung bezieht sich nur auf Konzeption und Prüfung des festgelegten Produkts gemäß Richtlinie 2014/34/EU. Weitere Anforderungen dieser Richtlinie gelten für die Herstellung und das Bereitstellen auf dem Markt. Diese Anforderungen werden nicht durch diese Bescheinigung abgedeckt.

(12) Die Kennzeichnung des Produkts muss die folgenden Angaben enthalten:

(15) Beschreibung des Produkts

Der Klemmenkasten Typ 8146/1***-* und 8146/2***-* besteht aus einem Gehäuse aus Polyesterharz in der Zündschutzart Erhöhte Sicherheit "eb" und Schutz durch Gehäuse „tb", das mit Ex-Typ zertifizierten Flanschen ausgestattet werden kann.

Es können mehrere Klemmenkästen miteinander kombiniert werden. Der Anschluss erfolgt über Ex-Kabel- und Leitungseinführungen.

Der Klemmenkasten ist mit Klemmen für Stromkreise in der Zündschutzart Erhöhte Sicherheit "eb" oder Eigensicherheit "ia" oder Kombinationen aus beiden ausgestattet. Er kann optional mit Trennklemmen und Sicherungen ausgestattet sein. Die Komponenten für eigensichere Stromkreise sind gekennzeichnet, z. B. in hellblau.

Es können auch Bolzenklemmen mit Anschluss an Sammelschienen installiert werden.

Das Gehäuse sowie alle ein- und angebauten Komponenten sind nach ATEX-Prüfbescheinigung geprüft und bescheinigt.

Änderungen

1) Zusätzliche Ex-Komponenten zur Komponentenliste hinzugefügt
2) Normen-Update auf den neuesten ATEX Normenstand
3) Neue Zertifizierungsbetriebsanleitung

Schutz durch Gehäuse nach IEC EN 60079-0, EN 60079-7 und EN 60079-31:
abhängig von den verbauten Ex-Komponenten oder Ex Geräten

Die Bemessungswerte sind Höchstwerte, die tatsächlichen elektrischen Werte werden von den eingebauten elektrischen Betriebsmitteln bestimmt. Der Hersteller legt im Rahmen dieser Grenzwerte bei Einhaltung der zutreffenden Normen und abhängig von Netzbedingungen, Betriebsart, Gebrauchskategorie usw. die endgültigen Bemessungswerte fest. Die Kennwerte der eigensicheren Stromkreise werden vom Hersteller in eigener Verantwortung festgelegt.

Der maximal zulässige Bereich der Umgebungstemperatur des Klemmenkastens kann durch die maximal zulässige Betriebstemperatur der getrennt bescheinigten Komponenten eingeschränkt werden.

Die Zusammensetzung des Zündschutzart-Kennzeichnung richtet sich nach den Zündschutzarten der jeweils verwendeten Komponenten.

(2) Equipment or Protective Systems Intended for Use in Potentially Explosive Atmospheres - **Directive 2014/34/EU**

(3) EU-Type Examination Certificate Number:

PTB 01 ATEX 1016 **Issue: 1**

(4) Product: Terminal box type 8146/1***-* und 8146/2***-*

(5) Manufacturer: R. STAHL Schaltgeräte GmbH

(6) Address: Am Bahnhof 30, 74638 Waldenburg (Württ.), Germany

(7) This product and any acceptable variation thereto is specified in the schedule to this certificate and the documents therein referred to.

(8) The Physikalisch-Technische Bundesanstalt, notified body No. 0102 in accordance with Article 17 of the Directive 2014/34/EU of the European Parliament and of the Council, dated 26 February 2014, certifies that this product has been found to comply with the Essential Health and Safety Requirements relating to the design and construction of products intended for use in potentially explosive atmospheres, given in Annex II to the Directive.

The examination and test results are recorded in the confidential Test Report PTB Ex 21-10099.

(9) Compliance with the Essential Health and Safety Requirements has been assured by compliance with:

EN IEC 60079-0:2018, EN 60079-1:2014, EN 60079-7:2015+A1:2018, EN 60079-11:2012, EN 60079-18:2015+A1:2017, EN 60079-28:2015, EN 60079-31:2014

(10) If the sign "X" is placed after the certificate number, it indicates that the product is subject to the Specific Conditions of Use specified in the schedule to this certificate.

(11) This EU-Type Examination Certificate relates only to the design and construction of the specified product in accordance to the Directive 2014/34/EU. Further requirements of the Directive apply to the manufacturing process and supply of this product. These are not covered by this certificate.

(12) The marking of the product shall include the following:

(13) # SCHEDULE

(14) **EU-Type Examination Certificate Number PTB 01 ATEX 1016 , Issue: 1**

(15) Description of Product

The Terminal Box type 8146/1***-* and 8146/2***-* consists of enclosures out of polyester resin in the type of protection Increased Safety "eb" and Protection by Enclosure “tb”, which may be provided with Ex-type certified flanges. Several boxes can be combined with each other. The connection is made by Ex-cable entries.

The Terminal Box is equipped with terminals for circuits in the type of protection Increased Safety "eb" or Intrinsic Safety "ia" or combinations of both. It may optionally be provided with isolating terminals and fuses. The components for intrinsically safe circuits are marked, e.g. in light blue.

Stud terminals connected to busbars can also be installed.

The empty enclosures as well as all mounted and attached components have been tested and certified under an ATEX examination certificate.

Changes

1) Additional Ex components added to list of components
2) Standard update to latest ATEX standards
3) New Certification Instruction

SCHEDULE TO EU-TYPE EXAMINATION CERTIFICATE PTB 01 ATEX 1016 , Issue: 1

Ingress protection according to IEC 60079-0, IEC 60079-7 and IEC 60079-31:
depends on the assembled Ex components or Ex equipments

The rated values are maximum values, the actual electrical values depend on the electrical equipment incorporated. Within the scope of these maximum permissible values and with due regard to the standards, the manufacturer specifies the final rated values dependent on the system conditions, mode of operation, utilization category, etc. The characteristic values of the intrinsically safe circuits are to be given by the manufacturer on his own responsibility.

The maximum permissible ambient temperature range of the terminal enclosure can be limited by the maximum permissible service temperature ranges of the separately certified components.

The composition of the type of protection marking will be based on the types of protection of components actually used.

(16) Test Report PTB Ex 21-10099

(17) Specific conditions of use

None.

(18) Essential health and safety requirements

Met by compliance with the aforementioned standards.

According to Article 41 of Directive 2014/34/EU, EC-type examination certificates which have been issued according to Directive 94/9/EC prior to the date of coming into force of Directive 2014/34/EU (April 20, 2016) may be considered as if they were issued already in compliance with Directive 2014/34/EU. By permission of the European Commission supplements to such EC-type examination certificates and new issues of such certificates may continue to hold the original certificate number issued before April 20, 2016.

Terminal Boxes
Series 8146

03098E00

- Enclosures in shock-resistant glass fibre reinforced polyester resin
- 8 basic enclosure sizes with various heights
- Fitted according to the customer's requirements
- For terminals up to max. 300 mm²
- With captive cap screws
- Degree of protection IP66

www.stahl.de

The terminal boxes of the Series 8146, made of high-quality, glass fibre reinforced polyester resin is ideally suitable for the use in rough operating conditions. Due to the reduced surface resistance, the enclosures correspond to the requirements for hazardous areas. Eight basic enclosure sizes having different heights allow the user a variety of application options. The terminal boxes are fitted to order with terminals up to a size of 300 mm². Upon request, flanges can be mounted on several sides of the enclosure.

Mechanical data		
Degree of protection	IP66	
Material		
Enclosure	Polyester resin, glass fibre reinforced, dark grey, similar to RAL 7024 Impact resistance ≥ 7 J Surface resistance ≤ 10^9 Ω Flame resistant according to IEC/EN 60695, UL 94, ASTM D635	
Gasket	Polyurethane foam	
Flanges		
Standard	In the standard design, the enclosures are supplied without flanges.	
Option	the enclosures can be fitted on one or more sides with flanges; flange material: polyester resin, glass fibre reinforced	
Cover fixing	with captive M6 stainless steel combo head screws or	
Tightening torque	according to the specifications of the terminal block manufacturers	
Terminal blocks	Rated cross section which can be used: max. 300 mm^2. The maximum number of terminals for the respective enclosure size are indicated in the EC type examination certificate.	
Assembly / Installation		
Connection	According to the order directly to the fitted components or to the terminal blocks. The rated operational voltage, the rated operational current and the rated cross section depend on the terminal type used and the explosion protected components.	

Terminal Box Fittings

Due to contact resistances at the terminals and the cables installed in the enclosure, heat can be caused. In order to ensure that the maximum temperatures of a terminal box are not exceeded, care should be taken that the current load of the circuits installed in the terminal box do not exceed certain values.

The maximum permitted number of conductors for individual terminal boxes, depending on the current load and conductor cross section, can be found in the EC Type Examination Certificate.

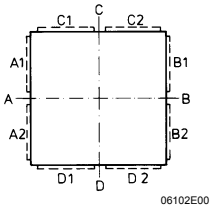
09714E02

Explanations to the Table

Each inserted conductor and each internal connection conductor is considered a conductor. Jumpers and earth conductors are not considered.

Noncritical area (light area of table)
The light area is noncritical in terms of heating up the enclosure. Circuits classified as being in this area can be incorporated in the enclosure in any number.

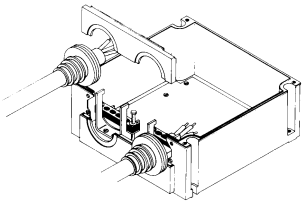


Critical area (inscribed area of table)
The inscribed area of the table shows the maximum permissible number of conductors considering the cross section of the conductor and the continuous current loading of the conductor. When using this table, simultaneous factors and load factors may be accounted for. Mixed arrangements with circuits of different cross sections and currents are possible. In this case the proportion of the load from the individual circuits should be allowed for on a percentage basis. If a terminal box is fully loaded according to the critical area of the inscribed part of the table, then any number of circuits from the noncritical, light area may be added.

Dangerous area (dark area of the table) Terminal boxes which are designed according to this area require an additional temperature-rise test.

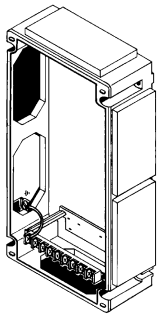
Terminal Boxes
Series 8146

Cable Glands



The cable glands are inserted according to the order. The respective holes are punched and the screw connections are fastened by means of counter nuts. Please indicate the entry side!

06102E00



Example:
8146/.08. cable entry sides

To insert large cables into the enclosures with a height of 150 mm, cable entry plates with strain relief and rubber seals which can be cut out are available.

05409E00

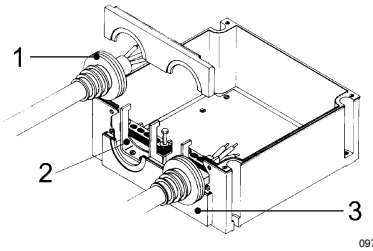
Cable entry plate

For metal cable glands, adapter plates can be used.

05380E00

Earthing of the metal cable glands by means of brass plates

In the standard version, cable glands made of moulding material, Series 8161, are used.



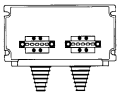
The opening of the rubber seals can be adapted easily to the diameter of the cable to be entered.

They are mounted at the inner sides of the enclosure walls. This will guarantee the connection to the internal earthing system.

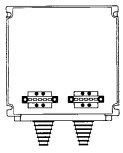
Cable Entry Flange with Strain Relief for Enclosure Series 8146

Application

To insert cables with a large outside diameter into the enclosures of the Series 8146, cable entry flanges can be used. These flanges are separable so that the cables can be inserted from the front side into the flange. A rubber sleeve which is pressed firmly to the cable by means of a hose clamp is used to seal the gap between flange and cable. In the enclosure, the cables are fixed by means of strain reliefs.

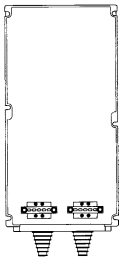


09715E00



1) Rubber seal for cable entry flange
2) Strain relief
3) cable entry flange, separable

Assembly



The cable entry flanges must only be mounted on the enclosure sides which point downward. The assembly is carried out in factory. The following enclosures of the Series 8146 can be fitted with cable entry flanges:

07947E00

8146/.S73

07948E00

8146/.083
8146/.085
8146/.086

1) For earthing metal gland parts when used in moulded plastic enclosures and plastic flanges

2)
- If the connecting cable is equipped with an armour which is larger than 6 mm^2 and which is used as earthing conductor, a brass plate with a thickness of 3 mm must be used.
- Due to the higher strain on the enclosure wall, the 3 mm brass plate has also to be used for large bell mounted glands.

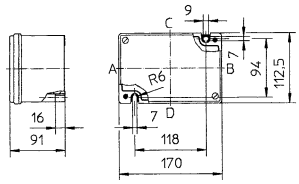
[1] For earthing metal gland parts when used in moulded plastic enclosures and plastic flanges



[2]
- If the connecting cable is equipped with an armour which is larger than 6 mm^2 and which is used as earthing conductor, a brass plate with a thickness of 3 mm must be used.
- Due to the higher strain on the enclosure wall, the 3 mm brass plate has also to be used for large bell mounted glands.

IECEx Certificate of Conformity

Certificate No.: IECEx PTB 06.0046

Date of Issue: **2012-02-08** Issue No.: **2**

Manufacturer: **R. STAHL Schaltgeräte GmbH**
Am Bahnhof 30
74638 Waldenburg (Württ.)
Germany

Additional Manufacturing location (s):

This certificate is issued as verification that a sample(s), representative of production, was assessed and tested and found to comply with the IEC Standard list below and that the manufacturer's quality system, relating to the Ex products covered by this certificate, was assessed and found to comply with the IECEx Quality system requirements. This certificate is granted subject to the conditions as set out in IECEx Scheme Rules, IECEx 02 and Operational Documents as amended.

STANDARDS:
The electrical apparatus and any acceptable variations to it specified in the schedule of this certificate and the identified documents, was found to comply with the following standards:

IEC 60079-0 : 2011 Edition: 6.0	Explosive atmospheres - Part 0: General requirements
IEC 60079-1 : 2007-04 Edition: 6	Explosive atmospheres - Part 1: Equipment protection by flameproof enclosures "d"
IEC 60079-11 : 2006 Edition: 5	Explosive atmospheres - Part 11: Equipment protection by intrinsic safety "i"
IEC 60079-18 : 2009 Edition: 3	Explosive atmospheres Part 18: Equipment protection by encapsulation "m"
IEC 60079-31 : 2008 Edition: 1	Explosive atmospheres – Part 31: Equipment dust ignition protection by enclosure 't'
IEC 60079-7 : 2006-07 Edition: 4	Explosive atmospheres - Part 7: Equipment protection by increased safety "e"

*This Certificate **does not** indicate compliance with electrical safety and performance requirements other than those expressly included in the Standards listed above.*

TEST & ASSESSMENT REPORTS:
A sample(s) of the equipment listed has successfully met the examination and test requirements as recorded in

Test Report:
DE/PTB/ExTR06.0061/02

Quality Assessment Report:

DE/BVS/QAR10.0002/02

IECEx Certificate of Conformity

Certificate No.: IECEx PTB 06.0046

Date of Issue: **2012-02-08** Issue No.: **2**

Schedule

EQUIPMENT:
Equipment and systems covered by this certificate are as follows:

Description
The terminal box of types 8146/1***-** and 8146/2***-** is a polyester-resin housing designed to type of protection Increased safety "e" and Protection by enclosure "tb". It is used to house terminals for intrinsically safe and non-intrinsically safe circuits and may optionally be provided with disconnect terminals, fuses, busbar and bolt-type screw terminals.
The intrinsically safe circuits will be marked e.g. by a special colour (light-blue) or a warning label.
Connection will be made by means of explosion-protected cable glands.
The enclosure as well as any installed and attached components have been tested and certified under a separate test certificate.

Annex
Technical data, nomenclature and notes for installation and use: See Attachment.
Tables of the maximum number of conductors depending on the cable size and permitted current: See Supplementary Sheets Issue 2.

CONDITIONS OF CERTIFICATION: NO

DETAILS OF CERTIFICATE CHANGES (for issues 1 and above):

1) The ambient temperature is increased from -60 °C to +100 °C
2) New test according to the standards:
IEC 60079-0:2011 (Ed. 6), IEC 60079-1:2007 (Ed. 6), IEC 60079-7:2006 (Ed. 4),
IEC 60079-11:2006 (Ed. 5), IEC 60079-18:2009 (Ed. 3), IEC 60079-31:2008 (Ed. 1)
3) New marking

Annexe: Annex-IECEx PTB 06.0046-Issue 2.pdf, Supplementary_sheet_Issue 2.pdf

- For safe cable entry in Ex e and Ex i areas
- Can be used at temperatures of between -60 ... +75 °C, degree of protection IP68
- Available in Ex e and Ex i versions (Ex i version distinguished by its blue cap nut)
- Suitable for cable diameters from 1 ... 48 mm
- Versions with multi-seal inserts

WebCode **8161B**

R. STAHL's 8161/7 and 8161/8 series cable entries can be used to safely run cables into Ex e enclosures. They are suitable for cables between 1 and 48 mm in diameter. They are available for Ex e and Ex i circuits – the Ex i version can be distinguished by its blue cap nut. A stopping plug can be integrated to seal any cable entries that are not being used.

(7) The design of this equipment or protective system and any acceptable variation thereto are specified in the schedule to this EC-Type-Examination Certificate and the documents therein referred to.

(8) The TÜV NORD CERT GmbH, notified body No. 0044 in accordance with Article 9 of the Council Directive of the EC of March 23, 1994 (94/9/EC), certifies that this equipment or protective system has been found to comply with the Essential Health and Safety Requirements relating to the design and construction of equipment and protective systems intended for use in potentially explosive atmospheres given in Annex II to the Directive. The examination and test results are recorded in the confidential report No. 16 203 174269-1.

(9) Compliance with the Essential Health and Safety Requirements has been assured by compliance with:
EN 60079-0:2012 + A11:2013 **EN 60079-11:2012**

(10) If the sign "X" is placed after the certificate number, it indicates that the equipment or protective system is subject to special conditions for safe use specified in the schedule to this certificate.

(11) This EC-type-examination certificate relates only to the design, examination and tests of the specified equipment in accordance to the Directive 94/9/EC. Further requirements of the Directive apply to the manufacturing process and supply of this equipment. These are not covered by this certificate.

(12) The marking of the equipment or protective system must include the following:

(13) SCHEDULE

(14) EC-Type-Examination Certificate No. TÜV 16 ATEX 174269 X

(15) Description of equipment
The Valve Position Sensors type SRBG-C1-N-20N-ZC-M12-EX5 and type SRBG-C1-N-20N-ZC-C2-C2-EX5 are used to convert the deviation into electrical signals. The device consists of up to three independent intrinsically safe powered circuits, two sensor circuits and one valve circuit.

The lowest permissible ambient temperature is -25 ° C.

Type code:
SRBG-C1-N-20N-ZC-M12-Ex5 and SRBG-C1-N-20N-ZC-C2-C2-EX5

Parameters:
Electrical parameters:

Sensor circuit
(Connection assignment see manufacturer's Instruction for use)

In type of protection intrinsic safety Ex ia IIC

Only for the connection to certified intrinsically safe circuit with the following maximum values:

Type 1: U_i = 15V
I_i = 25 mA
P_i = 34 mW
Type 2: U_i = 15V
I_i = 25 mA
P_i = 64 mW
Type 3: U_i = 15V
I_i = 52 mA
P_i = 169 mW

For applications that require devices of category 1G, the permissible ambient temperature depending on the temperature class and the intrinsically safe power supply and the internal effective capacitance resp. the internal effective inductance per type of sensor are given in the following table:

			Permissible ambient temperature								
			Type1			Type 2			Type 3		
Sensor- type	**C_i nF**	**L_i µH**	**T6**	**T5**	**T4-T1**	**T6**	**T5**	**T4-T1**	**T6**	**T5**	**T4-T1**
SRBG-C1-N-20N-ZC-M12-EX5	<100	<100	60°C	72°C	100°C	58°C	70°C	98°C	50°C	62°C	90°C
SRBG-C1-N-20N-ZC-C2-C2-EX5	<100	<100	46°C	58°C	86°C	46°C	58°C	86°C	46°C	58°C	86°C

The given values for C_i and L_i consider already a connected cable of 10m length.

Valve circuit
(Connection assignment see manufacturer's Instruction for use)

In type of protection intrinsic safety Ex ia IIC

Only for the connection to certified intrinsically safe circuit with the following maximum values:

5063789 | DRW | - | 203618

Schedule EC-Type Examination Certificate No. TÜV 16 ATEX 174269 X

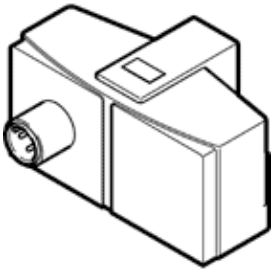
U_i = 15V
I_i = 25 mA

The internal effective inductance $L_i \leq 20$ µH and the internal effective capacitance $C_i \leq 10$nF
The given values for C_i and L_i consider already a connected cable of 10m length.

(16) Test documents are listed in the test report No. 16 203 174269-1.

(17) Special conditions for safe use

1. The context between the type of the connected circuit, the maximum permissible ambient temperature and the temperature class as well as the effective internal reactances for the individual types of the Valve Position Sensors is given in the Electrical parameters.
2. If the Valve Position Sensors type SRBG-C1-N-20N-ZC-M12-EX5 and type SRBG-C1-N-20N-ZC-C2-C2-EX5 are operated at ambient temperatures lower than – 20°C, they have to be protected against mechanical damages by appropriate measures.
3. The device has to be installed in such a way that process-related electrostatic charges can be excluded.
4. The type SRBG-C1-N-20N-ZC-C2-C2-EX5 is being delivered without cable entry. Their connection cable shall either be installed fixed and mechanically protected or a cable pull test shall be carried out. The realization of the pull test is described in the operation instructions. Depending of the installation way a suitable cable according to type B or A as specified in EN 60079-14 must be used.
5. The maximum values of the connected intrinsically safe valve have to be taken into account.



(18) Essential Health and Safety Requirements
No additional ones

(DE) Die alleinige Verantwortung für die Ausstellung dieser Konformitätserklärung trägt der Hersteller. Der beschriebene Gegenstand der Erklärung erfüllt die einschlägigen Harmonisierungsrechtsvorschriften der Union.

(EN) This declaration of conformity is issued under the sole responsibility of the manufacturer. The object of the declaration described is in conformity with the relevant Union harmonisation legislation.

(BG) Настоящата декларация за съответствие е издадена на отговорността на производителя. Предметът на описаната декларация отговаря на съответното законодателство на Съюза за хармонизация.

(CS) Toto prohlášení o shodě se vydává na výhradní odpovědnost výrobce. Popsaný předmět prohlášení je ve shodě s příslušnými harmonizačními právními předpisy Unie.

(DA) Denne overensstemmelseserklæring udstedes på fabrikantens ansvar. Genstanden for erklæringen, som beskrevet, er i overensstemmelse med den relevante EU-harmoniseringslovgivning.

(EL) Η παρούσα δήλωση συμμόρφωσης εκδίδεται με αποκλειστική ευθύνη του κατασκευαστή. Ο περιγραφόμενος στόχος της δήλωσης είναι σύμφωνος με τη σχετική ενωσιακή νομοθεσία εναρμόνισης.

(ES) La presente declaración de conformidad se expide bajo la exclusiva responsabilidad del fabricante. El objeto de la declaración descrita es conforme con la legislación de armonización pertinente de la Unión.

(ET) Käesolev vastavusdeklaratsioon on välja antud tootja ainuvastutusel. Kirjeldatud deklareeritav toode on kooskõlas asjaomaste liidu ühtlustamisaktidega.

(FI) Tämä vaatimustenmukaisuusvakuutus on annettu valmistajan yksinomaisella vastuulla. Kuvattu vakuutuksen kohde on asiaa koskevan unionin yhdenmukaistamislainsäädännön vaatimusten mukainen.

(FR) La présente déclaration de conformité est établie sous la seule responsabilité du fabricant. L'objet décrit de la dé-claration est conforme à la législation d'harmonisation de l'Union applicable.

(HU) Ezt a megfelelőségi nyilatkozatot a gyártó kizárólagos felelőssége mellett adják ki. Az ismertetett nyilatko-zat tárgya megfelel a vonatkozó uniós harmonizációs jogszabályoknak.

(IT) La presente dichiarazione di conformità è rilasciata sotto la responsabilità esclusiva del fabbricante. L'oggetto della dichiarazione descritto è conforme alla pertinente normativa di armonizzazione dell'Unione.

(LT) Ši atitikties deklaracija išduota tik gamintojo atsakomybe. Aprašytas deklaracijos objektas atitinka susijusius derinamuosius Sąjungos teisės aktus.

(LV) Šī atbilstības deklarācija ir izdota vienīgi uz ražotāja atbildību. Aprakstītais deklarācijas objekts atbilst attiecīgajam Savienības saskaņošanas tiesību aktam.

(NL) Deze conformiteitsverklaring wordt verstrekt onder volledige verantwoordelijkheid van de fabrikant. Het beschreven voorwerp is in overeenstemming de desbetreffende harmonisatiewetgeving van de Unie.

(PL) Niniejsza deklaracja zgodności wydana zostaje na wyłączną odpowiedzialność producenta. Wymieniony przedmiot niniejszej deklaracji jest zgodny z odnośnymi wymaganiami unijnego prawodawstwa harmonizacyjnego.

(PT) A presente declaração de conformidade é emitida sob a exclusiva responsabilidade do fabricante. O objeto da declaração descrito está em conformidade com a legislação aplicável de harmonização da União.

(RO) Prezenta declarație de conformitate este emisă pe răspunderea exclusivă a producătorului. Obiectul descris al declarației este în conformitate cu legislația relevantă de armonizare a Uniunii.

(SK) Toto vyhlásenie o zhode sa vydáva na vlastnú zodpovednosť výrobcu. Uvedený predmet vyhlásenia je v zhode s príslušnými harmonizačnými právnymi predpismi Únie.

(SL) Za izdajo te izjave o skladnosti je odgovoren izključno proizvajalec. Opisani predmet izjave je v skladu z ustrezno zakonodajo Unije o harmonizaciji.

(SV) Denna försäkran om överensstämmelse utfärdas på tillverkarens eget ansvar. Föremålet för försäkran överensstämmer med den relevanta harmoniserade unionslagstiftningen.

(TR) Bu Uygunluk Belgesi tamamen üreticinin sorumluluğu altındadır. Belgede açıklanan obje, Birliğin ilgili uyum mevzuatına uygundur.

Pressure gauge

stainless steel, liquid filled series 2940

case 63 mm

E 02.09.01

Ed.20.01

Application	Pressure gauge in stainless steel with liquid filling Suitable for aggressive media and environments where pulsation and vibration exist
Design	EN 837-1
Series	**2940**
WIKA model	233.50
Case size	Nominal size dim 63 mm
Accuracy	Class 1,6%
Case	Stainless steel 1.4301 with bayonet ring Option with case in stainless steel 316TI Option with epoxy- or PTFE-coating
Filling	Filling glycerine 99,7% (86,5% pressure ranges ≤ 2,5 bar) Compensating valve to vent case in pressure ranges ≤ 16 bar Option with silicone oil or glycerine for food applications
Window	Polycarbonate. Option with laminated safety glass
Pressure element	Stainless steel 316 SS
Movement	Stainless steel
Dial	Aluminium, white with black lettering
Pressure unit	Bar. Option with unit bar/Pa, bar/psi, kPa, MPa, psi
Pressure connection	G1/4” or 1/4”NPT. Option with other connections. Option with mounted restrictor
Mounting	Lower or back mount, also with back flange, front flange or triangular bezel with clamp
Ingress protection	IP 65 acc.to EN 60529/IEC 529
Pressure limitation	75% of full scale value by steady pressure 66% of full scale value by fluctuating pressure By short time pressure full scale value Option with overpressure safe 2 x full scale value
Permissible temperature	Medium temperature max +100°C Ambient temperature -20+60°C Option: Ambient temperature -40+60°C with filling silicone M50
Certificates	Certificate EN 10204 can be delivered as options Test report wetted parts EN 10204-2.2 Inspection certificate wetted parts EN 10204-3.1 Calibration certificate with 5 measuring points Calibration certificate EN 10204-3.1 or DKD-calibration
Production options	ATEX protection c with device cat 2G/2D Design acc.to NACE Sour Gas Service Design Degreased for oxygen services Silicone free design Pressure element in monel (type 263.50) Dial with colored sectors or with customer logo

-1/+3 bar	0,2	20
-1/+5 bar	0,2	30
-1/+9 bar	0,5	20
-1/+15 bar	0,5	32
-1/+24 bar	1,0	25

Accuracy

Max permissible error 1,6%
The accuracy is expressed as a percentage of full scale range. Permissible error 1,0% will cover 0% till 100% of scale range with a reference temperature of +20°C.
Ex. Pressure range 0-10 bar has an error of ± 0,16 bar

Temperature effect
Temperature of the measuring system over or under the reference temperature +20°C will effect the accuracy with 0,4 percentage per +10°C. With a medium temperature of +40°C the accuracy will be ± 2,4%.

Alternative design

Low pressure
Pressure range < 0-0,6 bar
Pressure range from 40 mbar to 600 mbar

1 # EU-Type Examination Certificate

2 **Equipment intended for use in potentially explosive atmospheres Directive 2014/34/EU**

3 EU-Type Examination Certificate Number: **BVS 14 ATEX E 035 X – revision 3**

4 Product: **Pressure transmitter type IS-3**

5 Manufacturer: **WIKA Alexander Wiegand SE & Co. KG**

6 Address: **Alexander-Wiegand-Straße 30, 63911 Klingenberg, Germany**

7 This product and any acceptable variations thereto are specified in the appendix to this certificate and the documents referred to therein.

8 DEKRA Testing and Certification GmbH, Notified Body number 0158, in accordance with Article 17 of Directive 2014/34/EU of the European Parliament and of the Council, dated 26 February 2014, certifies that this product has been found to comply with the Essential Health and Safety Requirements relating to the design and construction of products intended for use in potentially explosive atmospheres given in Annex II to the Directive.
The examination and test results are recorded in the confidential Report No. BVS PP 14.2077 EU.

9 The Essential Health and Safety Requirements are assured in consideration of:

EN IEC 60079-0:2018	**General requirements**
EN 60079-11:2012	**Intrinsic Safety "i"**
EN 60079-26:2015	**Equipment with equipment protection level (EPL) Ga**

10 If the sign "X" is placed after the certificate number, it indicates that the product is subject to the Special Conditions for Use specified in the appendix to this certificate.

11 This EU-Type Examination Certificate relates only to the design and construction of the specified product. Further requirements of the Directive apply to the manufacturing process and supply of this product. These are not covered by this certificate.

12 The marking of the product shall include the following:

II 1G Ex ia IIA T4/T5/T6 Ga
II 1G Ex ia IIC T4/T5/T6 Ga
II 1/2G Ex ia IIC T4/T5/T6 Ga/Gb
II 1D Ex ia IIIB T_{200}135°C Da
II 1/2D Ex ia IIIB T_{200}135°C Da/Db
II 1D Ex ia IIIC T135°C Da
II 1/2D Ex ia IIIC T135°C Da/Db
I M1 Ex ia I Ma

This 3rd revision replaces the EU Type Examination Certificate. BVS 14 ATEX E 035 X including 2nd revision.

		'24' = II 1/2G, II 1/2D, I M1
d	Approvals	'1' or '3' = with approval for Ex-atmospheres
e	Type of ignition protection	'1' = Intrinsic Safety
q	Adjustability	'Z' = none
		'T' = can be set to zero/range adjustable
rs	Electrical connection	Electrical output with two letters according to Table 1 below
t	Cable material	'Z' = none
		'A' = PUR
		'B' = FEP

15.2 **Description**

The pressure transmitter of type IS-3 converts pressure into electrical current. It is intended for measuring pressures in potentially explosive atmospheres and to be connected to intrinsically safe circuits.

15.3 **Electrical parameters**

Intrinsically safe supply and signal circuit (4 - 20 mA current loop)

Parameter	Group I	Group II	Group III
Voltage U_i	DC 30 V	DC 30 V	DC 30 V
Current I_i	100 mA	100 mA	100 mA
Power P_i	800 mW	800 mW	750 / 650 / 550 mW (IIIC) 800 / 650 mW (IIIB)
Effective internal capacitance C_i -	16.5 nF + 0.2 nF/m	16.5 nF + 0.2 nF/m	16.5 nF + 0.2 nF/m
Effective internal inductance L_i -	0 µH + 2 µH/m	0 µH + 2 µH/m	0 µH + 2 µH/m

N/A = "not applicable"

Optional cooling elements are provided for medium temperature ranges 105 °C < T_{med} ≤ 200 °C.

The following tables show the maximum medium temperatures at the corresponding ambient temperatures for the respective temperature classes.
The minimum ambient and medium temperatures from table 1 "Ambient and medium temperature range for medium temperatures ≤ 105 °C" remain valid.

This certificate may only be reproduced in its entirety and without any change.

16 **Report Number**

BVS PP 14.2077 EU, as of 2019-11-11

17 **Special Conditions for Use**

When used in areas which require Category 1G equipment, the pressure transmitter has to be wall-mounted in such a way that degrees of IP67 are ensured in compliance with EN 60529.

When used in areas which require Category 1D equipment, the pressure transmitter has to be wall-mounted in such a way that degree of IP6X is ensured in compliance with EN 60529.

The technical information provided by the manufacturer regarding the avoidance of mechanical hazards as well as the use of the pressure transmitter in conjunction with aggressive or corrosive media has to be adhered to.

When using the pressure transmitters in areas which require Category 1 equipment, the screen of the connecting cable needs to be integrated into the equipotential bonding of the equipment.

When used in areas which require Category 1G equipment, the cable gland has to be designed in such a way that degrees of IP67 are ensured in compliance with EN 60529.

When used in areas which require Category 1D equipment, the cable gland has to be designed in such a way that degree of IP6X is ensured in compliance with EN 60529.

The measuring of process media with temperatures exceeding the values of the measuring media temperature ranges stated in Table 1 above is only permitted if special cooling necks are used. However, the permitted surface temperature values, which apply to this range due to the defined temperature classes, shall not be exceeded.

18 **Essential Health and Safety Requirements**

The Essential Health and Safety Requirements are covered by the standards listed under item 9.

19 **Drawings and Documents**

Drawings and documents are listed in the confidential report.

We confirm the correctness of the translation from the German original.
In the case of arbitration only the German wording shall be valid and binding.

Pressure transmitter
For applications in hazardous areas
Model IS-3

WIKA data sheet PE 81.58

for further approvals
see page 10

Applications

- Chemical, petrochemical industry
- Oil, natural gas
- Machine building

Special features

- Measuring ranges from 0 ... 0.1 to 0 ... 6,000 bar (0 ... 3 to 0 ... 15,000 psi)
- Approved for use in hazardous areas, e.g. ATEX, IECEx, FM and CSA
- Suitable for SIL 2 per IEC 61508/IEC 61511

Pressure transmitter model IS-3
Fig. left: With angular connector and flush process connection
Fig. centre: High-pressure version
Fig. right: With field case

Description

For the highest demands
The pressure transmitters of the IS-3 series have been specifically designed for the highest industrial requirements in hazardous areas and feature the common approvals, such as ATEX, IECEx, FM and CSA, as well as a SIL rating per IEC 61508 / IEC 61511 for use in the process industry.

The model IS-3 pressure transmitter is available with measuring ranges up to 6,000 bar and is suitable for applications ranging from general machine building to high-pressure applications.

Design
All wetted parts are manufactured from stainless steel and are fully welded. Internal sealing elements are completely avoided, so that the unit can be used with almost all media. The robust case is also made of stainless steel and provides a minimum ingress protection of IP65. IP68 versions are also available.

The process connections with flush diaphragm are particularly suitable for the measurement of viscous and contaminated media and ensure trouble-free pressure measurement at all times.

The optional field case of the model IS-3 enables operation in extreme environmental conditions and is resistant to acids, bases, oils and solvents. Via the field case connection integrated into the case's head, the electrical cabling can be installed quickly and easily.

Voltage supply
It is recommended that the intrinsically safe variants of the IS-3 series are powered via a suitable repeater power supply. An ideal voltage supply is offered by the intrinsically safe repeater power supply model IS Barrier, see “Accessories”.

	-1 ... +9	-1 ... +15	-1 ... +24		
psi	-15 inHg ... 0	-30 inHg ... 0	-30 inHg ... 15	-30 inHg ... 30	-30 inHg ... 60
	-30 inHg ... 100	-30 inHg ... 160	-30 inHg ... 200	-30 inHg ... 300	

Other measuring ranges on request.

