Stat-X® Aerosol Fire Suppression

Electric Generator

Owner's Manual

Version 1.2.5
August 2021
P/N 19001

Fireaway Inc. 5852 Baker Road • Minnetonka,MN 55345

INTRODUCTION

Thank you for your purchase of a Stat-X® aerosol fire suppression product. This brief manual is designed to provide you with a general understanding of the product, as well as, general information on installation, operational, and maintenance parameters. It is not a detailed Design, Installation, Operation, and Maintenance Manual. A detailed manual may be obtained by contacting the manufacturer:

Fireaway Inc.
5852 Baker Road
Minnetonka, MN 55345
U.S.A.
www.statx.com

Stat-X systems and generators are to be installed and periodically inspected by trained personnel ONLY. No modifications are to be made to the installed system without consulting a qualified system designer. The system is made up of units tested within limitations contained in the detailed Design, Installation, Operation, and Maintenance Manual. The system designer must be consulted whenever changes are planned for the system or the protected area. An authorized installer or system designer must be consulted after the system has discharged.

SYSTEM DESCRIPTION

General

Stat-X systems combine an environmentally safe fire suppression agent, specially developed components, and fire detection devices for rapid agent application. The resulting timely suppression of fire may reduce property, facility, and equipment damage. These systems are electrically operated, are compact, and eliminate expensive pressure vessels, nozzles, and distribution piping associated with other gas and water based fire suppression systems. The Stat-X aerosol agent is extremely effective when compared to alternative agents and aerosol generators are strategically placed throughout the hazard area offering significant weight and space savings over conventional systems. Stat-X systems are designed for total flooding applications in accordance with established design criteria. All installations must meet the requirements of the local authority having jurisdiction.

A single or connected group of Stat-X electrically operated units (or generators) are used to suppress Class A (surface), Class B, and Class C fires in specific hazard areas, facilities, or within equipment located in enclosed areas and confined spaces where low weight/space to extinguishing capacity is a factor.

The fire-extinguishing agent is an ultra-fine aerosol, which hangs in suspension for extended periods of time (for at least 10 minutes) providing excellent protection against re-flash, with minimal clean up.

Stat-X systems and generators are suitable for use in normally occupied and unoccupied spaces. In areas where personnel may be present the system shall employ a pre-discharge alarm and 30 second time delay prior to activation. Provision for system isolation for system maintenance shall be provided when personnel may be in the protected area.

They are intended to protect the following typical applications:

- Electrical Cabinets and Rooms
- Generator Rooms
- Glove Boxes
- Telecommunications Facilities
- Flammable Liquid Storage Areas
- Process Control Rooms
- Storage Vaults
- Marine Engine Rooms*
- Gas Turbine Enclosure
- High Value Mobile Equipment*
- Power Plants
- High Value Industrial Equipment Areas

*Not part of the UL Listing under UL Subject 2775 but are covered under other applicable listings (American Bureau of Shipping, Marine and Coast Guard Agency, ECB, and others)

Stat-X generators are not suitable for the following hazards; or, where the following materials may be present:

- Materials, which burn with deep-seated characteristics (wood, fiber, cotton, etc.)

- Electrical equipment operating at over 40,000 V
- Metal hydrides, pyrophoric substances, and chemical substances that smolder and burn without air
- Metal powders (magnesium, titanium, etc.)
- Environments which require devices specifically listed/labeled for installation inside rated hazardous areas (explosive atmospheres).*

*Stat-X products suitable for use in classified hazardous areas are listed separately under UL File No. E495772.

Extinguishing Agent

The aerosol produced upon activation of a Stat-X generator suppresses fire by a combination of chemical and physical mechanisms similar to the Halons without negative effect on the environment. Because of the aerosol's ultra-fine particle size (≤2 micron) there is a dramatic increase in the surface area interaction between the agent and the fire.

Unlike gaseous agents the aerosol does not decompose in the presence of fire nor does it extinguish by oxygen deprivation. The aerosol is considered non-toxic to humans when applied in normal design concentrations necessary to extinguish most fires; however, certain safety restrictions should be observed when applying and handling the generators. Exposure to the aerosol should be limited and unnecessary exposure to the particulate should be avoided. Exposure to the aerosol is generally less concerning than exposure to the decomposition products of a fire.

Toxicity: Tests conducted by Charles River Laboratories (Tranent, Scotland) as well as others have shown that the aerosol does not present a health hazard due to limited accidental exposure at normal design concentrations. Exposures under five minutes are normally considered safe.

While the components of the aerosol are not considered toxic at normal concentration levels, ingestion of the ultra-fine particulate may cause short-term discomfort and unnecessary exposure should be avoided. Tests have shown no long-term negative effects from exposure to the aerosol. In addition, the aerosol has a high obscuration factor. US EPA has approved Stat-X for use as a total flooding system for normally occupied spaces.

NOTE

STAT-X SYSTEMS SHALL ONLY BE APPLIED IN AREAS WHERE PERSONNEL MAY BE PRESENT IN CONJUNCTION WITH A 30-SECOND TIME DELAY TO ENSURE EGRESS OF PERSONNEL PRIOR TO SYSTEM DISCHARGE. A SYSTEM MAINTENANCE ISOLATE SWITCH SHOULD BE INSTALLED IN NORMALLY OCCUPIED AREAS.

Residue and Cleaning: The ultra-fine aerosol discharge remains in suspension for an extended period and can be vented by a fan or air handling system. Aerosol residue, which may have settled on the floor, equipment, or other surfaces, can be vacuumed or wiped clean with a water & acetic acid solution (e.g. vinegar). Settled and agglomerated particulates following an aerosol discharge is initially deliquescent in spaces with high humidity and is soluble in water.

Other Safety Considerations: The aerosol discharged into the hazard area upon activation of the generator is relatively "cool." However, the aerosol stream as it leaves the generator is above 100°C for a short distance from the outlet of the generator. Maximum temperatures are realized only in the last seconds of discharge. Each model has a required installation clearance distance specified as its "C-Zone." Steps must be taken to ensure generator placement so that it complies with this installation requirement. The generator housing is approximately 90°C immediately after discharge and care should be taken if handling the post-discharge generator prior to its cooling to ambient temperature.

Generators must never be installed to discharge directly on walls or equipment being protected, as this will cause agglomeration.

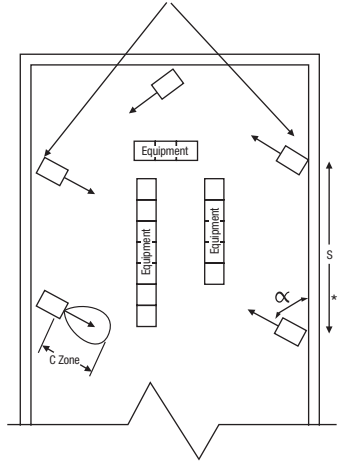
Storage: Each Stat-X aerosol generator is sealed with a non-permeable membrane and is unaffected by fluctuations in temperature and humidity. Accelerated aging tests have shown the generator's charge maintains its viability for more than 15 years under conditions ranging from - 40°C to + 54°C and cycled relative humidity levels up to 95%.

INSTALLATION

Facility Considerations

Significant Obstructions/Agent Distribution: In cases where there is a large ratio of fixed equipment to total volume, or where the protected equipment is located in such a way as to present a barrier to the free flow and distribution of aerosol throughout the hazard area, the use of a larger number of smaller aerosol generators may be more suitable. This will allow for strategic placement of the aerosol generators and improved distribution characteristics throughout the protected area.

Mounting: Stat-X aerosol generators are listed for both sidewall and ceiling locations and may be mounted on walls, beams, constructions, and columns, as long as the unit is securely bolted to the support structure and is mounted in a position where its "C-zone" (clearance zone where momentary peak temperature of the discharge will not exceed 75°C) will not impact on personnel, facilities, equipment or combustible materials located within the protected area. Housing clearance is required spacing of generator from combustibles and structural materials.



Aerosol Stream Characteristics			
Model	**C - Zone**	**Height Max.**	**Housing Clearance**
30E	0.25m/9.8"	0.5 to 1.22 m/19.7-48.0"	7mm/0.25"
60E	0.35m/13.8"	0.5 to 2.00 m/19.7-78.7"	7mm/0.25"
60ME	0.30m/11.8"	0.5 to 2.00m/19.7-78.7"	7mm/0.25"
100E	0.46m/18.1"	0.5 to 2.50 m/19.7-98.4"	13mm/0.50"
250E	0.75m/29.5"	0.5 to 2.75 m/19.7-108.3"	13mm/0.50"
500E	1.27m/50.0"	0.5 to 3.50 m/19.7-137.8"	13mm/0.50"
1000E	2.30m/90.6"	0.5 to 4.88 m/19.7-192.1"	13mm/0.50"
1500E	2.00m/78.7"	0.5 to 4.88 m/19.7-192.1"	30mm/1.00"
2500E	2.70m106.3"	0.5 to 4.88 m/19.7-192.1"	30mm/1.00"

Mounting Height: In general, the aerosol generators should be mounted at or near ceiling height and angled toward the floor at an angle to ensure three-dimensional distribution of aerosol and an unobstructed discharge path. (15° - 30° for sidewall mounting). To ensure maximum distribution of aerosol throughout the hazard area, the maximum height of generator placement from the floor must be limited as indicated above. Underfloor applications should be mounted horizontally.

Flow: Placement of the aerosol generators to ensure proper aerosol flow and distribution is extremely important as each generator functions as a flow nozzle. **Aerosol generators must never be positioned to discharge directly at each other!** This will cause agglomeration of the aerosol particulate, reducing the aerosol's extinguishing effectiveness. **For the same reason, aerosol generators must be positioned to ensure that the aerosol stream does not impinge directly on walls or the sides of equipment being protected.**

Typical Placement

Aerosol Generators

*Spacing "S" should be even unless prevented by obstruction.

Operating/Temperature Range: Stat-X aerosol generators are listed to operate within a temperature range of -40°C to +54°C/-40ºF to 129.2ºF. Generators are sealed with a non-permeable membrane and are unaffected by fluctuations in humidity and temperature.

EQUIPMENT INSTALLATION

General. All Stat-X generators must be installed to facilitate proper operation, inspection, testing, and any other maintenance as may be necessary. Equipment must not be subject to mechanical, chemical, or other damage, which could render the unit inoperative. Equipment must be installed in accordance with all applicable standards and the contents of this section of the manual.

WARNING

AEROSOL GENERATORS CONTAIN A FLAMMABLE SOLID AND MUST ONLY BE HANDLED, INSTALLED, AND SERVICED BY A TRAINED TECHNICIAN USING THE INSTRUCTIONS CONTAINED IN THIS SECTION. FAILURE TO FOLLOW THESE INSTRUCTIONS COULD CAUSE A PREMATURE DISCHARGE AND/OR POTENTIAL INJURY.

Aerosol Generator Installation. The Stat-X aerosol generators should normally be located within the protected hazard area. The following installation instructions must be followed in the exact sequence outlined below to prevent accidental discharge, bodily injury, or property damage.

WARNING

TO PREVENT PERSONAL INJURY, DE-ENERGIZE ALL ELECTRICAL CONNECTIONS PRIOR TO GENERATOR INSTALLATION.

Single Generator System:

1. Position mounting bracket and securely fasten to wall, ceiling, or other supporting structure in a location and manner, which ensures the generator will not be subjected to accidental damage or movement.

2. Remove generator from shipping container and inspect integrity of the non-permeable membrane and generator. Do not install if the membrane is ruptured in any way or if the housing has been damaged in shipment. Verify igniter integrity with Ohmmeter. Do not install if reading > 2 ohms.

3. Securely attach generator to the mounting bracket with generator clamp taking care to ensure the clamp is free of the initiator mechanism and that all bolts are securely tightened.

4. Position generator, via the bracket-mounting swivel, to allow for an unimpeded discharge upon activation. Care must be taken so that the generator does not directly discharge at close range at the wall, ceiling, or vertical surfaces of the equipment within the hazard area.

5. Taking care to ensure that power is off, connect electrical lines to the initiator fitting at the top of the generator.

NOTE

THE INTERFACE BETWEEN THE GENERATOR AND THE FIRE ALARM CONTROL PANEL MAY REQUIRE ADDITIONAL ELECTRICAL DEVICES TO MEET LISTING COMPATIBILITY REQUIREMENTS. CONSULT FIRE ALARM CONTROL PANEL MANUAL FOR ANY LISTED SPECIAL FIELD DEVICES THAT MAY BE REQUIRED AS PART OF THE RELEASING CIRCUIT (E.G. EMATCH PROTECTION DEVICE, P/N 3005014).

WARNING

DE-ENERGIZE ALL ELECTRICAL CONNECTIONS PRIOR TO GENERATOR INSTALLATION. BE CAREFUL TO ENSURE THAT NO BODY PART IS PLACED DIRECTLY IN FRONT OF THE GENERATOR'S EXIT PORTS DURING INSTALLATION.

Multiple Generator System:

1. Position mounting brackets and securely fasten to wall, ceiling, or other supporting structure in a location and manner, which ensures the generators will not be subjected to accidental damage or movement.

2. Make sure mounting brackets are located in a manner to ensure a circular flow pattern and maximum dispersal and mixing of aerosol and air during discharge.

3. Remove generator from shipping container and inspect integrity of the non-permeable membrane and generator. Do not install if the membrane is ruptured or punctured in any way or if the housing has been damaged in shipment. Verify igniter integrity with ohmmeter. Do not install if reading is outside a range of 1.4 – 2.0 ohms.

4. Securely attach generators to the mounting brackets with generator clamps taking care to ensure the clamps are free of the initiator mechanism and that all bolts are securely tightened. **Aerosol gases discharged from the generator will add thrust loading on the clamps. It is essential that the fasteners are secure.**

5. Position generators, via the bracket-mounting swivel, to allow for unimpeded discharge upon activation. Care must be taken so that the generator does not directly discharge at close range on the wall, ceiling, or vertical surfaces of equipment within the hazard area. Generators must be positioned to promote circular flow and mixing of aerosol from multiple generators. Aerosol generators must never be positioned to discharge directly at each other! This will cause agglomeration of the aerosol particulate, reducing the aerosol's extinguishing effectiveness. The aerosol system is designed to flood the protected space when the generators are positioned in a balanced arrangement. It is not required for the generators to be aimed at specific hazards as local application streaming devices.

6. Generators can be wired in series or parallel to a releasing control panel. Activation current must be supplied to each generator as follows:

Activation parameters of the initiator are:

- Resistance: 1.4 – 2.0 Ohms
- Minimum parallel circuit firing current: 0.5A for 0.050 seconds.
- Minimum series circuit firing current: 1.0A for 0.050 seconds.
- Specified maximum test current: ≤0.025A.
- Specified maximum supervisory current: ≤.005A.

7. Install releasing control panel, detection, and ancillary devices per the directions contained in the manual supplied. Wiring is to be installed to local code requirements.

8. Once the electrical components of the system have been installed and tested, ensure power is off and then connect electrical lines to the initiator fitting at the top of the generator.

Post Installation Checkout: After the Stat-X generators have been installed and connected to the appropriate detection and/or control system perform the following inspection and tests.

1. Verify generators of the correct size are installed per the installation drawings.

2. Verify generator mounting brackets and clamps are properly installed and that all fittings and fasteners are tight.

3. Verify electrical connections have been made and test for electrical continuity using an ohmmeter.

4. Verify generators are positioned properly. Check for obstructions in the path of the aerosol discharge stream. Generators must be installed such that they cannot cause personnel injury upon activation. The aerosol discharge stream must not impinge at close range on walls, ceiling, or equipment.

5. Manual/electrical release stations must be properly installed, readily accessible, and clearly identified.

6. Verify time delay functionality and integrity.

7. All acceptance testing shall be in accordance with this manual, any applicable standards, and the authority having jurisdiction.

OPERATION

General. A solid charge of the aerosol composition is contained within the sealed generator. Upon activation of the initiator, the charge begins a controlled burn producing an ultra-fine aerosol. The aerosol passes through an oxidation filter, where CO is converted to minor amounts of CO_2, and then through a cooling bed where the temperature of the aerosol is rapidly reduced before it escapes through the discharge ports of the generator at low pressure. Generator placement within the hazard area provides proper flow and distribution of the aerosol within the protected area.

Operating Procedures

Electrical Automatic Operation: Electrical automatic operation occurs upon activation of the detection circuit, initiating a voltage source from the fire alarm control panel to the generators.

In areas where personnel may be present, a 30 second time delay is required to ensure egress time prior to system discharge. In normally occupied areas, a system maintenance isolate switch shall be installed outside the hazard area to ensure that activation of the system is "manual only" during maintenance of the system.

Personnel must evacuate the hazard area promptly upon hearing the pre-discharge alarm. Ensure no one enters the hazard area after discharge and call the fire department promptly.

NOTE

THE ABOVE INSTRUCTIONS MUST BE POSTED ON DISPLAY IN THE PROTECTED AREA.

Remote Electrical Manual Operation: Manual electrical operation is performed by manual release from a releasing device located outside the protected enclosure. Operate as follows:

1. Upon fire notification, leave the hazard area quickly

2. Proceed to the appropriate remote manual/electrical release station for the hazard.

3. Ensure all personnel have left the protected enclosure.

4. Operate manual pull station.

5. Allow no one to enter the hazard area. Call the fire department promptly.

Maintenance System Isolate Switch: Unless prohibited by the local authority having jurisdiction, the automatic operation of the system shall be prevented by means of a system isolate switch (lockout located outside the protected area) during maintenance when personnel are present. The operation of the system shall be manual only during maintenance operations on the fire detection system or on the generators. While the system isolate switch is active the automatic activation of the system is inhibited but the fire detection and alarm system shall continue to function. The system shall return to full automatic control when the switch is reactivated. An abort switch may be installed to allow personnel to delay the automatic operation of the system.

Post Discharge Operation: After discharge of a Stat-X fire suppression system, qualified fire suppression system maintenance personnel must perform post discharge maintenance and system installation procedures outlined in this manual. Observe all warnings, especially those pertaining to the length of elapsed time before entering the hazard area.

WARNING

DO NOT ENTER A HAZARD AREA WITH AN OPEN FLAME OR LIGHTED CIGARETTE. THE POSSIBLE PRESENCE OF FLAMMABLE VAPORS MAY CAUSE RE-IGNITION OR EXPLOSION.

WARNING

WHILE MAINTAINING ENCLOSURE INTEGRITY, ENSURE FIRE IS COMPLETELY EXTINGUISHED PRIOR TO VENTILATING AREA. BEFORE PERMITTING ANYONE TO ENTER THE HAZARD AREA, VENTILATE AREA THOROUGHLY OR USE SELF-CONTAINED BREATHING APPARATUS.

Post Fire Operation: The following procedures must be followed in the exact sequence to maintain and re-commission Stat-X generators as part of a suppression system:

1. After discharge, allow a minimum holding time of ten (10) minutes

2. Always be sure to have backup portable extinguishers at hand for use in the event of re-ignition.

3. Vent area thoroughly by operating the ventilation system, by fan extraction, or by opening doors and windows. Avoid opening doors leading to other occupied rooms. To avoid unwanted inhalation of fire by-products and aerosol, a protective breathing apparatus or mask should be worn if it is necessary to enter prior to complete ventilation of the hazard volume.

4. Inspect the area to ensure the fire is completely extinguished and that there are no localized hot spots or other sources of re-ignition present.

5. Clean residue which have not been removed during ventilation, by thoroughly vacuuming, blowing, brushing, or washing away (with a water and 3.5% vinegar or similar acetic acid solution) as appropriate. Check to make sure that there is no agglomeration due to discharge too close to equipment, walls etc. If any agglomeration exists it must be wiped or

washed clean. Consult Stat-X Safety Data Sheet for safety information.

6. **Important! Any residue which is not cleaned up shortly following discharge can absorb moisture in air.** A change in room temperature during a fire event or discharge can affect humidity and it is important to reduce the enclosure humidity as soon as possible following discharge.

7. Remove spent generators, being sure to wear gloves or other hand protection. The generators will remain quite warm to the touch for a time after actuation.

8. Dispose of spent generators per applicable federal, state, and local regulations

9. Contact your Stat-X distributor immediately for replacement generators. Replacement and commissioning should only be undertaken by trained personnel

NOTE
WARNING
Before performing post fire maintenance procedures refer to the Stat-X Safety Data Sheet.

MAINTENANCE

General: To ensure proper operation of your fire suppression system, a systematic maintenance program is required. A periodic maintenance schedule must be instituted including an inspection log maintained for reference. The log should, at a minimum, record: (1) inspection interval, (2) inspection procedure performed, (3) maintenance performed, if any, because of inspection, and (4) the name of the responsible person performing the operation.

Preventive Maintenance. Fireaway suggests that a preventive maintenance program require, at a minimum, the following schedule:

Type of Survey: Weekly/Six Month/On 15th year Inspection Steps	Date: Yes	No	N.A.
Perform a general visual inspection of all aerosol generators for damaged or missing parts. Examine each device for a puncture in the aluminum foil seal at orifice plate. Replace generator if foil is punctured or ripped.			
Verify at the control panel for any fault or trouble indication with regards to the panel output releasing circuit(s). If there is an indicated releasing circuit fault, verify electrical signal connection from panel to each aerosol generator electrical initiator. Test using a multi-meter, the line resistance of the releasing circuit signal line. Replace aerosol generator if each electrical initiator resistance exceeds operational range of 1.4Ω to 2.0Ω.			
Inspect aerosol generators for physical damage that is not superficial, such as cracks, dents, distortion, or corrosion. If damage is found, replace generator as instructed in the owner's manual.			
Verify mounting brackets and straps, tightness of mounting hardware, and generator alignment are properly secured. Tighten all loose hardware or replace damaged parts.			
Ensure paths of emergency egress from protected area is not impeded by an aerosol discharge as well as unobstructed access to manual pull stations and abort devices (where installed). Ensure there are no obstacles inhibiting the proper operation of the aerosol generators or distribution of aerosol in the event of fire.			
Ensure automatic dampers (where fitted) are functional. Verify leakage areas identified during the original system design have not been modified.			
Follow specific recommended manufacturer maintenance and test procedure for the fire detection/control system and fire detection devices, and per local codes.			
The aerosol generators have an installed service life of fifteen (15) years. Replace each generator fifteen (15) years from the marked date code in the lower right corner of the product label.			

N.A.: Not Applicable

Inspection Procedures

Weekly

1. Check all electrical connections to ensure operation of the Stat-X generators in the event of a fire. If connected to a fire alarm control panel, check the panel status.

2. Make a general visual inspection of all aerosol generators for damaged or missing parts, and visually inspect that generator mounting is secure.

Every Six Months

1. Ensure access to hazard areas, lines of egress, and manual release stations are unobstructed and that there are no obstacles inhibiting the proper operation of the aerosol generators or distribution of the aerosol in the event of a fire.

2. Inspect Stat-X aerosol generators for physical damage, such as cracks, dents, distortion, or corrosion. If damage is found, replace generator as instructed in the installation section of this manual.

3. Inspect mounting brackets, clamps, and associated hardware for loose, damaged, or broken parts. Replace damaged parts and tighten all loose hardware.

4. Inspect all manual release stations for damage, dirt, or distortion. Inspect station for signs of physical damage, replace if necessary.

5. Inspect all electrical connections and run electrical continuity tests using an ohmmeter. Repair and replace as necessary.

6. Replacement: The aerosol generators have an installed service life of fifteen (15) years. Generators are to be replaced fifteen years from the date code in the lower right corner of the product label as follows, the 2-digit numeric represents the year and then the month of shipment from the factory:

21	22	23	24	1	2	3	4	5	6	7	8	9	10	11	12

21 = 2021, 22 = 2022, etc. A unit marked 21 12, for example, would have shipped in December of 2021.

RECYCLING OF AEROSOL GENERATORS AFTER DISCHARGE:

In most cases the discharged generator can be disposed of in any landfill that handles industrial waste. However, local regulations must be researched and observed.

Each discharged aerosol generator will contain the following material:

1. Stainless steel outer shell – all

2. Mild steel cross members (30E, 60E, 100E, 250E, 500E)

3. Mild steel spacer ring - all

4. Stainless steel inner shell, top and bottom plates, screens (all sizes), and cross members (1000E, 1500E, 2500E)

5. Activated Alumina: CAS 1333-84-2 (Aluminum Oxide non-fibrous)

30E	60E	100E	250E	500E	1000E	1500E	2500E
20g	40g	100g	550g	970g	1670g	2350g	3600g

1. Fiberglass rope (ø1cm x 50cm).

2. Ceramic Paper < 150g.

3. Wire – 24gauge, PVC coated (< 1g)

4. Trace chemicals: K2CO3 (water-soluble particulate "trapped" in unit during discharge).

Un-discharged generators taken out of service should be returned to your local authorized distributor for replacement and re-cycling.

LIMITED WARRANTY STATEMENT

Fireaway represents this product is free from defects in material and workmanship, and it will repair or replace any product or part thereof which proves to be defective in workmanship or material for a period of eighteen (18) months from the date of first shipment from our factory. Defective units should be returned shipment prepaid to the factory.

Fireaway Inc. will repair or replace and return shipping prepaid. Return or repair shall be the purchaser's sole remedy for defect.

Limitations of Liability

This warranty does not cover equipment damaged during shipment or by misuse, accident, or negligence, or which has been repaired or altered by others. Fireaway Inc. shall not under any circumstances be liable for special or consequential damages such as, but not limited to, damage or loss of property or equipment, loss of profits or revenue, cost of capital, cost of purchased or replacement goods, or claims by customers of the original purchaser. Remedies set forth herein to the original purchaser and all others shall not exceed the price of the equipment supplied.

This warranty is exclusively and expressly in lieu of all other warranties, whether expressed or implied, including warranty of merchantability or fitness.

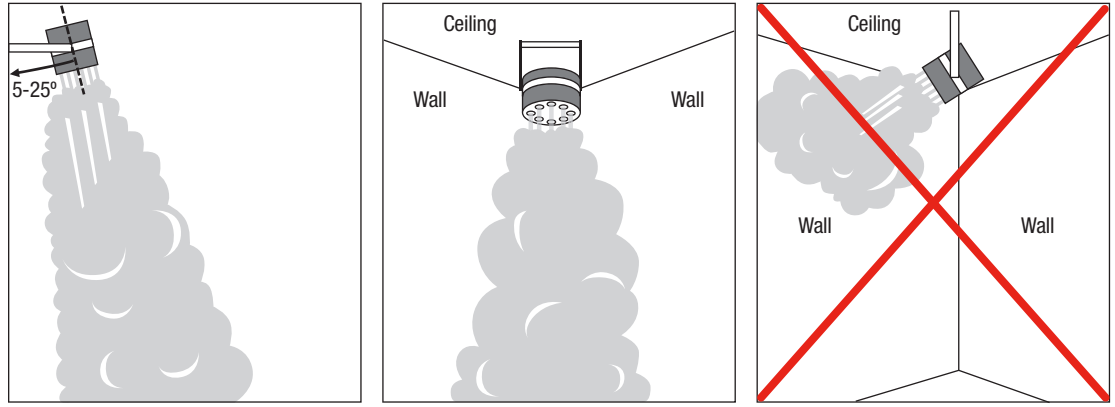
A DETAILED MANUAL MAY BE OBTAINED BY CONTACTING THE MANUFACTURER.

Stat-X products are manufactured in the USA, and sold worldwide (excluding the Federation of Russian States) exclusively by Fireaway Inc. under license from R-Amtech International.

IMPORTANT NOTE

Shutdown of Air Handling and Power Supply

Upon pre-discharge detection of a fire, the ventilation system for the protected volume must be shut-down to ensure the required application density is delivered and that the fire is not exacerbated by excessive air-flow. In addition, electrical power to protected equipment must be shut down. This eliminates the potential of re-ignition from a continuous short circuit.



Questions concerning the information presented in this manual may be addressed to your authorized distributor or:

Stat-X Installation Guidelines:

Aerosol generators should normally be mounted near ceiling height and angled to discharge down (under floor excepted) toward the floor at an angle to ensure three-dimensional distribution of aerosol. Normal orientation from vertical is 15° - 30°.

Generators must never be positioned to discharge directly at each other and must be mounted in such a way as to have an unobstructed discharge path, nor discharge at close range onto walls, ceiling, or equipment. Always check for obstructions in the path of the aerosol discharge stream. Generators must be installed such that they cannot cause personnel injury upon activation.

PUMA FIRE

OPERATING AND MAINTENANCE INSTRUCTIONS

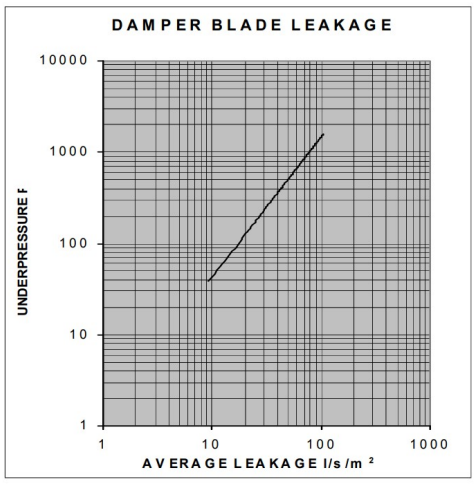
AIR MAKE UP DAMPERS (A.M.D) ALL UNITS

GENERAL DESCRIPTION

Air Make up Dampers (AMD), are designed to provide replacement air to the protected space whilst extracting gaseous extinguishant via a Puma gas extract unit. Refer to drawing No. COMMS 001.

The damper should be located as close as possible to the wall aperture. This will maintain the fire integrity of the wall. The fire rating of the fire smoke damper is 2 hours, tested to BS EN 1634.1:2008.

The casing and blades are constructed from galvanised steel. 25mm external flanges are fitted as standard, 50mm flanges are available upon request. Optional circular / rectangular spigot connections are also available on request.



External Walls require a Telescopic Duct (TD) and Weather Louvre (WL).

Internal Walls require a Wall Sleeve (WS) and Egg Crate Grille (ECG).

The blades are fitted with high temperature silicon blade seals. They have a leakage performance of 53 ltr/s/m2 @ 250 Pa to 103 ltr/s/m2 @ 1000Pa.

All Dampers are available with a fusible link rated at 75˚C, electro thermal link or pneumatic actuators. HEVAC installation frames for masonry walls are available.

Compliant to BS EN 1366-2 with regards to leakage rates not exceeding 200m³/hr/m².

Unit C Alexander Bell Centre, Hopkinson Way, West Portway Business Park, Andover, Hampshire, England, SP10 3UR
Telephone: 0044 1264 333305 Co Reg No 3230570
Email: sales@pumafire.co.uk Website: www.pumaproducts.co.uk
Director Mr Phillip Newton M Inst.R, M.A.S.H.R.A.E.

DAMPER MOTOR

This motor type is 'powered open' and will 'spring return' on power failure. The mains supply must be interlocked with the Puma FE gas extract unit to open simultaneously.

The damper motor is a fully sealed unit and is provided with 1.5m mains supply cable. The motor is factory fitted to the damper casing to prevent any movement of the motor during operation.
Any tampering of the motor seal or cable will invalidate warranty.

In the event of a fire condition, the damper motor will commence opening and be fully open in 75 seconds. When power is removed, the damper will shut in 20 Seconds.

INSTALLATION

The fresh air make up damper is to be installed directly to the face of the wall using self-tapping screws or raw plugs and sufficient fixings, depending on the wall construction. Before fixing the damper to the wall, ensure the flange is lined with fire-rated sealant to allow for a tight seal between the wall and the damper.

SERVICE & MAINTENANCE

The Damper and motor require no service as such, but a periodic mechanical and electrical test of the working mechanisms should be carried out at least twice yearly, or to coincide with existing service and maintenance contracts.
See appropriate certified drawing of units for further information re: sizes etc.

CROSSWIND

TECHNICAL NOTE

Title	**Inspection of low insulation resistance modules 12/02/2025**
Prepared by	Alessandro Sutto
Reviewed by	*Nicolas Le Brun*
Purpose	Highlighting possible causes that led to arc flash and possible mitigation measures for the way ahead of the BESS on BLPH
Doc No.	

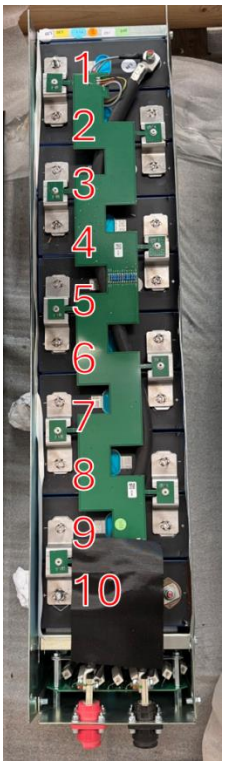
Introduction

Following the arc flash event in January, the investigation on the possible causes lead to point towards low impedance between cells and ground in different modules linked to the same string.

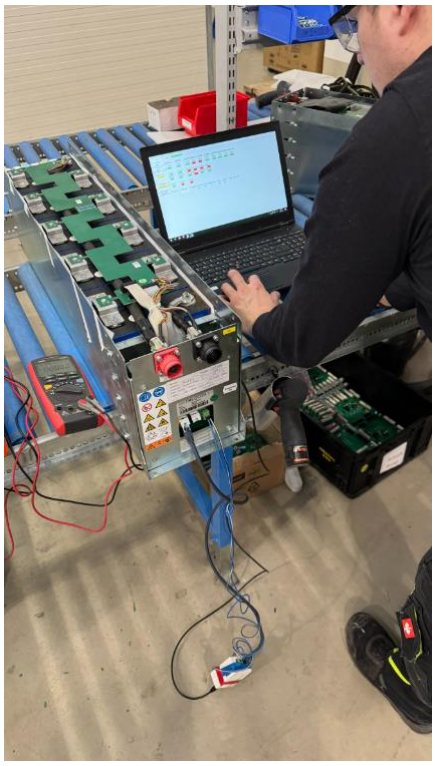
To prevent other events to happen, a measurement campaign was carried out in which all installed modules impedance resistance between ground and both terminal was measured.

The expected healthy value should measure in the range of hundreds of MΩ to GΩ. Five modules had an impedance lower than the expected. The identified modules were sent back to Freqcon HQ for inspection to investigate the causes.

Once in Germany, Freqcon would:



- visually inspect the modules for any external apparent damage,
- measure the impedance resistance (IR),
- connect the BMS to a diagnostic testing unit that can read the value of voltage and temperature inside the module,
- open the module and possibly extract components (BMS or cells) for internal visual check

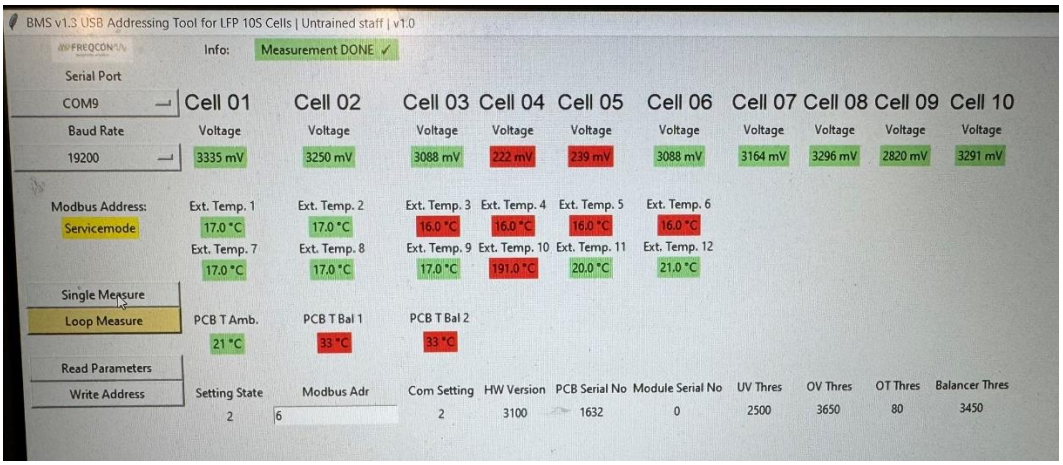


In the following document, a brief description of the findings per module is presented and conclusions on possible root causes and mitigation are presented.

In the pictures below :

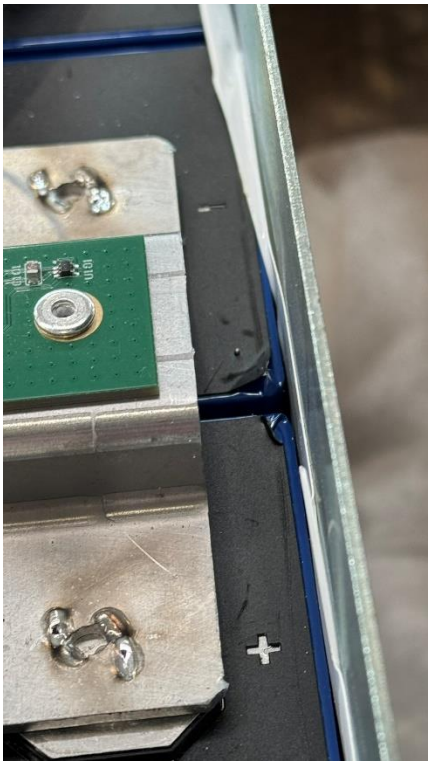
LEFT : the “numbering” of cells inside a module
RIGHT : open module connected to the diagnostic unit

CROSSWIND



Inspection

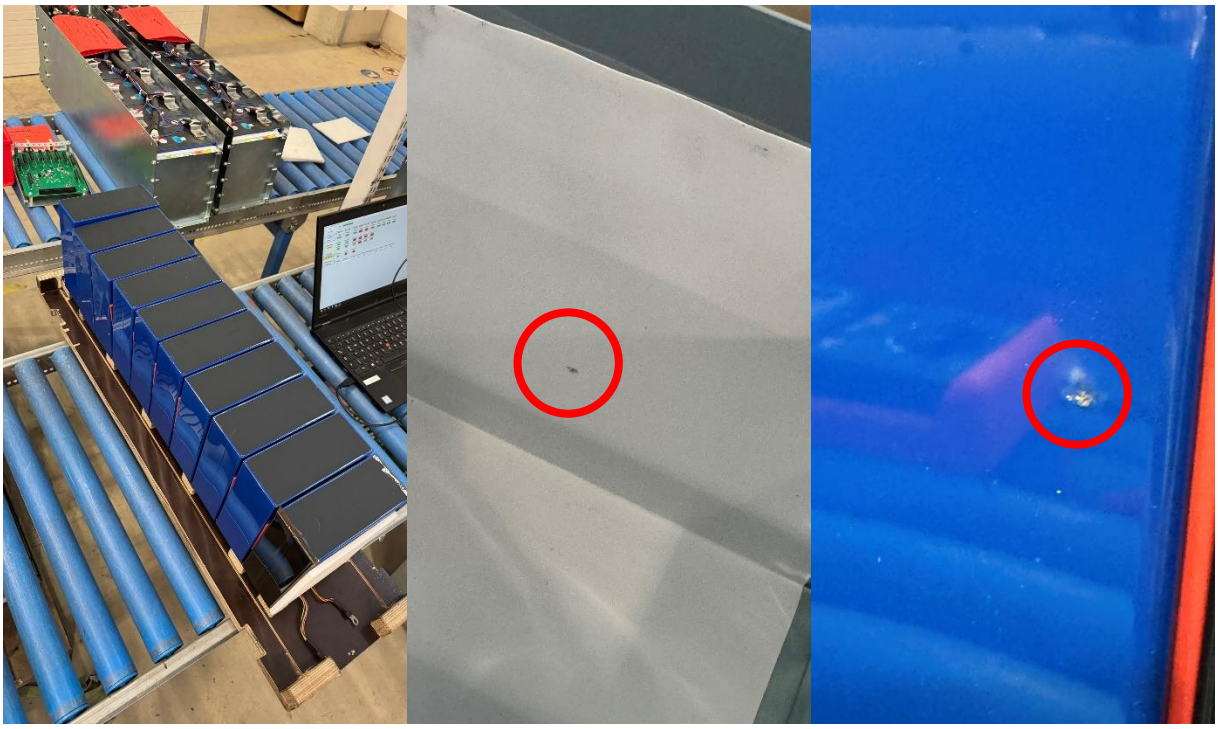
Module #508972000323



When tested the previous day, one could hear “zapping” when applying high voltage (2500Vac), suggesting small arcs between the cells and the case.

Diagnostic showed low voltage on cell 4 and 5, confirmed by a direct measurement with a multimeter.

Cell 9 had a lower voltage than the rest of the string.



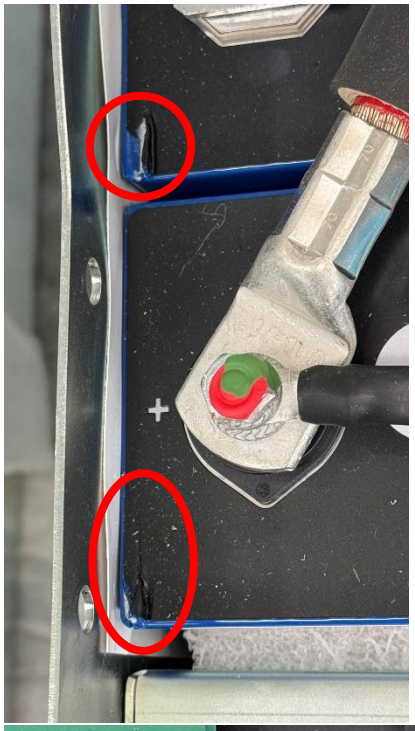
Once opened few visible damage on cell 4 and 5.

The string of cells were then taken out of the casing and flipped over. Visible damage on Cell 9 external blue insulation material linked to a damage on the white insulation sheet, possibly linked to a small fragment.

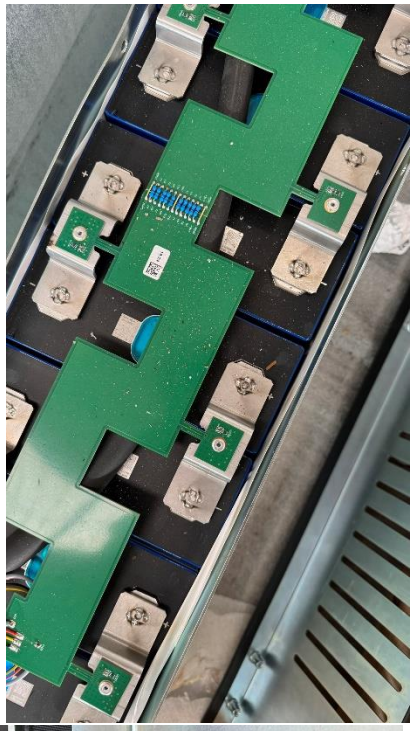
Other visible imperfections close to cell 4 and 5 was oxidized metal casing but not linked to any damage to the insulation sheet or to the cells themselves. No cause found for low voltage.

Module #509344000168

Module was damaged during transport to the yard. It was never installed in the racks.

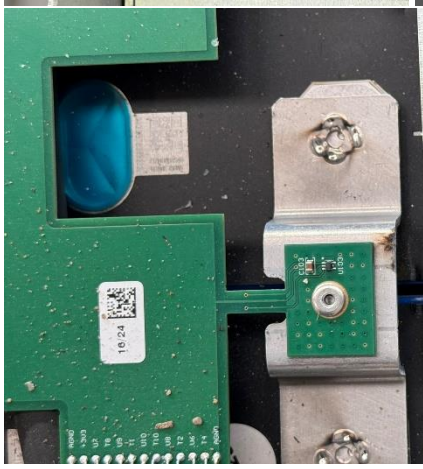


When testing for IR clear zapping could be heard, after opening the cover clear marks of discharge between the connectors of 2 cells and the case lid can be seen. Once the cover was removed there was no more contact or vicinity, so the IR went back to normal high values (GΩ scale). Also the diagnostic didn't highlight any particular issues with voltages.

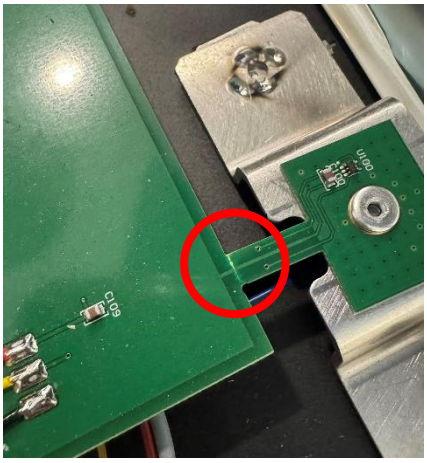


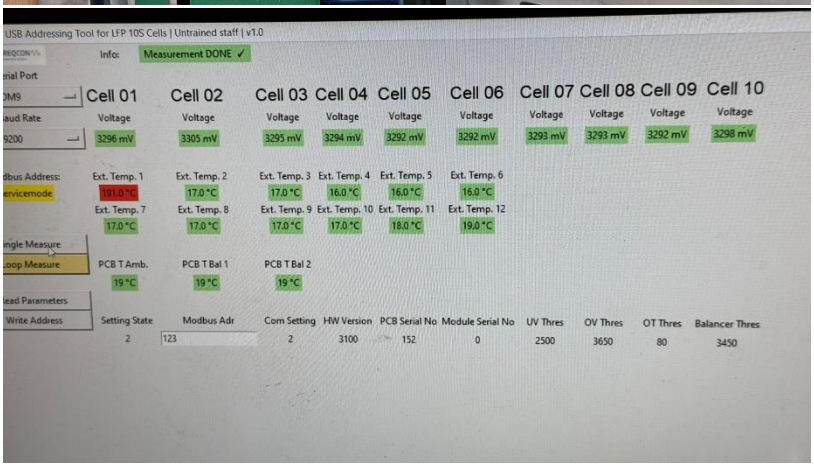
The module was particularly dirty with lots of debris and metal shaving (See magnet probe picture) and other clear damage on cell 10 and 9 on the edges.

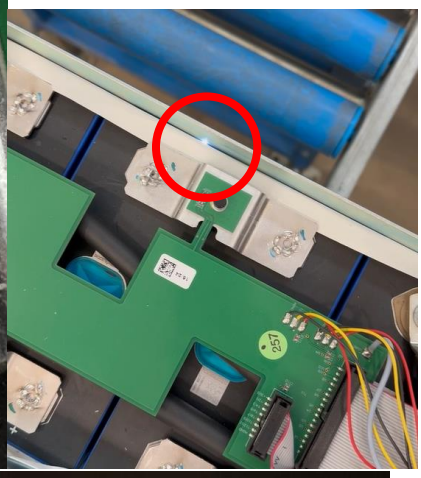
Diagnostic showed temperature probe for cell 1 to be defective. Visual inspection confirmed that the PCB was bent and probably the connection damaged.

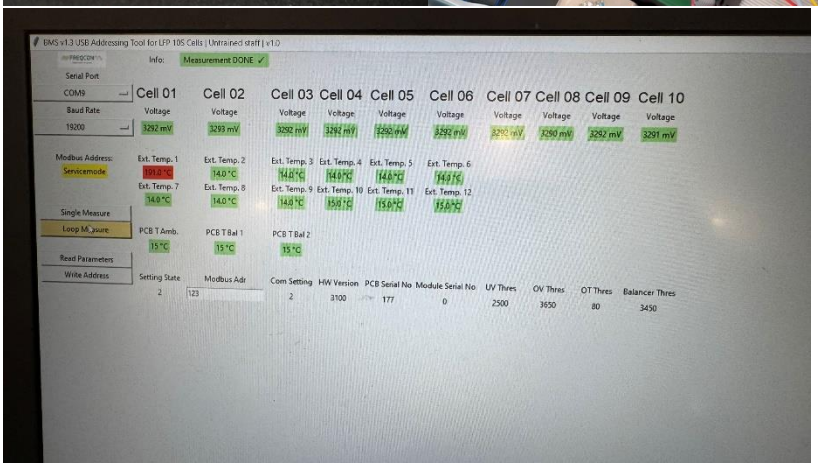


CROSSWIND





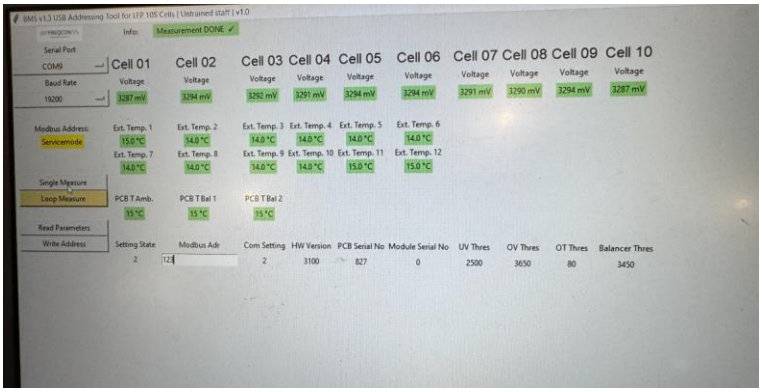




Module #503944000097

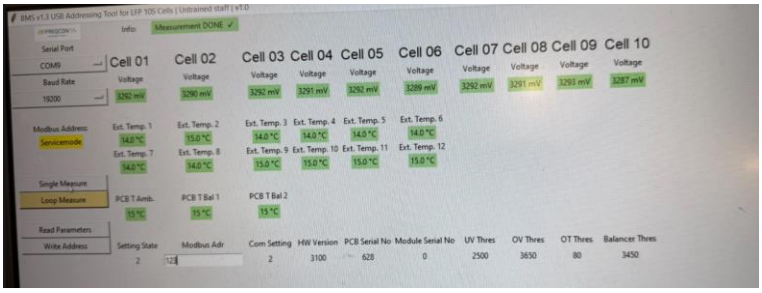
Diagnostic showed temperature probe to for cell 1 to be defective. Visual inspection didn't confirm the finding.

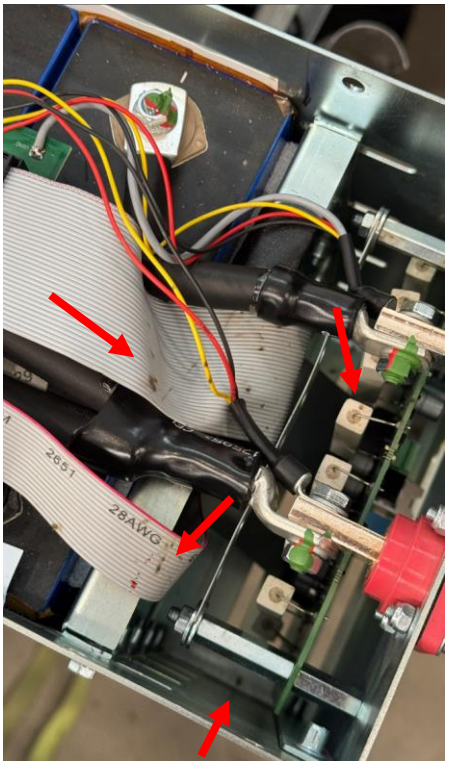
IR measurement produced intense zapping and small sparks could be seen between cell 8 and the case through the insulation sheet. Further inspection found a small metal debris that pierced the insulation sheet and the side of the cell reducing the IR.



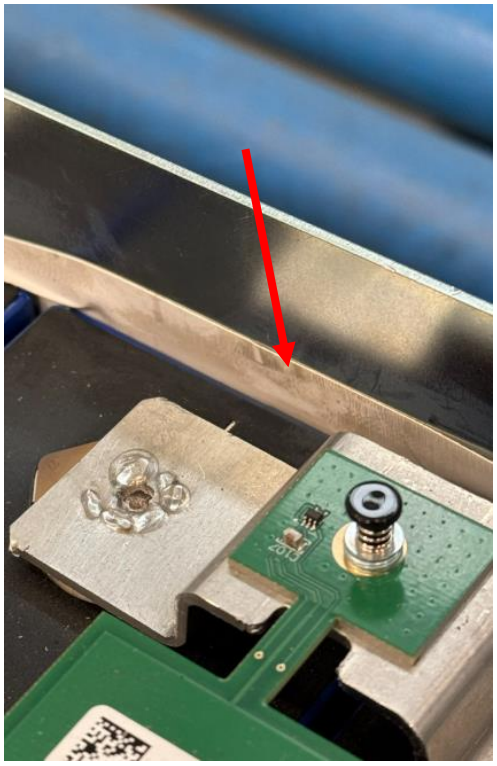
Module #508972000050

IR showed low values, after visual inspection found that case lid damaged the corner of cell 10. The insulating tape on the lid edge ripped while sliding it into position, damaged the cell and reduced the IR.





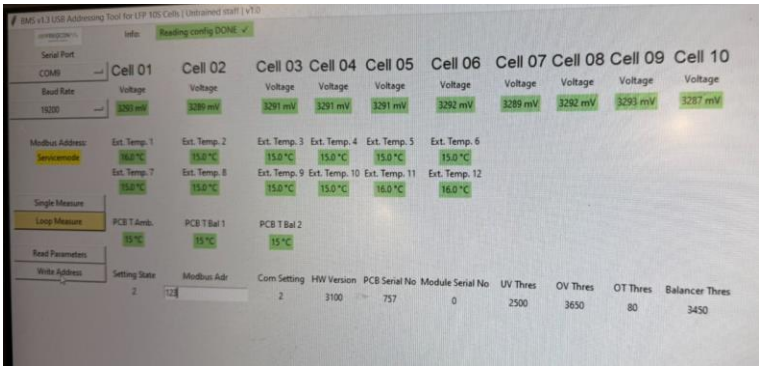
Module #509344000541

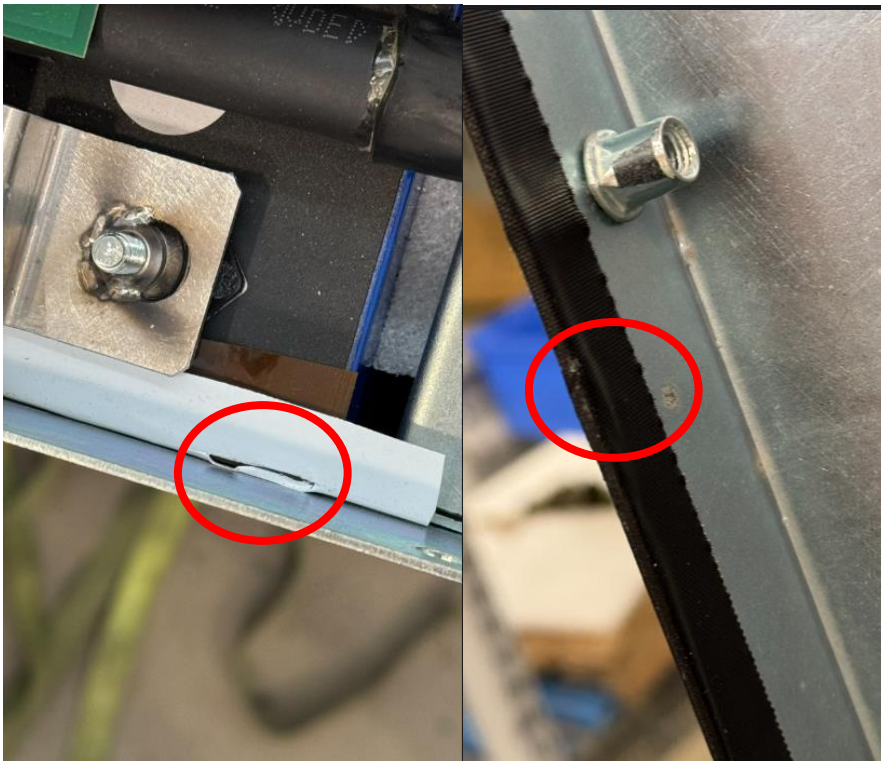


The diagnostic didn't highlight any issues across the cells.

No explicit evidence found after visual inspection. Probably the "damage" is located further down the side of the module in which, similarly to others, a small debris could have ripped the insulation sheet.

Interesting to notice burn-like marks on some parts close to the BMS, on some wiring and the bottom of the module. Not clear what caused them, but also no damage due to it.





Module #508972000062

Visual inspection showed damage on cell 10 like for previous models. Most probably due to excessive pressure when applying the lid or movement during transport.

Root causes

Two main root causes can be identified for the failure and/or damage of the modules.

1. **Transport damage**
   Possibly due to poor fixing of the modules on the pallet, insufficient padding, and/or excessive vibrations during any of the transports (e.g. Germany to Italy, yard warehouse to platform). This might have caused movement of parts inside the modules leading to Printed circuit board bending, or contact between cell edges and the module's lid.
2. **External debris**
   Small particles entering the modules via the lid's aeration slots have resulted in damages to the insulation sheet between cells and the module and/or of the cells insulation themselves, consequently, reducing the IR.
   This could be also linked to the absence of any protective foil/sheet installed after manufacturing and before transportation, as not part of the packing specifications.
   Module 509344000168 was left un-installed and stored for safety reason inside the container, its contamination is clearly showing signs of debris coming from the yard environment. For all the other modules it is hard if not impossible to determine whether the debris and external particles inside them was due to the dusty environment of the yard or already present at the time of shipping from Freqcon.

Possible Mitigations

Insulation resistance has been measured and confirmed in range for all modules currently installed in the system. The remaining commissioning of the system will not involve moving the modules or expose them to dusty environment. It is expected that none of the highlighted root causes had caused damages to them.

Going forward with commissioning , no transport damage can be expected considering modules are now installed in their final location and the only foreseen transport is linked to the sea transport to bring it to the final offshore location. The system has been designed to withstand the calculated accelerations and extra temporary fastening will be provided where necessary.

Additionally, the cabinet covers and the air inlets filters significantly reduce the chance of external debris and particles entering the modules.

Further possible mitigation to improve the transport and preservation of modules might include for Freqcon to review their internal packaging requirements prior shipment, and the procedure and method statement for module installation ex:

- no direct contact between 2 modules on the pallet using appropriate padding material,
- adding damping material/cushioning below the module,
- adding some protective foil to prevent ingress of dust and other particles,
- using close wooden crates instead of open one,
- require IR measurements prior to DC connection,
- update the category of PPE required for certain activities

Purpose of Visit (Bullet Points):

- Visual Inspection
- FAT

Inspection Summary / Findings (Bullet Points):

The inspection was performed based on the client's request via email on July 17th at Freqcon Company, located in 27336-Retham, Germany. The scope of inspection has been specified according to the inspection application through email:

- FAT for PCS Container, BESS Container and Converter

Based on the inspection notification, the inspector was scheduled to participate in the Factory Acceptance Test (FAT). However, due to the lack of the Inspection Test Plan (ITP) and other essential project reference documents, as well as reference documents, there were uncertainties regarding the inspection.
Although some documents received by the inspector, such as the FAT protocol, outlined the acceptance criteria for visual inspection and testing of certain instruments (including smoke detectors, CO detectors, and hydrogen detectors), the overall documentation was incomplete. This report will be updated after receiving the supplementary docs.
Additionally, the vendor informed the attendees that the FAT for the batteries was not planned for this visit.

PCS Container: Serial No. FRQ-53396000001

Examination		Result
Container colour	Required colour/RAL colour code: 7035 (Light Grey)	☑ OK ☐ Defects ☐ N/A
Damage	The container is free of dents and unusual rust (minor rust spots, e.g. on crane eyes, are unavoidable)	☑ OK ☐ Defects ☐ N/A
Performances	The bushings correspond in size and position to the underlying CAD	☑ OK ☐ Defects ☐ N/A
Earthing connections	The earthing lugs are in the correct position (compare CAD) and are not painted	☑ OK ☐ Defects ☐ N/A
Doors/openings	Doors and other openings of the container correspond in size and position to the CAD on which they are based	☑ OK ☐ Defects ☐ N/A
Cooling niche	The cooling recess corresponds to the underlying CAD. The cooling units are in the correct position and can draw in sufficient fresh air.	☑ OK ☐ Defects ☐ N/A
Warnings	The required warning signs are located on the personnel doors	☑ OK ☐ Defects ☐ N/A

Examination		Result
Accessibility	The clearances in the container correspond to the CAD. All enclosure doors are in the correct position and accessible	☑ OK ☐ Defects ☐ N/A
Light/sockets	Sufficient lighting is available. There are service sockets (230 V) in the container interior. The sockets and lighting are usable and easily accessible.	☑ OK ☐ Defects ☐ N/A
Air conditioning	The air conditioning units are in the correct position and at least one control unit for the air conditioning units is present. The air conditioning units are functional and can cool the room to a satisfactory level.	☑ ☐ OK ☐ Defects ☐ N/A
Personal security	All steps in the container (if present) are marked in signal colours (yellow/black). There are no sharp edges in the container.	☐ OK ☑ Defects ☐ N/A
Installation of components and cables in the container	All components such as switch cabinets, cable trays, air conditioning units, etc. are properly installed and cannot fall or tip over.	☐ OK ☐ Defects ☐ N/A
Cable bushings	All cable ducts are present (possibly not fitted) and comply with the client's specification. Covers, cable bushings or similar are available for all openings in the container	☑ OK ☐ Defects ☐ N/A

Notes:

- [redacted] For all the RAL code checks, there was no printed RAL color chart available to check, although the color of the container was light gray.
- The required marked signal for steps shall be stuck.

- The vendor is not able to perform the FAT of some detectors that were installed inside the container.
- The wrong nameplate on the container shall be replaced with the correct one.
- The vendor is not able to do the testing of the earth connection.

BESS 1 Container: Serial No. FRQ-53406000001

Examination		Result
Container colour	Required colour/RAL colour code: 7035 (Light Grey)	☑ OK ☐ Defects ☐ N/A
Damage	The container is free of dents and unusual rust (minor rust spots, e.g. on crane eyes, are unavoidable)	☑ OK ☐ Defects ☐ N/A
Performances	The bushings correspond in size and position to the underlying CAD	☑ OK ☐ Defects ☐ N/A
Earthing connections	The earthing lugs are in the correct position (compare CAD) and are not painted	☑ OK ☐ Defects ☐ N/A
Doors/openings	Doors and other openings of the container correspond in size and position to the CAD on which they are based	☑ OK ☐ Defects ☐ N/A
Cooling niche	The cooling recess corresponds to the underlying CAD. The cooling units are in the correct position and can draw in sufficient fresh air.	☑ OK ☐ Defects ☐ N/A
Warnings	The required warning signs are located on the personnel doors	☑ OK ☐ Defects ☐ N/A

Examination		Result
Accessibility	The clearances in the container correspond to the CAD. All enclosure doors are in the correct position and accessible	☑ OK ☐ Defects ☐ N/A
Light/sockets	Sufficient lighting is available. There are service sockets (230 V) in the container interior. The sockets and lighting are usable and easily accessible.	☑ OK ☐ Defects ☐ N/A
Air conditioning	The air conditioning units are in the correct position and at least one control unit for the air conditioning units is present. The air conditioning units are functional and can cool the room to a satisfactory level.	☑ ☐ OK ☐ Defects ☐ N/A
Personal security	All steps in the container (if present) are marked in signal colours (yellow/black). There are no sharp edges in the container.	☐ OK ☑ Defects ☐ N/A
Installation of components and cables in the container	All components such as switch cabinets, cable trays, air conditioning units, etc. are properly installed and cannot fall or tip over.	☐ OK ☐ Defects ☐ N/A
Cable bushings	All cable ducts are present (possibly not fitted) and comply with the client's specification. Covers, cable bushings or similar are available for all openings in the container	☑ OK ☐ Defects ☐ N/A

Notes:

- For all the RAL code checks, there was no printed RAL color chart available to check, although the color of the container was light gray.
- The required marked signal for steps shall be stuck.
- The vendor is not able to perform the FAT of some detectors that were installed inside the container.
- The wrong nameplate on the container shall be replaced with the correct one.
- The vendor is not able to do the testing of the earth connection.

- **Container type** 40FT BESS **Serial No.** FRQ-53412000001

Notes:

- For all the RAL code checks, there was no printed RAL color chart available to check, although the color of the container was light gray.
- The required marked signal for steps shall be stuck.
- The vendor is not able to perform the FAT of some detectors that were installed inside the container.
- The vendor is not able to do the testing of the earth connection.

Areas of Concern / Actions Required (Bullet Points):

- The vendor informed the attendees that the FAT for the batteries was not planned for this visit. Moreover, the vendor is not able to perform the FAT of some detectors that were installed inside the container. As a result, the inspection could not be completed in one day.
- Due to the large number of cables inside the container, the vendor must label all cables with numbers and tags.
- For all the RAL code checks, there was no printed RAL color chart available to check, although the color of the container was light gray.
- The required marked signal for steps shall be stuck.
- The vendor is not able to do the testing of the earth connection.

Inspection Criteria, i.e. Specifications / Standards / Drawings / ITP (*with revision*):

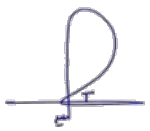
HSE Findings / Summary (Bullet Points):

- During the inspection, the requirements of the health and safety manual were acceptably fulfilled. Safety instructions concerning shop access have been explained and their application has been followed during the inspection. No unsafe events were observed during the inspection visit. All personnel involved in the working area were properly skilled and they were provided with the correct procedure and work instructions. Inspection activities were carried out in a safe manner and the area in which the inspections took place was found clean and safe.