Overload safety
The overpressure limit is based on the sensor element used. Depending on the selected process connection and sealing, restrictions in overload safety can result.
A higher overpressure limit will result in a higher temperature error.

Measuring ranges ≤ 25 bar (≤ 400 psi): 3-fold
Measuring ranges 40 ... 600 bar (500 ... 8,000 psi): 2-fold [1]
Measuring ranges ≥ 1,000 bar (≥ 10,000 psi): 1.15-fold

1) 1.7-fold overload safety with 1,000 psi, 1,500 psi, 4,000 psi and 6,000 psi

Output signal

Analogue signal
4 ... 20 mA

Permissible load in Ω
Model IS-3:
≤ (power supply - 10 V) / 0.02 A - (cable length in m x 0.14 Ω)

Model IS-3 with field case:
≤ (power supply - 11 V) / 0.02 A

For the test circuit signal of the IS-3 model with field case a load of ≤ 15 Ω applies

Voltage supply

Power supply U+
Model IS-3: DC 10 ... 30 V
Model IS-3 with field case: DC 11 ... 30 V

Supply and signal circuit for ignition protection type Ex i
Voltage: Ui = DC 30 V
Current: Ii = 100 mA
Power: Pi = 800 mW (for group III 750/650/550 mW)

Effective internal capacitance (version with non-detachable cable connection)
Ci ≤ 16.5 nF
Ci ≤ 16.5 nF + 0.2 nF/m

Effective internal inductance (version with non-detachable cable connection)
Li = 0 µH
Li = 0 µH + 2 µH/m

Reference conditions (per IEC 61298-1)

Temperature
15 ... 25 °C (59 ... 77 °F)

Atmospheric pressure
860 … 1,060 mbar (86 … 106 kPa/12.5 … 15.4 psig)

Humidity
45 ... 75 % r. h. (non-condensing)

Mounting position
Calibrated in vertical mounting position with process connection facing downwards.

Power supply
DC 24 V

Time response

Settling time
≤ 2 ms
≤ 10 ms for medium temperatures below -30 °C (-22 °F)

Accuracy specifications

Accuracy at reference conditions

Accuracy	
Standard	≤ ±0.50 % of span
Option	≤ ±0.25 % of span [1)]

1) Only for measuring ranges ≥ 0.25 bar (3 psi) and ≤ 1,000 bar (15,000 psi)

Including non-linearity, hysteresis, zero offset and end value deviation (corresponds to measured error per IEC 61298-2).

Non-linearity (IEC 61298-2)
≤ ±0.2 % of span BFSL

Non-repeatability
< 0.1 % of span

Mean temperature coefficient of zero point (0 ... 80 °C/32 ... 176 °F)
Measuring range ≤ 0.25 bar: ≤ ±0.4 % of span/10 K
Measuring range > 0.25 bar: ≤ ±0.2 % of span/10 K

Mean temperature coefficient of span (0 ... 80 °C/32 ... 176 °F)
≤ ±0.2 % of span/10 K

Long-term stability at reference conditions
≤ ±0.2 % of span/year

Adjustability of zero point and span
Adjustment is made using potentiometers inside the instrument.
Zero point: ±5 %
Span: ±5 %

The exact differentiation of EPLs and temperature ranges for safe operation is given in the operating instructions.

Materials

The materials used meet the requirements of the RoHS directive 2011/65/EU, with the exception of the following instrument variants:

- Electrical connection via bayonet connector
- Measuring ranges > 1,000 bar

Wetted parts

- Measuring ranges ≤ 25 bar and ≤ 400 psi, process connection G ½ B flush and G 1 B flush: 316Ti
- Measuring ranges ≥ 40 ... ≤ 1,000 bar and ≥ 500 ... ≤ 15,000 psi: 316Ti and S13800
- Measuring ranges > 1,000 bar: S13800
- Process connection G 1 B flush, hygienic: 316L
- Measuring ranges ≤ 25 bar and ≤ 400 psi with process connection with pressure port for optional medium temperature range: 316L and 316Ti
- Measuring ranges > 25 bar and > 400 psi with process connection with pressure port for optional medium temperature range: 316L, 316Ti and S13800

For sealing materials see “Process connections”
Where the medium is hydrogen, contact the manufacturer.

Non-wetted parts

- Case: Stainless steel
- Angular connector DIN EN 175301-803 A: PA6
- Circular connector M12 x 1 adjustable: PA6, stainless steel
- Circular connector M12 x 1 not adjustable: Stainless steel
- Circular connector M16 x 0.75 adjustable: PA6, stainless steel, Zn nickel-plated
- Circular connector M16 x 0.75 not adjustable: Stainless steel, Zn nickel-plated
- Bayonet connector adjustable: PA6, stainless steel, Al cadmium-plated
- Bayonet connector not adjustable: Stainless steel, Al cadmium-plated
- Cable outlet IP67: PA6, stainless steel, nickel-plated brass
- Cable outlet IP67 with protection cap: Stainless steel, PA66/6-FR
- Cable outlet IP68 cable gland: Stainless steel, nickel-plated brass
- Cable outlet IP68: Stainless steel
- Field case: Stainless steel, nickel-plated brass / stainless steel / PA
- Internal pressure transmission medium

- No oxygen version:	Synthetic oil
- Oxygen version:	Halocarbon oil
- Instruments with measuring range > 25 bar (400 psi):	Dry measuring cell

Hiermit erklären wir, dass das unten beschriebene Produkt in seiner Konzipierung und Bauart sowie in der von uns in Verkehr gebrachten Ausführung den einschlägigen Harmonisierungsvorschriften der EU entspricht. Die Anhänge, die wesentlicher Bestandteil dieser Erklärung sind, enthalten weitere Angaben zur Einhaltung dieser Richtlinie(n).	We hereby declare that the product described below, in its design and construction as well as in the version that we have placed on the market, is in conformity with the relevant EU harmonization legislation. The annexes, which are an integral part of this declaration of conformity, contain further information about the conformity to this Directive(s).	Nous déclarons par la présente que le produit spécifié ci-dessous, dans son développement et sa fabrication tel que mis sur le marché par nous, est conforme à la législation d'harmonisation de l'UE applicable. Les annexes, qui font partie intégrante de cette déclaration, contiennent des informations supplémentaires sur le respect de la ou des directives.

1 OPERATING INSTRUCTIONS

The operating instructions describe the entire life cycle of the device. Keep these instructions in a location which is easily accessible to every user, and make them available to every new owner of the device.

Important safety information!

- Carefully read these instructions.
- Above all, observe the safety instructions, intended use and operating conditions.
- People who work on the device must read and understand these instructions.

1.1 Terms and abbreviations

The terms and abbreviations in these instructions represent the following definitions:

Device/system	Type AC10 solenoid in connection with Type 2509 or Type 2513 cable plug
Ex area	Potentially explosive atmosphere
Ex approval	Approval for potentially explosive atmosphere
Hazardous Locations	Explosion protection area USA/CA

1.2 Symbols

The following symbols are used in these instructions.

DANGER!

Warns of an immediate danger.

- Failure to observe these instructions will result in death or serious injuries.

WARNING!

Warns of a potentially hazardous situation.

- Failure to observe these instructions may result in serious injuries or death.

CAUTION!

Warns of a potential danger.

- Failure to observe these instructions may result in moderate or minor injuries.

NOTE!

Warns of damage!

Important tips and recommendations.

Refers to information in these operating instructions or in other documentation.

- Highlights instructions to avoid a danger.

→ Highlights a procedure which you must carry out.

2 INTENDED USE

Improper use of the Type AC10 solenoid may be dangerous to people, nearby equipment and the environment.

The Type AC10 solenoid is used to operate valves that control gaseous or liquid media.

- A valve operated with the Type AC10 solenoid is to be used exclusively with the permissible media specified in the data sheet and for use in explosion group IIC, category 3G and/or explosion group IIIC, category 3D and temperature class T4 (see details on the type label for the Ex area).
- The solenoid may only be used for the applications specified in chapter „5 Operational conditions of the devices“ and in connection with the Type 2509 or Type 2513 cable plugs available from Bürkert.
  Variants with UL listing are only authorised for Type 2509 cable plugs.
- Prerequisites for safe and trouble-free operation of the device are proper transport, storage and installation as well as careful operation and maintenance. Any other or additional use is not considered part of the **intended use**. Bürkert will not be liable for any damage resulting from this. The user alone bears the risk.
- Only use the device as intended.

2.1 Ex approval

The explosion protect approval is only valid if you use the modules and components authorised by Bürkert as described in these operating instructions. The Type AC10 solenoid with Type 2509 or Type 2513 cable plug may be used only in combination with the additional components approved by Bürkert, otherwise the explosion protection approval is terminated. In the event of unauthorised changes to the device, modules or components, the explosion protection approval is also void. The EU type approval test certificate and the following IECEx certificates have been issued by:

Bureau Veritas
Consumer Products Services Germany GmbH
Businesspark A96
86842 Türkheim

Type AC10 solenoid with Type 2509 or Type 2513 cable plug	EPS 21 ATEX 1 234 X II 3G Ex ec IIC T4 Gc II 3D Ex tc IIIC T135°C Dc IECEX EPS 21.0078X Ex ec IIC T4 Gc Ex tc IIIC T135°C Dc

Production will be audited by:

CE 102
PTB (Physikalisch Technische Bundesanstalt - German Federal Metrology Institute)
Bundesallee 100
38116 Braunschweig, Germany

You can find the EU type approval test certificate online at:
country.burkert.com

2.2 UL approval

The UL approval is only valid if you use the modules and components authorised by Bürkert as described in these operating instructions. The Type AC10 solenoid with Type 2509 cable plug may be used only in combination with the additional components approved by Bürkert, otherwise the UL approval will be terminated. In the event of unauthorised changes to the device, modules or components, the UL approval is also void.

The UL certificate was issued by:

UL LLC 333 Pfingsten Road Northbrook IL 60062-2096 USA

Type AC10 solenoid with Type 2509 cable plug	E504714

Production will be audited by:

UL LLC 333 Pfingsten Road Northbrook IL 60062-2096 USA

2.3 Applied Standards for Hazardous Locations Zone 2/22 and Class I, II, III Div. 2 Listing

USL - U.S. Listed certification in accordance with UL 429 and

3 BASIC SAFETY INSTRUCTIONS

These safety instructions do not take into account any unforeseen circumstances and events which occur during installation, operation and maintenance.

The operator is responsible for observing the location-specific safety regulations, also with reference to personnel.

Risk of injury due to high pressure in the system or device.

- Before working on the system or device, switch off the pressure and ventilate or empty the lines.

Risk of injury due to electric shock.

- Before working on the system or device, switch off the power supply and secure against reactivation.
- Observe the applicable accident prevention and safety regulations for electrical devices.

Risk of burns or fire from hot device surfaces due to prolonged operation.

The solenoid can become very hot during continuous operation.

- Keep the device away from highly flammable substances and media and do not touch with bare hands.

Risk of explosion.

Solenoids and valve bodies form a closed system after installation. When used in a potentially explosive atmosphere, there is a risk of explosion when the system is opened while in operation.

- Do not dismantle or open the system during operation.

Risk of explosion due to electrostatic discharge.

If there is a sudden discharge of electrostatically charged devices or people, there is a risk of explosion in the Ex area.

- Use suitable measures to ensure that electrostatic charges cannot occur in the Ex area.
- The device must not be used in areas with processes that generate heavy charges, involve automated grinding or cutting, the spraying of electrons (e.g. near electrostatic painting equipment) or generate pneumatically propelled dust.
- Clean the device surface by gently wiping it with a damp or anti-static cloth only.

To avoid the risk of explosions, the following must be observed in the Ex area:

- Information about temperature class, ambient temperature, degree of protection and voltage on the type label for the Ex area.
- Installation, operation and maintenance may only be performed by qualified personnel.
- Observe applicable safety regulations (as well as national safety regulations), as well as the general rules for the technology during setup and operation.
- Repairs may only be carried out by the manufacturer.
- Do not subject the device to mechanical and/or thermal stresses which exceed the limits described in the operating instructions.
- Do not disconnect connector while circuit is live.

General hazardous situations.

To prevent injuries, observe the following:

- Secure the device or system against unintentional activation.
- Note the flow direction when installing.
- Following an interruption in the power supply, ensure that the process is restarted in a controlled manner.
- Do not use the device as a lever when screwing the valve into the line.

4 GENERAL NOTES

4.1 Contact addresses

Germany

Bürkert Fluid Control Systems
Sales Centre
Christian-Bürkert-Str. 13-17
D-74653 Ingelfingen
Tel. + 49 (0) 7940 - 10 91 111
Fax + 49 (0) 7940 - 10 91 448
E-mail: info@buerkert.com

International

The contact addresses can be found on the back pages of the printed operating instructions.

They are also available online at: country.burkert.com

4.2 Warranty

A precondition for the warranty is that the Type AC10 solenoid is used as intended in consideration of the specified application conditions.

4.3 Information on the Internet

Operating instructions and data sheets for Bürkert products can be found online at: country.burkert.com

5 OPERATIONAL CONDITIONS OF THE DEVICES

5.1 Special conditions

- Only use the device in an area which has pollution degree 2 at least, as defined in IEC 60664-1.
- Ensure that the transient protection has been set to a value which does not exceed 140% of the rated peak voltage value on the supply connections of the device.
- Use the device only in a mounting position that is not subject to mechanical stress.

Installation advice

The information for the authorised ambient temperature concerns the single installation of the solenoids. If multiple solenoids are installed in one valve block:

- Prevent mutual heating by using a suitable distance.

WARNING!

Hazard due to electrostatic discharge.

If there is a sudden discharge of electrostatically charged devices or people, there is a risk of explosion in the Ex area.

- Use suitable measures to ensure that electrostatic charges cannot occur in the Ex area.
- The device must not be used in areas with processes that generate heavy charges, involve automated grinding or cutting, the spraying of electrons (e.g. near electrostatic painting equipment) or generate pneumatically propelled dust.
- Clean the device surface by gently wiping it with a **damp** or **anti-static cloth** only.

5.2 Operating conditions

The valve fulfils a cooling function for the solenoid.
The solenoid must not be operated without a valve. The valve body must meet the following prerequisites:

- Material
  Metal (brass, aluminium, stainless steel) or polyamide
- Minimum dimensions
  32 mm x 32 mm x 10 mm

A larger valve body with better thermal conductivity may be used at any time.

Solenoids intended for single installation must not be used for block installation.

5.3 Operating temperature range

Pay attention to the operating temperature range for each type listed in the electrical data.

6 TECHNICAL DATA

6.1 Safety instructions

DANGER!

Risk of explosion.

If the technical safety information and values listed on the type label are not observed and complied with, dangerous situations could occur.

- Observe the degree of protection and temperature class for operating the device.

Exceeding the voltage stated on the type label is a technical safety risk that can cause the device to overheat.

- Do not connect the device to voltage higher than the one specified on the type label.

6.2 Standards and directives

The device complies with the relevant EU harmonisation legislation. In addition, the device also complies with the requirements of the laws of the United Kingdom.

The harmonised standards that have been applied for the conformity assessment procedure are listed in the current version of the EU Declaration of Conformity/UK Declaration of Conformity.

6.3 Type label for Ex area

7 INSTALLATION AND DISASSEMBLY

DANGER!

Risk of injury due to high pressure in the system or device.

- Before working on the system or device, switch off the pressure and ventilate or empty the lines.

Risk of injury due to electric shock.

- Before working on the system or device, switch off the power supply and secure against reactivation.
- Observe the applicable accident prevention and safety regulations for electrical devices.

Risk of burns or fire from hot device surfaces due to prolonged operation.

- Keep the device away from highly flammable substances and media and do not touch with bare hands.

Danger of short circuit due to damaged connection cables.

- Solenoid connection cables must be attached firmly and protected from damage.

Risk of explosion.

Solenoids and valve bodies form a closed system after installation. When used in a potentially explosive atmosphere, there is a risk of explosion when the system is opened while in operation.

- Do not dismantle or open the system during operation.
- Before connecting the cable plug ensure that all contacts as well as the terminal room are clean and dry.

DANGER!

Risk of explosion due to electrostatic discharge.

If there is a sudden discharge of electrostatically charged devices or people, there is a risk of explosion in the Ex area.

- Use suitable measures to ensure that electrostatic charges cannot occur in the Ex area.
- The device must not be used in areas with processes that generate heavy charges, involve automated grinding or cutting, the spraying of electrons (e.g. near electrostatic painting equipment) or generate pneumatically propelled dust.
- Clean the surface of the solenoid valve by gently wiping it with a damp or anti-static cloth only.

WARNING!

Risk of injury due to improper installation.

- Installation may be carried out by trained technicians only with the appropriate tools.
- Secure the system against unintentional activation.
- Ensure a controlled restart after installation.

7.1 Installing the cable plug

An exact description of the installation can be found in the operating instructions for the cable plug attached to each cable plug and/or online at: country.burkert.com via searching for 2509 or 2513.

Type of Approval	Applicable Manual of Cable Plug
ATEX + IECEx	Type 2513 or 2509
ATEX + IECEx + UL Haz Loc	Type 2509

7.2 Electrical connection

DANGER!

Risk of injury due to electric shock.

- Before reaching into the system, switch off the power supply and secure against reactivation.
- Observe the applicable accident prevention and safety regulations for electrical devices.

If there is no electrical contact between the metal valve components and the protective conductor of the solenoid, there is a risk of electric shock.

- Always connect the protective conductor.
- Check electrical continuity between the protective conductor of the solenoid and the core guide tube of the valve.

7.3 Disassembly

DANGER!

Risk of injury due to high pressure in the system or device.

- Before working on the system or device, switch off the pressure and ventilate or empty the lines.

Risk of injury due to electric shock.

- Before working on the system or device, switch off the power supply and secure against reactivation.
- Observe the applicable accident prevention and safety regulations for electrical devices.

WARNING!

Risk of injury due to improper disassembly.

- Disassembly must be performed only by trained personnel using suitable tools.

Risk of injury due to medium leaking out of loose connections.

- Carefully seal connection lines.

→ Disconnect electrical connection.

→ Disconnect valve body from the pipeline.

8 START-UP

WARNING!

Risk of injury due to improper operation.

Improper operation may result in injuries as well as damage to the device and the area around it.

- Before start-up, ensure that the operating personnel are aware of and have completely understood the contents of the operating instructions.
- The safety instructions must be followed and the device used only as intended.
- Only adequately trained personnel may start up the system or device.

Before start-up, ensure that

→ the device is installed according to regulations,

→ the connection has been properly made,

→ the device is not damaged,

→ all screws have been tightened.

9 MAINTENANCE, REPAIRS, TROUBLESHOOTING

9.1 Maintenance

The Type AC10 solenoid is maintenance-free if the operating conditions described in the instructions are observed.

9.2 Repair

DANGER!

Risk of injury due to improper repair.

The safety and function of the Type AC10 solenoid and the accompanying solenoid valve can only be guaranteed after a repair if the repairs were done by the manufacturer.

- **Only** have the device repaired by the manufacturer.

9.3 Troubleshooting

In the case of malfunction, ensure that

→ the device is installed according to regulations,

→ the connection has been properly made,

→ the device is not damaged,

→ voltage and pressure have been applied,

→ the pipelines are free,

→ all screws have been tightened.

10 TRANSPORT, STORAGE, PACKAGING

NOTE!

Transport damage.

Inadequately protected devices may be damaged during transport.

- Use shock-resistant packaging to protect the device against moisture and dirt during transport.
- Avoid exceeding or falling below the permitted storage temperature.

Incorrect storage may damage the device.

Permitted storage temperature –40 … +60 °C.

- Store the device in a dry and dust-free location.

Environmentally friendly disposal

- Follow national regulations regarding disposal and the environment.
- Collect electrical and electronic devices separately and dispose of them as special waste.

DATA SHEET

Type 6518

bürkert
FLUID CONTROL SYSTEMS

Servo-assisted 3/2-way Solenoid Valve for pneumatics

- High flow-rate capacity
- Reduced power consumption
- Single or manifold mounting
- Standard, Ex mb, Ex eb mb and Ex ia versions
- Threaded port G ¼" and NPT ¼"

Product variants described in the data sheet may differ from the product presentation and description.

Can be combined with

Type 2507 ▸
Cable plug, form B according to industry standard

Type 2516 ▸
Cable plug, form C according to DIN EN 175301-803

Type 2518 ▸
Cable plug, form A according to DIN EN 175301-803

Type 2030 ▸
Pneumatically operated 2/2-way diaphragm valve CLASSIC with plastic valve body

Type 1087 ▸
Timer, form A according to DIN EN 175301-803

Type description

The Type 6518 is a servo-assisted 3/2-way valve and the Type 6519 is a 5/2 or 5/3-way valve. Together, they form a product line. The valves can be used individually or in blocks. The valves work without a continuous air consumption and are used for the pneumatic control of double or single-acting actuators. The use of high quality materials makes it possible to use these valves in the open air and under chemical atmospheres. The product line contains units with Ex-Approvals and NAMUR flange interface. Valves with circuit function C, D and H monostable are certified acc. IEC 61508 as SIL2.

1. General technical data

Product properties	
Dimensions	Detailed information can be found in chapter “5. Dimensions” on page 7.
Material	
Body	Polyamide, reinforced glass-fibre
Threaded bushing	Brass (stainless steel on request)
Seal	NBR and PUR
Manual override	Standard
Nominal diameter	DN 8
Performance data	
Switching time [1.)]	
Opening	Pressure build-up 0…10 %
Closing	Pressure reduction 100…90 %
Compressed air quality	ISO 8573-1:2010, class 7.4.4 [2.)]
Nominal operating mode	100 % continuous operation
Medium data	
Operating medium	Neutral medium, e.g. lubricated or non-lubricated compressed air
Process/Port connection & communication	
Pneumatic connection	Supply ports 1, 3, 5: Threaded G ¼, NPT ¼ Working ports 2, 4: Threaded G ¼, NPT ¼
Electrical connection	Plug form A acc. to DIN EN 175301-803 Plug form B acc. to DIN EN 175301-803 Plug form C acc. to DIN EN 175301-803
Product accessories	
Cable plug Type 2518 – form A (standard)	Detailed information can be found in chapter “Cable plug Type 2518, form A according to DIN EN 175301-803” on page 19.
Cable plug Type 2507 – form B (standard)	Detailed information can be found in chapter “Cable plug Type 2507, form B according to industry standard” on page 20.
Cable plug Type 2516 – form C (standard)	Detailed information can be found in chapter “Cable plug Type 2516, form C according to DIN EN 175301-803” on page 20.
Cable plug Type 2513 – form A for the EX area cat. 3	Detailed information can be found in chapter “Cable plug Type 2513, form A according to DIN EN 175301-803” on page 19.
Approvals and certificates	
Degree of protection	IP65 with cable plug
Environment and installation	
Installation position	Any, preferably actuator face up

1.) Measurement at 6 bar and +20 °C at the valve outlet

2.) To prevent freezing of the expanded compressed air, the pressure dew point must be at least 10 K lower than the temperature of the medium.

DTS 1000011064 EN Version: F Status: RL (released | freigegeben | validé) printed: 11.09.2023

2. Product versions

2.1. Standard version

Note:
For general technical data, see **"1. General technical data" on page 3**.

Type 6518 is a pilot operated 3/2-way valve (normally closed or open). The valve width of 32 mm allows high flow rates. The valves can be used individually or in blocks.

Product properties	Coil size 24.5 mm	Coil size 32 mm
Switching time		
Opening	20 ms	20 ms
Closing	40 ms	40 ms
Weight	212 g	384 g
Electrical data		
Operating voltage	24 V DC	24 V DC 24/ 110/ 230 V/ 50…60 Hz
Power consumption		
Inrush	–	AC: 11 VA AC: 6/2 VA/W
Hold	DC: 1.7 W	DC: 2 W
Medium data		
Medium temperature	-10 °C…+55 °C	-10 °C…+55 °C
Process/Port connection & communication		
Electrical connection	Plug form B acc. to DIN EN 175301-803 Plug form C acc. to DIN EN 175301-803	Plug form A acc. to DIN EN 175301-803
Environment and installation		
Ambient temperature	-25 °C…+55 °C	-25 °C…+55 °C

DTS 1000011064 EN Version: F Status: RL (released | freigegeben | validé) printed: 11.09.2023

2.2. Ex mb- und Ex eb mb version

Note:

- Ex mb (with moulded cable) or Ex eb mb (with terminal box)
- The maximum medium temperature may never exceed the permissible temperature class (T4 135 °C, T5 100 °C, T6 85 °C) minus 5K.

The approval Ex m is achieved by the mounting of an approved push-over coil. The cable connection and the cable are non-detachable and sealed together with the valve. The valves can be used individually or in blocks.

Product properties	
Switching time	
Opening	20 ms
Closing	50 ms
Weight	600 g
Electrical data	
Operating voltage	24/ 110/ 230 V/UC
Voltage tolerance	+10 %
Medium data	
Medium temperature	-10 °C…+55 °C
Process/Port connection & communication	
Electrical connection	3 m cable, moulded Terminal box (without fuse)
Approvals and certificates	
Ignition protection class (ATEX and IECEx)

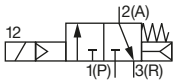
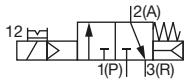
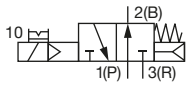
Coil with terminal box	EPS 18 ATEX 1232 X / IECEx EPS 18.0110X II 2G Ex eb mb IIC T5 Gb II 2D Ex mb tb IIIC T95 °C Db
Environment and installation	
Ambient temperature	-25 °C…+50 °C

DTS 1000011064 EN Version: F Status: RL (released | freigegeben | validé) printed: 11.09.2023

2.3. Ex i version







Note:

- The maximum medium temperature may never exceed the permissible temperature class (T4 135 °C, T5 100 °C, T6 85 °C) minus 5K.
- The units may only be used in potentially explosive atmospheres in the manner approved by the admission board, i.e. the permissible maximum electrical values must be observed.
- The valve is intended for operation on 24 V DC outputs via the intermediate switching of a corresponding intrinsically-safe operating resource (isolating module or barrier).

The intrinsically-safe Type 6518 Ex i valve consist of an intrinsically-safe pilot control and a pneumatic amplifier. The diaphragm-controlled valve seats work with very low friction, ensuring reliable switching of the valve, even after long shut-down periods.

Product properties		
Switching time		
Opening	75 ms	
Closing	115 ms	
Weight	580 g	
Electrical data		
Function values for switching function valve	**At +20 °C**	**At +55 °C**

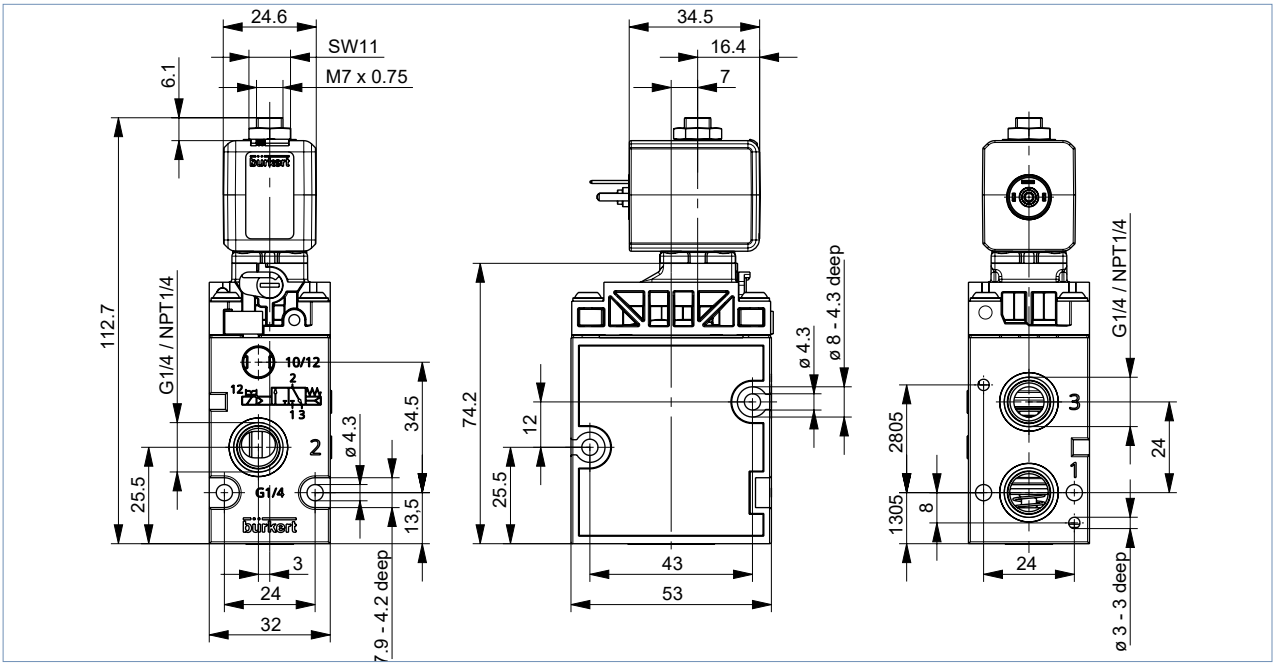
5. Dimensions

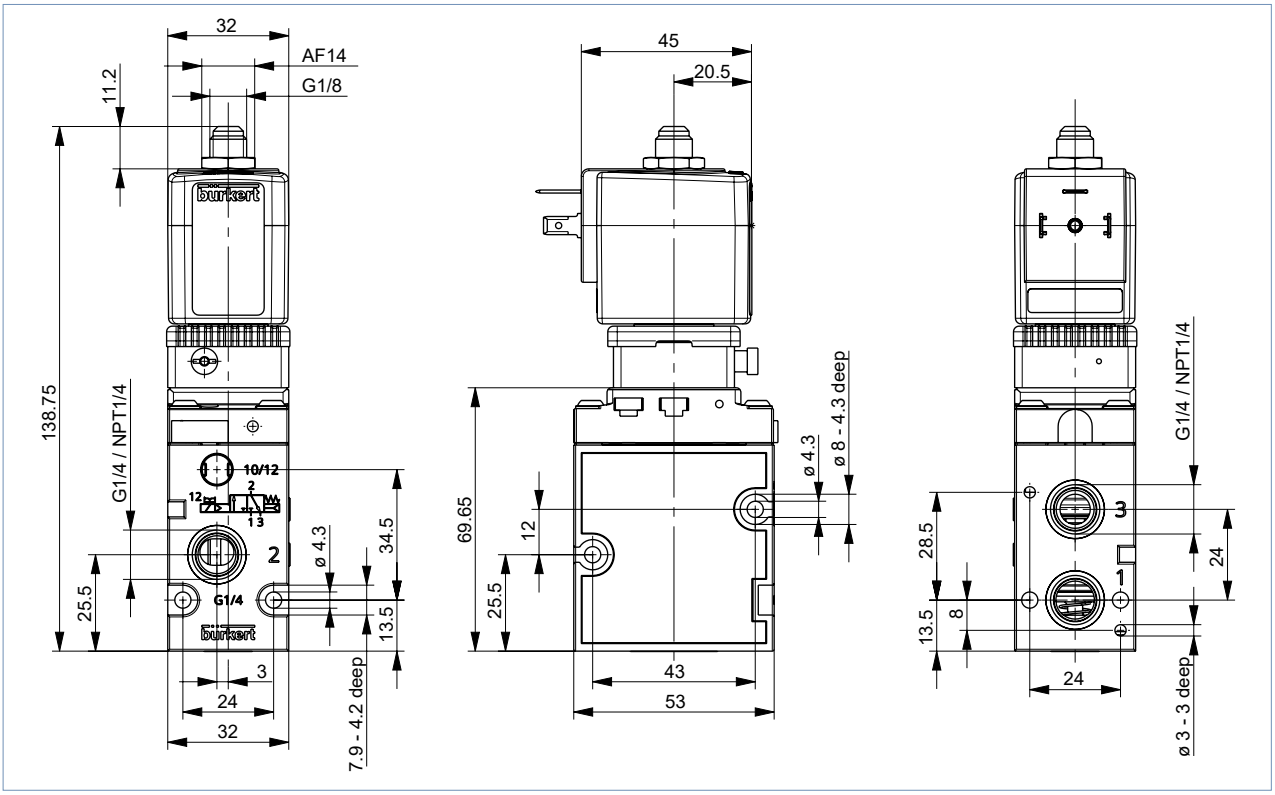
5.1. Pneumatic module Type MP07

Note:

- Dimensions in mm
- n = no. of valves, maximum 12
- Block mounting on wall or with DIN rail 50022 or 50023
- Valve mounting on the pneumatic modules Type MP07 by means of included M4 screws



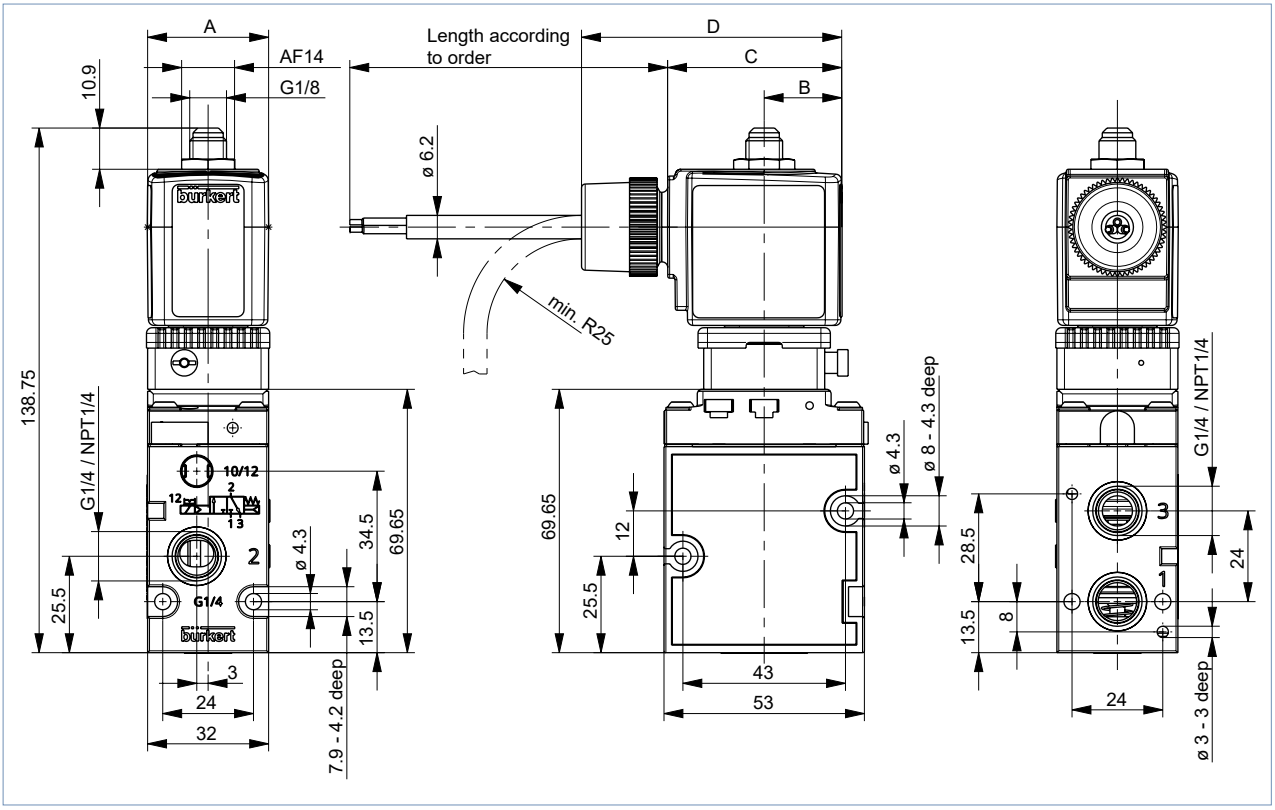
DTS 1000011064 EN Version: F Status: RL (released | freigegeben | validé) printed: 11.09.2023