Specific Comments / Action(s) to be followed up (Bullet Points):

- The vendor informed the attendees that the FAT for the batteries was not planned for this visit. Moreover, the vendor is not able to perform the FAT of some detectors that were installed inside the container. As a result, the inspection could not be completed in one day.
- Due to the large number of cables inside the container, the vendor must label all cables with numbers and tags.
- For all the RAL code checks, there was no printed RAL color chart available to check, although the color of the container was light gray.
- The required marked signal for steps shall be stuck.
- The vendor is not able to do the testing of the earth connection.
- This report will be updated after receiving the supplementary docs.

1 For your safety

1.1 General safety statements

- Before using this product, carefully read the Instructions for Use.
- Strictly follow the Instructions for Use. The user must fully understand and strictly observe the instructions. Use the product only for the purposes specified in the Intended use section of this document.
- Do not dispose of the Instructions for Use. Ensure that they are retained and appropriately used by the product user.
- Only fully trained and competent users are permitted to use this product.
- Comply with all local and national rules and regulations associated with this product.
- Only trained and competent personnel are permitted to inspect, repair and service the product as detailed in these Instructions for Use. Further maintenance work that is not detailed in these Instructions for Use must only be carried out by Dräger or personnel qualified by Dräger.
- Properly trained service personnel must inspect and service this product as detailed in the Maintenance section of this document.
- Use only genuine Dräger spare parts and accessories, or the proper functioning of the product may be impaired.
- Do not use a faulty or incomplete product, and do not modify the product.
- The flameproof threads for the explosion proof enclosure do not conform to the minimum/maximum values in EN/IEC 60079-1. The threads must not be modified by the user.
- The measuring function of the gas measurement transmitter for explosion protection according to Annex II, Sections 1.5.5, 1.5.6 and 1.5.7 of Directive 94/9/EG is not covered at present.
- Exchanging components may compromise the intrinsic safety. This only applies if the device is intrinsically safe.
- Only operate the product within the framework of a risk-based alarm signalling concept.

Safe coupling with electrical devices

- Electrical connections to devices which are not listed in these Instructions for Use should only be made following consultation with the respective manufacturers or an expert.

Use in areas subject to explosion hazards

- Devices or components for use in explosion-hazard areas which have been tested and approved according to national, European or international Explosion Protection Regulations may only be used under the conditions specified in the approval and with consideration of the relevant legal regulations. The devices or components may not be modified in any manner. The use of faulty or incomplete parts is forbidden. The appropriate regulations must be observed at all times when carrying out repairs on these devices or components.

1.2 Definitions of alert icons

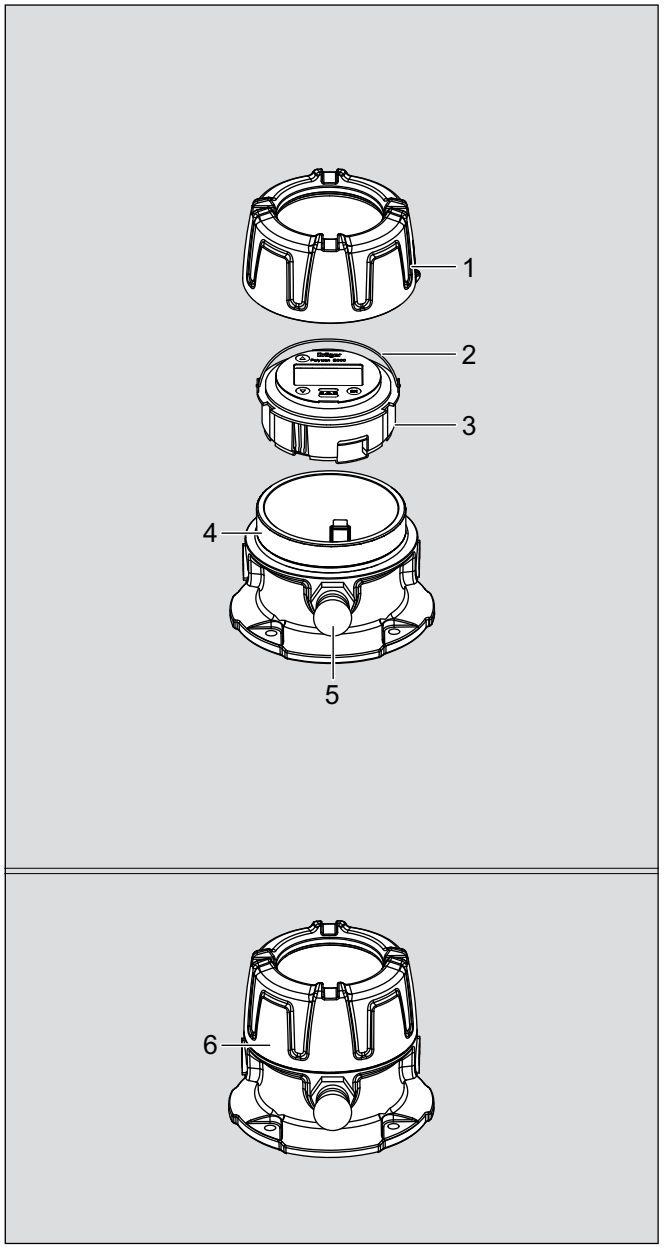
The following alert icons are used in this document to provide and highlight areas of the associated text that require a greater awareness by the user. A definition of the meaning of each icon is as follows:

WARNING

Indicates an imminently hazardous situation which, if not avoided, will result in death or serious injury.

CAUTION

Indicates a potentially hazardous situation which, if not avoided, could result in physical injury, or damage to the product or environment. It may also be used to alert against unsafe practices.



NOTICE

Indicates additional information on how to use the product.

2.2 Functional description

2.2.1 Principle of operation of the DrägerSensor DD, LC

The DrägerSensor is a transducer for measuring the partial pressure of flammable gases and vapors in ambient air. It operates on the heat of combustion principle.

The ambient air to be monitored diffuses through the flame arrestor in the sensor. The mixture of flammable gases and vapors is burned catalytically on the heated measuring element (pellistor). The oxygen required for combustion is taken from the monitored ambient air (must be greater than 12 vol.%). The measuring element receives additional warming from the heat arising from the combustion. This warming causes a change in the resistance of the measuring element which is proportional to the concentration of the mixture of flamable gases and vapors in the air being monitored.

In addition to the catalytically activated measuring element, the sensor also has a compensating element. Both elements are part of a Wheatstone bridge circuit. Consequently, environmental influences such as changes in temperature or humidity are almost completely compensated for.

The DrägerSensor LC includes additional processing and amplification of the measuring signal. As a result, the sensor is suitable for the measuring range 0 - 10 %LEL.

2.2.2 Principle of operation of the DrägerSensor IR

The DrägerSensor IR infrared gas sensor is a gas transmitter for determining the concentration of gases and vapors in ambient air. The measuring principle is based on the concentration-dependent absorption of infrared radiation in the measured gases.

The ambient air to be monitored diffuses through a sintered body into the pressure-tight housing of a measurement cuvette. The broadband light produced by the emitter passes through the gas in the cuvette, is reflected from the cuvette walls and is focused on the entrance window of a dual-element detector. One channel of the detector measures the gas-dependent light transmission of the cuvette (measuring channel) and the other is used as the reference. The gas concentration in the cuvette can be determined from the ratio of the measured signal to the reference signal. The cuvette is heated to prevent condensation of atmospheric humidity.

The calculation of the concentration is performed by internal electronics and software. For the output signal, the gas sensor emulates the half bridge of a catalytic bead sensor.

2.2.3 Contaminating gases for the DrägerSensor DD, LC

NOTICE

Certain substances in the atmosphere to be measured can impair the sensitivity of the sensors.

a) Polymerizing substances such as acrylonitrile, butadiene and styrene

b) Corrosive compunds such as halogenated hydrocarbons (which release halogens such as bromine, chlorine or fluorine on oxidation) and halogen hydracids, as well as gaseous acidic compounds such as sulfur dioxide and oxides of nitrogen.

c) Catalyst poisons such as sulfur and phosphorus compounds, silicon compounds (particularly silicones) and organometallic vapors. The sensors used work with measuring elements (pellistors) that are poison-resistant (PR) and thus have a longer life than conventional sensors when catalyst poisons are present.

It may be necessary to check the calibration if the sensor has been exposed for a long time to a high concentration of flammable gases or vapors or the above-mentioned contaminating substances.

2.3 Intended use

The Dräger Polytron 8200/8310 is an explosion proof device for continuous monitoring of the concentration of gases and vapors containing hydrocarbons. The housing for the device consists of robust, non-corroding stainless steel or aluminum and is suitable for indoor or outdoor applications. The unit can be connected to a Dräger monitoring system or a programmable logic controller (PLC) by means of a sealed conduit or an appropriately approved cable gland. With the optionally integrated relay module, the device can be operated without a central controller (with additional local alarm signalling). The device is designed for fixed installation and is approved for use in potentially explosive atmospheres, see chapter 2.5 on page 7.

WARNING

Not tested in oxygen enriched atmospheres (>21% O_2). High off-scale readings may indicate an explosive concentration.

2.3.1 Dräger Polytron 8200 with DrägerSensor® [1] Ex DD

Catalytic bead sensor for monitoring flammable gases and vapors containing hydrocarbons

- Detection range: 0 to 100 % LEL [2]

2.3.2 Dräger Polytron 8200 with DrägerSensor Ex LC

Catalytic bead sensor for monitoring flammable gases and vapors containing hydrocarbons

- Detection range: 0 to 10 % LEL [2)]

1 DrägerSensor® is a registered trademark of Dräger.
2 Lower Explosion Limit, depending on substance and the locally applicable regulations.

2.3.3 Dräger Polytron 8310 with DrägerSensor IR

Infrared sensor for monitoring flammable gases and vapors containing hydrocarbons

- Detection range: 0 to 100 % LEL [2)]

WARNING

Explosive. Not to be used in oxygen enriched atmospheres. None of the Polytron 8000 transmitters is certified and approved to be operated in oxygen enriched atmospheres.

2.4 Intended operating area and operating conditions

Hazardous areas classified by zones:
The device is only designed for use in Zone 1 or Zone 2 potentially explosive atmospheres for which a temperature range as specified on the device must be observed and in which gases of Explosion Groups IIA, IIB or IIC and Temperature Classes T4 or T6 (depending on maximum ambient temperature) or dust of Groups IIIA, IIIB or IIIC may occur.

Hazardous areas classified by divisions:
The device is only designed for use in potentially explosive atmospheres of Classes I&II, Div. 1 or 2, for which a temperature range as specified on the device must be observed and in which gases or dust of Groups A, B, C, D or E, F, G and Temperature Classes T4 or T6 (depending on maximum ambient temperature) may occur.

2.5 Approvals

See printed version for approval markings.

2.6 Device marking

The device marking is supplied with the device as a copy on a separate document.

Key to the Serial Number: The third letter of the Serial Number specifies the year of manufacture: A = 2009, B = 2010, C = 2011, D = 2012, E = 2013, F = 2014, H = 2015, J = 2016, K = 2017 etc. Example: Serial Number ARBH-0054: The third letter is B, i.e. the device was manufactured in 2010.

3 Installation

3.1 General information for the installation

The selection of a suitable mounting location is crucial for the effectiveness and performance of the entire system. Every detail of the installation must be thoroughly thought out. The following must be noted in particular:

- the local and national rules and regulations for the installation of gas monitoring systems,
- the applicable regulations for running and connecting power and signal cables to gas monitoring systems,
- the full extent of environmental influences to which the device will be subjected,
- the physical properties of the gases and vapors to be measured,
- the details of the particular application (e.g., potential leaks, air movements/flows, etc.),
- accessibility for required maintenance activities,
- the geometric of the accessories that are used with the system,
- all other limiting factors and stipulations that may affect the installation of the system.
- For installation without a conduit, an approved cable gland (e.g. Hawke A501/421/A/¾" NPT or equivalent) must be used (see chapter 12 on page 28). To increase the RF interference immunity, it may be necessary to connect the cable screen to the cable gland and to the control unit.
- The explosion proof enclosure has three ¾" NPT connections, which can be used for field wiring, the direct attachment of a sensor or wiring an external sensor. Unused openings must be closed off with a plug. For the correct tightening torques for cable bushings, plugs, sensors and connectors, see chapter 12 on page 28.
- The secondary are supposed to be supplied from an isolating source (does not apply to relay contacts).
- The optional e-Box has up to four 20 mm connections, which can be used for field wiring or wiring an external sensor. The permissible cable diameter is 7 to 12 mm.
- If the device is installed in locations where ambient temperatures of over 55 °C prevail, appropriate cables which are specified for use at temperatures of 25 °C above the maximum ambient temperature must be used.
- Strip back the insulation on conductors by 5 to 7 mm.
- Connect the cable as shown in Chapter 3.5 on page 9 (shown here also with protective ground) oder Chapter 3.6 on page 10.
- The connecting wires for the optional relay module must be selected and fused according to the rated voltages, currents and environmental conditions.
- When stranded conductors are used, an end ferrule must also be used.

3.2 Restrictions on the installation

- The device requires a DC voltage between 10 and 30 V. The minimum supply voltage of 10 V and the cross-section of the conductors used determine the distance of the device from the supply or the central controller (see chapter 12 on page 28). The device is designed for cables of sizes 12 to 24 AWG (0.2 to 2.5 mm^2). Use a three-wire, shielded cable as a minimum.
- The device must not be subjected to any radiant heat (e.g. direct sunlight) as this will result in a temperature rise above the specified thresholds (see chapter 12 on page 28). The use of a reflective screen is recommended.
- The housing is weather resistant and suitable for outdoor applications. The use of the optional splash guard is recommended to protect the sensor from water and dust.
- The device must be installed and operated in an environment which conforms to the stated specifications (see chapter 12 on page 28).
- To insure proper operation of the device, the impedance of the 4 to 20 mA signal loop must not exceed 500 ohms. Depending on the operating voltage and according to the application (e.g. HART operation), certain minimum impedances must be adhered to (see chapter 3.3 on page 8). The conductors for the power supply must have an adequately low resistance to insure the correct supply voltage at the device.

NOTICE

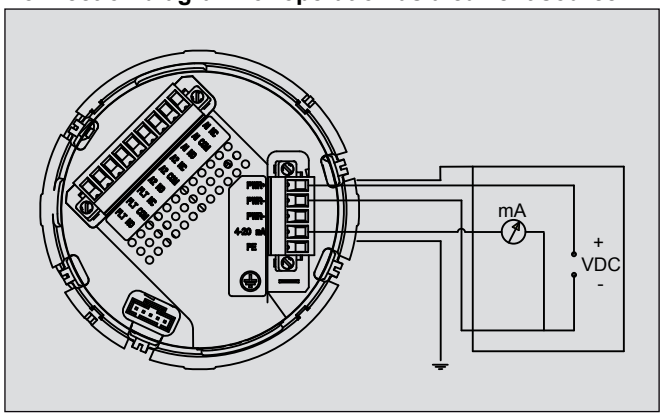
A dust cap can be fitted to the cable entry of the device. This cap is only used for transport purposes and must be removed before the device is connected to a sealed conduit.

3.3 Impedance range of the signal loop

Devices with a HART interface can be operated with HART communication or in HART Multidrop mode.

Operating mode	Impedance range of the signal loop	Supply voltage range
Operation without HART communication	0 to 230 Ω	at 10 V DC
	Rising linearly with the supply voltage from: 0 to 230 Ω at 10 V to 0 to 500 Ω at 16 V	10 to 18 V DC
	0 to 500 Ω	18 to 30 V DC
Operation with HART communication (HART mode)	230 to 270 Ω	at 13 V DC
	Rising linearly with the supply voltage from: 230 to 270 Ω at 11 V to 230 to 500 Ω at 16 V	11 to 16 V DC
	230 to 500 Ω	18 to 30 V DC
HART Multidrop operation	230 to 500 Ω	10 to 30 V DC

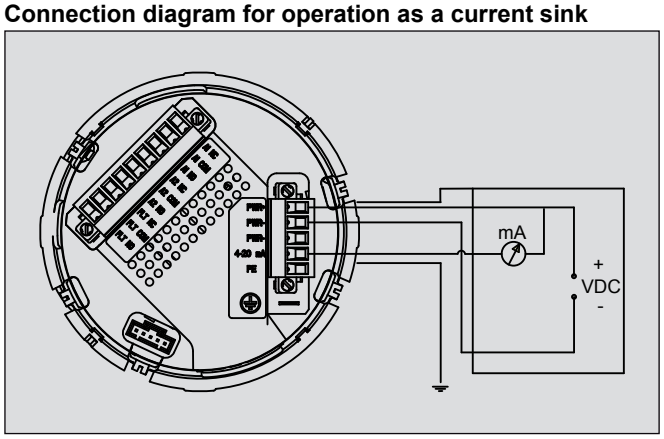
3.4 Mechanical installation



- Use the supplied drilling template for mounting on a wall.
- The mounting surface should be even and free of sharp edges.
- Dräger recommends using M6 Allen bolts.
- The openings must be readily accessible to the surrounding atmosphere.

3.5 Electrical installation without e-Box

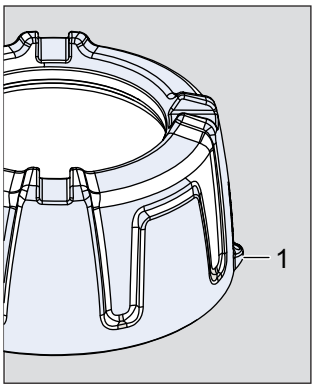
CAUTION



First connect the cables for the relays and make the connections to the sensor before connecting the device to the power supply.

Connection diagram for operation as a current source

01133300.eps



Connection diagram for operation as a current sink

01033300.eps

3.5.1 Power and signal cables

1. Release the set screw (1) and unscrew the housing cover from the device.
2. Lift the handle and remove the enclosure with the main electronics.
3. Connect the device electrically to the protective ground.
4. Rotate the main electronics and disconnect the 5-way plug.

00933300.eps

5. Connect the three cables for the power supply and the signal to the corresponding terminals (see following table of connections for the 5-way plug).

Connections for 5-way plug (power supply and signal):

5-way plug (power supply and signal)					
Terminal	1	2	3	4	5
Ident.	PWR+	PWR-	PWR-	4 to 20 mA signal	PE
Function	V+	V-	V-	4 to 20 mA signal (Operation as source or sink)	PE

6. For operation without a central controller: connect Terminal 3 to Terminal 4.
7. Fit the plug back in the socket and tighten the screws.
8. The screen of the cable must only be connected to the control unit.
9. Insert the main electronics back in the housing.
10. Screw the cover on again and tighten the set screw.

3.5.2 Version with relays

WARNING

At voltages >30 V AC or >42.4 V DC, the relay cables must be enclosed in protective tubing, or double-insulated cables must be used.

When the relay module is fitted, the wires for the alarm device are connected to the 9-way plug.

1. Disconnect the 9-way plug on the rear of the main electronics.
2. Connect the wires for Alarm Relay 1, Alarm Relay 2 and the Fault relay to the corresponding terminals, (see following table of connections for the 9-way plug).
3. The relays are energized when the default settings are used and in the measurement mode. This insures "fail-safe" operation. The terminal assignments in the connection table below apply when the default settings are used and when in measuring mode (see chapter 4.6 on page 13).
4. Fit the plug back in the socket and tighten the screws.
5. Fit the enclosed protective cover over the plug and secure it with cable ties if necessary.

NOTICE

For clear and far-ranging detection of a device fault, an alarm device should be switched by the fault relay.

Connections for 9-way plug (relays):

9-way plug (relays)									
	Fault relay			A2 relay			A1 relay		
Terminal	1	2	3	4	5	6	7	8	9
Ident.	FLT NO	FLT C	FLT NC	A2 NO	A2 C	A2 NC	A1 NO	A1 C	A1 NC

(NO = Normally open, NC = Normally closed, C = Common)

3.5.3 Remote Sensor

The remote junction box (Order Number 45 44 098 for stainless steel / Order Number 45 44 099 for aluminum) permits the installation of the sensors remote from the device electronics. This installation enables operation of the device in difficult to access or unfavourable positions (see the Instructions for Use for the Dräger Polytron 5000 Junction Box). The maximum permissible distance between the Polytron 8200/8310 and the sensors is 30 m.

3.6 Electrical installation with e-Box

- Install the e-Box in accordance with the Installation Instructions for the Polytron 5000/8000 e-Box.

NOTICE

The e-Box can be pre-installed, wired and closed off with the supplied cover. As soon as the installation is ready for commissioning, the device is connected to the e-Box and put into operation. This prevents the device from being damaged during the construction phase.

3.7 Connecting the device to a Dräger control unit

NOTICE

Information on connection can be found in the Instructions for Use accompanying the particular Dräger control unit (e.g. Regard, QuadGard).

Electrical connections to the control unit

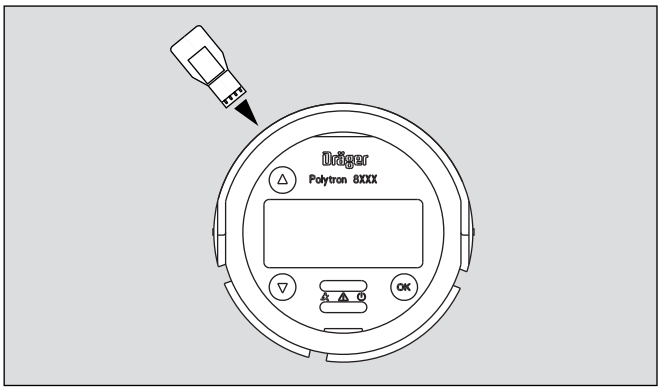
- Connect the screen for the wires to the grounding point in the control unit (e.g., chassis, grounding rail).

3.8 Connecting the device to a PC

The separately available Polytron 5000/8000 IR connection kit is intended for use with the Polytron 5000/8000 and enables communication between the Polytron 5000/8000 and a PC.

3.9 PolySoft 8000 PC software (optional)

The PolySoft 8000 PC software is used to display device information, edit configuration settings and read out from the measurements memory.



3.10 Installing software dongles

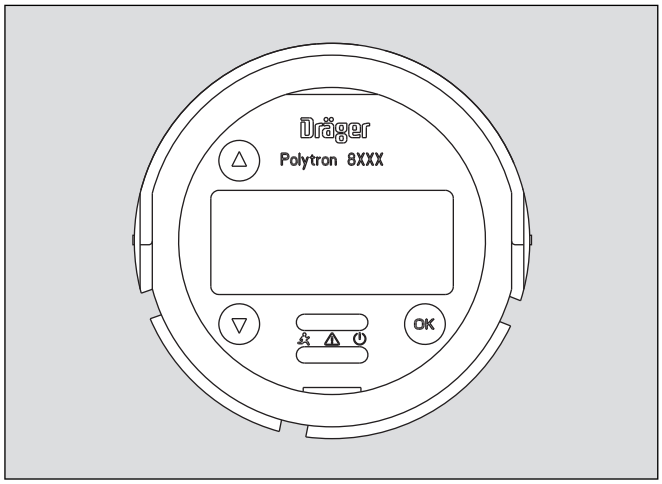
The following SW dongles are available for the Polytron 8200:

Datalogger dongle 83 17 618	Enables the datalogger and the graphic display of concentrations.
Sensor test dongle 83 17 619	Enables the sensor self test (for certain versions only)
Diagnostic dongle 83 17 860	Enables the sensor self test, the display of the remaining sensor activity and the sensor diagnostic function (for certain functions only)

Combi-dongle (datalogger and sensor test dongle)
83 23 218

Combi-dongle (datalogger and diagnostic dongle)
83 23 219

00833300.eps



To install a SW dongle:

1. Switch off the power to the unit or declassify the area according to the local regulations.
2. Release the set screw and unscrew the housing cover from the device.
3. Lift the handle and remove the enclosure with the main electronics.
4. Insert the dongle in the slot with the Dräger lettering facing upwards.
5. Insert the main electronics back in the housing.
6. Screw the cover on again and tighten the set screw.
   The dongle is installed.
7. Switch on the power.

4 Operation

4.1 Operating fundamentals

4.1.1 Menu navigation

00733300.eps

It is possible to scroll throught he menu items by tapping the ▲ and ▼ symbols with the magnetic wand (Part Number 4544101, blue). OK confirms a function.

NOTICE

The housing cover should be fitted when using the magnetic wand. If the housing cover is not fitted, the magnetic wand might activate two or more buttons at the same time (crosstalk).

Graphic symbols facilitate navigation in the various menus.

- Together with the text » Back «, » Menu «, etc., exit the menu or go back 1 step.
- Closed folder
  Further functions or sub-menus are located under this item.
- Opened folder
  The functions and sub-menus available here are listed under this item.
- Function
  When activated, functions can be executed in one or more steps.
- Selection activated
  For functions that can be selected and activated, the activation is initiated by taping » OK «.
- List closed above / complete
  There are no further functions, menus or sub-menus listed above.
- List can be scrolled upwards
  There are further functions, menus or sub-menus listed above.
- List closed below / complete
  There are no further functions, menus or sub-menus listed below.
- List can be scrolled downwards
  There are further functions, menus or sub-menus listed below.
- Next
  Perform context-related action.
- 3/3 Number / total number of steps (screens) within the function.
- 2/2 Entry
  Enter data with » ▲ « and » ▼ «.

4.1.2 Changing parameter values or the parameter status

1. Select the desired menu item with ▲ and ▼.
2. Confirm the menu item with OK.
   The current value or status will be displayed.
3. Using ▲ and ▼, the value of a numerical parameter can be changed or preset values can be selected.
4. As soon as the desired value or the selection is displayed, tap OK to validate/confirm the new parameter.
5. Tap OK to access the next higher level.

- If exiting using **Back to menu** or **Previous**, all changes will be discarded.

4.1.3 Exiting menus

- ▲ Tap **Back to measurement** and OK to exit the menu.

4.2 Display and LEDs

In measurement mode, the current gas concentration, the name of the gas and the measurement units are shown on the display. The green LED lights.

In addition, the following symbols may be displayed:

- " ↑ ↑ ↑ ↑ ", if the measurement range is exceeded
- " **- - - -** " and " **X** " in the event of a malfunction. The yellow LED lights, (see chapter 4.2.2 on page 12).
- "SIL", when SIL status is activated.

When the optional relay PCB is used:

- If the first alarm has been triggered, the red LED gives single flashes.
- If the second alarm has been triggered, the red LED gives double flashes.

4.2.1 Special symbols

The following special symbols, which indicate the device state, may be displayed on the right hand side in measurement mode.

- Warning message present –
  to display warnings, see chapter 7.1.1 on page 17.
  Information can be called up in Info mode, see chapter 4.3 on page 12.
- Fault message present –
  To display the fault, see chapter 7.1.2 on page 17
- Maintenance signal will be output on the interface, see chapter 8.3.2 on page 21.
- Measurement range of analog interface exceeded
- Measurement less than range of analog interface
- Analog interface is set to a fixed value (e.g. Multidrop HART communication) and is not transmitting any measurements.
- "Preventive" maintenance: The sensor is ready for operation
- "Preventive" maintenance: The sensor is ready for operation but is close to the end of its life cycle.
- "Preventive" maintenance: The sensor is still ready for operation but should be changed as soon as possible.
- The datalogger is active in rolling mode.
  To activate/deactivate, see chapter 8.5.2 on page 24.
- The datalogger is active in stacking mode.
  To activate/deactivate, see chapter 8.5.2 on page 24.
- SIL SIL is activated (observe Safety Manual - Order Number 9033307).

4.2.2 LED symbols

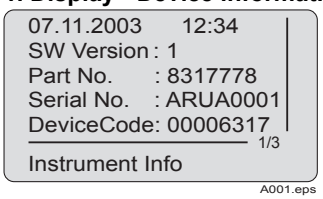
Symbol	LED	Description
	red	Alarm triggered
	yellow	Malfunction / Warning
	green	Switched on Measurement mode

NOTICE

The alarm triggering function is only available when the optionally integrated relay module is used.

When the optional relay PCB is used:

- If the first alarm has been triggered, the red LED gives single flashes. A1 relay is activated.
- If the second alarm has been triggered, the red LED gives double flashes. A2 relay is activated.
- If an alarm can be acknowledged and is acknowledged, the LED stops flashing and lights continuously instead until the alarm condition is no longer present. The corresponding relay is deactivated.

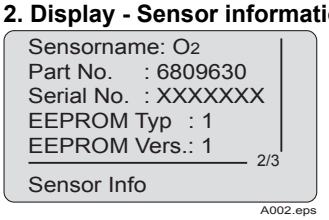


4.3 Activating the Info mode

The Info mode is used to present information about the central device settings and states.

- Tap ▲ and hold for 3 seconds.
  The device information appears on several displays. No changes can be made.
- Tap ▲ or ▼ briefly to switch between the displays.
- The Info mode can be ended at any time by selecting OK.
- If no button is selected within 30 seconds, the device reverts automatically to the measurement mode.

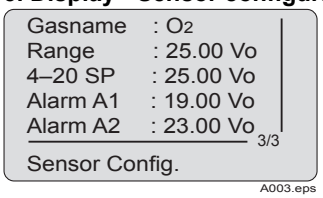
Example of the Info mode
(Displays vary depending on sensor):



1. Display - Device information:

A001.eps

- Date and Time
- Software version
- Part number of the device
- Serial number of the device
- Device code



2. Display - Sensor information:

A002.eps

- Sensor description
- Part number of sensor (only for certain sensors)
- Serial number of sensor (only for certain sensors)
- Software version (only for certain sensors)
- Software revision (only for certain sensors)

3. Display - Sensor configuration:

A003.eps

- Gas description
- Maximum measurement limit and measurement units for the sensor
- Measurement range and measurement units for the analog interface. Only displayed when the 4-20 mA interface is enabled.

- A1 Alarm limit and measurement units[1]
- A2 Alarm limit and measurement units[1]

4.4 Switching to the Quick Menu mode

- Tap ▼ and hold for 1 to 2 seconds.
  The Quick Menu will open. This menu is displayed without any password request. No changes can be made.
  The selected information about status and device settings can be retrieved (e.g. warning messages, error messages, installed modules and calibration data).

4.5 Switching to Menu mode (password protected)

1. Tap ▼ and hold for longer than 3 seconds.
   The password request appears.
2. **Enter the password** and confirm.
   The screen for password entry appears.
3. Set the password and confirm the entry.
   The menu hierarchy corresponding to the entered password will open.

- An error message appears if the entered password is invalid.

Password presets:
Password for the **Calibration** menu: _ _ _ 1
Password for the **Settings** menu: _ _ _ 2

4.6 Measurement mode

WARNING

The configuration and calibration settings must be checked before the device is operated in measurement mode.

- Switch on the power.
  - The device runs through a start-up sequence (LCD test by inverting the video, LED test, software version and initialization) and starts the warm-up phase. The display indicates that the sensor will be ready to operate in hh:mm:ss (the countdown begins) and the Polytron 8200/8310 sends the Maintenance signal.
  - After the warm-up phase, the device passes into the measurement mode.
  - The current gas concentration, the selected gas and the units of measure appear on the display.
  - The ⏻ LED lights green.
  - The sensor is ready to take measurements.

NOTICE

The correct date and time settings are important for many functions (see chapter 8.2.3 on page 19).

4.6.1 Analog signals

In measurement mode the output current of the device is between 4 and 20 mA and is proportional to the measured gas concentration.

The device uses various current values to indicate different operating modes. This conforms to the NAMUR NE43 recommendation. The 4-20 mA interface on the device can be customized and configured to individual requirements. The device is provided with suitable standard settings at the factory (see chapter 12.3 on page 29).

1 Only displayed when relay is configured.

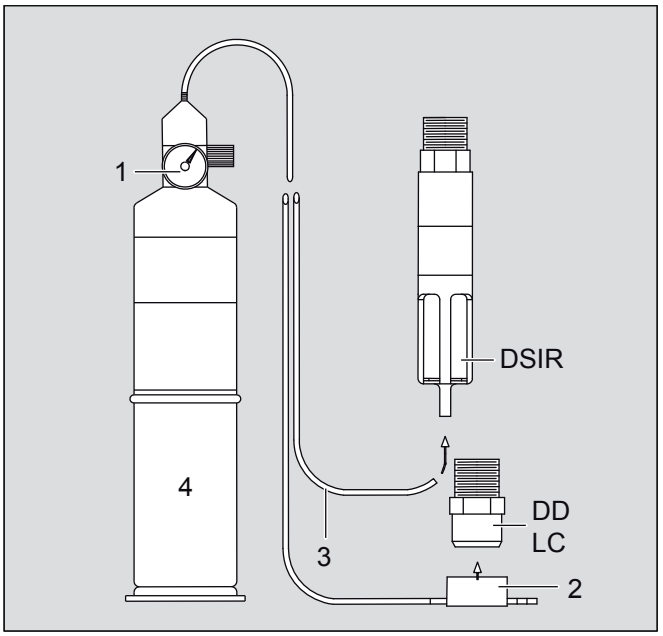
5 Calibration

Repeat the calibration of the device at regular intervals as specified in the particular sensor data sheet.

CAUTION

Danger to health! Do not inhale the test gas. Observe the hazard information in the corresponding safety data sheets. Provide venting into a fume cupboard or outside the building.

Always calibrate the zero point first before the sensitivity. Otherwise the calibration will be faulty!



NOTICE

Calibration is not possible if the date and time are not set (see chapter 8.2.3 on page 19).

Dräger recommends calibrating devices with the gas that is to be measured operationally. This method of measured gas calibration is more accurate than a surrogate gas calibration. A surrogate gas calibration may only be performed as an alternative if a measured gas calibration is not possible.

5.1 Calibrating the device

1. Connect the pressure reducer to the calibration gas cylinder.
2. Attach the calibration adapter to the sensor.
3. The gas flow should be between 0.5 and 2.0 L/min.
4. Connect the hose to the calibration adapter.

1 Pressure reducer
2 Calibration adapter
3 Test gas cylinder
4 Hose

For DSIR only (see also Instructions for Use for DrägerSensor IR)

1. Position the magnetic wand on the sensor button marked with ⇩0 and hold it there for at least 5 seconds.
   A negative value will be displayed for as long as the magnetic wand is held on the button (e.g. -10 %LEL). This will start the automatic zeroing of the sensor.
2. Remove the magnetic wand.
   The sensor ends the automatic zeroing after approx. 30 seconds. A negative value (e.g. -10 %LEL) is displayed again as confirmation.

After the zero-point calibration of the DrägerSensor IR, the instrument should show 0 %LEL in the display. If this is not the case, a zero-point calibration must be performed on the instrument (see chapter 5.1.1 on page 14).

5.1.1 Zero point calibration

NOTICE

Ambient air can also be used instead of nitrogen or synthetic air to zero the sensor, provided it is insured that the ambient air contains no measured gas or any other gas for which the sensor may exhibit cross-sensitivity (see the details in the sensor data sheet). In this case, neither a gas cylinder nor a calibration adapter is required for the zero point calibration.

1. Select **Calibration > Zero Calibration** and confirm.
   The Maintenance signal is transmitted.
   The message **Apply zero gas** appears.
2. Apply zero gas (synthetic air or nitrogen) to the sensor.
3. Select **Next** and confirm.
   The current value is displayed.

After the displayed value is stable:

4. Set the value to 0 and confirm.
   The message **Please wait…** appears.
   The actual value is displayed.

- Actual value within the permissible range:
  - Select **Next** and confirm.
  - Shut off the test gas and remove the calibration adapter from the sensor or disconnect the hose.

5.1.2 Span calibration

1. Check which gas category is set (only for DrägerSensor IR, see also the Instructions for Use for the DrägerSensor IR).
1. Select **Calibration > Span calibration** and confirm.
2. Apply calibration gas (e.g., 50 % LEL methane).
   The current value is displayed.

After the displayed value is stable:

3. Set the value to 50 and confirm.
4. Shut off the test gas and remove the calibration adapter from the sensor or disconnect the hose.

5.2 Performing Auto Calibration

The device offers the option of an automatically sequenced calibration. This reduces the number of otherwise manual interactions with the device. The auto calibration is only suitable for experienced users, as calibration errors can occur here as a result of tightened procedures.

NOTICE

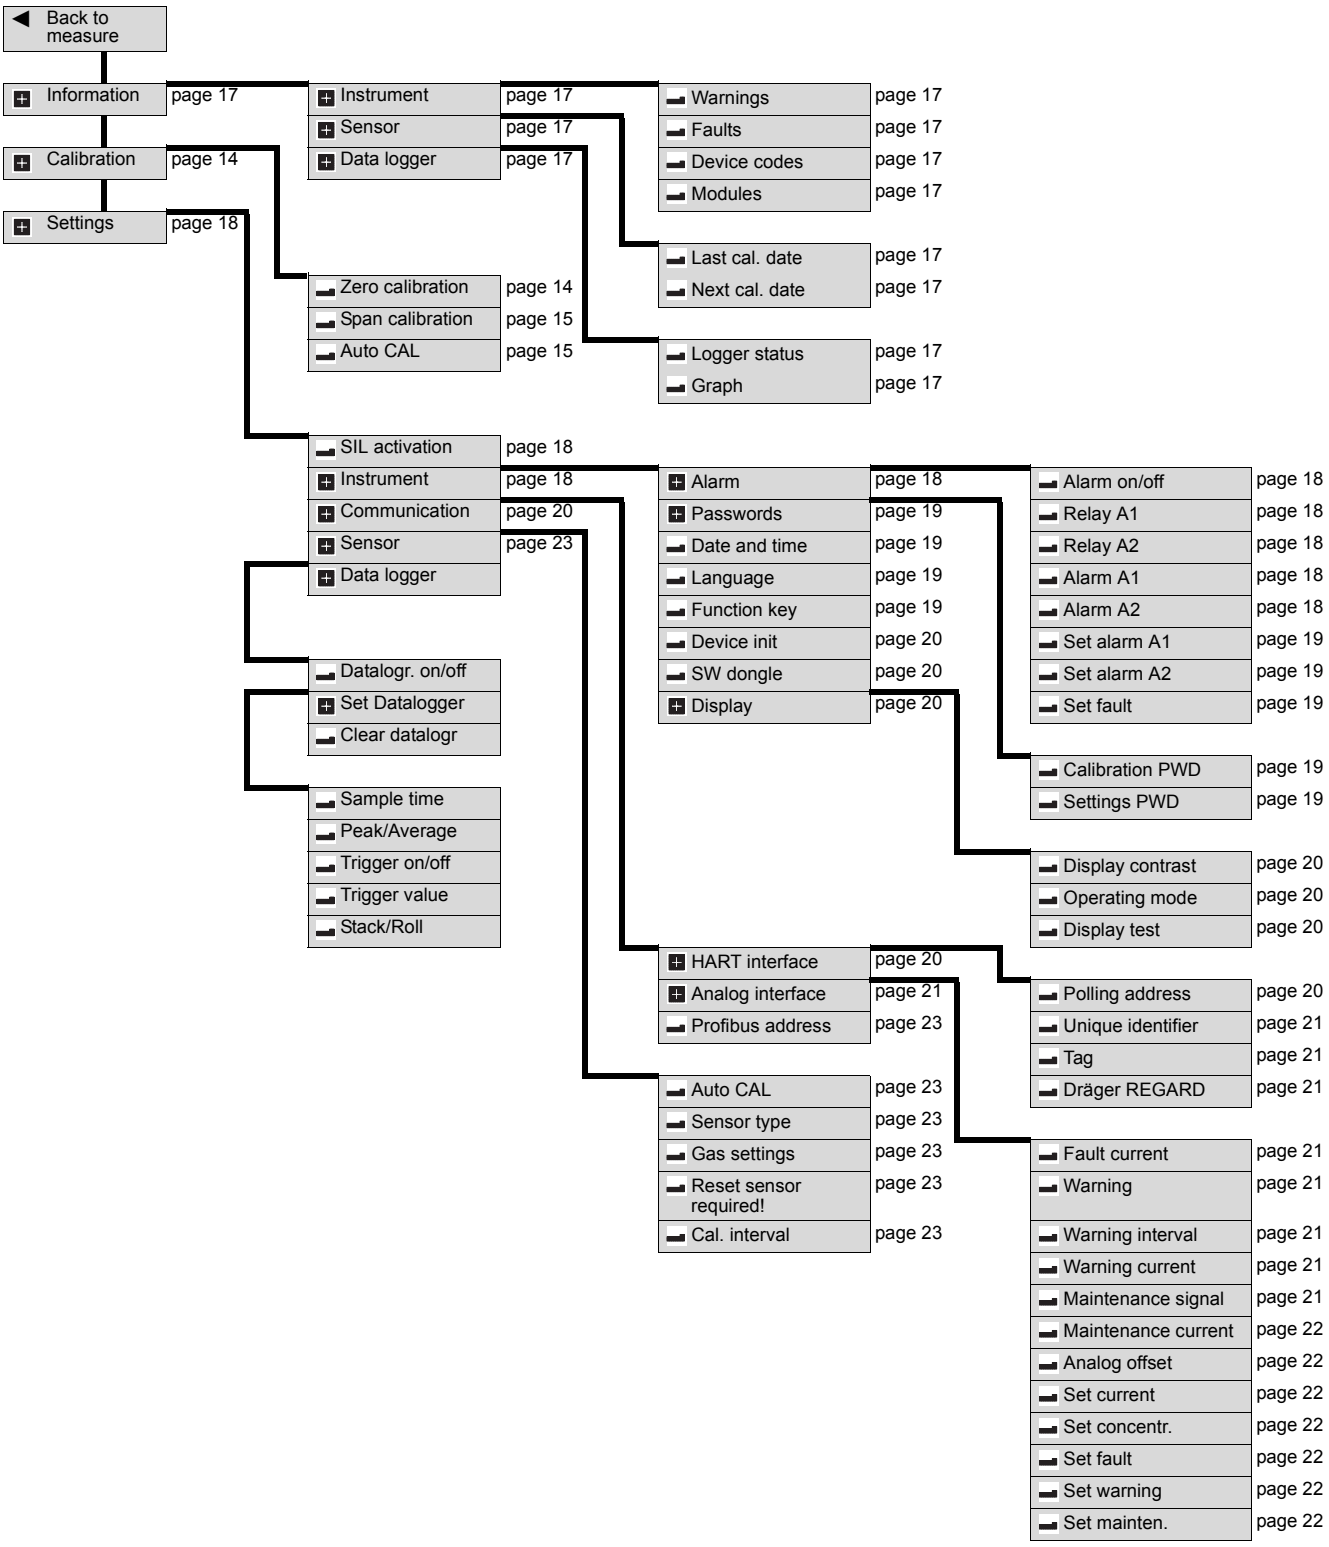
Not all of the available sensors and gases support auto calibration. If the function is not available, a manual calibration must be performed.

1. Select **Settings > Sensor > Autocal. set.** to enable or disable the function.
2. Supply fresh air or feed nitrogen or compressed air at a flow rate of 0.5 - 2.0 L/min to the sensor.

WARNING

It must be insured that during the zero point calibration, no measured gas is present in the supplied calibration gas. Particularly with a fresh air calibration, Dräger recommends performing a second, independent measurement. Some sensors may only be calibrated with synthetic air or nitrogen (observe the relevant sensor data sheets).

3. Select **Calibration > Auto cal.** and confirm.
   - **Please wait...** is displayed and a calibration of the zero point is performed automatically.
   - After a successful zero point calibration, the span calibration is started.
   - The calibration gas concentration, the units and, where appropriate, the calibration gas are displayed and can be changed.
4. Start the calibration with **Next**; **Back to menu** aborts the calibration.



NOTICE

After 10 minutes, without confirmation the device reverts to measurement mode without performing a calibration.

5. Feed the relevant calibration gas to the sensor at a flow rate of 0.5 - 2.0 L/min.
   - When the measured value is stable, the device performs the calibration automatically.
   - After a successful calibration, the measurement and the message **Value OK?** are displayed
6. When the measurement is stable, shut off the calibration gas and wait until the measurement is below any possible alarm thresholds again.

- The calibration is performed again with **Redo**.
- Complete the calibration with **Accept value**.
  The device returns to the measurement mode.

6 Menu overview

7 Information menu

Specific data about the device, the sensor used and the measured gas are summarized in this menu. The menu can be accessed without a password. Changes to the data are not possible.

7.1 Device settings

7.1.1 Displaying warning messages

To display warnings in plain text with warning numbers, see chapter 9 on page 25.
The ⚠ symbol is displayed when there is a warning present.

- Select **Information > Instrument > Warnings** and confirm.
  Warnings are displayed in plain text.
  If several warnings are present, this is indicated in the upper right-hand corner of the display, e.g., 1/3 = Screen 1 of 3.

7.1.2 displaying fault messages

To display faults present in plain text with fault numbers, see chapter 9 on page 25.
The ☒ symbol is displayed when there is a fault present.

- Select **Information > Instrument > Faults** and confirm.
  Faults are displayed in plain text.
  If several faults are present, this is indicated in the upper right-hand corner of the display, e.g., 1/2 = Screen 1 of 2.

7.1.3 Displaying device codes

Display of codes for faults/warnings in a numerical table (hexadecimal).
The ☒ symbol is displayed when there is a fault present.

- Select **Information > Instrument > Device codes** and confirm.
  Faults are displayed as a hexadecimal numerical code in tabular form. If all the numerical groups are displayed as **00**, there are no faults or warnings present.

NOTICE

The fault code is very helpful for technical support and should always be stated in full in the event of a fault.

7.1.4 Displaying installed modules

Display of the installed hardware modules.

- Select **Information > Instrument > Modules** and confirm.
  A list of all possible modules is displayed. The installed modules are identified by a ■, those not installed by a □.
- Mark a module and request detailed information with OK.

7.2 Sensor information

This menu contains the functions for retrieving the calibration data.

7.2.1 Display last calibration date

Display the date of the last calibration.

- Select **Information > Sensor > Last cal. date** and confirm.
  The date of the last calibration is displayed

7.2.2 Display next calibration date

Display the date of the next calibration.

- Select **Information > Sensor > Next cal. date** and confirm.
  The date when the next calibration of the sensor is due is displayed.

7.3 Datalogger information (only with data dongle)

This menu contains the functions for querying the datalogger.

7.3.1 Displaying the datalogger status

- Select **Information > Datalogger > Logger status** and confirm.
  The current status of the datalogger is displayed: Datalogr. : on or off (datalogger on or off)
- To switch the datalogger on/off, see chapter 8.5.1 on page 24.

7.3.2 Displaying a graph of measured values

Show the measurements from the sensor on a 15-minute time axis.

- Select **Information > Datalogger > Graph** and confirm.

8 Settings menu

This menu contains all the functions that are required for the individual configuration of the device.

8.1 Switching SIL lock on or off

NOTICE

SIL lock is only available for certain sensors (see also the sensor data sheets or the Dräger Polytron 8X00 Safety Manual).

With this function, the device can be protected against unauthorized changes to the configuration with a password. Changing the configuration (e.g., changing the measurement range from 100 %LEL to 50 %LEL) will cause the device to display all the safety-relevant parameters to the user once more before it returns to the measurement mode. The correctness of the parameters and settings must be confirmed.

1. Select **Settings > Instrument > Set SIL**.
2. Select the desired state **On** or **Off** and confirm.

NOTICE

When SIL is activated, the device displays all the important parameters and setting before returning to measurement mode. Check the parameters and settings carefully and confirm.

8.2 Device settings

8.2.1 Alarm settings (only with installed relay module)

Alarms issued via relays and LEDs.

CAUTION

In the normal state, the relays in the relay module are energized. That is, the relays change their state if the power supply is interrupted!

Switching the alarm on or off

1. Select **Settings > Instrument > Alarm > Alarm on/off**.
2. Select the desired state **On** or **Off** and confirm.

CAUTION

If the alarm is inactive, the alarm state will not be issued by the LEDs or the relay interface! A warning message ▯ will be shown on the display!

Configuring Relay A1 or A2

This function is used to define whether the alarm relay is energized in standard operation or in an alarm state. If the configuration of the relay is set to "Normally energized", the corresponding relay contact is closed in the normal case and drops out in the event of an alarm. This configuration results in an alarm being triggered in the event of a loss of power to the transmitter (fail-safe). The fault relay is factory-configured to "Normally energized" and cannot be changed.

1. Select **Settings > Instrument > Alarm > Relay A1** or **Relay A2** and confirm.
2. Select **Normal energy supply** oder **Energy supply during alarm** and confirm.

Configuring Alarm A1 or A2

1. Select **Settings > Instrument > Alarm > Alarm A1** or **Alarm A2** and confirm.
2. Select the line for entering the alarm limit and confirm.
3. Set the threshold and confirm.
   The setting for the alarm threshold is displayed.
4. Select **Next** and confirm.
   The setting for the alarm direction is displayed.
5. Select **Rising** or **Falling** and confirm.
6. Select **Next** and confirm.
   The setting for the alarm direction is displayed.
7. Select **Latching** or **Non Latching** and confirm.
8. Select **Next** and confirm.
   The setting for the acknowledgement is displayed.
9. Select **Acknowledgeable** or **NonAcknowledgeabl** or **PreAcknowledgeabl** and confirm.
10. Select **Next** and confirm.
    The function for setting the A1 hysteresis is opened.

NOTICE

This function permits the setting of a zone within which a triggered relay maintains its status until the gas concentration is outside the zone. This function prevents relays from chattering at an alarm threshold.
Example: A2 at 40 %LEL methane
Maximum possible hysteresis: 3 %LEL
Alarm activation at measured values ≥40 %LEL
Alarm deactivation at measured values ≤37 %LEL (40 %LEL - 3 %LEL)

11. Select the line for entering the hysteresis and confirm.
12. Set the hysteresis for A1 and confirm.
    The hysteresis setting for A1 is displayed.
13. Select **Next** and confirm.
    The settings for A1 are displayed.
14. Select and confirm with **Confirm**.
    The settings for the A1 alarm are now complete.

The functional relationship between the various settings is explained in the following table:

Latching and acknowledgeable	The alarm must be acknowledged manually. The alarm can be acknowledged when the alarm condition is still present.
Latching and not acknowledgeable	The alarm must be acknowledged manually. The alarm can only be acknowledged when the alarm condition is no longer present.
Latching and pre-acknowledgeable	The alarm must be acknowledged manually. The alarm can be acknowledged when the alarm condition is still present but will only be reset when the alarm condition is no longer present.
Non-latching and acknowledgeable	The alarm is acknowledged automatically when there is no longer any alarm condition present, or it can be acknowledged manually.
Non-latching and not acknowledgeable	The alarm is acknowledged automatically when there is no longer any alarm condition present. The alarm cannot be acknowledged manually.
Non-latching and pre-acknowledgeable	Corresponds to the alarm behavior for "Non-latching" and "Not acknowledgeable".

Testing Alarm A1

NOTICE

When the function **Set Alarm A1** is exited in the menu, the Polytron 8200/8310 reverts automatically to measurement mode.

This function simulates the A1 alarm status.

1. Select **Settings > Instrument > Alarm > Set Alarm A1** and confirm.
2. Select **On** or **Off** and confirm.

When the function is activated, the relay and the interface are set to the A1 alarm status and the red LED gives single flashes.

Testing Alarm A2

NOTICE

When the function **Set Alarm A2** is exited in the menu, the Polytron 8200/8310 reverts automatically to measurement mode.

This function simulates the A2 alarm status.

1. Select **Settings > Instrument > Alarm > Set Alarm A2** and confirm.
2. Select **On** or **Off** and confirm.

When the function is activated, the relay and the interface are set to the A2 alarm status and the red LED gives double flashes.

Testing Fault status

NOTICE

When the function **Set fault** is exited in the menu, the Polytron 8200/8310 reverts automatically to measurement mode.

This function simulates the Fault alarm.

1. Select **Settings > Instrument > Alarm > Set fault** and confirm.
2. Select **On** or **Off** and confirm.

When the function is activated, the Fault relay and the 4-20 mA interface are set to the fault current and the yellow LED lights.

8.2.2 Changing passwords

The passwords for calibration (zero and span calibrations) and for the settings (full configuration) can be defined in this menu.

1. Select **Settings > Instrument > Passwords > Calibration/ Settings PWD** and confirm.
2. Select the line for the password settings and confirm.
3. Set the password and confirm.
   The setting for the password is displayed.
4. Select **Confirm** and confirm.

8.2.3 Setting the date and time

1. Select **Settings > Instrument > Date and time** and confirm.
2. Select the desired line and confirm in order to switch to the Change mode.
3. Set each digit and confirm each setting.
4. Select **Confirm** and confirm.

8.2.4 Changing the display language

1. Select **Settings > Instrument > Language** and confirm.
2. Select the desired language from the list and confirm.

8.2.5 Configuring the function key

This function is used to assign a predefined function to the ▲ key. The selected function is activated by briefly taping the ▲ key.

1. Select **Settings> Instrument > Function key** and confirm.
2. Select the desired function and confirm.

- Repeating the confirmation deactivates the selected function.
- If **Bumptest** is selected:
  The maintenance symbol 🔧 is shown on the right hand side of the display and the maintenance signal is output. Repeating the confirmation ends the bump test and the device reverts to the normal measurement mode.
- In measurement mode, the selected function can be activated by briefly taping ▲.

Selection options:

Graph (only with datalogger)	The measurements from the sensor are displayed graphically on a time axis (see chapter 7.3.2 on page 17).
Faults	Faults are displayed in plain text (see chapter 7.1.2 on page 17).
Warnings	Warnings are displayed in plain text (see chapter 7.1.1 on page 17).
Bump test	The bump test allows gas to be applied without an alarm being issued. The maintenance signal is output on the 4-20 mA output.
Sensor vitality	Shows the remaining sensor vitality (only available for certain sensors).

8.2.6 Resetting the device to factory settings

The following device parameters are reset to the factory settings with this function (see chapter 12.3 on page 29).

- Alarm parameters
- Passwords
- Language
- Function key
- HART interface
- Data logger
- Analog interface
- Relay configuration

1. Select **Settings > Instrument > Device init.** and confirm.
2. Select **Confirm** and confirm in order to reset the device to the factory settings.

8.2.7 Deactivating the software dongle

This function allows the SW dongles to be deactivated before they are removed or in the event of a fault.
A dongle can only be reactivated by switching the power to the device off and on.

1. Select **Settings > Instrument > SW dongle > Dongle datalogger/Dongle sensortest/Dongle diagnostic** and confirm.
2. Select **Deactivate func.** and deactivate Dongle datalogger/ Dongle sensortest/Dongle diagnostic with ⓞⓚ.

8.2.8 Display settings

Changing the contrast

1. Select **Settings > Instrument > Display > Display contrast** and confirm.
2. Change the contrast and confirm.

Changing the display mode
The display of measured values can be turned on or off with this function.

1. Select **Settings > Instrument > Display > Display mode** and confirm.
2. Select **Standard** or **Non display** and confirm.

If "Non display" has been selected, the display shows the start screen and the symbols.

If the relay option is set and an alarm is triggered, the display shows the current gas concentration and the red LED flashes, regardless of the selected display mode.

Switching the display test on or off
The function of the display and the LEDs is tested with this function.

1. Select **Settings > Instrument > Display > Displaytest** and confirm.
2. Select **On** or **Off** and confirm.

When this function is activated, the display is shown inverted and all the LEDs are lit.

8.3 Communication settings

8.3.1 Settings for the HART interface (only for devices with the optional HART interface)

This group contains the setting functions for the HART interface.

Setting the polling address
The polling address configures the device for analog operation (4 to 20 mA) or multidrop operation. Analog operation (4 to 20 mA) is activated by setting the polling address to 0. For multidrop operation the polling address must be configured to a value between 1 and 15, which will result in the analog interface being deactivated and set to a constant current of approx. 1 mA. To allow the control unit to request the Unique Identifier (unique HART address) with HART command #0, all the devices on a line must be configured with different polling addresses. It is advisable to choose a sequence starting with 1 and incrementing continuously.
This setting corresponds to HART command #6 (Write Polling Address).

1. Select **Settings > Communication > HART interface > Polling address** and confirm.
2. Select the address line for the entry and confirm in order to switch to the Change mode.
3. Set the polling address and confirm.
4. Select **Confirm** and confirm.

Displaying the Unique Identifier
This function enables reading of the Unique Identifier (unique HART address), which has to be known for almost all the HART addressing commands. However this information is only required for those systems that are not able to read back the Unique Identifier using HART command #0 in Short-Frame Format or HART command #11. The display corresponds to the address for HART command #0 (Read Unique Identifier) or #11 (Read Unique Identifier associated with Tag).

- Select **Settings > Communication > HART interface > Unique Identifier** and confirm.
  The Unique Identifier is displayed.

Changing the measuring point name
The tag can be used to identify special devices. It can contain up to 8 alphanumeric characters. The tag can also function as an address for reading the unique identifier from the device using HART command #11 (Read Unique Identifier Associated With Tag), even when the polling address is unknown.
This requires that a unique tag has previously been configured.

1. Select **Settings > Communication > HART interface > Tag** and confirm.
2. Select the tag line for the entry and confirm.
3. Set the tag and confirm.
4. Select **Confirm** and confirm.

Selecting Dräger REGARD
This function enables switching between different HART protocols.

NOTICE

REGARD SW 2.0 is the standard setting. REGARD SW 1.4 must be set on REGARD controllers with SW 1.4.

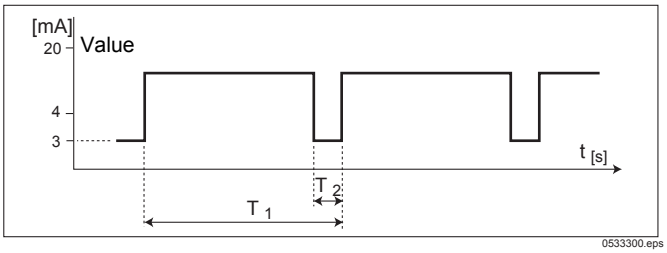
1. Select **Settings > Communication > HART interface > Dräger REGARD** and confirm.
2. Select **REGARD SW 2.0** or **REGARD SW 1.4** and confirm.

8.3.2 Settings for the analog interface

The test and setting functions for the analog interface are summarized in this menu.

Setting the fault current
This function is used to set the current for the fault signal on the analog interface.

1. Select **Settings > Communication > Analog interface > Fault current** and confirm.
2. Select the fault current line and confirm.
3. Set the currrent and confirm.
4. Select **Confirm** and confirm.



Switching the warning signal on or off
This function is used to switch the warning signal on the analog interface on and off. If an existing warning is to be output over the analog interface, the warning signal must be turned on. During a warning, the current on the analog interface is switched to the "Warning" status for one second. The measurement is transmitted for the rest of the time. The interval between warning signals and the analog signal phase can be customized.

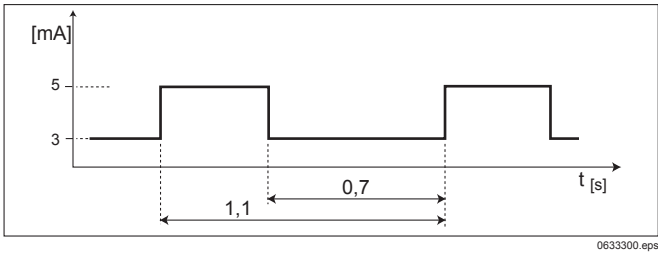
To switch the warning signal on or off:

1. Select **Settings > Communication > Analog interface > Warning** and confirm.
2. Select **On** or **Off** and confirm.

Setting the warning interval
This function is used to set the interval between the warning signals and the analog interface.

1. Select **Settings > Communication > Analog interface > Warning interval** and confirm.
2. Select line **T1** for the entry and confirm.
3. Set the time and confirm.
   The setting for Time T1 is displayed.
4. Select **Next** and confirm.
5. Select line **T2** for the entry and confirm.
6. Set the time and confirm each setting.
   The setting for Time T2 is displayed.
7. Select **Confirm** and confirm.

Setting the warning current
This function is used to set the current for the warning signal on the analog interface.



1. Select **Settings > Communication > Analog interface > Warning current** and confirm.
2. Select the current line for the entry and confirm.
3. Set the currrent and confirm.
   The setting for the warning current is displayed.
4. Select **Confirm** and confirm.

Changing the maintenance signal type
This function is sets the type of signal used on the analog interface for the maintenance signal.

1. Select **Settings > Communication > Analog interface > Maint. signal** and confirm.
2. Select **static** or **dynamic** signal type and confirm.

NOTICE

The **static** signal type is a constant current. The current can be configured.
The **dynamic** signal type is a square wave signal with the following characteristics:

Setting the maintenance current
This function is used to set the current for the maintenance signal on the analog interface.

1. Select **Settings > Communication > Analog interface > Maint. current** and confirm.
2. Select the current line for the entry and confirm.
3. Set the currrent and confirm.
   The setting for the maintenance current is displayed.
4. Select **Confirm** and confirm.

NOTICE

The maintenance current can only be set if the maintenance signal has been set to static. This function is not available otherwise.

Setting the 4-20 mA offset
This function can be used to set an adjustable offset current on the analog interface. The offset is constant over the entire range of the output signal.

1. Select **Settings > Communication > Analog interface > Analog offset** and confirm.
2. Select the current line for the entry (max. range: -0.2 to 1.5 mA) and confirm.
3. Set the currrent and confirm.
   The setting for the 4-20 mA offset is displayed.
4. Select **Confirm** and confirm.

Test functions for the analog interface

NOTICE

Alarms in the central controller may be triggered by these functions! If necessary, the alarms in the central controller must be disabled beforehand.

Setting current signals
Using this function, various currents in the range from 0 to 22 mA can be set on the analog interface.

1. Select **Settings > Communication > Analog interface > Set current** and confirm.
2. If the alarm in the control unit is disabled, confirm the message **Disable all alarm settings**.
3. Select the current line for the entry and confirm.
4. Set the currrent and confirm.
   The setting for the current is displayed.
5. Select **Next** and confirm.
6. Select **Set current out** or **Current off** and confirm.
7. Select **Next** and confirm. The function is terminated.
8. After the alarm settings in the control unit have been re-enabled, confirm the **Enable all alarm settings** message.

Setting the concentration
This function is used to set various concentrations in the range between 0 and 100 % of the selected unit of measure. The current output is set to correspond to the selected concentration.

1. Select **Settings > Communication > Analog interface > Set concentr.** and confirm.
2. If the alarm in the control unit is disabled, confirm the message **Disable all alarm settings**.
3. Select the concentration line for the entry and confirm.
4. Set the concentration and confirm.
   The setting for the concentration is displayed.
5. Select **Next** and confirm.
6. Select **Define concentr. output** or **Conc. off** and activate.
7. Select **Next** and confirm. The function is terminated.
8. After the alarm settings in the control unit have been re-enabled, confirm the **Enable all alarm settings** message.

Testing the Fault signal
This function is used to set the analog interface for the fault signal.

1. Select **Settings > Communication > Analog interface > Set fault** and confirm.
2. Select **On** or **Off** and confirm.
   The current for the Fault signal will be transmitted on the analog interface.

Testing the warning signal
This function is used to set the analog interface for the warning signal.

1. Select **Settings > Communication > Analog interface > Set warning** and confirm.
2. Select **On** or **Off** and confirm.
   The current for the warning signal will be transmitted on the analog interface.

Testing the maintenance signal
This function is used to set the analog interface for the maintenance signal.

1. Select **Settings > Communication > Analog interface > Set mainten.** and confirm.
2. Select **On** or **Off** and confirm.
   The current for the maintenance signal will be transmitted on the analog interface.

8.3.3 Profibus address

Not yet active - for future functions.

8.4 Sensor settings

8.4.1 Switching Auto CAL on or off

NOTICE

The auto-calibration from the **Calibration** menu is only available if this function is enabled.

1. Select **Settings > Sensor > Set auto calibration** and confirm.
2. Select **On** or **Off** and confirm.

8.4.2 Setting the sensor type (for DrägerSensor DD only)

This function is used to set the sensor type.

1. Select **Settings > Sensor > Sensor type** and confirm.

8.4.3 Changing the gas settings

Settings for gas type, measuring range and measurement units can be made in this menu.

1. Select **Settings > Sensor > Gas setting** and confirm.
2. Select the measured gas from the list and confirm.
   The measurement units display will be shown.
3. Select the measurement units and confirm.
   The full scale reading display will be shown.
4. Set the full scale reading and confirm.
   The setting for the full scale reading is displayed.
5. Select **Next** and confirm.
   an overview of the new gas settings is displayed.

- Return to the previous view with **Previous** or confirm the settings with **Confirm**.

Information about measurement units

The Polytron 8200/8310 represents the measured value in various optional units. The following are available:

- %LEL
- %LIE
- %UEG

The Polytron 8000 automatically calculates the correct value.

Information about the 20 mA measuring range

The full scale reading can be set with this function. At the full scale reading set, the device outputs 20 mA on the 4-20 mA interface.

8.4.4 Resetting the sensor to factory settings

This function resets all the sensor parameters to the factory default settings (see chapter 12.3 on page 29).

1. Select **Settings > Sensor > Reset sensor required!** and confirm.
2. Select **Confirm** and confirm.

8.4.5 Setting the calibration interval

NOTICE

The calibration interval can be set between 0 and 720 days.

1. Select **Settings > Sensor > Calibration interval** and confirm.
2. Set the calibration interval and confirm.

8.5 Datalogger settings (only with data dongle)

NOTICE

The functions are only available if the Polytron 8000 is fitted with the data dongle (Order Number 83 17 618), see chapter 3.10 on page 10.

The datalogger has a storage capacity of approx. 3000 measurements. At a sampling interval of 1 minute, this would allow monitoring for approx. 50 hours. The monitoring time can be significantly increased if the **Trigger** function is enabled.

The results in the datalogger can only be evaluated with the PolySoft 8000 PC software. An evaluation of the datalogger contents over the last 15 minutes is available in the menu under **Information > Datalogger > Graph** (see chapter 7.3.2 on page 17).

8.5.1 Switching the datalogger on or off

1. Select **Settings > Datalogger > Datalogr. on/off** and confirm.
2. Select **On** or **Off** and confirm.

8.5.2 Setting up the datalogger

Setting the sampling interval

1. Select **Settings > Datalogger > Datalogr. on/off > Sample time** and confirm.
2. Select the sample time and confirm.

Setting peak/average

1. Select **Settings > Datalogger > Set datalogger > Peak/average** and confirm.
2. Select the desired function and confirm.

Peak value	The measured maximum (for O_2, the minimum value) value of the concentration within the selected sampling interval is stored.
Average	The average value of all the concentrations measured within the selected sampling time is stored.

Switching the trigger on or off

1. Select **Settings > Datalogger > Set datalogger > Trigger on/off** and confirm.
2. Select **On** or **Off** and confirm.

On	Concentrations will only be stored if they exceed (relative to the last stored value) a threshold set under Trigger Value.
Off	The measurements made within the set sampling time are always stored.

Setting the trigger threshold

The trigger threshold is specified as a percentage of the full scale reading.
Example: A trigger threshold of 2 % is entered for a full scale reading of 500 ppm. Consequently the datalogger will only store measurements if they deviate (relative to the last stored value) by 10 ppm.

1. Select **Settings > Datalogger > Datalogr. on/off > Trigger value** and confirm.
2. Set the trigger value and confirm.

Setting the storage mode

1. Select **Settings > Datalogger > Set Datalogger > Stack/Roll** and confirm.
2. Select the desired condition and confirm

Overwrite	When the capacity of the datalogger is used up, the older data will be overwritten.
Hold	When the capacity of the datalogger is used up, no more data can be stored. An appropriate warning is issued.

8.5.3 Clearing the datalogger

1. Select **Settings > Datalogger > Clear Datalogr.** and confirm.
2. To clear the datalogger, select **Confirm** and confirm.

9 Troubleshooting

9.1 Fault reference

Fault number	Cause	Remedy
#001 #003 #004 #005 #011 - #014 #020 - #024 #043 #060 #067	Serious device fault, various causes.	Have the device checked by DrägerService®[1].
#002 #025 - #027 #030 - #034 #041 #042 #044 #050 #052 #081 #085	Serious data error in the device, various causes.	Reset the device to factory settings (see chapter 8.2.6 on page 20). If this fault occurs again: Have the device checked by DrägerService.
#10	4-20 mA interface cable not connected.	Disconnect the powwer supply, connect the 4-20 mA interface and reconnect the power supply.
#045	Device not detecting any sensor.	Check contacts. If this fault occurs again: Have the device checked by DrägerService.
#051 #054	Faulty zero-point.	Perform zero-point calibration (see chapter 5.1.1 on page 14).
#055	Faulty span calibration was performed.	Perform new span calibration (see chapter 5.1.2 on page 15).
#076 #080 - #084	Device fault.	Check contacts. If this fault occurs again: Have the device checked by DrägerService.

1 DrägerService® is a registered trademark of Dräger.

9.2 Warning reference

Warning number	Cause	Remedy
#101	Datalogger in Stack mode is 100 % full and is not logging any more data.	Read out the data, clear the datalogger and start again.
#102	Datalogger in Stack mode is 90 % full.	Read out the data as soon as possible, clear the datalogger and start again.
#103 #106	Data error in the device. Functions such as the datalogger or dongle functions may no longer be available.	Reset the device to factory settings (see chapter 8.2.6 on page 20). If this fault occurs again: Have the device checked by DrägerService.
#105	Device fault.	Have the device checked by DrägerService.
#104	No valid date or time set.	Set time and date (see chapter 8.2.3 on page 19).
#107	Battery almost used up.	Have the device checked by DrägerService.
#110 #111 #112	SW dongle has been removed without logging out.	Disable SW dongle (see chapter 8.2.7 on page 20).
#113	Alarms disabled.	Enable alarms (see chapter 8.2.1 on page 18).
#137	Device fault.	Restart. If this fault occurs again: Have device checked by DrägerService.
#164 #165	Sensor warm-up phase has not ended yet. Increased measurement error must be expected.	Wait until the sensor has warmed up.
#167 #170	Calibration interval expired.	Recalibrate the device (see chapter 5.1 on page 14).

10 Maintenance

10.1 Maintenance intervals

10.1.1 During commissioning

- Check calibration.
- Check signal transmission to controller and triggering of alarms.

10.1.2 Every 6 months

- Inspection by trained service personnel.

The inspection intervals must be established in each individual case and shortened if necessary, depending on technical safety considerations, engineering conditions, and the technical requirements of the equipment.
Contact DrägerService if you wish to take out a service contract and have any repairs carried out.

10.1.3 As required

- Change the sensor, see chapter 10.2 on page 27.

10.2 Changing the sensor

WARNING

As a matter of principle, always check a newly installed sensor with measured gas to insure correct operation.

CAUTION

When the sensor is changed, all settings and parameters must be checked for correctness.

The sensor is changed as follows:

1. Switch off the power to the device or declassify the area according to the local regulations.
2. Release the set screw and unscrew the housing cover from the device.
3. Lift the handle and remove the enclosure with the main electronics.
4. Disconnect the sensor cable.
5. Unscrew the DrägerSensor.
6. Pass the sensor cable through the threaded connection in the housing.
7. Screw in the DrägerSensor.

WARNING

Five threads must be engaged to insure explosion protection (see chapter 12.1 on page 29).

8. Plug the sensor cable into the socket.
9. Re-fit the sensor electronics and enclosure.
10. Screw the housing cover on again and tighten the set screw.
11. Switch on the power to the device.
12. If necessary, switch off SIL activation (see chapter 8.1 on page 18).
13. Calibrate the device if necessary (see chapter 5 on page 14).
14. If required, switch on SIL activation (see chapter 8.1 on page 18).

10.3 Changing the main electronics

CAUTION

When the main electronics are changed, all settings and parameters must be checked for correctness.

1. Switch off the power to the device or declassify the area according to the local regulations.
2. Release the set screw and unscrew the housing cover from the device.
3. Lift the handle and remove the enclosure with the main electronics.
4. Remove the protective caps for the connectors.
5. Unscrew the connector locking ring for the power supply and relay and withdraw the connector.
6. Change the main electronics.
7. Plug the sensor cable and the connector for the power supply and relay into the corresponding sockets and screw them tight.
8. Re-fit the dust caps for the connectors.
9. Re-fit the sensor electronics and enclosure.
10. Screw the housing cover on again and tighten the set screw.
11. Switch on the power to the device.
12. Check and adjust the configuration as required.
13. Calibrate the device if necessary (see chapter 5 on page 14).

11 Disposal

Disposal of electrical and electronic equipment:
EU-wide regulations governing the disposal of electric and electronic appliances which have been defined in the EU Directive 2002/96/EC and in national laws have been effective from August 2005 and apply to this device. Common household appliances can be disposed of using special collecting and recycling facilities. However, as this device has not been registered for household usage, it must not be disposed of through these means. The device can be returned to your national Dräger Safety Sales Organization for disposal. Please do not hesitate to contact the above if you have any further questions on this issue.

12 Technical data

CAUTION

Specifications and restrictions in the Instructions for Use and/or data sheets for the sensors used must be observed. For SIL applications the Dräger Polytron 8X00 Safety Manual must be observed.

The measuring range and performance characteristics are dependent on the sensor installed, see the Instructions for Use and/or data sheets for the sensors used.

Signal transmission to the central controller	
Analog	
Output current	4 mA to 20 mA
Drift below zero-point	3.8 mA to 4 mA
Measuring range exceeded	20 mA to 20.5 mA
Device malfunction	≤1.2 mA
Fault on analog output	>21 mA
Maintenance signal	3.4 mA constant signal or 1 Hz modulation between 3 and 5 mA (selectable)
Supply voltage	
Operating voltage	3-wire shielded cable, 10 to 30 V DC
Inrush current	2.5 A for 0.8 ms at 24 V DC, 10 Ω conductor resistance
Operating current (max.)	
with DrägerSensor Ex DD	105 mA at 24 V DC, no relay, sensor not remote 145 mA at 24 V DC, with relay, remote sensor
with DrägerSensor Ex LC	130 mA at 24 V DC, no relay, sensor not remote 165 mA at 24 V DC, with relay, remote sensor
with DrägerSensor IR	145 mA at 24 V DC, no relay, sensor not remote 185 mA at 24 V DC, with relay, remote sensor
Relay design (optional)	SPDT, 5 A at 230 V AC, 5 A at 30 V DC, resistive load For safety-related applications (SIL2), the maximum contact rating is reduced (see also the Dräger Polytron 8X00 Safety Manual).
Housing	NEMA 4X
Protection Class	IP 65/66/67
Dimensions (LxWxD)	
Without e-Box (DrägerSensor LC, DD)	approx. 180 x 150 x 130 mm (7" x 5.8" x 5.1")
With e-Box (DrägerSensor LC, DD)	approx. 185 x 180 x 190 mm (7.3" x 7.1" x 7.4")
Without e-Box (DrägerSensor IR)	approx. 295 x 150 x 130 mm (11,6" x 5,8" x 5,1")
With e-Box (DrägerSensor IR)	approx. 300 x 180 x 190 mm (11,9" x 7,1" x 7,4")
Weight	
Without e-Box, aluminum	approx. 2.2 kg (4.9 lbs.)
Without e-Box, stainless steel 316	approx. 4.0 kg (8.8 lbs.)
With e-Box, aluminum	approx. 3.5 kg (7.7 lbs.)
With e-Box, stainless steel 316	approx. 5.4 kg (11.9 lbs.)
Display	Resolution 128 x 64, back-lit

Environmental conditions	Specifications for the sensor: see sensor data sheet
Pressure	700 to 1300 hPa (20.7 to 38.4 in. Hg)
Humidity	0 to 100 % R. H., non-condensing
Temperature	
DrägerSensor DD, LC no relay	-40 to +80 °C (-40 to +176 °F)
DrägerSensor DD, LC with relay	-40 to +70 °C (-40 to +158 °F)
DrägerSensor IR no relay	-40 to +65 °C (-40 to +149 °F)
DrägerSensor IR with relay	-40 to +65 °C (-40 to +149 °F)
Environmental influences	See respective sensor data sheets.

12.1 Torques

(The torques are valid for the aluminum and stainless steel 316 variants)

Part	Torque Lb. In.	Torque Nm
Housing cover	min. 266	min. 30
Sensors	min. 266	min. 30
Plug	min. 266	min. 30
Cable bushing	min. 443	min. 50
Device to e-Box	71	8

If an optional e-Box is being used, fasten the device securely to the e-Box with 4 screws and a tightening torque of 8 Nm.

12.2 Tightening torque and cable size for field wiring terminals

Electronic		
Torque Lb. In.	**Cable size in AWG**	**Cable size in mm^2**
All field wiring terminals 4.4–7.0 (0.5–0.8 Nm)	20–12	0.5–2.5

12.3 Factory settings

12.3.1 Alterable settings for the Polytron 8200/8310

Menu	Standard setting	
	DrägerSensor DD, IR	**DrägerSensor LC**
A1 Alarm	20 %LEL	2.0 %LEL
A2 Alarm	40 %LEL	4.0 %LEL
A1 Relay alarm: Direction	Rising	Rising
A2 Relay Alarm: Direction	Rising	Rising
A1 latching mode	Non-latching	Non-latching
A2 latching mode	Latching	Latching
A1 Acknowledgement mode	Acknowledgeable	Acknowledgeable
A2 Acknowledgement mode	Not acknowledgeable	Not acknowledgeable
A1 enrg / wired in e-Box	Energized / NO	Energized / NO
A2 enrg / wired in e-Box	Energized / NO	Energized / NO
Maintenance password	0000	0000
LCD setting	on	on
Configuration/SIL password	_ _ _2	_ _ _2
SIL status	Off	Off
Language	English	English
Fault current	1.2 mA	1.2 mA
Warning current	3.0 mA	3.0 mA
Maintenance current	3.4 mA	3.4 mA
HART address	0	0
Auto-cal.	Off	Off
Calibration interval	360	360
Function key	Faults	Faults

12.3.2 Unalterable settings

Fault	Meaning
Fault relay / wired in e-Box	Energized / NO
Yellow Fault LED	Lights when a fault is present (see chapter 9 on page 25).
Red Alarm LED	Gives single flashes when an A1 alarm is present. Gives double flashes when an A2 alarm is present. If an alarm is configured as acknowledgeable and the alarm is acknowledged, the LED lights. Alarm hierarchy: A2 has a higher priority for the LED than A1. However the A1 and A2 relays operate independently of one another, i.e. if A1 is acknowledgeable and A2 is not and the gas concentration is so high that A1 and A2 are triggered, an acknowledgement results in the A1 relay dropping out. However the red LED continues to give double flashes as long as the A2 condition exists.

13 Order list

13.1 Dräger Polytron 8200/83X0

Name and description	Order Number
Dräger Polytron 8200 DD d A 4-20/HART	45 44 439
Dräger Polytron 8200 DD d A 4-20/HART Relay	45 44 440
Dräger Polytron 8200 DD d S 4-20/HART	45 44 448
Dräger Polytron 8200 DD d S 4-20/HART Relay	45 44 449
Dräger Polytron 8200 DD e A 4-20/HART	45 44 457
Dräger Polytron 8200 DD e A 4-20/HART Relay	45 44 458
Dräger Polytron 8200 DD e S 4-20/HART	45 44 466
Dräger Polytron 8200 DD e S 4-20/HART Relay	45 44 467
Dräger Polytron 8200 Remote DD e A 4-20/HART	45 44 511
Dräger Polytron 8200 Remote DD e A 4-20/ HART Relay	45 44 512
Dräger Polytron 8200 Remote DD e S 4-20/HART	45 44 520
Dräger Polytron 8200 Remote DD e S 4-20/ HART Relay	45 44 521
Dräger Polytron 8200 LC d A 4-20/HART	45 44 475
Dräger Polytron 8200 LC d A 4-20/HART Relay	45 44 476
Dräger Polytron 8200 LC d S 4-20/HART	45 44 484
Dräger Polytron 8200 LC d S 4-20/HART Relay	45 44 485
Dräger Polytron 8200 LC e A 4-20/HART	45 44 493
Dräger Polytron 8200 LC e A 4-20/HART Relay	45 44 494
Dräger Polytron 8200 LC e S 4-20/HART	45 44 502
Dräger Polytron 8200 LC e S 4-20/HART Relay	45 44 503
Dräger Polytron 8200 Remote e A 4-20/HART	45 44 529
Dräger Polytron 8200 Remote LC e A 4-20/ HART Relay	45 44 530
Dräger Polytron 8200 Remote LC e S 4-20/HART	45 44 538
Dräger Polytron 8200 Remote LC e S 4-20/ HART Relay	45 44 539
Dräger Polytron 8310 d A 4-20/HART	45 44 807
Dräger Polytron 8310 d A 4-20/HART Relay	45 44 808
Dräger Polytron 8310 d S 4-20/HART	45 44 816
Dräger Polytron 8310 d S 4-20/HART Relay	45 44 817
Dräger Polytron 8310 e A 4-20/HART	45 44 825
Dräger Polytron 8310 e A 4-20/HART Relay	45 44 826
Dräger Polytron 8310 e S 4-20/HART	45 44 834
Dräger Polytron 8310 e S 4-20/HART Relay	45 44 835
Dräger Polytron 8310 Remote e A 4-20/HART	45 44 843

Name and description	Order Number
Dräger Polytron 8310 Remote e A 4-20/ HART Relay	45 44 844
Dräger Polytron 8310 Remote e S 4-20/HART	45 44 852
Dräger Polytron 8310 Remote e S 4-20/ HART Relay	45 44 853
e-Box standard version (power only)	68 12 420
e-Box power / relay / remote version (with 2 cable glands)	68 12 275

13.2 Sensors for remote versions

1 For your safety

1.1 General safety statements

- Before using this product, carefully read the Instructions for Use.
- Strictly follow the Instructions for Use. The user must fully understand and strictly observe the instructions. Use the product only for the purposes specified in the Intended use section of this document.
- Do not dispose of the Instructions for Use. Ensure that they are retained and appropriately used by the product user.
- Only fully trained and competent users are permitted to use this product.
- Comply with all local and national rules and regulations associated with this product.
- Only trained and competent personnel are permitted to inspect, repair and service the product as detailed in these Instructions for Use. Further maintenance work that is not detailed in these Instructions for Use must only be carried out by Dräger or personnel qualified by Dräger.
- Properly trained service personnel must inspect and service this product as detailed in the Maintenance section of this document.
- Use only genuine Dräger spare parts and accessories, or the proper functioning of the product may be impaired.
- Do not use a faulty or incomplete product, and do not modify the product.
- The flameproof threads for the explosion proof enclosure do not conform to the minimum/maximum values in EN/IEC 60079-1. The threads must not be modified by the user.
- The measuring function of the gas measurement transmitter for explosion protection according to Annex II, Sections 1.5.5, 1.5.6 and 1.5.7 of Directive 94/9/EG is not covered at present.
- Exchanging components may compromise the intrinsic safety. This only applies if the device is intrinsically safe.
- Only operate the product within the framework of a risk-based alarm signalling concept.

Safe coupling with electrical devices

- Electrical connections to devices which are not listed in these Instructions for Use should only be made following consultation with the respective manufacturers or an expert.

Use in areas subject to explosion hazards

- Devices or components for use in explosion-hazard areas which have been tested and approved according to national, European or international Explosion Protection Regulations may only be used under the conditions specified in the approval and with consideration of the relevant legal regulations. The devices or components may not be modified in any manner. The use of faulty or incomplete parts is forbidden. The appropriate regulations must be observed at all times when carrying out repairs on these devices or components.

1.2 Definitions of alert icons

The following alert icons are used in this document to provide and highlight areas of the associated text that require a greater awareness by the user. A definition of the meaning of each icon is as follows:

WARNING

Indicates an imminently hazardous situation which, if not avoided, will result in death or serious injury.

CAUTION

Indicates a potentially hazardous situation which, if not avoided, could result in physical injury, or damage to the product or environment. It may also be used to alert against unsafe practices.

NOTICE

Indicates additional information on how to use the product.

2.2 Functional description

2.2.1 Principle of operation of the DrägerSensor DD, LC

The DrägerSensor is a transducer for measuring the partial pressure of flammable gases and vapors in ambient air. It operates on the heat of combustion principle.

The ambient air to be monitored diffuses through the flame arrestor in the sensor. The mixture of flammable gases and vapors is burned catalytically on the heated measuring element (pellistor). The oxygen required for combustion is taken from the monitored ambient air (must be greater than 12 vol.%). The measuring element receives additional warming from the heat arising from the combustion. This warming causes a change in the resistance of the measuring element which is proportional to the concentration of the mixture of flamable gases and vapors in the air being monitored.

In addition to the catalytically activated measuring element, the sensor also has a compensating element. Both elements are part of a Wheatstone bridge circuit. Consequently, environmental influences such as changes in temperature or humidity are almost completely compensated for.

The DrägerSensor LC includes additional processing and amplification of the measuring signal. As a result, the sensor is suitable for the measuring range 0 - 10 %LEL.

2.2.2 Principle of operation of the DrägerSensor IR

The DrägerSensor IR infrared gas sensor is a gas transmitter for determining the concentration of gases and vapors in ambient air. The measuring principle is based on the concentration-dependent absorption of infrared radiation in the measured gases.

The ambient air to be monitored diffuses through a sintered body into the pressure-tight housing of a measurement cuvette. The broadband light produced by the emitter passes through the gas in the cuvette, is reflected from the cuvette walls and is focused on the entrance window of a dual-element detector. One channel of the detector measures the gas-dependent light transmission of the cuvette (measuring channel) and the other is used as the reference. The gas concentration in the cuvette can be determined from the ratio of the measured signal to the reference signal. The cuvette is heated to prevent condensation of atmospheric humidity.

The calculation of the concentration is performed by internal electronics and software. For the output signal, the gas sensor emulates the half bridge of a catalytic bead sensor.

2.2.3 Contaminating gases for the DrägerSensor DD, LC

NOTICE

Certain substances in the atmosphere to be measured can impair the sensitivity of the sensors.

a) Polymerizing substances such as acrylonitrile, butadiene and styrene

b) Corrosive compunds such as halogenated hydrocarbons (which release halogens such as bromine, chlorine or fluorine on oxidation) and halogen hydracids, as well as gaseous acidic compounds such as sulfur dioxide and oxides of nitrogen.

c) Catalyst poisons such as sulfur and phosphorus compounds, silicon compounds (particularly silicones) and organometallic vapors. The sensors used work with measuring elements (pellistors) that are poison-resistant (PR) and thus have a longer life than conventional sensors when catalyst poisons are present.

It may be necessary to check the calibration if the sensor has been exposed for a long time to a high concentration of flammable gases or vapors or the above-mentioned contaminating substances.

2.3 Intended use

The Dräger Polytron 8200/8310 is an explosion proof device for continuous monitoring of the concentration of gases and vapors containing hydrocarbons. The housing for the device consists of robust, non-corroding stainless steel or aluminum and is suitable for indoor or outdoor applications. The unit can be connected to a Dräger monitoring system or a programmable logic controller (PLC) by means of a sealed conduit or an appropriately approved cable gland. With the optionally integrated relay module, the device can be operated without a central controller (with additional local alarm signalling). The device is designed for fixed installation and is approved for use in potentially explosive atmospheres, see chapter 2.5 on page 7.

WARNING

Not tested in oxygen enriched atmospheres (>21% O_2). High off-scale readings may indicate an explosive concentration.

2.3.1 Dräger Polytron 8200 with DrägerSensor® [1] Ex DD

Catalytic bead sensor for monitoring flammable gases and vapors containing hydrocarbons

- Detection range: 0 to 100 % LEL [2]

2.3.2 Dräger Polytron 8200 with DrägerSensor Ex LC

Catalytic bead sensor for monitoring flammable gases and vapors containing hydrocarbons

- Detection range: 0 to 10 % LEL [2)]

1 DrägerSensor® is a registered trademark of Dräger.
2 Lower Explosion Limit, depending on substance and the locally applicable regulations.

2.3.3 Dräger Polytron 8310 with DrägerSensor IR

Infrared sensor for monitoring flammable gases and vapors containing hydrocarbons

- Detection range: 0 to 100 % LEL [2)]

WARNING

Explosive. Not to be used in oxygen enriched atmospheres. None of the Polytron 8000 transmitters is certified and approved to be operated in oxygen enriched atmospheres.

2.4 Intended operating area and operating conditions

Hazardous areas classified by zones:
The device is only designed for use in Zone 1 or Zone 2 potentially explosive atmospheres for which a temperature range as specified on the device must be observed and in which gases of Explosion Groups IIA, IIB or IIC and Temperature Classes T4 or T6 (depending on maximum ambient temperature) or dust of Groups IIIA, IIIB or IIIC may occur.

Hazardous areas classified by divisions:
The device is only designed for use in potentially explosive atmospheres of Classes I&II, Div. 1 or 2, for which a temperature range as specified on the device must be observed and in which gases or dust of Groups A, B, C, D or E, F, G and Temperature Classes T4 or T6 (depending on maximum ambient temperature) may occur.

2.5 Approvals

See printed version for approval markings.

2.6 Device marking

The device marking is supplied with the device as a copy on a separate document.

Key to the Serial Number: The third letter of the Serial Number specifies the year of manufacture: A = 2009, B = 2010, C = 2011, D = 2012, E = 2013, F = 2014, H = 2015, J = 2016, K = 2017 etc. Example: Serial Number ARBH-0054: The third letter is B, i.e. the device was manufactured in 2010.

3 Installation

3.1 General information for the installation

The selection of a suitable mounting location is crucial for the effectiveness and performance of the entire system. Every detail of the installation must be thoroughly thought out. The following must be noted in particular:

- the local and national rules and regulations for the installation of gas monitoring systems,
- the applicable regulations for running and connecting power and signal cables to gas monitoring systems,
- the full extent of environmental influences to which the device will be subjected,
- the physical properties of the gases and vapors to be measured,
- the details of the particular application (e.g., potential leaks, air movements/flows, etc.),
- accessibility for required maintenance activities,
- the geometric of the accessories that are used with the system,
- all other limiting factors and stipulations that may affect the installation of the system.
- For installation without a conduit, an approved cable gland (e.g. Hawke A501/421/A/¾" NPT or equivalent) must be used (see chapter 12 on page 28). To increase the RF interference immunity, it may be necessary to connect the cable screen to the cable gland and to the control unit.
- The explosion proof enclosure has three ¾" NPT connections, which can be used for field wiring, the direct attachment of a sensor or wiring an external sensor. Unused openings must be closed off with a plug. For the correct tightening torques for cable bushings, plugs, sensors and connectors, see chapter 12 on page 28.
- The secondary are supposed to be supplied from an isolating source (does not apply to relay contacts).
- The optional e-Box has up to four 20 mm connections, which can be used for field wiring or wiring an external sensor. The permissible cable diameter is 7 to 12 mm.
- If the device is installed in locations where ambient temperatures of over 55 °C prevail, appropriate cables which are specified for use at temperatures of 25 °C above the maximum ambient temperature must be used.
- Strip back the insulation on conductors by 5 to 7 mm.
- Connect the cable as shown in Chapter 3.5 on page 9 (shown here also with protective ground) oder Chapter 3.6 on page 10.
- The connecting wires for the optional relay module must be selected and fused according to the rated voltages, currents and environmental conditions.
- When stranded conductors are used, an end ferrule must also be used.

3.2 Restrictions on the installation

- The device requires a DC voltage between 10 and 30 V. The minimum supply voltage of 10 V and the cross-section of the conductors used determine the distance of the device from the supply or the central controller (see chapter 12 on page 28). The device is designed for cables of sizes 12 to 24 AWG (0.2 to 2.5 mm^2). Use a three-wire, shielded cable as a minimum.
- The device must not be subjected to any radiant heat (e.g. direct sunlight) as this will result in a temperature rise above the specified thresholds (see chapter 12 on page 28). The use of a reflective screen is recommended.
- The housing is weather resistant and suitable for outdoor applications. The use of the optional splash guard is recommended to protect the sensor from water and dust.
- The device must be installed and operated in an environment which conforms to the stated specifications (see chapter 12 on page 28).
- To insure proper operation of the device, the impedance of the 4 to 20 mA signal loop must not exceed 500 ohms. Depending on the operating voltage and according to the application (e.g. HART operation), certain minimum impedances must be adhered to (see chapter 3.3 on page 8). The conductors for the power supply must have an adequately low resistance to insure the correct supply voltage at the device.

NOTICE

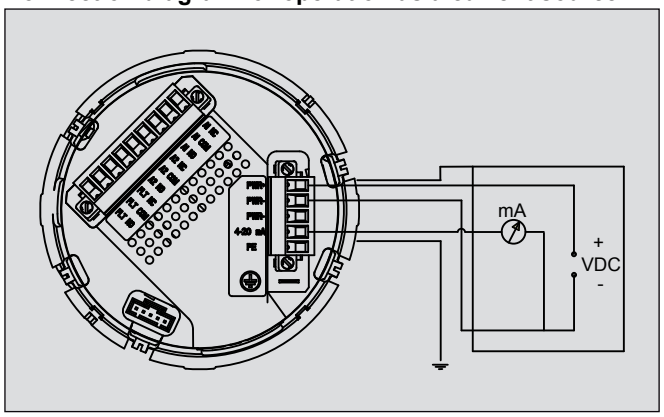
A dust cap can be fitted to the cable entry of the device. This cap is only used for transport purposes and must be removed before the device is connected to a sealed conduit.

3.3 Impedance range of the signal loop

Devices with a HART interface can be operated with HART communication or in HART Multidrop mode.

Operating mode	Impedance range of the signal loop	Supply voltage range
Operation without HART communication	0 to 230 Ω	at 10 V DC
	Rising linearly with the supply voltage from: 0 to 230 Ω at 10 V to 0 to 500 Ω at 16 V	10 to 18 V DC
	0 to 500 Ω	18 to 30 V DC
Operation with HART communication (HART mode)	230 to 270 Ω	at 13 V DC
	Rising linearly with the supply voltage from: 230 to 270 Ω at 11 V to 230 to 500 Ω at 16 V	11 to 16 V DC
	230 to 500 Ω	18 to 30 V DC
HART Multidrop operation	230 to 500 Ω	10 to 30 V DC

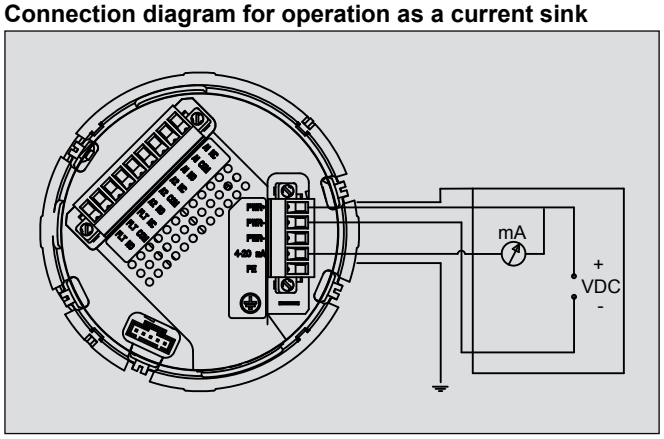
3.4 Mechanical installation



- Use the supplied drilling template for mounting on a wall.
- The mounting surface should be even and free of sharp edges.
- Dräger recommends using M6 Allen bolts.
- The openings must be readily accessible to the surrounding atmosphere.

3.5 Electrical installation without e-Box

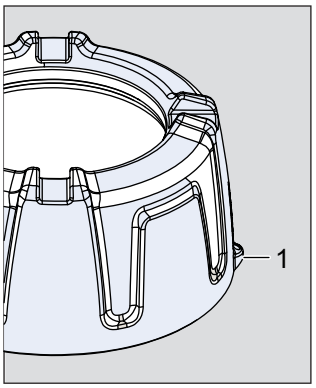
CAUTION



First connect the cables for the relays and make the connections to the sensor before connecting the device to the power supply.

Connection diagram for operation as a current source

01133300.eps



Connection diagram for operation as a current sink

01033300.eps

3.5.1 Power and signal cables

1. Release the set screw (1) and unscrew the housing cover from the device.
2. Lift the handle and remove the enclosure with the main electronics.
3. Connect the device electrically to the protective ground.
4. Rotate the main electronics and disconnect the 5-way plug.

00933300.eps

5. Connect the three cables for the power supply and the signal to the corresponding terminals (see following table of connections for the 5-way plug).

Connections for 5-way plug (power supply and signal):

5-way plug (power supply and signal)					
Terminal	1	2	3	4	5
Ident.	PWR+	PWR-	PWR-	4 to 20 mA signal	PE
Function	V+	V-	V-	4 to 20 mA signal (Operation as source or sink)	PE

6. For operation without a central controller: connect Terminal 3 to Terminal 4.
7. Fit the plug back in the socket and tighten the screws.
8. The screen of the cable must only be connected to the control unit.
9. Insert the main electronics back in the housing.
10. Screw the cover on again and tighten the set screw.

3.5.2 Version with relays

WARNING

At voltages >30 V AC or >42.4 V DC, the relay cables must be enclosed in protective tubing, or double-insulated cables must be used.

When the relay module is fitted, the wires for the alarm device are connected to the 9-way plug.

1. Disconnect the 9-way plug on the rear of the main electronics.
2. Connect the wires for Alarm Relay 1, Alarm Relay 2 and the Fault relay to the corresponding terminals, (see following table of connections for the 9-way plug).
3. The relays are energized when the default settings are used and in the measurement mode. This insures "fail-safe" operation. The terminal assignments in the connection table below apply when the default settings are used and when in measuring mode (see chapter 4.6 on page 13).
4. Fit the plug back in the socket and tighten the screws.
5. Fit the enclosed protective cover over the plug and secure it with cable ties if necessary.

NOTICE

For clear and far-ranging detection of a device fault, an alarm device should be switched by the fault relay.

Connections for 9-way plug (relays):

9-way plug (relays)									
	Fault relay			A2 relay			A1 relay		
Terminal	1	2	3	4	5	6	7	8	9
Ident.	FLT NO	FLT C	FLT NC	A2 NO	A2 C	A2 NC	A1 NO	A1 C	A1 NC

(NO = Normally open, NC = Normally closed, C = Common)

3.5.3 Remote Sensor

The remote junction box (Order Number 45 44 098 for stainless steel / Order Number 45 44 099 for aluminum) permits the installation of the sensors remote from the device electronics. This installation enables operation of the device in difficult to access or unfavourable positions (see the Instructions for Use for the Dräger Polytron 5000 Junction Box). The maximum permissible distance between the Polytron 8200/8310 and the sensors is 30 m.

3.6 Electrical installation with e-Box

- Install the e-Box in accordance with the Installation Instructions for the Polytron 5000/8000 e-Box.

NOTICE

The e-Box can be pre-installed, wired and closed off with the supplied cover. As soon as the installation is ready for commissioning, the device is connected to the e-Box and put into operation. This prevents the device from being damaged during the construction phase.

3.7 Connecting the device to a Dräger control unit

NOTICE

Information on connection can be found in the Instructions for Use accompanying the particular Dräger control unit (e.g. Regard, QuadGard).

Electrical connections to the control unit

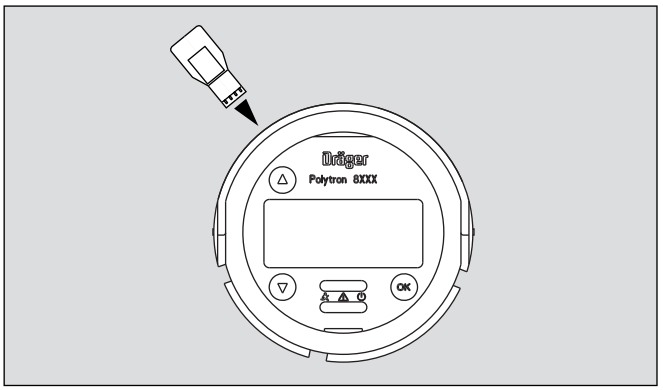
- Connect the screen for the wires to the grounding point in the control unit (e.g., chassis, grounding rail).

3.8 Connecting the device to a PC

The separately available Polytron 5000/8000 IR connection kit is intended for use with the Polytron 5000/8000 and enables communication between the Polytron 5000/8000 and a PC.

3.9 PolySoft 8000 PC software (optional)

The PolySoft 8000 PC software is used to display device information, edit configuration settings and read out from the measurements memory.



3.10 Installing software dongles

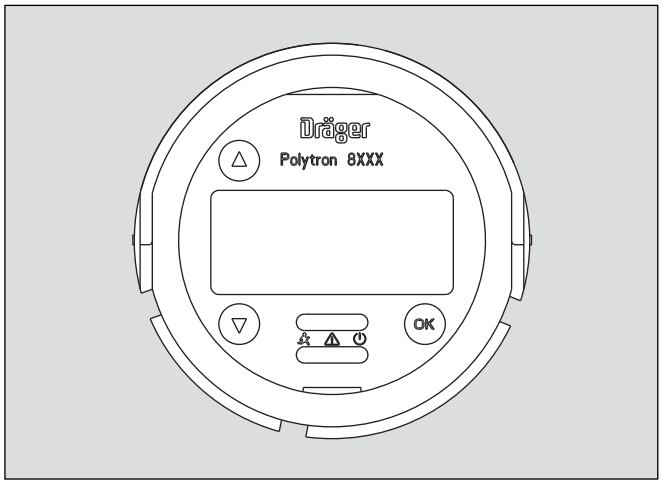
The following SW dongles are available for the Polytron 8200:

Datalogger dongle 83 17 618	Enables the datalogger and the graphic display of concentrations.
Sensor test dongle 83 17 619	Enables the sensor self test (for certain versions only)
Diagnostic dongle 83 17 860	Enables the sensor self test, the display of the remaining sensor activity and the sensor diagnostic function (for certain functions only)

Combi-dongle (datalogger and sensor test dongle)
83 23 218

Combi-dongle (datalogger and diagnostic dongle)
83 23 219

00833300.eps



To install a SW dongle:

1. Switch off the power to the unit or declassify the area according to the local regulations.
2. Release the set screw and unscrew the housing cover from the device.
3. Lift the handle and remove the enclosure with the main electronics.
4. Insert the dongle in the slot with the Dräger lettering facing upwards.
5. Insert the main electronics back in the housing.
6. Screw the cover on again and tighten the set screw.
   The dongle is installed.
7. Switch on the power.

4 Operation

4.1 Operating fundamentals

4.1.1 Menu navigation

00733300.eps

It is possible to scroll throught he menu items by tapping the ▲ and ▼ symbols with the magnetic wand (Part Number 4544101, blue). OK confirms a function.

NOTICE

The housing cover should be fitted when using the magnetic wand. If the housing cover is not fitted, the magnetic wand might activate two or more buttons at the same time (crosstalk).

Graphic symbols facilitate navigation in the various menus.

- Together with the text » Back «, » Menu «, etc., exit the menu or go back 1 step.
- Closed folder
  Further functions or sub-menus are located under this item.
- Opened folder
  The functions and sub-menus available here are listed under this item.

  Perform context-related action.
- 3/3 Number / total number of steps (screens) within the function.
- 2/2 Entry
  Enter data with » ▲ « and » ▼ «.

4.1.2 Changing parameter values or the parameter status

1. Select the desired menu item with ▲ and ▼.
2. Confirm the menu item with OK.
   The current value or status will be displayed.
3. Using ▲ and ▼, the value of a numerical parameter can be changed or preset values can be selected.
4. As soon as the desired value or the selection is displayed, tap OK to validate/confirm the new parameter.
5. Tap OK to access the next higher level.

- If exiting using **Back to menu** or **Previous**, all changes will be discarded.

4.1.3 Exiting menus

- ▲ Tap **Back to measurement** and OK to exit the menu.

4.2 Display and LEDs

In measurement mode, the current gas concentration, the name of the gas and the measurement units are shown on the display. The green LED lights.

In addition, the following symbols may be displayed:

- " ↑ ↑ ↑ ↑ ", if the measurement range is exceeded
- " **- - - -** " and " **X** " in the event of a malfunction. The yellow LED lights, (see chapter 4.2.2 on page 12).
- "SIL", when SIL status is activated.

When the optional relay PCB is used:

- If the first alarm has been triggered, the red LED gives single flashes.
- If the second alarm has been triggered, the red LED gives double flashes.

4.2.1 Special symbols

The following special symbols, which indicate the device state, may be displayed on the right hand side in measurement mode.

- Warning message present –
  to display warnings, see chapter 7.1.1 on page 17.
  Information can be called up in Info mode, see chapter 4.3 on page 12.
- Fault message present –
  To display the fault, see chapter 7.1.2 on page 17
- Maintenance signal will be output on the interface, see chapter 8.3.2 on page 21.
- Measurement range of analog interface exceeded
- Measurement less than range of analog interface
- Analog interface is set to a fixed value (e.g. Multidrop HART communication) and is not transmitting any measurements.
- "Preventive" maintenance: The sensor is ready for operation
- "Preventive" maintenance: The sensor is ready for operation but is close to the end of its life cycle.
- "Preventive" maintenance: The sensor is still ready for operation but should be changed as soon as possible.
- The datalogger is active in rolling mode.
  To activate/deactivate, see chapter 8.5.2 on page 24.
- The datalogger is active in stacking mode.
  To activate/deactivate, see chapter 8.5.2 on page 24.
- SIL SIL is activated (observe Safety Manual - Order Number 9033307).

4.2.2 LED symbols

Symbol	LED	Description
	red	Alarm triggered
	yellow	Malfunction / Warning
	green	Switched on Measurement mode

NOTICE

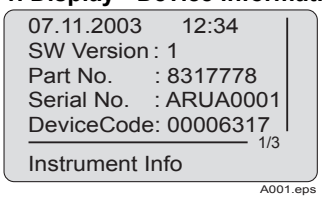
The alarm triggering function is only available when the optionally integrated relay module is used.

When the optional relay PCB is used:

- If the first alarm has been triggered, the red LED gives single flashes. A1 relay is activated.
- If the second alarm has been triggered, the red LED gives double flashes. A2 relay is activated.
- If an alarm can be acknowledged and is acknowledged, the LED stops flashing and lights continuously instead until the alarm condition is no longer present. The corresponding relay is deactivated.

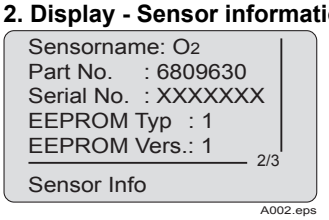


4.3 Activating the Info mode

The Info mode is used to present information about the central device settings and states.

- Tap ▲ and hold for 3 seconds.
  The device information appears on several displays. No changes can be made.
- Tap ▲ or ▼ briefly to switch between the displays.
- The Info mode can be ended at any time by selecting OK.
- If no button is selected within 30 seconds, the device reverts automatically to the measurement mode.

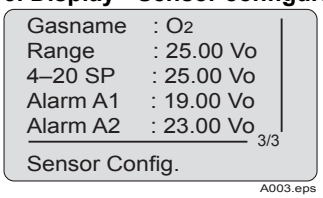
Example of the Info mode
(Displays vary depending on sensor):



1. Display - Device information:

A001.eps

- Date and Time
- Software version
- Part number of the device
- Serial number of the device
- Device code



2. Display - Sensor information:

A002.eps

- Sensor description
- Part number of sensor (only for certain sensors)
- Serial number of sensor (only for certain sensors)
- Software version (only for certain sensors)
- Software revision (only for certain sensors)

3. Display - Sensor configuration:

A003.eps

- Gas description
- Maximum measurement limit and measurement units for the sensor
- Measurement range and measurement units for the analog interface. Only displayed when the 4-20 mA interface is enabled.

- A1 Alarm limit and measurement units[1]
- A2 Alarm limit and measurement units[1]

4.4 Switching to the Quick Menu mode

- Tap ▼ and hold for 1 to 2 seconds.
  The Quick Menu will open. This menu is displayed without any password request. No changes can be made.
  The selected information about status and device settings can be retrieved (e.g. warning messages, error messages, installed modules and calibration data).

4.5 Switching to Menu mode (password protected)

1. Tap ▼ and hold for longer than 3 seconds.
   The password request appears.
2. **Enter the password** and confirm.
   The screen for password entry appears.
3. Set the password and confirm the entry.
   The menu hierarchy corresponding to the entered password will open.

- An error message appears if the entered password is invalid.

Password presets:
Password for the **Calibration** menu: _ _ _ 1
Password for the **Settings** menu: _ _ _ 2

4.6 Measurement mode

WARNING

The configuration and calibration settings must be checked before the device is operated in measurement mode.

- Switch on the power.
  - The device runs through a start-up sequence (LCD test by inverting the video, LED test, software version and initialization) and starts the warm-up phase. The display indicates that the sensor will be ready to operate in hh:mm:ss (the countdown begins) and the Polytron 8200/8310 sends the Maintenance signal.
  - After the warm-up phase, the device passes into the measurement mode.
  - The current gas concentration, the selected gas and the units of measure appear on the display.
  - The ⏻ LED lights green.
  - The sensor is ready to take measurements.

NOTICE

The correct date and time settings are important for many functions (see chapter 8.2.3 on page 19).

4.6.1 Analog signals

In measurement mode the output current of the device is between 4 and 20 mA and is proportional to the measured gas concentration.

The device uses various current values to indicate different operating modes. This conforms to the NAMUR NE43 recommendation. The 4-20 mA interface on the device can be customized and configured to individual requirements. The device is provided with suitable standard settings at the factory (see chapter 12.3 on page 29).

1 Only displayed when relay is configured.

5 Calibration

Repeat the calibration of the device at regular intervals as specified in the particular sensor data sheet.

CAUTION

Danger to health! Do not inhale the test gas. Observe the hazard information in the corresponding safety data sheets. Provide venting into a fume cupboard or outside the building.

Always calibrate the zero point first before the sensitivity. Otherwise the calibration will be faulty!

NOTICE

Calibration is not possible if the date and time are not set (see chapter 8.2.3 on page 19).

Dräger recommends calibrating devices with the gas that is to be measured operationally. This method of measured gas calibration is more accurate than a surrogate gas calibration. A surrogate gas calibration may only be performed as an alternative if a measured gas calibration is not possible.

5.1 Calibrating the device

1. Connect the pressure reducer to the calibration gas cylinder.
2. Attach the calibration adapter to the sensor.
3. The gas flow should be between 0.5 and 2.0 L/min.
4. Connect the hose to the calibration adapter.

1 Pressure reducer
2 Calibration adapter
3 Test gas cylinder
4 Hose

For DSIR only (see also Instructions for Use for DrägerSensor IR)

1. Position the magnetic wand on the sensor button marked with ⇩0 and hold it there for at least 5 seconds.
   A negative value will be displayed for as long as the magnetic wand is held on the button (e.g. -10 %LEL). This will start the automatic zeroing of the sensor.
2. Remove the magnetic wand.
   The sensor ends the automatic zeroing after approx. 30 seconds. A negative value (e.g. -10 %LEL) is displayed again as confirmation.

After the zero-point calibration of the DrägerSensor IR, the instrument should show 0 %LEL in the display. If this is not the case, a zero-point calibration must be performed on the instrument (see chapter 5.1.1 on page 14).

5.1.1 Zero point calibration

NOTICE

Ambient air can also be used instead of nitrogen or synthetic air to zero the sensor, provided it is insured that the ambient air contains no measured gas or any other gas for which the sensor may exhibit cross-sensitivity (see the details in the sensor data sheet). In this case, neither a gas cylinder nor a calibration adapter is required for the zero point calibration.

1. Select **Calibration > Zero Calibration** and confirm.
   The Maintenance signal is transmitted.
   The message **Apply zero gas** appears.
2. Apply zero gas (synthetic air or nitrogen) to the sensor.
3. Select **Next** and confirm.
   The current value is displayed.

After the displayed value is stable:

4. Set the value to 0 and confirm.
   The message **Please wait…** appears.
   The actual value is displayed.

- Actual value within the permissible range:
  - Select **Next** and confirm.
  - Shut off the test gas and remove the calibration adapter from the sensor or disconnect the hose.

5.1.2 Span calibration

1. Check which gas category is set (only for DrägerSensor IR, see also the Instructions for Use for the DrägerSensor IR).
1. Select **Calibration > Span calibration** and confirm.
2. Apply calibration gas (e.g., 50 % LEL methane).
   The current value is displayed.

After the displayed value is stable:

3. Set the value to 50 and confirm.
4. Shut off the test gas and remove the calibration adapter from the sensor or disconnect the hose.

5.2 Performing Auto Calibration

The device offers the option of an automatically sequenced calibration. This reduces the number of otherwise manual interactions with the device. The auto calibration is only suitable for experienced users, as calibration errors can occur here as a result of tightened procedures.

NOTICE

Not all of the available sensors and gases support auto calibration. If the function is not available, a manual calibration must be performed.

1. Select **Settings > Sensor > Autocal. set.** to enable or disable the function.
2. Supply fresh air or feed nitrogen or compressed air at a flow rate of 0.5 - 2.0 L/min to the sensor.

WARNING

It must be insured that during the zero point calibration, no measured gas is present in the supplied calibration gas. Particularly with a fresh air calibration, Dräger recommends performing a second, independent measurement. Some sensors may only be calibrated with synthetic air or nitrogen (observe the relevant sensor data sheets).

3. Select **Calibration > Auto cal.** and confirm.
   - **Please wait...** is displayed and a calibration of the zero point is performed automatically.
   - After a successful zero point calibration, the span calibration is started.
   - The calibration gas concentration, the units and, where appropriate, the calibration gas are displayed and can be changed.
4. Start the calibration with **Next**; **Back to menu** aborts the calibration.

NOTICE

After 10 minutes, without confirmation the device reverts to measurement mode without performing a calibration.

5. Feed the relevant calibration gas to the sensor at a flow rate of 0.5 - 2.0 L/min.
   - When the measured value is stable, the device performs the calibration automatically.
   - After a successful calibration, the measurement and the message **Value OK?** are displayed
6. When the measurement is stable, shut off the calibration gas and wait until the measurement is below any possible alarm thresholds again.

- The calibration is performed again with **Redo**.
- Complete the calibration with **Accept value**.
  The device returns to the measurement mode.

6 Menu overview

7 Information menu

Specific data about the device, the sensor used and the measured gas are summarized in this menu. The menu can be accessed without a password. Changes to the data are not possible.

7.1 Device settings

7.1.1 Displaying warning messages

To display warnings in plain text with warning numbers, see chapter 9 on page 25.
The ⚠ symbol is displayed when there is a warning present.

- Select **Information > Instrument > Warnings** and confirm.
  Warnings are displayed in plain text.
  If several warnings are present, this is indicated in the upper right-hand corner of the display, e.g., 1/3 = Screen 1 of 3.

7.1.2 displaying fault messages

To display faults present in plain text with fault numbers, see chapter 9 on page 25.
The ☒ symbol is displayed when there is a fault present.

- Select **Information > Instrument > Faults** and confirm.
  Faults are displayed in plain text.
  If several faults are present, this is indicated in the upper right-hand corner of the display, e.g., 1/2 = Screen 1 of 2.

7.1.3 Displaying device codes

Display of codes for faults/warnings in a numerical table (hexadecimal).
The ☒ symbol is displayed when there is a fault present.

- Select **Information > Instrument > Device codes** and confirm.
  Faults are displayed as a hexadecimal numerical code in tabular form. If all the numerical groups are displayed as **00**, there are no faults or warnings present.

NOTICE

The fault code is very helpful for technical support and should always be stated in full in the event of a fault.

7.1.4 Displaying installed modules

Display of the installed hardware modules.

- Select **Information > Instrument > Modules** and confirm.
  A list of all possible modules is displayed. The installed modules are identified by a ■, those not installed by a □.
- Mark a module and request detailed information with OK.

7.2 Sensor information

This menu contains the functions for retrieving the calibration data.

7.2.1 Display last calibration date

Display the date of the last calibration.

- Select **Information > Sensor > Last cal. date** and confirm.
  The date of the last calibration is displayed

7.2.2 Display next calibration date

Display the date of the next calibration.

- Select **Information > Sensor > Next cal. date** and confirm.
  The date when the next calibration of the sensor is due is displayed.

7.3 Datalogger information (only with data dongle)

This menu contains the functions for querying the datalogger.

7.3.1 Displaying the datalogger status

- Select **Information > Datalogger > Logger status** and confirm.
  The current status of the datalogger is displayed: Datalogr. : on or off (datalogger on or off)
- To switch the datalogger on/off, see chapter 8.5.1 on page 24.

7.3.2 Displaying a graph of measured values

Show the measurements from the sensor on a 15-minute time axis.

- Select **Information > Datalogger > Graph** and confirm.

8 Settings menu

This menu contains all the functions that are required for the individual configuration of the device.

8.1 Switching SIL lock on or off

NOTICE

SIL lock is only available for certain sensors (see also the sensor data sheets or the Dräger Polytron 8X00 Safety Manual).

With this function, the device can be protected against unauthorized changes to the configuration with a password. Changing the configuration (e.g., changing the measurement range from 100 %LEL to 50 %LEL) will cause the device to display all the safety-relevant parameters to the user once more before it returns to the measurement mode. The correctness of the parameters and settings must be confirmed.

1. Select **Settings > Instrument > Set SIL**.
2. Select the desired state **On** or **Off** and confirm.

NOTICE

When SIL is activated, the device displays all the important parameters and setting before returning to measurement mode. Check the parameters and settings carefully and confirm.

8.2 Device settings

8.2.1 Alarm settings (only with installed relay module)

Alarms issued via relays and LEDs.

CAUTION

In the normal state, the relays in the relay module are energized. That is, the relays change their state if the power supply is interrupted!

Switching the alarm on or off

1. Select **Settings > Instrument > Alarm > Alarm on/off**.
2. Select the desired state **On** or **Off** and confirm.

CAUTION

If the alarm is inactive, the alarm state will not be issued by the LEDs or the relay interface! A warning message ▯ will be shown on the display!

Configuring Relay A1 or A2

This function is used to define whether the alarm relay is energized in standard operation or in an alarm state. If the configuration of the relay is set to "Normally energized", the corresponding relay contact is closed in the normal case and drops out in the event of an alarm. This configuration results in an alarm being triggered in the event of a loss of power to the transmitter (fail-safe). The fault relay is factory-configured to "Normally energized" and cannot be changed.

1. Select **Settings > Instrument > Alarm > Relay A1** or **Relay A2** and confirm.
2. Select **Normal energy supply** oder **Energy supply during alarm** and confirm.

Configuring Alarm A1 or A2

1. Select **Settings > Instrument > Alarm > Alarm A1** or **Alarm A2** and confirm.
2. Select the line for entering the alarm limit and confirm.
3. Set the threshold and confirm.
   The setting for the alarm threshold is displayed.
4. Select **Next** and confirm.
   The setting for the alarm direction is displayed.
5. Select **Rising** or **Falling** and confirm.
6. Select **Next** and confirm.
   The setting for the alarm direction is displayed.
7. Select **Latching** or **Non Latching** and confirm.
8. Select **Next** and confirm.
   The setting for the acknowledgement is displayed.
9. Select **Acknowledgeable** or **NonAcknowledgeabl** or **PreAcknowledgeabl** and confirm.
10. Select **Next** and confirm.
    The function for setting the A1 hysteresis is opened.

NOTICE

This function permits the setting of a zone within which a triggered relay maintains its status until the gas concentration is outside the zone. This function prevents relays from chattering at an alarm threshold.
Example: A2 at 40 %LEL methane
Maximum possible hysteresis: 3 %LEL
Alarm activation at measured values ≥40 %LEL
Alarm deactivation at measured values ≤37 %LEL (40 %LEL - 3 %LEL)

11. Select the line for entering the hysteresis and confirm.
12. Set the hysteresis for A1 and confirm.
    The hysteresis setting for A1 is displayed.
13. Select **Next** and confirm.
    The settings for A1 are displayed.
14. Select and confirm with **Confirm**.
    The settings for the A1 alarm are now complete.

The functional relationship between the various settings is explained in the following table:

Latching and acknowledgeable	The alarm must be acknowledged manually. The alarm can be acknowledged when the alarm condition is still present.
Latching and not acknowledgeable	The alarm must be acknowledged manually. The alarm can only be acknowledged when the alarm condition is no longer present.
Latching and pre-acknowledgeable	The alarm must be acknowledged manually. The alarm can be acknowledged when the alarm condition is still present but will only be reset when the alarm condition is no longer present.
Non-latching and acknowledgeable	The alarm is acknowledged automatically when there is no longer any alarm condition present, or it can be acknowledged manually.
Non-latching and not acknowledgeable	The alarm is acknowledged automatically when there is no longer any alarm condition present. The alarm cannot be acknowledged manually.
Non-latching and pre-acknowledgeable	Corresponds to the alarm behavior for "Non-latching" and "Not acknowledgeable".

Testing Alarm A1

NOTICE

When the function **Set Alarm A1** is exited in the menu, the Polytron 8200/8310 reverts automatically to measurement mode.

This function simulates the A1 alarm status.

1. Select **Settings > Instrument > Alarm > Set Alarm A1** and confirm.
2. Select **On** or **Off** and confirm.

When the function is activated, the relay and the interface are set to the A1 alarm status and the red LED gives single flashes.

Testing Alarm A2

NOTICE

When the function **Set Alarm A2** is exited in the menu, the Polytron 8200/8310 reverts automatically to measurement mode.

This function simulates the A2 alarm status.

1. Select **Settings > Instrument > Alarm > Set Alarm A2** and confirm.
2. Select **On** or **Off** and confirm.

When the function is activated, the relay and the interface are set to the A2 alarm status and the red LED gives double flashes.

Testing Fault status

NOTICE

When the function **Set fault** is exited in the menu, the Polytron 8200/8310 reverts automatically to measurement mode.

This function simulates the Fault alarm.

1. Select **Settings > Instrument > Alarm > Set fault** and confirm.
2. Select **On** or **Off** and confirm.

When the function is activated, the Fault relay and the 4-20 mA interface are set to the fault current and the yellow LED lights.

8.2.2 Changing passwords

The passwords for calibration (zero and span calibrations) and for the settings (full configuration) can be defined in this menu.

1. Select **Settings > Instrument > Passwords > Calibration/ Settings PWD** and confirm.
2. Select the line for the password settings and confirm.
3. Set the password and confirm.
   The setting for the password is displayed.
4. Select **Confirm** and confirm.

8.2.3 Setting the date and time

1. Select **Settings > Instrument > Date and time** and confirm.
2. Select the desired line and confirm in order to switch to the Change mode.
3. Set each digit and confirm each setting.
4. Select **Confirm** and confirm.

8.2.4 Changing the display language

1. Select **Settings > Instrument > Language** and confirm.
2. Select the desired language from the list and confirm.

8.2.5 Configuring the function key

This function is used to assign a predefined function to the ▲ key. The selected function is activated by briefly taping the ▲ key.

1. Select **Settings> Instrument > Function key** and confirm.
2. Select the desired function and confirm.

- Repeating the confirmation deactivates the selected function.
- If **Bumptest** is selected:
  The maintenance symbol 🔧 is shown on the right hand side of the display and the maintenance signal is output. Repeating the confirmation ends the bump test and the device reverts to the normal measurement mode.
- In measurement mode, the selected function can be activated by briefly taping ▲.

Selection options:

Graph (only with datalogger)	The measurements from the sensor are displayed graphically on a time axis (see chapter 7.3.2 on page 17).
Faults	Faults are displayed in plain text (see chapter 7.1.2 on page 17).
Warnings	Warnings are displayed in plain text (see chapter 7.1.1 on page 17).
Bump test	The bump test allows gas to be applied without an alarm being issued. The maintenance signal is output on the 4-20 mA output.
Sensor vitality	Shows the remaining sensor vitality (only available for certain sensors).

8.2.6 Resetting the device to factory settings

The following device parameters are reset to the factory settings with this function (see chapter 12.3 on page 29).

- Alarm parameters
- Passwords
- Language
- Function key
- HART interface
- Data logger
- Analog interface
- Relay configuration

1. Select **Settings > Instrument > Device init.** and confirm.
2. Select **Confirm** and confirm in order to reset the device to the factory settings.

8.2.7 Deactivating the software dongle

This function allows the SW dongles to be deactivated before they are removed or in the event of a fault.
A dongle can only be reactivated by switching the power to the device off and on.

1. Select **Settings > Instrument > SW dongle > Dongle datalogger/Dongle sensortest/Dongle diagnostic** and confirm.
2. Select **Deactivate func.** and deactivate Dongle datalogger/ Dongle sensortest/Dongle diagnostic with ⓞⓚ.

8.2.8 Display settings

Changing the contrast

1. Select **Settings > Instrument > Display > Display contrast** and confirm.
2. Change the contrast and confirm.

Changing the display mode
The display of measured values can be turned on or off with this function.

1. Select **Settings > Instrument > Display > Display mode** and confirm.
2. Select **Standard** or **Non display** and confirm.

If "Non display" has been selected, the display shows the start screen and the symbols.

If the relay option is set and an alarm is triggered, the display shows the current gas concentration and the red LED flashes, regardless of the selected display mode.

Switching the display test on or off
The function of the display and the LEDs is tested with this function.

1. Select **Settings > Instrument > Display > Displaytest** and confirm.
2. Select **On** or **Off** and confirm.

When this function is activated, the display is shown inverted and all the LEDs are lit.

8.3 Communication settings

8.3.1 Settings for the HART interface (only for devices with the optional HART interface)

This group contains the setting functions for the HART interface.

Setting the polling address
The polling address configures the device for analog operation (4 to 20 mA) or multidrop operation. Analog operation (4 to 20 mA) is activated by setting the polling address to 0. For multidrop operation the polling address must be configured to a value between 1 and 15, which will result in the analog interface being deactivated and set to a constant current of approx. 1 mA. To allow the control unit to request the Unique Identifier (unique HART address) with HART command #0, all the devices on a line must be configured with different polling addresses. It is advisable to choose a sequence starting with 1 and incrementing continuously.
This setting corresponds to HART command #6 (Write Polling Address).

1. Select **Settings > Communication > HART interface > Polling address** and confirm.
2. Select the address line for the entry and confirm in order to switch to the Change mode.
3. Set the polling address and confirm.
4. Select **Confirm** and confirm.

Displaying the Unique Identifier
This function enables reading of the Unique Identifier (unique HART address), which has to be known for almost all the HART addressing commands. However this information is only required for those systems that are not able to read back the Unique Identifier using HART command #0 in Short-Frame Format or HART command #11. The display corresponds to the address for HART command #0 (Read Unique Identifier) or #11 (Read Unique Identifier associated with Tag).

- Select **Settings > Communication > HART interface > Unique Identifier** and confirm.
  The Unique Identifier is displayed.

Changing the measuring point name
The tag can be used to identify special devices. It can contain up to 8 alphanumeric characters. The tag can also function as an address for reading the unique identifier from the device using HART command #11 (Read Unique Identifier Associated With Tag), even when the polling address is unknown.
This requires that a unique tag has previously been configured.

1. Select **Settings > Communication > HART interface > Tag** and confirm.
2. Select the tag line for the entry and confirm.
3. Set the tag and confirm.
4. Select **Confirm** and confirm.

Selecting Dräger REGARD
This function enables switching between different HART protocols.

NOTICE

REGARD SW 2.0 is the standard setting. REGARD SW 1.4 must be set on REGARD controllers with SW 1.4.

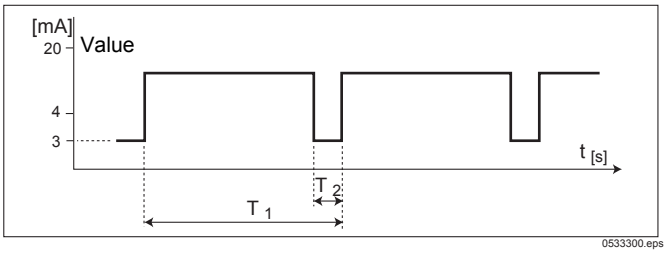
1. Select **Settings > Communication > HART interface > Dräger REGARD** and confirm.
2. Select **REGARD SW 2.0** or **REGARD SW 1.4** and confirm.

8.3.2 Settings for the analog interface

The test and setting functions for the analog interface are summarized in this menu.

Setting the fault current
This function is used to set the current for the fault signal on the analog interface.

1. Select **Settings > Communication > Analog interface > Fault current** and confirm.
2. Select the fault current line and confirm.
3. Set the currrent and confirm.
4. Select **Confirm** and confirm.



Switching the warning signal on or off
This function is used to switch the warning signal on the analog interface on and off. If an existing warning is to be output over the analog interface, the warning signal must be turned on. During a warning, the current on the analog interface is switched to the "Warning" status for one second. The measurement is transmitted for the rest of the time. The interval between warning signals and the analog signal phase can be customized.

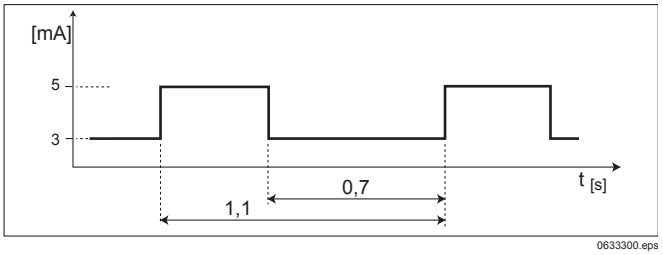
To switch the warning signal on or off:

1. Select **Settings > Communication > Analog interface > Warning** and confirm.
2. Select **On** or **Off** and confirm.

Setting the warning interval
This function is used to set the interval between the warning signals and the analog interface.