5.2. Standard version 3/2-way valve, circuit function C and D

Note:
Dimensions in mm

With plug form B or C



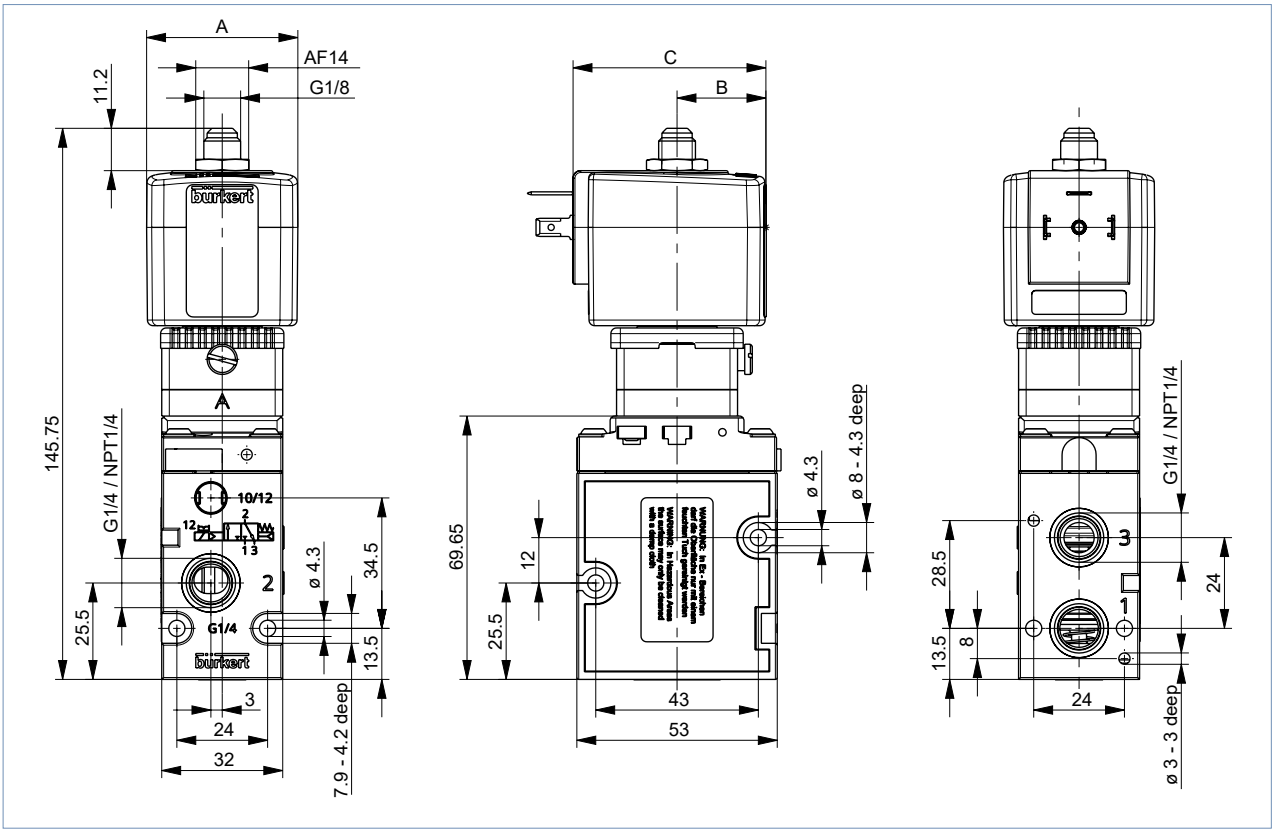
With plug form A

5.3. Ex mb-/eb mb- version 3/2-way valve, circuit function C and D

With moulded cable (3 m long) (Ex mb)

Note:
Dimensions in mm

With terminal box (Ex eb mb)

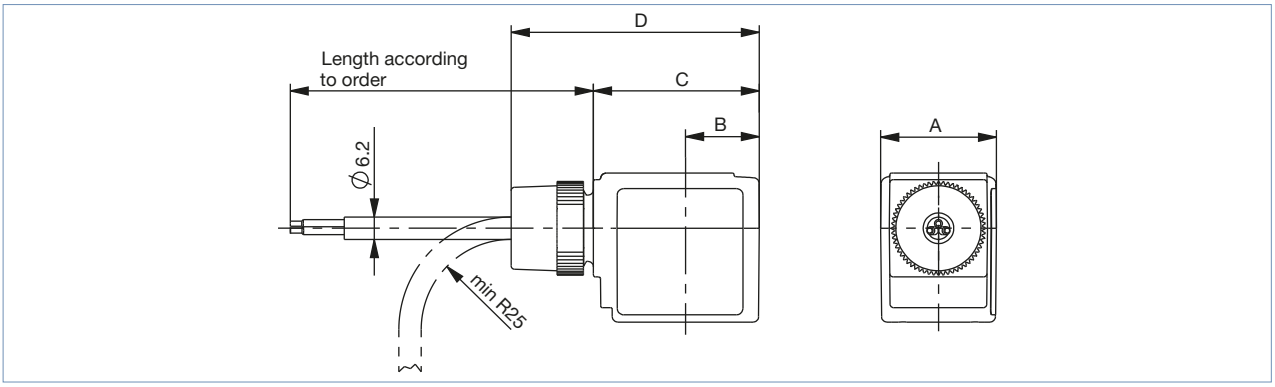


Note:

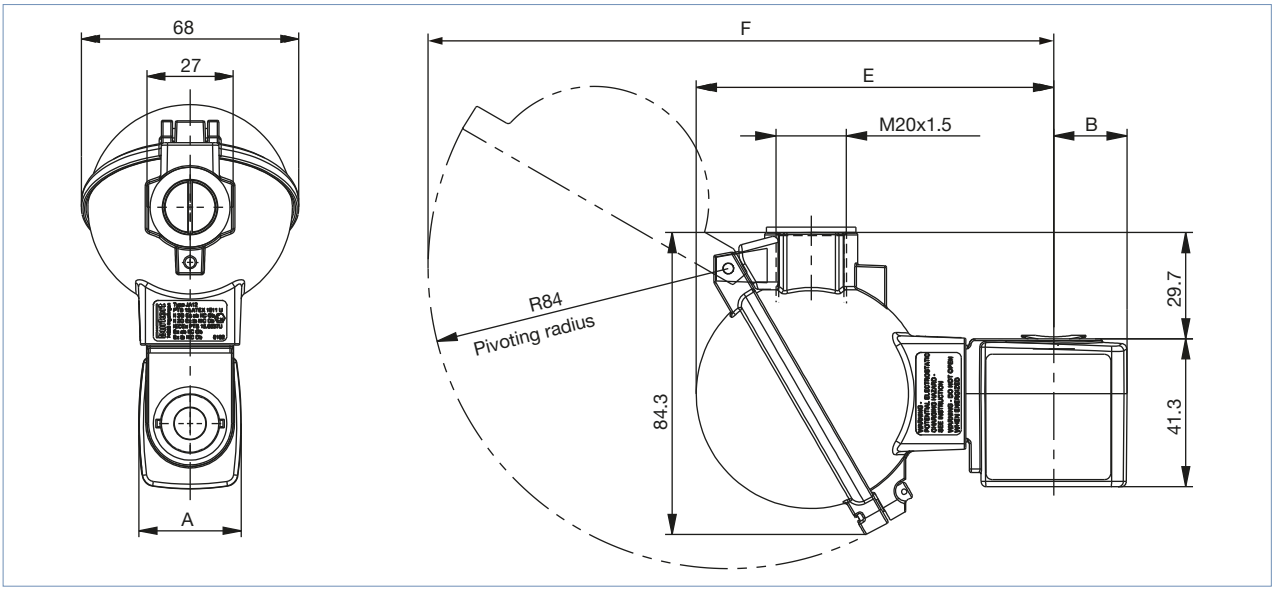
- The dimensions of the housing are identical to the version with molded cable.
- For the coil dimensions, see chapter **"5.5. ATEX version cable coil and terminal box" on page 11**.

DTS 1000011064 EN Version: F Status: RL (released | freigegeben | validé) printed: 11.09.2023

5.4. Ex i version 3/2-way valve, circuit function C



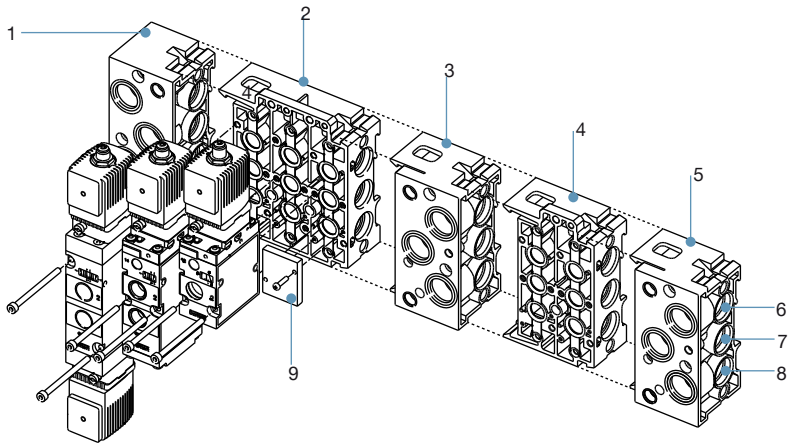
Note:
Dimensions in mm



DTS 1000011064 EN Version: F Status: RL (released | freigegeben | validé) printed: 11.09.2023

5.5. ATEX version cable coil and terminal box

Note:
Dimensions in mm



Coil size	A	B	C	D	E	F
5	32	20.5	46	66.8	99.8	174.7
6	40	23.5	52	74.8	102.8	177.7

DTS 1000011064 EN Version: F Status: RL (released | freigegeben | validé) printed: 11.09.2023

6. Product design and assembly

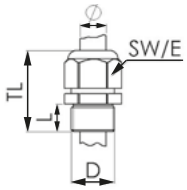
6.1. Block construction

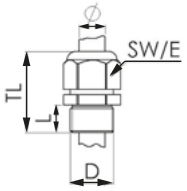
Note:
Single modules or pre-mounted blocks are available.

No.	Element
1	Connector module left
2	Basic module 3-fold
3	intermediate supply module: supply channel pushed through for additional pressure supply or Connector module, right: supply channel closed off, there by several operational pressures possible in a single block
4	Basic module 2-fold
5	Connector module right
6	Supply port: 3(R)
7	Supply port: 1(P)
8	Supply port: 5(S)
9	Covering plate for 3/2-way valve (to cover unused connections)

Note:
Valves with Ex i coil or Ex versions with terminal boxes are not suitable for block mounting.

Ordering example Type 6518 with pneumatic module Type MP07		
Unit	**Version**	**Article no.**
1	Connector module right, G ½	635331
1	Basic module 2-fold universal (for 3/2-, 5/2- and 5/3-way)	635319
1	Basic module 3-fold universal (for 3/2-, 5/2- and 5/3-way)	635343
1	Connector module left, G ½	635324
5	Valves 6518	132475





Version	**Article no.**
Connector module right, G ½	635331
Intermediate supply module	637505
Basic module 2-fold universal (for 3/2-, 5/2- and 5/3-way)	635319
Basic module 3-fold universal (for 3/2-, 5/2- and 5/3-way)	635343
Connector module left, G ½	635324
Covering plate for 5/2-way and 5/3-way (to cover unused valve positions)	635335
Covering plate for 3/2-way (to cover unused connections)	635337

DTS 1000011064 EN Version: F Status: RL (released | freigegeben | validé) printed: 11.09.2023

7. Product accessories

7.1. Cable glands for ATEX/IECEx terminal box

Note:
A cable gland in polyamide version is included in the delivery. A nickel-plated brass version can be ordered at a surcharge, see **"Cable glands for ATEX/IECEx terminal box" on page 21**.

Description	Ex approvals		Dimensions	
	Certification	Identification		
Ex cable gland, Brass, nickel-plated, 6…13 mm 	PTB 04 ATEX 1112 X, IECEx PTB 13.0027X	II 2 G Ex e IIC Gb, II 2 D Ex tb IIIC Db IP68		TL 29…37 mm L 6 mm D 20 mm SW 24 mm E 27 mm
Ex cable gland, Polyamide, 7…13 mm 	PTB 13 ATEX 1015 X, IECEx PTB 13.0034X	II 2 G Ex e IIC Gb, II 2 D Ex tb IIIC Db IP68		TL 36…45 mm L 10 mm D 20 mm SW 24 mm E 28 mm

7.2. Special tool to turn the terminal box

Note:
This special tool is not supplied with the valve, see**"Cable glands for ATEX/IECEx terminal box" on page 21**.

Description	Components of the set
Set SC02-AC10 	• Special wrench • Service manual

		Without circuitry (standard)	2…250 V AC/DC	423845
		With LED	24 V AC/DC	423849
		With LED and free-wheeling diode	12…24 V AC/DC	423851
		With rectifier, LED and varistor	12…24 V AC/DC	423853

Cable plug Type 2516, form C according to DIN EN 175301-803

Note:

- Delivery of cable plug includes a flat seal and a fixing screw.
- For further versions see data sheet **Type 2516 ▸.**

Cable plug	Dimensions	Version	Voltage	Article no.
		Without circuitry	0…250 V AC/DC	303141
		With LED	12…24 V AC/DC	303145
		With LED and varistor	12…24 V AC/DC	303148
		With rectifier, LED and varistor	12…24 V AC/DC	303142

DTS 1000011064 EN Version: F Status: RL (released | freigegeben | validé) printed: 11.09.2023

Cable glands for ATEX/IECEx terminal box

Note:

- A cable gland in polyamide version is included in the delivery. A nickel-plated brass version can be ordered at surcharge.
- For more information on Ex cable glands, see “7.1. Cable glands for ATEX/IECEx terminal box” on page 13.
- For more information on Special wrench see “7.2. Special tool to turn the terminal box” on page 13.

Description	Article no.
Ex cable gland, brass, nickelplated, 6…13 mm[1.)]	773278
Ex cable gland, polyamide, 7…13 mm[1.)]	773277
Set SC02-AC10: Special wrench[2.)] incl. service manual	293488

1.) Cable diameter
2.) Not included in the scope of delivery of the valve

(1)

EC TYPE EXAMINATION CERTIFICATE

(2) **Equipment or protective system intended for use in potentially explosive atmospheres Directive 94/9/EC**

(3) EC type examination certificate number: **ISSeP08ATEX016X**

(4) Equipment or protective system:
Temperature, pressure and level switches.

(5) Applicant – Manufacturer – ~~Authorized representative in the Community~~:
BARKSDALE GmbH

(6) Address: Dorn-Assenheimer Str. 27
D – 61203 REICHELSHEIM

(7) This equipment or protective system and any acceptable variation thereto is specified in the schedule to this certificate and the documents therein referred to.

(8) ISSeP, notified body n^{r} 492 in accordance with article 9 of the Council Directive 94/9/EC of 23 March 1994, certifies that this equipment or protective system has been found to comply with the Essential Health and Safety Requirements relating to the design and construction of equipment and protective systems intended for use in potentially explosive atmospheres given in annex II to the Directive.

The examination and test results are recorded in confidential report n^{r} 07148.

(9) Compliance with the Essential Health and Safety Requirements has been assured by compliance with:

EN 60079-0 : 2006 (CEI 60079-0 : 2004)
EN 60079-11 : 2007 (CEI 60079-11 : 2006)
EN 60079-26 : 2004 (CEI 60079-26 : 2004)
EN 61241-0 : 2006 (CEI 61241-0 : 2004 + corrigendum 2005)
EN 61241-11 : 2006 (CEI 61241-11 : 2005 + corrigendum 2006)

(10) If the symbol "X" is placed after the certificate number, it indicates that the equipment or protective system is subject to special conditions for safe use specified in the schedule to this certificate.

(11) This EC TYPE EXAMINATION CERTIFICATE relates only to the design, examination and tests of the specified equipement or protective system in accordance to the Directive 94/9/EC. Further requirements of this Directive may apply to the manufacturing process and supply of this equipment or protective system. These are not covered by this certificate.

(12) The marking of the equipment or protective system shall include the following indications:
Ex II 1 G Ex ia II C T6 – Ex ia II B T6
Ex II 1 GD Ex iaD 20 T100

(13) **SCHEDULE**

(14) **EC TYPE EXAMINATION CERTIFICATE N^{R} ISSeP08ATEX016X**

(15) Description of the equipment or protective system:
Temperature, pressure and level switches.

The possible and admissible variations are the following :

- Level switches:

UNS-Ms 1/8--BN25, UNS-VA 1/8--VA27, UNS-Ms 1/4--BN30, UNS-VA 1/4--VA52, UNS-Ms 3/8--BN30, UNS-VA 3/8--VA52, Bilge Guard, UNS-1000-VA/Ms-BN, UNS-1000-VA/Ms-VA, UNS1000-G/X, UNS1000-VA--VA44, UNS-2000-S, UNS2000 VA/Ms-BN, UNS2000 VA/Ms-VA, UNS2100-VA/MS-VA et UNS Bilge Switch

- Option : all level switches of the type UNS can be equipped with a bimetallic switch acting with temperature. In the type number, is added the –TP –extension.
- The floats can be in stainless steel, in Burna-N or in other plastic materials such as PP, PE, PVC, PTFE or PA.

- Pressure switches:

D1T, D2T, B1T, B2T, P1H, P1X, KLM/KLK---K, KLM/KLK---S1, E1H---GE12, E1H---PLS, E1S, XTM, X1T, XTK, B1X, B2X, D1X, D2X, MSPS, DPD1T, DPD2T, 9671X, 9681X, 9692X, « compact X » series and 8000 series.

- Temperature switches:

MT1H, T2H, ML1H, L2H, T1X, T2X, L1X, TH, TX and T9692X.

- Flow switch

BFS

- By-pass switch

GK03-EXI

Electrical parameters
Ui = 28 V
Ii = 110 mA
Ci = 40 pF
Li = 4 µH

Routine tests :
The manufacturer shall make the routine verifications and tests necessary to ensure that the electrical apparatus produced complies with the specification submitted to the testing station together with the prototype or sample (CEI 60079 : clause 27).
Eventual prescriptions : Tamb : -40°C to +75°C
IP6X

(16) Report n^{r} 07148 of 28.02.2008
Composed in total of 39 pages, completed by the following descriptive documents :

(17) Special conditions for safe use :

Symbol X.

- The following models are coded Ex ia IIB T6 : E1S, MSPS, KLM/KLK…S1, XTM, X1T, XTK, UNS-Ms 1/8 - - BN25, UNS-Ms 1/4 - - BN30, UNS-Ms 3/8 - - BN30, Bilge Guard, UNS-1000-VA/Ms-BN, UNS2000 VA/Ms-BN, UNS Bilge Switch (with Buna float), 8XXX-PL1-XX, 8XXX-PL4-XX, UNS-2000-S-VA----BN, UNS-2000-S-VA----PE and BFS as well as level switches having a plastic material float (PP, PE, PVC, PTFE or PA)

- For the model E1H…PLS, all precautions shall be taken during their use in category 1 (zones 0) zones in order to avoid all ignition of the explosive atmosphere by electrostatic hazards. Furthermore, this model is also coded Ex ia IIB T6.

- The other models are coded Ex ia IIC T6

- For the models with –TP- extension, the temperature switch shall be supplied by a separte associated apparatus

- The following models can be use only in gas atmospheres (dust atmospheres not allowed): E1H---GE12, E1H---PLS

- The models E1S and MSPS shall be installed in an additional enclosure. The ingress protection of this enclosure shall be at least IP6X when using these models in dust atmosphere.

- The cable entries shall be of a certified type and kept the IP6X degree when using in Dust atmosphere. They are not a part of this certificate.

- The models having a light alloy enclosure or part of enclosure shall be protected against all impact or friction which can ignite the explosive atmosphere.

- The metallic enclosures shall be connected to earth.

(18) Essential Health and Safety Requirements: covered by the Standards listed in (9).

This certificate may only be reproduced in its entirety and without any change, schedule included

Mechanical temperature switches ML1H

Local mount type

Features

- Local mount type single switch
- Explosion proof housing
- Terminal clip and set point adjustment in °C and °F under tamper protected cover
- Protection class: IP65, NEMA 4 / 13
- Optional:
  - Disconnection with manual reset, G (RD)-micro switch
  - Adjustable hysteresis (switch-back difference), S-micro switch
- Thermowell in stainless steel and brass 3/4" NPT male thread
- Option thermowell: W = Brass WS = Stainless steel SS316Ti, 1.4571
- Approvals: Ex ia, UL, CSA, SIL2 (IEC 61508)

Adjustment ranges

-45 °C...+24 °C to +66 °C...+232 °C

Applications

Temperature monitoring in machine and machine tool industry, shipbuilding, power plants, antifreeze, heating systems, compressor monitoring

Technical Data

Housing material:	Die-cast aluminium, anodized
Process connection:	Standard 1/2" NPT male, option W/ WS 3/4" NPT male
Temperature sensor material:	Standard: brass / copper, version S: stainless steel (SS304 / 1.4301) for pressure values refer to table in chap. Accessories
Electrical values:	All models are equipped with SPDT contacts
Micro switch type:	H, M, GH, GM, S, G (RD)
Electrical connection:	1/2" NPT female, internal screw terminal, cable gland in PA, for cable size 6...12 mm is included
Protection class:	IP65, NEMA 4 / 13

Set point adjustment:	Turn adjustment knob clockwise to increase the actuation point
Standards:	The equipment is in conformity with the following harmonised European standards: EN 60014 1977 + A1 to A4 and EN 500120 1977 + A1
Intrinsic safety:	The switches are also suitable for intrinsically safe applications. Add "Exi" in case of ordering. The following max. values are valid when using these switches: Umax = 28 V Imax = 50 mA
Approvals:	Ex ia, UL, CSA
Weight:	1.0 kg approx.

Art. No.: 923-0183
Index J, 16.03.2019

Specifications are subject to changes without notice!

Intended Applications

The temperature switches are specifically applied for monitoring and controlling of operations using maximum or minimum temperatures. A microswitch triggers an electrical signal when minimum or maximum temperatures are reached.

⚠	**DANGER**
The switch may only be used in the specified fields of application (see type label). The temperature has to be within the specified ranges, the pressure values and the electrical rating must not exceed the values specified. Observe also the applicable national safety instructions for assembly, commissioning and operation of the switch. The switch is not designed to be used as the only safety relevant element in pressurized systems according to DGR 97/23/EC.	

Safety Instructions

The safety instructions are intended to protect the user from dangerous situations and/or material damage.

In the operating instructions the seriousness of the potential risk is designated by the following signal words:

⚠	**DANGER**
Refers to imminent danger to men. Nonobservance may result in fatal injuries.	

⚠	**WARNING**
Refers to a recognizable danger. Nonobservance may result in fatal injuries, and destroy the equipment or plant parts.	

⚠	**CAUTION**
Refers to a danger. Nonobservance may result in light injuries and material damage to the equipment and/or to the plant.	

☞	**IMPORTANT**
Refers to important information essential to the user.	

Disposal

The equipment must be disposed of correctly in accordance with the local regulations for electric/electronic equipment.

The equipment must not be disposed of with the household garbage!

Standards

The standards applied during development, manufacture and configuration are listed in the CE conformity and manufacturer's declaration.

Warranty/Guaranty

Warranty

Our scope of delivery and services is governed by the legal warranties and warranty periods.

Terms of guaranty

We guaranty for function and material of the single / dual temperature switch under normal operating and maintenance conditions in accordance with the statutory provisions.

Loss of guaranty

The agreed guaranty period will expire in case of:

changes or modifications to the housing/switch/fitting
incorrect use,
incorrect installation or
incorrect handling or operation contrary to the provisions of these operating instructions.

No liability is assumed for any damage resulting therefrom, or any consequential damage.

Transport/Storage

⚠	**CAUTION**
Severe shock and vibrations should be avoided during transport. Storage should be dry and clean.	

Installation/Commissioning

DANGER

Only install or uninstall the switch when deenergized (electrically and hydraulically/pneumatically).

Process connection and electrical connection must be carried out by trained or instructed personnel according to state-of-the-art standards.

The switch must only be installed in systems where the maximum temperature T_{max} is not exceeded (see type label).

WARNING

Be aware of the fact that in case of operation with higher temperatures the casing surface may become very hot!

Ambient temperature range: –40… +75 °C; max. pressure at sensor: 21 bar

WARNING

In case the temperature falls below or exceeds the permissible temperature limits specified for the sensor and the permissible ambient temperature, the function of the temperature switch can no longer be guaranteed and the temperature switch may be damaged.

Check the operation of the switch regularly. If the switch does not work properly, stop operation immediately!

CAUTION

All standard temperature switches are supplied with cable glands, the explosion-proof switches with threaded plugs covering the electrical connection entry.

These must be removed to install the approved cable gland of your choice.
The capillary system must be installed with care avoiding sharp bends.
Provide protection against damage where needed.

IMPORTANT

The temperature sensing element can be used up to 21 bar. In case of pressures higher than 21 bar the temperature sensing element must be provided with a thermowell suitable for the respective application.

All temperature switches are tested for proper functioning before they leave the factory.

Contact Protection

The micro switches used are normally suitable for both direct and alternating current operation. Inductive, capacitive and lamp loads may, however, considerably reduce the life expectancy of a micro switch and, under extreme circumstances, even damage the contacts.

Depending on the application spark suppression and current limiting is recommended (see succeeding figures).

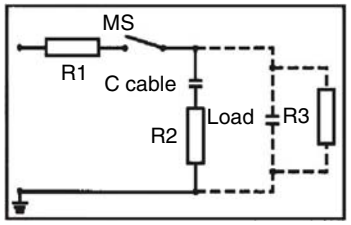

Fig. 1: Protection in case of capacitive loads R1: Protection against starting current rushes R2,R3: Protection against high discharge currents

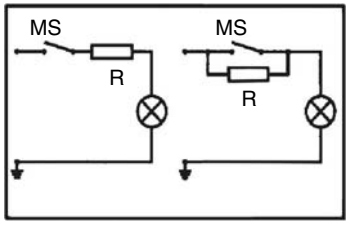

Fig. 2: Lamp load provided with resistance in parallel or series connection to switch of condensators

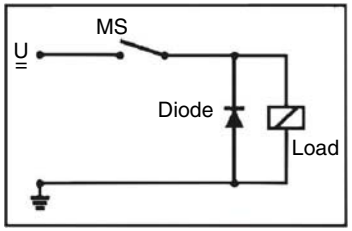

Fig. 3: Protection in case of continuous current and inductive load by recovery diode

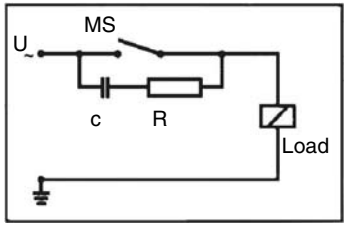

Fig. 4: Protection in case of alternating current and inductive load by RC-link

Set point adjustment

IMPORTANT

Factory-Provided: pressure (temperature) switch point setting
We confirm for pressure (temperature) switches that have been factory set the setting will be detailed on the label name plate.

Warranty is not applicable for any changes that may occur due to transportation or installation. For critical applications we recommend the setting is checked and re-set if cecessary after installation and wirding of the pressure (temperature) switch.

In temperature switches, the liquid expands in the sensing element (capillary) when the temperature changes. Due to the expansion the microswitch is actuated.

Upon delivery of the product, the set points are likely to be found in the middle of the adjustable range. On request, fix set points may be adjusted by our factory. In this event, the point will be indicated on the type plate or any separate plate, i = increasing, d = decreasing.

The set point is adjusted by turning the adjustment knob (see figure 7…12).

☞	**IMPORTANT**
In some cases the corresponding housing cover must be removed in order to reach the adjustment knob.	

Heat the temperature switch to the desired switching temperature.

Turn the adjustment knob to actuate the microswitch.

☞	**IMPORTANT**
Please consult the wiring diagram for the contact status at state of rest (see Fig. 5).	

Precise adjustment of set point to actuate on increasing temperature

Connect a control unit (lamp, buzzer, etc.) to 1 (C) and 4 (NO). When the unit is connected correctly and the sensor temperature is higher than the temperature adjusted on the scale, the buzzer or lamp is **not** activated.

Adjust the desired switch point with the help of the scale and via the adjustment knob.

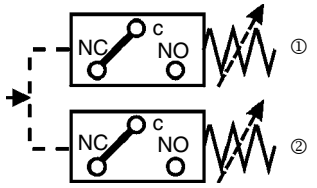
Watch the switch point while the temperature is rising (about 2°C/minute). The control unit is activated when the switch point is reached.

If necessary, readjust the set temperature by some degrees (by means of the scale the temperature can be adjusted with an accuracy of 3…5 % of the scale value).

Precise adjustment of set point to actuate on decreasing temperature

Connect a control unit (lamp, buzzer, etc.) to 1 (C) and 2 (NC). When the unit is connected correctly and the sensor temperature is higher than the temperature adjusted on the scale, the buzzer or lamp is activated.

Adjust the desired switch point with the help of the scale and via the adjustment knob.



Increase the temperature (about 2°C/minute) until the control unit is deactivated.

Watch the point at which the control unit is activated again while the temperature is falling. This is the set switch point.

If necessary, readjust the set temperature by some degrees (by means of the scale the temperature can be adjusted with an accuracy of 3…5 % of the scale value).

☞	**IMPORTANT**
Adjustment of several set points is performed for each set point as specified above. Due to the sluggishness of the capillary system switching delays may occur in case of rapid temperature changes (>2 °C/Minute).	

Wiring Code for all Types (Contact status at atm. pressure)

Power circuit ①	**Power circuit ②**
C = purple	C = brown
NC = blue	NC = orange
NO = red	NO = black

Circuit ① = lower contact (low)

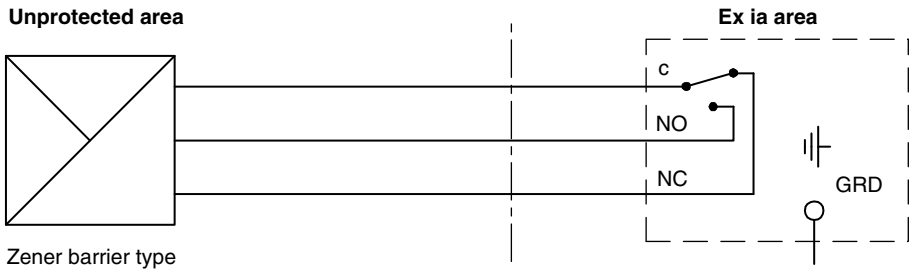
Circuit ② = upper contact (high)

Fig. 5 Wiring Code

Use in Hazardous Locations

The weather-proof standard temperature switches must not be used for hazardous locations.

Depending on the application we offer two versions for hazardous locations:



An intrinsically safe version Ex ia IIC T6 with certificate no.ISSeP08ATEX016X for all standard temperature switches
and the special temperature switch versions T1X, T2X and L1X for Ex db IIC T6 Gb;
Ex tb IIIC T80°C Db IP66 explosion-proof applications with certificate no. ISSeP08ATEX024X.

Both versions are suitable for gas and dust applications and approved for Ex II G or D in accordance with the ATEX 2014/34/EU regulations.

The intrinsically safe versions must be operated with an approved switch amplifier (see Fig. 6).

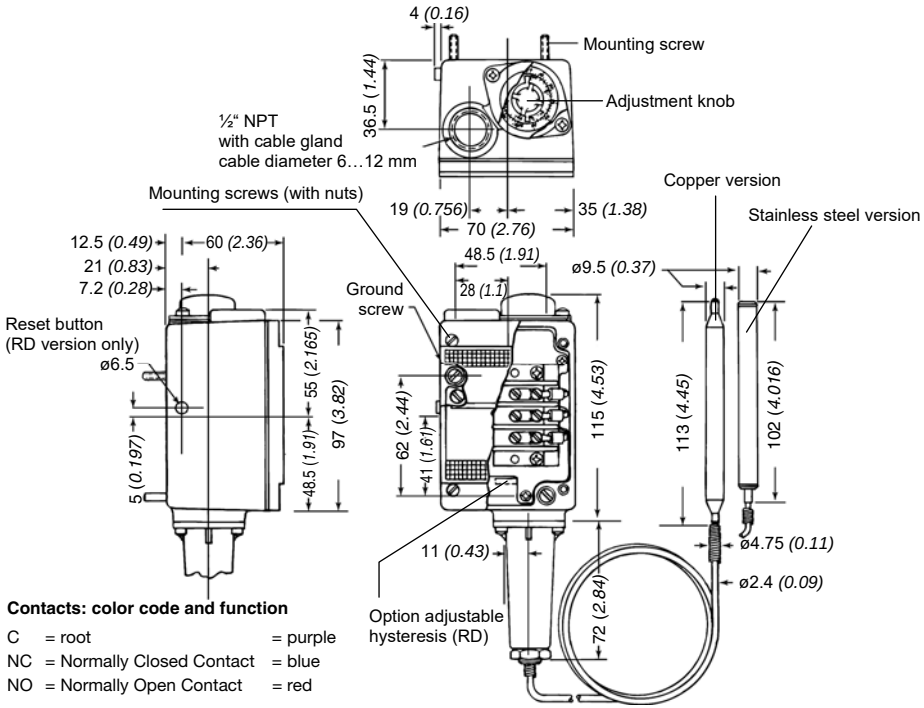
The switches with explosion-proof enclosure can be wired via conduit connection or cable gland with Ex approval. The switches may only be used in accordance with the instructions and provisions of the declaration of conformity.

⚠	**WARNING**
With option Ex i: The models having light-alloy (aluminium) enclosures or enclosure parts must be protected against all impact or friction which can ignite the explosive atmosphere.	

Zener barrier type
Switch amplifier NAMUR

Fig. 6: Operation of temperature switches in intrinsically safe areas

Maintenance/Cleaning



Maintenance

The pressure switch is maintenance free. Checking the set points lies within the discretion of the user. The usual preventive maintenance work in accordance with the PED and ATEX guidelines must always be carried out.

Management summary

This report summarizes the results of the hardware assessment carried out on the temperature switches ML1H / L1X, MT1H / T1X, L2H and T2H / T2X. Table 1 gives an overview of the different versions that belong to the considered temperature switches.

The mechanical assessment consists of a Failure Modes, Effects and Diagnostics Analysis (FMEDA). A FMEDA is one of the steps taken to achieve functional safety assessment of a device per IEC 61508. From the FMEDA, failure rates are determined and consequently the Safe Failure Fraction (SFF) is calculated for the device. For full assessment purposes all requirements of IEC 61508 must be considered.

Table 1: Version overview [1]

Type	Comment
MLH / L1X	Single temperature switch, Ex i approval, L1X additional with Explosion proof housing and Ex d approval
MT1H / T1X	Single temperature switch with remote sensor, Ex i approval, T1X additional with Explosion proof housing and Ex d approval
L2H	Dual temperature switch, Ex i approval
T2H / T2X	Dual temperature switch, Terminal clip integrated, Ex i approval, T2X additional with Explosion proof housing and Ex d approval,

For safety applications only the described versions of the temperature switches have been considered. All other possible variants and configurations are not covered by this report.

Barksdale GmbH and *exida* together did a quantitative analysis of the temperature switches ML1H / L1X, MT1H / T1X, L2H and T2H / T2X to calculate the failure rates using *exida's* experienced-based data compilation for the different mechanical components.

The temperature switches ML1H / L1X, MT1H / T1X, L2H and T2H / T2X are classified as Type A[2] elements according to IEC 61508, having a hardware fault tolerance of 0.

All types can be used as monitoring devices which are switching at increasing temperature (max) or decreasing temperature (min).

The failure rates listed in this report do not include failures due to wear-out of any components. They reflect random failures and include failures due to external events, such as unexpected use, see section 4.2.3.

The failure rates according to IEC 61508:2010 2nd edition for the temperature switches ML1H / L1X, MT1H / T1X, L2H and T2H / T2X are listed in the following tables.

[1] All versions are available in several temperature ranges and switching contact materials (gold or silver). The listed versions are representative for the type series.

[2] Type A element: "Non-complex" element (all failure modes are well defined); for details see 7.4.4.1.2 of IEC 61508-2.

Table 2: Summary – IEC 61508:2010 failure rates[3] for increasing temperature detection

All types are with Ex i approval, L1X, T1X and T2X additional with Ex d approval.

	Failure rates (in FIT) according to *exida* Profile 2			
Failure category	**ML1H / L1X**	**MT1H / T1X**	**L2H**	**T2H / T2X**
Fail Safe Detected (λ_{SD})	**0**	**0**	**0**	**0**
Fail Safe Undetected (λ_{SU})	**139**	**139**	**265**	**265**
Fail Dangerous Detected (λ_{DD}) [4]	**0**	**0**	**27**	**27**
Fail Dangerous Undetected (λ_{DU})	**72**	**89**	**45**	**62**
Fail Annunciation Undetected (λ_{AU}) [5]	0	0	30	30
No effect	77	85	91	99
No part	0	0	0	0
Total failure rate (safety function)	**211**	**228**	**337**	**354**
SFF	**65%**	**60%**	**86%**	**82%**
SIL AC [6]	**SIL2**	**SIL2**	**SIL2**	**SIL2**

[3] It is assumed that practical fault insertion tests can demonstrate the correctness of the failure effects assumed during the FMEDAs.

[4] The device does not contain any internal diagnostics. The DD failures result from the fact that the redundant switch is considered to be a safety measure for the primary switch providing a DC of 90% by considering a common cause factor of 10%.

[5] The AU failures result from the fact that the redundant switch is considered to be a safety measure and therefore is contributing to the "annunciation" failure category.

[6] SIL AC (architectural constraints) means that the calculated values are within the range for hardware architectural constraints for the corresponding SIL. For full assessment purposes all requirements of IEC 61508 must be considered.

Table 3: Summary – IEC 61508:2010 failure rates[7] for decreasing temperature detection

All types are with Ex i approval, L1X, T1X and T2X additional with Ex d approval.