1. Select **Settings > Communication > Analog interface > Warning interval** and confirm.
2. Select line **T1** for the entry and confirm.
3. Set the time and confirm.
   The setting for Time T1 is displayed.
4. Select **Next** and confirm.
5. Select line **T2** for the entry and confirm.
6. Set the time and confirm each setting.
   The setting for Time T2 is displayed.
7. Select **Confirm** and confirm.

Setting the warning current
This function is used to set the current for the warning signal on the analog interface.



1. Select **Settings > Communication > Analog interface > Warning current** and confirm.
2. Select the current line for the entry and confirm.
3. Set the currrent and confirm.
   The setting for the warning current is displayed.
4. Select **Confirm** and confirm.

Changing the maintenance signal type
This function is sets the type of signal used on the analog interface for the maintenance signal.

1. Select **Settings > Communication > Analog interface > Maint. signal** and confirm.
2. Select **static** or **dynamic** signal type and confirm.

NOTICE

The **static** signal type is a constant current. The current can be configured.
The **dynamic** signal type is a square wave signal with the following characteristics:

Setting the maintenance current
This function is used to set the current for the maintenance signal on the analog interface.

1. Select **Settings > Communication > Analog interface > Maint. current** and confirm.
2. Select the current line for the entry and confirm.
3. Set the currrent and confirm.
   The setting for the maintenance current is displayed.
4. Select **Confirm** and confirm.

NOTICE

The maintenance current can only be set if the maintenance signal has been set to static. This function is not available otherwise.

Setting the 4-20 mA offset
This function can be used to set an adjustable offset current on the analog interface. The offset is constant over the entire range of the output signal.

1. Select **Settings > Communication > Analog interface > Analog offset** and confirm.
2. Select the current line for the entry (max. range: -0.2 to 1.5 mA) and confirm.
3. Set the currrent and confirm.
   The setting for the 4-20 mA offset is displayed.
4. Select **Confirm** and confirm.

Test functions for the analog interface

NOTICE

Alarms in the central controller may be triggered by these functions! If necessary, the alarms in the central controller must be disabled beforehand.

Setting current signals
Using this function, various currents in the range from 0 to 22 mA can be set on the analog interface.

1. Select **Settings > Communication > Analog interface > Set current** and confirm.
2. If the alarm in the control unit is disabled, confirm the message **Disable all alarm settings**.
3. Select the current line for the entry and confirm.
4. Set the currrent and confirm.
   The setting for the current is displayed.
5. Select **Next** and confirm.
6. Select **Set current out** or **Current off** and confirm.
7. Select **Next** and confirm. The function is terminated.
8. After the alarm settings in the control unit have been re-enabled, confirm the **Enable all alarm settings** message.

Setting the concentration
This function is used to set various concentrations in the range between 0 and 100 % of the selected unit of measure. The current output is set to correspond to the selected concentration.

1. Select **Settings > Communication > Analog interface > Set concentr.** and confirm.
2. If the alarm in the control unit is disabled, confirm the message **Disable all alarm settings**.
3. Select the concentration line for the entry and confirm.
4. Set the concentration and confirm.
   The setting for the concentration is displayed.
5. Select **Next** and confirm.
6. Select **Define concentr. output** or **Conc. off** and activate.
7. Select **Next** and confirm. The function is terminated.
8. After the alarm settings in the control unit have been re-enabled, confirm the **Enable all alarm settings** message.

Testing the Fault signal
This function is used to set the analog interface for the fault signal.

1. Select **Settings > Communication > Analog interface > Set fault** and confirm.
2. Select **On** or **Off** and confirm.
   The current for the Fault signal will be transmitted on the analog interface.

Testing the warning signal
This function is used to set the analog interface for the warning signal.

1. Select **Settings > Communication > Analog interface > Set warning** and confirm.
2. Select **On** or **Off** and confirm.
   The current for the warning signal will be transmitted on the analog interface.

Testing the maintenance signal
This function is used to set the analog interface for the maintenance signal.

1. Select **Settings > Communication > Analog interface > Set mainten.** and confirm.
2. Select **On** or **Off** and confirm.
   The current for the maintenance signal will be transmitted on the analog interface.

8.3.3 Profibus address

Not yet active - for future functions.

8.4 Sensor settings

8.4.1 Switching Auto CAL on or off

NOTICE

The auto-calibration from the **Calibration** menu is only available if this function is enabled.

1. Select **Settings > Sensor > Set auto calibration** and confirm.
2. Select **On** or **Off** and confirm.

8.4.2 Setting the sensor type (for DrägerSensor DD only)

This function is used to set the sensor type.

1. Select **Settings > Sensor > Sensor type** and confirm.

8.4.3 Changing the gas settings

Settings for gas type, measuring range and measurement units can be made in this menu.

1. Select **Settings > Sensor > Gas setting** and confirm.
2. Select the measured gas from the list and confirm.
   The measurement units display will be shown.
3. Select the measurement units and confirm.
   The full scale reading display will be shown.
4. Set the full scale reading and confirm.
   The setting for the full scale reading is displayed.
5. Select **Next** and confirm.
   an overview of the new gas settings is displayed.

- Return to the previous view with **Previous** or confirm the settings with **Confirm**.

Information about measurement units

The Polytron 8200/8310 represents the measured value in various optional units. The following are available:

- %LEL
- %LIE
- %UEG

The Polytron 8000 automatically calculates the correct value.

Information about the 20 mA measuring range

The full scale reading can be set with this function. At the full scale reading set, the device outputs 20 mA on the 4-20 mA interface.

8.4.4 Resetting the sensor to factory settings

This function resets all the sensor parameters to the factory default settings (see chapter 12.3 on page 29).

1. Select **Settings > Sensor > Reset sensor required!** and confirm.
2. Select **Confirm** and confirm.

8.4.5 Setting the calibration interval

NOTICE

The calibration interval can be set between 0 and 720 days.

1. Select **Settings > Sensor > Calibration interval** and confirm.
2. Set the calibration interval and confirm.

8.5 Datalogger settings (only with data dongle)

NOTICE

The functions are only available if the Polytron 8000 is fitted with the data dongle (Order Number 83 17 618), see chapter 3.10 on page 10.

The datalogger has a storage capacity of approx. 3000 measurements. At a sampling interval of 1 minute, this would allow monitoring for approx. 50 hours. The monitoring time can be significantly increased if the **Trigger** function is enabled.

The results in the datalogger can only be evaluated with the PolySoft 8000 PC software. An evaluation of the datalogger contents over the last 15 minutes is available in the menu under **Information > Datalogger > Graph** (see chapter 7.3.2 on page 17).

8.5.1 Switching the datalogger on or off

1. Select **Settings > Datalogger > Datalogr. on/off** and confirm.
2. Select **On** or **Off** and confirm.

8.5.2 Setting up the datalogger

Setting the sampling interval

1. Select **Settings > Datalogger > Datalogr. on/off > Sample time** and confirm.
2. Select the sample time and confirm.

Setting peak/average

1. Select **Settings > Datalogger > Set datalogger > Peak/average** and confirm.
2. Select the desired function and confirm.

Peak value	The measured maximum (for O_2, the minimum value) value of the concentration within the selected sampling interval is stored.
Average	The average value of all the concentrations measured within the selected sampling time is stored.

Switching the trigger on or off

1. Select **Settings > Datalogger > Set datalogger > Trigger on/off** and confirm.
2. Select **On** or **Off** and confirm.

On	Concentrations will only be stored if they exceed (relative to the last stored value) a threshold set under Trigger Value.
Off	The measurements made within the set sampling time are always stored.

Setting the trigger threshold

The trigger threshold is specified as a percentage of the full scale reading.
Example: A trigger threshold of 2 % is entered for a full scale reading of 500 ppm. Consequently the datalogger will only store measurements if they deviate (relative to the last stored value) by 10 ppm.

1. Select **Settings > Datalogger > Datalogr. on/off > Trigger value** and confirm.
2. Set the trigger value and confirm.

Setting the storage mode

1. Select **Settings > Datalogger > Set Datalogger > Stack/Roll** and confirm.
2. Select the desired condition and confirm

Overwrite	When the capacity of the datalogger is used up, the older data will be overwritten.
Hold	When the capacity of the datalogger is used up, no more data can be stored. An appropriate warning is issued.

8.5.3 Clearing the datalogger

1. Select **Settings > Datalogger > Clear Datalogr.** and confirm.
2. To clear the datalogger, select **Confirm** and confirm.

9 Troubleshooting

9.1 Fault reference

Fault number	Cause	Remedy
#001 #003 #004 #005 #011 - #014 #020 - #024 #043 #060 #067	Serious device fault, various causes.	Have the device checked by DrägerService®[1].
#002 #025 - #027 #030 - #034 #041 #042 #044 #050 #052 #081 #085	Serious data error in the device, various causes.	Reset the device to factory settings (see chapter 8.2.6 on page 20). If this fault occurs again: Have the device checked by DrägerService.
#10	4-20 mA interface cable not connected.	Disconnect the powwer supply, connect the 4-20 mA interface and reconnect the power supply.
#045	Device not detecting any sensor.	Check contacts. If this fault occurs again: Have the device checked by DrägerService.
#051 #054	Faulty zero-point.	Perform zero-point calibration (see chapter 5.1.1 on page 14).
#055	Faulty span calibration was performed.	Perform new span calibration (see chapter 5.1.2 on page 15).
#076 #080 - #084	Device fault.	Check contacts. If this fault occurs again: Have the device checked by DrägerService.

1 DrägerService® is a registered trademark of Dräger.

9.2 Warning reference

Warning number	Cause	Remedy
#101	Datalogger in Stack mode is 100 % full and is not logging any more data.	Read out the data, clear the datalogger and start again.
#102	Datalogger in Stack mode is 90 % full.	Read out the data as soon as possible, clear the datalogger and start again.
#103 #106	Data error in the device. Functions such as the datalogger or dongle functions may no longer be available.	Reset the device to factory settings (see chapter 8.2.6 on page 20). If this fault occurs again: Have the device checked by DrägerService.
#105	Device fault.	Have the device checked by DrägerService.
#104	No valid date or time set.	Set time and date (see chapter 8.2.3 on page 19).
#107	Battery almost used up.	Have the device checked by DrägerService.
#110 #111 #112	SW dongle has been removed without logging out.	Disable SW dongle (see chapter 8.2.7 on page 20).
#113	Alarms disabled.	Enable alarms (see chapter 8.2.1 on page 18).
#137	Device fault.	Restart. If this fault occurs again: Have device checked by DrägerService.
#164 #165	Sensor warm-up phase has not ended yet. Increased measurement error must be expected.	Wait until the sensor has warmed up.
#167 #170	Calibration interval expired.	Recalibrate the device (see chapter 5.1 on page 14).

10 Maintenance

10.1 Maintenance intervals

10.1.1 During commissioning

- Check calibration.
- Check signal transmission to controller and triggering of alarms.

10.1.2 Every 6 months

- Inspection by trained service personnel.

The inspection intervals must be established in each individual case and shortened if necessary, depending on technical safety considerations, engineering conditions, and the technical requirements of the equipment.
Contact DrägerService if you wish to take out a service contract and have any repairs carried out.

10.1.3 As required

- Change the sensor, see chapter 10.2 on page 27.

10.2 Changing the sensor

WARNING

As a matter of principle, always check a newly installed sensor with measured gas to insure correct operation.

CAUTION

When the sensor is changed, all settings and parameters must be checked for correctness.

The sensor is changed as follows:

1. Switch off the power to the device or declassify the area according to the local regulations.
2. Release the set screw and unscrew the housing cover from the device.
3. Lift the handle and remove the enclosure with the main electronics.
4. Disconnect the sensor cable.
5. Unscrew the DrägerSensor.
6. Pass the sensor cable through the threaded connection in the housing.
7. Screw in the DrägerSensor.

WARNING

Five threads must be engaged to insure explosion protection (see chapter 12.1 on page 29).

8. Plug the sensor cable into the socket.
9. Re-fit the sensor electronics and enclosure.
10. Screw the housing cover on again and tighten the set screw.
11. Switch on the power to the device.
12. If necessary, switch off SIL activation (see chapter 8.1 on page 18).
13. Calibrate the device if necessary (see chapter 5 on page 14).
14. If required, switch on SIL activation (see chapter 8.1 on page 18).

10.3 Changing the main electronics

CAUTION

When the main electronics are changed, all settings and parameters must be checked for correctness.

1. Switch off the power to the device or declassify the area according to the local regulations.
2. Release the set screw and unscrew the housing cover from the device.
3. Lift the handle and remove the enclosure with the main electronics.
4. Remove the protective caps for the connectors.
5. Unscrew the connector locking ring for the power supply and relay and withdraw the connector.
6. Change the main electronics.
7. Plug the sensor cable and the connector for the power supply and relay into the corresponding sockets and screw them tight.
8. Re-fit the dust caps for the connectors.
9. Re-fit the sensor electronics and enclosure.
10. Screw the housing cover on again and tighten the set screw.
11. Switch on the power to the device.
12. Check and adjust the configuration as required.
13. Calibrate the device if necessary (see chapter 5 on page 14).

11 Disposal

Disposal of electrical and electronic equipment:
EU-wide regulations governing the disposal of electric and electronic appliances which have been defined in the EU Directive 2002/96/EC and in national laws have been effective from August 2005 and apply to this device. Common household appliances can be disposed of using special collecting and recycling facilities. However, as this device has not been registered for household usage, it must not be disposed of through these means. The device can be returned to your national Dräger Safety Sales Organization for disposal. Please do not hesitate to contact the above if you have any further questions on this issue.

12 Technical data

CAUTION

Specifications and restrictions in the Instructions for Use and/or data sheets for the sensors used must be observed. For SIL applications the Dräger Polytron 8X00 Safety Manual must be observed.

The measuring range and performance characteristics are dependent on the sensor installed, see the Instructions for Use and/or data sheets for the sensors used.

Signal transmission to the central controller	
Analog	
Output current	4 mA to 20 mA
Drift below zero-point	3.8 mA to 4 mA
Measuring range exceeded	20 mA to 20.5 mA
Device malfunction	≤1.2 mA
Fault on analog output	>21 mA
Maintenance signal	3.4 mA constant signal or 1 Hz modulation between 3 and 5 mA (selectable)
Supply voltage	
Operating voltage	3-wire shielded cable, 10 to 30 V DC
Inrush current	2.5 A for 0.8 ms at 24 V DC, 10 Ω conductor resistance
Operating current (max.)	
with DrägerSensor Ex DD	105 mA at 24 V DC, no relay, sensor not remote 145 mA at 24 V DC, with relay, remote sensor
with DrägerSensor Ex LC	130 mA at 24 V DC, no relay, sensor not remote 165 mA at 24 V DC, with relay, remote sensor
with DrägerSensor IR	145 mA at 24 V DC, no relay, sensor not remote 185 mA at 24 V DC, with relay, remote sensor
Relay design (optional)	SPDT, 5 A at 230 V AC, 5 A at 30 V DC, resistive load For safety-related applications (SIL2), the maximum contact rating is reduced (see also the Dräger Polytron 8X00 Safety Manual).
Housing	NEMA 4X
Protection Class	IP 65/66/67
Dimensions (LxWxD)	
Without e-Box (DrägerSensor LC, DD)	approx. 180 x 150 x 130 mm (7" x 5.8" x 5.1")
With e-Box (DrägerSensor LC, DD)	approx. 185 x 180 x 190 mm (7.3" x 7.1" x 7.4")
Without e-Box (DrägerSensor IR)	approx. 295 x 150 x 130 mm (11,6" x 5,8" x 5,1")
With e-Box (DrägerSensor IR)	approx. 300 x 180 x 190 mm (11,9" x 7,1" x 7,4")
Weight	
Without e-Box, aluminum	approx. 2.2 kg (4.9 lbs.)
Without e-Box, stainless steel 316	approx. 4.0 kg (8.8 lbs.)
With e-Box, aluminum	approx. 3.5 kg (7.7 lbs.)
With e-Box, stainless steel 316	approx. 5.4 kg (11.9 lbs.)
Display	Resolution 128 x 64, back-lit

Environmental conditions	Specifications for the sensor: see sensor data sheet
Pressure	700 to 1300 hPa (20.7 to 38.4 in. Hg)
Humidity	0 to 100 % R. H., non-condensing
Temperature	
DrägerSensor DD, LC no relay	-40 to +80 °C (-40 to +176 °F)
DrägerSensor DD, LC with relay	-40 to +70 °C (-40 to +158 °F)
DrägerSensor IR no relay	-40 to +65 °C (-40 to +149 °F)
DrägerSensor IR with relay	-40 to +65 °C (-40 to +149 °F)
Environmental influences	See respective sensor data sheets.

12.1 Torques

(The torques are valid for the aluminum and stainless steel 316 variants)

Part	Torque Lb. In.	Torque Nm
Housing cover	min. 266	min. 30
Sensors	min. 266	min. 30
Plug	min. 266	min. 30
Cable bushing	min. 443	min. 50
Device to e-Box	71	8

If an optional e-Box is being used, fasten the device securely to the e-Box with 4 screws and a tightening torque of 8 Nm.

12.2 Tightening torque and cable size for field wiring terminals

Electronic		
Torque Lb. In.	**Cable size in AWG**	**Cable size in mm^2**
All field wiring terminals 4.4–7.0 (0.5–0.8 Nm)	20–12	0.5–2.5

12.3 Factory settings

12.3.1 Alterable settings for the Polytron 8200/8310

Menu	Standard setting	
	DrägerSensor DD, IR	**DrägerSensor LC**
A1 Alarm	20 %LEL	2.0 %LEL
A2 Alarm	40 %LEL	4.0 %LEL
A1 Relay alarm: Direction	Rising	Rising
A2 Relay Alarm: Direction	Rising	Rising
A1 latching mode	Non-latching	Non-latching
A2 latching mode	Latching	Latching
A1 Acknowledgement mode	Acknowledgeable	Acknowledgeable
A2 Acknowledgement mode	Not acknowledgeable	Not acknowledgeable
A1 enrg / wired in e-Box	Energized / NO	Energized / NO
A2 enrg / wired in e-Box	Energized / NO	Energized / NO
Maintenance password	0000	0000
LCD setting	on	on
Configuration/SIL password	_ _ _2	_ _ _2
SIL status	Off	Off
Language	English	English
Fault current	1.2 mA	1.2 mA
Warning current	3.0 mA	3.0 mA
Maintenance current	3.4 mA	3.4 mA
HART address	0	0
Auto-cal.	Off	Off
Calibration interval	360	360
Function key	Faults	Faults

12.3.2 Unalterable settings

Fault	Meaning
Fault relay / wired in e-Box	Energized / NO
Yellow Fault LED	Lights when a fault is present (see chapter 9 on page 25).
Red Alarm LED	Gives single flashes when an A1 alarm is present. Gives double flashes when an A2 alarm is present. If an alarm is configured as acknowledgeable and the alarm is acknowledged, the LED lights. Alarm hierarchy: A2 has a higher priority for the LED than A1. However the A1 and A2 relays operate independently of one another, i.e. if A1 is acknowledgeable and A2 is not and the gas concentration is so high that A1 and A2 are triggered, an acknowledgement results in the A1 relay dropping out. However the red LED continues to give double flashes as long as the A2 condition exists.

13 Order list

13.1 Dräger Polytron 8200/83X0

Name and description	Order Number
Dräger Polytron 8200 DD d A 4-20/HART	45 44 439
Dräger Polytron 8200 DD d A 4-20/HART Relay	45 44 440
Dräger Polytron 8200 DD d S 4-20/HART	45 44 448
Dräger Polytron 8200 DD d S 4-20/HART Relay	45 44 449
Dräger Polytron 8200 DD e A 4-20/HART	45 44 457
Dräger Polytron 8200 DD e A 4-20/HART Relay	45 44 458
Dräger Polytron 8200 DD e S 4-20/HART	45 44 466
Dräger Polytron 8200 DD e S 4-20/HART Relay	45 44 467
Dräger Polytron 8200 Remote DD e A 4-20/HART	45 44 511
Dräger Polytron 8200 Remote DD e A 4-20/ HART Relay	45 44 512
Dräger Polytron 8200 Remote DD e S 4-20/HART	45 44 520
Dräger Polytron 8200 Remote DD e S 4-20/ HART Relay	45 44 521
Dräger Polytron 8200 LC d A 4-20/HART	45 44 475
Dräger Polytron 8200 LC d A 4-20/HART Relay	45 44 476
Dräger Polytron 8200 LC d S 4-20/HART	45 44 484
Dräger Polytron 8200 LC d S 4-20/HART Relay	45 44 485
Dräger Polytron 8200 LC e A 4-20/HART	45 44 493
Dräger Polytron 8200 LC e A 4-20/HART Relay	45 44 494

Original document

This document is an original document of FREQCON GmbH.

Target Group

This document is intended for persons responsible for the maintenance of FREQCON Battery Energy Storage Systems.

Display Elements

Symbol	Significance
➜	Action with one or several steps for which the sequence is irrelevant.
Step 1 : **Step 2 :**	Action with several steps for which the sequence is relevant.
•	First level of list.
-	Second level of list.

1.1 Disclaimer of Liability

The contents of this publication have been reviewed to ensure consistency with the hardware and software described. Since variance cannot be precluded entirely, we cannot guarantee full consistency. However, any necessary corrections are included in subsequent editions.

2 Maintenance

⚠ DANGER	
	**Hazard by electrolyte** Performing work on the battery storage unit and its components is only permitted for qualified personnel, trained and certified by FREQCON GmbH. It is not allowed to modify or manipulate the battery storage unit and its components. ➜ Do not open, disassemble or puncture the battery modules ➜ Do not short circuit the battery modules ➜ Do not drop the battery modules and avoid vibrations ➜ Do not a use defective or damaged battery modules ➜ Do not a use defective or damaged battery storage unit ➜ Do not touch defective or damaged batteries with bare hands. Defective or damaged batteries must only be handled by FREQCON personnel. **Avoid these dangerous situations, since it may lead to severe injuries or even death!**

⚠ DANGER	
	**Electric shock hazard!** **Always respect all the safety instructions and, in particular:** ➜ Always use protective devices suitable and approved for each type of activity. ➜ The instructions in this manual must be strictly followed. ➜ The electrical connection must be carried out in accordance with the local regulations of the utility company and /or VDE (in Germany). ➜ Use of the equipment must comply with all national and local regulations. ➜ Battery modules must only be accessed after disconnecting the electrical system from all electrical power sources.

The following describes the maintenance work that is necessary for trouble-free operation. Maintenance intervals must be taken into account*(see section 2.3 "Maintenance Schedule* BESS").

If increased wear of individual components or functional groups is determined during regular inspections, the operator has to reduce the required maintenance intervals on the basis of the actual signs of wear. Changes compared to the normal operation (increased power consumption, temperatures, vibrations, noises, etc. or respond of monitoring systems) might indicate the functionality of the device is impaired. These then have to be subjected to an inspection by qualified personnel.

2.1 Preparations Prior Maintenance

The following safety precautions must be carried out before commencing service and maintenance work.

Non-observation of these safety instructions can cause injury to persons, damage to objects or malfunction or damage to the device itself.

Do not operate!	**Lock and tag power switches and controller devices**
⚠ DANGER 	Disconnect power and block operation controller devices. Follow national laws regarding Occupational Safety and Health. 1. Identify the energy source(s). 2. Isolate the energy source(s). 3. Determine voltage-free status. 4. Ground device or equipment to protect from short circuiting and from shocks. 5. Lock and Tag the energy source(s). 6. Prove that the equipment isolation is effective. 7. When required, apply lock-out device or clamp and secure with padlock(s).

2.2 Maintenance Execution

The maintenance work described below may only be carried out by personnel authorized and trained by FREQCON GmbH. The individual maintenance tasks are performed and described during the training. In addition, participants will be given a detailed description of the maintenance work in the form of training documents.

2.3 Maintenance Schedule BESS

The maintenance intervals provided in the following must be adhered.

	Maintenance Instructions	Interval	Hours	Personnel
BESS container exterior	• Visual inspection for external damage, leakage and corrosion • If necessary, seal leaks, touch up corrosion protection • Visual inspection of ventilation, cleaning/replacement of filters and ventilation technology (fans) if necessary. • Checking the lock mechanism for function • Visual inspection of ground connections and measurement of ground resistance • Visual inspection for contamination and cleaning if necessary • Visual inspection of warning and safety instructions • Documentation of damage and activities performed	Annually	2	1
Battery modules and DC cabling	• Maintenance of the storage units according to manufacturer's specifications, visual inspection of ventilation, cleaning/replacement of filters and ventilation technology (fans) if necessary. • Visual inspection for external damage, leakage and corrosion • Testing of terminal points by means of thermography, function control of load-break switches and fuse switches • Visual inspection for contamination/dust and cleaning if necessary • Visual inspection of sensors for tight fit and damage • Documentation of damage and activities performed	Annually	2	1
	• If required or requested, replacement of the battery modules • Visual inspection of mechanical and electrical connections for tight fit, damage, corrosion - If necessary, repair before installing the new battery modules • Visual inspection of the slide rails, the holding frame and the rack system for damage, corrosion - If necessary, repair before installing the new battery modules • Include in overall system documentation	If needed	1 h per module + 1 h setup time	2

Electrical components and cabinet	• Check protective covers and insulation protection for completeness • Perform function test for on/off switch • Visual inspection of the cable fastening for electrical cables and communication cables • Random mechanical testing • Fastening of electrical cables and communication cables; retighten if necessary. • Functional test of fault-current circuit breaker • Check stability of cable ducts • Perform functional test of uninterruptible power supply (UPS), replace if necessary • Checking the server and network components, performing software and security updates, if necessary • Testing according to DGUV for stationary equipment	Annually	3	1
	• Inspect Stat-X aerosol generators for physical damage such as cracks, dents, deformation, or corrosion. Inspect Stat-X aerosol generators for physical damage, such as cracks, dents, distortion, or corrosion. If damage is found, replace generator as instructed in the installation section of this manual. • Inspect mounting brackets, clamps, and associated hardware for loose, damaged, or broken parts. Replace damaged parts and tighten all loose hardware. • Inspect all manual release stations for damage, dirt, or distortion. Inspect station for signs of physical damage, replace if necessary. • Inspect all electrical connections and run electrical continuity tests using an ohmmeter. Repair and replace as necessary.	Every 6 months	0.5/cartridge	1
	• Replacing Stat-X aerosol cartridges (see manufacturer documentation) The aerosol generators have an installed service life of fifteen (15) years. Generators are to be replaced fifteen years from the date code in the lower right corner of the product label.	Every 15 years	0.25/cartridge	1
Converter	• Converter maintenance according to manufacturer's specifications	Annually	3	1
Climate control	• Clean the device • Check for cleanliness and functional capability of the condensate drain • Check fans for overheating and unusual vibrations and whether they rotate freely • Check heat exchanger for contamination and effectiveness • Check refrigeration circuit for leakage, check pressure switch and refrigerant indicator • Check condition of filters - cleaning or replacement if necessary. • Check all electrical connections • Perform function tests for all switches and the control board, perform alarm signal test	Annually	1	1

Table 1: Maintenance schedule BESS

2.4 Visual Inspection

For functional and safety reasons, the customer is responsible that regular inspections of the BEES and its operating environment are carried out.

The following needs to be inspected/performed at least every six (6) months:

- ➜ Visually check for external signs of damage. Consult your authorized FREQCON representative if any damage is detected.
- ➜ Open the doors of the rack/front lid of the cabinet and visually check for signs of electrolyte leakage or any other deviation from normal conditions. Consult your authorized FREQCON representative if any leakage etc. is detected.
- ➜ Check that the cable connectors look undamaged and that the battery packs are properly positioned on the shelfs.
- ➜ Check for any deviation from normal conditions in the BMS (look, listen and smell). Consult your authorized FREQCON representative if any deviation is detected.
- ➜ Check general appearance and cleanliness. If necessary, clean by using a dry cloth.

Anlagenübersicht:

Material	Typ	Anzahl
8344800	Polytron 8200 Series Customized	3

Bemerkung: -Wartezeit durch nicht fertig verdrahtete Transmitter.
Inbetriebnahme konnte nicht durchgeführt werden.
-Inbetriebnahme wurde daher abgebrochen.

Inbetriebnahme durchgeführt.

Die betriebsbereite Dräger- Anlage wurde heute nach Vorführung der Funktion gemäß Auftrag abgenommen. Eine eventuell notwendige Abnahme der Anlage durch einen Sachverständigen erfolgt durch den Auftraggeber. Der Auftraggeber bzw. dessen Beauftragter sowie der Betreiber wurden in den Betrieb der Anlage eingewiesen und die zugehörige Dokumentation wurde übergeben. Mit dem Tag der Abnahme beginnt die Gewährleistungsfrist gemäß Betriebsanleitung und den allgemeinen Geschäftsbedingungen der Dräger Safety AG & Co KGaA. Die Gewährleistung erstreckt sich nicht auf natürlichen Verschleiß entsprechend dem allgemeinen Stand der Technik oder wie im Auftrag vereinbart.

Teilnehmer der Abnahmebegehung:

Für den AG:	Für den AN: Lakic, Muharem

Heute, den 15.07.2024, ist für o.g. Gaswarnanlage eine Abnahmebegehung durchgeführt worden. Die Abnahme wurde erteilt.

An der Leistung wurden folgende Mängel festgestellt: (Mängel ggf. auf Anlage zum Protokoll auflisten)

Die übergebene Dräger-Anlage ist vorschriftsmäßig zu warten. Die Justage- und Wartungsintervalle sind den hierfür bekannten Vorschriften T 021, T 023 und der gültigen Gebrauchsanleitung zu entnehmen. Für Serviceleistungen empfehlen wir Ihnen, Kontakt zum Dräger Service in der für Sie zuständigen Niederlassung aufzunehmen.

Die Geräte wurden überprüft und ermittelte Messwerte entsprechen den Spezifikationen. Die für die Kalibrierung und Justierung verwendeten Messeinrichtungen werden regelmäßig kalibriert und sind rückführbar auf nationale Standards. Wenn keine nationalen Standards existieren, entspricht das Messverfahren den derzeitigen technischen Regeln und Normen.

Bemerkungen:

8344800 ARTF-0365 MK2:

- **Alarmmittel:**- keine akkustischen und visuellen Alarmmittel vorhanden.
- **Melde- / Registriereinrichtungen:**- Aufschaltung auf Fremdauswerteinheit nicht angeschlossen. Progammierarbeiten nicht abgeschlossen.
  -Testung der Alarme A1 , A2 sowie Fehlerstrom wurde getestet über die Analoge Schnittstelle des Polytron 8200 mit dem Programmierer von Firma Freqcon.
  Funktion war gegeben. Desweiteren wurden die Relais getest ob sie schalten.

  - Nur A2 Alarm wird ausgewertet.
  -Fehlerschwelle wird als Kabelbruch benannt , wenn Fehler ansteht.

  -Fehlerschwelle des Polytron 8200 ist bei 1,2mA. Der Kunde wurde davon in Kenntnis gesetzt.
  -Auswertung und quittierung der Alarme soll nach abgeschlossender Programmierung über eine GLT stattfinden.

  -Für die Verdrahtung der Transmitter wurde kein geschirmtes Kabel verwendet.
  -Der verwendete Kabeltyp F-CY-OZ (LIY-CY) 10x0,5 verwendet worden.

Anlage zum Abnahmeprotokoll - Systemkontrolle -

Die Geräte wurden überprüft und ermittelte Messwerte entsprechen den Spezifikationen. Die für die Kalibrierung und Justierung verwendeten Messeinrichtungen werden regelmäßig kalibriert und sind rückführbar auf nationale Standards. Wenn keine nationalen Standards existieren, entspricht das Messverfahren den derzeitigen technischen Regeln und Normen.

Bemerkungen:

8344800 ARTF-0368 MK1:

- **Alarmmittel:**-keine akkustische und visuelle Alarmierung vorhanden.
- **Melde- / Registriereinrichtungen:**-Aufschaltung auf Fremdauswerteinheit nicht abgeschlossen. Programmiererarbeiten nicht abgeschlossen.
  - Testung der Alarme A1 , A2 sowie Fehlerstrom wurde getestet über die Analoge Schnittstelle des Polytron 8200 mit dem progammierer von Firma Freqcon, Funktion war gegeben. Desweiteren wurde die Relais getestet ob sie schalten.

  -Nur A2 Alarm wird ausgewertet.
  -Fehlerschwelle wird als Drahtbruch benannt, wenn Fehler ansteht.

  - Fehlerschwelle des Polytron 8200 ist bei 1,2mA . Kunde wurde in Kenntnis gesetzt.
  - Auswertung und quittierung der Alarme soll nach abgeschlossen Programmierung über eine GLT statt finden.

  -Für die Verdrahtung der Transmitter wurde kein geschirmtes Kabel verwendet.
  -Der verwendete Kabeltyp F-CY-OZ (LIY-CY) 10x0,5 verwendet worden.

Anlage zum Abnahmeprotokoll - Systemkontrolle -

Referenz:	W07270432	Name:	Lakic, Muharem	Datum:	15.07.2024
Kundenauftragsnummer	24BE1283	CO-Nr:	000023148723		

Bemerkungen:

Mangel:
- In der Fremdauswerteinheit ist keine sicherheitsgerichtete SPS verbaut.

8344800 ARTF-0363 MK3:

- **Alarmmittel:**-keine akkustische und visuelle Alarmierung vorhanden.

- **Melde- / Registriereinrichtungen:**-Aufschaltung auf Fremdauswerteinheit nicht abgeschlossen. Programmiererarbeiten nicht abgeschlossen.

BLPH BESS Safety description document

Title	**Thermal runaway mitigations and recommendations**
Prepared by	Alessandro Sutto
Reviewed by	
Purpose	
Doc No.	K559-2254-CWIWP4202201-E99-099

Introduction

*"Safety cannot be determined or evaluated by one criterion or parameter. Rather, safety is determined by the implementation of complementary approaches that work together to enhance safety by: (a) reducing the probability of an event and (b) lessening the severity of outcome, should an event occur. As this approach is applied to batteries, thermal stability is perhaps the most important of several parameters that determine safety of Li-ion cells, modules and battery packs." (*A General Discussion of Li Ion Battery Safety by Dan Doughty and E. Peter Roth - 2012)

Battery fires and in particular thermal runaway (TR) events represent the largest dangers to the safety of a Battery Energy Storage System (BESS) using Lithium-ion battery cells with consequences spanning from minor asset damage and inoperability to dramatic system and environmental harm and sometimes tragic human losses.

Industry best practices, standards, continuous technological advancement, alongside learnings from previously reported incidents and consequent investigation reports, are significantly contributing to increase the safety for the system, operators, and the surrounding environment.

This document will discuss the recommendations and mitigations implemented in the 1MW/5MWh system that will be installed on the BLPH and how they will positively affect the overall safety of the system.

May 2024

Acronyms

BESS	Battery Energy Storage System
BLPH	BaseLoad Power Hub
BMS	Battery Management System
FAT	Factory Acceptance Test
FSS	Fire Suppression System
LFL	Lower Flammable Level
LFP	Lithium Iron Phosphate
MAH	Major Accident Hazard
PCS	Power Conversion System
SECE	Safety & Environmentally Critical Elements
TR	Thermal Runaway

Thermal Runaway

Thermal runaway (TR) consists of a catastrophic release of energy in lithium-ion batteries. A TR is an event characterized by the onset of rapid uncontrolled self-heating of a battery cell. Generation and emission of flammable and toxic gases, ejection of particulate, extremely high temperatures, smoke and/or fire are common side-effects of a TR. Due to the high levels of energy released within a few minutes, TRs are very difficult to stop and therefore present a risk that must be understood and mitigated in battery deployments. Multiple reasons can initiate a TR in a lithium-ion cell, however, the final outcome remains the same: accelerated self-heating generating flammable and toxic gases, leading up to complete thermal decomposition.

The bowtie diagram in Figure 1 details the threats and consequences for a cell thermal runaway. It can be noticed that when unmitigated, this can lead to a complete system-level accident.

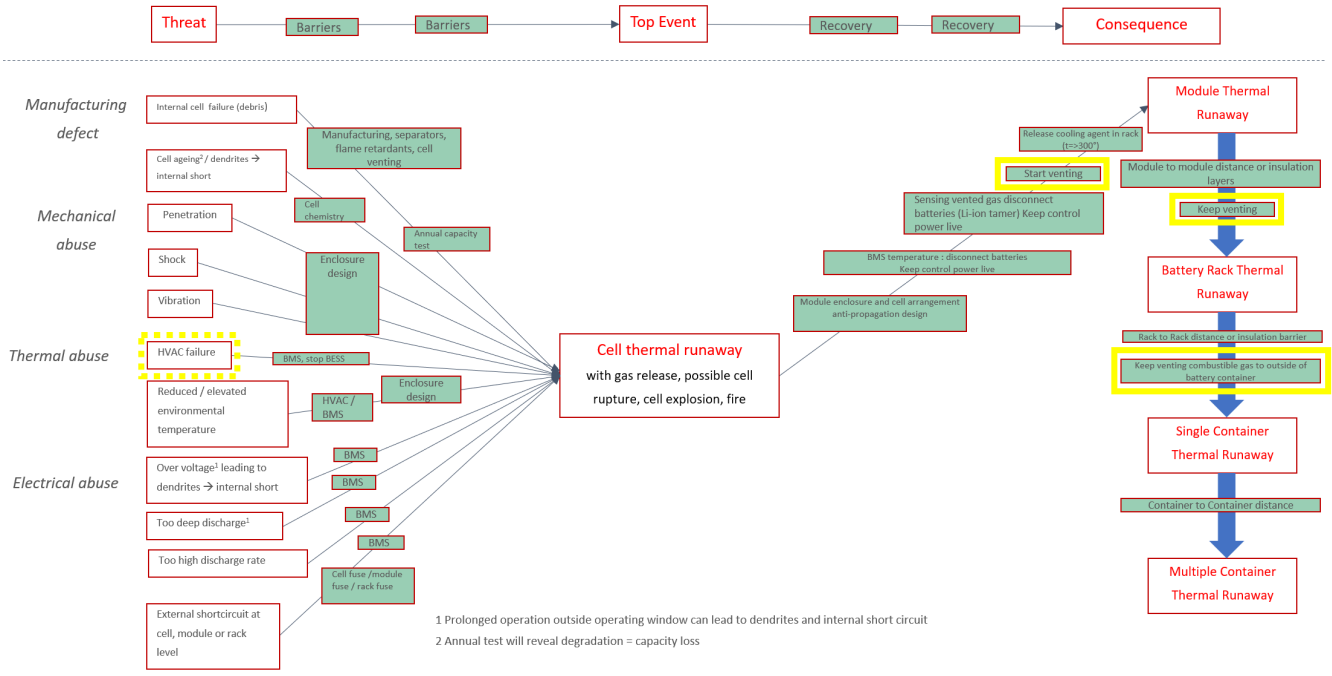

Figure 1 - Bowtie diagram for a lithium-ion battery

The main recognized **causes** for a TR event and relative barriers can be summarized as:

1. **Manufacturing defects**: productions defects might be detected with FATs and quality checks. Early replacements or disconnection of malfunctioning batteries can lower the chances of TR events.
2. **Mechanical damages**: punctures, shocks, falls and other hard impacts can be avoided by properly encasing cells in a hard and fixed protective module.
3. **Electrochemical stress**: currents higher than nominal for prolonged times or high intensity charge/discharge repetitive cycles can electrochemically stress the cell locally increasing temperature or leading to the creation of internal material degradation that can lead to TR.

General Layout

The BESS package for BLPH (1MW/5MWh) consists of a total of 3 containers: 2x 40ft BESS containers and 1x 20ft PCS (Power Conversion System) container. Figure 2 and Figure 3 illustrate the general arrangement.

The BESS containers host the battery modules arranged in racks (or cabinets), HVAC units for climate control, an automatic fire suppression system, a set of sensors and detectors and other minor electronic components forming the BMS (Battery Management System). The two containers include a total of **6160** 280Ah LFP cells grouped as follow:

(Column item/row item)	Cell	Module	Rack	Container
Module	10			
Rack	280	28		
Container	3080	308	11	
BESS	6160	616	22	2

The PCS container includes devices meant for power conversion (Inverters, transformers etc), a closed loop liquid cooling setup and other minor electronics.

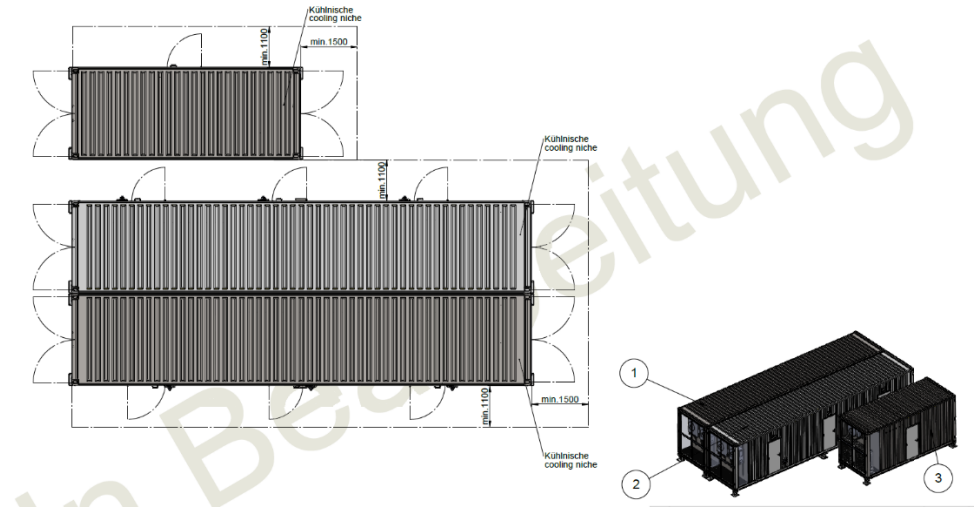

Figure 2 - General Arrangement of BESS. 1 & 2 BESS containers, 3 PCS container

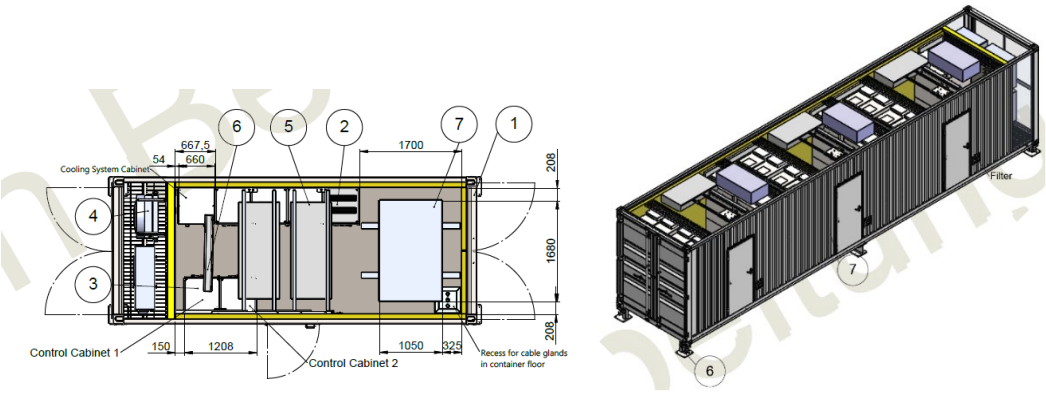

Figure 3 - Details of internal arrangement. Left) PCS container. Right) BESS container

Prevention and mitigation strategies

Throughout the project development, Crosswind supported Statron/Freqcon on the development of an effective prevention and mitigation strategy towards possible TR events.

Prevention

The product offered by Freqcon already presented a solid set of preventive measures to limit the chances of TR and to ensure safe operations. Additional barriers were included in the final design. They can be grouped in three main categories:

Mechanical	
Offered	Benefits
Stainless steel module casing with slots for aeration	Solid metal case protects the cells from impacts when handled and help preventing the propagation of fires. The slots on the top allows any offgas not to be accumulated in the module and being dispersed.
Cabinets/rack cooling and HVAC	The containers are equipped with active cooling via HVAC and each cabinet has a set of fans mounted on top that will force cool air through the modules helping keeping them at optimal working temperature.
Added	Benefits
Transport arrangement and reinforced cabinets	By installing reinforced cabinets to hosts the modules, it is possible to keep the system fully assembled during sea transport eliminating the risks related to module removal and re-commissioning once offshore. This will exclude additional mechanical shock and possible damage to the modules and cells. (Technical Note Transport recommendation for BLPH BESS system)

Software – Monitor & Control	
Offered	Benefits
Electrical design and BMS	The electrical design together with the software monitoring the cell status and controlling the operations of the system includes important features such as: - Capillary module temperature measurement (6 probes every 10 cells) - Individual cell voltage measurement - Current limiting and protection devices (e.g. DC fuses) - Cell internal resistance imbalance regulation
C-rate	The nominal power vs installed capacity ratio allows for lower c-rates of utilization decreasing the electrochemical stress on the individual cells.

Technological	
Offered	Benefits
LFP cells	LFP cells are considered “safer” in the industry due to the lower temperature expressed during TR and the composition of gasses produced. It has been demonstrated that LFP tends to not self-ignite and producing flames.
UL9540A testing on cell level	The company produced a UL9540A certificate for the cells used in their product demonstrating the consequences of induced TR including gas composition and temperature profiles.
Considered options	Explanation
UL9540A testing on module level	A module-level test was not pursued since it was agreed that the existing documentation and knowledge from the industry on the TR expected evolution was sufficient to ensure an adequate level of safety. (CWHKN-INN-BPH-TN-00005 - Requirement for UL9540A Test for BLPH BESS System)

Mitigation

The product offered by Freqcon already presented a solid set of mitigation measures against extended damages or TR propagation. Additional barriers were included in the final design. They can be grouped in two main categories:

Mechanical	
Offered	Benefits
Cell separators in module	Cells inside the module are not directly in contact with each other limiting thermal conductivity and ensuring room for expansion due to cell aging.
Container separation	Despite the limited area available on the platform, it was possible to ensure minimum separation between the BESS containers to limit thermal conductivity and possible fire propagation between containers.
Added	Benefits
Emergency ventilation, offgas extraction	A set of 3 emergency fans are installed on the BESS containers roofs alongside 3 electromechanical louvers on the bottom sides. They will activate in case of TR signalling and will support the cooling of the system as well as extract any off gasses and particles from the container atmosphere maintaining it below a critical level. (Technical Note Thermal Runaway scenario recommendations for BLPH BESS System)
Considered options	Explanation
Internal fire wall insulation	Adding a layer of insulating material inside the BESS containers to slow the thermal propagation was deemed not necessary for this particular application. The thickness required would have added considerable challenges to the internal redesign of the existing components and it was agreed that there would have been limited benefits in terms of safety.
Explosion hatches / Pressure release devices on container level	This option was discarded in favour of the emergency ventilation.
Individual module offgas exhaust	This option was discarded in favour of the emergency ventilation on the container level.

Software – Monitor & Control	
Offered	Benefits
Electrical design and BMS	The software monitoring the cell status and controlling the operations of the system includes important features such as: - Active disconnection in case of TR detection - Sensors and detectors (Smoke, CO, temperature) - Alarm notification
Flame extinguishing Stat-X	An active flame suppression system was present in the original design. The system consisting of aerosol capsules mounted in every cabinets was kept but its working principle was modified.
Added	Benefits
Upgraded BMS and TR system reaction	Modifications were made to the BMS reaction considering the existing and added components in the system. (see XXX for detailed information)

BMS Thermal Runaway response

Following industry's best practices and recommendations (e.g. DNV's "Technical Reference for Li-ion Battery Explosion Risk and Fire Suppression"), learnings from investigated BESS accidents, and the existing devices and strategy offered by Freqcon, the BESS Thermal Runaway response has been adjusted as follow.

The major indicators of an incoming possible TR are **voltage** deviations and **temperature** increases. The BMS monitors the cells behaviour and triggers reaction on the overall system. Keeping stable operating conditions (temperature, current, voltage etc.) ensures limited stress on the cells and lowers the risks of TR. By limiting or stopping providing energy to the system (electrical or thermal) a TR runaway process is slowed or limited in its outcome.

The bowtie in Figure 1 highlights how ventilation plays an essential role in both the prevention and mitigation of TR both on the cell, module, and system level.

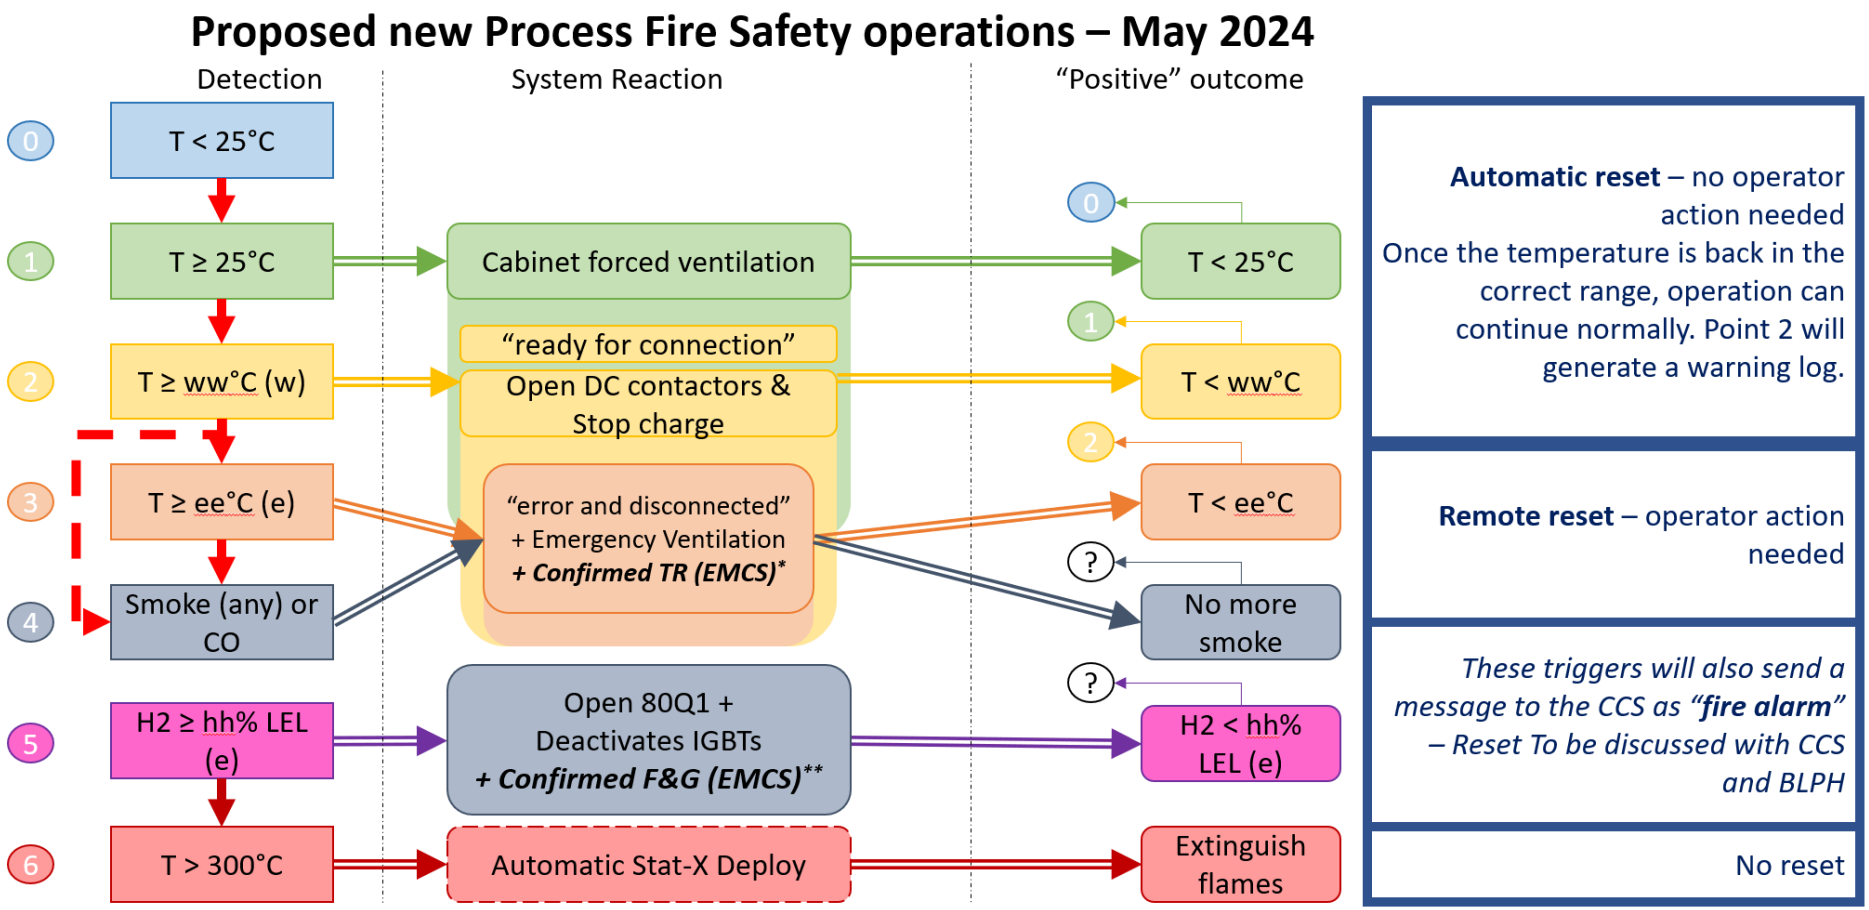

Figure 4 simplifies the functioning of the BMS linking specific TR indicator triggers to one or more reactions. It is easy to see that as the conditions become close to the one indicating a possible TR (High temperature, chemicals and smoke) the system progressively increases the ventilation provided and lowers the injected energy in the system by cutting down power and operations.

- "Open DC contactor" means the affected cabinet is disconnected
- "error and disconnected" means the whole BESS container stops operations.
- The fire suppression system (FSS) consists of Stat-X cartridges mounted on the battery racks that will automatically deploy their flame suppressant aerosol once the critical temperature (~300°C) is reached. It does not need aux power to be activated. The impact on the system after release is high. Inspection and cleaning before resuming operation will be needed.
- Current philosophy for BLPH control once the "fire" signal is communicated from the BESS is a complete shut down of power (aux included) and blow out of H2.

The following condition constitutes the basis for a realistic TR scenario:

- Only one module (10 cells), in one rack inside one BESS container would experience TR during the span of 6 to 8h. In the worse case scenario, each cell would undergo TR with one (1) min difference from the next;
- The amount and composition of gas released by each cell is assumed to be the one provided on the UL9540A test report;
- The full release of gas per cell is set to be taking place in one (1) minute;
- Smoke, temperature and gas detectors alongside the BMS are working correctly;
- There is no personnel present on the platform;

The schematic below (Figure 5) describes the steps and system reactions during a realistic TR event. It shows how the emergency ventilation will start operation long before any off-gasses (CO, CO2 or H2) are detected by the system. This lowers the risks of gas accumulations and promote air exchange before any gas is released.

*Aux still on

**Full platform shut down with H2 blowout

Place / type of activity: 0 / 0

Influence leads to probability of injury (0 = practically impossible, 2 = conceivable but very unlikely, 4 = unlikely, 7 = rare, 10 = occasionally to frequently)

a) Type/condition of the system — 4

Type/condition of the system with regard to bridgeable potentials (arc formation) or the limitation of arc effects

Explanation:

b) Technical measures — 4

Technical measures to prevent potential bridging (arcing) or to limit the effects of arcing

Explanation:

c) Organisational measures — 4

Organisational measures to avoid potential bridging (arcing) or to limit the effects of arcing

Explanation:

d) Personal measures — 4

Personal measures to avoid potential bridging (arcing) or to limit the effects of arcing

Explanation:

e) Statistical influencing factors — 4

Statistical influencing factors that play a role in assessing the probability of occurrence of an electric arc or an injury caused by an electric arc

Explanation:

f) Ergonomic influencing factors — 4

Ergonomic factors that play a role in assessing the probability of occurrence of an electric arc or an injury caused by an electric arc

Explanation:

Total evaluation points: 24,0

	Probability of occurrence of an injury	0 ...	10 ...	20 ...	31 ...	46 ...
Injury severity$_{WLB}$ / $_{WLBS}$		Practically impossible	Conceivable, very unlikely	untrue-probable	rare	Occasional to frequent
0 ...	Minor injury			APC2		
1 ...	Reversible injury					
3 ...	Irreversible injury					
10 ...	Fatal injury					

APC1 1,9
APC2 1,0

Result:

Performance of work with PPEgS APC2 permitted on the basis of the assessment approaches taken and in accordance with the specified protective measures

Material Safety Data Sheet

Section 1 – IDENTIFICATION OF THE SUBSTANCE/PREPARATION AND OF THE COMPANY/UNDERTAKING

Product Name: Li-ion Battery

Battery type: Li-ion Battery

Model	Voltage	Capacity（Ah）			Energy（Wh）
		Typical	Min	MAX	
LF280K	3.2V	280	/	/	896

Product Use: Energy Storage System

MSDS Date of Preparation: April 6th, 2021 ； Updated：/

Company Identification:

Name： EVE POWER Co., Ltd.

Address: No.68, Jingnan Avenue, Jingmen Hi-teck Zone, 448000 Jingmen City, Hubei Province

Post Code: 448000

Tel: +86-724-6079630

Fax:+86-724-6079688

Section 2 - Hazards Identification

- **Health Hazards (Acute and Chronic)**

These chemicals are contained in a sealed Al foil. Risk of exposure occurs only if the battery is mechanically or electrically abused. Contact of electrolyte with skin and eyes should be avoided.

- **Sign/Symptoms of Exposure**

A shorted battery can cause thermal and chemical burns upon contact with the skin. Maybe a reproductive hazard.

These products are classified as Articles under REACH and are not subject to the requirements for Information in the Supply Chain (Safety Data Sheets and Labels). While batteries may release hazardous substances if damaged, this is not an intended release as defined under REACH. Batteries are not classified as hazardous under the CLP.

The following information is provided to assist in the safe use of our products.

CAUTION: Battery can explode or leak if heated, disassembled, shorted, recharged, exposed to fire or high temperature or inserted incorrectly. Keep in original package until ready to use. Do not carry batteries

loose in your pocket or purse. Keep batteries away from children. If swallowed, consult a physician at once.

Under certain misuse conditions and by abusively opening the battery, exposed lithium can react with water or moisture in the air causing potential thermal burns or fire.

Section 3 – Composition/Information on Ingredient

Material or ingredient	Chemical Formula	CAS No.	Wt %

Lithium iron phosphate	$LiFePO_4$	/	37.0
Phosphate(1-),hexafluoro,lithium	$LiPF_6$	(CAS-No.)21324-40-3 (EC-No.)244-334-7	3.2
Graphite	C	(CAS-No.)7782-42-5 (EC-No.)231-955-3	19.1
Aluminum	Al	(CAS-No.)7429-90-5 (EC-No.)231-072-3 (EC Index-No.)013-002-00-1	4.6
Copper	Cu	(CAS-No.)7440-50-8 (EC-No.)231-159-6	7.5
Polypropylene	PP	(CAS-No.) 9003-07-0 (EC-No.)618-352-4	4.8

Section 4 - First Aid Measures

- **General Advice**

  The chemicals in this product are contained in a sealed package. Exposure to the contents will not occur unless the battery leaks, is exposed to high temperatures or is mechanically, physically, or electrically abused.

- **Eye**

  Flush eyes with plenty of water for at least 15 minutes, occasionally lifting the upper and lower eyelids. Get medical aid.

- **Skin**

  Remove contaminated clothes and rinse skin with plenty of water or shower for 15 minutes. Get medical aid.

- **Inhalation**

  Remove from exposure and move to fresh air immediately. Use oxygen if available.

- **Ingestion**

  Give at least 2 glasses of milk or water. Induce vomiting unless patient is unconscious. Call a physician.

- **Note to Physician**

  Published reports recommend removal from the esophagus be done endoscopically (under direct visualization). Batteries beyond the esophagus need not be retrieved unless there are signs of injury to the GI tract or a large diameter battery fails to pass the pylorus. If asymptomatic, follow up x rays are necessary only to confirm the passage of larger batteries. Confirmation by stool inspection is preferable under most circumstances. Potential leakage of less than 50 milligrams of dimethoxyethane and propylene carbonate. Dimethoxyethane rapidly evaporates. Do not give ipecac.

Section 5 - Fire Fighting Measures

- **Fire and Explosion Hazards**: Batteries may burst and release hazardous decomposition products when exposed to a fire situation.
- **Extinguishing Media**

  CO_2.

- **Special Fire-Fighting Procedures**

  Self-contained breathing apparatus.
- **Unusual Fire and Explosion Hazards**

  Cell may vent when subjected to excessive heat-exposing battery contents.
- **Hazardous Combustion Products**

  Carbon monoxide, carbon dioxide, lithium oxide fumes.

Section 6 - Accidental Release Measures

- **Steps to be Taken in case Material is Released or Spilled**

  If the battery material is released, remove personnel from area until fumes dissipate. Provide maximum ventilation to clear out hazardous gases. Wipe it up with a cloth, and dispose of it in a plastic bag and put into a steel can. The preferred response is to leave the area and allow the battery to cool and vapors to dissipate. Provide maximum ventilation. Avoid skin and eye contact or inhalation of vapors. Remove spilled liquid with absorbent and incinerate.
- **Waste Disposal Method**

  It is recommended to discharge the battery to the end, handing in the abandoned batteries to related department unified, dispose of the batteries in accordance with approved local, state, and federal requirements. Consult state environmental protection agency and/or federal EPA.

Section 7 - Handling and Storage

The battery should not be opened, destroyed or incinerate, since they may leak or rupture and release to the environment the ingredients that they contain in the hermetically sealed container.

Do not short circuit terminals, or over charge the battery, forced over-discharge, throw to fire. Do not crush or puncture the battery, or immerse in liquids.

- **Precautions to be taken in Handling and Storing**

  Avoid mechanical or electrical abuse. Storage preferably in cool, dry and ventilated area, which is subject to little temperature change. Storage at high temperatures should be avoided.

  Do not place the battery near heating equipment, nor expose to direct sunlight for long periods.
- **Other Precautions**

  The battery may explode or cause burns, if disassembled, crushed or exposed to fire or high temperatures.

  Do not short or install with incorrect polarity.
- **Storage**

  Store batteries in a dry place at normal room temperature.

Section 8 - Exposure Controls, Personal Protection

- **Exposure Limits**: No exposure to the battery components should occur during normal use.
- **Ventilation:** Not necessary under conditions of normal use.
- **Respiratory Protection**

  In case of battery venting, provide as much ventilation as possible. Avoid confined areas with venting cell cores. Respiratory Protection is not necessary under conditions of normal use.
- **Skin Protection:** None required for normal use. Use butyl rubber gloves when handling leaking

batteries..

- **Eye Protection:** None required for normal use. Wear safety goggles when handling leaking batteries.
- **Protective Gloves**

  Not need
- **Other Protective Clothing or Equipment**

  Not necessary under conditions of normal use.

  Personal Protection is recommended for venting battery: Respiratory protection, Protective gloves, protective clothing and safety glass with side shields.

Section 9 - Physical and Chemical Properties

Appearance and Odor: prismatic cell, no odor.

Water Solubility: Insoluble

Flash Point: Not Applicable

Section 10 - Stability and Reactivity

- **Stability**

  Stable
- **Conditions to Avoid**

  Heating, mechanical abuse and electrical abuse.
- **Hazardous Decomposition Products**

  N/A.
- **Hazardous Polymerization**

  N/A.

Section 11 - Toxicological Information

- **Potential Health Effects**: The chemicals in this product are contained in a sealed package. Exposure to the contents will not occur unless the battery leaks, is exposed to high temperatures or is mechanically, physically, or electrically abused.
- **Eye Contact**: Contact with battery contents may cause irritation.
- **Skin Contact**: Contact with battery contents may cause irritation.
- **Inhalation**: Inhalation of vapors or fumes released due to heat or a large number of leaking batteries may cause respiratory and eye irritation.
- **Ingestion**: Seek immediate medical advice. Batteries lodged in the esophagus should be removed immediately since leakage, caustic burns and perforation package occur as soon as two hours after ingestion. Irritation to the internal/external mouth areas, may occur following exposure to a leaking battery.

Section 12 - Ecological Information

When promptly used or disposed the battery does not present environmental hazard. When disposed, keep away from water, rain and snow.

Section 13 - Disposal Considerations

- **APPROPRIATE METHOD OF DISPOSAL OF SUBSTANCE OR PREPARATION**

  If batteries are still fully charged or only partially discharged, they can be considered a reactive hazardous waste because of significant amount of not reaction or unconsumed lithium remaining in the spent battery. The battery must be neutralized through an approved secondary treatment facility prior to disposal as a hazardous waste. Recycling of battery can be done in authorized facility, through licensed waste carrier.

  lithium ion cell batteries are labeled in compliance with the EU Battery Directive 2006/66/EC.