	Failure rates (in FIT) according to *exida* Profile 2			
Failure category	**ML1H / L1X**	**MT1H / T1X**	**L2H**	**T2H / T2X**
Fail Safe Detected (λ_{SD})	**0**	**0**	**0**	**0**
Fail Safe Undetected (λ_{SU})	**146**	**161**	**266**	**281**
Fail Dangerous Detected (λ_{DD}) [8]	**0**	**0**	**32**	**32**
Fail Dangerous Undetected (λ_{DU})	**65**	**67**	**33**	**35**
Fail Annunciation Undetected (λ_{AU})[9]	0	0	36	36
No effect	77	85	91	99
No part	0	0	0	0
Total failure rate (safety function)	**211**	**228**	**331**	**348**
SFF	**69%**	**70%**	**90%**	**89%**
SIL AC [10]	**SIL2**	**SIL2**	**SIL3**	**SIL2**

The failure rates are valid for the useful life of the considered temperature switches ML1H / L1X, MT1H / T1X, L2H and T2H / T2X (see Appendix 2) when operating as defined in the considered scenarios.

[7] It is assumed that practical fault insertion tests can demonstrate the correctness of the failure effects assumed during the FMEDAs.

[8] The device does not contain any internal diagnostics. The DD failures result from the fact that the redundant switch is considered to be a safety measure for the primary switch providing a DC of 90% by considering a common cause factor of 10%.

[9] The AU failures result from the fact that the redundant switch is considered to be a safety measure and therefore is contributing to the "annunciation" failure category.

[10] SIL AC (architectural constraints) means that the calculated values are within the range for hardware architectural constraints for the corresponding SIL. For full assessment purposes all requirements of IEC 61508 must be considered.

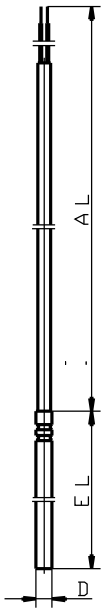
Push-in RTD Temperature Probe with Connecting Cable

- **Temperature range from -50 to +400 °C**
- **As single or double RTD temperature probe**
- **In 2-wire, 3-wire or 4-wire-circuit**
- **Connecting cable PVC, silicone, PTFE, metal braiding**

Push-in RTD temperature probes are mainly used for measuring temperature in liquids and gasses. The application areas, among others, are the air conditioning and refrigeration industry, in the construction of heating systems/furnaces/equipment, and in laboratory technology.
Depending on the version, the connection cables are suitable for dry or moist rooms with a temperature range between -50 to +400 °C. The connecting cable transition points are strain-relieved. An anti-kink protection is available as an option.
A Pt100 temperature sensing element according to DIN EN 60751, class b in 2-wire circuit is used as a measuring insert by default – versions with Pt500 or Pt1000 are also possible. The connection is also available in 3-wire and 4-wire circuits as an option.

Technical data



Connection	Cable ends stripped bare, with ferrules available with push-on contacts or multi-pole plug connector
Connecting cable	PVC, ambient temperature -5 to +80 °C (+105 °C) PUR, ambient temperature -5 (+5) to +105 °C Silicone, ambient temperature -50 to +180 °C PTFE, ambient temperature -50 to +260 °C Metal braiding, ambient temperature -50 to +260 °C (+350 °C / +400 °C)
Protection tube	Stainless steel 1.4571, Ø 3 mm, Ø 4 mm, Ø 5 mm, Ø 5.2 mm, Ø 6 mm, and Ø 8 mm
Measuring insert	Pt100 temperature sensing element, DIN EN 60751, class B, 2-wire circuit
Response times	In water 0.4 m/s / in air 3.0 m/s Ø 6 mm: water $t_{0.5}$ approx. 4 s, $t_{0.9}$ approx. 10 s / in air $t_{0.5}$ approx. 32 s, $t_{0.9}$ approx. 98 s Ø 8 mm: water $t_{0.5}$ approx. 7 s, $t_{0.9}$ approx. 18 s / in air $t_{0.5}$ approx. 50 s, $t_{0.9}$ approx. 140 s
Accessories	For pipe screw connections and flanges refer to data sheet 909750

Order details: Push-in RTD temperature probe with connecting cable

			(1)	**Basic type**
		902150/10		Push-in RTD temperature probe with connecting cable, single-section protection tube made of stainless steel
		902150/20		Push-in RTD temperature probe with spiral connecting cable, single-section protection tube made of stainless steel
			(2)	**Operating temperature in °C/connecting cable**
x		378		-50 to +180 °C / silicone
x		386		-50 to +260 °C / PTFE
x		388		-50 to +260 °C / metal braiding
x		402		-50 to +400 °C / metal braiding
x		724		-5 to +80 °C / PVC
x	x	730		-5 to +105 °C / PVC or PUR
x		912		5 to +105 °C / PUR (only with 1× Pt100 in 2-wire circuit)
			(3)	**Measuring insert**
x		1001		1× Pt 100 in 3-wire-circuit
x	x	1003		1× Pt 100 in 2-wire circuit
x		1011		1× Pt 100 in 4-wire circuit
x		2001		2× Pt 100 in 3-wire-circuit
x		2003		2× Pt 100 in 2-wire circuit
			(4)	**Tolerance class according to DIN EN 60751**
x	x	1		Class B (standard)
x	x	2		Class A
			(5)	**Protection tube diameter D in mm**
x		3		Ø 3 mm (only as 1× Pt100 in 2-wire circuit with PTFE connecting cable)
x		4		Ø 4 mm (only as 1× Pt100 in 2-wire circuit with silicone, PTFE connecting cable, or metal braid)
x		5		Ø 5 mm
x		5.2		Ø 5.2 mm
x	x	6		Ø 6 mm
			(6)	**Insertion length EL in mm**
x		30		30 mm (standard with D 3 mm and D 4 mm)
x		45		45 mm (standard with D 5 mm and D 5.2 mm)
x	x	50		50 mm (not for D < 6 mm)
x		60		60 mm (not for D < 6 mm)
			(7)	**Connecting cable end**
x	x	03		Blank connection wires
x	x	11		Ferrules (standard)
x	x	13		Push-on contact 6.3
x	x	80		Multi-pole plug connector (specify type in plain text)
			(8)	**Connecting cable length AL in mm (AL 500 to 500,000 mm for basic type 902150/10)**
	x	1100		1,100 mm (effective)
x		1500		1,500 mm
x		2500		2,500 mm
x		...		Please specify in plain text (500 mm steps)
			(9)	**Extra codes**
x	x	000		Without extra code
x		315		Strain relief spring
x		316		Strain-relief spring hose
x	x	317		Shielded connecting cable
x		858		Waterproof, protection type IP65 (only for EL 60 mm with PUR or silicone connecting cable)

	(1)		(2)		(3)		(4)		(5)		(6)		(7)		(8)		(9)	
Order code		-		-		-		-		-		-		-		/		, ...[1]
Order example	902150/10	-	378	-	1001	-	1	-	6	-	50	-	11	-	2500	/	000

data sheet 902150

Kommanditgesellschaft, Sitz: 36039 Fulda, Amtsgericht Fulda, HRA 302 USt.-Id.-Nr. DE 112411234; Persönlich haftende Gesellschafterin: M. K. JUCHHEIM GmbH, Sitz: 36039 Fulda, Amtsgericht Fulda, HRB 17; Geschäftsführer: Dipl.-Ing. Bernhard Juchheim, Dipl.-Kfm. Michael Juchheim, Dipl.-Ing. Dimitrios Charisiadis

AQUAGAS SWEDEN AB

Date: 2022-06-20

To whom it may concern

Verification as simple apparatus for JUMO PT100 sensor 90.2150/30

Based on EN 60079-14 :2014, chapter 16.4 a) the "PT100 element" supplied from Jumo, part number "90.2150/30" can be used as a simple apparatus.

Remarks EN 60079-11 :2012, chapter 5. 7
the type "90.2150/30" contains no voltage limiting and/or current limiting and/or protective devices (See vendor documentation).
the type "90.2150/30" contain no devices to increase the available voltage and available current.(see vendor documentation).

The sensor of type "90.2150/30" is installed in a closed 6mm Cr/Ni tube of 90mm length in such a way that it maintains the integrity of the isolation from earth according to EN60079-14 :2014 chapter 16.4
.
The surface area of the "90.2150/30" sensor is 1725 mm
According to EN 60079-0:2009, chapter 16.4 table 4 devices with a surface >1 000 mm2 and a maximum power dissipation of Pi=1000mW, could be classified in T4 with T ambient max 80°C
The sensor is installed in an area with max 40°C ambient temperature.

The values Ci and Li of the "90.2150/30" are negligible.
Therefore the classification for the "90.2150/30" is :
EPL Ga, llC, Pi= 1000mW, temperature class T4 T ambient max 80°C

Yours sincerely

Surface RTD Temperature Probes

- For temperatures between -50 and +260 °C
- With protection fittings made from various materials
- For round and flat surfaces
- Simple and quick installation
- Low thermal mass
- Good thermal transfer from the measuring point to the sensor

Surface RTD temperature probes are the preferred choice for measuring temperatures on closed pipe systems and/or other round or flat surfaces. The probes can be installed with ease using tightening bands or cable ties so there is no need for mechanical modification of the measuring location. The basic types 902550/10 and 902550/11 which are provided with a hole for screw-fitting to any surface (such as heating plates) are the exception.

The indirect method of temperature measurement avoids disruption of the medium flow. Additionally, the operating life of the RTD temperature probe is not shortened by the effects of either pressure or chemicals.

The low thermal mass of the probe means that it has very little influence on the measured object. Heat-conducting paste is available to improve heat transfer. Large differences in temperature between the measurement medium and the surrounding environment will influence the measurement. In such cases, we recommend additional insulation.

The measuring insert is fitted as standard with a Pt100 temperature sensor according to DIN EN 60751, class B in a two-wire circuit; versions with Pt500 or Pt1000 are also available.

The product range is rounded off by a pipe contact probe with a large cable socket (basic type 902554/44). This is available with an analog transmitter as an optional extra.

Technical data

Connection	Available as tin-plated cable ends, with ferrules, with plug-in sleeves, or multi-pole plug connectors
Connecting cable	Silicone, ambient temperature -50 to +180 °C PTFE, ambient temperature -190 to +260 °C Kapton, ambient temperature -50 to +260 °C
Cable socket	Basic type 902554/41 and 902554/42 plastic housing: PC, color: silver-gray/blue Basic type 902554/44 plastic housing: PC, color: white Connection via screw terminals, basic type 902554/44 if transmitter not selected available with spring-cage terminals as optional extra
Protection tube	Stainless steel 1.4571, aluminum, plastic
Measuring insert	Pt100 temperature sensor, DIN EN 60751, class B, two-wire circuit
Transmitter	For basic type 902554/44 analog transmitter as optional extra, 4 to 20 mA or 0 to 10 V

To whom it may concern

Verification as simple apparatus for JUMO PT100 sensor 90.2550/10

Based on EN 60079-14 :2014, chapter 16.4 a) the "PT100 element" supplied from Jumo, part number "90.2250/10" can be used as a simple apparatus.

Remarks EN 60079-11 :2012, chapter 5. 7
the type "90.2550/10" contains no voltage limiting and/or current limiting and/or protective devices (See vendor documentation).
the type "90.2550/10" contain no devices to increase the available voltage and available current.(see vendor documentation).

The sensor of type "90.2550/10" is installed in a closed 6 mm aluminum body of 31mm length in such a way that it maintains the integrity of the isolation from earth according to EN60079-14 :2014 chapter 16.4
.
The surface area of the "90.2550/10" sensor is 650 mm2
According to EN 60079-0:2009, chapter 16.4 table 4 devices with a surface between 20mm2 and 1000mm2 and a maximum power dissipation of Pi=1000mW, could be classified in T4 with T ambient max 80°C
The sensor is installed in an area with max 40°C ambient temperature.

The values Ci and Li of the "90.2550/10" are negligible.
Therefore the classification for the "90.2550/10" is :
EPL Ga, llC, Pi= 1000mW, temperature class T4 T ambient max 80°C

CERTIFICATE

(1) EC-Type Examination

(2) **Equipment and protective systems intended for use in potentially explosive atmospheres - Directive 94/9/EC**

(3) EC-Type Examination Certificate Number: **KEMA 03ATEX1535 X** Issue Number: **4**

(4) Equipment: **2-Wire Programmable Transmitter Type 5333B, Type 5333C and Type 5333D**

(5) Manufacturer: **PR electronics A/S**

(6) Address: **Lerbakken 10, 8410 Rønde, Denmark**

(7) This equipment and any acceptable variation thereto is specified in the schedule to this certificate and the documents therein referred to.

(8) DEKRA Certification B.V., notified body number 0344 in accordance with Article 9 of the Council Directive 94/9/EC of 23 March 1994, certifies that this equipment has been found to comply with the Essential Health and Safety Requirements relating to the design and construction of equipment and protective systems intended for use in potentially explosive atmospheres given in Annex II to the directive.

The examination and test results are recorded in confidential test report no. 214371900/2.

(9) Compliance with the Essential Health and Safety Requirements has been assured by compliance with:

EN 60079-0 : 2012 **EN 60079-11 : 2012** **EN 60079-26 : 2007**

(10) If the sign "X" is placed after the certificate number, it indicates that the equipment is subject to special conditions for safe use specified in the schedule to this certificate.

(11) This EC-Type Examination Certificate relates only to the design, examination and tests of the specified equipment according to the Directive 94/9/EC. Further requirements of the directive apply to the manufacturing process and supply of this equipment. These are not covered by this certificate.

(12) The marking of the equipment shall include the following:

II 1 G Ex ia IIC T4...T6 Ga
II 1 D Ex ia IIIC Da
II 1 M Ex ia I Ma

This certificate is issued on 21 Augustus 2013 and, as far as applicable, shall be revised before the date of cessation of presumption of conformity of (one of) the standards mentioned above as communicated in the Official Journal of the European Union.

(13) # SCHEDULE

(14) **to EC-Type Examination Certificate KEMA 03ATEX1535 X** Issue No. **4**

(15) **Description**

The 2-Wire Programmable Transmitter, Type 5333B, Type 5333C and Type 5333D, suitable for mounting in an enclosure form B according to DIN 43729, is used to convert the temperature measurement signal of a resistive temperature sensor into a 4 ... 20 mA current signal with digital communication.

The relation between temperature class and temperature class is as follows:
T4 (Ta -40 to +85 °C),
T5 (Ta -40 to +60 °C),
T6 (Ta -40 to +60 °C).

For explosive dust atmospheres, the surface temperature of the outer enclosure is 20 K above the ambient temperature.

Electrical data

Supply / output circuit (terminals 1 and 2):
in type of protection intrinsic safety Ex ia IIC, Ex ia IIIC and Ex ia I, only for connection to a certified intrinsically safe circuit, with the following maximum values:
U_i = 30 V; I_i = 120 mA; P_i = 0,84 W; C_i = 1 nF; L_i = 10 µH.

Sensor circuit (terminals 3, 4 and 6):
in type of protection intrinsic safety Ex ia IIC, Ex ia IIIC and Ex ia I, with the following maximum values:
U_o = 30 V; I_o = 8 mA; P_o = 60 mW; C_o = 66 nF; L_o = 35 mH.

Installation instructions

The instructions provided with the equipment shall be followed in detail to assure safe operation.

(16) **Test Report**

No. 214371900/2.

(17) **Special conditions for safe use**

If the transmitter is installed in an explosive atmosphere requiring the use of equipment of category 1 G, 1 M or 2 M, and if the enclosure is made of aluminum, if must be installed such, that ignition sources due to impact and friction sparks are excluded.

(18) **Essential Health and Safety Requirements**

Covered by the standards listed at (9).

(19) **Test documentation**

As listed in Test Report No. 214371900/2.

PERFORMANCE MADE SMARTER

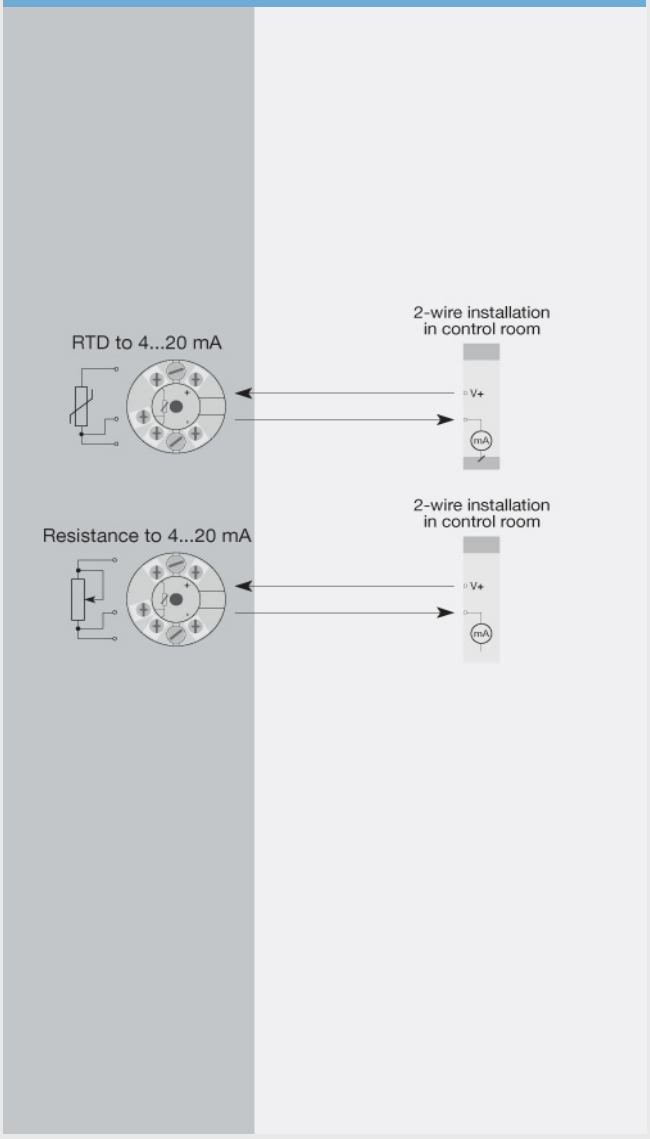
2-wire programmable transmitter

5333D

- RTD or Ohm input
- High measurement accuracy
- 3-wire connection
- Programmable sensor error value
- For DIN form B sensor head mounting

Application

- Linearized temperature measurement with Pt100...Pt1000 or Ni100...Ni1000 sensor.
- Conversion of linear resistance variation to a standard analog current signal, for instance from valves or Ohmic level sensors.



Technical characteristics

- Within a few seconds the user can program PR5333D to measure temperatures within all RTD ranges defined by the norms.
- The RTD and resistance inputs have cable compensation for 3-wire connection.

Mounting / installation

- For DIN form B sensor head mounting.

Connections

Order:

Type
5333D

Environmental Conditions

Specifications range	-40°C to +85°C
Calibration temperature	20...28°C
Relative humidity	< 95% RH (non-cond.)
Protection degree (encl./terminal)	IP68 / IP00

Mechanical specifications

Dimensions	Ø 44 x 20.2 mm
Weight approx.	50 g
Wire size	1 x 1.5 mm^2 stranded wire
Screw terminal torque	0.4 Nm
Vibration	IEC 60068-2-6 : 2007
Vibration: 2...25 Hz	±1.6 mm
Vibration: 25...100 Hz	±4 g

Common specifications

Supply

Supply voltage	8.0...30 VDC

Response time

Response time (programmable)	0.33...60 s
Internal consumption	25 mW…0.8 W
Voltage drop	8.0 VDC
Warm-up time	5 min.
Programming	Loop Link
Signal / noise ratio	Min. 60 dB
Accuracy	Better than 0.1% of selected range
Signal dynamics, input	19 bit
Signal dynamics, output	16 bit
Effect of supply voltage change	< 0.005% of span / VDC
EMC immunity influence	< ±0.5% of span

Input specifications

Common input specifications

Max. offset	50% of selected max. value

RTD input

RTD type	Pt100, Ni100, lin. R
Cable resistance per wire (max.)	10 Ω
Sensor current	> 0.2 mA, < 0.4 mA
Effect of sensor cable resistance (3-wire)	< 0.002 Ω / Ω
Sensor error detection	Yes

Linear resistance input

Linear resistance min....max	0 Ω...10000 Ω

Output specifications

Current output

Signal range	4…20 mA
Min. signal range	16 mA
Load (@ current output)	≤ (Vsupply - 8) / 0.023 [Ω]
Load stability	≤0.01% of span / 100 Ω
Sensor error indication	Programmable 3.5…23 mA
NAMUR NE 43 Upscale/Downscale	23 mA / 3.5 mA

Common output specifications

Updating time	135 ms
*of span	= of the presently selected range

Observed authority requirements

EMC	2014/30/EU

Approvals

ATEX 2014/34/EU	KEMA 03ATEX1535 X

EU DECLARATION OF CONFORMITY

(5333DoC_106)

As manufacturer

PR electronics A/S, Lerbakken 10, DK-8410 Rønde

hereby declares that the following product:

Type: **5333**
Name: **2-wire programmable transmitter**
From serial no.: **211809511**

is in conformity with the following directives and standards:

The EMC Directive 2014/30/EU and later amendments:

EN 61326-1 : 2013

Immunity test requirements for equipment intended to be used in an industrial electromagnetic environment. For specification of the acceptable EMC performance level, refer to the electrical specifications for the device.

The ATEX Directive 2014/34/EU and later amendments:

EN IEC 60079-0 : 2018, EN 60079-7 : 2015 + A1 : 2018, EN 60079-11 : 2012 and EN 60079-15 : 2010
ATEX certificate: DEKRA 20ATEX0106 X (5333A)
ATEX certificate: DEKRA 20ATEX0105 X (5333D)

ATEX notified body (type approval)

DEKRA Certification B.V.
Meander 1051, 6825 MJ Arnhem
P.O. Box 5185, 6802 ED Arnhem
The Netherlands

The RoHS2 Directive 2011/65/EU and later amendments

04 - HANDLING OPERATING MAINTENANCE INSTRUCTIONS

Lifting Instruction

Project Information

Project Name	**C63 Offshore**
Project Number	A-23/24 140
Equipment Description	DEDR 500/36
Weight of Equipment	Approx. 1400 kg
Number of Lifting Eyes	4 (2 on each support)
Prepared By	Kasim Aytekin

Table of Contents

1. **General Safety Precautions**
2. **Equipment and Lifting Gear Requirements**
3. **Lifting Procedure**
   3.1 Pre-Lift Inspection
   3.2 Rigging the Equipment
   3.3 Lifting and Positioning
   3.4 Load Transport and Set Down
4. **Post-Lift Inspection**
5. **Emergency Procedures**

1. General Safety Precautions

- Ensure all personnel involved are trained and authorized for lifting operations.
- Use appropriate personal protective equipment (PPE) such as safety helmets, gloves, and steel-toe boots.
- Ensure the lifting equipment (crane, hoists, shackles, slings) is certified and has the capacity to handle the load.
- Inspect the equipment and lifting accessories before starting the operation.
- Confirm that the load is balanced, stable, and securely fastened.
- Establish clear and agreed-upon communication signals between the operator and spotters.

2. Equipment and Lifting Gear Requirements

- **Crane/Hoist**: Use a crane or hoist with sufficient lifting capacity, providing a safety margin above the total load to be lifted.
- **Lifting Shackles**: Ensure that shackles are appropriately rated for the load applied to each lifting point. Select shackles based on the specific load distribution.
- **Lifting Slings**: Use wire rope or synthetic slings rated for the total load, ensuring proper sling length to achieve a safe lifting angle.
- **Spreader Bar (optional)**: A spreader bar may be used to evenly distribute the load across multiple lifting points and prevent lateral forces on the lifting eyes.

---

3. Lifting Procedure

Step 1: Rigging the Equipment

- Attach lifting shackles to each lifting eye, ensuring all shackles are rated appropriately for the load.
- Secure the slings to the shackles without twisting or damaging them.
- If using a spreader bar, connect the slings to the spreader bar first to maintain safe lifting angles.
- Double-check all connections to ensure the load is evenly distributed across the lifting eyes.

Step 2: Lifting and Positioning

- Slowly lift the equipment a few centimeters off the ground to verify the load's balance and stability.
- Ensure that the load is evenly distributed across all lifting points before lifting further.
- Continue lifting gradually, avoiding sudden movements, and maintain control over the load at all times.
- Have a designated spotter guide the operator and monitor clearances throughout the lifting process.

Step 3: Load Transport and Set Down

- Keep the load close to the ground during transport to reduce risks of swinging or instability.
- Move the equipment to the designated location, ensuring personnel stay clear of the load.
- Lower the load gently and evenly to prevent tipping or damage to the equipment.
- Once in position, release tension from the slings and disconnect them from the lifting eyes.

4. Post-Lift Inspection

- After the lift, inspect all lifting eyes and supports for any damage or deformation.

5. Emergency Procedures

- In case of any issues during the lift (such as load instability or equipment malfunction), stop the lift immediately.
- Ensure all personnel are clear of the load.
- Lower the load to a safe position if possible and assess the situation before resuming the lift.

Site location	OFFSHORE NETHERLANDS
Project manager:	Christian Jaspers christian.jaspers@aquagas.se

HANDLING INSTRUCTIONS
Applicable for DEDR 500/36 Offshore version

This AQUAGAS Deoxo-Dryer is a skid-mounted process unit that operates under pressure.
It is delivered “ready-for-use”, pressure and function tested, pre-filled with catalyst and desiccant material at the manufacturer’s workshop.

Proper preservation, handling and transportation are essential for a correct trouble-free start-up and operation at the site.

The non-observance of these instructions may result in defaults occurring such as but not limited to:

- bending of piping resulting in leaking or even weld rupture
- damage to the insulation material and jacketing
- damage to instruments or electrical components
- corrosion
- degradation of reactive materials

Inappropriate preservation, transportation or handling may affect the manufacturer’s warranty.

In case of any incident occurring, please contact AQUAGAS immediately for advice.

Issued: 2024-01-30
Rev.0

1. Preservation and transportation

As a standard, AQUAGAS delivers its units FCA Workshop, Södertälje, Sweden.
This means that the loading onto the truck of the customer's forwarding agent is done by and under responsibility of AQUAGAS. Loading onto inappropriate means of transport will be rejected.

AQUAGAS Deoxo-Dryers are designed to be handled and transported in an **upright vertical position**.

For transport, the skid-mounted unit shall be installed on a wooden pallet – and fixed to it with 4 bolts (diameter 12 mm) using the existing anchoring bolts' holes in the frame. See picture 1.

Picture 1

For transport by truck, the palletised skid will be reinforced with a wooden frame and wrapped with a plastic film for protection against dust or moisture. See picture 2.

Picture 2

Moving of the unit for loading and unloading from the truck, and for installation inside a container if this is required, **shall be done preferably using a forklift truck and using the pallet** functions.
Please consider the warning labels on the packaging before handling.

Permanent exposure of the unit/pallet to water during transport or intermediate storage must be avoided as it will affect the mechanical quality of the box/pallet.

WARNING: If the unit has been delivered with Nitrogen filling (Option), the opening of flanges or connections must be avoided during transport and storage in order to avoid humidity ingression by ambient air. If flange connections with elastagraph gaskets (one-time use) have been opened, these gaskets must be replaced.

WARNING: Be aware of the high centre of gravity and slim width design of the skidded unit. Secure and stabilise with rope slings (steel cable must be avoided) if needed.

2. Handling at site for installation

Upon arrival at site, it is advisable to inspect the equipment for any damages that may have occurred during transport. Perforations of the plastic wrapping, damages to the wooden frame or box may indicate that equipment has been hit during the transport.
If any features are altered, please document with pictures and report.

When Nitrogen filling is included, please do not open the process flanges if a longer storage at site is expected. When opening the flange connections, please beware of nitrogen slight overpressure (0,1 bar) inside and of choking danger. Open in a ventilated place.

Once the wooden support pallet (and fixing bolts) have been removed, please use the four (4) dedicated forklift lugs on the skid frame. Always make sure that the forks are **engaging all four (4) lugs** before lifting and moving.

When access with a forklift truck is not possible and lifting is performed with a crane, exclusively use the four (4) lifting lugs on the top frame. Use rope slings attached to the bottom forklift lugs to avoid swinging during crane operation.

WARNING: When using slings for stabilizing the unit during handling, only connect to the base steel frame and do NOT connect the slings to the insulating jackets, piping, or any other components.

Once installed in its final position, secure the skid with the dedicated four (4) holes for anchoring bolts. In addition, the skid has two fixation points at the top back side for anchoring to the wall of the container – this will avoid risk of tipping over during handling of the container.

09 - CONTROL LOGIC INSTRUCTION FOR PROGRAMMING PLC

No.	Qty.	Modified from	Date	Intr.	Appr.

Please note: For more information regarding the alarms, and compulsory alams see DEDR alarm list.

For more information about the operation, see Operation and Maintenace manual.

FC64.1 Controlled by 4-20mA, 0-100% flow capacity input = 4-20 mA.

Sequence 1 Adsorption tower A & regenerating (heating) tower B.
Sequence 2 Adsorption tower A & regenerating (cooling) tower B.
Sequence 3 Adsorption tower B & regenerating (heating) tower A.
Sequence 4 Adsorption tower B & regenerating (cooling) tower A.

Please note: Wherever in the program the deoxo/dryer stopped it shall restart in the same sequence/position as it was stopped in unless otherwise is stated.

If an alarm + shutdown occur, PLC HMI reset button shall relase the alarm and the dryer shall restart the acutal sequence.

During stand-by, stop, safety critical stop etc. contol valves and contactors should be deactivated:

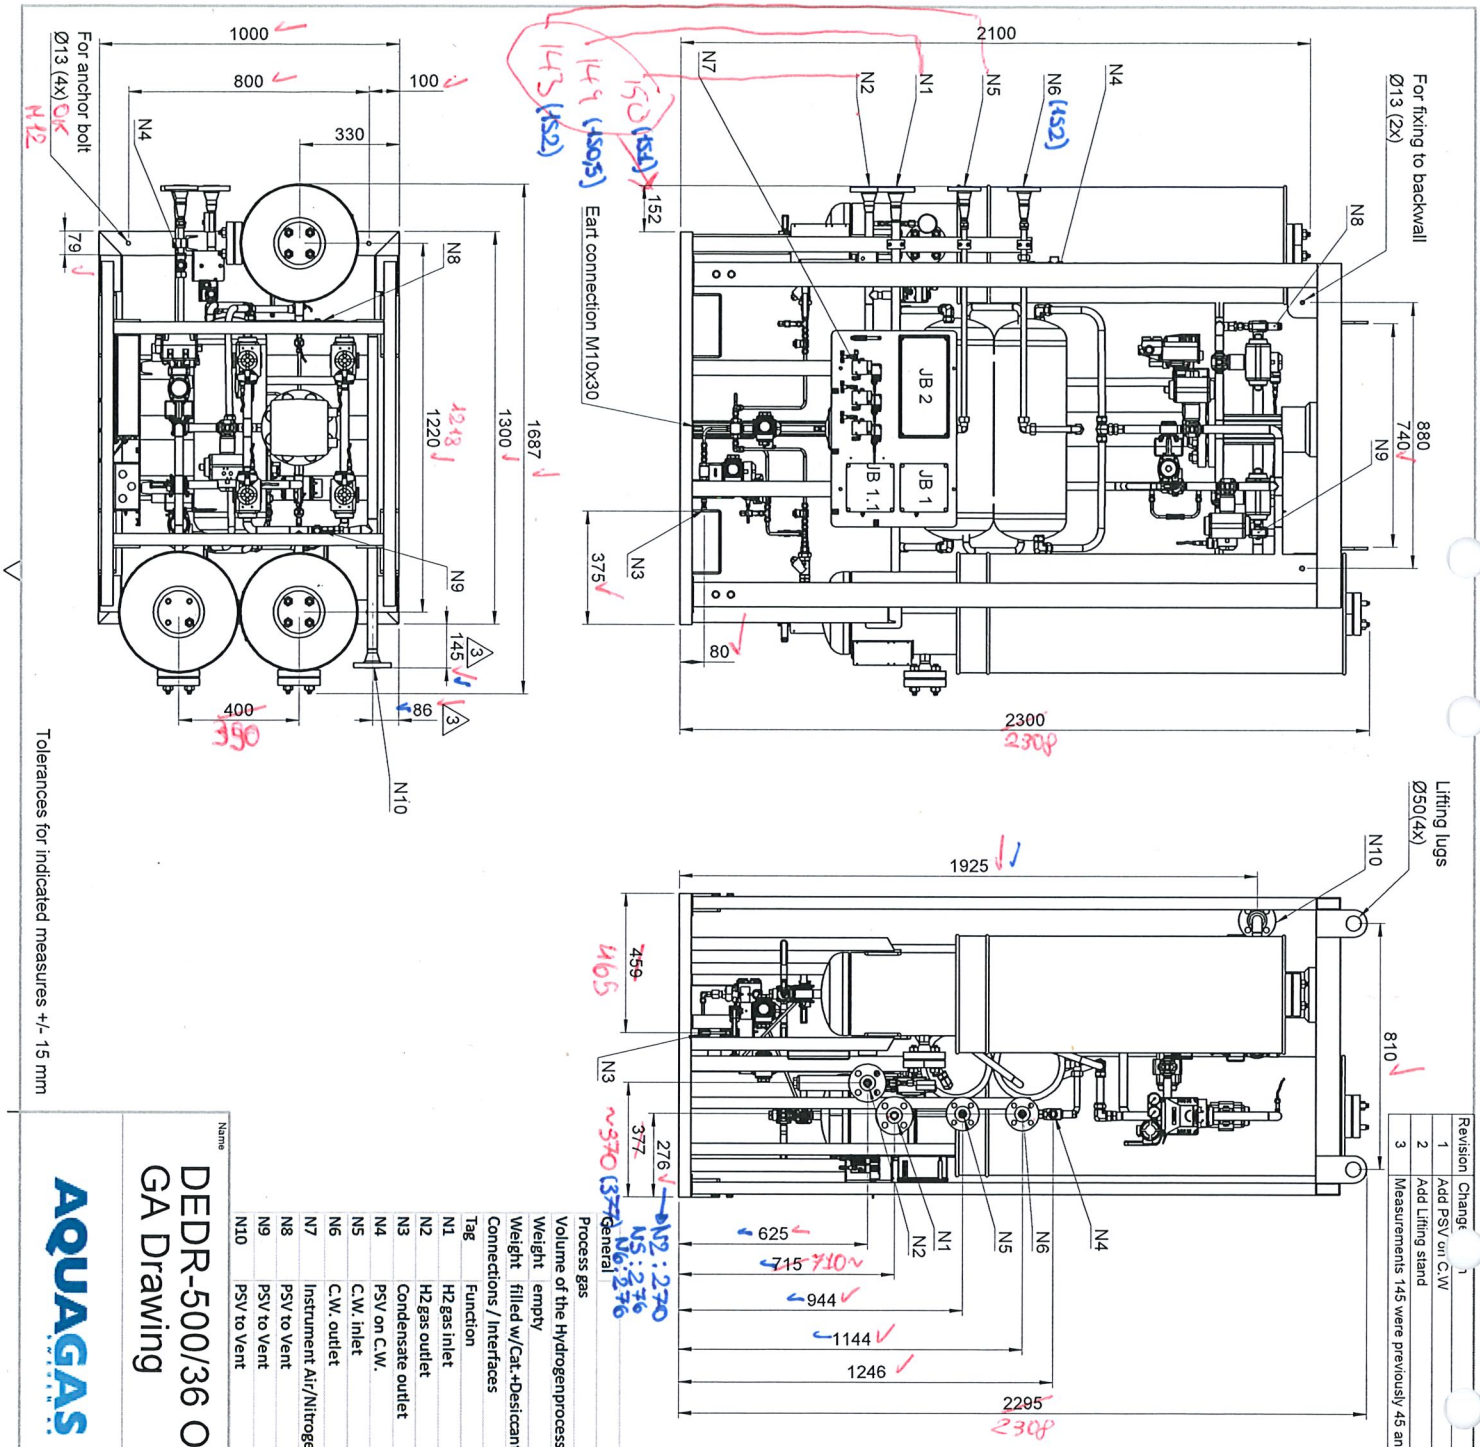
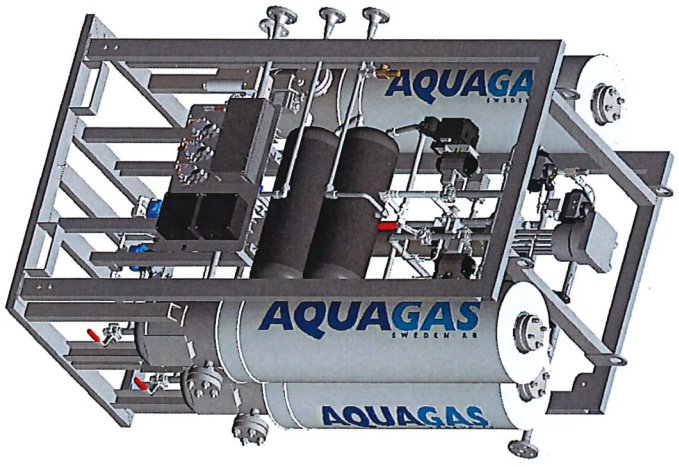
10 - FAT AND FUNCTIONAL TESTS

APPENDIX FAT DEDR 500/36 A-23/24 140 Rev.1



Punch list:



Cert. of pin bolts	Incl. in Final documentation
Plastic plugs for lifting structure	Corrected
Pictures of PSV's	Corrected, sent by email to Hassan Hammami
ATEX documentation of cable glands	Incl. in Final documentation
ATEX documentation of cables	Incl. in Final documentation
ATEX documentation of instrumentation	Incl. in Final documentation
Separation of blue, black, white cables in cable trays	Accepted as is.
Precaution sticker on back side	Corrected
DoC for coolers	Included in PED documentation
Vent line outlet flange	Accepted, built according to design pressure.
Painting documentation	Incl. in Final documentation
BOM PED	Incl. in Final documentation
BOM ATEX	Incl. in Final documentation
Spare cable glands	Available as spare parts
Touch up painting	Corrected
As built drawings	Incl. in Final documentation
Interface connections painted, not able to verify at FAT	Accepted. Already verified at Weld assembly inspection.

Note 1* An as built GA drawing will be created according to final measurements during FAT.

Note 2* Investigation of possibility to use cable sizing according to AQUAGAS recommendations. In other case, AQUAGAS to quote for rebuild of connection box.

This document is our property and shall not without our permission be altered, copied, used for manufacturing or communicated to any other person or company.

FACTORY ACCEPTANCE TEST

Inspected object	Deoxo dryer DEDR 500/36
Pressure vessel No.	A: GYP-2430132, B: GYP-2430133, DE: GYP-2430131
Customer Order No.	BC0006223
Aquagas order No.	A-23/24 140
Manufacturer	AQUAGAS Sweden AB
P&ID nr. (Appendix A)	20230440 rev. 3
GA drawing nr. (Appendix B)	21231800 rev. 3
Electrical drawing nr. (Appendix C)	20240040

Check points	Result	Remark / Setpoint
Build and dimensions		
With P&ID nr. acc. to above, check build and tags	√	Dryer must correspond to P&ID.
With dimensional drawing nr. acc. to above, check all dimensions. * Note 1	√	Dryer must correspond to dimensional drawing.
With Electrical drawing verify amount/size of cable glands and number of terminals installed. * Note 2	√	Dryer must correspond to electrical drawing.
All bottom drain points have plugs; Tower A, B, DE, heater pipe and condensate.	√	At delivery
Check all instruments for ATEX or IECEX approval according to spec.	√	PT, FC, HE, TS *
Electrical test		
Insulation test trace heater, HE61.1	∞ MΩ	Min 1 M Ω Max: ∞ M Ω
Insulation test trace heater, HE61.2	N/A	Min 1 M Ω Max: ∞ M Ω
Insulation test regeneration heater HE64.1	√	Min: 1 M Ω Max: ∞ M Ω ∞ MΩ
Resistance over trace heater on HE61.1	~~53,3 Ω~~	L1-0 16,5 Ω
Resistance over trace heater on HE61.2	N/A	L1-0
Resistance over regeneration heater HE64.1	53,3 Ω	L1-L2, L1-L3, L2-L3 or L-0
Continuity over temperature switch, TS-64.2	√	On/Off at 20°C, test with continuity (pin 3 & 4).
Set point for TS-64.2 is according to spec.	√	Set value 280°C
Maximum temp. of reg heater	√	Maximum T1: 440°C
Note down type of heater	√	DHG81B03GG-6-T1, 6 kW
Continuity over temperature switch, TS-64.3	√	Test continuity (pin "Common" & "NC"). Should give signal
Set point for TS-64.3 is according to spec.	√	Set value 200°C
Continuity over temperature switch, TS-64.4	√	Test continuity (pin "Common" & "NC"). Should give signal
Set point for TS-64.4 is according to spec.	√	Set value 60°C

Grounding cables attached on all solenoid valves, ~~level switch~~, ~~level sensor~~, heater, ~~dew point sensor~~ and positioner	V	Ground cable present on all EX-d/e devices.
All Ex-i cables have blue markings	V	Check both ends.
Functional test		**Use reference list where applicable**
Instruments wired through zenerbarriers should have LF option on.	N/A	Check DIP switch under cover of zenerbarrier. Typically model 9170. Only wired channels should be on.
Solenoid valves acc. to electrical drawing.	V	On/off electrical with test instrument. Check corresponding valve movement.
Function of all pneumatic valves, check P&ID for reference	V	Checked open/close with pilot air. Valve axle location should correspond to actuator indicator.
Function of all manually operated valves, check P&ID for reference	V	Checked open/close. Manually, no resistance should be felt.
Function of all electrical limit switches, check P&ID for reference	V	On/off electrical with test instrument. Signal acc. to P&ID
Function of temperature control by positioner	V	4mA=Closed 12mA=25% Open 20mA=80% Open Use loop calibrator
Function of all temperature sensors PT100, check P&ID for reference	5,20-5,23mA @23°C	Programmed at supplier 0-300°C. Max deviation between all readings is 0,7 mA (differentiate between low mount sensors and high mount sensors). Note down min/max mA or Ω @ RT Use loop calibrator Or Use test equipment for PLC node, note down temperatures. +
Function of temperature sensors PT100 under insulation of DE vessel	V	Connect power (max 2300W to the trace heating cable acc. To electrical drawing. Temperature of sensor attached to trace heating cable should rise followed by sensor attached on vessel. Note down according to previous test. +
Position of temperature sensors must correspond to P&ID	V	Use heat gun or body heat to confirm that the sensors are installed in the correct location. Use P&ID and electrical drawing as reference. +
Function of pressure transmitter PT-64.1	12,9 V @ 31 Bar	Check signal at pressure. Analog 4-20mA. Use loop calibrator. Or Use test equipment for PLC node, note down pressure and signal value

Check if pressure transmitter has appropriate approval, CE/ATEX or UL/IECEx marking	√	Check specification of dryer and should be CE/ATEX for Europe ~~and UL/IECEx for US and ASME vessel countries.~~
Function of Dew point transmitter MT-64.1	N/A	Check signal at pressure. Analog 4-20mA. Use loop calibrator. Or Use test equipment for PLC node, note down dew point temperature.
Note down type of dew point sensor	N/A	
Note down type of pressure transmitter	√	2088 G3S22B2K1
Condensate System test		
Test condensate trap valves 64-V13 (controlled by 64-V2), 64-31 (controlled by 64-V17). Open valve: 64-T2 (controlled by 64-V12).	√	Open/close with air, Change tower with 3-way valve and repeat. Change to tower DE with the other 3-way valve and repeat. Isolate units not in use in all steps. + 5
Level Switch LS-64-1-1-2	N/A	Check signal with and without water. Digital 1/0.
Level sensor LIT-64-1-1-1	N/A	Check signal with and without water. Analog 4-20mA.
Condensate valves ~~64-V10~~, ~~64-V11~~ in open position. 61-V2 V15 V16	√	Confirm open position. +
Test condensate traps 64-T2, 64-T3	N/A	Open with water/close when empty.
Safety valve(s)		
Check correct opening pressure PSV 64.1, PSV 64.2	√	36 bar, check opening pressure marking on valve.
Check correct opening pressure PSV 64.3	√	6 bar, check opening pressure marking on valve.
Leak test		
Pressurised and isolated unit to atmosphere and detect leaks at nozzles, fittings, and valves.	Start 20 End 20 √	20 bar (g) for 1 hour with air. Detect leaks with leak detecting spray. Note: If applicable, open condensate valve and block outlet. +
Pressurised and isolated unit to atmosphere and detect leaks at nozzles, fittings, and valves.	Start 31 End 31 √	31.1 Gas mix with ~20% helium + ~80% compressed air/nitrogen for 1 hour. Detect leaks with Helium leak detector. Start by filling helium. Start depressurized. +
Pressurised and isolated HEX water side to atmosphere and detect leaks at nozzles, fittings, and valves.	Start 5 End 5 √	5 bar (g) for 1 hour with air. Detect leaks with leak detecting spray. +

Check all fittings with wrench and gap-inspection tool	✓	When approved, draw a line with dedicated green marker to indicate position of the nut on the coupling.	+
Visual			
Ground label attached on grounding point(s) on skid	✓		
Logo, tower designation stickers, warning stickers (all towers and heater) and trace heating warning label attached on system	✓	A, B, DE, Precaution Heat, Trace Heating cable warning.	+
Label attached on instrument air line connections	✓	Label with solenoid valve that should be connected to the port.	
Label attached on 3-way valves which tower is in condensate drain operation attached on system.	✓	A, B, DE, DR	
Labels for all nozzles according to dim. drawing attached on piping.	✓	Media, Flow direction arrow and designator (N1, N2, N3…)	
Photos taken of all components	✓	Machine type plate, pressure vessel plates and all 4 sides.	+
Machine and vessel nameplates attached. Vessel nameplates should be stamped.	✓	All pressure vessels and machine type plate attached.	
Filling			
Tower A&B filled with drying agent acc. to specification	✓	60 kg/each	
Tower DE filled with deoxo agent acc. to specification	✓	100 kg DSL2 Fill Before delivery	+
Condensate 3-way valves have seals	N/A	Check that 8mm connections have bonded seals (tredo) installed.	
Cleaning inspections			
Visual inspection of vessels, piping and nozzles. Internal and external	✓		
Cleaning of all surfaces with air	✓		
Other			
Bypass valve pre-set	✓	Set to approx. 3 turns, ~50%	
Thermowell coupling tightened for all temperature transmitters	✓	Approx. 1/8 turn, check by pulling on sensor. Make sure transmitter is seated before tightening.	+
Cover for position sensor puck screw attached.	✓	Mount after all tests have passed.	
Confirm that T-filters have the correct insert	✓	Mesh screen 0,5 mm, not 50µm filter. See marking on filter housing	
Note down all serial numbers in below list	✓		+

Temporary checks 2024		
Check Habonim actuators for IIC marking	✓	If IIB then take photo of serial number and send to Project manager with project nr.
Check if Hy-lok valves have lock washer installed on axlenut	✓	

Serial number list

Equipment tag	Serial number	Description
61	GYP-2430131	Deoxo vessel
64A	GYP-2430132	Dryer vessel A
64B	GYP-2430133	Dryer vessel B
Vessel HE 64.1	GYP-2430134	Heater vessel
64-T1A	N/A	HEX Cooler
64-T1B	N/A	HEX Cooler
HE 61.1	24-182 2643 01	Trace heater DE vessel
HE 61.2	N/A	Trace heater DE vessel
HE 61.3	N/A	Trace heater condens.
HE 64.1	24-0450-001	Regeneration heater
TS 64.3	WN10261.2/ 001	Temp. switch 200°C
TS 64.4	WN10261.1/ 001	Temp. switch 60°C
PT 64.1	23SHPJ0219217	Pressure transmitter
FC 64.1	23092296	Flow Control
66	68305	Particle filter
PSV 64.1	1001206460 ✓	Safety valve on H2
PSV 64.2	1001206459 ✓	Safety valve on H2
PSV 64.3	1001218536 ✓	Safety valve on CW

Reference list for instrumentation values

Instrument	Analogue mA	Resistance Ω	Physical value
TT (min/max @ RT*)	5,00-5,17	107-109	RT is usually around 19-22 °C
PT (min/max @ pressure)	11,54-11.97	N/A	26-27,5 bar (g)
MT (min/max @ pressure/flow)	13,33-17,33	N/A	0 to -30 °C dew point
HX/HE (min/max @ RT) 4,5kW	N/A	11,1-11,7	*RT is usually around 19-22 °C
HX/HE (min/max @ RT) 2,0kW	N/A	26,0-26,6	*RT is usually around 19-22 °C

11 - CE-MARKING WITH CERTIFICATE OF CONFORMITY

Issued: 2024-10-01
Rev: 0

Declaration of conformity (CE)

AQUAGAS Sweden AB, declare, the product:
Hydrogen deoxo dryer type DEDR 500/36 serial no.: A-23/24 140

Unit drawing no. 21231800 Rev.4 consisting of the following pressure vessels:

Pressure vessel	Vessel Serial No.	Category / Module
DE Vessel	GYP-2430131	IV / G
DR Vessel A and B	GYP-2430132, GYP-2430133	IV / G
Heater Pipe	GYP-2430134	III / G

There is an EC module G design examination for the pressure vessels above. For the other pressure containing devices there is a monitoring agreement for inspection in accordance with directive 2014/68/EU, module A2.

The examination and monitoring are performed by TÜV Thüringen e.V. NoBo 0090. and Kiwa Sweden AB NoBo 0409. The internal piping and coolers are according to category SEP. The design and manufacturing follow above references, although they do not bear the CE mark as the PED does not apply.

Bought-in products (see separate declaration): Electrical heaters, Valves and instruments.
All parts are CE-marked and installed on a skid. As no control system is in scope of the delivery, manufacturer cannot categorize the unit as a PED assembly. This is in responsibility by buyer or user.

The product which this declaration is referring to is in compliance with the essential Protection requirements of the directives and harmonized standards:

2014/34/EU ATEX Directive (ATEX)
EN 60079-0:2012+A11:2013
EN 60079-1-7-11-14-18

SniffIT X1® – Product Introduction

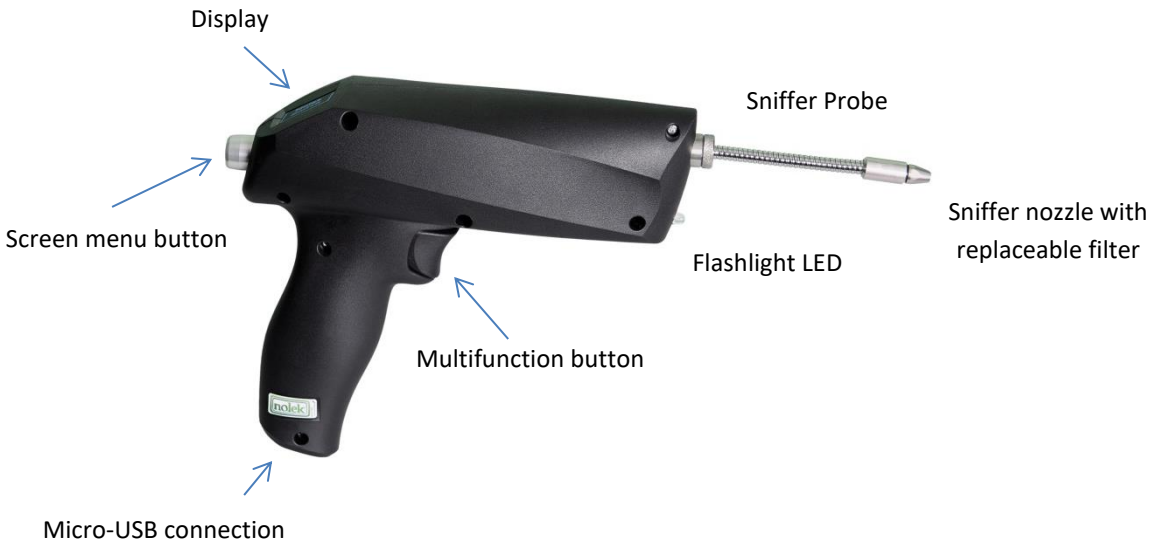
SniffIT X1® is fully digitalized with a screen that shows both quantitative numeric measurement values as well as graphical leak indications.

SniffIT X1® utilizes temperature, pressure, and humidity sensors to ensure accurate measurements and a high level of sensitivity.

The instrument can log and store large amounts of measurement data. By attaching the sniffer to a computer via USB, data can easily be transferred. Software upgrades are available through Nolek's website and are easy to install by connecting the SniffIT X1® to the computer.

Warning! Do not use the sniffer to sniff in liquid. It can destroy the internal sensor and will affect the warranty.

Technical Data



Technical Data - SniffIT X1®	
Battery capacity	8 hours
Charging time	4 hours
Dimension H*B*D	149x238x55 mm
Weight	320 gram
Detectable gases	Helium
Detect leaks greater than	$1{,}00\times10^{-4}$ mbarl/s
Accuracy	± 20% of reading or min ± $3{,}00\times10^{-4}$ mbarl/s
Available units	mbarl/s
Response time	<0.5 seconds
Recovery time	<1 seconds
Operating temperature	10-40°C
Storage temperature	-10°C to 60°C
Humidity	85% RH NC
Input voltage	5 V(dc)
Input current	500 mA max
Signal presentation	Numeric and bar graph, OLED Display
Alarm level	Yes
Audio and vibration alarm	Yes
Logging possibilities	Yes
Auto zero	Yes
Probe lengths	50mm and 350mm
Wrist strap	Yes
USB charger	Yes
Two extra filter	Yes
Language	English, Swedish
Package	weather protected case included
Calibration certificate	Yes
Certificates	CE, FCC
Warranty	1-year

Operate the SniffIT X1®

SniffIT X1® has six main menus. Five main menus are available for the daily use: "Shut down", "Measure", "Settings", "Info" and "Language". To enter the menu "Settings", a password is required.

The sixth menu, "Service", is protected by a password and is for Nolek service staff only.

SniffIT X1®- overview

Screen menu button

Press the screen menu button and hold to turn the SniffIT X1® on. In the menu "Shut down", press the screen menu button and hold for 9 seconds to turn the SniffIT X1® off.

To switch between the menus: turn the Screen menu button to choose menu and press on the button to enter the menu. Press and hold the button to leave the menu.

Note! If the SniffIT X1® should need a restart, this can be performed by pressing the Screen menu button and hold for more than 9 seconds.

Display

The display is an OLED screen and presents the result of the leak detection as a graph or as numeric values.

Multifunction button

Performs three different functions during measurement:

- Press the multifunction button quick to zero the measurement and perform background compensation. Release the button after zeroing to normal operation.
- Double click on the multifunction button to stop logging at the current location and start logging at the next measuring place.
  Note! For this function to work "Graph" or "Numeric" must be chosen in the "Measure log" menu and log values must be specified in the "Settings" menu.

- Press and hold the multifunction button to activate or deactivate the LED headlight.
  Note! For this function to work, "LED" mode must be set to "Toggle" in "Settings" menu.

Micro-USB Connection

Charging - Plug in any standard USB charger to charge the instrument.

Log - Connect the SniffIT X1® to a computer between measurements and export the compiled measurement data. The data is presented in txt-format but is also Excel compatible.

Note! Make sure that the "log" functions are deactivated when the SniffIT X1® is connected to the computer.

The Menus

Table 1 below shows the menus for the SniffIT X1®:

Shut down	Measure	Settings	Service	Info	Language
	Measure	LED		System data	English
	Measure log	RTC		System data	Swedish
		USB Mode		Alarms	
		Auto off time			
		HLrange			
		Calib			
		Leak unit			
		Gas type			
		Log			
		Password			
		Vibrate			
		Sound			
		RejValue			
		Auto Zero			
		Config			

Note! For more accurate results it is recommended to rest the SniffIT X1® in measuring mode for approximately 10 minutes in the test environment before starting the testing. This way the sniffer can adapt to the ambient conditions.

Menu: Shut down

Switch on the SniffIT X1® by pressing and holding the Screen menu button until the Nolek logo shows up. In the menu "Shut down", press the Screen menu button and hold for 9 seconds to turn the SniffIT X1® off.

Menu: Measure

Measure

This menu is the one to use for performing the leak detection. The result of the leak detection can be presented either as a graph or as a numeric value for SniffIT X1®.

To perform leak detection: Start the SniffIT X1® and let it adapt to the room's ambient conditions for 10 minutes before sniffing. Choose the menu "Graphic" or "Numeric" mode in "Measure" menu. Hold the sniffer nozzle away from the test object and press the multifunction button shortly to perform background compensation ("zero"). Then move the nozzle to the test object. The left of the display should now show a low green bar graph or a value with a "<" symbol in front.

Sweep the SniffIT X1® nozzle along the object. In case of a leakage the display will show an increasing bar graph colored yellow and red or a number larger than the number displayed after the "<" symbol. It is also possible to get an audible and/or vibration for indicating a leak rate above a pre-set alarm limit as well. To enable these functions, go to submenus "Sound" and "Vibration" in "Settings". The leak rate value set in "Settings/RejValue" acts as a trigger to the alarm indicators. See more in chapter RejValue.

The left sample shows the SniffIT X1 ® display in numeric **L**ow sensitivity mode. The actual leak rate reading shown is less than $1{,}0\times10^{-4}$ mbarl/s. The sample image on the right shows the SniffIT X1® display in graphic **H**igh sensitivity measurement mode and it is showing a small leakage close to the lower measurement range limit.

If there is a decrease or increase in background gas concentration, this will be shown on the graphical display as a decrease or increase of signal even though the sniffer isn't held against the test object. Press the multifunction button to zero the instrument. Now only the green field will be shown on the display as the background is compensated. On the numerical display, the result of zeroing the instrument is shown as the lowest number of leak rate (= the highest sensitivity).

The H or L in the header of the display tells whether the measuring is performed in the high or low sensitivity range. Press the screen menu button quickly to change from H to L range and vice versa. In the header the battery status is shown as well.

Measure Log

SniffIT X1® Digital Pro has a log function (Graphic and/or Numeric log) which stores the measuring data. The stored data can be collected from the USB memory by a connection between the SniffIT X1's Micro USB connection and a computer. In the "Settings" submenu "Log", the conditions such as number of measuring points, filename and maximum time for measurement are specified.

When in the menu Graphic or Numeric log, a number will be shown in the head of the display. This number represents the number of the actual measuring point. The specified name for the current measurement is shown on the screen until the measurement begins with a double click on the multifunction button. The measurement continues for as long time as specified in the "Settings" menu. It is possible to cancel the measurement and start the next earlier by double clicking on the multifunction button.

The data from the USB is presented in txt-format. In the document, the following will be stated in the following order (without titles):

Filename – Type – Time – Value – Reject Value– Rejected

"Filename", "Type" and "Time" is described under the heading "Menu: Settings" in this manual.
"Value" is the leak value, shown in the chosen unit.
"Reject value" is the alarm limit, stated in the Settings submenu "Reject Value".
"Rejected" shows the result of the measurement. 0 means an approved object, while 1 means that the rejected value is reached and that the object is leaking.

There will be one file created for each filename. If a new filename is stated, a new file will be created. If an old stored name is repeated, the old file will be resumed. In each file there will be a new row added for each measurement.

Menu: Settings

The menu "Settings" is only available with a password. The default menu access password is "000". The submenus here will be introduced individually.

LED

If the leak detection is going to be conducted in narrow and dark areas, the LED-light can be switched on by choosing "5 minutes" in the menu "LED". The lamp will then be on for 5 minutes. To switch the light off, choose "OFF" in the LED-menu.

Another way to turn the LED-light on/off is to press the multifunction button and hold until the light is on/off. This mode can be set by selecting "Toggle" in "LED" menu. The light will be on until the user presses and holds on the multifunction button again.

RTC

RTC stands for "Real-Time Clock". This is for adjusting the time and date settings.

USB Mode

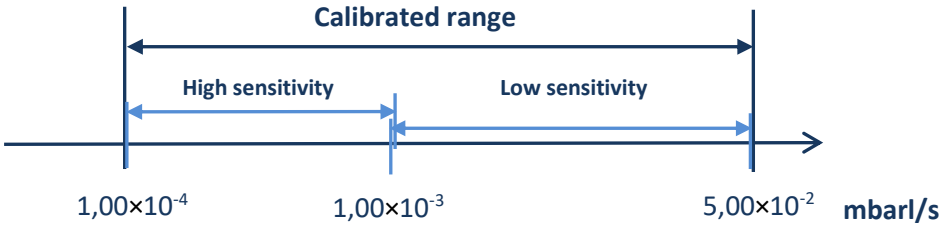
"USB Disk" setting is selected by default. In this mode the SniffIT X1® acts as a mass storage device when connected to a computer. This way the user manual is accessible as it were stored on an internal USB memory.

"USB VCP" setting is an unavailable feature.

Auto off time

Using the integrated accelerometer after the set time (minutes) the SniffIT X1® will shut itself down to save battery. Setting this value to "0" disables the function.

HLrange



The SniffIT X1® unit has two different sensitivity ranges. One is called the **H**igh sensitivity range, suitable to detect low leak rates, the other is the **L**ow sensitivity range, suitable to detect high leak rates.

Basic operation of the unit is as follows: The unit is turned on. It is recommended to wait 10 minutes before starting the measurements so the unit can adapt to the ambient conditions. Go to Measurement mode and select **H**igh sensitivity. Navigate the sniffer probe close to the tested object and move it along the objects surface. If a leakage is detected, the visible information is displayed on the bar graph and a Leak rate/time graph. If the leak rate is higher than the upper limit of the high sensitivity range then the edge of the display turns blinking red, audio and vibrating feedback alarms turn on (if enabled). At this event the operator should switch to the low sensitivity mode to be able to pinpoint the leak location precisely.

The high and low sensitivity ranges are defined as windows over the complete measurement range of the unit. The detectable range spans from $1{,}0\times10^{-4}$ to $5{,}0\times10^{-2}$ mbarl/s. In the menu point "Settings/HLrange" the operator can define two windows over this range. High Min and High Max defines the bottom and top of the high sensitivity window respectively. Low Min and Low Max defines the bottom and top of the low sensitivity window respectively. The two windows cannot overlap, which means Low Min can never be a lower value than High Max.

1. Choose the submenu "HLrange".
2. Choose "High_Min". Enter the desired minimum value, for example $1{,}00\times10^{-4}$, by turning the Screen menu button until 1,00e-04 is shown on the display. Press and hold the Screen menu button to store value and leave the submenu.
   Choose "High_Max". Enter the desired maximum value, for example $5{,}00\times10^{-4}$, by turning the Screen menu button until 5.00e-04 is shown on the display. Press and hold the Screen menu button to store value and leave the submenu.

3. Choose "Low_Min". Enter the desired minimum value, for example $1{,}00\times10^{-3}$, by turning the Screen menu button until 1,00e-03 is shown on the display. Press and hold the Screen menu button to store value and leave the submenu.
   Choose "Low_Max". Enter the desired maximum value, for example $5{,}00\times10^{-3}$, by turning the Screen menu button until 5,00e-03 is shown on the display. Press and hold the Screen menu button to store value and leave the submenu.

1 - Settings range for HLrange

The factory default settings are as follows:

- Low Max: 5,00E-02 mbarl/s (1 000 000 u/M)
- Low Min: 1,01E-03 mbarl/s (20 000 u/M)
- High Max: 1,01E-03 mbarl/s (20 000 u/M)
- High Min: 1,00E-04 mbarl/s (0 u/M)

Calib
Unavailable function.

Leak unit
In the menu "Leak unit", the user chooses the desired unit. Supported units are:

- mbarl/s (millibar liters per second)

Gas type
Unavailable function.

Log
In this menu users can specify the conditions for storage of data from the measurements. Detailed description is available in section "Menu: Measure". There are four available options:

N:	Specify the chosen number of measuring points. 1-9 pcs.
Filename:	Name each of the measuring points, up to 9 detection places.
Time:	Specify the maximum time (1-180 seconds) for measurement at each measuring point. The chosen time limit is valid for all the measuring points. **Note!** When measuring, it is possible to terminate the ongoing measurement and go to the next measuring point by double clicking on the multifunction button.
Type:	Choose to record all measuring values or to record only the peak value.

Password
Define a new password for accessing the "Settings" menu. The password must be of 3 digits. The default menu access password is "000".

Vibrate
Enables (Vibrator On) or disables (Vibrator Off) vibrating alarm when the detected leak rate exceeds the pre-set rejection value of "RejValue" menu.

Sound
Enables ("Enable / Sound On") or disables ("Enable / Sound Off") audible alarm when the detected leak rate exceeds the pre-set rejection value of "RejValue" menu. The volume can be adjusted in percentage.

RejValue
The operator can set the alarm limit in this menu. If the detected leak rate exceeds the set value visible an audible and/or vibrating alarm (if enabled) is triggered.

Auto Zero
Auto Zero function is designed to perform the zeroing of the SniffIT X1® automatically during measuring. This function must only be enabled if the operator is aware of the nature of the leakages to be found.

The leak signal can be interpreted as an impulse. The impulse has a rising and a falling edge and rising time and falling time accordingly. Usually, the rising and falling time is defined as how much time passes between the amplitude of the impulse rises from 10% of the logical high level to 90% of the logical high level.

The Auto Zero function enables the instrument to activate the zeroing autonomously if the rising time and the falling time of the leak signals are short enough. If the detected leakage is low and the leakage generates a slow rise (long rising time) in the leak rate readings (low impulse amplitude) than it could be interpreted as a disturbance in the background value and Auto Zero could trigger zeroing and effectively suppress it. That is, Auto Zero hides the real leakage from the operator. Enabling Auto Zero is only recommended if the expected leakages are big enough to generate impulse-like leak rate signals. Auto Zero function is disabled by default as it could be a source of false positive test tests (no leakage detected due to signal suppression).

Config
All settings can be saved to the internal memory in a .txt file. This file can be transferred to the computer as a back-up and can be useful to restore all settings in the unlikely case of data loss or after a firmware upgrade.
To export the setting to the internal memory select "SD Store".
To load saved settings from the internal memory select "SD Load".

Menu: Service
This menu is for Nolek service personnel only.

Menu: Info

On the first page information is available about the SniffIT X1® 's current firmware version, serial number, pre-set date, and time. Battery charge is displayed in volts.

On the second page the tracer gas and the leak rate unit are displayed that was used to calibrate the unit in the factory.

Menu: Language

Available languages are:

- English
- Swedish

Software Update

Nolek will continuously release software updates. To update your SniffIT X1®, first select menu "Settings" – "Config" – "SD Store" to save current device settings.

Connect the SniffIT X1® to a computer via the micro-USB connection on the sniffer to the USB connection on the computer. Use the cable for the charger. After connecting the SniffIT X1® to the computer, the computer will automatically open, or you must open the SniffIT X1® device folder. Select subfolder "app" then "load".

To retrieve the new firmware, visit our support web site at:
http://www.nolek.com/sniffitupdate

Copy the downloaded firmware file in the "load" folder and delete old file. Use your operating system's "Safely remove mass storage device" function to disconnect SniffIT X1® from the computer.

Disconnect the USB cable and shut down your SniffIT X1®. Then, restart it while at the same time pressing the multifunction button. Select "update" on the menu screen of the SniffIT X1®. When the update procedure is completed press and hold the Screen menu button to return to the Update menu.

Shut down SniffIT X1®. After powering up the unit again the new firmware version will be loaded and the SniffIT X1® can now be used again.

Operator's Manual Update

Nolek will continuously release Operators Manual Updates. To update the SniffIT X1® with the latest manual, first connect the SniffIT X1® to a computer via the micro-USB connection on the sniffer to the USB connection on the computer. Use the cable for the charger.

After connecting your SniffIT X1® to the computer, the computer will automatically open, or you must open the SniffIT X1® device folder. In the folder first select "manual". Copy the downloaded manual file in the "manual" folder and delete the old one.

To retrieve the new user manual, visit our support web site at:
http://www.nolek.com/sniffitupdate

Table of version changes

Version	Updates	Date
220920	- "Table of changes" heading added. - Sensitivity ranges updated: ○ Low Min: 9,48E-04 mbarl/s (previously 1,0E-04) ○ High Max: 9,48E-04 mbarl/s (previously 1,0E-04) ○ High Min: 1,00E-04 mbarl/s (previously 1,0E-05) - "Measure" column in Table 1 updated. - Illustration of settings for HLrange updated. - Minor layout and formatting changes.	2022-09-20
201017	- Technical data: ○ Hydrogen removed as detectable gas. - Sensitivity ranges updated: ○ Low Min: 1,01E-03 mbarl/s (previously 9,48E-04) ○ High max: 1,01E-03 mbarl/s (previously 9,48E-04) - Gas type updated: ○ Text changed to "Unavailable function" (earlier "helium or hydrogen). - Minor layout and formatting changes.	2022-10-17

15 - RISK ANALYSIS & HAZOP

AQUAGAS SWEDEN AB

Deoxo and Dryer type: DEDR 500/36
Customer: ELOGEN
Project: A-23/24 140

HAZOP Cause & Effect
Issued: 2024-01-23
Rev: 0

HAZOP RISK CATEGORY MATRIX

LIKELYHOOD	CONSEQUENCE					RISK ASSEMENT
	No injury	First Aid	Medical Need	Permant Disability	Death	
Certain (A)	1A	2A	3A	4A	5A	1 LAYER OF PROTECTION
Likely (B)	1B	2B	3B	4B	5B	2 LAYERS OF PROTECTION
Possible (C)	1C	2C	3C	4C	5C	2 LAYERS OF PROTECTION + SIL CLASSIFICATION
Unlikey (D)	1D	2D	3D	4D	5D	RISK NOT ACCEPTABLE
Rare (E)	1E	2E	3E	4E	5E	

DEDR Tag. Element	Cause	Consequences	Preventive measurements / safeguards	Remark	HAZOP Risk category (without preventive measurements / safeguards)	Notes
DEVIATION: NO FLOW OR LOW FLOW (< 10% of nominal)						
Deoxo tower 61	No or low H2 inlet flow.	Temperature increase if trace heater HE 61.1 in operation. 571 °C = ignition temperature for hydrogen	Trace heater HE 61.1 temperature controlled by TT 60.1 and TT 60.2. Warning + Shutdown if TSA 60.1 HH or TSA 60.2 HH is reached.		3D	
Trace heater HE 61.1	No or low H2 inlet flow.	Temperature increase if trace heater HE 61.1 in operation. 571 °C = ignition temperature for hydrogen	Trace heater HE 61.1 temperature controlled by TT 60.2 . Warning + Shutdown if TSA 60.2 HH is reached.		3E	
Heater HE 64.1	No or low H2 flow during regeneration heating	Temperature increase if heater HE 64.1 in operation. 571 °C = ignition temperature for hydrogen	Heater HE 64.1 temperature controlled by TS(TC) 64.1 and TS 64.2. Warning + Shutdown at TSA 64.2 HH. Warning + Shutdown at TSA 64.3 HH.	Elmess heater 81 series are designed to operate at 0% flow.	3D	
Ejector 64-T4	No or low H2 inlet flow.	None			1E	Valve 64-V6 is normally open and controlled by 4-20 mA input
Heat exchanger 64-T1	No or low H2 inlet flow.	None			1D	
Dryer tower 64A	No or low H2 inlet flow.	None			1D	
Dryer tower 64B	No or low H2 inlet flow.	None			1D	
Condensate system	No or low H2 inlet flow.	None			1C	
Particle filter 66	No or low H2 inlet flow.	None			1C	
DEVIATION NO PNEUMATIC/INSTRUMENT AIR OR NITROGEN						
Deoxo tower 61	None	None	Dryer goes in to fail safe mode: Valve 64-V5 closed, 64-V6 open, 64-V7 closed and valve 64-V4.1-V4.4 stay in position.		1E	
Trace heater HE 61.1	None	None	Dryer goes in to fail safe mode: Valve 64-V5 close, 64-V6 open, 64-V7 close and valve 64-V4.1-V4.4 stay in position.		1E	
Heater HE 64.1	Regeneration (heating). Temperature increase.	Temperature increase if heater HE 64.1 in operation. 571 °C = ignition temperature for hydrogen	Heater HE 64.1 temperature controlled by TC 64.1 and TS 64.2. Warning + Shutdown TSA 64.2 HH	Elmess heater 81 series are designed to operate at 0% flow.	3D	Risk of temperature increase in heater.
Ejector 64-T4	None	None	Dryer goes in to fail safe mode: Valve 64-V5 close, 64-V6 open, 64-V7 close and valve 64-V4.1-V4.4 stay in position.		1E	
Heat exchanger 64-T1	None	None	Dryer goes into fail safe mode: Valve 64-V5 close, 64-V6 open, 64-V7 close and valve 64-V4.1-V4.4 stay in position.		1E	
Dryer tower 64A	None	None	Dryer goes into fail safe mode: Valve 64-V5 close, 64-V6 open, 64-V7 close and valve 64-V4.1-V4.4 stay in position.		3E	Risk of temperature increase in vessel.
Dryer tower 64B	None	None	Dryer goes into fail safe mode: Valve 64-V5 close, 64-V6 open, 64-V7 close and valve 64-V4.1-V4.4 stay in position.		3E	Risk of temperature increase in vessel.
Condensate system	None	None	Dryer goes into fail safe mode: Valve 64-V5 close, 64-V6 open, 64-V7 close and valve 64-V4.1-V4.4 stay in position.		1E	Water will be built up in deoxo/dryer towers. Is not considered as safety risk. But strongly recommended to be avoided.
Particle filter 66	None	None	Dryer goes into fail safe mode: Valve 64-V5 close, 64-V6 open, 64-V7 close and valve 64-V4.1-V4.4 stay in position.		1E	
DEVIATION NO C.W. FLOW						
Heater HE 64.1	During regeneration (heating).	Temperature increase if heater HE 64.1 in operation. 571 °C = ignition temperature for hydrogen	Heater HE 64.1 temperature controlled by TS(TC) 64.1 and TS 64.2. Warning + Shutdown at TSA 64.2 HH. Warning + Shutdown at TSA 64.3 HH. Warning + Shutdown TSA 64.6 HH (Tower 64A) / TSA 64.8 HH (Tower 64B).		3D	
Ejector 64-T4	None	None			1E	
Heat exchanger 64-T1	No C.W. flow	Reduced or no capacity.	TA/TSA 64.5 and TA/TSA 64.6 (Adsorption Tower 64A) or TA/TSA 64.7 and TA/TSA 64.8 (Adsorption Tower B)	High temperature will lead to warning + shutdown.	1E	
Dryer tower 64A	No C.W. flow	Temperature increase on inlet TT 64.5.	TA/TSA 64.5 and TA/TSA 64.6	High temperature will lead to warning + shutdown.	3E	High temperture is a risk but unlikely.
Dryer tower 64B	No C.W. flow	Temperature increase on inlet TT 64.7.	TA/TSA 64.7 and TA/TSA 64.8	High temperature will lead to warning + shutdown.	3E	High temperture is a risk but unlikely.
Condensate system	Increased condensate temperature	None	TA/TSA 64.5 (Tower 64A) AND TA/TSA 64.7 (Tower B)	High temperature will lead to warning + shutdown.	1E	
Particle filter 66	Increased gas temperature	Increased downstream temperature, >100°C Wear/damage of filter insert.	Warning + Shutdown TSA 64.4 HH when temperature >60°C.		1E	
DEVIATION MANUAL VALVES IN WRONG POSITION						
Deoxo tower 61	None	None			N/A	
Trace heater HE 61.1	None	None			N/A	
Heater HE 64.1	Regeneration (heating). Temperature increase. Valve 64-V14 not open = no flow	Temperature increase if heater HE 64.1 in operation. 571 °C = ignition temperature for hydrogen	Warning + Shutdown GSA 64.3 LL. Heater HE 64.1 temperature controlled by TS(TC) 64.1 and TS 64.2. Warning + Shutdown at TSA 64.2 HH. Warning + Shutdown at TSA 64.3 HH.	Elmess heater 81 series are designed to operate at 0% flow.	3D	
Ejector 64-T4	None	None			N/A	
Heat exchanger 64-T1	None	None			N/A	
Dryer tower 64A	None	None			N/A	