Section 14 - Transport Information

Emergency Phone Number:

CHEMTREC 24 Hour Emergency Response Hotline （+86-752-2606966）

Persons who prepare or offer lithium batteries for transport are required by regulation to be trained and certified.

The information provided below is for informational purposes only.

Lithium Ion Batteries
UN No.：UN3480
EmS No.:F-A,S-I
Marine pollutant:No
Proper shipping name:Lithium ion battery（Including lithium ion ploymer batteries）
Hazard classification: The goods shall be complied with the requirements of section IA of Packing Instructions 965 of 61 th DGR Manual of IATA（2020）Edition and special provision 188 of IMDG CODE（Amdt.39-18）Edition,including the passing of the UN38.3 test.

The products meet all the requirements of the IATA DGR 61th edition, under special provisions including UN 38.3 test . If the package exceeds the table 965 - the - standard, so it belongs to the ninth category of dangerous goods. Only cargo transport. According to the packing instructions 965 Part IA IATA 61th version of the DGR requirements.

Lithium ion cells and batteries must be offered for transport at a state of charge (SoC) not exceeding 30% of their rated design capacity from 1 April 2016.

Shipping packages containing rechargeable lithium batteries must be labeled, regardless of size or number of batteries, with a lithium battery handling label.

More information concerning shipping, testing, marking and packaging can be obtained from Label master at http://www.labelmaster.com.

Separate battery when shipping to prevent short-circuiting. They should be packed in strong packaging for support during transport. Take in a cargo of them without falling, dropping, and breakage. Prevent

collapse of cargo piles and wet by rain.

Section 15 - Regulatory Information

- **Law Information**

  《Dangerous Goods Regulation》

  《Recommendations on the Transport of Dangerous Goods Model Regulations》

  《International Maritime Dangerous Goods》

  《Technical Instructions for the Safe Transport of Dangerous Goods》

  《Classification and code of dangerous goods》

  《Occupational Safety and Health Act》(OSHA)

  《Toxic Substances Control Act》(TSCA)

  《Consumer Product Safety Act》(CPSA)

  《Federal Environmental Pollution Control Act》(FEPCA)

  《The Oil Pollution Act》(OPA)

  《Superfund Amendments and Reauthorization Act Title III (302/311/312/313)》(SARA)

  《Resource Conservation and Recovery Act》(RCRA)

  《Safety Drinking Water Act》(CWA)

  《California Proposition 65》

  《Code of Federal Regulations》(CFR)

EU BATTERY DIRECTIVE: These batteries comply with the Directive substance limits and labeling requirements.

EU REACH REGISTRATION: These products are manufactured articles and not subject to REACH registration requirements.

EU Labeling: lithium ion cell batteries are labeled in compliance with the EU Battery Directive 2006/66/EC.

Section 16 – Other Information

EVE Hazard Rating: Health: 0 Fire: 0 Reactivity: 0

==========

Data supplied is for use only in connection with occupational safety and health.

DISCLAIMER: This MSDS is intended to provide a brief summary of our knowledge and guidance regarding the use of this material. The information contained here has been compiled from sources considered by EVE to be dependable and is accurate to the best of the Company's knowledge. It is not meant to be an all inclusive document on worldwide hazard communication regulations.

Gefahr!
Beim Benutzen von Geräten müssen einige Sicherheitsvorkehrungen eingehalten werden, um Verletzungen und Schäden zu verhindern. Lesen Sie diese Bedienungsanleitung / Sicherheitshinweise deshalb sorgfältig durch. Bewahren Sie diese gut auf, damit Ihnen die Informationen jederzeit zur Verfügung stehen. Falls Sie das Gerät an andere Personen übergeben sollten, händigen Sie diese Bedienungsanleitung / Sicherheitshinweise bitte mit aus. Wir übernehmen keine Haftung für Unfälle oder Schäden, die durch Nichtbeachten dieser Anleitung und den Sicherheitshinweisen entstehen.

1. Sicherheitshinweise

Gefahr!
Lesen Sie alle Sicherheitshinweise und Anweisungen. Versäumnisse bei der Einhaltung der Sicherheitshinweise und Anweisungen können elektrischen Schlag, Brand und/oder schwere Verletzungen verursachen. **Bewahren Sie alle Sicherheitshinweise und Anweisungen für die Zukunft auf.**

1. Kontrollieren Sie stets ob die Netzspannung der Spannung auf dem Typenschild entspricht. Für den Fall, dass die Netzspannung nicht geeignet ist, kann dies zu abnormalem Arbeiten der Maschine und zu Personenschäden führen.
2. Die Stromversorgung muss eine Erdung besitzen und mit einem Fehlerstrom-Schutzschalter abgesichert sein.
3. Es ist verboten, Lasten die die Nennlast überschreiten, anzuheben.
4. Verwenden Sie das Gerät nur für den vorgesehenen Zweck. Nie Personen mit dem Seilhebezug anheben.
5. Ziehen Sie nicht am Kabel, um den Stecker zu ziehen. Halten Sie das Kabel von Hitze, Öl und scharfen Kanten fern.
6. Versuchen Sie nie, feste oder blockierte Lasten anzuheben.
7. Ziehen Sie den Netzstecker, wenn der Seilhebezug nicht in Gebrauch ist.
8. Halten Sie Kinder und andere nicht autorisierte Personen von der Maschine fern.
9. Es ist verboten Lasten seitwärts oder von einer Seite zu ziehen. Vermeiden Sie ein Schwingen der Last.
10. Stellen Sie sicher dass sich der Haken in die selbe Richtung wie auf dem Bedienschalter angezeigt bewegt.
11. Kontrollieren Sie den Seilhebezug regelmäßig auf Beschädigungen. Der Bedienschalter muss in gutem Zustand sein.
12. Lassen Sie Reparaturen und Wartungsarbeiten nur in autorisierten Fachwerkstätten durch einen Elektrofachmann durchführen. Reparaturen dürfen nur von einer Elektrofachkraft ausgeführt werden, andernfalls können Unfälle für den Betreiber entstehen.
13. Vermeiden Sie schnelles An- und Abschalten (Tippbetrieb).
14. Seien Sie bei der Bedienung des Seilhebezuges stets aufmerksam.
15. Stehen oder arbeiten Sie nicht unter der gehobenen Last.

2. Gerätebeschreibung und Lieferumfang

2.1 Gerätebeschreibung (Bild 1/2)
1. Befestigungsbügel
2. Befestigungsloch für Haken
3. Trommel
4. Hebel für maximale Seillänge
5. Hebel des automatischen Stoppmechanismus
6. Stahlseil
7. Abschaltgewicht
8. Haken
9. Not-Aus-Schalter
10. Drucktaster
11. Fernbedienung
12. Netzkabel
13. Steuerleitung
14. Motor
15. Umlenkrolle
16. Zusatzhaken
17. Seil für Fernbedienung

2.2 Lieferumfang
Bitte überprüfen Sie die Vollständigkeit des Artikels anhand des beschriebenen Lieferumfangs. Bei Fehlteilen wenden Sie sich bitte spätestens innerhalb von 5 Arbeitstagen nach Kauf des Artikels unter Vorlage eines gültigen Kaufbeleges an unser Service Center oder an die Verkaufstelle, bei der Sie das Gerät erworben haben. Bitte beachten Sie hierzu die Gewährleistungstabelle in den Service-Informationen am Ende der Anleitung.

Anl_TC_EH_500_SPK9.indb 5 16.11.2017 15:21:53

- Öffnen Sie die Verpackung und nehmen Sie das Gerät vorsichtig aus der Verpackung.
- Entfernen Sie das Verpackungsmaterial sowie Verpackungs-/ und Transportsicherungen (falls vorhanden).
- Überprüfen Sie, ob der Lieferumfang vollständig ist.
- Kontrollieren Sie das Gerät und die Zubehörteile auf Transportschäden.
- Bewahren Sie die Verpackung nach Möglichkeit bis zum Ablauf der Garantiezeit auf.

Gefahr!
Gerät und Verpackungsmaterial sind kein Kinderspielzeug! Kinder dürfen nicht mit Kunststoffbeuteln, Folien und Kleinteilen spielen! Es besteht Verschluckungs- und Erstickungsgefahr!

- Originalbetriebsanleitung

3. Bestimmungsgemäße Verwendung

Der Seilhebezug dient zum Heben und Absenken von Lasten in geschlossenen Räumen entsprechend der Geräteleistung.

Die Maschine darf nur nach ihrer Bestimmung verwendet werden. Jede weitere darüber hinausgehende Verwendung ist nicht bestimmungsgemäß. Für daraus hervorgerufene Schäden oder Verletzungen aller Art haftet der Benutzer/Bediener und nicht der Hersteller.

Bitte beachten Sie, dass unsere Geräte bestimmungsgemäß nicht für den gewerblichen, handwerklichen oder industriellen Einsatz konstruiert wurden. Wir übernehmen keine Gewährleistung, wenn das Gerät in Gewerbe-, Handwerks- oder Industriebetrieben sowie bei gleichzusetzenden Tätigkeiten eingesetzt wird.

4. Technische Daten

Spannung (V)	230 V ~ 50 Hz
Nennstrom (A)	4,4
Leistungsaufnahme (W)	1000
Betriebsart	S3 20% 10 min
Nennlast (kg)	250 / 500
Hebehöhe (m)	11,5 / 5,7
Nenngeschwindigkeit (m/min)	8 / 4
Durchmesser des Stahlseiles (mm)	4,0
Zugfestigkeit des Stahlseils (N/mm^2)	1870
Isolationsklasse	B
Schutzart	IP54
Triebwerksklasse	M1
Nettogewicht (kg)	16,2

Betriebsart S3 - 20% - 10min: S3 = Aussetzbetrieb ohne Einfluss des Anlaufvorganges. Dies bedeutet, dass während eines Zeitraums von 10 min die max. Betriebszeit 20% (2 Min) beträgt.

Beschränken Sie die Geräuschentwicklung und Vibration auf ein Minimum!
- Verwenden Sie nur einwandfreie Geräte.
- Warten und reinigen Sie das Gerät regelmäßig.
- Passen Sie Ihre Arbeitsweise dem Gerät an.
- Überlasten Sie das Gerät nicht.
- Lassen Sie das Gerät gegebenenfalls überprüfen.
- Schalten Sie das Gerät aus, wenn es nicht benutzt wird.
- Tragen Sie Handschuhe.

5. Vor Inbetriebnahme

Überzeugen Sie sich vor dem Anschließen, dass die Daten auf dem Typenschild mit den Netzdaten übereinstimmen.
Warnung!
Ziehen Sie immer den Netzstecker, bevor Sie Einstellungen am Gerät vornehmen.

- Der Seilhebezug ist nicht für den Transport von heißen und/oder geschmolzenen Massen geeignet, des Weiteren ist der Seilhebezug nicht für den Einsatz bei niedrigen Temperaturen und in aggressiver Umwelt vorgesehen.
- Mechanische Gruppe ist M1.
- Die Nutzungsdauer des Seilhebezuges ist ca. 8000 Zyklen (exkl. Verschleißteile). Wenn der

Anl_TC_EH_500_SPK9.indb 6 16.11.2017 15:21:53

Zug 8000 Zyklen durchlaufen hat, müssen alle mechanischen Teile kontrolliert und überholt werden.
- Lesen und verstehen Sie die Bedienungsanleitung, bevor Sie den Seilhebezug benutzen.
- Stellen Sie sicher, dass die Bedienperson weiß, wie die Maschine funktioniert, und wie sie betrieben werden sollte.
- Der Nutzer sollte immer in Übereinstimmung mit der Bedienungsanleitung operieren.
- Der Hebezug ist nicht für den Dauereinsatz vorgesehen. Die Betriebsart ist: Aussetzbetrieb ohne Einfluss des Anlaufvorganges.
- Die Nennleistung der Maschine variiert nicht mit der Position der Belastung.

5.1 Auspacken
Nach dem Öffnen der Verpackung inspizieren Sie bitte den Rahmen, das Stahlseil, die Haken, und den elektrischen Kontrollmechanismus auf mögliche Transportschäden.

5.2 Montage (Bild 5)
Der Seilhebezug ist mit 2 Befestigungsbügeln (1) ausgestattet, mit denen er an einem Vierkantrohr befestigt werden muss. Die Abmessungen des Auslegers müssen in Übereinstimmung mit der Größe der Befestigungsbügel (1) sein und er muss die zweifache Nennlast tragen können. Wir empfehlen Ihnen, Kontakt mit einem qualifizierten Techniker aufzunehmen.
Alle Schrauben müssen richtig angezogen werden. Vor der Inbetriebnahme sollte ein qualifizierter Techniker die Verankerung des Auslegers überprüfen.

5.3 Flaschenzugfunktion (Bild 6-9)
Der Seilhebezug ist mit einer Umlenkrolle (15) und einem Zusatzhaken (16) ausgestattet. Bei richtiger Verwendung kann der Seilhebezug die doppelte Last heben.
Montieren Sie Umlenkrolle (15) und Zusatzhaken (16) wie in Bild 6-8 dargestellt. Der fest montierte Haken (8) muss am Befestigungsloch (2) eingehängt werden (Bild 9).
Die Last wird nun mit Hilfe von zwei Stahlseilen angehoben, der Seilhebezug kann somit die doppelte Last anheben.

6. Bedienung

Gefahr!
6.1 Hinweise zum Betrieb
1. Entfernen Sie vor der ersten Benutzung das Klebeband von der Trommel (3).
2. Der Wert der A-bewerteten Lärmemission an der Betreiberposition ist niedriger als 75dB (Schalldruckpegel L_{pA}). Die Geräusch- und Vibrationswerte wurden entsprechend EN ISO 11201 ermittelt.
3. Versorgungsspannung: 230V ± 10%, 50Hz ± 1%.
4. Der Seilhebezug ist bei Umgebungstemperaturen zwischen 0 °C und 40 °C relative Luftfeuchtigkeit unter 50% zu betreiben. Höhe über dem Meeresspiegel: max. 1000 m.
5. Für Transport und Lagerung darf die Temperatur zwischen -25 °C und 55 °C betragen. Die höchste zulässige Temperatur darf nicht über 70 °C betragen.
6. Der Nutzer sollte die Last vom Boden mit der geringsten möglichen Geschwindigkeit anheben. Das Seil sollte gestrafft sein, wenn die Last angehoben wird.
7. Der Motor (14) des Seilhebezuges ist mit einem Thermostatschalter ausgestattet. Während des Betriebes des Seilhebezuges kann es daher zum Stoppen des Motors (14) kommen, dieser läuft automatisch wieder an wenn er abgekühlt ist.
8. Der elektrische Seilhebezug ist nicht mit einem Nennleistungsbegrenzer ausgestattet. Deshalb, bitte nicht weiter Versuchen die Last anzuheben, wenn der Überhitzungsschutz den Betrieb begrenzt. Die Last überschreitet in diesem Fall die Nennleistung des Seilhebezuges.
9. Lassen Sie keine hängenden Lasten unbeaufsichtigt ohne entsprechende Sicherheitsvorkehrungen getroffen zu haben.
10. Sichern Sie das Gerät mit einer 10 A Sicherung oder einem 10 mA Fehlerstrom-Schutzschalter ab um den Stromkreis zu schützen.
11. Verwenden Sie die Hebel (4/5) nicht als Routine Stoppvorrichtung. Diese dienen nur als Stoppvorrichtung für den Notfall.
12. Bevor Sie beginnen, stellen Sie sicher, dass das Stahlseil (6) korrekt um die Trommel (3) gewickelt ist und der Abstand zwischen den Windungen kleiner als das Stahlseil ist (Bild. 3)
13. Stellen Sie sicher, dass die Ladung ordnungsgemäß am Haken (8) beziehungsweise

Anl_TC_EH_500_SPK9.indb 7 16.11.2017 15:21:53

bei Flaschenzugbetrieb dem Zusatzhaken (16) gesichert ist und halten Sie stets Abstand zur Last und dem Stahlseil (6).

6.2 Betrieb (Bild 1)

- Überprüfen Sie, ob der Not-Aus-Schalter (9) gedrückt ist. Drehen Sie den roten Stoppschalter im Uhrzeigersinn um ihn zu entriegeln.
- Drücken Sie den Drucktaster ▲ (10) zum Anheben der Last.
- Drücken Sie den Drucktaster ▼ (10) zum Senken der Last.
- Hebel des automatischen Stoppmechanismus (5): Wenn die maximale Hebehöhe erreicht ist, drückt das Abschaltgewicht (7) den Hebel (5) nach oben. Dadurch wird ein Endschalter betätigt und die Last kann nicht weiter angehoben werden.
- Hebel für maximale Seillänge (4): Wenn die Last die niedrigste mögliche Position erreicht hat, wird ein Endschalter betätigt, der ein weiteres Absenken der Last nicht ermöglicht. Dieser Endschalter würde auch einen Betrieb des Seilhebezuges in falscher Richtung (Haken bewegt sich entgegengesetzt zur am Bedienschalter angezeigten Richtung) verhindern.
- Wenn der Not-Aus-Schalter (9) betätigt wird, hält der Seilhebezug an.
- Im Falle eines Notfalls, sofort Not-Aus-Schalter (9) betätigen um den Seilhebezug anzuhalten. Die Bedienung des Seilhebezuges ist nicht möglich, wenn der Not-Aus-Schalter betätigt wurde.

7. Austausch der Netzanschlussleitung

Gefahr!
Wenn die Netzanschlussleitung dieses Gerätes beschädigt wird, muss sie durch den Hersteller oder seinen Kundendienst oder eine ähnlich qualifizierte Person ersetzt werden, um Gefährdungen zu vermeiden.

8. Reinigung, Wartung und Ersatzteilbestellung

Gefahr!
Ziehen Sie vor allen Reinigungsarbeiten den Netzstecker.

8.1 Reinigung

- Halten Sie Schutzvorrichtungen, Luftschlitze und Motorengehäuse so staub- und schmutzfrei wie möglich. Reiben Sie das Gerät mit einem sauberen Tuch ab oder blasen Sie es mit Druckluft bei niedrigem Druck aus.
- Wir empfehlen, dass Sie das Gerät direkt nach jeder Benutzung reinigen.
- Reinigen Sie das Gerät regelmäßig mit einem feuchten Tuch und etwas Schmierseife. Verwenden Sie keine Reinigungs- oder Lösungsmittel; diese könnten die Kunststoffteile des Gerätes angreifen. Achten Sie darauf, dass kein Wasser in das Geräteinnere gelangen darf. Das Eindringen von Wasser in ein Elektrogerät erhöht das Risiko eines elektrischen Schlages.

8.2 Wartung
Gefahr! Stellen Sie stets sicher, dass die Maschine nicht mit dem Stromnetz verbunden ist, wenn Sie die Maschine pflegen.

- Nachstehend: Ein Zyklus entspricht einer Auf- und Abwärtsbewegung einer Last. Periodische Prüfung entspricht einer Prüfung nach 100 Zyklen.
- Überprüfen Sie periodisch, dass die Endschalter des Seilhebezugs ordnungsgemäß funktionieren. Die Prüfung erfolgt folgendermaßen: Wenn das Seil die maximale Hebehöhe erreicht, wird der Hebel des automatischen Stoppmechanismus (5) betätigt. Der Motor (14) muss nun stoppen. (ohne Last prüfen).
  Wenn das Stahlseil (6) so weit wie möglich abgewickelt ist, wird der Hebel für maximale Seillänge (4) betätigt. Der Motor (14) muss nun stoppen.
- Prüfen Sie periodisch das Netzkabel (12) und die Steuerleitung (13).
- Alle 200 Zyklen müssen Stahlseil (6) und Umlenkrolle (15) geschmiert werden.
- Alle 30 Zyklen muss entsprechend Bild 4 kontrolliert werden, ob das gesamte Stahlseil (6) in gutem Zustand ist. Falls es beschädigt ist, muss es durch ein den technischen Daten entsprechendes Stahlseil ersetzt werden.

Anl_TC_EH_500_SPK9.indb 8 16.11.2017 15:21:53

- Alle 1000 Zyklen prüfen, ob die Schrauben der Befestigungsbügel (1) und Umlenkrolle (15) gut angezogen sind.
- Alle 1000 Zyklen prüfen, ob die Haken (8/16) und die Umlenkrolle (15) in gutem Zustand sind.
- Schmieren Sie regelmäßig das Seil, Kette, Getriebe, Lager und Haken.
- Prüfen Sie alle 1000 Zyklen Verschleißteile wie: Seil, Kette, Haken, Bänder und Bremsbeläge.
- Kontrollieren Sie vor jeder Benutzung des Seilhebezuges, ob Not-Aus-Schalter (9) und Drucktaster (10) in einwandfreiem Betriebszustand sind.
- Alle 1000 Zyklen das Bremssystem überprüfen. Wenn der Motor (14) ungewöhnliche Geräusche macht oder die Nennlast nicht anheben kann, ist es möglich, dass das Bremssystem überholt werden muss:
  - Ersetzen Sie beschädigte oder abgenutzte Teile, und bewahren Sie die dazugehörige Wartungsdokumentation auf.
  - Für außerplanmäßige Instandhaltungsarbeiten wenden Sie sich bitte an ein autorisiertes Servicecenter.
- Lassen Sie ihr Elektrowerkzeug nur von qualifiziertem Fachpersonal reparieren.

8.3 Ersatzteilbestellung:
Bei der Ersatzteilbestellung sollten folgende Angaben gemacht werden;

- Typ des Gerätes
- Artikelnummer des Gerätes
- Ident-Nummer des Gerätes
- Ersatzteilnummer des erforderlichen Ersatzteils

Aktuelle Preise und Infos finden Sie unter www.isc-gmbh.info

9. Entsorgung und Wiederverwertung

Das Gerät befindet sich in einer Verpackung um Transportschäden zu verhindern. Diese Verpackung ist Rohstoff und ist somit wieder verwendbar oder kann dem Rohstoffkreislauf zurückgeführt werden. Das Gerät und dessen Zubehör bestehen aus verschiedenen Materialien, wie z.B. Metall und Kunststoffe. Defekte Geräte gehören nicht in den Hausmüll. Zur fachgerechten Entsorgung sollte das Gerät an einer geeigneten Sammelstellen abgegeben werden. Wenn Ihnen keine Sammelstelle bekannt ist, sollten Sie bei der Gemeindeverwaltung nachfragen.

10. Lagerung

Lagern Sie das Gerät und dessen Zubehör an einem dunklen, trockenen und frostfreiem Ort. Die optimale Lagertemperatur liegt zwischen 5 und 30 ˚C. Bewahren Sie das Elektrowerkzeug in der Originalverpackung auf.

Anl_TC_EH_500_SPK9.indb 9 16.11.2017 15:21:53

Nur für EU-Länder

Werfen Sie Elektrowerkzeuge nicht in den Hausmüll!

Gemäß europäischer Richtlinie 2012/19/EU über Elektro- und Elektronik-Altgeräte und Umsetzung in nationales Recht müssen verbrauchte Elektrowerkzeuge getrennt gesammelt werden und einer umweltgerechten Wiederverwertung zugeführt werden.

Recycling-Alternative zur Rücksendeaufforderung:
Der Eigentümer des Elektrogerätes ist alternativ anstelle Rücksendung zur Mitwirkung bei der sachgerechten Verwertung im Falle der Eigentumsaufgabe verpflichtet. Das Altgerät kann hierfür auch einer Rücknahmestelle überlassen werden, die eine Beseitigung im Sinne der nationalen Kreislaufwirtschafts- und Abfallgesetze durchführt. Nicht betroffen sind den Altgeräten beigefügte Zubehörteile und Hilfsmittel ohne Elektrobestandteile.

Der Nachdruck oder sonstige Vervielfältigung von Dokumentation und Begleitpapieren der Produkte, auch auszugsweise, ist nur mit ausdrücklicher Zustimmung der iSC GmbH zulässig.

Technische Änderungen vorbehalten

Anl_TC_EH_500_SPK9.indb 10 16.11.2017 15:21:53

Service-Informationen

Wir unterhalten in allen Ländern, welche in der Garantieurkunde benannt sind, kompetente Service-Partner, deren Kontakte Sie der Garantieurkunde entnehmen. Diese stehen Ihnen für alle Service-Belange wie Reparatur, Ersatzteil- und Verschleißteil-Versorgung oder den Bezug von Verbrauchsmaterialien zur Verfügung.

Es ist zu beachten, dass bei diesem Produkt folgende Teile einem gebrauchsgemäßen oder natürlichen Verschleiß unterliegen bzw. folgende Teile als Verbrauchsmaterialien benötigt werden.

Kategorie	Beispiel
Verschleißteile*	Stahlseil, Haken, Umlenkrolle, Zusatzhaken
Verbrauchsmaterial/ Verbrauchsteile*	
Fehlteile	

* nicht zwingend im Lieferumfang enthalten!

Bei Mängel oder Fehlern bitten wir Sie, den Fehlerfall im Internet unter www.isc-gmbh.info anzumelden. Bitte achten Sie auf eine genaue Fehlerbeschreibung und beantworten Sie dazu in jedem Fall folgende Fragen:

- Hat das Gerät bereits einmal funktioniert oder war es von Anfang an defekt?
- Ist Ihnen vor dem Auftreten des Defektes etwas aufgefallen (Symptom vor Defekt)?
- Welche Fehlfunktion weist das Gerät Ihrer Meinung nach auf (Hauptsymptom)? Beschreiben Sie diese Fehlfunktion.

Anl_TC_EH_500_SPK9.indb 11 16.11.2017 15:21:53

Garantieurkunde

Sehr geehrte Kundin, sehr geehrter Kunde,
unsere Produkte unterliegen einer strengen Qualitätskontrolle. Sollte dieses Gerät dennoch einmal nicht einwandfrei funktionieren, bedauern wir dies sehr und bitten Sie, sich an unseren Servicedienst unter der auf dieser Garantiekarte angegebenen Adresse zu wenden. Gerne stehen wir Ihnen auch telefonisch über die angegebene Servicerufnummer zur Verfügung. Für die Geltendmachung von Garantieansprüchen gilt folgendes:

1. Diese Garantiebedingungen richten sich ausschließlich an Verbraucher, d. h. natürliche Personen, die dieses Produkt weder im Rahmen ihrer gewerblichen noch anderen selbständigen Tätigkeit nutzen wollen. Diese Garantiebedingungen regeln zusätzliche Garantieleistungen, die der u. g. Hersteller zusätzlich zur gesetzlichen Gewährleistung Käufern seiner Neugeräte verspricht. Ihre gesetzlichen Gewährleistungsansprüche werden von dieser Garantie nicht berührt. Unsere Garantieleistung ist für Sie kostenlos.
2. Die Garantieleistung erstreckt sich ausschließlich auf Mängel an einem von Ihnen erworbenen neuen Gerät des u. g. Herstellers, die auf einem Material- oder Herstellungsfehler beruhen und ist nach unserer Wahl auf die Behebung solcher Mängel am Gerät oder den Austausch des Gerätes beschränkt. Bitte beachten Sie, dass unsere Geräte bestimmungsgemäß nicht für den gewerblichen, handwerklichen oder beruflichen Einsatz konstruiert wurden. Ein Garantievertrag kommt daher nicht zustande, wenn das Gerät innerhalb der Garantiezeit in Gewerbe-, Handwerks- oder Industriebetrieben verwendet wurde oder einer gleichzusetzenden Beanspruchung ausgesetzt war.
3. Von unserer Garantie ausgenommen sind:
   - Schäden am Gerät, die durch Nichtbeachtung der Montageanleitung oder aufgrund nicht fachgerechter Installation, Nichtbeachtung der Gebrauchsanleitung (wie durch z.B. Anschluss an eine falsche Netzspannung oder Stromart) oder Nichtbeachtung der Wartungs- und Sicherheitsbestimmungen oder durch Aussetzen des Geräts an anomale Umweltbedingungen oder durch mangelnde Pflege und Wartung entstanden sind.
   - Schäden am Gerät, die durch missbräuchliche oder unsachgemäße Anwendungen (wie z.B. Überlastung des Gerätes oder Verwendung von nicht zugelassenen Einsatzwerkzeugen oder Zubehör), Eindringen von Fremdkörpern in das Gerät (wie z.B. Sand, Steine oder Staub, Transportschäden), Gewaltanwendung oder Fremdeinwirkungen (wie z. B. Schäden durch Herunterfallen) entstanden sind.
   - Schäden am Gerät oder an Teilen des Geräts, die auf einen gebrauchsgemäßen, üblichen oder sonstigen natürlichen Verschleiß zurückzuführen sind.
4. Die Garantiezeit beträgt 24 Monate und beginnt mit dem Kaufdatum des Gerätes. Garantieansprüche sind vor Ablauf der Garantiezeit innerhalb von zwei Wochen, nachdem Sie den Defekt erkannt haben, geltend zu machen. Die Geltendmachung von Garantieansprüchen nach Ablauf der Garantiezeit ist ausgeschlossen. Die Reparatur oder der Austausch des Gerätes führt weder zu einer Verlängerung der Garantiezeit noch wird eine neue Garantiezeit durch diese Leistung für das Gerät oder für etwaige eingebaute Ersatzteile in Gang gesetzt. Dies gilt auch bei Einsatz eines Vor-Ort-Services.
5. Für die Geltendmachung Ihres Garantieanspruches melden Sie bitte das defekte Gerät an unter: www.isc-gmbh.info. Halten Sie bitte den Kaufbeleg oder andere Nachweise Ihres Kaufs des Neugeräts bereit. Geräte, die ohne entsprechende Nachweise oder ohne Typenschild eingesendet werden, sind von der Garantieleistung aufgrund mangelnder Zuordnungsmöglichkeit ausgeschlossen. Ist der Defekt des Gerätes von unserer Garantieleistung erfasst, erhalten Sie umgehend ein repariertes oder neues Gerät zurück.

Selbstverständlich beheben wir gegen Erstattung der Kosten auch gerne Defekte am Gerät, die vom Garantieumfang nicht oder nicht mehr erfasst sind. Dazu senden Sie das Gerät bitte an unsere Serviceadresse.
Für Verschleiß-, Verbrauchs- und Fehlteile verweisen wir auf die Einschränkungen dieser Garantie gemäß den Service-Informationen dieser Bedienungsanleitung.

iSC GmbH · Eschenstraße 6 · 94405 Landau/Isar (Deutschland)

Anl_TC_EH_500_SPK9.indb 12 16.11.2017 15:21:53

Sehr geehrte Kundin, sehr geehrter Kunde,
um Ihnen noch mehr Service zu bieten, haben Sie die Möglichkeit auf unserem Onlineportal weitere Informationen abzurufen.

Sollten einmal Probleme oder Fragen zu Ihrem Produkt auftreten, können Sie schnell und einfach unter www.isc-gmbh.info viele Aktionen durchführen. Hier einige Beispiele:

- Ersatzteile bestellen
- Aktuelle Preisauskünfte
- Verfügbarkeiten der Ersatzteile
- Servicestellen Vorort für Benzingeräte
- Defekte Geräte anmelden
- Garantieverlängerungen (nur bei bestimmten Geräten)
- Bestellverfolgung

Danger!
When using the equipment, a few safety precautions must be observed to avoid injuries and damage. Please read the complete operating instructions and safety regulations with due care. Keep this manual in a safe place, so that the information is available at all times. If you give the equipment to any other person, hand over these operating instructions and safety regulations as well. We cannot accept any liability for damage or accidents which arise due to a failure to follow these instructions and the safety instructions.

1. Safety regulations

Danger!
Read all safety regulations and instructions.
Any errors made in following the safety regulations and instructions may result in an electric shock, fire and/or serious injury.
Keep all safety regulations and instructions in a safe place for future use.

1. Always check that the mains voltage is identical to the voltage quoted on the rating plate. In the event that the mains voltage is not suitable, it may cause the machine to work abnormally and thus result in personal injury.
2. The power supply must be earthed and be secured by a residual current operated circuit breaker (RCCB).
3. Do not attempt to lift loads that exceed the rated load.
4. Use the machine only for the purpose for which it is designed. Never lift personnel using the cable hoist.
5. Do not pull the power cable in order to pull out the plug. Protect the power cable from heat, oil and sharp edges.
6. Never attempt to raise fixed or jammed loads.
7. Pull out the plug when the cable hoist is not in use.
8. Keep children and other unauthorized persons away from the machine.
9. Do not pull loads sideways or from one side. Do not allow the load to swing.
10. Ensure that the hook moves in the same direction as shown on the control switch.
11. Check the cable hoist at regular intervals for signs of damage. The control switch must be in good condition.
12. Have repair and servicing work carried out only by authorized workshops by a trained electrician. Repair work must only be carried out by a trained electrician, otherwise the machine may cause accidents.
13. Do not switch the machine on and off quickly (inching mode).
14. Always concentrate fully when operating the cable hoist.
15. Do not stand or work under the raised load.

2. Layout and items supplied

2.1 Layout (Fig. 1/2)
1. Fastening bar
2. Fastening hole for hook
3. Drum
4. Lever for maximum cable length
5. Automatic stop mechanism lever
6. Steel cable
7. Cut-out weight
8. Hook
9. Emergency Stop switch
10. Pushbutton
11. Remote control
12. Power cable
13. Control cable
14. Motor
15. Return roller
16. Additional hook
17. Cable for remote control

2.2 Items supplied
Please check that the article is complete as specified in the scope of delivery. If parts are missing, please contact our service center or the sales outlet where you made your purchase at the latest within 5 working days after purchasing the product and upon presentation of a valid bill of purchase. Also, refer to the warranty table in the service information at the end of the operating instructions.
- Open the packaging and take out the equipment with care.
- Remove the packaging material and any packaging and/or transportation braces (if available).
- Check to see if all items are supplied.
- Inspect the equipment and accessories for transport damage.
- If possible, please keep the packaging until the end of the guarantee period.

Anl_TC_EH_500_SPK9.indb 14 16.11.2017 15:22:00

Danger!
The equipment and packaging material are not toys. Do not let children play with plastic bags, foils or small parts. There is a danger of swallowing or suffocating!

- Original operating instructions

3. Proper use

The cable hoist is designed for lifting and lowering loads in enclosed areas commensurate with the machine's capacity.

The equipment is to be used only for its prescribed purpose. Any other use is deemed to be a case of misuse. The user / operator and not the manufacturer will be liable for any damage or injuries of any kind caused as a result of this.

Please note that our equipment has not been designed for use in commercial, trade or industrial applications. Our warranty will be voided if the machine is used in commercial, trade or industrial businesses or for equivalent purposes.

4. Technical data

Voltage (V)	230 V ~ 50 Hz
Rated current (A)	4,4
Power consumption (W)	1000
Operating mode	S3 20% 10 min
Rated load (kg)	250 / 500
Lifting height (m)	11,5 / 5,7
Rated speed (m/min)	8 / 4
Diameter of steel cable (mm)	4,0
Tensile strength of the steel cable (N/mm²)	1870
Insulation class	B
Protection type	IP 54
Drive unit class	M1
Net weight (kg)	16,2

Operating mode S3 – 20% - 10 minutes:
S3 = Intermittent mode without influencing the starting process. This means that the maximum operating period over a time of 10 minutes is 20% (2 minutes).

Keep the noise emissions and vibrations to a minimum.
- Only use appliances which are in perfect working order.
- Service and clean the appliance regularly.
- Adapt your working style to suit the appliance.
- Do not overload the appliance.
- Have the appliance serviced whenever necessary.
- Switch the appliance off when it is not in use.
- Wear protective gloves.

5. Before starting the equipment

Before you connect the equipment to the mains supply make sure that the data on the rating plate are identical to the mains data.
Warning!
Always pull the power plug before making adjustments to the equipment.

- The cable hoist is not suitable for transporting hot and/or molten masses and in addition it is not suitable for use at low temperatures or in aggressive atmospheres.
- It is in mechanical group M1.
- The service life of the cable hoist is approximately 8000 cycles (excluding wearing parts). When the hoist has completed 8000 cycles, all its mechanical parts must be checked and overhauled.
- Read and absorb the operating instructions before you use the cable hoist.
- Ensure that the operator knows how the machine works and how it should be operated.
- The user should always operate as set out in the operating instructions.
- The cable hoist is not designed for continuous operation. Its mode of operation is: Intermittent mode without influencing the starting process.
- The rated capacity of the machine does not vary due to the position of the load.

5.1 Unpacking
After opening the packaging, inspect the frame, the steel cable, the hook and the electric control mechanism for signs of possible transit damage.

Anl_TC_EH_500_SPK9.indb 15 16.11.2017 15:22:00

5.2 Assembly (Fig. 5)
The cable hoist is fitted with two fastening bars (1) with which it has to be fastened to a rectangular tube. The dimensions of the arm must conform with the size of the fastening bars (1) and must be capable of supporting twice the rated load. We recommend that you seek advice from a qualified technician.
All screws must be tightened correctly. A qualified technician should check the anchoring of the arm before the machine is started.

5.3 Block and tackle function (Fig. 6 – 9)
The cable hoist is fitted with a return roller (15) and an additional hook (16). If these parts are used correctly, the cable hoist can lift twice its rated load.
Fit the return roller (15) and additional hook (16) as shown in Figure 6 – 8. The permanent hook (8) must be attached to the fastening hole (2) (Fig. 9). The load is now raised by two steel cables, which means that the cable hoist can lift twice its rated load.

6. Operation

Danger!
6.1 Information for operation
1. Remove the adhesive tape from the drum (3) before using the hoist for the first time.
2. The value of the A-rated noise emissions at the operator's position is less than 75 dB (sound pressure level LpA). Sound and vibration values were measured in accordance with EN ISO 11201.
3. Supply voltage: 230 V ± 10%, 50 Hz ± 1%.
4. The cable hoist must be operated in ambient temperatures of between 0°C and 40°C with a relative humidity of less than 50%. Height above sea level: max. 1,000 m.
5. The temperature for transport and storage may be between -25°C and 55°C. The maximum temperature must not exceed 70°C.
6. The user should lift the load off the ground at the slowest possible speed. The cable should be taut when the load is raised.
7. The motor (14) for the cable hoist is fitted with a thermostat switch. Whilst the cable hoist is operating, the motor (14) may therefore stop. It will restart automatically when it has cooled down.
8. The electric cable hoist is not fitted with a rated power limiter. You should therefore not repeat attempts to lift a load if the overload trip is limiting the hoist's operation. In this case the load exceeds the rated capacity of the cable hoist.
9. Do not leave any suspended loads unsupervised without first taking the appropriate safety precautions.
10. Fit the machine with a 10 A fuse or a 10 mA residual current operated circuit breaker (RCCB) to protect the circuit
11. Do not use the lever (4/5) as a routine stopping device. It should only be used to stop the machine in an emergency.
12. Before you start, ensure that the steel cable (6) is correctly wound around the drum (3) and that the spacing between the windings is smaller than the steel cable (Fig. 3)
13. Ensure that the load is correctly secured to the hook (8) or, if you are using the block and tackle, the additional hook (16) and always maintain a safe distance from the load and the steel cable (6).

6.2 Operation (Fig. 10)
- Check whether the Emergency Stop switch (9) is pressed. Turn the red stop switch clockwise to release it.
- Press the pushbutton ▲ (10) to raise the load.
- Press the pushbutton ▼ (10) to lower the load.
- Automatic stop mechanism lever (5): When the maximum lifting height has been reached, the cut-out weight (7) presses the lever (5) upwards. This trips a limit switch after which the load cannot be raised any further.
- Lever for maximum cable length (4): When the load has reached its lowest possible position, a limit switch is tripped which makes it impossible to lower the load any further. This limit switch also prevents the cable hoist operating in the wrong direction (hook moving in the opposite direction to the arrow shown on the control switch).
- The cable hoist will stop if the Emergency Stop switch (9) is pressed.
- In an emergency, immediately press the Emergency Stop switch (9) to stop the cable hoist. The cable hoist cannot be operated if the Emergency Stop switch has been pressed.

Anl_TC_EH_500_SPK9.indb 16 16.11.2017 15:22:00

7. Replacing the power cable

Danger!
If the power cable for this equipment is damaged, it must be replaced by the manufacturer or its after-sales service or similarly trained personnel to avoid danger.

8. Cleaning, maintenance and ordering of spare parts

Danger!
Always pull out the mains power plug before starting any cleaning work.

8.1 Cleaning

- Keep all safety devices, air vents and the motor housing free of dirt and dust as far as possible. Wipe the equipment with a clean cloth or blow it with compressed air at low pressure.
- We recommend that you clean the device immediately each time you have finished using it.
- Clean the equipment regularly with a moist cloth and some soft soap. Do not use cleaning agents or solvents; these could attack the plastic parts of the equipment. Ensure that no water can seep into the device. The ingress of water into an electric tool increases the risk of an electric shock.

8.2 Servicing

Danger! Always ensure that the machine is not connected to the mains supply before you start any servicing work.

- In the following: One cycle means one raising and lowering movement of a load. Periodic inspection means an inspection after 100 cycles.
- Test periodically that the limit switches on the cable hoist are in correct working order. Conduct this test as follows: When the cable has reached the maximum height, the lever on the automatic stopping mechanism (5) will be actuated. The motor (14) must then stop. (Test without a load).
  When the steel cable (6) has been unwound as far as possible, the lever for the maximum cable length (4) will be actuated. The motor (14) must then stop.
- Inspect the mains cable (12) and the control cable (13) periodically.
- The steel cable (6) and return roller (15) must be greased every 200 cycles.
- A check must be made every 30 cycles, as shown in Fig. 4, to find whether the entire steel cable (6) is in good condition. If it is damaged, it must be replaced by a steel cable of the type specified in the technical data.
- Check every 1000 cycles whether the screws for the fastening bars (1) and return roller (15) are properly tightened.
- Check every 1000 cycles whether the hooks (8/16) and return roller (15) are in good condition.
- Lubricate the cable, chain, gear unit, bearings and hooks regularly.
- Check wearing parts after every 1000 cycles, e.g.: cable, chain, hooks, belts and brake linings.
- Check before using the cable hoist whether the Emergency Stop switch (9) and pushbuttons (10) are in perfect working order.
- Check the braking system every 1000 cycles. If the motor (14) makes any unusual noises or cannot raise the rated load, it is possible that the braking system requires an overhaul:
  - Replace damaged or worn parts and keep the service documentation relating to this in a safe place.
  - Please contact an authorized service center for any unscheduled maintenance work.
- Have your electric tools repaired only by a qualified electrician.

8.3 Ordering replacement parts:

Please quote the following data when ordering replacement parts:

- Type of machine
- Article number of the machine
- Identification number of the machine
- Replacement part number of the part required

For our latest prices and information please go to www.isc-gmbh.info

Anl_TC_EH_500_SPK9.indb 17 16.11.2017 15:22:00

9. Disposal and recycling

The equipment is supplied in packaging to prevent it from being damaged in transit. The raw materials in this packaging can be reused or recycled. The equipment and its accessories are made of various types of material, such as metal and plastic. Never place defective equipment in your household refuse. The equipment should be taken to a suitable collection center for proper disposal. If you do not know the whereabouts of such a collection point, you should ask in your local council offices.

10. Storage

Store the equipment and accessories in a dark and dry place at above freezing temperature. The ideal storage temperature is between 5 and 30 °C. Store the electric tool in its original packaging.

Anl_TC_EH_500_SPK9.indb 18 16.11.2017 15:22:00

For EU countries only

Never place any electric power tools in your household refuse.

To comply with European Directive 2012/19/EC concerning old electric and electronic equipment and its implementation in national laws, old electric power tools have to be separated from other waste and disposed of in an environment-friendly fashion, e.g. by taking to a recycling depot.

Recycling alternative to the return request:
As an alternative to returning the equipment to the manufacturer, the owner of the electrical equipment must make sure that the equipment is properly disposed of if he no longer wants to keep the equipment. The old equipment can be returned to a suitable collection point that will dispose of the equipment in accordance with the national recycling and waste disposal regulations. This does not apply to any accessories or aids without electrical components supplied with the old equipment.

The reprinting or reproduction by any other means, in whole or in part, of documentation and papers accompanying products is permitted only with the express consent of the iSC GmbH.

Subject to technical changes

Anl_TC_EH_500_SPK9.indb 19 16.11.2017 15:22:00

Service information

We have competent service partners in all countries named on the guarantee certificate whose contact details can also be found on the guarantee certificate. These partners will help you with all service requests such as repairs, spare and wearing part orders or the purchase of consumables.

Please note that the following parts of this product are subject to normal or natural wear and that the following parts are therefore also required for use as consumables.

Category	Example
Wear parts*	Steel cable, Hook, Return roller, Additional hook
Consumables*	
Missing parts	

* Not necessarily included in the scope of delivery!

In the effect of defects or faults, please register the problem on the internet at www.isc-gmbh.info. Please ensure that you provide a precise description of the problem and answer the following questions in all cases:

- Did the equipment work at all or was it defective from the beginning?
- Did you notice anything (symptom or defect) prior to the failure?
- What malfunction does the equipment have in your opinion (main symptom)? Describe this malfunction.

Anl_TC_EH_500_SPK9.indb 20 16.11.2017 15:22:00

Warranty certificate

Dear Customer,
All of our products undergo strict quality checks to ensure that they reach you in perfect condition. In the unlikely event that your device develops a fault, please contact our service department at the address shown on this guarantee card. You can also contact us by telephone using the service number shown. Please note the following terms under which guarantee claims can be made:

1. These guarantee terms apply to consumers only, i.e. natural persons intending to use this product neither for their commercial activities nor for any other self-employed activities. These warranty terms regulate additional warranty services, which the manufacturer mentioned below promises to buyers of its new products in addition to their statutory rights of guarantee. Your statutory guarantee claims are not affected by this guarantee. Our guarantee is free of charge to you.
2. The warranty services cover only defects due to material or manufacturing faults on a product which you have bought from the manufacturer mentioned below and are limited to either the rectification of said defects on the product or the replacement of the product, whichever we prefer.
   Please note that our devices are not designed for use in commercial, trade or professional applications. A guarantee contract will not be created if the device has been used by commercial, trade or industrial business or has been exposed to similar stresses during the guarantee period.
3. The following are not covered by our guarantee:
   - Damage to the device caused by a failure to follow the assembly instructions or due to incorrect installation, a failure to follow the operating instructions (for example connecting it to an incorrect mains voltage or current type) or a failure to follow the maintenance and safety instructions or by exposing the device to abnormal environmental conditions or by lack of care and maintenance.
   - Damage to the device caused by abuse or incorrect use (for example overloading the device or the use or unapproved tools or accessories), ingress of foreign bodies into the device (such as sand, stones or dust, transport damage), the use of force or damage caused by external forces (for example by dropping it).
   - Damage to the device or parts of the device caused by normal or natural wear or tear or by normal use of the device.
4. The guarantee is valid for a period of 24 months starting from the purchase date of the device. Guarantee claims should be submitted before the end of the guarantee period within two weeks of the defect being noticed. No guarantee claims will be accepted after the end of the guarantee period. The original guarantee period remains applicable to the device even if repairs are carried out or parts are replaced. In such cases, the work performed or parts fitted will not result in an extension of the guarantee period, and no new guarantee will become active for the work performed or parts fitted. This also applies if an on-site service is used.
5. To make a claim under the guarantee, please register the defective device at: www.isc-gmbh.info. Please keep your bill of purchase or other proof of purchase for the new device. Devices that are returned without proof of purchase or without a rating plate shall not be covered by the guarantee, because appropriate identification will not be possible. If the defect is covered by our guarantee, then the item in question will either be repaired immediately and returned to you or we will send you a new replacement.

Of course, we are also happy offer a chargeable repair service for any defects which are not covered by the scope of this guarantee or for units which are no longer covered. To take advantage of this service, please send the device to our service address.

Also refer to the restrictions of this warranty concerning wear parts, consumables and missing parts as set out in the service information in these operating instructions.

Anl_TC_EH_500_SPK9.indb 21 16.11.2017 15:22:00

Danger !
Lors de l'utilisation d'appareils, il faut respecter certaines mesures de sécurité afin d'éviter des blessures et dommages. Veuillez donc lire attentivement ce mode d'emploi/ces consignes de sécurité. Veillez à le conserver en bon état pour pouvoir accéder aux informations à tout moment. Si l'appareil doit être remis à d'autres personnes, veillez à leur remettre aussi ce mode d'emploi/ ces consignes de sécurité. Nous déclinons toute responsabilité pour les accidents et dommages dus au non-respect de ce mode d'emploi et des consignes de sécurité.

1. Consignes de sécurité

Danger !
Veuillez lire toutes les consignes de sécurité et instructions. Tout non-respect des consignes de sécurité et instructions peut provoquer une décharge électrique, un incendie et/ou des blessures graves.
Conservez toutes les consignes de sécurité et instructions pour une consultation ultérieure.

1. Contrôlez toujours si la tension du secteur correspond bien à celle indiquée sur la place signalétique? Dans le cas où la tension de réseau ne serait pas adéquate, cela peut entraîner des travaux anormaux de la machine et même des blessures de personnes.
2. L'alimentation électrique doit avoir une prise de terre et être protégée par un disjoncteur à courant de défaut.
3. Il est interdit de soulever des charges qui dépassent la charge nominale.
4. Utilisez toujours l'appareil dans le but prévu. Ne soulevez jamais les personnes avec la commande Bowden à câble.
5. Ne tirez pas la fiche par le câble. Maintenez le câble à l'écart de la chaleur, d'huile et des arêtes vives.
6. N'essayez jamais de soulever des charges fixes ou bloquées.
7. Tirez la fiche de contact, lorsque vous n'utilisez pas la commande Bowden à câble.
8. Maintenez les enfants et autres personnes non autorisées à distance de la machine.
9. Il est interdit de tirer des charges latéralement ou par le côté. Evitez que la charge n'oscille.
10. Assurez-vous que le crochet se déplace dans la même direction que celle indiquée sur l'interrupteur de commande.
11. Contrôlez régulièrement la commande Bowden à câble pour découvrir les éventuelles détériorations. L'interrupteur de commande doit être en bon état.
12. Faites exécuter les réparations et les travaux d'entretien uniquement dans des ateliers spécialisés dûment autorisés par un(e) électricien(ne) spécialisé(e). Les réparations doivent uniquement être effectuées par un(e) électricien(ne) qualifié(e), si tel n'est pas le cas, cela peut entraîner des accidents pour l'entreprise exploitante.
13. Evitez une mise en et hors-circuit rapide (mode « pas à pas »).
14. Soyez toujours attentif lorsque vous maniez la commande Bowden à câble.
15. Ne vous tenez pas ni ne travaillez sous une charge suspendue.

2. Description de l'appareil et volume de livraison

2.1 Description de l'appareil (figure 1/2)
1. Etrier d'attache
2. Trou de montage pour crochet
3. Tambour
4. Levier pour une longueur de câble maximale
5. Levier du mécanisme d'arrêt automatique
6. Câble métallique
7. Poids de mise hors circuit
8. Crochet
9. Interrupteur d'arrêt d'urgence
10. Bouton-poussoir
11. Télécommande
12. Câble secteur
13. Ligne de commande
14. Moteur
15. Poulie de renvoi
16. Crochet supplémentaire
17. Câble pour commande à distance

2.2 Volume de livraison
Veuillez contrôler si l'article est complet à l'aide de la description du volume de livraison. S'il manque des pièces, adressez-vous dans un délai de 5 jours maximum après votre achat à notre service après-vente ou au magasin où vous avez acheté l'appareil muni d'une preuve d'achat valable. Veuillez consulter pour cela le tableau des garanties dans les informations service après-vente à la fin du mode d'emploi.
- Ouvrez l'emballage et prenez l'appareil en le

Anl_TC_EH_500_SPK9.indb 22 16.11.2017 15:22:00

sortant avec précaution de l'emballage.
- Retirez le matériel d'emballage tout comme les sécurités d'emballage et de transport (s'il y en a).
- Vérifiez si la livraison est bien complète.
- Contrôlez si l'appareil et ses accessoires ne sont pas endommagés par le transport.
- Conservez l'emballage autant que possible jusqu'à la fin de la période de garantie.

Danger !
L'appareil et le matériel d'emballage ne sont pas des jouets ! Il est interdit de laisser des enfants jouer avec des sacs et des films en plastique et avec des pièces de petite taille. Ils risquent de les avaler et de s'étouffer !

- Mode d'emploi d'origine

3. Utilisation conforme à l'affectation

La commande Bowden à câble sert à lever et à baisser des charges dans des endroits clos conformément la performance de l'appareil.

La machine doit exclusivement être employée conformément à son affectation. Chaque utilisation allant au-delà de cette affectation est considérée comme non conforme. Pour les dommages en résultant ou les blessures de tout genre, le producteur décline toute responsabilité et l'opérateur/l'exploitant est responsable.

Veillez au fait que nos appareils, conformément à leur affectation, n'ont pas été construits, pour être utilisés dans un environnement professionnel, industriel ou artisanal. Nous déclinons toute responsabilité si l'appareil est utilisé professionnellement, artisanalement ou dans des sociétés industrielles, tout comme pour toute activité équivalente.

4. Données techniques

Tension (V) ..... 230 V ~ 50 Hz
Courant nominal (A) 4,4
Puissance absorbée (W) 1000
Mode de travail ..... S3 20% 10 min
Charge nominale (kg) .....250 / 500
Hauteur de levage (m) .....11,5 / 5,7
Vitesse nominale (m/min) .....8 / 4
Diamètre du câble métallique (mm) 4,0
Résistance à la rupture
par traction du câble métallique (N/mm^2) 1870
Classe d'isolation.....B
Type de protection ..... IP 54
Catégorie de mécanisme d'entraînement M1
Poids net (kg)..... 16,2

Mode de service S3 - 20% - 10 mn. :
S3 = service discontinu sans influence du procédé de démarrage. Ceci signifie que pendant une période de 10 mn., la durée de fonctionnement maxi. est de 20% (2 mn).

Limitez le niveau sonore et les vibrations à un minimum !
- Utilisez exclusivement des appareils en excellent état.
- Entretenez et nettoyez l'appareil régulièrement.
- Adaptez votre façon de travailler à l'appareil.
- Ne surchargez pas l'appareil.
- Faites contrôler l'appareil le cas échéant.
- Mettez l'appareil hors circuit lorsque vous ne l'utilisez pas.
- Portez des gants.

Anl_TC_EH_500_SPK9.indb 23 16.11.2017 15:22:00

5. Avant la mise en service

Assurez-vous, avant de connecter la machine, que les données se trouvant sur la plaque de signalisation correspondent bien aux données du réseau.
Avertissement !
Enlevez systématiquement la fiche de contact avant de paramétrer l'appareil.

- La commande Bowden à câble ne convient pas au transport de masses brûlantes et/ou fondues. La commande Bowden à câble n'est pas prévue non plus pour un emploi à des températures basses et dans un milieu agressif.
- Le groupe mécanique est M1.
- La vie utile de la commande Bowden à câble est d'env. 8000 cycles (sauf les pièces d'usure). Lorsque la commande Bowden a réalisé 8000 cycles, toutes les pièces mécaniques doivent être contrôlées et révisées.
- Lisez et comprenez le mode d'emploi, avant d'utiliser la commande Bowden à câble.
- Assurez-vous que l'opérateur/l'opératrice sait bien comment la machine fonctionne, et comment il/elle doit la commander.
- L'utilisateur doit toujours opérer en conformité avec le mode d'emploi.
- Le palan ne convient pas à une utilisation continue. Le mode est : service discontinu sans influence du procédé de démarrage.
- La puissance nominale de la machine ne varie pas avec la position de la charge.

5.1 Déballage
Une fois l'emballage ouvert, effectuez une inspection du châssis, le câble métallique, les crochets et le mécanisme de contrôle électrique pour découvrir les éventuels dommages dus au transport.

5.2 Montage (figure 5)
La commande Bowden à câble est équipée d'étriers de fixation (1), avec lesquels elle peut être fixée à un tube carré. Les dimensions du bras doivent correspondre à la taille de l'étrier de fixation (1) et il doit pouvoir porter le double de la charge nominale. Nous vous recommandons de contacter un(e) technicien(ne) qualifié(e).
Toutes les vis doivent être correctement serrées. Avant la mise en service, un(e) technicien(ne) qualifié(e) doit contrôler l'ancrage du bras.

5.3 Fonction du palan (figure 6 – 9)
La commande Bowden à câble est équipée d'une poulie de renvoi (15) et d'un crochet supplémentaire (16). Lorsque la commande Bowden à câble est correctement utilisée, elle peut soulever le double de la charge.
Montez la poulie de renvoi (15) et le crochet supplémentaire (16) comme indiqué dans la figure 6-8. Le crochet monté fixement (8) doit être suspendu au trou de montage (2) (figure 9).
La charge est à présent soulevée à l'aide de deux câbles métalliques, la commande Bowden à câble peut alors soulever le double de la charge.

6. Commande

Danger !
6.1 Remarques relatives au fonctionnement
1. Avant de l'utiliser pour la première fois, retirez l'adhésif du tambour (3).
2. La valeur de l'émission sonore A, évaluée sur la position de l'exploitant, est inférieure à 75 dB (niveau de pression acoustique LpA). Les valeurs de bruits et de vibration ont été déterminées conformément à EN ISO 11201.
3. Tension d'alimentation : 230V ± 10%, 50Hz ± 1%.
4. La commande Bowden à câble doit être exploitée à des températures ambiantes situées entre 0 °C et 40 °C et avec une humidité relative ne dépassant pas 50%. Hauteur au-dessus du niveau de la mer : maxi. 1000 m.
5. Pour le transport et l'entreposage, la température doit se situer entre -25 °C et 55 °C. La température maximale admise ne doit pas dépasser 70 °.
6. L'utilisateur doit soulever la charge du sol à la vitesse la plus lente possible. Le câble doit être tendu lorsque la charge est soulevée.
7. Le moteur (14) de la commande Bowden à câble est doté d'un interrupteur à thermostat. Pendant le fonctionnement de la commande Bowden à câble, il est donc possible que le moteur (14) s'arrête, celui-ci se remet automatiquement en marche dès qu'il est refroidi.
8. La commande Bowden à câble électrique n'est pas dotée d'un limiteur de puissance nominale. Raison pour laquelle il ne faut pas essayer de soulever la charge lorsque la protection contre la surchauffe limite le fonctionnement. La charge dépasse dans ce cas la puissance nominale de la commande Bowden à câble.

Anl_TC_EH_500_SPK9.indb 24 16.11.2017 15:22:01

9. Ne laissez aucune charge suspendue sans surveillance sans avoir pris auparavant les mesures de sécurité correpondantes.
10. Protégez l'appareil avec un fusible de 10 A ou un disjoncteur à courant de défaut de 10 mA afin de protéger le circuit électrique.
11. N'utilisez pas le levier (4/5) comme dispositif d'arrêt de routine. Il sert uniquement de dispositif d'arrêt pour les situations d'urgence.
12. Avant de commencer, assurez-vous que le câble métallique (6) est bien enroulé correctement autour du tambour (3) et que la distance entre les spires est inférieure à la section du câble métallique (figure 3)
13. Assurez-vous que la charge est bien bloquée conformément aux spécifications au crochet (8) ou au crochet supplémentaire (16) pour le service avec palan et maintenez toujours une distance par rapport à la charge et au câble métallique (6).

6.2 Fonctionnement (figure 1)

- Contrôlez si l'interrupteur d'arrêt d'urgence (9) est bien enfoncé. Tournez l'interrupteur d'arrêt dans le sens des aiguilles d'une montre pour le déverrouiller.
- Appuyez sur le bouton-poussoir ▲ (10) pour soulever la charge.
- Appuyez sur le bouton-poussoir ▼ (10) pour abaisser la charge.
- Levier du mécanisme d'arrêt automatique (5): Lorsque la hauteur de levage est atteinte, le poids de mise hors circuit (7) pousse le levier (5) vers le haut. L'interrupteur fin de course est actionné et la charge ne peut plus être soulevée.
- Levier pour une longueur de câble maximale (4) : Lorsque la charge a atteint la position la plus basse possible, l'interrupteur fin de course est actionné, ce qui empêche de continuer l'abaissement de la charge. Cet interrupteur fin de course empêcherait également le fonctionnement de la commande Bowden à câble dans une mauvaise direction (lorsque le crochet se déplace dans le sens inverse de celui indiqué sur l'interrupteur de commande).
- Lorsque l'interrupteur d'arrêt d'urgence (9) est actionné, la commande Bowden à câble s'arrête.
- En cas d'urgence, actionnez immédiatement l'interrupteur d'arrêt d'urgence (9) pour stopper la commande Bowden à câble. La commande de la commande Bowden à câble est impossible lorsque l'interrupteur d'arrêt d'urgence est actionné.

7. Remplacement de le câble d'alimentation réseau

Danger !
Si le câble d'alimentation réseau de cet appareil est endommagée, il faut la faire remplacer par le producteur ou son service après-vente ou par une personne de qualification semblable afin d'éviter tout risque.

8. Nettoyage, maintenance et commande de pièces de rechange

Danger !
Retirez la fiche de contact avant tous travaux de nettoyage.

8.1 Nettoyage

- Maintenez les dispositifs de protection, les fentes à air et le carter de moteur aussi propres (sans poussière) que possible. Frottez l'appareil avec un chiffon propre ou soufflez dessus avec de l'air comprimé à basse pression.
- Nous recommandons de nettoyer l'appareil directement après chaque utilisation.
- Nettoyez l'appareil régulièrement à l'aide d'un chiffon humide et un peu de savon. N'utilisez aucun produit de nettoyage ni détergeant; ils pourraient endommager les pièces en matières plastiques de l'appareil. Veillez à ce qu'aucune eau n'entre à l'intérieur de l'appareil. La pénétration de l'eau dans un appareil électrique augmente le risque de décharge électrique.

8.2 Maintenance

Danger ! Assurez-vous toujours que la machine n'est pas raccordée au réseau de courant pendant que vous l'entretenez.

- Dans ce qui suit : Un cycle correspond à un mouvement de montée et descente d'une charge. Un contrôle périodique correspond à un contrôle après 100 cycles.
- Contrôlez périodiquement si les interrupteurs fin de course de la commande Bowden à câble fonctionnent bien conformément aux spécifications. Le contrôle doit se fait de la manière suivante : Lorsque le câble a atteint la hauteur maximale de levage, le levier du mécanisme d'arrêt automatique (5) est acti-

Anl_TC_EH_500_SPK9.indb 25 16.11.2017 15:22:01

onné. Le moteur (14) doit à présent s'arrêter. (sans contrôle de charge).
Lorsque le câble métallique (6) est déroulé le plus possible, le levier de longueur maximale du câble (4) est actionné. Le moteur (14) doit à présent s'arrêter.

- Vérifiez périodiquement le câble secteur (12) et la ligne de commande (13).
- Il faut lubrifier tous les 200 cycles le câble métallique (6) et la poulie de renvoi (15).
- Tous les 30 cycles, il faut contrôler conformément à la figure 4 si le câble métallique (6) complet est bien en bon état. S'il est endommagé, il faut le remplacer par un câble métallique conforme aux caractéristiques techniques.
- Contrôlez tous les 1000 cycles si les vis de l'étrier de fixation (1) et de la poulie de renvoi (15) sont bien serrées.
- Graissez régulièrement le câble, la chaîne, l'engrenage, les roulements et les crochets.
- Contrôlez tous les 1000 cycles, les pièces d'usures telles que : câble, chaîne, crochet, courroies et revêtement de freins.
- Tous les 1000 cycles, vérifiez si les crochets (8/16) et la poulie de renvoi (15) sont dans un bon état.
- Contrôlez avant chaque utilisation de la commande Bowden à câble, si l'interrupteur d'arrêt d'urgence (9) et le bouton-poussoir (10) sont bien dans un état de service impeccable.
- Tous les 1000 cycles, contrôlez le système de freinage. Lorsque le moteur (14) fait des bruits inhabituels ou que la charge nominale ne peut pas être soulevée, il est possible de devoir réviser le système de freinage :
  - Remplacez les pièces endommagées ou usées et conservez la documentation sur la maintenance les concernant.
  - Pour les travaux de maintenance hors plan, veuillez vous adresser à un centre de service clientèle autorisé.
- Faites réparer votre outil électrique uniquement par un personnel qualifié spécialisé.

8.3 Commande de pièces de rechange :
Pour les commandes de pièces de rechange, veuillez indiquer les références suivantes:

- Type de l'appareil
- No. d'article de l'appareil
- No. d'identification de l'appareil
- No. de pièce de rechange de la pièce requise

Vous trouverez les prix et informations actuelles à l'adresse www.isc-gmbh.info

9. Mise au rebut et recyclage

L'appareil se trouve dans un emballage permettant d'éviter les dommages dus au transport. Cet emballage est une matière première et peut donc être réutilisé ultérieurement ou être réintroduit dans le circuit des matières premières. L'appareil et ses accessoires sont en matériaux divers, comme par ex. des métaux et matières plastiques. Les appareils défectueux ne doivent pas être jetés dans les poubelles domestiques. Pour une mise au rebut conforme à la réglementation, l'appareil doit être déposé dans un centre de collecte approprié. Si vous ne connaissez pas de centre de collecte, veuillez vous renseigner auprès de l'administration de votre commune.