Dryer tower 64B	None	None			N/A	
Condensate system	None	None			N/A	Water will be built up in deoxo/dryer towers. Is not considered as safety risk. But strongly recommended to be avoided.
Particle filter 66	None	None			N/A	Wear/damage of internal materals is not considered as safety risk. But strongly recommended to be avoided.
Manual valve 61-V2 in closed position	Water build up in 61 Deoxidizer	Catalysts will get wet and loose it´s capacity to make oxygen react with hydrogen into water.			1E	
Manual valve 64-V15/16 in closed position	Water build up in 64 A/B Dryer	Desiccants will get wet and loose it´s capacity to adsorb moisture.	Dew point measurement (not included) will lead to Warning + shutdown		1E	Dew Point measuerement = Customer supply
DEVIATION HIGH FLOW						
Deoxo tower 61	Too high gas velocity upstream DEDR.	Lifting of catalysts in deoxo leads to wear/damage of catalysts.		Customer to control flowrate and minimum working pressure according to DEDR specification.	1C	Wear/damage of internal materals is not considered as safety risk. But a strongly recommended to be avoided.
Trace heater HE 61.1	Too high gas velocity upstream DEDR.	Reduced heating capacity, might lead to condensation in Deoxo tower 61.	Trace heater HE 61.1 temperature controlled by TT 60.2 . Warning + Shutdown if TSA 60.1 LL or TSA 60.2 LL.	Customer to control flowrate and minimum working pressure according to DEDR specification.	1C	
Heater HE 64.1	Too high gas velocity upstream DEDR.	Reduced heating temperature.	Reduced heating temperature will lead to Warning TA 64.6/8 and/or TA 64.5/7.	Customer to control flowrate and minimum working pressure according to DEDR specification.	1C	
Ejector 64-T4	Too high gas velocity upstream DEDR.	Pressure drop in system.		Customer to control flowrate and minimum working pressure according to DEDR specification.	1C	
Heat exchanger 64-T1	Too high gas velocity upstream DEDR.	Reduced cooling capacity in Heat exchanger 64-T1.		Customer to control flowrate and minimum working pressure according to DEDR specification.	1C	
Dryer tower 64A	Too high gas velocity upstream DEDR.	Lifting of desiccants in dryer leads to wear/damage of desiccants.		Customer to control flowrate and minimum working pressure according to DEDR specification.	1C	Wear/damage of internal materals is not considered as safety risk. But a strongly recommended to be avoided.
Dryer tower 64B	Too high gas velocity upstream DEDR.	Lifting of desiccants in dryer leads to wear/damage of desiccants.		Customer to control flowrate and minimum working pressure according to DEDR specification.	1C	Wear/damage of internal materals is not considered as safety risk. But a strongly recommended to be avoided.
Condensate system	Too high gas velocity upstream DEDR.	None		Customer to control flowrate and minimum working pressure according to DEDR specification.	1C	
Particle filter 66	Too high gas velocity upstream DEDR.	Wear/damage of filter insert.		Customer to control flowrate and minimum working pressure according to DEDR specification.	1C	Wear/damage of internal materals is not considered as safety risk. But a strongly recommended to be avoided.
DEVIATION REVERSE FLOW						
Deoxo tower 61	Back pressure flow	Dusting/particles of catalysts goes upstream system.		Customer to secure no reverse flow.	1E	Particles from DEDR can go into H2 source which might lead to severe damage of an electrolyzer.
Trace heater HE 61.1	Back pressure flow	None			3D	It´s unlikey that a back flow will lead to a temperature increase.
Heater HE 64.1	Regeneration (heating). Reverse flow.	Temperature increase if heater HE 64.1 in operation. 571 °C = ignition temperature for hydrogen	Heater HE 64.1 temperature controlled by TS(TC) 64.1 and TS 64.2. Warning + Shutdown at TSA 64.2 HH. Warning + Shutdown at TSA 64.3 HH.	Elmess heater 81 series are designed to operate at 0% flow.	3E	
Ejector 64-T4	None	None			1E	
Heat exchanger 64-T1	None	None			1E	
Dryer tower 64A	Back pressure flow	Temperature increase if heater HE 64.1 in operation. 571 °C = ignition temperature for hydrogen	Heater HE 64.1 temperature controlled by TS(TC) 64.1 and TS 64.2. Warning + Shutdown at TSA 64.2 HH. Warning + Shutdown at TSA 64.3 HH.	Elmess heater 81 series are designed to operate at 0% flow.	3E	
Dryer tower 64B	Back pressure flow	Temperature increase if heater HE 64.1 in operation. 571 °C = ignition temperature for hydrogen	Heater HE 64.1 temperature controlled by TS(TC) 64.1 and TS 64.2. Warning + Shutdown at TSA 64.2 HH. Warning + Shutdown at TSA 64.3 HH.	Elmess heater 81 series are designed to operate at 0% flow.	3E	
Condensate system	None	None			1E	
Particle filter 66	Back pressure flow	None			1E	
MISDIRECT FLOW						
Inceased outlet temperature due to leakage in valves 64-V4.1 or 64-V4.2	Temperature increase	Temperature increase on outlet	Warning + Shutdown at TSA 64.4 HH.	Calculations shows that mixing of gas will give maximum 80°C at worst case scenario.	1E	
DEVIATION LOW PRESSURE/ VACUUM						
Deoxo tower 61	Too high gas velocity through DEDR.	Lifting of catalysts in deoxo leads to wear/damage of catalysts.		Customer to control flowrate and minimum working pressure according to DEDR specification.	1C	Wear/damage of internal materals is not considered as safety risk. But a strongly recommended to be avoided.
Trace heater HE 61.1	Too high gas velocity through DEDR.	Reduced heating capacity, might lead to condensation in Deoxo tower 61.	Trace heater HE 61.1 / HE 61.2 temperature controlled by TT 60.1 and TT 60.2 / TT 60.3. Warning + Shutdown TSA 60.1 HH and TSA 60.2 HH.	Customer to control flowrate and minimum working pressure according to DEDR specification.	1C	
Heater HE 64.1	Only during regeneration (heating).	Reduced heating temperature.	Reduced heating temperature will lead to Warning TA 64.6/8 and/or TA 64.5/7.	Customer to control flowrate and minimum working pressure according to DEDR specification.	1C	
Ejector 64-T4	Too high gas velocity through DEDR.	Pressure drop in system.		Customer to control flowrate and minimum working pressure according to DEDR specification.	1C	

Heat exchanger 64-T1	Too high gas velocity through DEDR.	Reduced cooling capacity in Heat exchangers 64-T1.		Customer to control flowrate and minimum working pressure according to DEDR specification.	1C	
Dryer tower 64A	Too high gas velocity through DEDR.	Lifting of desiccants in dryer leads to wear/damage of desiccants.		Customer to control flowrate and minimum working pressure according to DEDR specification.	1C	
Dryer tower 64B	Too high gas velocity through DEDR.	Lifting of desiccants in dryer leads to wear/damage of desiccants.		Customer to control flowrate and minimum working pressure according to DEDR specification.	1C	
Condensate system	Too high gas velocity through DEDR.	None		Customer to control flowrate and minimum working pressure according to DEDR specification.	1C	
Particle filter 66	Too high gas velocity through DEDR.	Wear/damage of filter insert.		Customer to control flowrate and minimum working pressure according to DEDR specification.	1C	Wear/damage of internal materals is not considered as safety risk. But a strongly recommended to be avoided.
Vacuum	Risk for oxygen ingress due to leakage from atmosphere into the system	Increased oxygen concentrationin system can lead to potential internal explosion	Pressure vessels are calculated for vacuum -1 bar(g)	Customer to secure that vacuum cannot occur.	3C	

DEVIATION HIGH PRESSURE						
Deoxo tower 61	High pressure upstream DEDR	Wear/damage.	Pressure safety valves PSV 64.1 / PSV 64.2 are installed.	Customer to secure that upstream pressure don´t exceed design pressre.	3C	
Trace heater HE 61.1	None	None			1C	Not a pressurized part.
Heater HE 64.1	High pressure upstream DEDR	Wear/damage.	Pressure safety valves PSV 64.1 / PSV 64.2 are installed.	Customer to secure that upstream pressure don´t exceed design pressre.	3C	
Ejector 64-T4	High pressure upstream DEDR	Wear/damage.	Pressure safety valves PSV 64.1 / PSV 64.2 are installed.	Customer to secure that upstream pressure don´t exceed design pressre.	3C	
Heat exchanger 64-T1	High pressure upstream DEDR	Wear/damage.	Pressure safety valves PSV 64.1 / PSV 64.2 are installed.	Customer to secure that upstream pressure don´t exceed design pressre.	1C	Gas side Cooler has design pressure >100 bar
Heat exchanger 64-T1	High pressure cooling lines	Wear/damage. Hydrogen leakage into cooling water system.	Safet valve PSV 64.3 on the cooling water system.		1C	
Dryer tower 64A	High pressure upstream DEDR	Wear/damage.	Pressure safety valves PSV 64.1 / PSV 64.2 are installed.	Customer to secure that upstream pressure don´t exceed design pressre.	3C	
Dryer tower 64B	High pressure upstream DEDR	Wear/damage.	Pressure safety valves PSV 64.1 / PSV 64.2 are installed.	Customer to secure that upstream pressure don´t exceed design pressre.	3C	
Condensate system	High pressure upstream DEDR	Wear/damage.	Pressure safety valves PSV 64.1 / PSV 64.2 are installed.	Customer to secure that upstream pressure don´t exceed design pressre.	3C	
Particle filter 66	High pressure upstream DEDR	Wear/damage.	Pressure safety valves PSV 64.1 / PSV 64.2 are installed.	Customer to secure that upstream pressure don´t exceed design pressre.	3C	Wear/damage of internal materals is not considered as safety risk. But a strongly recommended to be avoided.

DEVIATION LOW GAS INLET TEMPERATURE						
Deoxo tower 61	None	Temperture goes below design temperature -20°C	Warning + Shutdown TSA 61.1 LL.	User to control inlet temperature according to specification.	1E	
Trace heater HE 61.1	None	None			N/A	
Heater HE 64.1	None	None			N/A	
Ejector 64-T4	None	None			N/A	
Heat exchanger 64-T1	None	None			N/A	
Dryer tower 64A	None	Temperture goes below design temperature -20°C	Warning + Shutdown TSA 64.5 LL.	User to control inlet temperature according to specification.	1E	
Dryer tower 64B	None	Temperture goes below design temperature -20°C	Warning + Shutdown TSA 64.7 LL.	User to control inlet temperature according to specification.	1E	
Condensate system	None	None			N/A	
Particle filter 66	None	None			N/A	

DEVIATION HIGH INLET TEMPERATURE						
Deoxo tower 61	Internal and outlet temperature increase	Temperature increase in Deoxo Tower 61.	Warning + Shutdown TSA 60.1 HH and TSA 61.1 HH.	User to control inlet temperature according to specification.	1E	
Trace heater HE 61.1	Temperature increase	Temperature increase of trace heater HE 61.1.	Trace heater HE 61.1 temperature controlled by TT 60.1 and TT 60.2 . Warning + Shutdown TSA 60.1 HH, TSA 60.2 HH and TSA 61.1 HH.	User to control inlet temperature according to specification.	3E	High inlet temperature will not affect the trace heating cable rapidly.
Heater HE 64.1	Regeneration (heating). Temperature increase.	Temperature increase if heater HE 64.1 in operation. 571 °C = ignition temperature for hydrogen	Heater HE 64.1 temperature controlled by TS(TC) 64.1 and TS 64.2. Warning + Shutdown at TSA 64.2 HH. Warning + Shutdown at TSA 64.3 HH. Warning + Shutdown TSA 64.6 HH (Tower 64A) / TSA 64.8 HH (Tower 64B).	User to control inlet temperature according to specification.	3D	
Ejector 64-T4	None	None			1E	
Heat exchanger 64-T1	Inlet temperature increase	Outlet temperature increase	Warning + Shutdown TSA 64.5 HH (Tower 64A) and/or TSA64.7 HH (Tower 64B).	User to control inlet temperature according to specification.	1E	
Pressure increase because of heating effect of gas	Temperarure increase	Pressure increase	Heater HE 64.1 temperature controlled by TS(TC) 64.1 and TS 64.2. Warning + Shutdown at TSA 64.2 HH. Warning + Shutdown at TSA 64.3 HH. Warning + Shutdown TSA 64.6 HH (Tower 64A) / TSA 64.8 HH (Tower 64B). Safety valves PSV 64.1 / PSV 64.2 installed.		3D	
Dryer tower 64A	Inlet temperature increase	Temperature increase on inlet TT 64.5.	Warning + Shutdown TSA 64.5 HH and TSA 64.6 HH.	User to control inlet temperature according to specification.	3E	

Dryer tower 64B	Inlet temperature increase	Temperature increase on inlet TT 64.7.	Warning + Shutdown TSA 64.7 HH and TSA 64.8 HH.	User to control inlet temperature according to specification.	3E	
Condensate system	Condensate temperature increase	None	Warning + Shutdown TSA 64.5 HH (Tower 64A) and TSA 64.7 HH (Tower 64B).	User to control inlet temperature according to specification.	1E	
Particle filter 66	Gas temperature increase	Increased downstream temperature, >100°C Wear/damage of filter insert.	Warning + Shutdown TSA 64.4 HH.	User to control inlet temperature according to specification.	1E	

DEVIATION HIGH O2 CONTENT						
Deoxo tower 61	Internal and outlet temperature increase	Temperature increase in Deoxo Tower 61.	TSA 60.1 and TSA 61.1.	User to control inlet O2 content according to specification (max 500 ppmv).	3E	0.1% O2 in H2 gives a temperature rise of 16°C
Trace heater HE 61.1	Temperature increase	Temperature increase of trace heater HE 61.1.	Trace heater HE 61.1 temperature controlled by TT 60.1 and TT 60.2 . Warning + Shutdown TSA 60.1 HH, TSA 60.2 HH and TSA 61.1 HH.	User to control inlet O2 content according to specification (max 500 ppmv).	3E	
Heater HE 64.1	Regeneration (heating). Temperature increase.	Temperature increase of heater HE 64.1. Gas temperature >440°C lead to possible ignition.	Heater HE 64.1 temperature controlled by TS(TC) 64.1 and TS 64.2. Warning + Shutdown at TSA 64.2 HH. Warning + Shutdown at TSA 64.3 HH. . Warning + Shutdown TSA 64.6 HH (Tower 64A) / TSA 64.8 HH (Tower 64B).	User to control inlet O2 content according to specification (max 500 ppmv).	3D	
Ejector 64-T4	None	None			1E	
Heat exchanger 64-T1	Gas inlet temperature increase	Outlet temperature increase	Warning + Shutdown TSA 64.5 HH or TSA64.7 HH.	User to control inlet O2 content according to specification (max 500 ppmv).	1E	
Dryer tower 64A	Inlet temperature increase	Temperature increase on inlet TT 64.5.	Warning + Shutdown TSA 64.5 HH and TSA 64.6 HH.	User to control inlet O2 content according to specification (max 500 ppmv).	3E	
Dryer tower 64B	Inlet temperature increase	Temperature increase on inlet TT 64.7.	Warning + Shutdown TSA 64.7 HH and TSA 64.8 HH.	User to control inlet O2 content according to specification (max 500 ppmv).	3E	
Condensate system	Condensate temperature increase	Condensate water starts to boil	Warning + Shutdown TSA 64.5 HH (Tower 64A) and TSA 64.7 HH (Tower 64B).	User to control inlet O2 content according to specification (max 500 ppmv).	1E	
Particle filter 66	Gas temperature increase	Increased downstream temperature, >100°C Wear/damage of filter insert.	Warning + Shutdown TSA 64.4 HH.	User to control inlet O2 content according to specification (max 500 ppmv).	1E	

GENERAL FINDINGS APPLICABLE TO ALL ELEMENTS						
No power supply	Power Loss	Dryer turns off	Dryer goes into fail safe mode: Valve 64-V5 close, 64-V6 open, 64-V7 close and valve 64-V4.1-V4.4 stay in position. Heaters turns off.	Always restart in the same sequence/position as before stop.	1B	Condensate circuit heat tracing ineffective: risk of freezing if negative ambient temperature..
Condensation valve failure	Condensation valve 64-T2 failure	Hydrogen is vented through the condensation line.	GSA 64-T2 closed. Dryer goes in to fail safe mode. ID 1 mm orrifice to reduce hydrogen flow. Warning+ shutdown PSA 64.1 HH.	Possible hydrogen in condensation line to be routed so that it´s vented to atmosphere by customer/user.	1B	
Clogged or failure in condensation system	Dirt/debris in the condensation water	Water in Tower 61, 64A and/or 64B	Warning+ shutdown TSA 64.5/7 LL. Warning+ shutdown PSA 64.1 LL.	If any part upstream PT 64.1 is clogged PT 64.1 will not reach sufficient pressure during condensation which will lead to Warning + shutdown PSA 64.1.	1B	Regeneration will not be sufficient which will result in Warning + shutdown. Outlet requirements (oxygen and moisture) will not be met and result in Warning + shutdown.
Instrument failure	Wire break or instrument failure	Warning+ shutdown	All instruments to have a Warning + shutdown if the instrument output is out of range (4-20 mA)		1B	
HE 61.1 or HE 64.1 contactor failure	Contactor stuck in on/active position	HE 61.1 and HE64.1 temperature increase. Gas temperature 571°C = equal to ignition temperature for hydrogen.	Electrical installation with 2 contactors in series and with Aux contacts.		3E	Compulsory to have protection for the contactors.
Blockage downstream DEDR.	Blockage/failure downstream	Pressure increase in DEDR	Pressure safety valve upstream DEDR. Safety valves PSV 64.1 / PSV 64.2 are installed.		3E	

Risk analysis for DEDR 500/36

1. Assumptions

The risk analysis concerns an AQUAGAS Hydrogen gas deoxo-DEDR, type DEDR 500/36.

The Manufacturer will supply the control logic for the functions of the DEDR.
The interfaces are the unit's junction boxes where the Customer connects the power supply and signal cables to and from the PLC. The Customer shall provide and program the PLC to be able to start/stop and operate the DEDR, considering all safety shut-down functions.
There should be a 2-way hard-wired emergency stop signal between DEDR's electrical enclosure and the Customer's main electrical enclosure.

The Customer will install the DEDR and interconnect it with the upstream and downstream equipment. The power supply is done by the Customer.

The ambient temperature may vary between +0°C and +40°C.
The equipment will be installed inside a building or container.

The unit is equipped with pressure safety valves on the process gas circuit as well as on the cooling water circuit. It is the Customer's scope and responsibility to connect the outlet of all the safety valves to an appropriate and safe drainage & venting line.

It is assumed that the Customer is aware of all risks related to handling and reactivity of hydrogen as well as dangers related to nitrogen (inertisation & instruments) and shall design and equip with peripheral equipment at the site location accordingly.

2. Risk mitigation of the DEDR and its function.

2.1 Design features

The DEDR is designed to purify and dry compressed Hydrogen gas through removal of the oxygen impurities by a catalytic reaction (max. 1% vol. O2) and subsequently remove the water content by adsorption over a desiccant material.

All process line components are made of carbon steel or stainless steel in conformity with the applicable codes & standards.

The unit is designed for continuous operation and consists of one Deoxo (DE) Tower and two Dryer (DR) towers.
The DE tower is filled with a catalyst, type DSL2 of ANCO, composed of alumina beads coated with palladium. The downstream DR towers will adsorb moisture from the gas, one in active mode while the other will be reactivated.
The DR towers are filled with desiccant material type Sorbead WS 2050 from BASF.
The MSDS of the above materials have been submitted.

Changeover of drying towers will take place automatically.
During operation, all vessels are under pressure.
The unit is designed for 20.000 cyclic loads.

The automatic valves are opened or closed by pneumatic actuators which are operated by solenoid valves controlled from the Customer's PLC.
Electric limit switches check the position (open or closed) of the concerned valves. Critical actuators are spring loaded in order to put them in fail-safe position in case of instrument air or power supply failure.

Condensate water is generated and drained through the automatic condensation system. It is secured with a pressure transmitter. Reaching of the setting point HH will lead to the immediate shutdown of the unit so as to mitigate a break-through of process gas into the condensate drainage. As a breakthrough of hydrogen could nevertheless happen in case of leakage /failure of the drain valve 64-T2, the Customer should design and equip his drainage system accordingly. The condensate line is equipped with a 1mm diameter orifice which shall limit the amount of hydrogen that could go into the drainage in case of 64-T2 failure.

Two temperature switches, in addition of the one integrated in the regeneration heater, are installed for protection against overheating.

The unit is equipped with three (3) pressure safety valves respectively installed on the gas process side (2 pieces – setting 36 bar(g)) and on the C.W. circuit (1 piece – setting pressure 6 bar(g)). The safe discharge of the water or gas in case of opening of this safety valve is the scope of the Customer.

There are no rotating parts in the design, and no risks associated with such items. This minimizes wear& tear and risks due to failure or disfunction.

The DEDR is equipped with the necessary instruments and safety features to deal with the risks related to its operation at normal conditions. The design is 1oo1.

2.2 Operation

Please refer to the unit's Operation and Maintenance Manual.

3. Identifying potential hazards for the DEDR.

- **Mechanical** risks related to the pressure vessels such as leakage, propagation of cracks, corrosion or fatigue have been eliminated by applying the European Directive on Pressure Equipment (PED, 2014/68/EU).

- **Zone classification**, the DEDR unit is installed indoors in Zone 2. ATEX certified components are used where applicable.

- **Site installation**
  A free area of approx. 1,5 meter and ambient natural air circulation are expected in front of the DEDR skid. The skid frame can be fixed by anchoring bolts to the floor as well as to the container wall. As Hydrogen is lighter than air, appropriate roof venting shall be installed by the Customer. Risks related to leakage of instrument nitrogen shall be considered by the Customer.

- **Hydrogen hazards**
  Hydrogen reacts with the oxygen in the air or can lead to embrittlement of certain metals/alloys. This may lead to fire/combustion or cracking under pressure. Appropriate metals/alloys have been used by AQUAGAS for manufacturing the DEDR unit. Customer or user shall apply proper purging procedures, like flushing with nitrogen when required during commissioning, operation and maintenance of the plant. Appropriate air circulation shall be possible to avoid choking risks during the usage of nitrogen.

Declaration

We hereby certify that all items supplied for the above purchase order meet all requirements of the applicable specifications of manufacture, the purchase order item descriptions, purchase specifications and purchase order requirements. We certify that all applicable heat treatments, chemical analysis, mechanical tests, non destructive examinations, welding procedures, etc., as required in the purchase order, were performed and that the results were in accordance with the requirements of the purchase order. We certify that all required analysis and tests were performed on final production parts, or on specimens which were representative in all respects, of the final production part. We certify that all the instruments used for all the mesurements are properly calibrated according to our internal procedure P07.

Items Description

Items (Q.ty): 10(100), 96(10), 24(20), 29(5), 92(5), 30(5), 52(10), 70(10), 63(10), 65(25), 85(5), 101(5), 20(10), 33(20), 58(15), 28(10), 81(100), 71(20), 35(20), 31(100),

Declaration

We hereby certify that all items supplied for the above purchase order meet all requirements of the applicable specifications of manufacture, the purchase order item descriptions, purchase specifications and purchase order requirements. We certify that all applicable heat treatments, chemical analysis, mechanical tests, non destructive examinations, welding procedures, etc., as required in the purchase order, were performed and that the results were in accordance with the requirements of the purchase order. We certify that all required analysis and tests were performed on final production parts, or on specimens which were representative in all respects, of the final production part. We certify that all the instruments used for all the mesurements are properly calibrated according to our internal procedure P07.

Other applicable Specifications :: NACE MR 0175-2021 / ISO 15156 - 2020 NACE MR 0103 - 2015 & MATERIAL CONFORMS TO W2/W9/W10 / NORSOK MDS S01 Rev.5-2021

Melting Process : Electrical induction furnace & Argon Oxygen decarburization(IRS) Concast

Heat Treatment : Solution Annealed at 1080°C and water Quenched

Dimensional Inspection : Conform with the specification (100% inspected)

Surface quality : Satisfactory Roughness value - RZ 12.5 to 25 µm / RA 3.2 to 6.3 µm

PMI Test : No objection (100% tested with mobile spectro)

Corrosion Test : Passed IGC test in accordance with DIN EN ISO 3651-2 & ASTM A262 Practice E

Micro Observation : No carbide precipitation observed on grain boundaries

Radioactivity Test : We here by certify that all the material is free from radioactive contamination

Mercury Contamination : Free from mercury contamination

we certify that the above material has been inspected and tested and complies with the order/contract and is of Indian origin

Die Produkte wurden zusammen mit der TÜV SÜD Product Service GmbH einer Gefahrenanalyse nach der Richtlinie 2014/34/EU unterzogen mit folgendem Ergebnis:
Der oben angeführte Ventiltyp in der geprüften Ausführung ist gemäß technischem Bericht der TÜV SÜD Product Service GmbH zu Bescheinigung Nr. 713082362 vom 14.04.16 für die Verwendung in der Gerätegruppe I Kategorie M2 und Gerätegruppe II Zonen 1, 21 und 2, 22 verwendbar.

In co-operation with the TÜV SÜD Product Service GmbH, the products were subject to a hazard analysis according to Directive 2014/34/EU with the following result:
The valve type specified above in the tested version, is according to the technical report of the TÜV SÜD Product Service GmbH relating to Attestation No. 713082362 dd. 14.04.16 suitable for use in Group I category M2 and Equipment Group II zones 1, 21 and 2, 22.

Les produits ont été soumis à une procédure d 'évaluation de risque de danger selon la directive 2014/34/EU en collaboration avec le TÜV SÜD Product Service GmbH, dont le résulat est le suivant:
Le type de robinettrie specifiée ci-dessus est dans la version contrôlée, selon le rapport téchnique en relation de l'attestation no. 713082362 dd. 14.04.16 du TÜV SÜD Product Service GmbH, convenable pour utilisation dans les Groupes des Appareils I catégorie M2 et Groupes des Appareils II zones 1, 21 et 2, 22.

ARMATUREN GOETZE

Wartungs- und Montageanleitung
Service- and Installation Instructions
Instructions de Montage et d'Entretien

Zusätzliche Hinweise
Supplementary Information
Renseignements additionels

Hinweise für den Einsatz in explosionsgefährdeten Bereichen in Anlehnung an die Richtlinie 2014/34/EU (ATEX)

Recommendations for use in potentially explosive areas based on the guideline 2014/34/EU (ATEX)

Renseignements pour l'emploi dans des zones explosibles basé sur la directive 2014/34/EU (ATEX)

Die Armatur ist grundsätzlich auch für den Einsatz im Ex-Bereich verwendbar und wurde demzufolge einem Konformitätsbewertungsverfahren entsprechend der RL 2014/34/EU unterzogen.
Im Rahmen der Untersuchungen wurde eine Zündgefahrenanalyse nach EN 13463-1 durchgeführt mit folgendem Ergebnis:

- **Die Armatur besitzt keine potentielle Zündquelle und fällt nicht in den Anwendungsbereich der ATEX.**
- **Die Armatur darf unter Beachtung des jeweiligen Betriebszustandes im EX-Bereich eingesetzt werden.**

This fitting is in principle also suitable for use in Ex-zones and was consequently subject to a conformity analysis according to guideline 2014/34/EU. Within the scope of the tests, a potential ignition source analysis according to EN 13463-1 was carried-out with the following results:

- *The fitting does not have a potential ignition source and consequently is not subject to ATEX*
- *The fitting may be used in the Ex-zone, providing that the individual operating conditions are respected.*

La robinetterie est en principe aussi employable pour des zones Ex. Par conséquence, elle était soumis à une analyse de conformité d'après directive 2014/34/EU. Dans le cadre de ces tests, une analyse des source d'ignition était exécuté d'après EN 13463-1. Les résultats étaient comme suit :

- *La robinetterie ne possède pas de source d'ignition potentielle et par conséquence ne fait pas partie de la domaine d'emploi ATEX.*
- *La robinetterie peut être employé dans des zones Ex – pourvu que les conditions d'opération individuels sont respectés.*

Bei Einsatz im Ex-Bereich sind zusätzlich zur bestimmungsgemäßen Verwendung nach der Auswahltabelle für GÖTZE ATEX - Produkte entsprechend den Herstellerangaben folgende Punkte zu beachten:

- **Die gesamte Anlage muss den Anforderungen der ATEX entsprechend überprüft und abgenommen sein.**
- **Die Armatur muss in das Erdungskonzept der Gesamtanlage eingebunden werden.**
- **Je nach Einbauort ist auch eine Einbindung in das Blitzschutzsystem vorzunehmen.**
- **Vor dem Öffnen des Ventils zu Reinigungs- und Wartungsarbeiten muss die Innentemperatur der Armatur unterhalb der Zündtemperatur des eingesetzten explosiven Gemisches sein.**

An der Armatur ist sichergestellt, dass Teile, die zum Erreichen des Schutzgrades notwendig sind, nicht unabsichtlich oder unbeabsichtigt entfernt werden können. Dies ist beispielsweise durch Verschlussteile erreicht, die nur mittels Werkzeug oder Schlüssel abgenommen werden können.

Bei uneingestellt gelieferten ATEX-Ventilen für die Kategorien 1 und 2 muss nach der Einstellung die Gasdichtheit geprüft und gewährleistet werden.

In case of use in the Ex-zone, in addition to correct usage as per the GOETZE ATEX product selection table, the following manufacturer's notes must be adhered to:

- *The complete plant must fulfil all ATEX requirements and have been certified accordingly.*
- *The fitting must be included in the grounding concept of the complete plant.*
- *Depending on its position, if necessary, the fitting must be taken into account in the lightning protection system.*
- *Before the valve is opened for cleaning or maintenance purposes, the inner temperature of the fitting must be below the flashpoint of the explosive medium employed.*

The valve is designed in such a way that the parts of the valve which guarantee the required level of protection cannot be removed unintentionally. This is achieved for example with closure parts which can only be removed by means of a tool or spanner.

En cas d' utilisation dans des zones Ex, pourvu que la correcte robinetterie était sélecté d'après la table GÖTZE ATEX sélection des produits, il faut respecter les points suivants:

- *L'entière installation doit satisfaire tous exigences ATEX et doit être certifié de façon analogue.*
- *La robinetterie doit être inclus à la stratégie de mis à la terre de l'ensemble de l'installation.*
- *Dépendant de l'endroit du montage, il faut aussi l'intégrer dans le système protection contre les éclairs.*
- *Avant d'ouvrir la soupape pour des raisons de maintenance et nettoyage, la température interne de la robinetterie doit rester inférieure à la température d'étuvage de la mélange explosible.*

Il est assuré que des pièces qui sont nécessaire pour obtenir un certain degré de protection ne peuvent pas être enlevé involontairement. C'est obtenu par exemple par des pièces de fermeture qui peuvent être détachés seulement avec un outillage ou une clé.

En cas des soupapes ATEX non tarées pour les catégories 1 et 2, il est indispensable de vérifier et d'assurer l'étanchéité au gaz suite au tarage des soupapes.

Bescheinigung

Nr. 713082362

vom 01.08.2016

Auftraggeber:	Goetze KG Armaturen Robert-Mayer-Strasse 21 D-71636 Ludwigsburg
Hersteller:	Goetze KG Armaturen Robert-Mayer-Straße 21 D-71636 Ludwigsburg
Produkt:	Sicherheitsventile; Überström- und Regelventile; Druckminderventile; Wechselkugelhahn Produkte zur Verwendung in explosionsgefährdeten Bereichen im Sinne der: Gruppe II, Gerätekategorien 1; 2; 3; sowie Gruppe I, Gerätekategorie M1 und M2
Technische Daten:	Kupfer, Rotguss, Edelstahl, Messing
Prüf-spezifikation:	Grundlegende Sicherheits- und Gesundheitsanforderungen gemäß Anhang II der Richtlinie 2014/34/EU EN 1127-1:2011
Zugrunde liegender Bericht:	Technischer Bericht Nr. 713082362 vom 14.04.2016 Dieser Bericht ist Bestandteil dieser Bescheinigung.
Bedingungen:	Technischer Bericht Nr. 713082362 vom 14.04.2016, Abschnitt 4.

Nach Durchführung einer Zündgefahrenbewertung bescheinigt die TÜV SÜD Product Service GmbH für die oben genannten Produkte die **Zündquellenfreiheit** und die Erfüllung der Sicherheitsanforderungen für explosionsgefährdete Bereiche gemäß dem Technischen Bericht Nr. 713082362 vom 14.04.2016.

Attestation

no. 713082362

dated 01.08.2016

Client:	Goetze KG Armaturen Robert-Mayer-Strasse 21 D-71636 Ludwigsburg
Manufacturer:	Goetze KG Armaturen Robert-Mayer-Straße 21 D-71636 Ludwigsburg
Product:	Safety valve Overflow and pressure control valve Pressure relief valve Pressure reducing valve Ball diverter valve Products intended for use in potentially explosive atmospheres in line with: Group II, equipment categories 1; 2; 3; as well as Group I, equipment category M1 and M2
Technical data:	Copper, red brass, stainless steel, brass
Test specification:	Fundamental health and safety requirements according to Annex II of the Directive 2014/34/EU EN 1127-1:2011
Underlying report:	Technical report no. 713082362 dated 14.04.2016 This report is part of this certificate.
Conditions:	Technical report no. 713082362 dated 14.04.2016, section 4.

After the performance of an ignition hazard assessment, TÜV SÜD Product Service GmbH certifies the **absence of ignition sources** and compliance with the safety requirements for potentially explosive atmospheres according to the Technical report no. 713082362 dated 14.04.2016 for the products specified above.

Date of issue : Mar-11-2024

HCD No	Description (Part Name)	Q'ty
JSK	Male Pipe Weld Connector 6mmOD-1/4"NPS(ACWC6M-4P)	1 EA

Chemical Composition(%)

C	Si	Mn	P	S	Ni	Cr	Mo								
0.030 max	1.00 max	2.00 max	0.045 max	0.030 max	10.00-14.00	16.00-18.00	2.00-3.00								
0.014	0.20	1.74	0.037	0.023	10.04	16.15	2.62								

Mechanical Properties

Yield Strength MPa	Tensile Strength MPa	Elongation (%)	Reduction of Area (%)	Hardness ( )
515 min	655 min	25 min	40 min	
626	720	42	72	

Remarks

ISSUE No. : -

* Visual & Dimensional Inspection : Good
* Mechanical Tested According to ASTM A370
* Grain Size Result : 5
* Solution Treatment 1060°C WQ
* Intergranular Corrosion Test : Good

We hereby certify that the material herein has been made and tested in accordance with the above specification and also with the requirements called for by the above order.

HCD No	Description (Part Name)	Q'ty
FMN	Plug Valve 6mmOD(VP1VH-6M) - BODY	1 EA

Chemical Composition(%)

C	Si	Mn	P	S	Ni	Cr	Mo								
0.030 max	1.00 max	2.00 max	0.045 max	0.030 max	10.00-14.00	16.00-18.00	2.00-3.00								
0.021	0.505	1.726	0.0337	0.0189	10.602	16.870	2.038								

Mechanical Properties

Yield Strength MPa	Tensile Strength MPa	Elongation (%)	Reduction of Area (%)	Hardness ( )
205 min	515 min	30 min	40 min	
537	634	44	72	

Remarks

ISSUE No. : -

* Visual & Dimensional Inspection : Good
* Mechanical Tested According to ASTM A370
* Grain Size Result : 6.0
* Solution - Annealed, 1050°C
* Intergranular Corrosion Test : Good

We hereby certify that the material herein has been made and tested in accordance with the above specification and also with the requirements called for by the above order.

Herstellerprüfungen / *Manufacturer's Tests / Tests du fabricant*

Das Sicherheitsventil wurde durch den Hersteller gemäß DIN EN ISO 4126-1 auf Druckfestigkeit und Dichtheit geprüft. Die Prüfanforderungen sind eingehalten.
Der Einstelldruck wurde auf einem überwachten Prüfstand mit kalibrierten Feinmessmanometern justiert. Die Ventile sind gegen Verstellung durch eine Werksplombierung gesichert.

The safety valve was tested by the manufacturer according to DIN EN ISO 4126-1 for resistance to pressure and tightness. The test requirements were complied with.
The set pressure was adjusted on a monitored test rig with calibrated precision pressure gauges. The valves are protected against adjustment by means of a factory seal.

Le fabricant a testé la résistance à la pression et l'étanchéité de la soupape selon DIN EN ISO 4126-1. Les exigences pour le test ont été respectées.
Le tarage a été réalisé sur un banc d'éssai contrôlé à l'aide de manomètres calibrés de haute précision. Les soupapes sont protégées du déréglage par un capuchon de plombage.

1 SAFETY CONDITIONS

1.1 PPE reminder

1.2 General Safety Risk assessment

Hazardous voltage will cause death, serious personal injury, or equipment damage.
During operation, parts of the device or system are carrying hazardous electrical voltage. Improper handling of the device or system can result in death or serious injury, as well as significant materiel damage.

- Commissioning phase has to be performed only by qualified personnel.
- Pay attention to all the following steps procedures
- Before any instruction, ensure that no voltage is present on the power distribution equipment.

1.3 Required tools

- Multimeter
- Manual pump for cooling circuit filling

2 REFERENCE DOCUMENTS

	Document name	Description	revision
DA01	*C63-NID-ELO-DED01_A.5 Detailed Electrical Drawing.pdf*	Detailed electrical drawing	A.5
DA02	*C63-NIDE-ELO-MP006* Hydraulic system maintenance procedure	Hydraulic system maintenance procedure	00

3 INSTALLATION CHECKING (WITHOUT VOLTAGE)

3.1 Visual inspection

External inspection, no shocks, no rust on cabinets or cooling system. Cabinet doors are not warped and close properly.

Acceptance :
- **No chocs or rust on the cabinet, cabinets doors close properly**

To check door accessibility (that's easy to open and close).

Acceptance :
- **The door accessibility is correct.**

3.2 Mechanical installation

Check that the cabinets are securely fastened in the container

Acceptance :
- **Cabinets are securely fastened**

3.3 Ground wires

Visually check that the cabinet ground bars are corrected connected to plant earthing point according to earth diagram of [DA01].

Acceptance :
- **The cabinet are correctly grounded according earth diagram, with respect of cable size and tightening torque.**

3.4 Cabinet interconnection

Check interconnection between A500 (Control unit) and A201 (PCS unit 1) cabinets

Acceptance :
- **The interconnection wiring complies with the diagram**
- **The labels are correct**

Check interconnection between A500 (Control unit) and A202 (PCS unit 2) cabinets

Acceptance :
- **The interconnection wiring complies with the diagram**

- **The labels are correct**

Check interconnection between A100 (Transformer) and A201 (PCS unit 1) cabinets
Check cable insulation test report (take a copy)
Check cable tightening (Write the value communicated)
Check correct sealing of cable entry if applicable.

Acceptance :
- **The interconnection wiring complies with the diagram**
- **The labels are correct**
- **No phase inversion**
- **Presence of mark of tightening**
- **Cable insulation test successfully performed.**
- **No sealing issue.**

Check interconnection between A100 (Transformer) and A202 (PCS unit 2) cabinets
Check cable insulation test report (take a copy)
Check cable tightening (Write the value communicated)
Check correct sealing of cable entry if applicable.

Acceptance :
- **The interconnection wiring complies with the diagram**
- **The labels are correct**
- **No phase inversion**
- **Presence of mark of tightening**
- **Cable insulation test successfully performed.**
- **No sealing issue.**

Check interconnection between A100 (Transformer) and A500 (Control unit) cabinets

Acceptance :
- **The interconnection wiring complies with the diagram**
- **The labels are correct**

3.5 Auxiliaries Cables Connections and Labelling

Check the connection of auxiliaries and exchange cable:
- Cabinet A500 Terminal X1.0 : 400V supply
- Cabinet A500 Terminal X2.0: 230VAC supply & 230VAC UPS
- Cabinet A500 Terminal X12.1: I/O exchanges with Elogen

Check the labels of each cable since the FAT state with the electrical drawing:

Check correct sealing of cable entry if applicable. In case of cable glands, check that all spares are correctly filled.

Acceptance :
- **The labels of each component and cables are correct.**
- **No sealing issue (no remaining opening)**

3.6 HV input cables

WARNING: For this part you need :
- **To access to transformer with checking that LOTO procedure has been done properly**
- **Perform a check of Absence of Voltage**

Check type of input HV cable and correct connection on transformer terminal, with shield grounding.
Take picture of cable connections.
Check cable insulation test report (take a copy)
Check HVCB settings
Check correct sealing of cable entry if applicable.
Check surge arrester (continuity check between phase and earth)

Acceptance :
- **Correct cable type used (according to nominal voltage) and correctly connected (with shield grounding)**
- **Cable insulation test successfully performed.**
- **HVCB settings appropriate according to transformer data**
- **No continuity on surge arrester**
- **No sealing issue.**

3.7 Main transformer tap changer

WARNING: For this part you need :
- **To access to transformer with checking that LOTO procedure has been done properly**
- **Perform a check of Absence of Voltage**

Check transformer off-load tap changer position. It should be on 0% or +2,5% or +5% position to have a secondary voltage at value between 330Vac and 370Vac. (depending of HV grid value).
Default position should be +2,5%

Acceptance :
- **Off load tap changer on correct position (write the setting on the report)**

3.8 DC power cables

Check type of output DC cable and correct connection on terminal.

Check cable labelling and correct connection of each polarity (No short circuit) (if applicable measure resistance between each polarity and with earth). Write the value on the report.
Check cable insulation test report (take a copy)
Check correct sealing of cable entry if applicable.

Acceptance :

- **Correct cable type used (according to [DA01]) and correctly connected (no mistake between polarity)**
- **Cable insulation test successfully performed.**
- **No sealing issue**

4 CONTROL CABINET WITH LOW VOLTAGE SUPPLY

4.1 400V auxiliaries supply check

Check that 400V main auxiliary circuit breaker is opened (100Q1)
Close the appropriate departure in customer main LV panel.
Measure the 400 VAC voltage & phase rotation on the upstream side of the 100Q1 circuit breaker.
Check short circuit absence on the downstream side of the 100Q1 circuit breaker.

Acceptances :
- **Voltage measurements upstream the breaker 100Q1 is equal to 400 VAC (+/- 10V).**
- **Phase rotation L1-L2-L3 passed.**
- **No short circuit test must beep.**

Close the 100Q1 circuit breaker.

Acceptance :
- **The 100Q1 circuit breaker is close and shouldn't trip**

4.2 230V auxiliaries supply check

Check that 230VAC main auxiliary circuit breaker is opened (100Q2)
Close the appropriate departure in customer main LV panel.
Measure the 230 VAC voltage on the upstream side of the 100Q2 circuit breaker.
To check the neutral position on the terminal bloc :
Since the neutral is wired to the ground but separated, you can check the voltage measurement between the ground of the cabinet and the neutral cable.
Check short circuit absence on the downstream side of the 100Q2 circuit breaker.

Acceptances :
- **Voltage measurements upstream the breaker 100Q2 is equal to 230 VAC (+/- 5V).**
- **Voltage measurement from Neutral cable and the ground is near 0 VAC (+/- 1V)**
- **No short circuit test must beep.**

Close the 100Q02 switch.

Acceptances :
- **The 100Q2 circuit breaker is close and shouldn't trip.**

4.3 230V UPS auxiliaries supply check

Check that 230VAC UPS main auxiliary circuit breaker is opened (100Q3)
Close the appropriate departure in customer main LV panel.
Measure the 230 VAC UPS voltage on the upstream side of the 100Q3 circuit breaker.
Check short circuit absence on the downstream side of the 100Q3 circuit breaker.

Acceptances :

- **Voltage measurements upstream the breaker 100Q3 is equal to 230 VAC (+/- 5V).**
- **Voltage measurement from Neutral cable and the ground is near 0 VAC (+/- 1V)**
- **No short circuit test must beep.**

Close the 100Q03 switch.

Acceptances :

- **The 100Q3 circuit breaker is close and shouldn't trip.**

Check that every components inside the cabinet are a live :

Acceptances :

- **LED ON active on every devices**

All breakers inside the control panel must be closed at this stage.

4.4 Cooling circuit monitoring

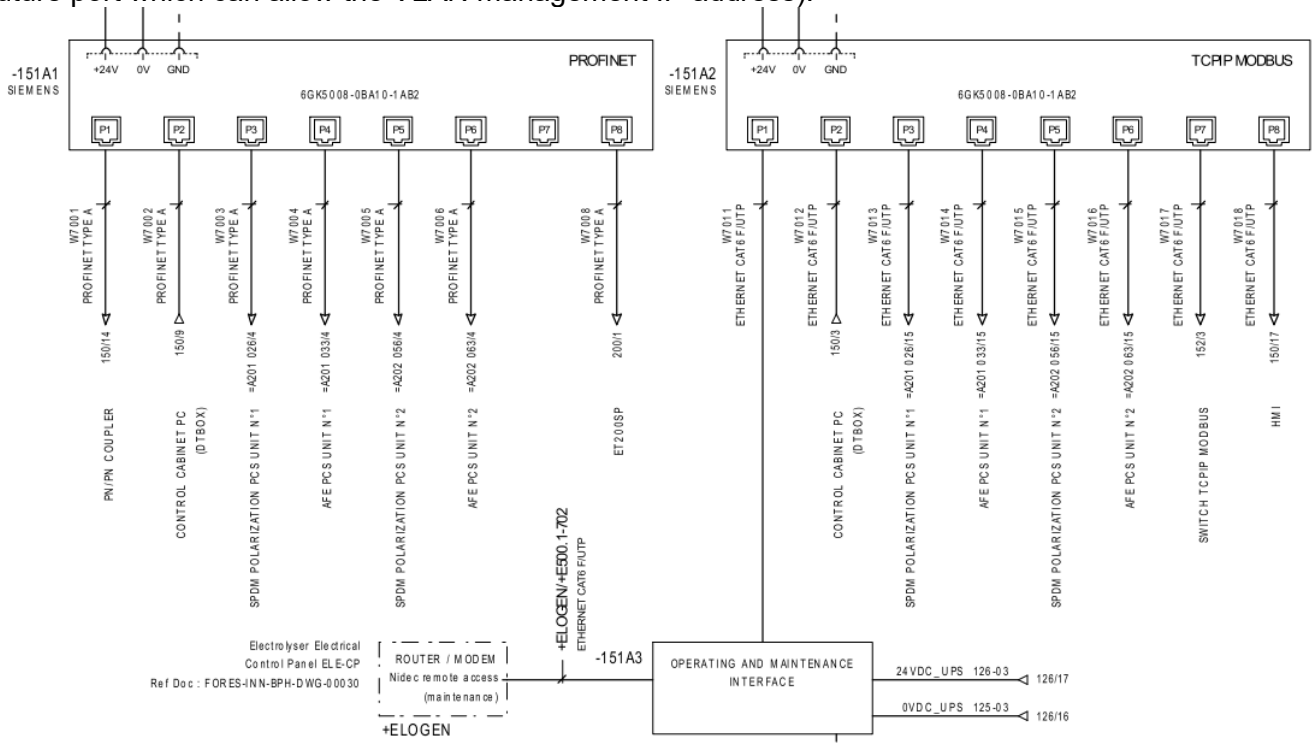
Follow procedure [DA02] to fill the cooling circuit.

Start one of the two pumps.
Follow procedure [DA02] to check correct working of cooling circuit:

- Visual inspection of all circuit inside container (no leaks)
- Correct pressure value
  Check automatic drains position (closed position)
- Absence of fault on HMI

Acceptance :

- **No leaks and corrosion**
- **Pump running**
- **Correct pressure value and absence of fault**



Let it run for few hours.
If the pressure goes below 1,5 bar, stop the pump and replenish the circuit up to 2.5 bars (with pump stopped).
Start the pump again.

Acceptance :

- **The pressure at the pump discharge is between 1,5 and 2 bars (pressure value to be checked on as-built documentation).**

4.5 Maintenance tools check

Connect a RJ45 ethernet cable from your PC to the switch 151A2 (in A500 cabinet) on the port P1 (future port which can allow the VLAN management IP address).

Search for : “Remote Connexion Desktop” on your PC. Then type the IP address corresponding to the container maintenance PC (192.168.10.203).
Check software installed and the correct version of program:

- ArticsTools with converter snapshots
- Isagraf with program last version
- IBA in operation
- Beijer panel operator software

Acceptances :

- **You success to connect to the maintenance tool PC**
- **All software with last applicative program are present:**
  - **Successful online mode on Isagraf (connected to DTbox)**
  - **Correct recording of IBA**

4.6 Safety tests

Note: Ask customer if he wants to witness these tests.

Check the safety relays LEDs, if the outputs (2 bottoms LED) are off or if the reset button lights up blue, rearm remotely through the HMI system “Ack” command, or by pressing the reset button (163S1 in A500 cabinet)

Acceptance :

- **All the LEDS of the relay are lightened in green.**

Check all safety loop elements (including DGPT2 contacts) according to the wiring diagram and their feedback on the HMI system alarm view. For each input test, you must reset the safety relay using the HMI system button or the blue button inside the control panel.

Acceptance :
- **For each loop element, the safety relay LEDs have gone out.**

4.7 HVCB I/O exchange (if possible)

With customer HV CB in test mode, check the wiring exchange with it (if possible depending on HV cell).
*If test mode is not allowed on customer HVCB, follow chapter "**6.4 ES stop test**" to perform this check with HV.*

Note : This test should be performed with customer presence.

Check HV CB status
Check HV CB opening in below cases:
- Safety relay stop command
- Opening command from DGPT2 fault (Reed fault, Pressure fault & temperature fault)

Acceptance :
- **All I/O wiring exchange with HVCB are correct**
- **HV switchgear breaker opened on safety relay stop command**

PCS container are ready for HV supply energization

5 EXCHANGE DATA

Note 1 : this section could be done before or after High Voltage energization (chapter 6).

Note 2 : This test should be performed with customer automation engineer.

5.1 Communication check with customer PLC

Check correct Profinet communication with customer PLC

Acceptances :

- **No communication fault.**

5.2 I/O exchange check

Check all I/O wiring exchanges by forcing the corresponding output, according to [DA01], and resume in below tables, check scaling:

Input from Elogen	
I/O Description	***Test***
High voltage circuit breaker status 1=Closed	
High voltage circuit breaker status 1= Opened	
Electrolyzer 1 system healthy feedback 1=Healthy	
Electrolyzer 2 system healthy feedback 1=Healthy	
Elogen Start/stop command 1=Start	

Acceptances :

- **All I/O feedback should be as expected**

6 INSTALLATION CHECK WITH HIGH VOLTAGE SUPPLY

WARNING: Before energize HV and close HVCB, check :
- **Transformer terminal box correctly closed with all eventual temporary earting connections removed (according to local procedure)**
- **LV circuit breaker on both transformer secondary side opened (020Q1, 021Q1, 022Q1, 023Q2, 050Q1, 051Q1, 052Q1, 053Q2).**

6.1 Main voltage supply check

Close the HV circuit breaker and energize the transformer.

HV supply energized, Power transformer energized from the 6,6kV HV line.

Check the voltage at the 2 transformer secondaries

Acceptance :
- **HV circuit breaker status correct (if not checked in "*124.7 HVCB I/O exchange (if possible)*")**
- **Voltage measurements upstream the breaker 020Q1 and 050Q1 is equal to 360 VAC (+/- 10V).**
- **Voltage measurements is balanced between the 3 phases (+/- 2V)**
- **Voltage measurements is balanced between the 2 secondary (+/- 1%)**
- **Phase rotation L1-L2-L3 passed on the two secondaries.**

Close the AFE synchronization transformers circuit breakers (022Q1 and 052Q1).

Acceptance :
- **The circuit breaker is close and shouldn't trip.**
- **AC voltage measurement on AFE converter is equal to voltage measure +/-2%**
  Note: AFE voltage measurement could be adjusted if necessary [25.01]

Close the SPDM synchronization transformers circuit breakers (023Q2 and 053Q2).

Acceptance :
- **The circuit breaker is close and shouldn't trip.**
- **AC voltage measurement on SPDM converter is equal to voltage measure +/-2%**
  Note SPDM voltage measurement could be adjusted if necessary

Close the insulation monitoring device fuse breaker (021Q1 and 051Q1).

Acceptance :
- **Correct voltage value on insulation monitoring device**
- **No faults on permanent insulation monitoring device**

Lock in open position the DC switches (040Q1 and 070Q1) to avoid any supply of the electolyzer stacks

6.2 AFE 1 operating test

Send precharge order
Check closing of precharge contactor (032KM1) and smooth increase of DC voltage
Check closing of AC circuit breaker (020Q1)

Acceptance :
- **Precharge contactor closed until end of precharge**
- **No inrush current during precharge (No precharge fuse blown)**
- **AC circuit breaker closed and precharge contactor opened after end of precharge**

Check DC regulation.
Check DC voltage measure and compare with AFE feedback

Acceptance :
- **AFE started without fault**
- **AFE regulating the voltage setpoint at +/-1%**
- **DC voltage measurement on AFE converter is equal to voltage measure +/-5V**
  Note: AFE voltage measurement could be adjusted if necessary

6.3 AFE 2 operating test

Send precharge order
Check closing of precharge contactor (062KM1) and smooth increase of DC voltage
Check closing of AC circuit breaker (050Q1)

Acceptance :
- **Precharge contactor closed until end of precharge**
- **No inrush current during precharge (No precharge fuse blown)**
- **AC circuit breaker closed and precharge contactor opened after end of precharge**

Check DC regulation.
Check DC voltage measure and compare with AFE feedback

Acceptance :
- **AFE started without fault**
- **AFE regulating the voltage setpoint at +/-1%**
- **DC voltage measurement on AFE converter is equal to voltage measure +/-5V**
  Note: AFE voltage measurement could be adjusted if necessary

6.4 ES stop test

Note 1: This test is not mandatory if "***4.7 HVCB I/O exchange (if possible)***" has been performed.

Note 2: This test should be performed with customer presence.

Perform an ES stop command
Check LV CB opening
Check HV CB opening

Acceptance :
- **LV and HV circuit breaker opened on ES stop command**

6.5 Backup

Perform a backup of all converter parameters (snapshot).
Perform a backup of PLC program (Isagraf)
Copy these backup on maintenance tools if present

Acceptance :
- **Backup performed**

3.1.1 Power-Up command

Test procedure

After receiving "Power-Up command"(***ELO_IB_PowerUpCmd_1***)(from Elogen on Profinet), check:

- Cooling system starting (pump running).
- Alternation between pumps.
- Cabinets ventilation running.
- AFE preload completed.
- AFE AC circuit breaker closed.

Curve of the test :

Criteria :

- Sequence applied like described, in accordance with the **DA01** document.
- Correct cooling operation

	Rectifier 1	**Rectifier 2**
Test Result (Passed/Not Passed/NA)		
Date		
Name of Operator		

3.1.2 Polarization command

Test procedure

After receiving "Start polarization command"(***ELO_IB_PolaCmd_1***)(from Elogen on Profinet), check:

- Discharge resistor contactor opened, polarization contactors closed.
- SPDM running to the polarization voltage setpoint according to Elogen ramp and with current limitation at 20A.
- AFE start running at polarization voltage setpoint.

- SPDM stop running, polarization contactors opened.
- DC circuit breaker closed.

Curve of the test :

Criteria :

- Sequence applied like described, in accordance with the **DA01** document.
- Polarization ramp correctly followed (+/-5%)
- Polarization setpoint respected, and 20A limit
- Correct cooling operation

	Rectifier 1	**Rectifier 2**
Test Result (Passed/Not Passed/NA)		
Date		
Name of Operator		

3.1.3 Production command

Test procedure

After receiving "Start regulation I command"(***ELO_IB_StartReg_Cmd_1***)(from Elogen on Profinet), check:

- AFE regulate current according to Elogen setpoint according to Elogen ramp

Curve of the test :

Criteria :

- Sequence applied like described, in accordance with the **DA01** document.
- Production ramp correctly followed (+/-5%)
- Production current setpoint respected (+/-1% Full Scale = 15A)
- Correct cooling operation
- Lovato's measurements are correct

	Rectifier 1	**Rectifier 2**
Test Result (Passed/Not Passed/NA)		
Date		

Name of Operator		

3.2 TestOFF Sequence – Electrolyser power off

3.2.1 Stop production

Test procedure

After receiving "Stop control command"(***ELO_IB_StopControl_Cmd_1***)(from Elogen on Profinet), check:

- Current decrease
- AFE regulates voltage at polarization voltage setpoint

Curve of the test :

Criteria :

- Sequence applied like described, in accordance with the **DA01** document.
- Polarization setpoint respected (+/-5V)
- Cooling system started

	Rectifier 1	**Rectifier 2**
Test Result (Passed/Not Passed/NA)		
Date		
Name of Operator		

3.2.2 Stop electrolyzer

Test procedure

After receiving "Stop electrolyzer command"(***ELO_IB_StopElectro_Cmd_1***)(from Elogen on Profinet), check:

- AFE stopped
- DC switch opened
- Discharge resistor contactor closed

Curve of the test :

Criteria :

- Sequence applied like described, in accordance with the **DA01** document.
- Cooling system running
- DC voltage decrease (through resistor)

	Rectifier 1	**Rectifier 2**
Test Result (Passed/Not Passed/NA)		
Date		
Name of Operator		

3.2.3 Power off

Test procedure

After receiving “Power off command”(***ELO_IB_PowerOFFCmd_1***)(from Elogen on Profinet), check:

- AFE stopped
- DC switch opened
- Discharge resistor contactor closed
- Pumps stopped
- Cabinets ventilation stopped

Curve of the test :

Criteria :

- Sequence applied like described, in accordance with the **DA01** document.
- Cooling system stopped

	Rectifier 1	**Rectifier 2**
Test Result (Passed/Not		

Passed/NA)		
Date		
Name of Operator		

3.2.4 Fault

Test procedure

After generating a fault, check:

- Check that the system responds as described in the **DA02** document.

Curve of the test :

Criteria :

- Sequence applied like described, in accordance with the **DA01** and **DA02** documents.

	Rectifier 1	**Rectifier 2**
Test Result (Passed/Not Passed/NA)		
Date		
Name of Operator		

4 *LOAD TEST ELECTROLYSER*

4.1 Operation at full load

Test procedure
In production mode:
- Applied maximum current setpoint according to electrolyser configuration (as close as possible to 1407Adc)
- Check correct current feedback (with external measure)
- Check Lovato's feedback
- Check harmonics on grid side
- Check current stability
- Check current balancing between the rectifiers

Curve of the test :

External current measurement:

Criteria :
- Required setpoint reached (+/- 1%)
- Current stability (< 2% on rms value)
- THDI < 5%

	Rectifier 1	**Rectifier 2**
Test Result (Passed/Not Passed/NA)		
Date		
Name of Operator		

4.2 Ripple measurement

Test procedure
- Applied maximum current setpoint according to electrolyser configuration (as close as possible to 1407Adc)
- Measure with external probe current ripple

Scope measurement :

Criteria :

- DC ripple < 2%

	Rectifier 1	**Rectifier 2**
Test Result (Passed/Not Passed/NA)		
Date		
Name of Operator		

5 ***EQUIPMENT ACCEPTANCE***

Equipment is running according to the contractual requirements.

Commissioning and start-up activities are accomplished on ……/…../…….

1. Introduction

This document presents the results of operational tests performed with customer presence during FAT on 30th of September and 1st of October 2024 at Nidec factory in St Etienne.

Factory tests are described in 8934FAT00 document.
This document only presents the operational tests and additional witnessed tests required by ELOGEN during FAT (factory Acceptance test) with their results.

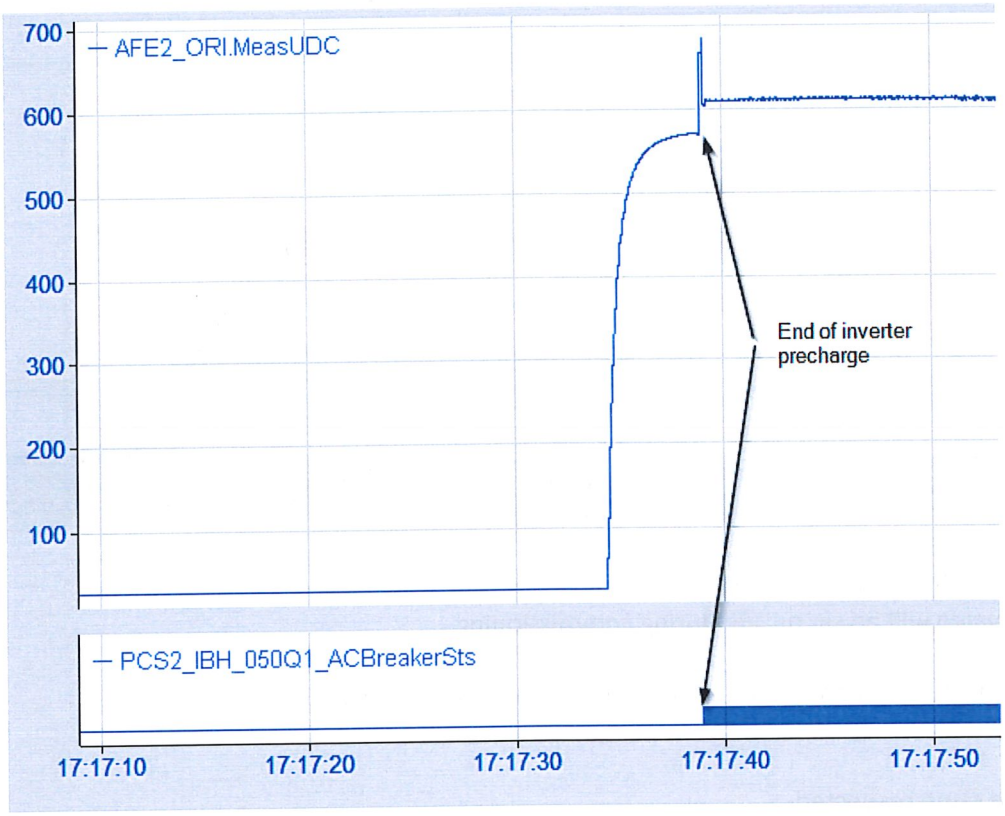
2. Reference documents

	Document name	***Description***	***revision***
DA01	*8934FAT00_01 Schedule & Results.pdf*	FAT Tests	01
DA02	*8755AFL01_01 Alarm & Fault List.pdf*	Alarm and Fault list and associated safety action	01
DA03	*8934AFD01_00 Functional Analysis.pdf*	Functional Analysis	00
DA04	*8934FAT01_00 PCS cabinet Test procedure hardware and live test*	FAT procedure	00
DA05	*C63-NID-ELO-SEQ01_02 General sequence*	General sequence	02

3. Associated documents

	Document name	Description	revision
DA06	*8934FAT00_00 Annex Remarks & Comments.pdf*	FAT Annex for punchlist	00

5. Operation tests



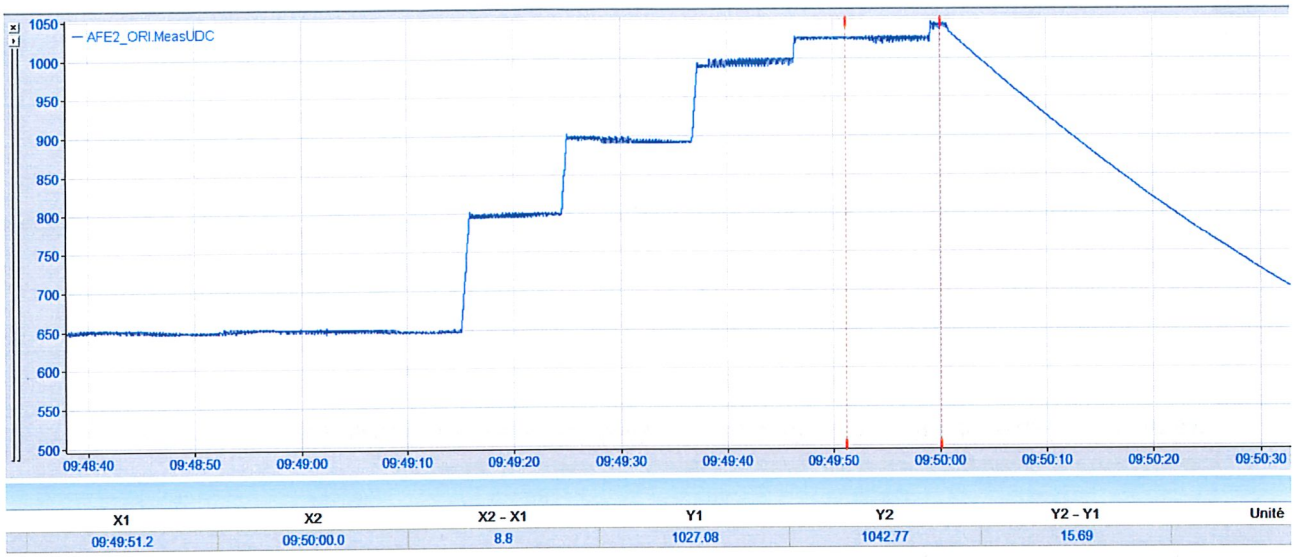
Check of correct system operation according to [**DA03**].

All different sequence operation are tested. Acceptance criteria is that system status and operation is according to [**DA03**].

Test are performed on one PCS cabinet without load (only a capacitive load in order to check voltage regulation and polarization sequence)

Functional sequence diagram

Note: Due to power limitation of test bench power supply, this state could not be withstand for more than few seconds (before test bench main circuit opening).



5.2. Polarization function

PCS unit tested: **PCS 1 – A202**
Systems goes from "*power up mode*" to "*polarization mode*" and "*stand-by*" mode

Check:

- Disconnection of precharge resistor
- Start of polarization rectifier
- Check correct sequence end of polarization and stand-by mode (close of main DC breaker)

Polarization mode:
Following of voltage setpoint send by ELOGEN PLC with current limitation at 20Adc.

Correct operation up to 1027Vdc.
Fault detection and stop at 1040Vdc (1042Vdc measured)
Note: the fault stop threshold value could be set according to ELOGEN requirement for stack protection.

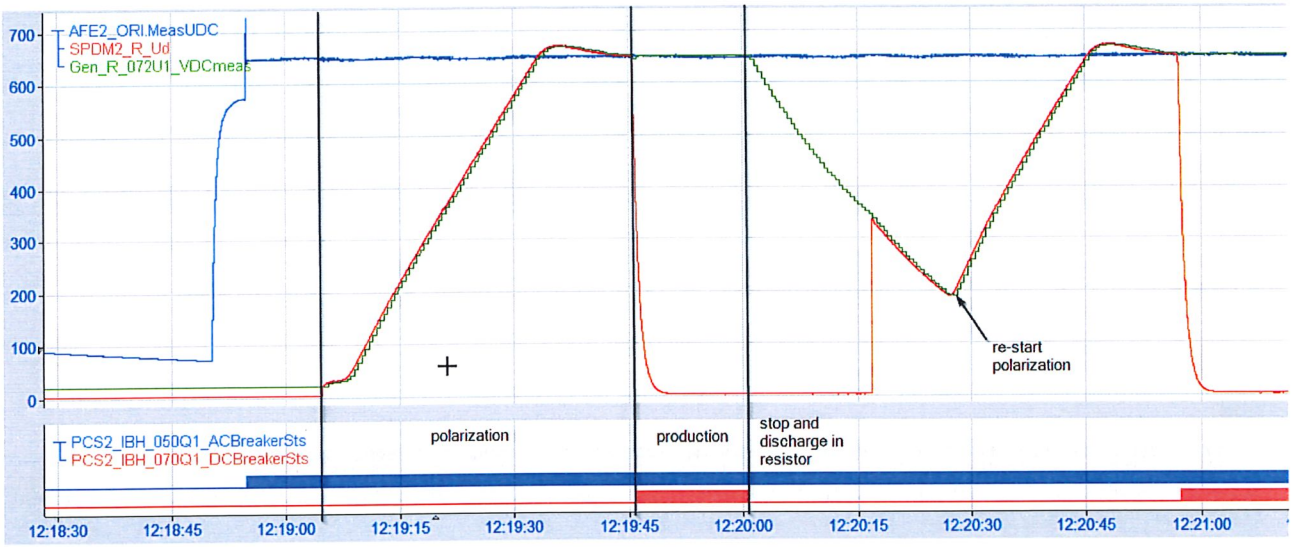
Check of correct compensation of capacitor filter.
External measure with Ampmeter:

- Inverter stopped and AC line breaker closed: 311A ac
- Inverter in operation: 49Aac

Criteria:

- Reach of maximum operating point of 1027Vdc

⇨ Test passed



Note: only no-load test.

5.4. Emergency stop

PCS unit tested: **PCS 1 – A201**
Systems shunt down after ES stop action

Check:

- Correct stop of the complete PCS unit

Criteria:

- Correct stop and discharge

⇨ Test passed

5.6. Re-start polarization

PCS unit tested: **PCS 2 – A202**
Systems goes from "*initial state*" to stand-by and "*production mode*".

Check:

- Check correct pre-charge, and polarization with current limitation
- Check correct discharge resistor disconnection

Same curve than above.

⇨ Test passed

5.7. Electrolyser stop from fault

PCS unit tested: **PCS 2 – A201**
Systems goes from "*stand-by mode*" / "*production mode*" to "*power off*" due to internal fault.
Note: different fault could be simulated

Check:

- Check correct stop
- Check correct discharge in resistance

6. List of equipment used

ATTIVITA' ESEGUITE / *Activities Carried Out*

Witnessed test of 2.5MW Rectifires tag A201&A202, Hidraulic Cooling Unit A300, and HCU Control Panel A500 according to NIDEC's QCP no C63-NID-ELO-QCP01, rev 01, activity no I.3.1., and visual inspection of transformer retention tank, antivibration mounts and Filter, according to test notification issued by ELOGEN, ref mail Andreia Vilarinho dated 26/09/2024.
At supplier workshop:
NIDEC ASI SAS, Za Les Baraudes, Impasse Du Buchat, 42530 Saint Genest Lerpt, France.

Before the FAT Nidec declare that all the steps mentioned in the Factory Acceptance Test Schedule & Results doc. no. C63-NID-ELO-FAT00 was carried out during internal test successfully without punches, attached internal test report.

The FAT tests are carried out following the given agenda received by mail from Elogen Andreia Vilarinho dated 26/09/2024, here attached IR-01-C63-NIDEC FAT AGENDA.

The agenda's steps are referenced to some steps of Factory Acceptance Test Schedule & Results doc. no. C63-NID-ELO-FAT00, in which are described the procedures to follow, and the acceptance criteria to be respected.

Here attached Nidec FAT report ref no 8934FAT02_00, title Factory Acceptance Test Witnessed Test, as evidence of carried out tests and results.

Some punch-list items was raised, reference is made to the OWL no IR-01-C63-NIDEC here attached.