10. Stockage

Entreposez l'appareil et ses accessoires dans un endroit sombre, sec et à l'abri du gel tout comme inaccessible aux enfants. La température de stockage optimale est comprise entre 5 et 30 °C. Conservez l'outil électrique dans l'emballage d'origine.

Anl_TC_EH_500_SPK9.indb 26 16.11.2017 15:22:01

Uniquement pour les pays de l'Union Européenne

Ne jetez pas les outils électriques dans les ordures ménagères!

Selon la norme européenne 2012/19/CE relative aux appareils électriques et systèmes électroniques usés et selon son application dans le droit national, les outils électriques usés doivent être récoltés à part et apportés à un recyclage respectueux de l'environnement.

Possibilité de recyclage en alternative à la demande de renvoi :
Le propriétaire de l'appareil électrique est obligé, en guise d'alternative à un envoi en retour, à contribuer à un recyclage effectué dans les règles de l'art en cas de cessation de la propriété. L'ancien appareil peut être remis à un point de collecte dans ce but. Cet organisme devra l'éliminer dans le sens de la Loi sur le cycle des matières et les déchets. Ne sont pas concernés les accessoires et ressources fournies sans composants électroniques.

Toute réimpression ou autre reproduction de la documentation et des papiers joints aux produits, même sous forme d'extraits, est uniquement permise une fois l'accord explicite de l'ISC GmbH obtenu.

Sous réserve de modifications techniques

Anl_TC_EH_500_SPK9.indb 27 16.11.2017 15:22:01

Informations service après-vente

Nous disposons dans tous les pays mentionnés dans le bon de garantie de partenaires de service après-vente compétents dont vous trouverez les coordonnées dans le bon de garantie. Ceux-ci se tiennent à votre disposition pour tout ce qui concerne le service après-vente comme les réparations, l'approvisionnement en pièces de rechange et d'usure ou l'achat de pièces de consommation.

Il faut tenir compte du fait que pour ce produit les pièces suivantes sont soumises à une usure liée à l'utilisation ou à une usure naturelle ou que les pièces suivantes sont nécessaires en tant que consommables.

Catégorie	Exemple
Pièces d'usure*	Câble métallique, Crochet, Poulie de renvoi, Crochet supplémentaire
Matériel de consommation/ pièces de consommation*	
Pièces manquantes	

*Pas obligatoirement compris dans la livraison !

En cas de vices ou de défauts, nous vous prions d'enregistrer le cas du défaut sur internet à l'adresse www.isc-gmbh.info. Veuillez donner une description précise du défaut et répondre dans tous les cas aux questions suivantes :

- est-ce que l'appareil a fonctionné une fois ou était-il défectueux dés le départ ?
- avez-vous remarqué quelque chose avant la panne (symptôme avant la panne) ?
- quel est le défaut de fonctionnement de l'appareil à votre avis (symptôme principal) ? Décrivez ce défaut de fonctionnement.

Anl_TC_EH_500_SPK9.indb 28 16.11.2017 15:22:01

Bon de garantie

Chère cliente, cher client,
nos produits sont soumis à un contrôle de qualité très strict. Si toutefois, il arrivait que cet appareil ne fonctionne pas parfaitement, nous en sommes désolés et nous vous prions de vous adresser à notre service après-vente à l'adresse indiquée sur le bon de garantie. Nous nous tenons également volontiers à votre disposition par téléphone au numéro de service après-vente indiqué. La garantie est valable dans les conditions suivantes :

1. Ces conditions de garantie s'adressent uniquement à des consommateurs, c'est à dire à des personnes physiques qui ne souhaitent ni utiliser ce produit dans le cadre de leur activité industrielle ou artisanale, ni dans le cadre de toute autre activité indépendante. Les conditions de garantie réglementent les prestations de garantie supplémentaires que le fabricant mentionné ci-dessous promet aux acheteurs de ses appareils en supplément de la prestation de garantie légale. Vos droits légaux en matière de garantie restent inchangés. Notre prestation de garanti est gratuite pour vous.
2. La prestation de garantie s'étend exclusivement aux défauts résultant d'une erreur de fabrication ou de matériau d'un appareil neuf du fabricant mentionné ci-dessous et acheté par vos soins. La prestation de garantie se limite selon notre décision soit à la résolution de tels défauts sur l'appareil, soit à l'échange de l'appareil.
   Veillez au fait que nos appareils, conformément au règlement, n'ont pas été conçus pour être utilisés dans un environnement professionnel, industriel ou artisanal. Il n'y a donc pas de contrat de garantie quand l'appareil a été utilisé professionnellement, artisanalement ou par des sociétés industrielles ou exposé à une sollicitation semblable pendant la durée de la garantie.
3. Sont exclus de notre garantie :
   - les dommages liés au non-respect des instructions de montage ou en raison d'une installation incorrecte, au non-respect du mode d'emploi (en raison par ex. du branchement de l'appareil sur la tension de réseau ou le type de courant incorrect), au non-respect des dispositions de maintenance et de sécurité ou résultant d'une exposition de l'appareil à des conditions environnementales anormales ou d'un manque d'entretien et de maintenance.
   - les dommages résultant d'une utilisation abusive ou non conforme (comme par ex. une surcharge de l'appareil ou une utilisation d'outils ou d'accessoires non autorisés), de la pénétration d'objets étrangers dans l'appareil (comme par ex. du sable, des pierres ou de la poussière), de l'utilisation de la force ou de la violence (comme par ex. les dommages liés aux chutes).
   - les dommages sur l'appareil ou des parties de l'appareil résultant de l'usure normale liée à l'utilisation de l'appareil ou de toute autre usure naturelle.
4. La durée de garantie est de 24 mois et débute à la date d'achat de l'appareil. Les droits à la garantie doivent être revendiqués avant l'expiration de la durée de garantie dans un délai de deux semaines après avoir constaté le défaut. La revendication de droits à la garantie après expiration de la durée de garantie est exclue. La réparation ou l'échange de l'appareil n'entraîne ni une extension de la durée de garantie ni le début d'une nouvelle durée de garantie pour cet appareil ou toute autre pièce de rechange installée sur l'appareil. Cela est valable également dans le cas d'une intervention du service après-vente à domicile.
5. Pour faire valoir vos droits à la garantie, veuillez enregistrer l'appareil défectueux à l'adresse suivante : www.isc-gmbh.info. Veuillez garder à disposition la preuve d'achat ou tout autre justificatif de l'achat de votre nouvel appareil. Les appareils envoyés sans les justificatifs correspondants ou sans plaque signalétique sont exclus de la prestation de garantie en raison de l'impossibilité de les enregistrer. Si le défaut de l'appareil est inclut dans la garantie, vous recevrez sans délai un appareil réparé ou un nouvel appareil.

Bien entendu, nous réparons volontiers les défauts de votre appareil qui ne sont pas ou plus compris dans l'étendue de la garantie contre le remboursement des frais de réparation. Pour cela, veuillez envoyer l'appareil à notre adresse de service après-vente.

Pour les pièces d'usure, de consommation et manquantes, nous renvoyons aux restrictions de cette garantie conformément aux informations du service après-vente de ce mode d'emploi.

Anl_TC_EH_500_SPK9.indb 29 16.11.2017 15:22:01

Pericolo!
Nell'usare gli apparecchi si devono rispettare diverse avvertenze di sicurezza per evitare lesioni e danni. Quindi leggete attentamente queste istruzioni per l'uso/le avvertenze di sicurezza. Conservate bene le informazioni per averle a disposizione in qualsiasi momento. Se date l'apparecchio ad altre persone, consegnate queste istruzioni per l'uso/le avvertenze di sicurezza insieme all'apparecchio. Non ci assumiamo alcuna responsabilità per incidenti o danni causati dal mancato rispetto di queste istruzioni e delle avvertenze di sicurezza.

1. Avvertenze sulla sicurezza

Pericolo!
Leggete tutte le avvertenze di sicurezza e le istruzioni. Dimenticanze nel rispetto delle avvertenze di sicurezza e delle istruzioni possono causare scosse elettriche, incendi e/o gravi lesioni.
Conservate tutte le avvertenze e le istruzioni per eventuali necessità future.

1. Controllate sempre che la tensione di rete corrisponda a quella indicata sulla targhetta. Una tensione di rete non adatta può causare un funzionamento anomalo della macchina o danni alle persone.
2. L'alimentazione di corrente deve essere dotata di messa a terra e deve essere protetta con un interruttore di sicurezza per correnti di guasto.
3. È vietato sollevare carichi superiori al relativo valore nominale.
4. Utilizzate l'apparecchio esclusivamente per lo scopo previsto. Il paranco elettrico non deve mai essere usato per sollevare persone.
5. Non tirate mai il cavo per staccare la spina dalla presa di corrente. Tenete lontano il cavo dal calore, dall'olio e dagli spigoli.
6. Non tentate mai di sollevare carichi che siano fissi o bloccati.
7. Togliete la spina dalla presa di corrente quando il paranco elettrico non è in funzione.
8. Tenete lontano dall'apparecchio i bambini e le persone non autorizzate.
9. È vietato sollevare carichi lateralmente o da un lato. Evitate oscillazioni del carico.
10. Assicuratevi che il gancio si muova nella direzione indicata sull'interruttore di comando.
11. Controllate regolarmente che il paranco elettrico non presenti danni. L'interruttore di comando deve essere in buone condizioni.
12. Fate eseguire le riparazioni e i lavori di manutenzione esclusivamente da un elettricista specializzato in officine autorizzate. Le riparazioni devono essere eseguite solo da un elettricista specializzato, altrimenti ne possono derivare infortuni per l'utilizzatore.
13. Evitate di inserire e disinserire continuamente l'apparecchio (utilizzo a intermittenza).
14. Durante l'utilizzo del paranco elettrico prestate sempre molta attenzione.
15. Non sostate o lavorate sotto al carico sospeso.

2. Descrizione dell'apparecchio ed elementi forniti

2.1 Descrizione dell'apparecchio (Fig. 1/2)
1. Staffa di fissaggio
2. Foro di fissaggio per gancio
3. Tamburo
4. Leva per lunghezza massima cavi
5. Leva per meccanismo di arresto automatico
6. Cavo d'acciaio
7. Peso di disinserimento
8. Gancio
9. Interruttore di arresto di emergenza
10. Pulsante
11. Telecomando
12. Cavo di alimentazione
13. Cavo di comando
14. Motore
15. Carrucola di rinvio
16. Gancio aggiuntivo
17. Fune per telecomando

2.2 Elementi forniti
Verificate che l'articolo sia completo sulla base degli elementi forniti descritti. In caso di parti mancanti, rivolgetevi al nostro Centro Servizio Assistenza o al punto vendita in cui avete acquistato l'apparecchio presentando un documento di acquisto valido entro e non oltre i 5 giorni lavorativi dall'acquisto dell'articolo. Al riguardo fate attenzione alla Tabella Garanzia nelle informazioni sul Servizio Assistenza alla fine delle istruzioni.
- Aprite l'imballaggio e togliete con cautela l'apparecchio dalla confezione.
- Togliete il materiale d'imballaggio e anche i fermi di trasporto / imballo (se presenti).
- Controllate che siano presenti tutti gli elementi forniti.
- Verificate che l'apparecchio e gli accessori

Anl_TC_EH_500_SPK9.indb 30 16.11.2017 15:22:01

non presentino danni dovuti al trasporto.
- Se possibile, conservate l'imballaggio fino alla scadenza della garanzia.

Pericolo!
L'apparecchio e il materiale d'imballaggio non sono giocattoli! I bambini non devono giocare con sacchetti di plastica, film e piccoli pezzi! Sussiste pericolo di ingerimento e soffocamento!

- Istruzioni per l'uso originali

3. Utilizzo proprio

Il paranco elettrico serve per il sollevamento e l'abbassamento di carichi in ambienti chiusi in modo conforme alle prestazioni dell'apparecchio.

L'apparecchio deve venire usato solamente per lo scopo a cui è destinato. Ogni altro tipo di uso che esuli da quello previsto non è un uso conforme. L'utilizzatore/l'operatore, e non il costruttore, è responsabile dei danni e delle lesioni di ogni tipo che ne risultino.

Tenete presente che i nostri apparecchi non sono stati costruiti per l'impiego professionale, artigianale o industriale. Non ci assumiamo alcuna garanzia quando l'apparecchio viene usato in imprese commerciali, artigianali o industriali, o in attività equivalenti.

4. Caratteristiche tecniche

Tensione (V)	230 V ~ 50 Hz
Corrente nominale (A)	4,4
Potenza assorbita (W)	1000
Modalità operativa	S3 20% 10 min
Carico nominale (kg)	250 / 500
Altezza di sollevamento (m)	11,5 / 5,7
Velocità nominale (m/min)	8 / 4
Diametro del cavo d'acciaio (mm)	4,0
Resistenza del cavo alla trazione (N/mm^2)	1870
Classe di isolamento	B
Tipo di protezione	IP 54
Classe del motore	M1
Peso netto (kg)	16,2

Modalità operativa S3 - 20% - 10min:
S3 = esercizio intermittente senza influsso sul processo di avvio. Ciò significa che in un lasso di tempo di 10 min il tempo di utilizzo max. è il 20% (2 min).

Limitate al minimo lo sviluppo di rumore e le vibrazioni!
- Utilizzate soltanto apparecchi in perfetto stato.
- Eseguite regolarmente la manutenzione e la pulizia dell'apparecchio.
- Adattate il vostro modo di lavorare all'apparecchio.
- Non sovraccaricate l'apparecchio.
- Fate eventualmente controllare l'apparecchio.
- Spegnete l'apparecchio se non lo utilizzate.
- Indossate i guanti.

5. Prima della messa in esercizio

Prima di inserire la spina nella presa di corrente assicuratevi che i dati sulla targhetta di identificazione corrispondano a quelli di rete.
Avvertenza!
Staccate sempre la spina di alimentazione prima di ogni impostazione all'utensile.

- Il paranco elettrico non è adatto al trasporto di masse calde e/o fuse, inoltre non ne è previsto l'utilizzo a basse temperature e in un ambiente aggressivo.
- Il gruppo meccanico è M1.
- La durata utile del paranco elettrico è di circa 8000 cicli (escl. le parti soggette ad usura). Quando il cavo ha superato gli 8000 cicli tutte le parti meccaniche devono essere controllate e revisionate.
- Le istruzioni per l'uso devono essere lette e comprese prima di utilizzare il paranco elettrico.
- Assicuratevi che l'utilizzatore conosca il funzionamento e il modo di utilizzo della macchina.
- L'utilizzatore deve eseguire il lavoro in modo conforme alle istruzioni per l'uso.
- Il paranco non è adatto all'uso continuo. La modalità operativa è: esercizio intermittente senza influsso del processo di avvio.
- La potenza nominale dell'apparecchio non varia a seconda della posizione del carico.

Anl_TC_EH_500_SPK9.indb 31 16.11.2017 15:22:01

5.1 Disimballo
Dopo aver aperto l'imballo controllate che il telaio, il cavo d'acciaio, i ganci e il meccanismo elettrico di controllo non presentino danni.

5.2 Montaggio (Fig. 5)
Il paranco elettrico è dotato di 2 staffe di fissaggio (1) con le quali deve essere installato su un tubo quadro. Le misure del braccio, che deve poter sostenere il doppio del carico nominale, devono corrispondere alle dimensioni delle staffe di fissaggio (1). Vi consigliamo di contattare un tecnico qualificato.
Tutte le viti devono essere correttamente serrate. Prima della messa in esercizio un tecnico qualificato deve controllare l'ancoraggio del braccio.

5.3 Funzione con bozzello (Fig 6-9)
Il paranco elettrico è dotato di una carrucola di rinvio (15) e di un gancio aggiuntivo (16). Se utilizzato in modo corretto il paranco elettrico può sollevare un carico doppio.
Montate la carrucola di rinvio (15) e il gancio aggiuntivo (16) come indicato nelle Fig. 6-8. Il gancio (8) deve essere montato saldamente e appeso al foro di fissaggio (2) (Fig. 9).
Ora il carico viene sollevato con l'aiuto di due cavi in acciaio e in questo modo è possibile sollevare il doppio del carico.

6. Uso

Pericolo!
6.1 Avvertenze per l'esercizio
1. Prima di utilizzare l'apparecchio per la prima volta togliete il nastro adesivo dal tamburo (3).
2. Il livello di emissione sonora ponderato A nella posizione di esercizio è inferiore ai 75 dB (livello di pressione acustica LpA). I valori del rumore e delle vibrazioni sono stati rilevati secondo la norma EN ISO 11201.
3. Tensione di alimentazione: 230V ± 10%, 50Hz ± 1%.
4. Il paranco elettrico deve essere utilizzato ad una temperatura ambiente compresa tra 0 °C e 40 °C e con un'umidità relativa inferiore all'50%. Altezza sul livello del mare: max. 1.000 m
5. Per il trasporto e la conservazione la temperatura deve essere compresa tra i -25 °C e i 55 °C . La massima temperatura consentita non deve superare i 70 °C.
6. L'utilizzatore deve sollevare il carico dal terreno alla minima velocità possibile. Quando il carico viene sollevato il cavo deve essere teso.
7. Il motore (14) del paranco elettrico è dotato di interruttore a termostato. Durante l'esercizio del paranco elettrico ci può essere un arresto del motore (14), che si riavvia automaticamente una volta raffreddato.
8. Il paranco elettrico non è fornito di limitatore di corrente nominale. Si prega quindi di non riprovare a sollevare il carico se la protezione dal surriscaldamento ha interrotto l'esercizio. In questo caso il carico supera la potenza nominale del paranco elettrico.
9. Non lasciate incustodito alcun carico sospeso senza aver prima preso tutte le misure di sicurezza relative.
10. Assicurate l'apparecchio con una protezione di 10 A o con un interruttore di sicurezza per correnti di guasto 10 mA per proteggere il ciclo di corrente.
11. Non utilizzate la leva (4/5) come abituale dispositivo di arresto. Serve solo come dispositivo di arresto in caso di emergenza.
12. Prima di cominciare assicuratevi che il cavo di acciaio (6) sia avvolto correttamente al tamburo (3) e che la distanza tra gli avvolgimenti sia inferiore al cavo d'acciaio (Fig.3).
13. Accertatevi che il carico sia assicurato correttamente al gancio (8) ovvero al gancio aggiuntivo (16) durante la funzione con bozzello e tenetevi sempre a distanza dal carico e dal cavo d'acciaio (6).

6.2 Esercizio (Fig. 1)
- Controllate se l'interruttore di arresto di emergenza (9) sia premuto. Per sbloccarlo girate l'interruttore rosso di arresto in senso orario.
- Premete il pulsante ▲ (10) per sollevare il carico.
- Premete il pulsante ▼ (10) per abbassare il carico.
- Leva per meccanismo di arresto automatico (5): quando viene raggiunta la massima altezza di sollevamento il peso di disinserimento (7) spinge la leva (5) verso l'alto. In questo modo si aziona un interruttore di fine corsa e il carico non può essere sollevato ulteriormente.
- Leva per lunghezza massima cavi (4): quando il carico ha raggiunto la posizione più bassa possibile viene azionato un interruttore di fine corsa che non permette di abbassare ulteriormente il carico. Questo interruttore di

Anl_TC_EH_500_SPK9.indb 32 16.11.2017 15:22:01

fine corsa impedisce anche di usare il paranco elettrico nella direzione errata (il gancio si muove nella direzione opposta rispetto a quella indicata sull'interruttore di comando).
- Quando viene azionato l'interruttore di arresto di emergenza (9) il paranco elettrico si ferma.
- In caso di emergenza azionare immediatamente l'interruttore di arresto di emergenza (9) per fermare il paranco elettrico. L'utilizzo del paranco elettrico non è possibile se è stato azionato l'interruttore di arresto di emergenza.

7. Sostituzione del cavo di alimentazione

Pericolo!
Se il cavo di alimentazione di questo apparecchio viene danneggiato deve essere sostituito dal produttore, dal suo servizio di assistenza clienti o da una persona al pari qualificata al fine di evitare pericoli.

8. Pulizia, manutenzione e ordinazione dei pezzi di ricambio

Pericolo!
Prima di qualsiasi lavoro di pulizia staccate la spina dalla presa di corrente.

8.1 Pulizia
- Tenete il più possibile i dispositivi di protezione, le fessure di aerazione e la carcassa del motore liberi da polvere e sporco. Strofinate l'apparecchio con un panno pulito o soffiatelo con l'aria compressa a pressione bassa.
- Consigliamo di pulire l'apparecchio subito dopo averlo usato.
- Pulite l'apparecchio regolarmente con un panno asciutto ed un po' di sapone. Non usate detergenti o solventi perché questi ultimi potrebbero danneggiare le parti in plastica dell'apparecchio. Fate attenzione che non possa penetrare dell'acqua nell'interno dell'apparecchio. La penetrazione di acqua in un elettroutensile aumenta il rischio di una scossa elettrica.

8.2 Manutenzione
Pericolo! Assicuratevi che l'apparecchio non sia collegato alla rete elettrica durante i lavori di manutenzione.
- Seguente: un ciclo corrisponde ad un movimento di sollevamento ed abbassamento di un carico. Un controllo periodico è un controllo effettuato ogni 100 cicli.
- Controllate periodicamente che gli interruttori di fine corsa del paranco elettrico funzionino in modo regolare. Il controllo va eseguito nel modo seguente: quando il cavo raggiunge la massima altezza di sollevamento si aziona la leva per il meccanismo di arresto automatico (5). Il motore (14) si deve fermare. (controllare senza carico).
  Quando il cavo di acciaio (6) è svolto il più possibile viene azionata la leva per la lunghezza massima cavi (4). Il motore (14) si deve fermare.
- Controllate periodicamente il cavo di alimentazione (12) e il cavo di comando (13).
- Ogni 200 cicli il cavo d'acciaio (6) e la carrucola di rinvio (15) devono essere lubrificati.
- Ogni 30 cicli si deve controllare come mostrato in Fig. 4 che l'intero cavo di acciaio (6) sia in buone condizioni. Nel caso sia danneggiato deve essere sostituito con un cavo d'acciaio corrispondente ai dati tecnici.
- Controllare ogni 1000 cicli che le viti della staffa di fissaggio (1) e la carrucola di rinvio (15) siano ben serrate.
- Controllare ogni 1000 cicli che i ganci (8/16) e la carrucola di rinvio (15) siano in buone condizioni.
- Lubrificate regolarmente fune, catena, ingranaggio, cuscinetti e ganci.
- Controllate ogni 100 cicli le parti soggette a usura come: fune, catena, ganci, nastri e ferodi.
- Controllate prima di ogni utilizzo del paranco elettrico che l'interruttore di arresto di emergenza (9) e il pulsante (10) siano in perfette condizioni.
- Ogni 1000 cicli controllate il sistema frenante. Se il motore (14) produce rumori insoliti o non riesce a sollevare il carico nominale è possibile che il sistema frenante debba essere revisionato:
  - sostituite le parti danneggiate o consumate e conservate i relativi documenti di manutenzione
  - per operazioni di riparazione non programmate rivolgetevi ad un centro di assistenza autorizzato.

Anl_TC_EH_500_SPK9.indb 33 16.11.2017 15:22:01

- Fate riparare l'elettroutensile solo da personale qualificato.

8.3 Ordinazione di pezzi di ricambio:
Volendo commissionare dei pezzi di ricambio, si dovrebbe dichiarare quanto segue:
- modello dell'apparecchio
- numero dell'articolo dell'apparecchio
- numero d'ident. dell'apparecchio
- numero del pezzo di ricambio del ricambio necessitato.

Per i prezzi e le informazioni attuali si veda www.isc-gmbh.info

9. Smaltimento e riciclaggio

L'apparecchio si trova in un imballaggio per evitare i danni dovuti al trasporto. Questo imballaggio rappresenta una materia prima e può perciò essere utilizzato di nuovo o riciclato. L'apparecchio e i suoi accessori sono fatti di materiali diversi, per es. metallo e plastica. Gli apparecchi difettosi non devono essere gettati nei rifiuti domestici. Per uno smaltimento corretto l'apparecchio va consegnato ad un apposito centro di raccolta. Se non vi è noto nessun centro di raccolta, rivolgetevi per informazioni all'amministrazione comunale.

10. Conservazione

Conservate l'apparecchio e i suoi accessori in un luogo buio, asciutto, al riparo dal gelo e non accessibile ai bambini. La temperatura ottimale per la conservazione è compresa tra i 5 e i 30 °C. Conservate l'elettroutensile nell'imballaggio originale.

Anl_TC_EH_500_SPK9.indb 34 16.11.2017 15:22:01

Solo per paesi membri dell'UE

Non smaltite gli elettroutensili nei rifiuti domestici!

Secondo la direttiva europea 2012/19/CE sui rifiuti di apparecchiature elettriche ed elettroniche e il suo recepimento nelle normative nazionali, gli elettroutensili usati devono venire raccolti separatamente e venire smaltiti in modo ecocompatibile.

Alternativa di riciclaggio alla richiesta di restituzione:
il proprietario dell'apparecchio elettrico è tenuto in alternativa, invece della restituzione, a collaborare in modo che lo smaltimento venga eseguito correttamente in caso ceda l'apparecchio. L'apparecchio vecchio può anche venire consegnato ad un centro di raccolta che provvede poi allo smaltimento secondo le norme nazionali sul riciclaggio e sui rifiuti. Non ne sono interessati gli accessori e i mezzi ausiliari senza elementi elettrici forniti insieme ai vecchi apparecchi.

La ristampa o l'ulteriore riproduzione, anche parziale, della documentazione o dei documenti d'accompagnamento dei prodotti è consentita solo con l'esplicita autorizzazione da parte della iSC GmbH.

Con riserva di apportare modifiche tecniche

Anl_TC_EH_500_SPK9.indb 35 16.11.2017 15:22:01

Informazioni sul Servizio Assistenza

In tutti i Paesi indicati nel certificato di garanzia disponiamo di competenti partner per il Servizio Assistenza (per i relativi dati di contatto si veda il certificato di garanzia), che sono a vostra disposizione per tutte le richieste di assistenza come riparazione, fornitura di pezzi di ricambio e parti di usura o vendita di materiali di consumo.

Si deve tenere presente che le seguenti parti di questo prodotto sono soggette a un'usura naturale o dovuta all'uso ovvero che le seguenti parti sono necessarie come materiali di consumo.

Categoria	Esempio
Parti soggette ad usura *	Cavo d'acciaio, Gancio, Carrucola di rinvio, Gancio aggiuntivo
Materiale di consumo/parti di consumo *	
Parti mancanti	

* non necessariamente compreso tra gli elementi forniti!

In presenza di difetti o errori vi preghiamo di denunciare il caso sul sito internet www.isc-gmbh.info. Vi preghiamo di descrivere con precisione l'anomalia e a tal riguardo di rispondere in ogni caso alle seguenti domande:

- L'apparecchio ha già funzionato una volta o era difettoso fin dall'inizio?
- Avete notato qualcosa prima che si manifestasse il difetto (sintomo prima del difetto)?
- A vostro parere che cosa non funziona nell'apparecchio (sintomo principale)?
  Descrivete che cosa non funziona.

Anl_TC_EH_500_SPK9.indb 36 16.11.2017 15:22:01

Certificato di garanzia

Gentili clienti,
i nostri prodotti sono soggetti ad un rigido controllo di qualità. Se l'apparecchio non dovesse tuttavia funzionare correttamente, ci scusiamo e vi preghiamo di rivolgervi al nostro servizio di assistenza clienti all'indirizzo indicato in questa scheda di garanzia. Siamo a vostra disposizione anche telefonicamente al numero del Servizio Assistenza indicato. Per la rivendicazione dei diritti di garanzia vale quanto segue:

1. Le presenti condizioni di garanzia si rivolgono esclusivamente a consumatori, vale a dire a persone fisiche che non intendono utilizzare questo prodotto né in ambito professionale né per altre attività di lavoro autonomo. Le presenti condizioni di garanzia regolano prestazioni di garanzia supplementari che il produttore su indicato concede in aggiunta alla garanzia legale agli acquirenti di nuovi apparecchi. La presente garanzia non tocca i vostri diritti al ricorso in garanzia previsti dalla legge. Le nostre prestazioni di garanzia sono per voi gratuite.
2. La prestazione di garanzia riguarda esclusivamente i difetti di un nuovo apparecchio da voi acquistato del produttore di cui sopra, riconducibili a errori di materiale o di produzione, ed è limitata, a nostra discrezione, all'eliminazione di questi difetti dell'apparecchio o alla sostituzione dell'apparecchio stesso.
   Tenete presente che i nostri apparecchi non sono stati costruiti per l'impiego artigianale, professionale o imprenditoriale. Pertanto un contratto di garanzia non viene concluso se l'apparecchio è stato usato entro il periodo di garanzia in attività artigianali, imprenditoriali o industriali o se è stato sottoposto a sollecitazioni equivalenti.
3. Sono esclusi dalla nostra garanzia:
   - Danni all'apparecchio causati dalla mancata osservanza delle istruzioni di montaggio o per un'installazione non corretta, dalla mancata osservanza delle istruzioni per l'uso (come ad es. collegamento a una tensione di rete o a un tipo di corrente non corretti), dalla mancata osservanza delle norme relative alla manutenzione e alla sicurezza, dall'esposizione dell'apparecchio a condizioni ambientali anomale o per la mancata esecuzione di pulizia e manutenzione.
   - Danni all'apparecchio dovuti a usi impropri o illeciti (come per es. sovraccarico dell'apparecchio o utilizzo di utensili di ricambio o accessori non consentiti), alla penetrazione di corpi estranei nell'apparecchio (come per es. sabbia, pietre o polvere, danni dovuti al trasporto), all'impiego della forza o a influssi esterni (come per es. danni causati da caduta).
   - Danni all'apparecchio o a parti di esso da ricondurre a un'usura comune, dovuta all'uso o di altro tipo naturale.
4. Il periodo di garanzia è 24 mesi e inizia a partire dalla data di acquisto dell'apparecchio. I diritti di garanzia devono essere fatti valere prima della scadenza del periodo di garanzia, entro due settimane dopo avere accertato il difetto. È esclusa la rivendicazione di diritti di garanzia dopo la scadenza del relativo periodo. La riparazione o la sostituzione dell'apparecchio non comporta una proroga del periodo di garanzia e con questa prestazione per l'apparecchio o per pezzi di ricambio eventualmente installati non inizia un nuovo periodo di garanzia. Ciò vale anche nel caso in cui si ricorra a un servizio sul posto.
5. Per rivendicare il diritto di garanzia vi preghiamo di comunicare che l'apparecchio è difettoso tramite sito internet: www.isc-gmbh.info. Tenete a portata di mano il documento di acquisto o altri documenti come prova dell'acquisto del vostro apparecchio nuovo. Apparecchi inviati senza i relativi documenti o senza targhetta d'identificazione sono esclusi dalla prestazione di garanzia perché non possono essere classificati in modo corrispondente. Se il difetto dell'apparecchio rientra nella nostra prestazione di garanzia, ricevete prontamente l'apparecchio riparato o un apparecchio nuovo.

Naturalmente effettuiamo a pagamento anche riparazioni sull'apparecchio che non rientrano o non rientrano più nella garanzia. A tale scopo inviate l'apparecchio all'indirizzo del nostro Centro Assistenza.

Per parti mancanti, di consumo e soggette a usura rimandiamo alle limitazioni di questa garanzia secondo le informazioni sul Servizio Assistenza di queste istruzioni per l'uso.

Anl_TC_EH_500_SPK9.indb 37 16.11.2017 15:22:01

Fara!
Innan maskinen kan användas måste särskilda säkerhetsanvisningar beaktas för att förhindra olyckor och skador. Läs därför noggrant igenom denna bruksanvisning och dessa säkerhetsanvisningar. Förvara dem på ett säkert ställe så att du alltid kan hitta önskad information. Om maskinen ska överlåtas till andra personer måste även denna bruksanvisning och dessa säkerhetsanvisningar medfölja. Vi övertar inget ansvar för olyckor eller skador som har uppstått om denna bruksanvisning eller säkerhetsanvisningarna åsidosätts.

1. Säkerhetsanvisningar

Fara!
Läs alla säkerhetsanvisningar och instruktioner. Försummelser vid iakttagandet av säkerhetsanvisningarna och instruktionerna kan förorsaka elstöt, brand och/eller svåra skador. **Förvara alla säkerhetsanvisningar och instruktioner för framtiden.**

1. Kontrollera alltid att nätspänningen stämmer överens med spänningen som anges på typskylten. Om nätspänningen är olämplig kan detta leda till att maskinen inte fungerar på rätt sätt samt att personer kommer till skada.
2. Strömförsörjningen måste vara jordad och ha kopplats till en jordfelsbrytare.
3. Det är förbjudet att lyfta laster som överskrider den nominella lasten.
4. Använd maskinen endast till avsett syfte. Lyft aldrig personer med vinschen.
5. Dra inte i kabeln för att ta ut stickkontakten ur uttaget. Skydda kabeln mot värme, olja och vassa kanter.
6. Försök aldrig att lyfta fasta eller blockerade laster.
7. Dra ut stickkontakten om vinschen inte ska användas längre.
8. Se till att barn och andra ej behöriga personer inte vistas i närheten av maskinen.
9. Det är förbjudet att dra laster i sidled eller från sidan. Undvik att lasten svänger fram och tillbaka.
10. Säkerställ att kroken rör sig i samma riktning som märkningen på manöverreglaget.
11. Kontrollera regelbundet om vinschen har skadats. Manöverreglaget måste vara i fullgott skick.
12. Lämna alltid in elvinschen till en behörig elinstallatör vid en auktoriserad verkstad om vinschen behöver repareras eller underhållas. Reparationer får endast genomföras av behörig elektriker eftersom användaren i annat fall kan komma att utsättas för fara.
13. Undvik att slå på och ifrån vinschen alltför snabbt (krypdrift).
14. Var alltid uppmärksam när du använder vinschen.
15. Stå inte och arbeta inte under hängande last.

2. Beskrivning av maskinen samt leveransomfattning

2.1 Beskrivning av maskinen (bild 1/2)
1. Fästbygel
2. Fästhål för krok
3. Trumma
4. Arm för maximal vajerlängd
5. Arm för automatisk stoppmekanism
6. Stålvajer
7. Frånkopplingsvikt
8. Krok
9. Nödstopps-brytare
10. Tryckknapp
11. Fjärrkontroll
12. Nätkabel
13. Styrledning
14. Motor
15. Brytskiva
16. Extrakro
17. Lina för fjärrstyrning

2.2 Leveransomfattning
Kontrollera att produkten är komplett med hjälp av beskrivningen av leveransen. Om delar saknas vill vi be dig ta kontakt med vårt servicecenter eller butiken där du köpte produkten inom fem dagar efter att du köpte artikeln. Tänk på att du måste visa upp ett giltigt kvitto. Beakta även garantitabellen i serviceinformationen i slutet av bruksanvisningen.
- Öppna förpackningen och ta försiktigt ut produkten ur förpackningen.
- Ta bort förpackningsmaterialet samt förpackningss- och transportsäkringar (om förhanden).
- Kontrollera att leveransen är komplett.
- Kontrollera om produkten eller tillbehörsdelarna har skadats i transporten.
- Spara om möjligt på förpackningen tills garantitiden har gått ut.

Anl_TC_EH_500_SPK9.indb 38 16.11.2017 15:22:01

Fara!
Produkten och förpackningsmaterialet är ingen leksak! Barn får inte leka med plastpåsar, folie eller smådelar! Risk för att barn sväljer delar och kvävs!

- Original-bruksanvisning

3. Ändamålsenlig användning

Vinschen används till att lyfta och sänka laster i slutna rum enligt gällande prestanda.

Maskinen får endast användas till sitt avsedda ändamål. Användningar som sträcker sig utöver detta användningsområde är ej ändamålsenliga. För materialskador eller personskador som resulterar av sådan användning ansvarar användaren/operatören själv. Tillverkaren påtar sig inget ansvar.

Tänk på att våra produkter endast får användas till ändamålsenligt syfte och inte har konstruerats för yrkesmässig, hantverksmässig eller industriell användning. Vi ger därför ingen garanti om produkten ska användas inom yrkesmässiga, hantverksmässiga eller industriella verksamheter eller vid liknande aktiviteter.

4. Tekniska data

Spänning (V)	230 V ~ 50 Hz
Nom. ström (A)	4,4
Effektförbrukning (W)	1000
Driftslag	S3 20% 10 min
Nom. last (kg)	250 / 500
Lyfthöjd (m)	11,5 / 5,7
Nom. hastighet (m/min)	8 / 4
Stålvajerns diameter (mm)	4,0
Stålvajerns draghållfasthet (N/mm^2)	1870
Isoleringsklass	B
Kapslingsklass	IP 54
Växelklass	M1
Nettovikt (kg)	16,2

Driftslag S3 - 20 % - 10 min:
S3 = Intermittent drift utan att uppstart påverkas. Detta betyder att drifttiden uppgår till max. 20 % (2 min) under en tidsperiod på 10 minuter.

Begränsa uppkomsten av buller och vibration till ett minimum!
- Använd endast intakta maskiner.
- Underhåll och rengör maskinen regelbundet.
- Anpassa ditt arbetssätt till maskinen.
- Överbelasta inte maskinen.
- Lämna in maskinen för översyn vid behov.
- Slå ifrån maskinen om den inte används.
- Bär handskar.

5. Före användning

Innan du ansluter maskinen måste du övertyga dig om att uppgifterna på typskylten stämmer överens med nätets data.
Varning!
Dra alltid ut stickkontakten innan du gör några inställningar på maskinen.

- Vinschen är inte avsedd för transport av het och/eller smält massa. Dessutom ska vinschen inte användas vid låga temperaturer och i aggressiv miljö.
- Vinschen ingår i mekanisk grupp M1.
- Livslängden för vinschen uppgår till ca 8 000 cykler (exkl. slitagedelar). När vinschen har utfört 8 000 cykler måste samtliga mekaniska delar kontrolleras och ses över.
- Läs igenom och se till att du har förstått bruksanvisningen innan du använder vinschen.
- Se till att användaren vet hur maskinen fungerar och hur den ska användas.
- Användaren ska alltid använda maskinen enligt instruktionerna i bruksanvisningen.
- Vinschen är inte dimensionerad för kontinuerlig drift. Driftslaget är: Intermittent drift utan att uppstart påverkas.
- Maskinens nominella effekt varierar inte när lastens position förändras.

5.1 Packa upp maskinen
Efter att du har öppnat förpackningen måste du kontrollera om ramen, stålvajern, kroken och den elektriska kontrollmekanismen har skadats i transporten.

5.2 Montera maskinen (bild 5)
Vinschen är utrustad med två fästbyglar (1) så att den kan monteras på ett fyrkantsrör. Bommens mått måste stämma överens med fästbyglarnas (1) mått och måste dessutom kunna tåla en dubbel nominell last. Vi rekommenderar att du tar kontakt med en kvalificerad tekniker.

Anl_TC_EH_500_SPK9.indb 39 16.11.2017 15:22:01

Samtliga skruvar måste dras åt ordentligt.. Innan vinschen används för första gången bör förankringen av bommen kontrolleras av en kvalificerad tekniker.

5.3 Lyftblocksfunktion (bild 6 – 9)
Vinschen är utrustad med en brytskiva (15) och en extrakrok (16). Om denna utrustning används på rätt sätt kan vinschen lyfta den dubbla lasten. Montera brytskivan (15) och extrakroken (16) enligt beskrivningen i bild 6-8. Den fast monterade kroken (8) måse hängas in i fästhålet (2) (bild 9). Lasten lyfts nu med hjälp av två stålvajrar. Vinschen kan därmed lyfta den dubbla lasten.

6. Använda

Fara!
6.1 Information om drift
1. Ta bort tejpen från trumman (3) innan du använder vinschen för första gången.
2. Värdet för den A-vägda bulleremissionen vid användarens arbetsplats är lägre än 75 dB (ljudtrycksnivå LpA). Buller- och vibrationsvärden har bestämts enligt EN ISO 11201.
3. Matningsspänning: 230 V ± 10 %, 50 Hz ± 1 %.
4. Vinschen ska användas vid en omgivningstemperatur mellan 0°C och 40°C. Den relativa luftfuktigheten ska ligga under 50%. Höjd över havet: max. 1 000 m.
5. För transport och lagring får temperaturen befinna sig mellan -25°C och 55°C. Den högsta tillåtna temperaturen får inte överstiga 70°C.
6. Användaren bör lyfta lasten från golvet med lägsta möjliga hastighet. Vajern ska vara spänd när lasten lyfts upp.
7. Motorn (14) i vinschen är utrustad med en termostatbrytare. Därför är det möjligt att motorn (14) stannar medan vinschen används. Motorn startar automatiskt igen när den har svalnat.
8. Elvinschen är inte utrustad med en nominell effektbegränsare. Försök därför inte att lyfta lasten ytterligare när överhettningsskyddet redan begränsar driften. I detta fall överskrider lasten vinschens nominella effekt.
9. Lämna inga hängande laster utan uppsikt om inga säkerhetsåtgärder har tilltagits.
10. Skydda maskinen med en säkring med strömvärde 10 A eller en 10 mA jordfelsbrytare för att skydda strömkretsen.
11. Använd inte armarna(4/5) för att stoppa vinschen i normaldrift. Dessa är endast avsedda som stoppanordning i nödfall.
12. Innan du använder vinschen måste du se till att stålvajern (6) lindas rätt runt om trumman (3), och att avståndet mellan lindningarna är mindre än stålvajern (bild 3)
13. Säkerställ att lasten är fast förankrad i kroken (8) eller i extrakroken (16) om lyftblocket används. Håll alltid tillräckligt avstånd till lasten och stålvajern (6).

6.2 Drift (bild 1)
- Kontrollera om nödstopps-brytaren (9) har tryckts in. Vrid runt den röda stoppknappen i medsols riktning för att regla upp den.
- Tryck på tryckknapp ▲ (10) för att lyfta lasten.
- Tryck på tryckknapp ▼ (10) för att sänka lasten.
- Arm för automatisk stoppmekanism (5): Om den maximala lyfthöjden har nåtts, trycks armen (5) uppåt av frånkopplingsvikten (7). Därigenom aktiveras gränslägesbrytaren varefter lasten inte kan lyftas längre.
- Arm för maximal vajerlängd (4). När lasten har nått sitt lägsta möjliga läge aktiveras gränslägesbrytaren så att lasten inte kan sänkas ytterligare. Denna gränslägesbrytare förhindrar även att vinschen kör i fel riktning (kroken rör sig i motsatta riktningen mot märkningen vid manöverreglaget).
- Vinschen stannar om nödstopps-brytaren (9) trycks in.
- I ett nödfall ska nödstopps-brytaren (9) genast tryckas in för att stoppa vinschen. Vinschen kan inte manövreras efter att nödstopps-brytaren har tryckts in.

7. Byta ut nätkabeln

Fara!
Om nätkabeln till denna produkt har skadats måste den bytas ut av tillverkaren, kundtjänst eller av en annan person med liknande behörighet eftersom det annars finns risk för personskador.

Anl_TC_EH_500_SPK9.indb 40 16.11.2017 15:22:01

8. Rengöring, Underhåll och reservdelsbeställning

Fara!
Dra alltid ut stickkontakten inför alla rengöringsarbeten.

8.1 Rengöra maskinen
- Håll skyddsanordningarna, ventilationsöppningarna och motorkåpan i så damm- och smutsfritt skick som möjligt. Torka av maskinen med en ren duk eller blås av den med tryckluft med svagt tryck.
- Vi rekommenderar att du rengör maskinen efter varje användningstillfälle.
- Rengör maskinen med jämna mellanrum med en fuktig duk och en aning såpa. Använd inga rengörings- eller lösningsmedel. Dessa kan skada maskinens plastdelar. Se till att inga vätskor tränger in i maskinens inre. Om vatten tränger in i ett elverktyg höjs risken för elektriska slag.

8.2 Underhåll
Fara! Övertyga dig alltid om att maskinen inte är kopplad till elnätet när du ska vårda maskinen.
- Nedan: En cykel motsvarar en uppåt- och nedåtkörning med last. Regelbunden kontroll består av en test efter 100 cykler.
- Kontrollera regelbundet att gränslägesbrytarna i vinschen fungerar på rätt sätt. Kontrollera på följande sätt: När vajern har nått den maximala lyfthöjden kommer armen till den automatiska stoppmekanismen (5) att aktiveras. Motorn (14) måste nu stanna (kontrollera utan last).
  Om stålvajern (6) har lindats av så mycket som möjligt kommer armen för maximal vajerlängd (4) att aktiveras. Motorn (14) måste nu stanna
- Kontrollera regelbundet nätkabeln (12) och styrledningen (13).
- Smörj in stålvajern (6) och brytskivan (15) var 200:e cykel.
- Var 30:e cykel måste du kontrollera enligt bild 4 att den kompletta stålvajern (6) är i fullgott skick. Om bajern är skadad måste den bytas ut mot en ny stålvajer med samma tekniska data.
- Kontrollera var 1000:e cykel att skruvarna i fästbyglarna (1) och brytskivan (15) är väl åtdragna.
- Kontrollera var 1000:e cykel att krokarna (8/16) och brytskivan (15) är i fullgott skick.
- Smörj regelbundet in linan, kedjan, växeln, lagret och kroken.
- Kontrollera följande reservdelar i intervall om 1000 cykler: lina, kedja, krok, band och bromsbelägg.
- Kontrollera varje gång innan vinschen används att nödstopps-brytaren (9) och tryckknapparna (10) är i fullgott skick.
- Kontrollera bromssystemet var 1000:e cykel. Om motorn (14) avger ovanligt ljud eller om den inte kan lyfta den nominella lasten, är det möjligt att bromssystemet måste granskas:
  - Byt ut skadade och slitna delar och spara på underhållsdokumentationen för framtida bruk.
  - Om icke-ordinarie tillsyn krävs måste du kontakta ett behörigt kundcenter.
- Låt endast kvalificerad fackpersonal reparera elverktyg.

8.3 Reservdelsbeställning
Lämna följande uppgifter vid beställning av reservdelar:
- Maskintyp
- Maskinens artikel-nr.
- Maskinens ident-nr.
- Reservdelsnummer för erforderlig reservdel

Aktuella priser och ytterligare information finns på www.isc-gmbh.info

9. Skrotning och återvinning

Produkten ligger i en förpackning som fungerar som skydd mot transportskador. Denna förpackning består av olika material som kan återvinnas. Lämna in förpackningen till ett insamlingsställe för återvinning. Produkten och dess tillbehör består av olika material som t ex metaller och plaster. Defekta produkter får inte kastas i hushållssoporna. Lämna in produkten till ett insamlingsställe i din kommun för professionell avfallshantering. Hör efter med din kommun om du inte vet var närmsta insamlingsställe finns.

10. Förvaring

Förvara produkten och dess tillbehör på en mörk, torr och frostfri plats samt otillgängligt för barn. Den bästa förvaringstemperaturen är mellan 5 och 30˚C. Förvara elverktyget i originalförpackningen.

Anl_TC_EH_500_SPK9.indb 41 16.11.2017 15:22:02

Endast för EU-länder

Kasta inte elverktyg i hushållssoporna.

Enligt det europeiska direktivet 2012/19/EG om avfall som utgörs av eller innehåller elektriska eller elektroniska produkter och dess tillämpning i den nationella lagstiftningen, måste förbrukade elverktyg källsorteras och lämnas in för miljövänlig återvinning.

Återvinnings-alternativ till begäran om återsändning:
Som ett alternativ till returnering är ägaren av elutrustningen skyldig att bidraga till ändamålsenlig avfallshantering för det fall att utrustningen ska skrotas. Efter att den förbrukade utrustningen har lämnats in till en avfallsstation kan den omhändertas i enlighet med gällande nationella lagstiftning om återvinning och avfallshantering. Detta gäller inte för tillbehörsdelar och hjälpmedel utan elektriska komponenter vars syfte har varit att komplettera den förbrukade utrustningen.

Eftertryck eller annan duplicering av dokumentation och medföljande underlag för produkterna, även utdrag, är endast tillåtet med uttryckligt tillstånd från iSC GmbH.

Med förbehåll för tekniska ändringar.

Anl_TC_EH_500_SPK9.indb 42 16.11.2017 15:22:02

Serviceinformation

I alla länder som nämns i garantibeviset har vi kompetenta servicepartners. Adresserna till dessa partners finns i garantibeviset. Våra partners står gärna till tjänst för alla slags servicearbeten såsom reparation och tillhandahållande av reservdelar, slitagedelar och förbrukningsmaterial.

Kom ihåg att följande delar i denna produkt är utsatta för ett bruksmässigt och naturligt slitage samt att följande delar krävs som förbrukningsmaterial.

Kategori	Exempel
Slitagedelar*	Stålvajer, Krok, Brytskiva, Extrakro
Förbrukningsmaterial/förbrukningsdelar*	
Delar som saknas	

* ingår inte tvunget i leveransomfattningen!

Vid brister eller störningar kan du anmäla detta på webbplatsen www.isc-gmbh.info. Ge en detaljerad beskrivning av felet som har uppstått och besvara alltid följande frågor:

- Fungerade produkten först eller var den defekt från början?
- Märkte du av någonting innan produkten slutade att fungera (symptomer före defekt)?
- Enligt din åsikt, vilken funktion är felaktig i produkten (huvudsymptom)?
  Beskriv den felaktiga funktionen.

Anl_TC_EH_500_SPK9.indb 43 16.11.2017 15:22:02

Garantibevis

Bästa kund,
våra produkter genomgår en sträng kvalitetskontroll. Om denna produkt mot förmodan inte fungerar på rätt sätt, beklagar vi detta och ber dig att kontakta vår serviceavdelning under adressen som anges på garantikortet. Vi står även gärna till tjänst på telefon under servicenumret som anges nedan. Följande punkter gäller för att du ska kunna göra anspråk på garantin:

1. Dessa garantivillkor vänder sig enbart till konsumenter, dvs. naturliga personer som inte har för avsikt att använda denna produkt i kommersiellt syfte eller inom egen verksamhet. Dessa garantivillkor reglerar ytterligare garantitjänster som nedanstående tillverkare erbjuder köpare av nya produkter. Dessa tjänster är en komplettering till den lagstadgade garantin. Garantianspråk som regleras enligt lag påverkas inte av denna garanti. Våra garantitjänster är gratis för dig.
2. Garantitjänsterna omfattar endast sådana brister som bevisligen kan härledas till material- eller tillverkningsfel. Produkten som du har köpt ska vara ny och härstamma från nedanstående tillverkare. Vi avgör om sådana brister i produkten ska åtgärdas eller om produkten ska bytas ut.
   Tänk på att våra produkter endast får användas till ändamålsenligt syfte och inte har konstruerats för kommersiell, hantverksmässig eller yrkesmässig användning. Ett garantiavtal sluts därför ej om produkten inom garantitiden har använts inom yrkesmässiga, hantverksmässiga eller industriella verksamheter eller har utsatts för liknande påkänning.
3. Garantin omfattar inte:
   - Skador på produkten som kan härledas till att monteringsanvisningen missaktats eller på grund av felaktig installation, åsidosatt bruksanvisning (t ex anslutning till felaktig nätspänning eller strömart), missaktade underhålls- och säkerhetsbestämmelser, om produkten utsätts för onormala miljöfaktorer eller bristfällig skötsel och underhåll.
   - Skador på produkten som kan härledas till missbruk eller ej ändamålsenlig användning (t ex överbelastning av produkten eller användning av ej godkända insatsverktyg eller tillbehör), främmande partiklar som har trängt in i produkten (t ex sand, sten eller damm, transportskador), yttre våld eller yttre påverkan (t ex skador efter att produkten fallit ned).
   - Skador på produkten eller delar av produkten som kan härledas till bruksmässigt, normalt eller för övrigt naturligt slitage .
4. Garantitiden uppgår till 24 månader och gäller från datumet när produkten köptes. Medan garantitiden fortfarande gäller ska anspråk på garanti ställas inom två veckor efter att defekten fastställdes. Det är inte möjligt att ställa anspråk på garanti efter att garantitiden har löpt ut. Garantitiden förlängs inte när produkten repareras eller byts ut, dessutom medför sådana arbeten inte att en ny garantitid börjar gälla för produkten eller för ev. reservdelar som har monterats in. Detta gäller även vid hembesök.
5. Anmäl den defekta produkten på följande webbplats för att göra anspråk på garantin: www.isc-gmbh.info. Se till att du har sparat på kvittot eller ett annat köpebevis som påvisar att du har köpt denna produkt i nytt skick. Produkter som sänds in utan köpebevis eller utan märkskylt täcks inte av våra garantitjänster eftersom de inte kan identifieras. Om defekten i produkten täcks av våra garantitjänster, får du genast en reparerad eller ny produkt av oss.

Givetvis kan vi även, mot debitering, åtgärda skador som antingen inte täcks av garantin eller som har uppstått efter garantitidens slut. Skicka in produkten till nedanstående serviceadress.

För slitage- och förbrukningsdelar samt för delar som saknas hänvisar vi till begränsningarna i garantin enligt serviceinformationen som anges i denna bruksanvisning.

Anl_TC_EH_500_SPK9.indb 44 16.11.2017 15:22:02

Nebezpečí!
Při používání přístrojů musí být dodržována určitá bezpečnostní opatření, aby se zabránilo zraněním a škodám. Přečtěte si proto pečlivě tento návod k obsluze / bezpečnostní pokyny. Dobře si ho/ je uložte, abyste měli tyto informace kdykoliv po ruce. Pokud předáte přístroj jiným osobám, předejte s ním prosím i tento návod k obsluze/ bezpečnostní pokyny. Nepřebíráme žádné ručení za škody a úrazy vzniklé v důsledku nedodržování tohoto návodu k obsluze a bezpečnostních pokynů.

1. Bezpečnostní pokyny

Nebezpečí!
Přečtěte si všechny bezpečnostní pokyny a instrukce. Zanedbání při dodržování bezpečnostních pokynů a instrukcí mohou mít za následek úder elektrickým proudem, požár a/nebo těžká zranění. **Všechny bezpečnostní pokyny a instrukce si uložte pro budoucí použití.**

1. Vždy zkontrolujte, zda síťové napětí souhlasí s napětím uvedeným na typovém štítku. V tom případě, že není síťové napětí vhodné, může dojít k abnormálnímu chodu stroje a ke škodám na zdraví.
2. Zásobování proudem musí disponovat uzemněním a být jištěno ochranným vypínačem proti chybnému proudu.
3. Je zakázáno zvedat břemena, která překračují jmenovitou nosnost.
4. Používejte zařízení pouze pro účely, ke kterým je určeno. Nikdy nezvedejte lanovým zvedákem osoby.
5. Na vytažení zástrčky ze zásuvky netahejte za kabel. Nedávejte kabel do blízkosti horka, oleje a ostrých hran.
6. Nikdy se nepokoušejte zvedat uvázlá nebo zablokovaná břemena.
7. Pokud není lanový zvedák používán, vytáhněte síťovou zástrčku.
8. Nepouštějte do blízkosti stroje děti a jiné neautorizované osoby.
9. Je zakázáno tahat břemena bočně nebo ze strany. Vyhýbejte se kmitání břemena.
10. Přesvědčte se, zda se hák pohybuje tím směrem, který je zobrazen na ovládacím spínači.
11. Kontrolujte lanový zvedák pravidelně, zda není poškozen. Ovládací spínač musí být v dobrém stavu.
12. Opravy a údržbu nechte provádět pouze autorizovanou dílnou a odborným elektrikářem. Opravy smí provádět pouze odborný elektrikář; v jiném případě nelze vyloučit úrazy provozovatele.
13. Vyhýbejte se rychlému vypínání a zapínání (impulzový provoz).
14. Při obsluze lanového zvedáku buďte vždy pozorní.
15. Nikdy nestůjte nebo nepracujte pod zvednutým břemenem.

2. Popis přístroje a rozsah dodávky

2.1 Popis přístroje (obr. 1/2)
1. Upevňovací úchytka
2. Upevňovací otvor pro hák
3. Buben
4. Páka maximální délky lana
5. Páka automatického zastavovacího mechanismu
6. Ocelové lano
7. Vypínací závaží
8. Hák
9. Nouzový vypínač
10. Tlačítko
11. Dálkové ovládání
12. Síťový kabel
13. Ovládací vedení
14. Motor
15. Vodicí kladka
16. Přídavný hák
17. Lanko pro dálkové ovládání

2.2 Rozsah dodávky
Zkontrolujte prosím úplnost výrobku na základě popsaného rozsahu dodávky. V případě chybějících dílů se prosím obraťte nejpozději během 5 pracovních dnů po zakoupení výrobku za předložení platného dokladu o koupi na naše servisní středisko nebo prodejnu, kde jste přístroj zakoupili. Dbejte prosím na tabulku o záruce v servisních informacích na konci návodu.
- Otevřete balení a přístroj opatrně vyjměte z balení.
- Odstraňte obalový materiál a ochrany balení / dopravní pojistky (jsou-li k dispozici).
- Překontrolujte, zda je rozsah dodávky úplný.
- Zkontrolujte přístroj a příslušenství, zda nebyly při přepravě poškozeny.
- Balení si pokud možno uložte až do uplynutí záruční doby.

Anl_TC_EH_500_SPK9.indb 45 16.11.2017 15:22:02

Nebezpečí!
Přístroj a obalový materiál nejsou dětská hračka! Děti si nesmějí hrát s plastovými sáčky, fóliemi a malými díly! Hrozí nebezpečí spolknutí a udušení!

- Originální návod k obsluze

3. Použití podle účelu určení

Lanový zvedák slouží na zvedání a spouštění břemen v uzavřených místnostech příslušně podle výkonu stroje.

Přístroj smí být používán pouze podle svého účelu určení. Každé další, toto překračující použití, neodpovídá použití podle účelu určení. Za z toho vyplývající škody nebo zranění všeho druhu ručí uživatel/obsluhující osoba a ne výrobce.

Dbejte prosím na to, že naše přístroje nebyly podle svého účelu určení konstruovány pro živnostenské, řemeslnické nebo průmyslové použití. Nepřebíráme proto žádné ručení, pokud je přístroj používán v živnostenských, řemeslných nebo průmyslových podnicích a při srovnatelných činnostech.

4. Technická data

Napětí (V)	230 V ~ 50 Hz
Jmenovitý proud (A)	4,4
Příkon (W)	1000
Druh provozu	S3 20% 10 min
Jmenovitá nosnost (kg)	250 / 500
Výška zdvihání (m)	11,5 / 5,7
Jmenovitá rychlost (m/min)	8 / 4
Průměr ocelového lana (mm)	4,0
Pevnost ocelového lana v tahu (N/mm^2)	1870
Třída izolace	B
Druh ochrany	IP 54
Třída motoru	M1
Hmotnost netto (kg)	16,2

Druh provozu S3 - 20% - 10 min:
S3 = přerušovaný chod bez vlivu rozběhu. Toto znamená, že v rozmezí 10 minut činí max. doba provozu 20% (2 min).

Omezte tvorbu hluku a vibrace na minimum!
- Používejte pouze přístroje v bezvadném stavu.
- Pravidelně provádějte údržbu a čištění přístroje.
- Přizpůsobte Váš způsob práce přístroji.
- Nepřetěžujte přístroj.
- V případě potřeby nechte přístroj zkontrolovat.
- Přístroj vypněte, pokud ho nepoužíváte.
- Noste rukavice.

5. Před uvedením do provozu

Před zapnutím se přesvědčte, zda údaje na typovém štítku souhlasí s údaji sítě.
Varování!
Než začnete na přístroji provádět nastavení, vždy vytáhněte síťovou zástrčku ze zásuvky.

- Lanový zvedák není vhodný pro transport horkých a/nebo roztavených mas, kromě toho není lanový zvedák určen pro použití při nízkých teplotách a v agresivním prostředí.
- Mechanická skupina je M1.
- Životnost lanového zvedáku činí cca 8000 cyklů (kromě rychle opotřebitelných dílů). Poté, co lanový zvedák prošel 8000 cykly, musí být všechny mechanické díly zkontrolovány a opraveny.
- Přečtěte si návod k obsluze a porozumějte mu před tím, než budete s lanovým zvedákem pracovat.
- Zabezpečte, aby obsluha věděla, jak stroj funguje a jak má být obsluhován.
- Uživatel by měl vždy postupovat v souladu s návodem k obsluze.
- Lanový zvedák není určen pro trvalý provoz. Druh provozu: přerušovaný chod bez vlivu rozběhu.
- Jmenovitý výkon stroje se nemění s polohou břemena.

5.1 Vybalení
Po otevření balení prosím zkontrolujte rám, ocelové lano, háky a elektrický kontrolní mechanismus, zda nevykazují možné škody vzniklé při přepravě.

5.2 Montáž (obr. 5)
Lanový zvedák je vybaven 2 upevňovacími úchytkami (1), pomocí kterých musí být připevněn na čtyřhrannou trubku. Rozměry ramena musí odpovídat velikosti upevňovacích úchytek (1) a

Anl_TC_EH_500_SPK9.indb 46 16.11.2017 15:22:02

rameno musí být schopno unést dvojnásobnou jmenovitou zátěž. Doporučujeme Vám vyhledat kvalifikovaného technika.
Všechny šrouby musí být řádně utaženy. Před uvedením do provozu by měl ukotvení ramena zkontrolovat kvalifikovaný technik.

5.3 Funkce kladkostroje (obr. 6 – 9)
Lanový zvedák je vybaven vodicí kladkou (15) a přídavným hákem (16). Při správném použití může lanový zvedák zvedat dvojitou zátěž.
Vodicí kladku (15) a přídavný hák (16) namontujte tak, jak je znázorněno na obrázcích 6-8.
Pevně namontovaný hák (8) musí být zavěšen do upevňovacího otvoru (2) (obr. 9). Břemeno je nyní za pomoci dvou ocelových lan zvednuto, lanový zvedák tak může zvednout dvojitou zátěž.

6. Obsluha

Nebezpečí!
6.1 Pokyny k provozu
1. Před prvním použitím odstraňte z bubnu (3) lepicí pásku.
2. Hodnota hlukové emise na místě provozovatele hodnocená jako A je nižší než 75 dB (hladina akustického tlaku LpA). Hluk a vibrace byly měřeny podle normy EN ISO 11201.
3. Zásobovací napětí: 230 V ± 10%, 50 Hz ± 1%.
4. Lanový zvedák provozovat při teplotách okolí mezi 0 °C a 40 °C, relativní vlhkosti vzduchu nižší než 50%. Výška nad hladinou moře: max. 1000 m.
5. Pro transport a uložení smí teplota ležet v rozmezí -25 °C a 55 °C. Nejvyšší přípustná teplota nesmí být vyšší než 70 °C.
6. Uživatel by měl břemeno ze země nadzvedávat s nejnižší možnou rychlostí. Je-li břemeno zvednuté, mělo by být lano napnuté.
7. Motor (14) lanového zvedáku je vybaven tepelným spínačem. Během provozu lanového zvedáku proto může dojít k zastavení motoru (14), tento se po ochlazení automaticky opět rozběhne.
8. Elektrický lanový zvedák není vybaven omezovačem jmenovitého výkonu. Proto se prosím nesnažte dále zvedat břemeno, pokud tepelná pojistka provoz omezí. Břemeno v tomto případě překračuje jmenovitý výkon lanového zvedáku.
9. Nenechávejte zavěšená břemena bez dozoru a bez provedení potřebných bezpečnostních opatření.
10. Na ochranu proudového okruhu jistěte stroj 10 A pojistkou nebo 10 mA ochranným vypínačem proti chybnému proudu.
11. Nepoužívejte páky (4/5) jako běžné zařízení na zastavení. Tyto slouží pouze pro zastavení v nouzovém případě.
12. Než začnete pracovat, zkontrolujte, zda je ocelové lano (6) řádně navinuto na bubnu (3) a zda je vzdálenost mezi vinutím menší, než je ocelové lano (obr. 3).
13. Zkontrolujte, zda je břemeno na háku (8), resp. při provozu jako kladkostroj na přídavném háku (16), zajištěno a vždy udržujte odstup od břemena a ocelového lana (6).