During the SAT Subvendor shall perform the on load tests, example: harmonic, power factor, ripple voltage, current regulation, with the definitive stacks.
It shall provide all the necessary instrumentations and tools, certificates, and the relevant specialized manpower to cover the points described in document no .

The Goods are accepted by Elogen, the relevant release note it will be issued by Elogen to Nidec only after closing of punch-list verification, to be done before shipment (expected to be the on Thursday 3rd October at 14:00), by sending pictures which as to be reviewed by Elogen.

Oggetto: RE: NIDEC_RECTIFIER_FAT_INVITATION

Hello Stephen,

Sorry, I was waiting to receive the FAT Procedure from NIDEC (in a report form) to send it to you but didn't received it yet.

You will find bellow the FAT agenda, with the tests that will occur.
As soon as we receive it in a report form, I will send it to you.

1. **Monday morning : Checking without voltage**
    1. From 9h00 to 11h00 :
        1. Installation and review documentation
        2. Visual inspection of external and internal part of cabinets (1)
        3. Safety protection (Protections against contact with live parts) - §1.1.8
        4. Check of earth wires, with random continuity test - §1.1.7
    2. From 11h00 to 12h:
        1. Check of correct tightening of power connections (random check): § 1.1.12
        2. Insulation test on AC power and DC power - §1.2.6

2. Lunch break 12h – 13h30 / connection preparation for live tests

3. **Monday afternoon: operation tests on cabinet 1**
   These tests' purpose is to check the correct operation of the complete system according to functional analysis.
   Measurements feedback inside PLC and display on local HMI are checked for each below test.
    1. §3.1.1: Sequence with power-up command
        1. Check correct working of auxiliaries (cooling, with flowrate and pressure measurements)
        2. Check correct precharge of inverter (AC and DC voltage measurement)
        3. Check of wiring I/O status with ELOGEN system (if any)
    2. §3.1.2: Polarization function

5000V minimum of polar

30/09/2024 1. Check disconnection of discharge resistor
30/09/2024 2. Start of precharge rectifier, check of correct voltage ramp and current limitation divrus polarization
01/10/2024 3. Check of wiring I/O status with ELOGEN system (if any)

3. §3.1.12: Production phase
01/10/2024 1. Check correct operation of inverter (DC voltage and current)
30/09/2024 2. Check grid value and correct compensation of filter reactive power
01/10/2024 3. Check of wiring I/O status with ELOGEN system (if any)

4. §3.1.13: Emergency stop
30/09/2024 1. Stop from emergency stop button
30/09/2024 2. Check correct action and sequence (stop of inverter, LVCB opening…)
01/10/2024 3. Check of wiring I/O status with ELOGEN system (if any)

5. Test of all remaining wiring I/O exchange with ELOGEN system - §2.5.10

4. **<u>Tuesday morning: operation tests on cabinet 2</u>**

Continuation of operations tests, but on cabinet 2

1. Start of cabinet 2 in production mode (no specific check).
2. §3.1.4: Normal stop (stand-by mode)
   1. Check correct action and sequence (stop of inverter…)
   2. Check of wiring I/O status with ELOGEN system (if any)
   3. Check DC voltage regulation
3. §3.1.5: Re-start in production mode and electrolyser stop ✓
   1. Check correct action and sequence (stop of inverter…)
   2. Check of wiring I/O status with ELOGEN system (if any)
   3. Check voltage discharge in resistor

01/10/2024

4. §3.1.6: Re-start polarization
   1. Start of precharge rectifier, check of correct voltage ramp and current limitation
   2. Check of wiring I/O status with ELOGEN system (if any)
5. §3.1.10: electrolyser stop ✓
   1. Check correct action and sequence (stop of inverter…)
   2. Check of wiring I/O status with ELOGEN system (if any)
   3. Check voltage discharge in resistor
6. §3.1.8: Re-start in production mode and stop from fault
   1. Check correct feedback to ELOGEN, but not stop in case of alarm
   2. Check correct stop in case of fault

<u>Note:</u> Different fault could be simulated and tested.

5. **<u>Tuesday afternoon: conclusion and preparation for shipping</u>**
   1. 14h: FAT conclusion and action list
   2. Cabinet disconnection

Don't hesitate if you have any question.

Best regards,

PEI & kPEI CALCULATION

Standard: EU 548/2014, EU 1783-2019

Transformer ref.

Des	*Value*	*Des*	*Value*
Rated power (Sn) [kVA]	**3200**	P.O.	**23/00084**
Primary Voltage (1U) [V]	6600 ±2x2,5	TRF sno	60258
Secondary (2u) [V]	360/270	Type	TOD3176.001
Tertiary (3u) [V]	360/270	Vector group	Dyn11y11

Formulae

$$PEI = 1 - \frac{2(P_0 + P_{c0} + P_{ck}(k_{PEI}))}{S_r\sqrt{\frac{P_0 + P_{c0} + P_{ck}(k_{PEI})}{P_k}}} = 1 - \frac{2}{S_r}\sqrt{(P_0 + P_{c0} + P_{ck}(k_{PEI}))P_k}\ (\%)$$

Where:

P_0	is the no load losses measured at rated voltage and rated frequency on the rated tap
P_{c0}	is the electrical power required by the cooling system for no load operation, derived from the type test measurements of the power taken by the fan and liquid pump motors (for ONAN and ONAN/ONAF cooling systems P_{c0} is always zero)
P_{ck} (k_{PEI})	is the electrical power required by the cooling system in addition to P_{c0} to operate at k_{PEI} times the rated load. P_{ck} is a function of the load. P_{ck} (k_{PEI}) is derived from the type test measurements of the power taken by the fan and liquid pump motors (for ONAN cooling systems P_{ck} is always zero).
P_k	is the measured load loss at rated current and rated frequency on the rated tap corrected to the reference temperature
S_r	is the rated power of the transformer or autotransformer on which P_k is based
k_{PEI}	is the load factor at which Peak Efficiency Index occurs';

Measuring & Calculation

Po [W]	Pco [W]	Pck(kPEI) [W]	Pk +75°C [W]	Ptot [W]	PEI meas [%]	Tier	PEI min [%]	kPEI

10	Dimensional Check / Overall Visual Check		p. 12

* ***Carried out during production: available as review***

Note: Routine tests are performed on every transformer. Type, special and other tests are performed upon previous agreement between manufacturer and customer. Not all tests apply to every transformer type. Different arrangements and tolerances are possible upon previous agreement between manufacturer and customer.

Auxiliaries

Standard: IEC 60076-3 ed. 3.0 (2013-07)
Power transformers
Part 3: Insulation levels, dielectric tests and external clearances in air
§ 9

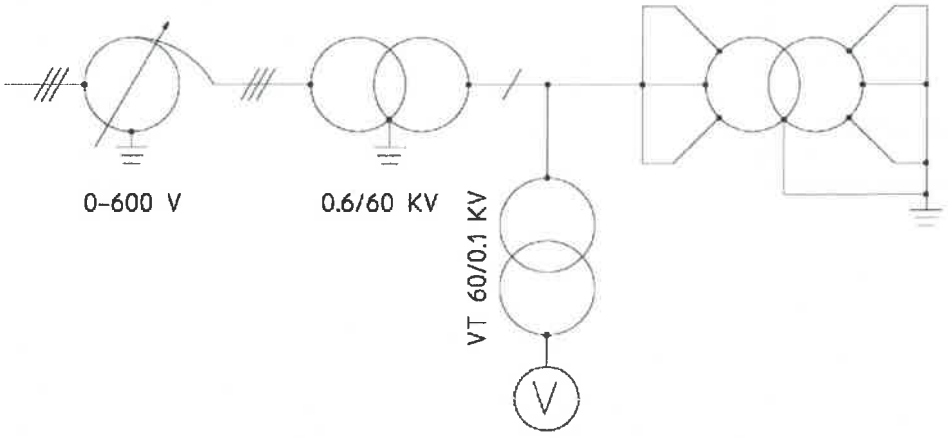
DGPT2+PT100

Surge arresters

A visual control of the placement of the auxiliaries is done, together with a functional check of the alarm and trip contacts and their respective cabling to the marshalling box.
In detail:
1. auxiliary dielectric and insulation resistance test (through relavant terminals on marshalling box); a test voltage of 2 kV is applied for 60 s between the auxiliaries' contacts and earth to verify the adequate insulation and protection.
2. auxiliary functionality (through relevant terminals on marshalling box);
3. accessories check;
4. Thermometer and WTI: calibration and setting on alarm and trip thresholds according to the references indicated on the general arrangement.

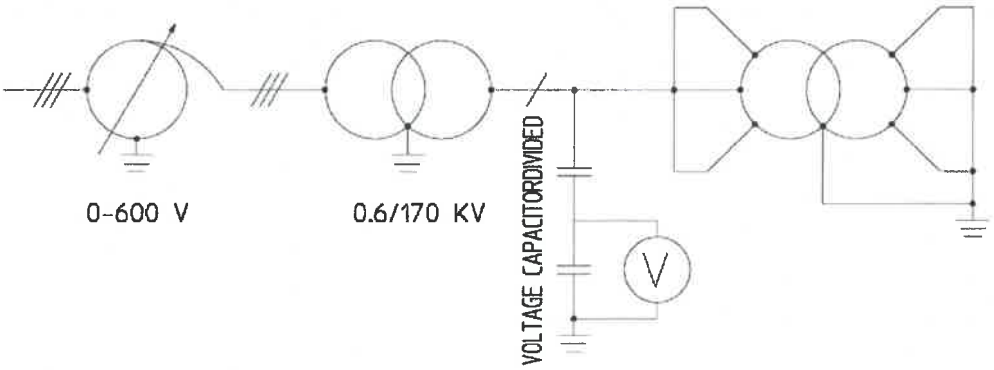
celme	Test Procedure	TP_23_00084 revision A-1

Separate source AC withstand voltage (AV) (11.1.2.1 e)



Standard: IEC 60076-3 ed. 3.0 (2013-07)
Power transformers
Part 3: Insulation levels, dielectric tests and external clearances in air
§ 11

Procedure: The separate source AC withstand test shall be made with single-phase alternating voltage as nearly as possible on **sine-wave form and not less than 80% of the rated frequency. The peak value of voltage divided by √2 shall be equal** to the test value. The full test voltage shall be applied for 60s between all terminals of the winding under test connected together and all terminals of the remaining windings, core, frame and tank connected together at earth. The test is performed on every winding according to its insulation level.



20KV at primary no intervention of protection OK
3KV at 1° secondary OK no intervention of protection
3KV at 2° secondary OK no intervention of protection

Wiring diagram

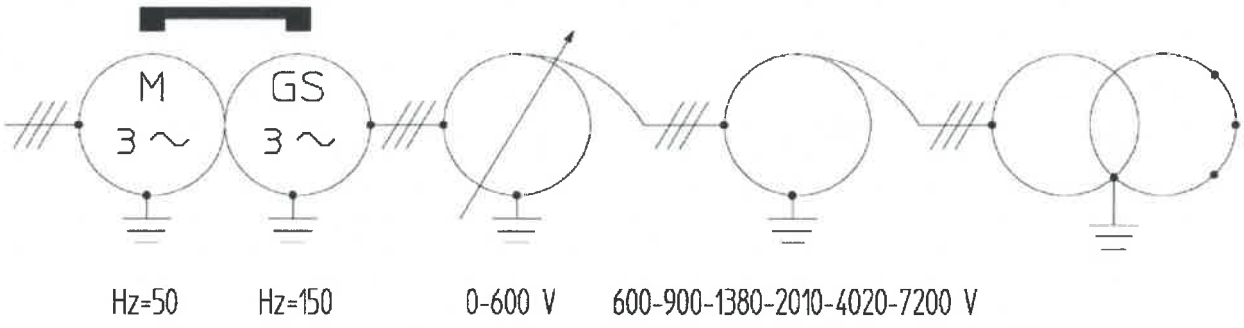
celme	Test Procedure	TP_23_00084 revision A-1



Short duration induced AC withstand voltage (IVW) (11.1.2.1 e)

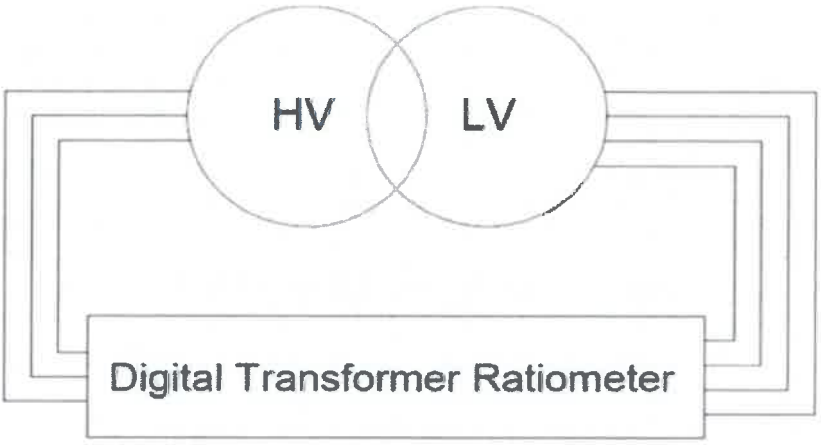
Standard: IEC 60076-3 ed. 3.0 (2013-07)
Power transformers
Part 3: Insulation levels, dielectric tests and external clearances in air
§ 12.2

Procedure: An alternating voltage as close as possible to two times the nominal voltage shall be applied to the terminals of one winding of the transformer. The test time shall be 120x([rated frequency]/[test frequency]) but not less than 15s. The equipment in the test room provides a 150Hz voltage so the duration is: 120x50/150 = 40s.

720V @ 150Hz For 40sec
acceptance criteria: no discharge no intervention of protection
OK passed

Wiring diagram

Results: /



celme	Test Procedure	TP_23_00084 revision A-1

Measurement of voltage ratio and check of phase displacement (11.3)

Standard: IEC 60076-1 ed. 3.0 (2011-04)
Power transformers
Part 1: General
§ 11.3

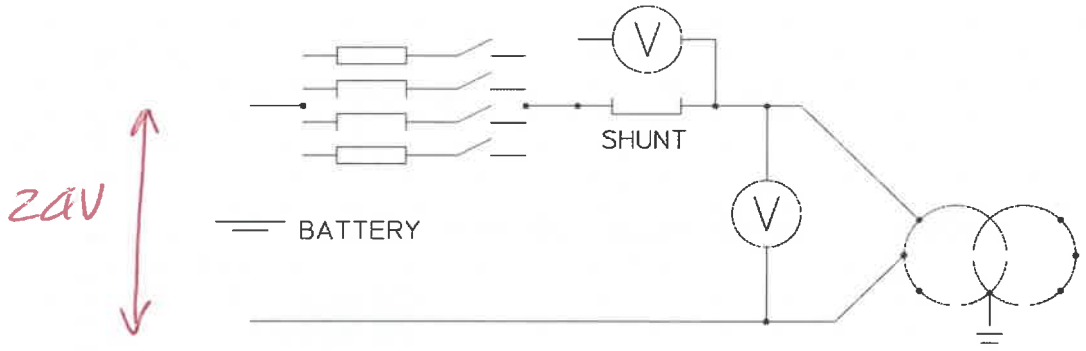
Procedure: The transformer is connected to a portable fully automated three phase turns ratio meter. The group and phase displacement is verified on every tap position.

Wiring diagram

N° 5 position Tap changer (2,5% each)
See Pos on general nameplate
acceptance criteria ±0,5° phase displacement.
±0,5% ratio deviation

Results: /

celme	Test Procedure	TP_23_00084 revision A-1



Measurement of winding resistance (11.2)

Standard: IEC 60076-1 ed. 3.0 (2011-04)
Power transformers
Part 1: General
§ 11.2

Procedure: The transformer shall be at rest in a constant ambient temperature for at least 3 hours. The temperature of the winding is then deemed to be the same as the average oil temperature. A small current is feeded through the each pair of phases in the winding and the voltage is read. The mean value is the resistance of the winding. The value is then corrected to the reference temperature of 75°C.

Temperature 23,7 °C

Wiring diagram

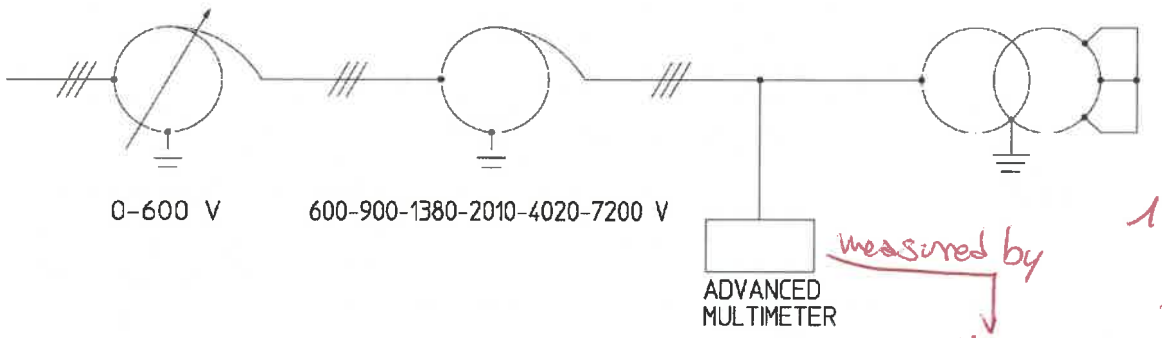
Aluminium winding 225
↙ ref temperature
225 + 75 = 300

225 + 23,7 = 248,7
↖ measured temperature

300 / 248,7 = 1,2 coefficient for temperature compensation to 75°C

Results: /

celme	Test Procedure	TP_23_00084 revision A-1



Measurement of short-circuit impedance and load loss (11.4)

Standard: IEC 60076-1 ed. 3.0 (2011-04)
Power transformers
Part 1: General
§ 11.4

Procedure: The short-circuit impedance and load loss for a pair of windings shall be measured at rated frequency with a voltage applied to the terminals of one winding and the terminals of the other winding short-circuited. All other windings, if present, must be open-circuited. The applied current shall be between 50% and 100% of the rated current. The measurement must be made quickly to avoid any significant error coming from the heating of the windings.

$In' = 279,93A \rightarrow 50\% = 139,96A$

Measurement of no-load loss and current (11.5)

Standard: IEC 60076-1 ed. 3.0 (2011-04)
Power transformers
Part 1: General
§ 11.5

Procedure: The no-load loss and the no-load current shall be measured on one of the windings at rated frequency and rated voltage. The remaining windings shall be left open-circuited. The winding that can be connected in open delta must be in closed. The transformer shall be approximately at factory ambient temperature. This test shall be performed at 90, 100 and 110% of rated voltage, measuring relevant corrent and losses.

Check of core and frame insulation (11.12)

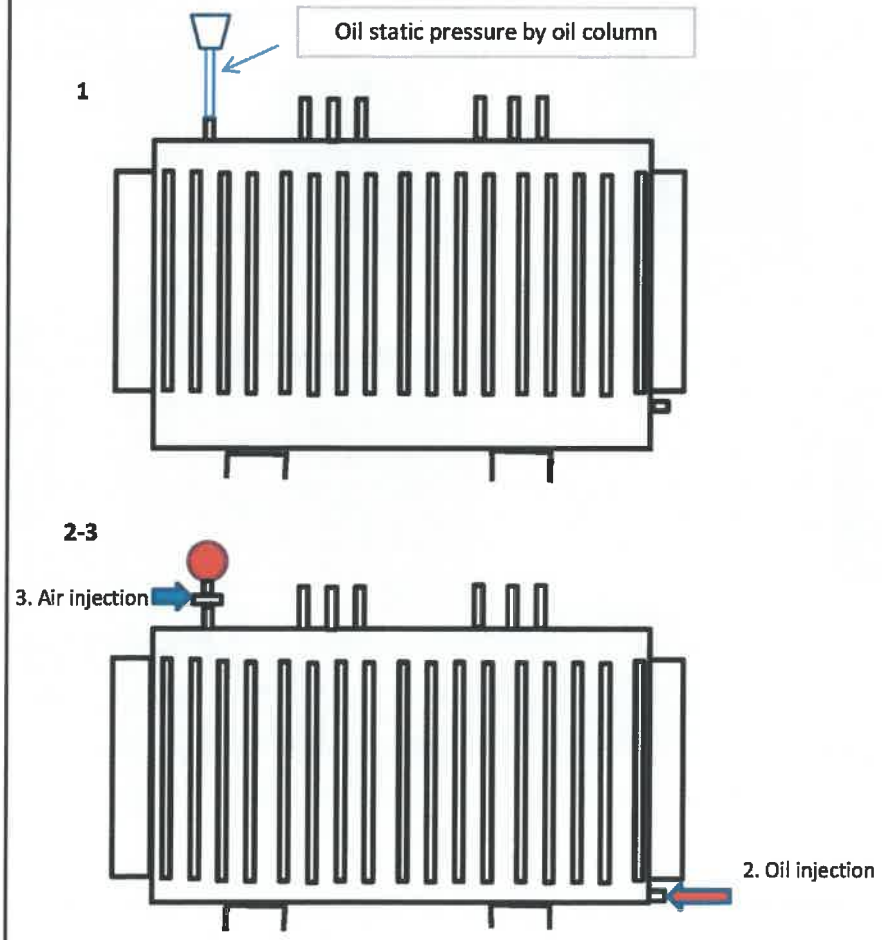
Standard: IEC 60076-1 ed3.0 (2011-04)
Power transformers
Part 1: General
§ 11.12

Procedure: This test shall be carried out on all liquid immersed transformers which incorporate insulation separating core and frame and/or frame and tank.
For transformers where the core and frame earth connections are not accessible when the transformer is liquid filled, the insulation shall be tested at 500 V d.c. for 1 min without breakdown before the active part is installed in the tank.
For transformers where the core and frame earth connections are accessible when the transformer is liquid filled, the insulation shall be tested at 2 500 V d.c. for 1 min without breakdown after the transformer is filled with liquid.

Wiring diagram

Results: /

celme	Test Procedure	TP_23_00084 revision A-1



Fluid leak test under pressure (11.8)

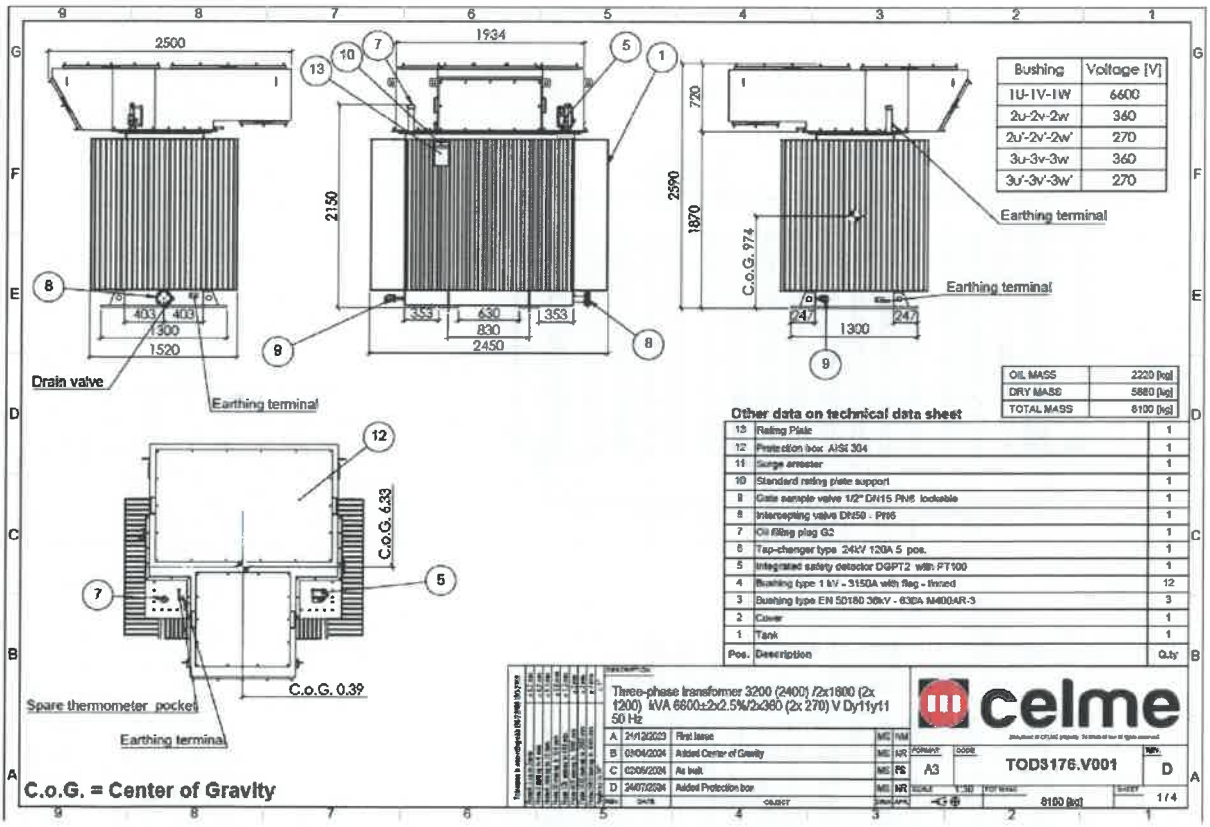
Standard: IEC 60076-1 ed. 3.0 (2011-04)
Power transformers
Part 1: General
§ 11.8

Procedure: If not differently agreed between manufacturer and purchaser, a pressure (by either using a liquid column or gas pressure in the conservator) of at least 30 kPa is applied over the normal liquid pressure. This pressure shall be maintained for 24 hours for transformers greater than 20 MVA or 72,5 kV and 8 hours for transformers with lower rating and voltage. The test is not applicable to hermetic transformers.

Even if this type of transformer is hermetic type (thus not under this test), the agreement between parts is to apply a pressure of 30kPa for 8hs. Celme follows three methods alternately:
1. pipe estension full of oil over the filling pipe up to height at least of mm over the cover surface.
2. injection of oil by a pump controlled by a calibrated pressure gauge installed on the filling pipe.
3. Injection of air controlled by calibrated pressure gauge installed on the filling pipe.

Sketch of test

Results: /



celme	Test Procedure	TP_23_00084 revision A-1

Dimensional Check / Overall Visual Check

Standard: IEC 60076-1 ed. 3.0 (2011-04)
Power transformers
Part 1: General

Procedure: General control is performed using the general arrangement drawing as reference. The tollerances are reported into the relevant drawnings.

ATTIVITA' ESEGUITE / *Activities Carried Out*

Witnessed test of 3.2MVA Transfomer tag TR-01/A100 according to FAT agenda, and visual and dimensional inspection, according to test notification issued by ELOGEN, ref mail Andreia Vilarinho dated 26/09/2024.
At supplier workshop:
CELME Via Cà Sordis, 30, 36054 Montebello Vicentino VI, Italy.

Before the FAT CELME declare that all internal tests was carried out successfully without punches.

The FAT tests are carried out following the given agenda here attached IR-01-C63-CELME FAT AGENDA, and FAT test procedure IR-01-C63-CELME FAT PROCEDURE, in which are described the procedures to follow, and the acceptance criteria to be respected.

Here attached CELME FAT report ref no 23/00084_241004_FAT, as evidence of carried out tests and results.

Some punch-list items was raised, reference is made to the OWL no IR-02-C63-NIDEC here attached.

Celme informs that before the SAT he will provide the check list for installation.

The Goods are accepted by Elogen, the relevant release note it will be issued by Elogen to Nidec only after closing of punch-list verification, to be done before shipment (expected to be the next Wednesday 9th Thursady 10th October), by sending pictures which as to be reviewed by Nidec/Elogen.

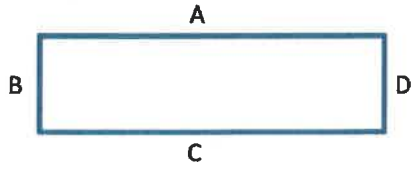
celme	Transformer Technical Datasheet	TDS.TOD3176.V001 revision A/0

Three phase transformer according to IEC 60076 for installation in safe zone with the following features:

natural ester Cargill FR3 (according to IEC 62770)



hermetic type (integral filling)

Type of load

The transformer is designed for continuous duty (THDi considered <3%)

Nominal ratings

Power 3,2 MVA KNAN

	Primary	Secondary
Power [MVA]	3.2/2.4	2 x 1.6/ 2 x 1.2
Rated voltage [V]	6600	2 x 360/ 2 x 270
Rated current [A]	279.93	2 x 2566
Material	AL	AL
Tap-changer	off-circuit	/
Taps	±2x2.5	/
Highest system voltage [kV]	7,2	1,1
Power frequency voltage [kV]	20	3
Impulse voltage [kV]	60	/
Bushing type	plug-in type - int. C 36kV/630A	porcelain 1kV/3150A
Bushing number	3	2 x 3 + 2 x 3
Bushing placement	cover side A	cover side C
Bushing protection	/	/

Electrical data

Frequency [Hz]	50	
Vector group	Dy11y11	
Impedance [%] @75 °C	7	(at Sn/2, 6600/360 V)
No load loss [W]	1400	
Load loss [W] @75 °C	42000	(at Sn/2, 6600/360 V)
Total loss [W] @75 °C	43400	(at Sn/2, 6600/360 V)
No load current [%]	0,5	
PEI [%]	99,52	

		Voltage drop				Efficiency			
Power factor		0,85	0,90	0,95	1,00	0,85	0,90	0,95	1,00
Load	1/4	1,19	1,05	0,86	0,34	99,41	99,44	99,47	99,50
	2/4	2,40	2,13	1,74	0,72	99,13	99,18	99,22	99,26
	3/4	3,63	3,22	2,65	1,12	98,79	98,85	98,91	98,97
	4/4	4,87	4,34	3,58	1,55	98,43	98,52	98,59	98,66

Environmental and working conditions

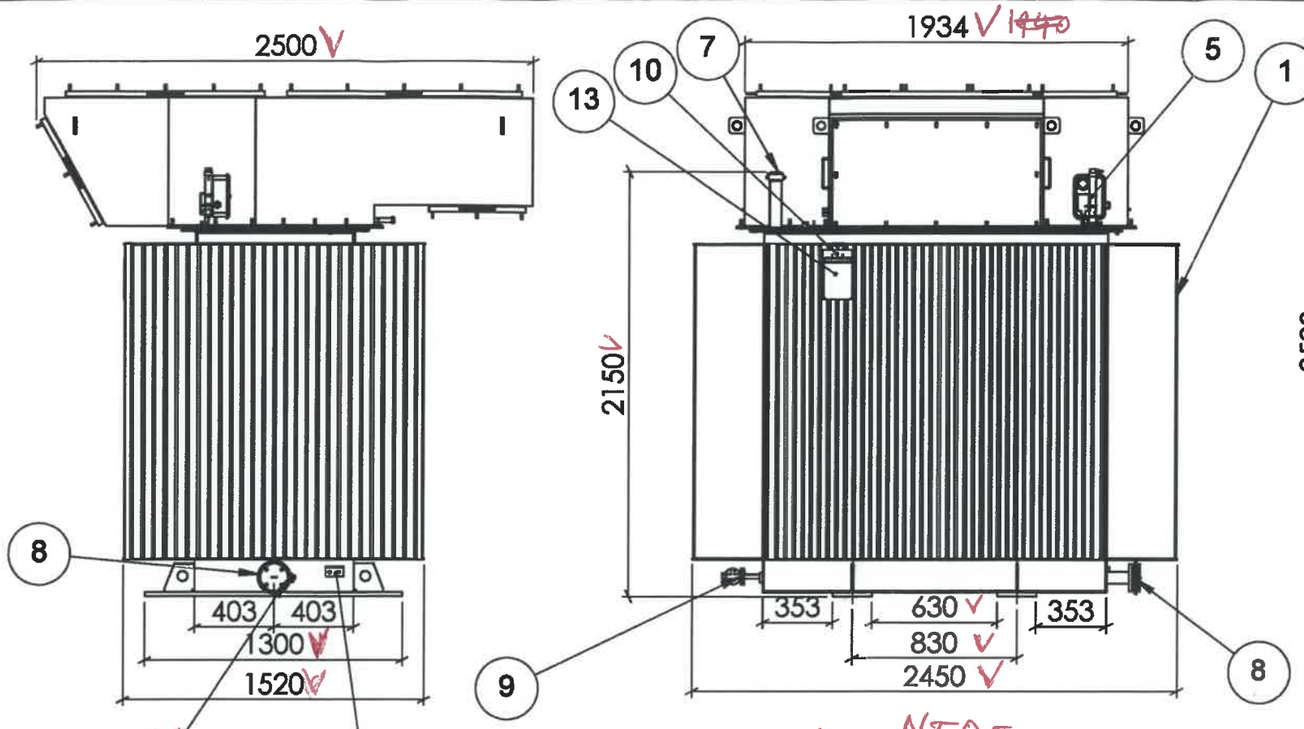
Minimum ambient temperature	-10 °C	
Maximum ambient temperature	40 °C	
Maximum installation altitude	1000 m	
Fluid temperature rise	60 K	
Winding temperature rise	65 K	
Corrosivity category	C5	durability: VH
Lp(A) @ 1m	75 dB(A)	

Mechanical data

Weights		Base
Fluid	2220 kg	Skid
Total	7830 kg	

Overall dimensions

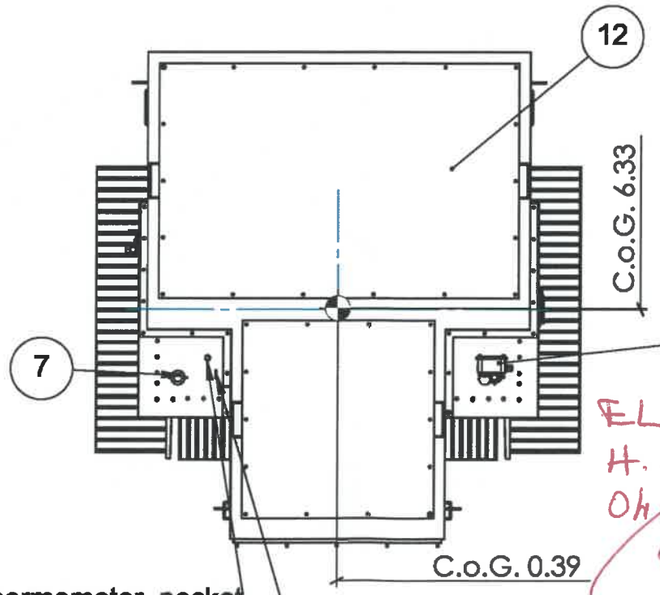
Service conditions



Lenght	2450 mm
Width	1520 mm
Height	2199 mm

Painting

The external protection is suitable for ambient C5. All the metallic surfaces are sandblasted Sa 2½. Tank is hot-dip galvanized (except for stainless steel parts). The paint thickness is 310µm. The color is RAL 7033.



Fittings

1 x Rating plate
2 x Earthing plate
1 x Filling plug
1 x Drain valve
1 x Sampling valve
1 x Spare thermometer pocket
1 x Electrostatic shield
1 x DGPT2 (safety device for hermetic transformers) fitted with PT100
3 x Surge arrester (primary side) - supply as loose material

Bushing	Voltage [V]
1U-1V-1W	6600
2u-2v-2w	360
2u'-2v'-2w'	270
3u-3v-3w	360
3u'-3v'-3w'	270

OIL MASS	2220 [kg]
DRY MASS	5880 [kg]
TOTAL MASS	8100 [kg]

QUALITY CONTROL PLAN

Oil immersed transformers
Mod 04 13

PFC02.2300084
revision A/1

Legend:

INSTRUCTIONS AND PLANS
IT: operative instructions;
SF: supply specifications;
PCA: check-in control plan;
PCQ: quality control plan;
D: drawing.

RECORDS OF P.C.C.
VCNu: magnetic circuit record;
VCCa: tank control record;
VCOl: oil control record;
Vco: test record;
RPF: supplier test record.

OPERATIVE AND CONTROL DATASHEET
SRM: assembly datasheet;
SA: winding datasheet;
SS: pre-spedition check.

OTHER
D.d.C.: supplier's declaration of conformity;
M: marking;
DD: PC record;
F: supplier's check;
AE: external assembler check.

INTERNAL FUNCTIONS
DG: general management;
FQ: quality function;
CQ: quality control;
FT: technical function;
FP: production function;
FC: sale function;
FA: purchase function;
MAG: warehouseman.

PARTICIPANTS
C: customer;
CF: final customer;
TP: third party.

ACTIVITIES
H: must be performed with a witness;
W: should be perfomerd with a witness; the internal record can be requested;
R: the internal record can be requested.

NOTE:
CELME, for some of its actions, doesn't prepare any quality document because the material is approved by the supplier's documents. In case of defective or broken material, a non-conformity record (N.C.) is open.
The column "Record n°" can be compiled upon customer's request with the relevant documents of the single transformer or of the production batch.