6.2 Provoz (obr. 1)
- Zkontrolujte, zda je stisknutý nouzový vypínač (9). Na odblokování červeného tlačítkového spínače STOP s ním otáčejte ve směru hodinových ručiček.
- Na nadzvednutí břemena stiskněte tlačítko ▲ (10).
- Na spuštění břemena stiskněte tlačítko▼ (10).
- Páka automatického zastavovacího mechanismu (5): je-li dosaženo maximální výšky zdvihání, zatlačí vypínací závaží (7) páku (5) nahoru. Tím je aktivován koncový spínač a břemeno již nemůže být dále zvedáno.
- Páka maximální délky ocelového lana (4): když břemeno dosáhne nejnižší možné polohy, je aktivován koncový spínač a další spouštění břemena není možné. Tento koncový spínač by také zabránil pohybu lanového zvedáku v nesprávném směru (hák se pohybuje oproti směru zobrazeném na ovládacím spínači).
- Je-li stisknutý nouzový vypínač (9), lanový zvedák se zastaví.
- V nouzovém případě ihned zmáčknout nouzový vypínač (9), aby byl lanový zvedák zastaven. Pokud byl aktivován nouzový vypínač, není obsluha lanového zvedáku možná.

7. Výměna síťového napájecího vedení

Nebezpečí!
Pokud je síťové napájecí vedení poškozeno, musí být nahrazeno výrobcem nebo jeho zákaznickým servisem nebo kvalifikovanou osobou, aby se zabránilo nebezpečím.

Anl_TC_EH_500_SPK9.indb 47 16.11.2017 15:22:02

8. Čištění, údržba a objednání náhradních dílů

Nebezpečí!
Před všemi čisticími pracemi vytáhněte síťovou zástrčku.

8.1 Čištění

- Udržujte bezpečnostní zařízení, větrací otvory a kryt motoru tak prosté prachu a nečistot, jak jen to je možné. Otřete přístroj čistým hadrem nebo ho profoukněte stlačeným vzduchem při nízkém tlaku.
- Doporučujeme přímo po každém použití přístroj vyčistit.
- Pravidelně přístroj čistěte vlhkým hadrem a trochou mazlavého mýdla. Nepoužívejte čisticí prostředky nebo rozpouštědla; tyto by mohly narušit plastové díly přístroje. Dbejte na to, aby se do přístroje nedostala voda. Vniknutí vody do elektrického přístroje zvyšuje riziko úderu elektrickým proudem.

8.2 Údržba
Nebezpečí! Při údržbě stroje se ubezpečte, že není stroj připojen na síť.

- Dále: Jeden cyklus odpovídá jednomu pohybu jednoho břemena nahoru a dolu. Pravidelná kontrola odpovídá jedné kontrole po 100 cyklech.
- Pravidelně kontrolujte, zda koncové spínače lanového zvedáku řádně fungují. Kontrola se provádí následovně: dosáhlo-li lano maximální výšky zdvihnutí je aktivována páka automatického zastavovacího mechanismu (5). Motor (14) se musí nyní zastavit (zkoušku provádět bez břemena).
  Je-li ocelové lano (6) odvinuto tak dalece, jak je to možné, je aktivována páka maximální délky lana (4). Motor (14) se musí nyní zastavit.
- Pravidelně kontrolujte síťový kabel (12) a ovládací vedení (13).
- Každých 200 cyklů musí být namazáno ocelové lano (6) a vodicí kladka (15).
- Každých 30 cyklů musí být podle obrázku 4 zkontrolováno, zda je celé ocelové lano (6) v dobrém stavu. Pokud je poškozeno, musí být nahrazeno za lano odpovídající údajům v technických datech.
- Každých 1000 cyklů zkontrolovat, zda jsou šrouby upevňovacích úchytek (1) a vodicí kladky (15) dobře utaženy.
- Pravidelně promazávejte lano, řetěz, převodovku, ložiska a háky.
- Každých 1000 cyklů zkontrolovat rychle opotřebitelné díly jako: lano, řetěz, háky, pásy a brzdová obložení.
- Každých 1000 cyklů zkontrolovat, zda jsou háky (8/16) a vodicí kladka (15) v dobrém stavu.
- Před každým použitím lanového zvedáku zkontrolujte, zda jsou nouzový vypínač (9) a tlačítko (10) v bezvadném provozním stavu.
- Každých 1000 cyklů zkontrolovat brzdový systém. Pokud vydává motor (14) nezvyklé zvuky nebo nemůže zvednout jmenovitou zátěž, je možné, že musí být opraven brzdový systém:
  - vyměňte poškozené nebo opotřebované díly a uložte si příslušnou údržbovou dokumentaci.
  - s neplánovanými opravárenskými pracemi se obraťte prosím na autorizovaný servis.
- Nechte Váš elektrický přístroj opravovat pouze kvalifikovaným odborným personálem.

8.3 Objednání náhradních dílů:
Při objednávce náhradních dílů je třeba uvést následující údaje:

- Typ přístroje
- Číslo artiklu přístroje
- Identifikační číslo přístroje
- Číslo požadovaného náhradního dílu

Aktuální ceny a informace naleznete na www.isc-gmbh.info

9. Likvidace a recyklace

Přístroj je uložen v balení, aby bylo zabráněno poškození při přepravě. Toto balení je surovina a tím znovu použitelné nebo může být dáno zpět do cirkulace surovin. Přístroj a jeho příslušenství jsou vyrobeny z rozdílných materiálů, jako např. kov a plasty. Defektní přístroje nepatří do domovního odpadu. K odborné likvidaci by měl být přístroj odevzdán na příslušném sběrném místě. Pokud žádné takové sběrné místo neznáte, měli byste se informovat na místním zastupitelství.

10. Skladování

Skladujte přístroj a jeho příslušenství na tmavém, suchém a nezamrzajícím místě a mimo dosah dětí. Optimální teplota skladování leží mezi 5 a 30 ˚C. Uložte elektrický přístroj v originálním balení.

Anl_TC_EH_500_SPK9.indb 48 16.11.2017 15:22:02

Jen pro země EU

Elektrické nářadí a přístroje neodhazujte do domovního odpadu!

Podle evropské směrnice 2012/19/ES o odpadních elektrických a elektronických zařízeních (OEEZ) a při prosazování národního práva musí být spotřebované elektrické nářadí sbíráno samostatně a musí být dopraveno do odpovídajícího ekologického recyklačního závodu.

Alternativa recyklace k výzvě na zpětné odeslání výrobku:
Vlastník elektrického přístroje je povinen alternativně namísto zpětného odeslání zařízení spolupůsobit při jeho správném zužitkování v případě, že se vzdá jeho vlastnictví. Starý přístroj lze v takovém případě odevzdat také ve sběrně, která provede odstranění ve smyslu národního zákona o recyklaci a odpadech. Tyto předpisy se nevztahují na díly příslušenství a pomocné prostředky bez elektrických součástí přidané ke starým přístrojům.

Patisk nebo jiné rozmnožování dokumentace a průvodních listin, také ve výtažcích, je přípustný pouze s výslovným souhlasem firmy iSC GmbH.

Technické změny vyhrazeny

Anl_TC_EH_500_SPK9.indb 49 16.11.2017 15:22:02

Servisní informace

Ve všech zemích uvedených v záručním listu máme kompetentní servisní partnery, jejichž kontaktní údaje naleznete v záručním listu. Jsou Vám k dispozici pro všechny servisní požadavky jako opravy, objednávání náhradních a rychle opotřebitelných dílů nebo nákup spotřebních materiálů.

Je třeba dbát na to, že u tohoto přístroje podléhají následující díly opotřebení přiměřenému použití nebo přirozenému opotřebení, resp. jsou potřebné jako spotřební materiál.

Kategorie	Příklad
Rychle opotřebitelné díly*	Ocelové lano, Hák, Vodicí kladka, Přídavný hák
Spotřební materiál/spotřební díly*	
Chybějící díly	

* není nutně obsaženo v rozsahu dodávky!

V případě nedostatků nebo chyb Vás žádame, abyste příslušnou chybu nahlásili na internetové stránce www.isc-gmbh.info. Dbejte prosím na přesný popis chyby a odpovězte přitom v každém případě na následující otázky:

- Fungoval přístroj předtím nebo byl od začátku defektní?
- Všimli jste si něčeho před vyskytnutím poruchy (příznak před poruchou)?
- Jakou chybnou funkci přístroj podle Vašeho názoru vykazuje (hlavní příznak)? Popište tuto chybnou funkci.

Anl_TC_EH_500_SPK9.indb 50 16.11.2017 15:22:02

Záruční list

Vážená zákaznice, vážený zákazníku,
naše výrobky podléhají přísné kontrole kvality. Pokud i přesto tento přístroj bezvadně nefunguje, je nám to velice líto a prosíme Vás, abyste se obrátili na naši servisní službu na adrese uvedené na tomto záručním listu. Rádi Vám budeme k dispozici také telefonicky na uvedeném servisním telefonním čísle. Pro uplatňování požadavků poskytnutí záruky platí následující:

1. Tyto záruční podmínky jsou určeny výlučně pro spotřebitele, tzn. fyzické osoby, které tento výrobek nebudou používat ani v rámci své profesní, ani jiné výdělečně činné aktivity. Tyto záruční podmínky upravují dodatečné záruky, které níže uvedený výrobce poskytuje kupujícím nových přístrojů navíc k zákonné záruce. Vaše zákonem stanovené nároky na záruku zůstanou touto zárukou nedotčeny. Naše záruka je pro Vás bezplatná.
2. Záruka se vztahuje výhradně na nedostatky na vámi zakoupeném novém přístroji níže uvedeného výrobce, které jsou způsobené chybou materiálu nebo výrobní chybou, a podle našeho uvážení je omezena na odstranění těchto nedostatků na přístroji nebo výměnu přístroje.
   Dbejte prosím na to, že naše přístroje nebyly podle svého účelu určení konstruovány pro živnostenské, řemeslnické nebo odborné použití. Záruční smlouva se proto nenaplní, pokud byl přístroj během záruční doby používán v živnostenských, řemeslnických nebo průmyslových podnicích nebo byl vystaven srovnatelnému zatížení.
3. Z naší záruky jsou vyloučeny:
   - Škody na přístroji, které vznikly nedodržením montážního návodu nebo na základě neoborné instalace, nedodržením návodu k použití (jako např. připojení na chybné síťové napětí nebo druh el. proudu), nebo nedodržením pokynů k údržbě a bezpečnostních pokynů, vystavením přístroje nepřirozeným povětrnostním podmínkám nebo nedostatečnou péčí a údržbou.
   - Škody na přístroji, které vznikly neoprávněným nebo nesprávným použitím (jako např. přetížení přístroje nebo použití neschválených přídavných nástrojů nebo příslušenství), vniknutím cizích těles do přístroje (jako např. písek, kameny nebo prach, škody při přepravě), používáním násilí nebo cizím působením (jako např. škody způsobené pádem).
   - Škody na přístroji nebo na dílech přístroje, které jsou způsobeny běžným opotřebením přiměřeného použití nebo jiným přirozeným opotřebením.
4. Záruční doba činí 24 měsíců a začíná datem koupě přístroje. Požadavky poskytnutí záruky musí být uplatňovány před uplynutím záruční doby během dvou týdnů poté, co byla vada zjištěna. Uplatňování požadavků poskytnutí záruky po uplynutí záruční doby je vyloučeno. Oprava nebo výměna přístroje nevede ani k prodloužení záruční doby, ani nedojde tímto výkonem k zahájení nové záruční doby pro tento přístroj nebo pro jakékoli zabudované náhradní díly. To platí také při využití místního servisu.
5. Pro uplatňování požadavků na poskytnutí záruky nahlaste prosím váš defektní přístroj na: www.isc-gmbh.info. Mějte připravenu nákupní účtenku nebo jiné doklady o vašem nákupu. Přístroje, které jsou zaslány bez odpovídajících dokladů a bez typového štítku, jsou ze záručního plnění vyloučeny z důvodu nedostatečné možnosti jednoznačného přiřazení. Pokud je defekt přístroje zahrnut v naší záruce, obdržíte obratem zpátky opravený nebo nový přístroj.

Samozřejmě Vám rádi odstraníme nedostatky na přístroji na Vaše náklady, pokud tyto nedostatky nejsou nebo už nejsou zahrnuty v rozsahu záruky. V takovém případě nám prosím zašlete přístroj na naší servisní adresu.

V případě rychle opotřebitelných dílů, spotřebních dílů a chybějících dílů poukazujeme na omezení této záruky podle servisních informací uvedených v tomto návodu k obsluze.

Anl_TC_EH_500_SPK9.indb 51 16.11.2017 15:22:02

Nebezpečenstvo!
Pri používaní prístrojov sa musia dodržiavať príslušné bezpečnostné opatrenia, aby bolo možné zabrániť prípadným zraneniam a vecným škodám. Preto si starostlivo prečítajte tento návod na obsluhu/bezpečnostné pokyny. Následne ich starostlivo uschovajte, aby ste mali vždy k dispozícii potrebné informácie. V prípade, že budete prístroj požičiavať tretím osobám, prosím odovzdajte im spolu s prístrojom tento návod na obsluhu/bezpečnostné pokyny. Nepreberáme žiadne ručenie za nehody ani škody, ktoré vzniknú nedodržaním tohto návodu na obsluhu a bezpečnostných pokynov.

1. Bezpečnostné pokyny

Nebezpečenstvo!
Prečítajte si všetky bezpečnostné predpisy a pokyny. Nedostatky pri dodržovaní bezpečnostných predpisov a pokynov môžu mať za následok úraz elektrickým prúdom, vznik požiaru a/alebo ťažké poranenia. **Všetky bezpečnostné predpisy a pokyny si odložte pre budúce použitie.**

1. Vždy skontrolujte, či sa sieťové napätie zhoduje s napätím na výrobnom štítku. Pre prípad, že sieťové napätie nie je vhodné, môže dochádzať k abnormálnemu fungovaniu stroja a k ujme na zdraví.
2. Napájanie elektrickým prúdom musí mať uzemnenie a musí byť zabezpečené ochranným elektrickým spínačom pre chybový prúd.
3. Je zakázané zdvíhať bremená, ktoré prekračujú nominálne zaťaženie.
4. Zariadenie používajte len na účel, pre ktorý je určené. Lanovým zdvíhacím zariadením nikdy nezdvíhajte osoby.
5. Pri vyťahovaní zástrčky zo zásuvky neťahajte za kábel. Chráňte elektrický kábel pred teplom, olejom a ostrými hranami.
6. Nikdy neskúšajte zdvíhať pevné alebo zaseknuté bremená.
7. Keď nepoužívate zdvíhacie zariadenie, vytiahnite zástrčku zo zásuvky.
8. Zabráňte prístupu detí a iných neautorizovaných osôb k zariadeniu.
9. Je zakázané ťahať bremená do strany alebo zo strany. Zabráňte kolísaniu bremena.
10. Zabezpečte, aby sa hák pohyboval rovnakým smerom, ako je to zobrazené na ovládacom spínači.
11. Pravidelne kontrolujte, či nie je lanové zdvíhacie zariadenie poškodené. Ovládací spínač musí byť v dobrom stave.
12. Opravy a údržbové práce nechajte vykonávať len v autorizovaných odborných servisoch alebo u odborného elektrikára. Opravy smie vykonávať len odborný elektrikár, v opačnom prípade môže dôjsť k úrazu obsluhujúcej osoby.
13. Vyhýbajte sa rýchlemu zapínaniu a vypínaniu zariadenia (tlačidlová prevádzka).
14. Pri obsluhovaní lanového zdvíhacieho zariadenia buďte vždy pozorní.
15. Nestojte ani nepracujte pod zdvihnutým bremenom.

2. Popis prístroja a objem dodávky

2.1 Popis prístroja (obr. 1/2)
1. Upevňovacie strmene
2. Upevňovací otvor pre hák
3. Bubon
4. Páčka pre maximálnu dĺžku lana
5. Páčka pre automatický zastavovací mechanizmus
6. Oceľové lano
7. Vypínacie závažie
8. Hák
9. Núdzový vypínač
10. Tlačidlo
11. Diaľkové ovládanie
12. Sieťový kábel
13. Kábel ovládača
14. Motor
15. Kladka
16. Dodatočný hák
17. Lanko pre diaľkové ovládanie

2.2 Objem dodávky
Prosím, skontrolujte kompletnosť výrobku na základe uvedeného objemu dodávky. V prípade chýbajúcich častí sa prosím obráťte najneskôr do 5 pracovných dní od zakúpenia výrobku s predložením platného dokladu o kúpe na naše servisné stredisko alebo na obchod, v ktorom ste prístroj zakúpili. Prosím, dbajte pritom na záručnú tabuľku uvedenú v servisných informáciách na konci návodu.

- Otvorte balenie a opatrne vyberte prístroj von z balenia.
- Odstráňte obalový materiál ako aj obalové/transportné poistky (pokiaľ sú obsiahnuté).

Anl_TC_EH_500_SPK9.indb 52 16.11.2017 15:22:02

- Skontrolujte, či obsah dodávky kompletný.
- Skontrolujte, či nedošlo k poškodeniu prístroja a príslušenstva transportom.
- Pokiaľ možno, uschovajte si obal až do konca záručnej doby.

Nebezpečenstvo!
Prístroj a obalový materiál nie sú hračky! Deti sa nesmú hrať s plastovými vreckami, fóliami ani malými dielmi! Hrozí nebezpečenstvo prehltnutia a udusenia!

- Originálny návod na obsluhu

3. Správne použitie prístroja

Lanové zdvíhacie zariadenie slúži na zdvíhanie a spúšťanie bremien v uzatvorených miestnostiach primerane k výkonu zariadenia.

Prístroj smie byť použitý len na ten účel, na ktorý bol určený. Akékoľvek iné odlišné použitie sa považuje za nespĺňajúce účel použitia. Za škody alebo zranenia akéhokoľvek druhu spôsobené nesprávnym používaním ručí používateľ / obsluhujúca osoba, nie však výrobca.

Prosím berte ohľad na skutočnosť, že naše prístroje neboli svojim určením konštruované na profesionálne, remeselnícke ani priemyselné použitie. Nepreberáme žiadne záručné ručenie, ak sa prístroj bude používať v profesionálnych, remeselníckych alebo priemyselných prevádzkach ako aj na činnosti rovnocenné s takýmto použitím.

4. Technické údaje

Napätie (V)	230 V ~ 50 Hz
Menovitý prúd (A)	4,4
Príkon (W)	1000
Pracovný režim	S3 20%:10 min
Nominálne zaťaženie (kg)	250 / 500
Zdvíhacia výška (jednoduchý/dvojitý hák) (m)	11,5 / 5,7
Nominálna rýchlosť (jednoduchý/dvojitý hák) (m/min)	8 / 4
Priemer oceľového lana (mm)	4,0
Pevnosť oceľového lana v ťahu (N/mm^2)	1870
Trieda izolácie	B
Stupeň ochrany	IP 54
Trieda hnacej jednotky	M1
Hmotnosť netto (kg)	16,2

Prevádzkový režim S3 - 20% - 10 min: S3 = prerušovaná prevádzka bez vplyvu priebehu rozbehu. Znamená to, že počas doby 10 minút predstavuje maximálny prevádzkový čas 20% (2,0 min).

Obmedzte tvorbu hluku a vibráciu na minimum!
- Používajte len prístroje v bezchybnom stave.
- Pravidelne vykonávajte údržbu a čistenie prístroja.
- Prispôsobte spôsob práce prístroju.
- Prístroj nepreťažujte.
- V prípade potreby nechajte prístroj skontrolovať.
- Prístroj vypnite, pokiaľ ho nepoužívate.
- Používajte rukavice.

5. Pred uvedením do prevádzky

Presvedčte sa pred zapojením prístroja do siete o tom, či údaje na typovom štítku prístroja súhlasia s údajmi elektrickej siete.
Výstraha!
Skôr než začnete na prístroji robiť akékoľvek nastavenia, vytiahnite zo siete elektrický kábel.

- Lanové zdvíhacie zariadenie nie je vhodné na prepravu horúcich a / alebo roztavených hmôt, okrem toho nie je zdvíhacie zariadenie určené na použitie pri nízkych teplotách a v agresívnom prostredí.
- Mechanická skupina je M1.
- Doba používania lanového zdvíhacieho zariadenia je cca. 8000 cyklov (okrem náhradných dielov). Keď má zdvíhacie zariadenie za sebou 8000 cyklov, musia byť skontrolované a opravené všetky mechanické časti.
- Predtým ako začnete používať lanové zdvíhacie zariadenie si prečítajte a pochopte návod na obsluhu.
- Ubezpečte sa, že obsluhujúca osoba vie, ako zariadenie funguje a ako by sa malo prevádzkovať.
- Používateľ by mal konať vždy v súlade s návodom na obsluhu.
- Zdvíhacie zariadenie nie je vhodné pre trvalú prevádzku. Prevádzkový režim je: Prerušovaná prevádzka bez vplyvu priebehu

Anl_TC_EH_500_SPK9.indb 53 16.11.2017 15:22:02

rozbehu.
- Menovitý výkon zariadenia sa nemení s polohou zaťaženia.

5.1 Vybalenie
Po otvorení balenia prosím skontrolujte možné transportné poškodenia rámu, oceľového lana, hákov a elektrického kontrolného mechanizmu.

5.2 Montáž (obrázok 5)
Lanové zdvíhacie zariadenie je vybavené 2 upevňovacími strmeňmi (1), ktorými sa musí upevniť na štvorhrannú rúru. Rozmery konzoly musia byť v súlade s veľkosťou upevňovacích strmeňov (1) a konzola musí mať dvojnásobnú nominálnu nosnosť. Odporúčame Vám kontaktovať kvalifikovaného technika.
Všetky skrutky musia byť riadne dotiahnuté. Pred uvedením zariadenia do prevádzky by mal ukotvenie konzoly skontrolovať kvalifikovaný technik.

5.3 Funkcia kladkostroja (obrázok 6 – 9)
Lanové zdvíhacie zariadenie je vybavené kladkou (15) a dodatočným hákom (16). Pri správnom použití je možné pomocou lanového zdvíhacieho zariadenia zdvihnúť dvojnásobnú záťaž.
Namontujte kladku (15) a dodatočný hák (16) tak, ako to je znázornené na obrázku 6-8. Napevno namontovaný hák (8) musí byť zavesený v upevňovacom otvore (2) (obrázok 9).
Bremeno je teraz zdvíhané pomocou dvoch oceľových lán, lanové zdvíhacie zariadenie je takto schopné uniesť dvojnásobnú záťaž.

6. Obsluha

Nebezpečenstvo!
6.1 Pokyny k prevádzke
1. Pred prvým použitím odstráňte lepiacu pásku z bubna (3).
2. Hodnota emisií hluku na mieste obsluhujúcej osoby s hodnotením A je nižšia ako 75 dB (hladina akustického tlaku LpA). Hodnoty hluku a vibrácie boli merané podľa EN ISO 11201.
3. Napájacie napätie: 230 V ± 10%, 50 Hz ± 1%.
4. Lanové zdvíhacie zariadenie je potrebné prevádzkovať pri teplotách okolitého prostredia medzi 0 °C a 40 °C a relatívnej vlhkosti pod 50%. Nadmorská výška: max. 1000 m.
5. Pre transport a skladovanie sa môže pohybovať teplota v rozpätí -25 °C a 55 °C. Najvyššia prípustná teplota nesmie prekročiť 70 °C.
6. Používateľ by mal zdvíhať bremeno z podlahy najnižšou možnou rýchlosťou. Keď sa zdvíha bremeno, lano by malo byť napnuté.
7. Motor (14) lanového zdvíhacieho zariadenia je vybavený termostatovým spínačom. Počas prevádzky lanového zdvíhacieho zariadenia môže preto dôjsť k zastaveniu motora (14), tento sa znovu spustí, akonáhle sa znovu ochladí.
8. Elektrické lanové zdvíhacie zariadenie nie je vybavené obmedzovačom menovitého výkonu. Preto sa prosím ďalej nepokúšajte zdvíhať bremeno, keď prevádzku obmedzuje ochrana pred prehrievaním. V tomto prípade prekračuje záťaž menovitý výkon zdvíhacieho zariadenia.
9. Nenechávajte bez dozoru visiace bremená bez toho, aby ste prijali príslušné bezpečnostné opatrenia.
10. Pre ochranu elektrického okruhu zabezpečte zariadenie 10 A poistkou alebo 10 mA ochranným spínačom pre chybový prúd.
11. Nepoužívajte páčky (4/5) ako bežné zastavovacie zariadenie. Slúžia len ako zastavovacie zariadenie pre prípad núdze.
12. Skôr než začnete pracovať, ubezpečte sa, že je oceľové lano (6) správne navinuté na bubon (3), a že je vzdialenosť medzi návinmi menšia ako oceľové lano (obrázok 3).
13. Ubezpečte sa, že je náklad riadne zaistený na háku (8), resp. pri kladkostrojovej prevádzke na dodatočnom háku (16) a vždy udržiavajte odstup od bremena a oceľového lana (6).

6.2 Prevádzka (obrázok 1)
- Skontrolujte, či je stlačené tlačidlo núdzového vypnutia (9). Otočte červené tlačidlo Stop v smere hodinových ručičiek, aby ste ho odistili.
- Stlačte tlačidlo ▲ (10) pre nadvihnutie bremena.
- Stlačte tlačidlo ▼ (10) pre spustenie bremena.
- Páčka automatického zastavovacieho mechanizmu (5): Ak je dosiahnutá maximálna zdvíhacia výška, zatlačí vypínacie závažie (7) páčku (5) nahor. Dôjde tým k aktivácii koncového vypínača a bremeno už nemôže byť ďalej zdvíhané.
- Páčka pre maximálnu dĺžku lana (4): Keď dosiahne bremeno najnižšiu možnú polohu, aktivuje sa koncový spínač, ktorý neumožní ďalšie spúšťanie bremena. Tento koncový

Anl_TC_EH_500_SPK9.indb 54 16.11.2017 15:22:02

spínač môže rovnako zabrániť aj prevádzke zdvíhacieho zariadenia nesprávnym smerom (hák sa pohybuje opačným smerom, ako je zobrazené na ovládacom spínači).
- Keď sa aktivuje núdzový vypínač (9), lanové zdvíhacie zariadenie sa zastaví.
- V prípade núdze okamžite stlačte núdzový vypínač (9), aby ste zdvíhacie zariadenie zastavili. Obsluha lanového zdvíhacieho zariadenia nie je možná, keď je stlačený núdzový vypínač.

7. Výmena sieťového prípojného vedenia

Nebezpečenstvo!
V prípade poškodenia sieťového prípojného vedenia prístroja sa musí vedenie vymeniť výrobcom alebo jeho zákazníckym zastúpením alebo podobne kvalifikovanou osobou, aby sa zabránilo rizikám.

8. Čistenie, údržba a objednanie náhradných dielov

Nebezpečenstvo!
Pred všetkými údržbovými a čistiacimi prácami vytiahnite kábel zo siete.

8.1 Čistenie
- Udržujte ochranné zariadenia, vzduchové otvory a kryt motora vždy v čistom stave bez prachu a nečistôt. Utrite prístroj čistou utierkou alebo ho vyčistite vyfúkaním stlačeným vzduchom pri nastavení na nízky tlak.
- Odporúčame, aby ste prístroj čistili priamo po každom použití.
- Čistite prístroj pravidelne pomocou vlhkej utierky a malého množstva tekutého mydla. Nepoužívajte žiadne agresívne čistiace prostriedky ani riedidlá; tieto prostriedky by mohli napadnúť umelohmotné diely prístroja. Dbajte na to, aby sa do vnútra prístroja nedostala voda. Vniknutie vody do elektrického prístroja zvyšuje riziko úrazu elektrickým prúdom.

8.2 Údržba
Nebezpečenstvo! Vždy sa ubezpečte, že zariadenie nie je napojené do elektrickej siete, keď vykonávate jeho údržbu.
- Následne: Jeden cyklus zodpovedá jednému pohybu bremena hore a dolu. Periodická kontrola zodpovedá kontrole po 100 cykloch.
- Periodicky overujte, či riadne fungujú koncové spínače lanového zdvíhacieho zariadenia. Kontrola sa vykonáva nasledovne: Keď dosiahne lano maximálnu zdvíhaciu výšku, aktivuje sa páčka automatického zastavovacieho mechanizmu (5). Motor (14) sa teraz musí zastaviť. (skontrolujte záťaž).
  Ak je lano (6) odtočené tak ďaleko, ako sa dá, aktivuje sa páčka pre maximálnu dĺžku lana (4). Motor (14) sa teraz musí zastaviť.
- Pravidelne kontrolujte sieťový kábel (12) a kábel ovládača (13).
- Každých 200 cyklov sa musí oceľové lano (6) a kladka (15) premazať.
- Každých 30 cyklov sa musí podľa obrázku 4 skontrolovať, či je celé oceľové lano (6) v dobrom stave. Ak je lano poškodené, musí sa nahradiť novým, ktoré vyhovuje technickým údajom.
- Každých 1000 cyklov skontrolujte, či sú skrutky upevňovacích strmeňov (1) a kladky (15) dobre dotiahnuté.
- Každých 1000 cyklov skontrolujte, či sú háky (8/16) a kladka (15) v dobrom stave.
- Pravidelne premazávajte lano, reťaz, prevodovku, ložiská a háky.
- Skontrolujte každých 1000 cyklov opotrebovávané diely ako: lano, reťaz, háky, pásy a brzdové obloženie.
- Pred každým použitím lanového zdvíhacieho zariadenia skontrolujte, či je núdzový vypínač (9) a tlačidlo (10) v bezchybnom prevádzkovom stave.
- Každých 1000 cyklov skontrolujte brzdový systém. Ak z motora (14) vychádzajú nezvyčajné zvuky alebo ak motor nedokáže zdvihnúť nominálnu záťaž, je možné, že je potrebné opraviť brzdový systém:
  - Poškodené alebo opotrebované diely vymeňte a uložte si údržbovú dokumentáciu, ktorá k nim patrí.
  - Pre neplánované opravárenské práce sa prosím obráťte na autorizované zákaznícke centrum.
- Nechajte Váš elektrický nástroj opravovať len kvalifikovaným odborníkom.

Anl_TC_EH_500_SPK9.indb 55 16.11.2017 15:22:02

8.3 Objednávanie náhradných dielov:
Pri objednávaní náhradných dielov je potrebné uviesť nasledovné údaje:

- Typ prístroja
- Výrobné číslo prístroja
- Identifikačné číslo prístroja
- Číslo potrebného náhradného dielu

Aktuálne ceny a informácie nájdete na stránke www.isc-gmbh.info

9. Likvidácia a recyklácia

Prístroj sa nachádza v obale za účelom zabránenia poškodeniu pri transporte. Tento obal je vyrobený zo suroviny a tým pádom je ho možné znovu použiť alebo sa môže dať do zberu na recykláciu surovín. Prístroj a jeho príslušenstvo sa skladajú z rôznych materiálov, ako sú napr. kovy a plasty. Poškodené prístroje nepatria do domového odpadu. Prístroj by sa mal odovzdať k odbornej likvidácii na príslušnom zbernom mieste. Pokiaľ Vám nie je známe takéto zberné miesto, informujte sa prosím na miestnej samospráve.

10. Skladovanie

Skladujte prístroj a jeho príslušenstvo na tmavom, suchom a nezamŕzajúcom mieste mimo dosahu detí. Optimálna teplota pre skladovanie je medzi 5 až 30 °C. Skladujte tento elektrický prístroj v originálnom balení.

Anl_TC_EH_500_SPK9.indb 56 16.11.2017 15:22:02

Len pre krajiny EÚ

Neodstraňujte elektrické prístroje ako domový odpad!

Podľa Európskej smernice 2012/19/ES o odpade z elektrických a elektronických zariadení (OEEZ) a v súlade s národnými právnymi predpismi sa musia použité elektronické prístroje odovzdať do triedeného zberu a musí sa zabezpečiť ich špecifické spracovanie v súlade s ochranou životného prostredia (recyklácia).

Recyklačná alternatíva k výzve na spätné zaslanie výrobku:
Majiteľ elektrického prístroja je alternatívne namiesto spätnej zásielky povinný spolupracovať pri riadnej recyklácii prístroja v prípade vzdania sa jeho vlastníctva. Starý prístroj môže byť za týmto účelom taktiež prenechaný zbernému miestu, ktoré vykoná odstránenie v zmysle národného zákona o recyklácii a odpadovom hospodárstve. Netýka sa to dielov príslušenstva, priložených k starým prístrojom a pomocných prostriedkov bez elektronických komponentov.

Dodatočná tlač alebo iné reprodukovanie dokumentácie a sprievodných dokladov výrobkov, taktiež ich častí, je prípustná len s výslovným súhlasom spoločnosti iSC GmbH.

Technické zmeny vyhradené

Anl_TC_EH_500_SPK9.indb 57 16.11.2017 15:22:02

Servisné informácie

Vo všetkých krajinách uvedených na záručnom liste máme kompetentných servisných partnerov, ktorých kontakty je možné prevziať zo záručného listu. Sú Vám k dispozícii pre akékoľvek servisné požiadavky ako opravy, objednávanie náhradných a opotrebovávaných dielov alebo nákup spotrebných materiálov.

Je potrebné dbať na to, že v prípade tohto výrobku podliehajú nasledujúce diely bežnému pracovnému alebo prirodzenému opotrebeniu, resp. sú nasledujúce diely považované za spotrebný materiál.

Kategória	Príklad
Diely podliehajúce opotrebeniu*	Oceľové lano, Hák, Kladka, Dodatočný hák
Spotrebný materiál / spotrebné diely*	
Chýbajúce diely	

* nie je bezpodmienečne obsiahnuté v objeme dodávky!

V prípade nedostatkov alebo chýb Vás prosíme, aby ste príslušnú chybu nahlásili na adrese www.isc-gmbh.info. Prosím, dbajte na presný popis chyby a odpovedzte pritom v každom prípade na nasledujúce otázky:

- Fungoval prístroj predtým alebo bol od začiatku chybný?
- Všimli ste si niečo pred vyskytnutím poruchy (symptóm pred poruchou)?
- Aké chybné funkcie podľa Vás prístroj vykazuje (hlavný symptóm)?
  Popíšte túto chybnú funkciu.

Anl_TC_EH_500_SPK9.indb 58 16.11.2017 15:22:02

Záručný list

Vážená zákazníčka, vážený zákazník,
naše výrobky podliehajú prísnej kontrole kvality. V prípade, že nebude prístroj napriek tomu bezchybne fungovať, je nám to veľmi ľúto a prosíme Vás, aby ste sa obrátili na našu servisnú službu na adrese uvedenej na tomto záručnom liste. Radi Vám budeme k dispozícii taktiež telefonicky na uvedenom servisnom telefónnom čísle. Pre uplatnenie nárokov na záručné plnenie platia nasledujúce podmienky:

1. Tieto záručné podmienky sa týkajú výlučne štandardných spotrebiteľov, t.j. takých osôb, ktoré tento výrobok nechcú používať na účely v rámci svojich remeselníckych činností ani na iné samostatne zárobkové činnosti. Tieto záručné podmienky upravujú dodatočné záručné plnenia, ktoré nižšie uvedený výrobca poskytuje kupujúcim svojich nových prístrojov dodatočne k zákonnej záruke. Vaše zákonné nároky na záruku nie sú touto zárukou dotknuté. Naše záručné plnenie je pre Vás zadarmo.
2. Záručné plnenie sa vzťahuje výlučne len na nedostatky na Vami zakúpenom novom prístroji nižšie uvedeného výrobcu, ktoré sú spôsobené chybami materiálu alebo výrobnými chybami, a podľa nášho uváženia sa obmedzuje na odstránenie týchto nedostatkov na prístroji alebo výmenu prístroja. Prosím, dbajte na to, že naše prístroje neboli svojim určením konštruované na profesionálne, remeselnícke ani odborné použitie. Táto záručná zmluva sa preto neuzatvára, ak sa prístroj počas záručnej doby používal v profesionálnych, remeselníckych alebo priemyselných prevádzkach, alebo ak bol vystavený namáhaniu rovnocennému s takýmto použitím.
3. Z našej záruky sú vylúčené:
   - Škody na prístroji, ktoré boli spôsobené nedodržaním montážneho návodu alebo na základe neodbornej inštalácie, nedodržaním návodu na použitie (ako napr. pripojením na nesprávne sieťové napätie alebo druh prúdu) alebo nedodržaním pokynov pre údržbu a bezpečnostných pokynov alebo vystavením prístroja abnormálnym poveternostným podmienkam alebo nedostatočnou starostlivosťou a údržbou.
   - Škody na prístroji, ktoré boli spôsobené zneužívaním alebo nesprávnym používaním (ako napr. preťaženie prístroja alebo použitie neprípustných pracovných nástrojov alebo príslušenstva), vniknutím cudzích telies do prístroja (ako napr. piesok, kamene alebo prach, prepravné poškodenia), použitím násilia alebo cudzieho pôsobenia (napr. škody spôsobené pádom).
   - Škody na prístroji alebo na častiach prístroja, ktoré zodpovedajú príslušnému pracovnému, bežnému alebo inému prirodzenému opotrebeniu.
4. Doba záruky je 24 mesiacov a začína plynúť od dátumu zakúpenia prístroja. Nároky na záruku sa musia uplatniť pred koncom uplynutia záručnej doby do dvoch týždňov od zistenia nedostatku. Uplatnenie nárokov na záruku po uplynutí záručnej doby je vylúčené. Oprava alebo výmena prístroja nevedie k predĺženiu záručnej doby ani nedochádza na základe tohto plnenia ku vzniku novej záručnej doby pre prístroj ani pre akékoľvek inštalované náhradné diely. To platí taktiež pri použití miestneho servisu.
5. Pre uplatnenie Vášho nároku, prosím nahláste defektný prístroj na adrese: www.isc-gmbh.info. Prosíme, aby ste mali k dispozícii účtenku alebo iné doklady o zakúpení nového prístroja. Prístroje, ktoré budú zaslané bez príslušných dokladov alebo bez typového štítku, budú vylúčené zo záručného plnenia kvôli nedostatočnej možnosti identifikácie. Ak spadá defekt prístroja pod naše záručné plnenie, dostanete obratom naspäť opravený alebo nový prístroj.

Samozrejme Vám radi opravíme nedostatky na prístroji na Vaše náklady, ak tieto nedostatky nespadajú alebo už nespadajú do rozsahu záruky. Prosím, pošlite nám v takom prípade prístroj na našu servisnú adresu.

Ohľadne opotrebovávaných, spotrebných a chýbajúcich dielov poukazujeme na obmedzenia tejto záruky podľa servisných informácií uvedených v tomto návode na obsluhu.

Anl_TC_EH_500_SPK9.indb 59 16.11.2017 15:22:02

Gevaar!
Bij het gebruik van toestellen dienen enkele veiligheidsmaatregelen te worden nageleefd om lichamelijk gevaar en schade te voorkomen. Lees daarom deze handleiding / veiligheidsinstructies zorgvuldig door. Bewaar deze goed zodat u de informatie op elk moment kunt terugvinden. Mocht u dit toestel aan andere personen doorgeven, gelieve dan deze handleiding / veiligheidsinstructies mee te geven. Wij zijn niet aansprakelijk voor ongevallen of schade die te wijten zijn aan niet-naleving van deze handleiding en van de veiligheidsinstructies.

1. Veiligheidsaanwijzingen

Gevaar!
Lees alle veiligheidsinstructies en aanwijzingen. Nalatigheden bij de inachtneming van de veiligheidsinstructies en aanwijzingen kunnen elektrische schok, brand en/of zware letsels tot gevolg hebben. **Bewaar alle veiligheidsinstructies en aanwijzingen voor de toekomst.**

1. Controleer steeds of de netspanning overeenkomt met de spanning vermeld op het kenplaatje. Indien de netspanning niet geschikt is kan dit leiden tot een abnormale functie van de machine en tot lichamelijk letsel.
2. De stroomtoevoer moet voorzien zijn van een aarding en beveiligd zijn door een aardlekschakelaar.
3. Het is verboden lasten te hijsen die de nominale last overschrijden.
4. Gebruik het gereedschap enkel voor het voorziene doeleinde. Nooit personen met de kabeltakel hijsen.
5. Trek niet aan de kabel om de stekker uit het stopcontact te verwijderen. Hou de kabel verwijderd van hitte, olie en scherpe kanten.
6. Probeer nooit vast zittende of geblokkeerde lasten te hijsen.
7. Verwijder de netstekker uit het stopcontact als de kabeltakel niet in gebruik is.
8. Hou kinderen en andere niet geautoriseerde personen weg van de machine.
9. Het is verboden lasten zijwaarts of van de zijkant te trekken. Vermijdt het slingeren van de last.
10. Zorg ervoor dat de haak in dezelfde richting beweegt als aangeduid op de bedieningsschakelaar.
11. Controleer de kabeltakel regelmatig op beschadigingen. De bedieningsschakelaar dient in goede staat te verkeren.
12. Laat herstellingen en onderhoudswerkzaamheden enkel door geautoriseerde gespecialiseerde werkplaatsen uitvoeren door een elektrovakman. Herstellingen mogen enkel door een elektrovakman worden doorgevoerd, anders zouden zich ongelukken voor de gebruiker kunnen voordoen.
13. Vermijdt het snel in- en uitschakelen (tipmodus).
14. Wees steeds oplettend als u de kabeltakel bedient.
15. Ga nooit onder de gehesen last gaan staan of werken.

2. Beschrijving van het gereedschap en leveringsomvang

2.1 Beschrijving van het gereedschap (fig. 1/2)
1. Bevestigingsbeugel
2. Bevestigingsgat voor haak
3. Trommel
4. Hendel voor maximale kabellengte
5. Hendel van het automatische stopmechanisme
6. Staaldraadkabel
7. Uitschakelgewicht
8. Haak
9. Noodstopschakelaar
10. Drukknoppen
11. Afstandsbediening
12. Netkabel
13. Stuurleiding
14. Motor
15. Keerrol
16. Extra haak
17. Kabel voor afstandsbediening

2.2 Leveringsomvang
Gelieve de volledigheid van het artikel te controleren aan de hand van de beschreven omvang van de levering. Indien er onderdelen ontbreken, gelieve u dan binnen 5 werkdagen na aankoop van het artikel te wenden tot ons servicecenter of tot het verkooppunt waar u het apparaat heeft gekocht, en leg een geldig bewijs van aankoop voor. Gelieve daarvoor de garantietabel in de serviceinformatie aan het einde van de handleiding in acht te nemen.

Anl_TC_EH_500_SPK9.indb 60 16.11.2017 15:22:02

- Open de verpakking en neem het toestel voorzichtig uit de verpakking.
- Verwijder het verpakkingsmateriaal alsmede verpakkings-/transportbeveiligingen (indien aanwezig).
- Controleer of de leveringsomvang compleet is.
- Controleer het toestel en de accessoires op transportschade.
- Bewaar de verpakking indien mogelijk tot het verloop van de garantieperiode.

Gevaar!
Het toestel en het verpakkingsmateriaal zijn geen speelgoed voor kinderen! Kinderen mogen niet met plastic zakken, folies en kleine stukken spelen! Er bestaat inslik- en verstikkingsgevaar!

- Originele handleiding

3. Reglementair gebruik

De kabeltakel dient om lasten in gesloten ruimten overeenkomstig de capaciteit van het apparaat te hijsen en te laten zakken.

De machine mag slechts voor werkzaamheden worden gebruikt waarvoor ze bedoeld is. Elk ander verder gaand gebruik is niet reglementair. Voor daaruit voortvloeiende schade of verwondingen van welke aard dan ook is de gebruiker/bediener, niet de fabrikant, aansprakelijk.

Wij wijzen erop dat onze gereedschappen overeenkomstig hun bestemming niet geconstrueerd zijn voor commercieel, ambachtelijk of industrieel gebruik. Wij geven geen garantie indien het gereedschap in ambachtelijke of industriële bedrijven alsmede bij gelijk te stellen activiteiten wordt gebruikt.

4. Technische gegevens

Spanning [V] ..... 230 V ~ 50 Hz
Nominale stroom (A) 4,4
Opgenomen vermogen (W) 1000
Bedrijfsmodus ..... S3 20%:10 min
Nominale last (kg) .....250 / 500
Hefhoogte (enkele/dubbele haak) (m) ...11,5 / 5,7
Nominale snelheid
(enkele/dubbele haak) (m/min) .....8 / 4
Diameter van de staaldraadkabel (mm) 4,0
Treksterkte van de staaldraadkabel (N/mm^2) 1870
Isolatieklasse ..... B
Beschermklasse ..... IP 54
Transmissieklasse..... M1
Nettogewicht (kg)..... 16,2

Bedrijfsmodus S3 – 20% - 10 min.:
S3 = intermitterende modus zonder invloed van de aanloopprocedure. Dat betekent dat gedurende een periode van 10 min. de maximale werkingsduur 20% (2,0 min.) bedraagt.

Beperk de geluidsontwikkeling en vibratie tot een minimum!
- Gebruik enkel intacte toestellen.
- Onderhoud en reinig het toestel regelmatig.
- Pas uw manier van werken aan het toestel aan.
- Overbelast het toestel niet.
- Laat het toestel indien nodig nazien.
- Schakel het toestel uit als het niet wordt gebruikt.
- Draag handschoenen.

5. Vóór inbedrijfstelling

Controleer of de gegevens vermeld op het kenplaatje overeenkomen met de gegevens van het stroomnet alvorens het gereedschap aan te sluiten.
Waarschuwing!
Verwijder altijd de netstekker uit het stopcontact voordat u het gereedschap anders afstelt.

- De kabeltakel is niet geschikt voor het transport van warme en/of gesmolten massa's en is evenmin voorzien om bij lage temperaturen en in een agressieve omgeving te worden gebruikt.
- Mechanische groep is M1.
- De gebruiksduur van de kabeltakel is ca. 8000 cycli (excl. slijtstukken). Als de takel 8000 cycli heeft voltooid dienen alle mechanische componenten te worden gecontroleerd en gereviseerd.
- Lees en begrijp de handleiding alvorens de kabeltakel te gebruiken.
- Zorg ervoor dat de bedieningspersoon weet hoe de machine werkt en hoe zij moet wor-

Anl_TC_EH_500_SPK9.indb 61 16.11.2017 15:22:02

den gebruikt.
- De gebruiker is gehouden steeds in overeenstemming met de handleiding te werk te gaan.
- De kabeltabel is niet voorzien voor permanent gebruik. De bedrijfsmodus is: intermitterende modus zonder invloed van de aanloopprocedure.
- Het nominale vermogen van de machine varieert niet met de positie van de belasting.

5.1 Uitpakken
Gelieve na het openen van de verpakking het frame, de staaldraadkabel, de haak en het elektrische controlemechanisme op mogelijke transportschade te controleren.

5.2 Montage (fig. 5)
De kabeltakel is uitgerust met 2 bevestigingsbeugels (1) waarmee hij op een vierkante buis moet worden vastgemaakt. De afmetingen van de draagarm dienen overeen te komen met de grootte van de bevestigingsbeugels (1) en hij moet de dubbele nominale last kunnen dragen. Wij bevelen u aan om een gekwalificeerde technicus te contacteren.
Alle schroeven en bouten moeten naar behoren aangehaald zijn. Vóór de inbedrijfstelling moet een gekwalificeerde technicus de verankering van de draagarm controleren.

5.3 Takelfunctie (fig. 6-9)
De kabeltakel is voorzien van een keerrol (15) en een extra haak (16). Bij correct gebruik kan de kabeltakel de dubbele last hijsen.
Monteer de keerrol (15) en de extra haak (16) zoals voorgesteld in fig. 6-8. De vast gemonteerde haak (8) moet in het bevestigingsgat (2) worden vastgehaakt (fig. 9).
De last wordt dan gehesen m.b.v. twee staaldraadkabels; de kabeltakel kan op die manier de dubbele last hijsen.

6. Bediening

Gevaar!
6.1 Aanwijzingen omtrent het werken met de kabeltakel
1. Verwijder het plakband van de trommel (3) voordat u de takel voor het eerst in gebruik neemt.
2. De waarde van de A-beoordeelde geluidsemissie aan de positie van de bediener is lager dan 75dB (geluidsdrukniveau LpA). De geluids- en trilwaarden werden vastgesteld volgens EN ISO 11201.
3. Voedingsspanning: 230V ± 10%, 50Hz ± 1%.
4. De kabeltakel dient bij omgevingstemperaturen tussen 0° C en 40° C en bij een luchtvochtigheid van minder dan 50% te worden gebruikt. Hoogte boven zeespiegel: max. 1.000 m
5. Voor het transport en de opslag mag de temperatuur tussen -25° C en 55° C bedragen. De maximaal toelaatbare temperatuur mag niet meer dan 70° C bedragen.
6. De gebruiker dient de last met een zo laag mogelijke snelheid van de grond te hijsen. De draadkabel moet strak zijn als de last wordt gehesen.
7. De motor (14) van de kabeltakel is uitgerust met een thermostaatschakelaar. Tijdens de werking van de kabeltakel zou het dus kunnen dat de motor (14) stopt; de motor zal vanzelf herstarten zodra hij afgekoeld is.
8. De elektrische kabeltakel is niet voorzien van een nominale vermogensbegrenzer. Daarom zeker niet verder proberen de last te hijsen als de beveiliging tegen oververhitting de werking van de machine begrenst. De last overschrijdt in dit geval het nominale vermogen van de kabeltakel.
9. Laat geen zwevende lasten zonder toezicht zonder overeenkomstige veiligheidsmaatregelen te hebben genomen.
10. Beveilig het apparaat door een 10 A zekering of door een 10 mA aardlekschakelaar om de stroomkring te beschermen.
11. Gebruik de hendels (4/5) niet als normale stopzetinrichting. Zij dienen slechts als stopinrichting in geval van nood.
12. Voordat u begint dient u er zich van te vergewissen dat de draadkabel (6) correct rond de trommel (3) is gewikkeld en dat de afstand tussen de windingen kleiner is dan de draadkabel (fig. 3)
13. Zorg ervoor dat de lading naar behoren aan de haak (8) of bij gebruik als katrol aan de extra haak (16) veilig is vastgemaakt en hou steeds afstand tot de last en de staaldraadkabel (6).

6.2 Gebruik (fig. 1)
- Controleer of de noodstopschakelaar (9) is ingedrukt. Draai de rode stopschakelaar met de wijzers van de klok mee om hem te ontgrendelen.
- Druk op de drukknop ▲ (10) om de last te

Anl_TC_EH_500_SPK9.indb 62 16.11.2017 15:22:03

hijsen.
- Druk op de drukknop ▼ (10) om de last te laten zakken.
- Hendel van het automatische stopmechanisme (5): Als de maximale hijshoogte is bereikt, drukt het uitschakelgewicht (7) de hendel (5) omhoog. Daardoor wordt een eindschakelaar in werking gesteld en kan de last niet verder worden gehesen.
- Hendel voor maximale kabellengte (4): als de last de onderste mogelijke positie heeft bereikt wordt een eindschakelaar in werking gesteld die verhindert dat men de last verder kan laten zakken. Deze eindschakelaar zou ook voorkomen dat de kabeltakel in verkeerde richting in werking wordt gesteld (haak beweegt in andere richting dan aangeduid op de bedieningsschakelaar).
- Als u op de noodstopschakelaar (9) drukt stopt de kabeltakel.
- In geval van nood onmiddellijk de noodstopschakelaar (9) bedienen om de kabeltakel te stoppen. De bediening van de kabeltakel is niet mogelijk als de noodstopschakelaar is ingedrukt.

7. Vervanging van de netaansluitleiding

Gevaar!
Als de netaansluitleiding van dit apparaat beschadigd wordt, dan moet hij door de fabrikant of diens klantendienst of door een gelijkwaardig gekwalificeerde persoon vervangen worden, om gevaren te vermijden.

8. Reiniging, onderhoud en bestellen van wisselstukken

Gevaar!
Trek vóór alle schoonmaakwerkzaamheden de netstekker uit het stopcontact.

8.1 Reiniging
- Hou de veiligheidsinrichtingen, de ventilatiespleten en het motorhuis zo veel mogelijk vrij van stof en vuil. Wrijf het toestel met een schone doek af of blaas het met perslucht bij lage druk schoon.
- Het is aan te bevelen het toestel direct na elk gebruik te reinigen.
- Reinig het toestel regelmatig met een vochtige doek en wat zachte zeep. Gebruik geen reinigings- of oplosmiddelen; die zouden de kunststofcomponenten van het toestel kunnen aantasten. Let er goed op dat geen water in het toestel terechtkomt. Door binnendringen van water in een elektrische apparatuur verhoogt het risico van een elektrische schok.

8.2 Onderhoud
Gevaar! Zorg er steeds voor dat de machine niet met het stroomnet is verbonden als u de machine onderhoudt.
- Hieronder: een cyclus komt overeen met één op- en neerwaartse beweging van een last. Periodieke controle komt overeen met een controle na 100 cycli.
- Ga periodiek na of de eindschakelaars van de kabeltakel naar behoren werken. Ga bij de controle als volgt te werk: zodra de kabel de maximale hijshoogte heeft bereikt wordt de hendel van het automatische stopmechanisme (5) in werking gesteld. De motor (14) moet dan stoppen. (Zonder last controleren). Als de staaldraadkabel (6) zo ver mogelijk is afgewonden wordt de hendel voor maximale kabellengte (4) in werking gesteld. De motor (14) moet dan stoppen.
- Onderwerp de netkabel (12) en de stuurleiding (13) aan een periodieke controle.
- Om de 200 cycli moeten de staaldraadkabel (6) en de keerrol (15) worden gesmeerd.
- Om de 30 cycli dient u conform fig. 4 na te gaan of de gehele draadkabel (6) in goede staat verkeert. Indien de kabel beschadigd is dient hij door een staaldraadkabel te worden vervangen die overeenkomt met de technische gegevens.
- Om de 1000 cycli controleren of de bouten van de bevestigingsbeugels (1) en de keerrol (15) goed aangehaald zijn.
- Om de 1000 cycli controleren of de haken (8/16) en de keerrol (15) in goede staat verkeren.
- Smeer regelmatig de kabel, ketting, transmissie, lagers en haak.
- Controleer om de 1000 cycli slijtstukken zoals: kabel, ketting, haak, banden en remvoeringen.
- Controleer vóór elk gebruik van de kabeltakel of de noodstopschakelaar (9) en de drukknop (10) in perfecte bedrijfstoestand verkeren.
- Om de 1000 cycli het remsysteem controleren. Als de motor (14) ongewone geluiden maakt of de nominale last niet kan hijsen moet het remsysteem mogelijk worden gere-

Anl_TC_EH_500_SPK9.indb 63 16.11.2017 15:22:03

viseerd:
- vervang beschadigde of versleten onderdelen en bewaar de bijhorende onderhoudsdocumentatie.
- voor extra onderhoudswerkzaamheden gelieve zich tot een geautoriseerde servicecenter te wenden.

- Laat uw elektrisch gereedschap enkel door gekwalificeerd vakpersoneel herstellen.

8.3 Bestellen van wisselstukken:
Gelieve bij het bestellen van wisselstukken volgende gegevens te vermelden:
- Type van het toestel
- Artikelnummer van het toestel
- Ident-nummer van het toestel
- Wisselstuknummer van het benodigd stuk

Actuele prijzen en info vindt u terug onder www.isc-gmbh.info

9. Verwijdering en recyclage

Het toestel bevindt zich in een verpakking om transportschade te voorkomen. Deze verpakking is een grondstof en bijgevolg herbruikbaar of kan naar de grondstofkringloop worden teruggevoerd. Het toestel en zijn accessoires bestaan uit diverse materialen, zoals b.v. metaal en kunststof. Defecte toestellen horen niet thuis in het huisvuil. Om zich van het toestel naar behoren te ontdoen dient het naar een geschikte verzamelplaats te worden gebracht. Als u geen verzamelplaats kent gelieve u dan bij de gemeente te informeren.

10. Opbergen

Bewaar het toestel en de accessoires op een donkere, droge en vorstvrije plaats die voor kinderen ontoegankelijk is. De optimale opbergtemperatuur ligt tussen 5° C en 30° C. Bewaar het elektrische gereedschap in de originele verpakking.

Anl_TC_EH_500_SPK9.indb 64 16.11.2017 15:22:03

Enkel voor EU-landen

Elektrisch gereedschap hoort niet bij het huisvuil thuis!

Volgens de Europese richtlijn 2012/19/EG op afgedankte elektrische en elektronische toestellen en omzetting in nationaal recht dienen afgedankte elektrische gereedschappen afzonderlijk te worden verzameld en milieuvriendelijk te worden gerecycleerd.

Recyclagealternatief i.p.v. het toestel terug te sturen:
De eigenaar van het elektrische toestel is alternatief verplicht, i.p.v. het toestel terug te sturen, mede te werken bij de behoorlijke recyclage in geval hij zich van het eigendom ontdoet. Het afgedankte toestel kan hiervoor ook bij een verzamelplaats worden afgegeven die voor een verwijdering als bedoeld in de wetgeving in zake recyclage en afvalverwerking zorgt. Hieronder vallen niet bij de afgedankte toestellen gevoegde accessoires en hulpmiddelen zonder elektrische componenten.

Nadruk of andere reproductie van documentatie en geleidepapieren van de producten, geheel of gedeeltelijk, enkel toegestaan mits uitdrukkelijke toestemming van iSC GmbH.

Technische wijzigingen voorbehouden

Service-informatie

Wij werken in alle landen die in het garantiebewijs zijn genoemd, samen met competente servicepartners, wier contactgegevens u kunt afleiden uit het garantiebewijs. Deze staan voor alle diensten zoals reparatie, het verschaffen van wisselstukken of slijtdelen of voor de aankoop van verbruiksmaterialen te uwer beschikking.

U moet er rekening mee houden dat bij dit product de volgende delen onderhevig zijn aan een slijtage door gebruik of een natuurlijke slijtage, resp. dat de volgende delen nodig zijn als verbruiksmaterialen.

Categorie	Voorbeeld
Slijtstukken*	Staaldraadkabel, Haak, Keerrol, Extra haak
Verbruiksmateriaal/verbruiksstukken*	
Ontbrekende onderdelen	

* niet verplicht bij de leveringsomvang begrepen!

Bij gebreken of defecten verzoeken wij u om de fout te melden op het internet onder www.isc-gmbh.info. Gelieve te zorgen voor een nauwkeurige beschrijving van de fout en daarbij in elk geval de volgende vragen te beantwoorden:

- Heeft het toestel reeds eenmaal gewerkt of was het vanaf het begin defect?
- Is u iets opgevallen voordat het defect zich voordeed (symptoom vóór het defect)?
- Welke foutieve werkwijze vertoont het toestel volgens u (hoofdsymptoom)?
  Beschrijf deze foutieve werkwijze.

Anl_TC_EH_500_SPK9.indb 66 16.11.2017 15:22:03

Garantiebewijs

Geachte klant,
onze producten worden onderworpen aan een strenge kwaliteitscontrole. Mocht dit apparaat echter ooit niet naar behoren functioneren, spijt dit ons ten zeerste en vragen u zich te wenden tot onze servicedienst onder het adres vermeld op dit garantiebewijs. Wij staan ook graag telefonisch tot uw dienst via het vermelde servicetelefoonnummer. Voor eisen in verband met het recht garantie geldt het volgende:

1. Deze garantievoorwaarden zijn uitsluitend gericht aan de gebruikers, d.w.z. natuurlijke personen die dit product niet in het kader van hun ambachtelijke noch van een andere zelfstandige activiteit willen gebruiken. Deze garantievoorwaarden regelen aanvullende garantieprestaties, die de hieronder genoemde fabrikant kopers van zijn nieuwe apparaten toezegt in aanvulling tot de wettelijke garantie. Uw wettelijke garantieclaims blijven onaangetast door deze garantie. Onze garantieprestatie is voor u gratis.
2. De garantieprestatie geldt uitsluitend voor gebreken aan een door u aangekocht nieuw apparaat van de hieronder genoemde fabrikant die aantoonbaar berusten op een materiaal- of productiefout, en is naar onze keuze beperkt tot het verhelpen van zulke gebreken aan het apparaat of de vervanging ervan.
   Wij wijzen erop dat onze apparaten overeenkomstig hun bestemming niet ontworpen zijn voor commercieel, ambachtelijk of industrieel gebruik. Van een garantiecontract is derhalve geen sprake, als het apparaat binnen de garantieperiode in commerciële, ambachtelijke of industriële bedrijven werd ingezet of aan een daarmee gelijk te stellen belasting werd blootgesteld.
3. Van onze garantie zijn uitgesloten:
   - Schade aan het apparaat als gevolg van niet-inachtneming van de montagehandleiding of op grond van ondeskundige installatie, als gevolg van niet-inachtneming van de gebruiksaanwijzing (zoals bijv. door aansluiting aan een verkeerde netspanning of stroomsoort) of niet-inachtneming van de onderhouds- en veiligheidsvoorschriften, door blootstelling van het apparaat aan abnormale omgevingsvoorwaarden of door nalatig onderhoud en verzorging.
   - Schade aan het apparaat als gevolg van misbruik of ondeskundige toepassingen (zoals bijv. overbelasting van het apparaat of de inzet van niet toegelaten gereedschappen of toebehoren), binnendringen van vreemde voorwerpen in het apparaat (zoals bijv. zand, stenen of stof, transportschade), gebruik van geweld of als gevolg van externe invloeden (zoals bijv. schade door vallen).
   - Schade aan het apparaat of aan delen van het apparaat die valt te herleiden tot slijtage als gevolg van gebruik, en als gevolg van normale of andere natuurlijke slijtage.
4. De garantieperiode bedraagt 24 maanden en gaat in op de datum van aankoop van het apparaat. Garantieclaims dienen voor het verloop van de garantieperiode binnen de twee weken na het vaststellen van het defect geldend te worden gemaakt. Het indienen van garantieclaims na verloop van de garantieperiode is uitgesloten. De herstelling of vervanging van het apparaat leidt niet tot een verlenging van de garantieperiode noch wordt door deze prestatie een nieuwe garantieperiode voor het apparaat of voor eventueel ingebouwde wisselstukken op gang gebracht. Dit geldt ook bij het ter plaatse uitvoeren van een serviceactiviteit.
5. Gelieve om een garantieclaim in te dienen het defecte apparaat aan te melden onder: www.isc-gmbh.info. Houd het aankoopbewijs of een ander bewijs van uw aankoop van het nieuwe apparaat bij de hand. Apparaten die zonder bijhorende bewijzen of zonder typeplaatje worden teruggestuurd, worden op grond van de ontbrekende mogelijkheid om het apparaat toe te kennen uitgesloten van de garantieprestatie. Valt het defect van het apparaat binnen onze garantieprestatie, dan bezorgen wij u per omgaande een gerepareerd of nieuw apparaat terug.

Uiteraard staan wij ook tot u dienst om, mits betaling van de kosten, defecten van het apparaat te verhelpen die buiten de garantieomvang vallen. Te dien einde stuurt u het apparaat aan ons serviceadres op.

Voor slijtstukken, verbruiksmateriaal en ontbrekende onderdelen wordt verwezen naar de beperkingen van deze garantie conform de service-informatie van deze handleiding.

Anl_TC_EH_500_SPK9.indb 67 16.11.2017 15:22:03

Peligro!
Al usar aparatos es preciso tener en cuenta una serie de medidas de seguridad para evitar lesiones o daños. Por este motivo, es preciso leer atentamente este manual de instrucciones/advertencias de seguridad. Guardar esta información cuidadosamente para poder consultarla en cualquier momento. En caso de entregar el aparato a terceras personas, será preciso entregarles, asimismo, el manual de instrucciones/advertencias de seguridad. No nos hacemos responsables de accidentes o daños provocados por no tener en cuenta este manual y las instrucciones de seguridad.

1. Instrucciones de seguridad

Peligro!
Lea todas las instrucciones de seguridad e indicaciones. El incumplimiento de dichas instrucciones e indicaciones puede provocar descargas, incendios y/o daños graves. **Guarde todas las instrucciones de seguridad e indicaciones para posibles consultas posteriores.**

1. Controlar en todo momento que la tensión de red coincida con la tensión indicada en la placa de identificación. Si la tensión de red no es la indicada, la máquina podrá trabajar de forma anormal y podría ocasionar daños personales.
2. La alimentación de corriente debe estar puesta a tierra y estar dotada de una protección diferencial.
3. Está prohibido elevar cargas superiores a la carga nominal.
4. Utilizar el aparato exclusivamente para su fin previsto. No elevar nunca a personas con el torno de cable.
5. No tirar del cable para desenchufar el aparato. Mantener el cable alejado de fuentes de calor, de aceites o bordes afilados.
6. No intentar nunca elevar cargas fijas o bloqueadas.
7. Desenchufar el torno de cable cuando no se utilice.
8. Mantener alejados de la máquina tanto a los niños como a otras personas no autorizadas.
9. Está prohibido elevar cargas lateralmente o desde un lateral. Evitar que la carga se balancee.
10. Asegurarse de que el gancho se mueva en la misma dirección que la indicada en el interruptor de control.
11. Controlar regularmente que el torno de cable no presente daños. El interruptor de control debe estar en buen estado.
12. Las reparaciones y los trabajos de mantenimiento solo serán llevados a cabo por electricistas profesionales y en talleres especializados. Sólo un electricista especializado puede llevar a cabo las reparaciones, ya que de otro modo el operario podría sufrir algún accidente.
13. Evitar conectar y desconectar rápidamente (servicio discontinuo).
14. Prestar atención en todo momento en que se esté operando el torno de cable.
15. No detenerse o trabajar bajo la carga en suspensión.

2. Descripción del aparato y volumen de entrega

2.1 Descripción del aparato (fig. 1/2)
1. Estribo de fijación
2. Orificio de fijación para gancho
3. Tambor
4. Palanca para longitud de cable máxima
5. Palanca para mecanismo de parada automática
6. Cable de acero
7. Peso de desconexión
8. Gancho
9. Interruptor de paro de emergencia
10. Pulsador
11. Mando a distancia
12. Cable de conexión a la red
13. Cable de control
14. Motor
15. Polea de inversión
16. Gancho adicional
17. Cable para mando a distancia

2.2 Volumen de entrega
Sirviéndose de la descripción del volumen de entrega, comprobar que el artículo esté completo. Si faltase alguna pieza, dirigirse a nuestro Service Center o a la tienda especializada más cercana en un plazo máximo de 5 días laborales tras la compra del artículo presentando un recibo de compra válido. A este respeto, observar la tabla de garantía de las condiciones de garantía que se encuentran al final del manual.

- Abrir el embalaje y extraer cuidadosamente el aparato.

Anl_TC_EH_500_SPK9.indb 68 16.11.2017 15:22:03

- Retirar el material de embalaje, así como los dispositivos de seguridad del embalaje y para el transporte (si existen).
- Comprobar que el volumen de entrega esté completo.
- Comprobar que el aparato y los accesorios no presenten daños ocasionados durante el transporte.
- Si es posible, almacenar el embalaje hasta que transcurra el periodo de garantía.

Peligro!
¡El aparato y el material de embalaje no son un juguete! ¡No permitir que los niños jueguen con bolsas de plástico, láminas y piezas pequeñas! ¡Riesgo de ingestión y asfixia!

- Manual de instrucciones original

3. Uso adecuado

El torno de cable sirve para elevar y bajar cargas adecuadas para la potencia del aparato en salas cerradas.

Utilizar la máquina sólo en los casos que se indican explícitamente como de uso adecuado. Cualquier otro uso no será adecuado. En caso de uso inadecuado, el fabricante no se hace responsable de daños o lesiones de cualquier tipo; el responsable es el usuario u operario de la máquina.

Tener en consideración que nuestro aparato no está indicado para un uso comercial, industrial o en taller. No asumiremos ningún tipo de garantía cuando se utilice el aparato en zonas industriales, comerciales o talleres, así como actividades similares.

4. Características técnicas

Tensión (V)..... 230 V ~ 50 Hz
Corriente nominal (A)..... 4,4
Consumo (W) 1000
Modo operativo..... S3 20% 10 min
Carga nominal (kg) .....250 / 500
Altura de elevación (m) .....11,5 / 5,7
Velocidad nominal (m/min).....8 / 4
Diámetro del cable de acero (mm)..... 4,0
Resistencia a la tracción
del cable de acero (N/mm^2) 1870
Clase de aislamiento .....B
Tipo de protección ..... IP 54
Categoría de mecanismo de propulsión M1
Peso neto (kg)..... 16,2

Modo operativo S3 - 20% - 10 min: S3 = Régimen de funcionamiento discontinuo independientemente del proceso de arranque. Es decir, durante un periodo de 10 min. el tiempo de funcionamiento máx. es del 20% (2 min).

¡Reducir la emisión de ruido y las vibraciones al mínimo!
- Emplear sólo aparatos en perfecto estado.
- Realizar el mantenimiento del aparato y limpiarlo con regularidad.
- Adaptar el modo de trabajo al aparato.
- No sobrecargar el aparato.
- En caso necesario dejar que se compruebe el aparato.
- Apagar el aparato cuando no se esté utilizando.
- Llevar guantes.

5. Antes de la puesta en marcha

Antes de conectar la máquina, asegurarse de que los datos de la placa de identificación coincidan con los datos de la red eléctrica.
Aviso!
Desenchufar el aparato antes de realizar ajustes.

- El torno de cable no ha sido concebido para transportar masas calientes y/o fundidas, ni para utilizarlo a bajas temperaturas ni en un entorno agresivo.
- El grupo mecánico es M1.
- La duración de uso del torno de cable es de unos 8000 ciclos (excl. piezas de desgaste). Cuando el torno ha realizado los 8000 ciclos, es preciso controlar y revisar todas las piezas mecánicas.
- Antes de utilizar el torno de cable es preciso haber leído y comprendido el manual de instrucciones.
- Asegurarse de que el operario sabe cómo funciona la máquina y cómo se opera.
- El operario debe actuar siempre de acuerdo con el manual de instrucciones.
- El torno no ha sido previsto para un uso ininterrumpido. El modo operativo es: régimen de funcionamiento discontinuo independiente-

Anl_TC_EH_500_SPK9.indb 69 16.11.2017 15:22:03

mente del proceso de arranque.
- La potencia nominal de la máquina no varía con la posición de la carga.

5.1 Desembalar
Después de abrir el embalaje inspeccionar que el bastidor, el cable de acero, los ganchos y el mecanismo eléctrico de control no presenten daños ocasionados por el transporte.

5.2 Montaje (fig. 5)
El torno de cable está dotado de 2 estribos de fijación (1) con los que se debe sujetar a un brazo de extensión cuadrado. Las dimensiones del brazo de extensión deben coincidir con el tamaño de los estribos de fijación (1) y el brazo debe poder soportar el doble de la carga nominal. Recomendamos ponerse en contacto con un técnico cualificado.
Es preciso apretar todos los tornillos. Antes de la puesta en marcha un técnico cualificado deberá comprobar el anclaje del brazo de extensión.

5.3 Función de polipasto (fig. 6 – 9)
El torno de cable está dotado de una polea de inversión (15) y un gancho adicional (16). Si se utiliza correctamente, el torno de cable puede elevar el doble de carga.
Montar la polea de inversión (15) y el gancho adicional (16) según se muestra en las fig. 6-8. El gancho fijo (8) debe colgar del orificio de fijación (2) (fig. 9).
La carga se eleva con ayuda de dos cables de acero, de forma que el torno de cable se puede elevar con el doble de carga.

6. Manejo

Peligro!
6.1 Advertencias sobre el funcionamiento
1. Antes del primer uso quitar la cinta adhesiva del tambor (3).
2. El valor de la emisión de ruido clasificado como A en la posición del usuario es inferior a los 75 dB (nivel de presión acústica LpA). Los valores de ruido y vibración se han determinado conforme a EN ISO 11201.
3. Tensión de alimentación: 230V ± 10%, 50Hz ± 1%.
4. Operar el torno de cable a temperaturas ambiente que oscilen entre los 0°C y los 40°C y a una humedad relativa inferior al 50%. Altura sobre el nivel del mar: máx. 1000 m.
5. La temperatura de transporte y almacenamiento puede ser entre -25 °C y 55 °C. La temperatura máxima admisible no puede superar los 70°C.
6. El usuario debe elevar la carga del suelo a la velocidad mínima posible. La cadena debe estar tensada al elevar la carga.
7. El motor (14) del torno de cable está dotado de un interruptor de termostato. Durante el funcionamiento del torno de cable es posible que el motor (14) se pare, pero volverá a ponerse en marcha de forma automática una vez se haya enfriado.
8. El torno de cable eléctrico no está dotado de un limitador de potencia nominal. Por este motivo, no seguir elevando la carga cuando la protección contra sobrecalentamiento suspenda el funcionamiento. En este caso la carga supera la potencia nominal del torno de cable.
9. No desatender ninguna carga en suspensión sin haber tomado previamente las medidas de seguridad necesarias.
10. Asegurar el aparato con un fusible de 10 A o con una protección diferencial de 10 mA para proteger el circuito eléctrico.
11. No utilizar la palanca (4/5) como dispositivo de parada rutinario, puesto que solo sirve como dispositivo de parada en caso de emergencia.
12. Antes de empezar asegurarse de que el cable de acero (6) esté bien enrollado alrededor del tambor (3) y que la distancia entre las vueltas sea inferior al diámetro cable de acero (fig. 3).
13. Asegurar que la carga esté correctamente asegurada en el gancho (8) o, en el modo de polipasto, los ganchos adicionales (16) y que mantienen en todo momento distancia con respecto de la carga y el cable de acero (6).

6.2 Funcionamiento (fig. 1)
- Comprobar si el interruptor de paro de emergencia (9) está pulsado. Girar el interruptor de paro rojo hacia la derecha para desbloquearlo.
- Presionar el pulsador ▲ (10) para elevar la carga.
- Presionar el pulsador ▼ (10) para bajar la carga.
- Palanca para mecanismo de parada automática (5): Una vez alcanzada la altura máxima de elevación, el peso de desconexión (7) presiona la palanca (5) hacia arriba. Así se activa un interruptor de fin de carrera y la

Anl_TC_EH_500_SPK9.indb 70 16.11.2017 15:22:03

carga no se puede elevar.
- Palanca para longitud de cable máxima (4): Una vez la carga ha alcanzado la posición más baja posible, se activa un interruptor de fin de carreta que no permite seguir bajando la carga. Este interruptor de fin de carrera evita asimismo que el torno de cable funcione en la dirección incorrecta (el gancho se mueve en dirección contraria a la indicada en el interruptor de control).
- Cuando se activa el interruptor de fin de carrera (9) el torno de cable se para.
- En caso de emergencia, activar de inmediato el interruptor de paro de emergencia (9) para parar el torno de cable. Si el interruptor de paro de emergencia está activado no es posible operar el torno de cable.

7. Cambio del cable de conexión a la red eléctrica

Peligro!
Cuando el cable de conexión a la red de este aparato esté dañado, deberá ser sustituido por el fabricante o su servicio de asistencia técnica o por una persona cualificada para ello, evitando así cualquier peligro.

8. Mantenimiento, limpieza y pedido de piezas de repuesto

Peligro!
Desenchufar siempre antes de realizar algún trabajo de limpieza.

8.1 Limpieza
- Reducir al máximo posible la suciedad y el polvo en los dispositivos de seguridad, las rendijas de ventilación y la carcasa del motor. Frotar el aparato con un paño limpio o soplarlo con aire comprimido manteniendo la presión baja.
- Se recomienda limpiar el aparato tras cada uso.
- Limpiar el aparato con regularidad con un paño húmedo y un poco de jabón blando. No utilizar productos de limpieza o disolventes ya que se podrían deteriorar las piezas de plástico del aparato. Es preciso tener en cuenta que no entre agua en el interior del aparato. Si entra agua en el aparato eléctrico existirá mayor riesgo de una descarga eléctrica.

8.2 Mantenimiento
Peligro! Asegurar que la máquina esté desenchufada de la red eléctrica siempre que se someta a trabajos de mantenimiento.
- A continuación: Un ciclo corresponde a un movimiento hacia arriba y hacia abajo de una carga. La comprobación periódica corresponde a una comprobación tras 100 ciclos.
- Comprobar de forma periódica que el interruptor de fin de carrera del torno de cable funcione correctamente. La comprobación tiene lugar de la siguiente manera: Cuando el cable ha alcanzado la altura de elevación máxima, la palanca activa el mecanismo de parada automático (5). El motor (14) se debe parar. (comprobar sin carga).
  Si el cable de acero (6) está desenrollado al máximo posible, se activa la palanca para la longitud máxima del cable (4). El motor (14) se debe parar.
- Comprobar periódicamente el cable de red (12) y el cable de control (13).
- Cada 200 ciclos es preciso lubricar el cable de acero (6) y la polea de inversión (15).
- Lubricar periódicamente el cable, la cadena, el engranaje, el rodamiento y el gancho.
- Comprobar cada 1000 ciclos las piezas de desgaste como: cable, cadena, gancho, cintas y guarniciones del freno.
- Cada 30 ciclos es preciso comprobar, según se muestra en la fig. 4, que todo el cable de acero (6) esté en buen estado. En caso de estar dañado, cambiarlo por uno nuevo que coincida con las características técnicas.
- Comprobar cada 1000 ciclos que todos los tornillos del estribo de fijación (1) y de la polea de inversión (15) estén bien apretados.
- Comprobar cada 1000 ciclos que los ganchos (8/16) y la polea de inversión (15) estén en buen estado.
- Antes de cada uso del torno de cable es preciso comprobar que el interruptor de paro de emergencia (9) y el pulsador (10) se encuentren en perfecto estado de funcionamiento.
- Comprobar cada 1000 ciclos el sistema de frenado. Cuando el motor (14) emita ruidos inusuales o no pueda elevar la carga nominal, es posible que se deba revisar el sistema de frenado.
  - Cambiar las piezas dañadas o desgastadas y guardar bien la documentación de mantenimiento correspondiente.
  - Para trabajos de cuidado no previstos ponerse en contacto con un centro de servicio autorizado.

Anl_TC_EH_500_SPK9.indb 71 16.11.2017 15:22:03

- La herramienta eléctrica solo debe ser reparada por personal especializado cualificado.

8.3 Pedido de piezas de recambio:
Al solicitar recambios se indicarán los datos siguientes:
- Tipo de aparato
- No. de artículo del aparato
- No. de identidad del aparato
- No. del recambio de la pieza necesitada.

Encontrará los precios y la información actual en www.isc-gmbh.info

9. Eliminación y reciclaje

El aparato está protegido por un embalaje para evitar daños producidos por el transporte. Este embalaje es materia prima y, por eso, se puede volver a utilizar o llevar a un punto de reciclaje. El aparato y sus accesorios están compuestos de diversos materiales, como, p. ej., metal y plástico. Los aparatos defectuosos no deben tirarse a la basura doméstica. Para su eliminación adecuada, el aparato debe entregarse a una entidad recolectora prevista para ello. En caso de no conocer ninguna, será preciso informarse en el organismo responsable del municipio.

10. Almacenamiento

Guardar el aparato y sus accesorios en un lugar oscuro, seco, protegido de las heladas e inaccesible para los niños. La temperatura de almacenamiento óptima se encuentra entre los 5 y 30 ˚C. Guardar la herramienta eléctrica en su embalaje original.

Anl_TC_EH_500_SPK9.indb 72 16.11.2017 15:22:03

Sólo para países miembros de la UE

No tirar herramientas eléctricas en la basura casera.

Según la directiva europea 2012/19/CE sobre aparatos usados electrónicos y eléctricos y su aplicación en el derecho nacional, dichos aparatos deberán recojerse por separado y eliminarse de modo ecológico para facilitar su posterior reciclaje.

Alternativa de reciclaje en caso de devolución:
El propietario del aparato eléctrico, en caso de no optar por su devolución, está obligado a reciclar adecuadamente dicho aparato eléctrico. Para ello, también se puede entregar el aparato usado a un centro de reciclaje que trate la eliminación de residuos respetando la legislación nacional sobre residuos y su reciclaje. Esto no afecta a los medios auxiliares ni a los accesorios sin componentes eléctricos que acompañan a los aparatos usados.

Sólo está permitido copiar la documentación y documentos anexos del producto, o extractos de los mismos, con autorización expresa de iSC GmbH.

Nos reservamos el derecho a realizar modificaciones técnicas

Anl_TC_EH_500_SPK9.indb 73 16.11.2017 15:22:03

Información de servicio

En todos los países mencionados en el certificado de garantía disponemos de distribuidores competentes cuyos datos de contacto podrán consultar en dicho certificado. Dichos distribuidores están a su disposición para cualquier asunto relacionado con el servicio como reparación, suministro de piezas de repuesto y desgaste, o con respecto a los materiales de consumo.

Es preciso tener en cuenta, que las siguientes piezas de este producto se someten a desgaste natural o provocado por el uso o que se necesitan las siguientes piezas como materiales de consumo.

Categoría	Ejemplo
Piezas de desgaste*	Cable de acero, Gancho, Polea de inversión, Gancho adicional
Material de consumo/Piezas de consumo*	
Falta de piezas	

*¡no tiene por qué estar incluido en el volumen de entrega!

En caso de deficiencia o fallo, rogamos que lo registre en la página web www.isc-gmbh.info. Describa exactamente el fallo y responda siempre a las siguientes preguntas:

- ¿Ha funcionado el aparato en algún momento o estaba defectuoso desde el principio?
- ¿Le ha llamado algo la atención antes de surgir el fallo (indicio antes del fallo)?
- ¿Qué fallo de funcionamiento le parece que presenta el aparato (indicio principal)? Describa ese fallo en el funcionamiento.

Anl_TC_EH_500_SPK9.indb 74 16.11.2017 15:22:04

Certificado de garantía

Estimado cliente:
Nuestros productos están sometidos a un estricto control de calidad. No obstante, lamentaríamos que este aparato dejara de funcionar correctamente, en tal caso, le rogamos que se dirija a nuestro servicio de atención al cliente en la dirección indicada en la parte inferior de la presente tarjeta de garantía. Con mucho gusto le atenderemos también telefónicamente en el número de servicio indicado a continuación. Para hacer válido el derecho de garantía, proceda de la siguiente forma:

1. Estas condiciones de garantía van dirigidas exclusivamente a los consumidores, es decir, personas naturales que no desean emplear este producto en el marco de su actividad comercial ni autónoma. Estas condiciones de garantía regulan prestaciones adicionales de garantía que el fabricante abajo mencionado se compromete a otorgar, de manera adicional a la garantía legal, a los compradores de sus nuevos aparatos. Las prestaciones de garantía que le corresponden conforme a ley no se ven afectadas por la presente. Nuestra prestación de garantía es gratuita para usted.
2. La garantía se extiende exclusivamente a defectos en un aparato nuevo adquirido por usted del fabricante abajo mencionado, ocasionados por fallos de material o de producción, y está limitada, según nuestra elección, a la reparación de los defectos o al cambio del aparato.
   Es preciso tener en consideración que nuestro aparato no está indicado para un uso comercial, industrial o en taller. Por lo tanto, no procederá un contrato de garantía cuando se utilice el aparato dentro del periodo de garantía en zonas industriales, comerciales o talleres, así como actividades similares.
3. Nuestra garantía no cubre:
   - Daños en el aparato ocasionados por la no observancia de las instrucciones de montaje o por una instalación no profesional, no observancia de las instrucciones de uso (como, p. ej., conexión a una tensión de red o corriente no indicada) o la no observancia de las disposiciones de mantenimiento y seguridad o por la exposición del aparato a condiciones anormales del entorno o por la falta de cuidado o mantenimiento.
   - Daños en el aparato ocasionados por aplicaciones impropias o indebidas (como, p. ej., sobrecarga del aparato o uso de herramientas o accesorios no homologados), introducción de cuerpos extraños en el aparato (como, p. ej., arena, piedras o polvo, daños producidos por el transporte), uso violento o influencias externa (como, p. ej., daños por caídas).
   - Daños en el aparato o en piezas del aparato provocados por el desgaste natural, habitual o producido por el uso.
4. El periodo de garantía es de 24 meses y comienza en la fecha de la compra del aparato. El derecho de garantía debe hacerse válido, antes de finalizado el plazo de garantía, dentro de un periodo de dos semanas una vez detectado el defecto. El derecho de garantía vence una vez transcurrido el plazo de garantía. La reparación o cambio del aparato no conllevará ni una prolongación del plazo de garantía ni un nuevo plazo de garantía ni para el aparato ni para las piezas de repuesto montadas. Esto también se aplica en el caso de un servicio in situ.
5. Para hacer efectivo su derecho a garantía, registre su aparato defectuoso en: www.isc-gmbh.info. Tenga a mano el recibo de compra o cualquier otro comprobante que acredite la compra del aparato nuevo. La garantía no cubre aquellos aparatos que se envíen sin el comprobante pertinente o sin la placa de identificación puesto que resulta difícil clasificarlos del modo correspondiente. Si nuestra prestación de garantía incluye el defecto aparecido en el aparato, recibirá de inmediato un aparato reparado o nuevo de vuelta.

Naturalmente, también solucionaremos los defectos del aparato que no se encuentren comprendidos o ya no se encuentren comprendidos en la garantía, en este caso contra reembolso de los costes. Para ello, envíe el aparato a nuestra dirección de servicio técnico.

Para piezas de desgaste, de repuesto y falta de piezas nos remitimos a las limitaciones de esta garantía conforme a la información de servicio de este manual de instrucciones.

Anl_TC_EH_500_SPK9.indb 75 16.11.2017 15:22:04

Vaara!
Laitteita käytettäessä tulee noudattaa tiettyjä turvallisuusvarotoimia tapaturmien ja vaurioiden välttämiseksi. Lue sen vuoksi tämä käyttöohje / nämä turvallisuusmääräykset huolellisesti läpi. Säilytä ne hyvin, jotta niissä olevat tiedot ovat myöhemminkin milloin vain käytettävissäsi. Jos luovutat laitteen muille henkilöille, ole hyvä ja anna heille myös tämä käyttöohje / nämä turvallisuusmääräykset laitteen mukana. Emme ota mitään vastuuta tapaturmista tai vaurioista, jotka ovat aiheutuneet tämän käyttöohjeen tai turvallisuusohjeiden noudattamisen laiminlyönnistä.

1. Turvallisuusmääräykset

Vaara!
Lue kaikki turvallisuusmääräykset ja ohjeet. Jos turvallisuusmääräyksiä tai muita ohjeita ei noudateta, saattaa tästä aiheutua sähköiskuja, tulipaloja ja/tai vaikeita vammoja. **Säilytä kaikki turvallisuusmääräykset ja ohjeet myöhempää tarvetta varten.**

1. Tarkasta aina, että käytettävissä oleva verkkojännite vastaa tyyppikilvessä ilmoitettua jännitettä. Siinä tapauksessa, että verkkojännite ei ole sovelias, saattaa tästä seurata koneen epänormaaleja toimintoja ja tapaturmia.
2. Virransyöttö tulee olla maadoitettu ja varmistettu vuotovirtasuojakatkaisimella.
3. Nimelliskuorman ylittävien kuormien nostaminen on kielletty.
4. Käytä laitetta vain sille määrättyyn tarkoitukseen. Älä koskaan nosta ihmisiä köysinosturilla.
5. Älä vedä sähköjohdosta, kun irroitat pistokkeen rasiasta. Suojaa johtoa kuumuudelta, öljyltä ja teräviltä reunoilta.
6. Älä koskaan yritä nostaa paikalleen kiinnitettyjä tai juuttuneita kuormia.
7. Irroita verkkopistoke sähköverkosta, kun köysinosturia ei käytetä.
8. Pidä lapset ja muut asiattomat henkilöt poissa koneen läheltä.
9. Kuormien nosto sivusuuntaan tai vetäminen sivulta on kielletty. Vältä kuorman heilahtelemista.
10. Varmista, että koukku liikkuu samaan suuntaan kuin käyttökatkaisimessa näytetään.
11. Tarkasta säännöllisesti, onko köysinosturissa vaurioita. Käyttökatkaisimen tulee olla hyväkuntoinen.
12. Anna korjaukset ja huoltotyöt aina vain valtuutetun korjaamon ja sähköalan asiantuntijan suoritettavaksi. Korjauksen saa tehdä vain sähköalan ammattihenkilö, muussa tapauksessa siitä voi aiheutua käyttäjälle tapaturmia.
13. Vältä nopeaa käynnistystä ja sammutusta (nykäyskäyttö).
14. Ole aina tarkkaavainen köysinosturia käyttäessäsi.
15. Älä oleskele tai työskentele ylösnostetun kuorman alapuolella.

2. Laitteen kuvaus ja toimituksen sisältö

2.1 Laitteen kuvaus (kuvat 1/2)
1. Kiinnityskaari
2. Koukun kiinnitysreikä
3. Rumpu
4. Suurimman köydenpituuden vipu
5. Automaattisen pysäytysmekanismin vipu
6. Teräsköysi
7. Sammutuspaino
8. Koukku
9. Hätä-Seis-katkaisin
10. Painonäppäin
11. Kauko-ohjain
12. Verkkojohto
13. Ohjausjohto
14. Moottori
15. Kääntörulla
16. Lisäkoukku
17. Kauko-ohjauksen köysi

2.2 Toimituksen sisältö
Tarkasta tässä kuvatun toimitusselostuksen avulla, että tuote on täysimääräinen. Jos osia puuttuu, ota viimeistään 5. arkipäivänä oston jälkeen yhteyttä asiakaspalveluumme tai siihen myyntipisteeseen, josta olet ostanut laitteen, ja esitä vastaava ostotosite. Huomioi tässä myös tämän ohjekirjan lopussa olevat asiakaspalveluohjeet ja takuusuoritustaulukko.
- Avaa pakkaus ja ota laite varovasti pakkauksesta.
- Poista pakkausmateiriaalit sekä pakkaus- ja kuljetusvarmistukset (mikäli käytetty).
- Tarkasta, onko toimitus täysilukuinen.
- Tarksta, onko laitteessa ja varusteissa kuljetusvaurioita.
- Säilytä pakkaus, mikäli mahdollista, takuuajan loppuun saakka.

Anl_TC_EH_500_SPK9.indb 76 16.11.2017 15:22:04

Vaara!
Laite ja pakkausmateriaalit eivät ole lasten leikkikaluja! Lapset eivät saa leikkiä muovipusseilla, kelmuilla tai pienillä osilla! Niistä uhkaa nielaisu- ja tukehtumisvaara!

- Alkuperäiskäyttöohje

3. Määräysten mukainen käyttö

Köysinosturia käytetään laitteen tehoa vastaavien kuormien nostamiseen ja laskemiseen suljetuissa tiloissa.

Konetta saa käyttää ainoastaan sille määrättyyn tarkoitukseen. Kaikkinainen tämän ylittävä käyttö ei ole määräysten mukaista. Kaikista tästä aiheutuvista vahingoista tai loukkaantumisista on vastuussa laitteen omistaja/käyttäjä eikä suinkaan sen valmistaja.

Ole hyvä ja ota huomioon, että laitteitamme ei ole suunniteltu ja valmistettu käytettäväksi pienteollisuus- tai teollisuustarkoituksiin. Emme siksi ota mitään vastuuta vaurioista, jos laitetta käytetään pienteollisuus-, käsityöläis- tai teollisuustyöpaikoilla tai näihin verrattavissa olevissa toimissa.

4. Tekniset tiedot

Jännite (V)	230 V ~ 50 Hz
Nimellisvirta (A)	4,4
Virranotto (W)	1000
Käyttötapa	S3 20% 10 min
Nimelliskuorma (kg)	250 / 500
Nostokorkeus (m)	11,5 / 5,7
Nimellisnopeus (m/min)	8 / 4
Teräsköyden halkaisija (mm)	4,0
Teräsköyden vetolujuus (N/mm²)	1870
Eristysluokka	B
Suojauslaji	IP 54
Käyttövoimaluokka	M1
Nettopaino (kg)	16,2

Käyttötapa S3 - 20% - 10min:
S3 = jaksottaiskäyttö ilman käynnistystapahtuman vaikutusta Tämä tarkoittaa, että 10 minuutin ajanjakson aikana suurin käyttöaika on 20% (2 minuuttia).

Rajoita melunpäästöt ja tärinä mahdollisimman vähäisiksi!
- Käytä ainoastaan moitteettomia laitteita.
- Huolla ja puhdista laite säännöllisesti.
- Sovita työskentelytapasi laitteen mukaiseksi.
- Älä ylikuormita laitetta.
- Tarkastuta laite aina tarvittaessa.
- Sammuta laite, kun sitä ei käytetä.
- Käytä suojakäsineitä.

5. Ennen käyttöönottoa

Tarkistakaa ennen käyttöönottoa, että tyyppikilven tiedot täsmäävät verkkotietojen kanssa.
Varoitus!
Vetäkää aina vahvavirtapistoke pistorasiasta, ennen kuin suoritatte laitteen säätöjä.

- Köysinosturi ei sovellu kuumien ja/tai sulatettujen massojen kuljetukseen, lisäksi köysinosturia ei ole tarkoitettu käytettäväksi alhaisissa lämpötiloissa tai syövyttävässä ympäristössä.
- Mekaaninen ryhmä on M1.
- Köysinosturin käyttöikä on n. 8000 työjaksoa (ei koske kuluvia osia). Kun nosturi on läpikäynyt 8000 jaksoa, täytyy kaikki mekaaniset osat tarkastaa ja kunnostaa.
- Lue käyttöohje ja ymmärrä se, ennen kuin käytät köysinosturia.
- Varmista, että käyttöhenkilöstö tietää, miten kone toimii ja miten sitä tulisi käyttää.
- Käyttäjän tulee aina toimia käyttöohjeessa annettujen ohjeiden mukaisesti.
- Köysinosturia ei ole tarkoitettu jatkuvaan käyttöön. Käyttötapa on: jaksottaiskäyttö ilman käynnistystapahtuman vaikutusta.
- Koneen nimellisteho ei vaihtele kuormitusaseman muuttuessa.

5.1 Pakkauksesta ottaminen
Pakkauksen avaamisen jälkeen tarkasta, onko kehyksessä, teräsköydessä, koukuissa tai sähköisessä valvontamekanismissa mahdollisesti kuljetusvaurioita.

5.2 Asennus (kuva 5)
Köysinosturi on varustettu 2 kiinnityskaarella (1), joiden avulla se täytyy kiinnittää nelikulmaiseen putkeen. Puomin mitoituksen tulee vastata kiinnityskaarien (1) kokoa ja sen kantokyvyn täytyy olla kaksinkertainen nimelliskuormaan verrattuna. Suosittelemme ottamaan yhteyttä pätevään te-

Anl_TC_EH_500_SPK9.indb 77 16.11.2017 15:22:04

knikkoon.
Kaikki ruuvit tulee kiristää oikein. Ennen käyttöönottoa tulee pätevän teknikon tarkastaa puomin kiinnitys.

5.3 Taljatoiminto (kuvat 6 – 9)
Köysinosturi on varustettu kääntörullalla (15) ja lisäkoukulla (16). Oikein käytettynä köysinosturilla voi nostaa kaksinkertaisen kuorman.
Asenna kääntörulla (15) ja lisäkoukku (16) kuten kuvissa 6-8 näytetään. Kiinteästi asennettu koukku (8) täytyy ripustaa kiinnitysreikään (2) (kuva 9). Kuorma nostetaan nyt kahta teräsköyttä käyttäen, täten voi köysinosturi nostaa kaksinkertaisen kuorman.

6. Käyttö

Vaara!
6.1 Ohjeita käyttöä varten
1. Ennen ensimmäistä käyttöä ota teippi pois rummusta (3).
2. A-arvotettujen melunpäästöjen arvo käyttäjän paikalla on alhaisempi kuin 75 dB (äänen painetaso LpA). Melu- ja tärinäarvot on mitattu standardin EN ISO 11201 mukaisesti.
3. Käyttöjännite: 230V ± 10%, 50Hz ± 1%.
4. Köysinosturia saa käyttää ympäristölämpötilan ollessa 0 °C ja 40 °C välillä ja alle 50 % suhteellisessa ilmankosteudessa. Korkeus merenpinnan yläpuolella: kork. 1.000 m.
5. Kuljetuksen ja varastoinnin aikana saa lämpötila olla -25 °C ja 55 °C välillä. Suurin sallittu lämpötila ei saa ylittää 70 °C.
6. Käyttäjän tulee nostaa kuorma lattialta pienimmällä mahdollisella nopeudella. Köyden tulee olla vedettynä kireälle, kun kuorma nostetaan.
7. Köysinosturin moottori (14) on varustettu termostaattikatkaisimella. Köysinosturin käytön aikana saattaa moottori (14) tämän vuoksi pysähtyä, se käynnistyy automaattisesti uudelleen, kun se on jäähtynyt.
8. Sähkökäyttöistä köysinosturia ei ole varustettu nimellistehorajoittimella. Sen vuoksi ole hyvä äläkä yritä nostaa kuormaa uudelleen, jos ylikuumenemissuoja on rajoittanur käyttöä. Tässä tapauksessa kuorma ylittää köysinosturin nimellistehon.
9. Älä jätä nostettua kuormaa riippumaan valvomatta ilman, että vastaavat turvallisuustoimenpiteet on suoritettu.
10. Varmista laite 10 A varokkeella tai 10 mA vuotovirtasuojakatkaisimella virtapiirin suojaamiseksi.
11. Älä käytä vipuja (4/5) tavallisina pysäytyslaitteina. Niitä tulee käyttää ainoastaan hätätilanteen pysäytyskeinona.
12. Ennen kuin aloitat, varmista, että teräsköysi (6) on kelattu oikein rummun (3) ympärille ja että kierrosten välimatka on pienempi kuin teräsköysi (kuva 3).
13. Varmista, että kuorma on kiinnitetty määräysten mukaisesti koukkuun (8) tai taljanostinkäytössä lisäkoukkuun (16) ja pysy aina turvallisen välimatkan päässä kuormasta ja teräsköydestä (6).

6.2 Käyttö (kuva 1)
- Tarkasta, onko Hätä-Seis-painike (9) painettu alas. Kierrä punaista pysäytysnuppia myötäpäivään sen vapauttamiseksi.
- Paina painiketta ▲ (10) kuorman nostamiseksi.
- Paina painiketta ▼ (10) kuorman laskemiseksi.
- Automaattisen pysäytysmekanismin vipu (5): Kun suurin nostokorkeus on saavutettu, niin sammutuspaino (7) painaa vivun (5) ylös. Tällöin rajakytkin toimintuu ja kuormaa ei enää voi nostaa ylemmäs.
- Suurimman köydenpituuden vipu (4): Kun kuorma on saavuttanut alhaisimman mahdollisen aseman, niin rajakatkaisin toimentuu ja kuorman laskeminen alemmaksi ei ole mahdollista. Tämä rajakatkaisin estää myös köysinosturin käytön väärään suuntaan (koukku liikkuu päinvastaiseen suuntaan kuin käyttökytkimessä näytetty suunta).
- Kun hätä-seis-katkaisinta (9) painetaan, niin köysinosturi pysähtyy.
- Hätätilanteen tullessa on heti painettava hätä-seis-katkaisinta (9) köysinosturin pysäyttämiseksi. Köysinosturin käyttö ei ole mahdollista, jos hätä-seis-katkaisinta on painettu.

7. Verkkojohdon vaihtaminen

Vaara!
Kun tämän laitteen verkkojohto vahingoittuu sen on korvattava joko valmistaja tai hänen asiakas-, huolto- ja varaosapalvelunsa tai vastaavan pätevyyden omaava henkilö, jotta vaaratilanteita ei pääse syntymään.

Anl_TC_EH_500_SPK9.indb 78 16.11.2017 15:22:04

8. Puhdistus, huolto ja varaosatilaus

Vaara!
Irroita verkkopistoke pistorasiasta ennen kaikkia puhdistusstoimia.

8.1 Puhdistus

- Pidä suojalaitteet, ilmaraot ja moottorin kotelo niin puhtaina pölystä ja liasta kuin suinki mahdollista. Pyyhi laite puhtaalla rievulla tai puhalla se puhtaaksi vähäpaineisella paineilmalla.
- Suosittelemme laitteen puhdistamista heti joka käytön jälkeen.
- Puhdista laite säännöllisin väliajoin käyttäen kosteaa riepua ja vähän saippuaa. Älä käytä sellaisia puhdistusaineita tai liuotteita, jotka saattavat syövyttää laitteen muoviosia. Huolehdi siitä, ettei laitteen sisäpuolelle pääse vettä. Veden tunkeutuminen sähkötyökaluun lisää sähköiskun vaaraa.

8.2 Huolto
Vaara! Varmista aina, että konetta ei ole liitetty sähköverkkoon, kun suoritat koneen hoitotoimet.

- Seuraavassa: Yksi jakso vastaa yhden kuorman yhtä liikettä ylös ja alas. Määräaikaistarkastus vastaa 100 jakson jälkeen suoritettua tarkastusta.
- Tarkasta määräajoin, että köysinosturin rajakatkaisimet toimivat määräysten mukaisesti. Tarkastus tehdään seuraavasti: Kun köysi on saavuttanut suurimman nostokorkeuden, toimennetaan automaattisen pysäytysmekanismin vipu (5). Moottorin (14) täytyy silloin pysähtyä. (tarkastus ilman kuormaa).
  Kun teräsköysi (6) on kelattu auki niin pitkälle kuin mahdollista, toimennetaan suurimman köydenpituuden vipu (4). Moottorin (14) täytyy silloin pysähtyä.
- Tarkasta määräajoin verkkoliitäntäjohto (12) ja ohjausjohto (13).
- Teräsköysi (6) ja kääntörulla (15) tulee voidella 200 jakson väliajoin.
- Aina 30 jakson jälkeen tulee tarkastaa kuvan 4 mukaan, onko teräsköysi (6) hyväkuntoinen koko pituudeltaan. Jos se on vahingoittunut, tulee sen tilalle vaihtaa teknisien tietojen mukainen teräsköysi.
- Tarkasta 1000 jakson välein, ovatko kiinnityskaarien (1) ja kääntörullan (15) ruuvit tiukasti kiinni.
- Tarkasta 1000 jakson välein, ovatko koukut (8/16) ja kääntörulla (15) hyväkuntoiset.
- Voitele köysi, ketju, vaihteisto, laakerit ja koukut säännöllisin väliajoin.
- Tarkasta aina 1000 työjakson jälkeen kuluvat osat, kuten köyden, ketjun, koukut, hihnat ja jarrupalat.
- Tarkasta ennen köysinosturin jokaista käyttöä, että hätä-seis-katkaisin (9) ja painonäppäin (10) ovat moitteettomassa käyttökunnossa.
- Tarkasta jarrujärjestelmä 1000 jakson välein. Jos moottori (14) pitää epätavallista ääntä tai ei voi nostaa nimelliskuormaa, on mahdollista, että jarrujärjestelmä täytyy kunnostaa:
  - vaihda vahingoittuneiden tai kuluneiden osien tilalle uudet, ja säilytä tähän kuuluva huoltosokumentaatio.
  - Määräaikaisen kunnossapidon ylittäviä töitä varten ole hyvä ja ota yhteyttä valtuutettuun huoltokeskukseen.
- Anna vain pätevän ammattihenkilön korjata sähkötyökalusi.

8.3 Varaosatilaus:
Varaosia tilatessasi anna seuraavat tiedot:

- Laitteen tyyppi
- Laitteen tuotenumero
- Laitteen tunnusnumero
- Tarvittavan varaosan varaosanumero.

Ajankohtaiset hinnat ja muut tiedot löydät osoitteesta www.isc-gmbh.info

9. Käytöstäpoisto ja uusiokäyttö

Laite on pakattu kuljetuspakkaukseen, jotta vältetään kuljetusvauriot. Tämä pakkaus on raaka-ainetta ja sitä voi siksi käyttää uudelleen tai sen voi toimittaa kierrätyksen kautta takaisin raaka-ainekiertoon. Laite ja sen varusteet on valmistettu eri materiaaleista, kuten esim. metallista ja muoveista. Vialliset laitteet eivät kuulu kotitalousjätteisiin. Laite tulee toimittaa asianmukaiseen keräyspisteeseen ammattitaitoista hävittämistä varten. Jos et tiedä, missä on tällainen keräyspiste, tiedustele asiaa kuntasi hallinnosta.

10. Säilytys

Säilytä laite ja sen varusteet valolta, kosteudelta ja pakkaselta suojatussa tilassa poissa lasten ulottuvilta. Paras säilytyslämpötila on 5°C ja 30°C välillä. Säilytä sähkötyökalut alkuperäispakkauksissaan.

Anl_TC_EH_500_SPK9.indb 79 16.11.2017 15:22:04

Koskee ainoastaan EU-maita

Älä heitä sähkötyökaluja kotitalousjätteisiin!

Euroopan direktiivin 2012/19/EY loppuunkäytetyistä sähkö- ja elektronisista laitteista ja sen kansalliseksi laiksi muuntamisen mukaan tulee käytetyt sähkötyökalut koota erikseen ja toimittaa ne ympäristöystävälliseen kierrätykseen.

Kierrätysvaihtoehto takaisinlähetykselle:
Sähkölaitteen omistaja on velvoitettu laitteen palauttamisen vaihtoehtona vaikuttamaan siihen, että hänen luovuttamansa omaisuus hävitetään asianmukaisesti. Loppuun käytetty laite voidaan tätä varten luovuttaa myös keräyspisteeseen, joka suorittaa sen käytöstäpoiston kansallisten kierrätystalous- ja jätehuoltolakien tarkoittamalla tavalla. Tämä ei koske käytettyihin laitteisiin liitettyjä lisävarusteita ja apuvälineitä, joissa ei ole sähköosia.

Tuotedokumentaation ja tuotteen mukana toimitettujen papereiden osittainenkin kopiointi tai muu monistaminen on sallittu ainoastaan iSC GmbH:n nimenomaisella luvalla.

Oikeus teknisiin muutoksiin pidätetään

Anl_TC_EH_500_SPK9.indb 80 16.11.2017 15:22:04

Asiakaspalvelutiedot

Meillä on kaikissa takuutodistuksessa mainituissa maissa päteviä asiakaspalvelusta huolehtivia kumppaneita, joiden yhteystiedot löydät takuutodistuksesta. Heidän kauttaan voit saada kaikki asiakaspalvelut, kuten korjaukset, varaosien ja kulumaosien sekä tarvittavien käyttömateriaalien toimitukset.

Huomaa, että seuraaviin tämän tuotteen osiin kohdistuu käytöstä johtuvaa, luonnollista kulumista, ja että seuraavia osia tarvitaan käyttömateriaaleina.

Laji	Esimerkki
Kuluvat osat*	Teräsköysi, Koukku, Kääntörulla, Lisäkoukku
Käyttömateriaali / käyttöosat*	
Puuttuvat osat	

* ei välttämättä kuulu toimitukseen!

Puutteellisuuksien tai vikojen ilmetessä pyydämme ilmoittamaan virheestä verkossa sivustoon www.isc-gmbh.info. Ole hyvä ja anna vian tarkka kuvaus ja vastaa sen lisäksi joka tapauksessa seuraaviin kysymyksiin:

- Onko laite toiminut jo ainakin kerran, vai oliko se jo alusta lähtien viallinen?
- Havaitsitko jotain erikoista ennen vian ilmenemistä (oireita ennen vikaa)?
- Mikä mielestäsi on laitteessa vikana (pääasiallinen vika)?
  Kuvaa tätä toimintavirhettä.

Anl_TC_EH_500_SPK9.indb 81 16.11.2017 15:22:04

Takuutodistus

Arvoisa asiakas,
tuotteemme läpikäyvät erittäin tiukan laadunvalvontatarkastuksen. Mikäli tämä laite ei kuitenkaan toimi moitteettomasti, valitamme tapahtunutta suuresti ja pyydämme sinua kääntymään teknisen asiakaspalvelumme puoleen käyttäen tässä takuukortissa annettua osoitetta. Selvitämme asian mielellämme myös puhelimitse allaolevan palvelunumeron kautta. Takuuvaateiden esittämistä koskevat seuraavat määräykset:

1. Nämä takuuehdot koskevat ainoastaan kuluttajia, ts. luonnollisia henkilöitä, jotka eivät käytä tätä tuotetta sen enempää pienteollisessa kuin muussakaan itsenäisessä ammatinharjoituksessa. Nämä takuuehdot säätelevät täydentäviä takuusuorituksia, jotka allamainittu valmistaja lupaa uusien laitteidensa ostajille lakimääräisen takuun lisäksi. Ne eivät vaikuta lakimääräisiin takuusuoritusvaateisiisi millään tavalla. Takuumme on sinulle maksuton.
2. Takuusuoritus kattaa ainoastaan sellaiset hankkimasi allamainitun valmistajan uuden laitteen puutteellisuudet, jotka todistettavasti aiheutuvat materiaali- tai valmistusvirheistä, ja se on rajattu valintamme mukaan ainoastaan näiden laitteen vikojen korjaamiseen tai laitteen korvaamiseen uudella.
   Ole hyvä ja ota huomioon, että laitteitamme ei ole suunniteltu käytettäväksi pienteollisuus-, käsityöläis- tai ammattitarkoituksiin. Takuusopimusta ei siksi synny, jos laitetta on takuun kestoaikana käytetty pienteollisuus-, käsityöläis- tai teollisuustyöpaikoilla tai siihen on kohdistunut näihin verrattavissa oleva rasitus.
3. Antamamme takuu ei kata näitä vaurioita:
   - laitteessa esiintyneet vauriot, jotka aiheutuvat asennusohjeen noudattamatta jättämisestä tai asiantuntemattomasta asennuksesta, käyttöohjeen noudattamatta jättämisestä (kuten esim. liitäntä väärään verkkojännitteeseen tai virtalajiin) tai huolto- ja turvallisuusmääräysten laiminlyönnistä tai laitteen altistamista epänormaaleille ympäristöolosuhteille tai puutteellisesta hoidosta ja huollosta.
   - laitteessa esiintyneet vauriot, jotka aiheutuvat määräysten vastaisesta tai virheellisestä käytöstä (esim. laitteen ylikuormitus tai hyväksymättömien liitostyökalujen tai varusteiden käyttö), vieraiden esineiden tunkeutumisesta laitteeseen (esim. hiekka, kivet tai pöly, kuljetusvauriot), väkivoiman käytöstä tai ulkopuolisista tekijöistä (esim. putoamisesta aiheutuneet vahingot).
   - laitteessa tai sen osissa esiintyneet vauriot, jotka aiheutuvat käytöstä johtuvasta, tavanomaisesta tai muuten tavallisesta kulumisesta.
4. Takuuajan kesto on 24 kuukautta ja se alkaa laitteen ostopäivästä. Takuuvaateet tulee esittää ennen takuuajan päättymistä kahden viikon kuluessa siitä, kun olet havainnut vian. Takuuvaateiden esittäminen takuuajan päätyttyä ei ole mahdollista. Laitteen korjaus tai vaihto ei johda takuuajan pitenemiseen tai laitteen tai siihen mahdollisesti asennettujen varaosien takuuajan alkamiseen uudelleen alusta. Tämä koskee myös paikan päällä suoritettuja palveluja.
5. Viallista laitetta koskevat takuuvaateet tulee esittää osoitteella: www.isc-gmbh.info. Pidä uuden laitteesi ostotosite tai muu ostonäyttö valmiina. Ilman vastaavia tositteita tai tyyppikilpeä meille lähetettyjen laitteiden osalta takuuvaateet on suljettu pois, koska mahdollisuudet laitteen tunnistamiseen puuttuvat. Mikäli takuumme kattaa laitteen vian, asiakkaalle toimitetaan korjattu tai uusi laite viipymättä.

Tietysti korjaamme mielellämme korvausta vastaan myös sellaiset laitteiden viat, jotka eivät kuulu tai eivät enää kuulu takuumme piiriin. Lähetä tätä varten laite teknisen asiakaspalvelumme osoitteeseen.

Kuluvien osien, käyttöosien ja puuttuvien osien suhteen viittaamme tämän takuun rajoituksiin, jotka on selostettu tämän käyttöohjeen asiakaspalvelutiedoissa.

Anl_TC_EH_500_SPK9.indb 82 16.11.2017 15:22:04

Опасность!
При использовании устройств необходимо соблюдать определенные правила техники безопасности для того, чтобы избежать травм и предотвратить ущерб. Поэтому внимательно прочитайте настоящее руководство по эксплуатации / указания по технике безопасности полностью. Храните их в надежном месте для того, чтобы иметь необходимую информацию, когда она понадобится. Если Вы даете устройство другим для пользования, то приложите к нему это руководство по эксплуатации / указания по технике безопасности. Мы не несем никакой ответственности за травмы и ущерб, которые были получены или причинены в результате несоблюдения указаний этого руководства и указаний по технике безопасности.

1. Указания по технике безопасности

Опасность!
Прочитайте все указания по технике безопасности и технические требования. При невыполнении указаний по технике безопасности и технических требований возможно получение удара током, возникновение пожара и/или получение серьезных травм. **Храните все указания по технике безопасности и технические требования для того, чтобы было возможно воспользоваться ими в будущем.**

1. Постоянно контролируйте соответствие напряжения сети напряжению, указанному на фирменной табличке. Если напряжение сети не подходит для устройства, это может привести к неправильной работе машины и травмированию людей.
2. Источник электропитания должен быть заземлен и оснащен автоматом защиты от тока утечки.
3. Запрещено поднимать грузы, вес которых превышает номинальную нагрузку.
4. Используйте устройство только для предусмотренной цели. Никогда не поднимайте людей при помощи канатной тали.
5. Не тяните за кабель для извлечения штекера. Защитите кабель от жары, контакта с маслом и острыми кромками.
6. Никогда не пытайтесь поднимать зафиксированные или заблокированные грузы.
7. Извлекайте штекер из розетки электросети, если канатная таль не используется.
8. Не подпускайте к машине детей и других неуполномоченных лиц.
9. Запрещено поднимать грузы боком или с одной стороны. Избегайте раскачивания груза.
10. Удостоверьтесь, что крюк движется в направлении, указанном на выключателе.
11. Регулярно проверяйте канатную таль на наличие повреждений. Выключатель должен быть в хорошем состоянии.
12. Поручайте выполнение ремонтных работ и работ по техническому обслуживанию только специалисту-электрику в авторизованных специализированных мастерских. Ремонт разрешается осуществлять только специалисту электрику, в противном случае пользователь может получить травмы.
13. Избегайте быстрого включения и выключения (шаговый режим).
14. Всегда соблюдайте осторожность при работе с канатной талью.
15. Не стойте и не работайте под подвешенным грузом.

2. Состав устройства и состав упаковки

2.1 Состав устройства (рисунки 1/2)
1. Крепежная скоба
2. Крепежное отверстие для крюка
3. Барабан
4. Рычаг для максимальной длины каната
5. Рычаг автоматического стопорного механизма
6. Стальной канат
7. Груз отключения
8. Крюк
9. Аварийный выключатель
10. Кнопка
11. Дистанционное управление
12. Кабель питания
13. Управляющая линия
14. Двигатель

Anl_TC_EH_500_SPK9.indb 83 16.11.2017 15:22:04

15. Направляющий ролик
16. Дополнительный крюк
17. Канат для дистанционного обслуживания

2.2 Состав комплекта устройства
Проверьте комплектность изделия на основании описанного объема поставки. При обнаружении недостатка компонентов обратитесь в наш сервисный центр или магазин, в котором Вы приобрели устройство, не позднее чем в течение 5-ти рабочих дней после приобретения изделия, предъявив действительную квитанцию о покупке. Обратите внимание на таблицу с указанием гарантийных сроков в документе с информацией о сервисном обслуживании.

- Откройте упаковку и выньте осторожно из упаковки устройство.
- Удалите упаковочный материал, а также приспособления защиты устройства при упаковывании и транспортировке (при наличии).
- Проверьте комплектность устройства.
- Проверьте устройство и принадлежности на наличие возникших при транспортировке повреждений.
- Сохраняйте упаковку по возможности до истечения срока гарантийных обязательств.

Опасность!
Устройство и упаковка не являются детскими игрушками! Запрещено детям играть с пластиковыми пакетами, пленками и мелкими деталями! Опасность заключается в том, что они могут проглотить или погибнуть от удушья!

- Оригинальное руководство по эксплуатации

3. Использование в соответствии с предназначением

Канатная таль служит для подъема и опускания грузов в закрытых помещениях в соответствии с мощностью устройства.

Разрешается использовать устройство только в соответствии с его предназначением. Любое другое, отличающееся от этого использование считается не соответствующим предназначению. За все возникшие в результате такого использования ущерб или травмы любого вида несет ответственность пользователь и работающий с устройством, а не его изготовитель.

Учтите, что конструкция наших устройств не предназначена для использования их в промышленной, ремесленной или индустриальной области. Мы не несем никакой ответственности по гарантийным обязательствам при использовании устройства в промышленной, ремесленной или индустриальной области, а также в подобной деятельности.

4. Технические данные

Напряжение (В) ..... 230 В ~ 50 Гц
Номинальный ток (А) 4,4
Потребляемая мощность (Вт) 1000
Режим работы ..... S3 20 % 10 минут
Номинальная нагрузка (кг) .....250 / 500
Высота подъема (м) .....11,5 / 5,7
Номинальная скорость (м/мин) .....8 / 4
Диаметр стального каната (мм) 4,0
Прочность стального каната
на разрыв (Н/мм^2) 1870
Класс изоляции ..... B
Степень защиты IP54
Класс привода M1
Масса нетто (кг) 16,2

Режим работы S3 - 20% - 10 минут:
S3 = повторно-кратковременный режим работы без влияния процесса запуска. Это означает, что во временном промежутке 10 минут максимальная продолжительность рабочего режима должна составлять 20% (2 минут).

Сведите образование шумов и вибрации к минимуму!

- Используйте только безукоризненно работающие устройства.
- Регулярно проводите техническое обслуживание и очистку устройства.
- При работе учитывайте особенности Вашего устройства.
- Не подвергайте устройство перегрузке.
- При необходимости дайте проверить устройство специалистам.

Anl_TC_EH_500_SPK9.indb 84 16.11.2017 15:22:04

- Отключайте устройство, если вы его не используете.
- Используйте перчатки.

5. Перед вводом в эксплуатацию

Убедитесь перед подключением, что данные на типовой табличке соответствуют параметрам сети.
Предупреждение!
Всегда вынимайте штекер из розетки прежде, чем осуществлять настройки устройства.

- Канатная таль не подходит для транспортировки горячих и/или расплавленных материалов, кроме того, канатная таль не предназначена для использования при низких температурах и в агрессивной среде.
- Механическая группа M1.
- Срок службы канатной тали составляет примерно 8000 циклов (за исключением быстроизнашивающихся деталей). После 8000 циклов необходимо проверить и отремонтировать все механические детали тали.
- Перед использованием канатной тали следует прочесть и понять руководство по эксплуатации.
- Удостоверьтесь в том, что оператор знает, как функционирует и эксплуатируется машина.
- Пользователь должен всегда действовать в соответствии с руководством по эксплуатации.
- Таль не предназначена для длительного режима работы. Предусмотренным режимом работы является повторно-кратковременный режим работы без влияния процесса запуска.

- Номинальная мощность машины не меняется в зависимости от положения груза.

5.1 Распаковка
После вскрытия упаковки проверьте раму, стальной канат, крюки и электрический контрольный механизм на наличие возможных повреждений при транспортировке.

5.2 Монтаж (рис. 5)
Канатная таль оснащена 2–мя крепежными скобами (1), при помощи которых ее необходимо закрепить на квадратной трубе. Размеры кронштейна должны соответствовать размеру крепежной скобы (1). Кронштейн должен выдерживать нагрузку вдвое больше номинальной нагрузки. Мы рекомендуем связаться с квалифицированным техником. Все винты должны быть правильно затянуты. Перед вводом в эксплуатацию квалифицированный техник должен проверить анкерное крепление кронштейна.

5.3 Использование в качестве полиспаста (рис. 6-9)
Канатная таль оборудована направляющим роликом (15) и дополнительным крюком (16). При правильном использовании при помощи канатной тали можно поднимать двойной груз. Смонтируйте направляющий ролик (15) и дополнительный крюк (16), как показано на рис. 6-8. Зафиксированный крюк (8) необходимо продеть в крепежное отверстие (2) (рис. 9).
После этого груз поднимается при помощи двух стальных тросов. Тем самым посредством канатной тали можно поднимать двойной груз.

6. Обращение с устройством

Опасность!
6.1 Указания касательно эксплуатации
1. Перед первым использованием удалите клейкую ленту с барабана (3).
2. Значение эмиссии шума в месте нахождения лица, эксплуатирующего устройство, по шкале A составляет менее 75 дБ (уровень звукового давления LpA). Данные шума и вибрации были определены в соответствии с нормами EN ISO 11201.
3. Питающее напряжение: 230 В ± 10 %, 50 Гц ± 1 %.
4. Эксплуатируйте канатную таль при температуре окружающей среды от 0 °C до 40 °C и относительной влажности воздуха менее 50 %. Высота над уровнем моря: макс. 1000 м.
5. Температура транспортировки и хранения составляет от -25 °C до 55 °C.

Anl_TC_EH_500_SPK9.indb 85 16.11.2017 15:22:04

Максимально допустимая температура не должна превышать 70 °C.

6. Пользователь должен поднимать груз с пола с минимальной возможной скоростью. Канат должен быть натянут во время подъема груза.
7. Двигатель (14) канатной тали оборудован термореле. Поэтому во время эксплуатации канатной тали двигатель (14) может останавливаться. Он снова запускается автоматически после остывания.
8. Электрическая канатная таль не имеет ограничителя номинальной мощности. Поэтому не пытайтесь поднять груз, если устройство защиты от перегрева ограничивает эксплуатацию. В таком случае нагрузка превышает номинальную мощность канатной тяги.
9. Не оставляйте подвешенные грузы без присмотра, не приняв соответствующие меры безопасности.
10. Оборудуйте устройство предохранителем 10 A или автоматом защиты от тока утечки 10 mA для защиты электрической цепи.
11. Не используйте рычаги (4/5) в качестве обычного стопорного приспособления. Они предназначены для использования в качестве стопорного приспособления только в аварийной ситуации.
12. Перед тем как приступить к работе, удостоверьтесь, что стальной канат (6) правильно намотан на барабан (3) и расстояние между витками меньше диаметра стального каната (рис. 3).
13. Удостоверьтесь в том, что груз надлежащим образом закреплен на крюке (8) или – при использовании в качестве полиспаста – на дополнительном крюке (16). Всегда соблюдайте дистанцию до груза и стального каната (6).

6.2 Эксплуатация (рис. 1)

- Проверьте, не нажат ли аварийный выключатель (9). Поверните красный выключатель по часовой стрелке для разблокировки.
- Нажмите кнопку ▲ (10) для подъема груза.
- Нажмите кнопку ▼ (10) для опускания груза.
- Рычаг автоматического стопорного механизма (5): если достигнута максимальная высота подъема, груз отключения (7) переключает рычаг (5) вверх. Посредством этого активируется конечный выключатель и груз больше нельзя поднимать.
- Рычаг для максимальной длины каната (4): если груз достиг самого нижнего положения, активируется конечный выключатель, который не позволяет продолжить опускание груза. Этот конечный выключатель также может применяться для предотвращения использования канатной тали с неправильным направлением движения (крюк движется в направлении, противоположном направлению, указанному на выключателе).
- При нажатии аварийного выключателя (9) канатная таль останавливается.
- В аварийной ситуации незамедлительно активируйте аварийный выключатель (9) для останова канатной тали. Работа с канатной талью невозможна, если активирован аварийный выключатель.

7. Замена кабеля питания электросети

Опасность!
Если будет поврежден кабель питания от электросети этого устройства, то его должен заменить изготовитель устройства, его служба сервиса или другое лицо с подобной квалификацией для того, чтобы избежать опасностей.

Anl_TC_EH_500_SPK9.indb 86 16.11.2017 15:22:04

8. Очистка, техобслуживание и заказ запасных деталей

Опасность!
Перед всеми работами по очистке необходимо вынуть штекер из розетки электросети.

8.1 Очистка

- Содержите защитные приспособления, вентиляционные щели и корпус двигателя свободными насколько это возможно от пыли и грязи. Протрите устройство чистой ветошью или продуйте сжатым воздухом под низким давлением.
- Мы рекомендуем очищать устройство сразу после каждого использования.
- Регулярно очищайте устройство влажной ветошью с небольшим количеством жидкого мыла. Не используйте средства для очистки или растворы; они могут повредить пластмассовые части устройства. Следите за тем, чтобы вода не попала вовнутрь устройства. Попадание воды в электрическое устройство повышает опасность получения удара током.

8.2 Техническое обслуживание
Опасность! Всегда необходимо удостоверяться в том, что машина не соединена с электросетью во время ухода за ней.

- Далее: один цикл соответствует одному подъему и опусканию груза. Периодическая проверка соответствует проверке через 100 циклов.
- Периодически проверяйте правильность функционирования конечных выключателей канатной тали. Проверка выполняется следующим образом: когда канат достигает максимальной высоты подъема, активируется рычаг автоматического стопорного механизма (5). Двигатель (14) должен остановиться. (Проверка без груза).
  Если стальной канат (6) максимально размотан, активируется рычаг для максимальной длины каната (4). Двигатель (14) должен остановиться.
- Периодически проверяйте кабель питания (12) и управляющую линию (13).
- Стальной канат (6) и направляющий ролик (15) необходимо смазывать каждые 200 циклов.
- Каждые 30 циклов контролируйте в соответствии с рис. 4 хорошее состояние всего стального каната (6). Если он поврежден, его следует заменить стальным канатом согласно техническим характеристикам.
- Каждые 1000 циклов проверяйте, хорошо ли затянуты винты крепежных скоб (1) и направляющего ролика (15).
- Каждые 1000 циклов проверяйте хорошее состояние крюков (8/16) и направляющего ролика (15).
- Регулярно смазывайте канат, цепь, привод, подшипники и крючки.
- Через каждую 1000 циклов проверяйте быстроизнашивающиеся детали: канат, цепь, крючки, ленты и тормозные накладки.
- Перед каждым использованием канатной тяги проверяйте безупречное рабочее состояние аварийного выключателя (9) и кнопок (10).
- Каждые 1000 циклов проверяйте тормозную систему. Если двигатель (14) издает необычные шумы или не может поднять груз, соответствующий номинальной нагрузке, возможно, требуется ремонт тормозной системы:
  - замените поврежденные или изношенные детали, соблюдайте указания в соответствующей документации по техническому обслуживанию;
  - для выполнения внеплановых ремонтных работ обращайтесь в авторизованный сервисный центр.
- Ремонтировать электроинструмент должны только квалифицированные специалисты.

8.3 Заказ запасных деталей:
При заказе запасных деталей необходимо указать следующие данные;

- Тип устройства
- Номер артикула устройства
- Идентификационный номер устройства
- Номер необходимой запасной детали

Актуальные цены и информация находятся на странице www.isc-gmbh.info

Anl_TC_EH_500_SPK9.indb 87 16.11.2017 15:22:04

9. Утилизация и вторичное использование

Устройство поставляется в упаковке для предотвращения повреждений при транспортировке. Эта упаковка является сырьем и поэтому может быть использована вновь или направлена на повторную переработку сырья. Устройство и его принадлежности изготовлены из различных материалов, например, металла и пластмасс. Не выбрасывайте дефектные устройства вместе с бытовыми отходами. Для правильной утилизации устройство необходимо сдать в подходящий пункт приема. Если Вы не знаете, где находится пункт приема, уточните это в органах коммунального управления.

10. Хранение

Храните устройство и его принадлежности в темном, сухом и неподверженном воздействию мороза, а также недоступном для детей месте. Оптимальная температура хранения находится между 5 ˚C и 30 ˚C. Храните электроинструмент в оригинальной упаковке.

Anl_TC_EH_500_SPK9.indb 88 16.11.2017 15:22:05

Только для стран ЕС

Запрещено выбрасывать электроинструмент в обычный домашний мусор.

Согласно европейской директиве 2012/19/EG об использованных электрических и электронных устройствах и реализации в правовой системе соответствующей страны необходимо использованный электрический инструмент утилизировать отдельно и направлять на вторичную переработку для охраны окружающей среды.

Вторичная переработка - альтернатива обязятельной отсылке устройства назад изґготовителю: Владелец электрическоґо устройства в случае избавления от собственности обязан,в качестве альтернативы отсылки назад изґготовителю, содействовать надлежащей утилизации. Пришедшее в неґодность устройство может быть передано в приемный пункт, который осуществит ликвидацию в соответствии с законом страны о цикличном производстве и обращении с мусором. Это не относится к приложенным к пришедшему в неґодность оборудованию дополнительным устройствам и вспомоґательным средствам, не содержащим электрические части.

Перепечатывание или прочие виды размножения документации и сопроводительных листов продукции фирмы, полностью или частично, разрешено производить только с однозначного разрешения ISC GmbH.

Сохраняется право на технические изменения

Информация о сервисном обслуживании

Во всех странах, указанных в гарантийном свидетельстве, у нас имеются компетентные сервисные партнеры, контактные данные которых Вы найдете в гарантийном свидетельстве. Они всегда в Вашем распоряжении для решения любых вопросов, связанных с обслуживанием, например, для ремонта, поставки запчастей и быстроизнашивающихся деталей, а также приобретения расходных материалов.

Следует обратить внимание на то, что в этом изделии следующие детали подвержены естественному износу или износу в связи с эксплуатацией / следующие детали требуются в качестве расходных материалов.

Категория	Пример
Быстроизнашивающиеся детали*	Стальной канат, Крюк, Направляющий ролик, Дополнительный крюк
Расходный материал/расходные части*	
Недостающие компоненты	

* Не обязательно входят в объем поставки!

При обнаружении дефектов или неисправностей мы просим Вас заявить о таком случае в сети Интернет на сайте www.isc-gmbh.info. Обратите внимание на точное описание неисправности и в любом случае ответьте на следующие вопросы:

- Устройство уже работало или оно было неисправным с самого начала?
- Вам бросилось что-либо в глаза перед возникновением неисправности (признак перед неисправностью)?
- Какую неисправность имеет устройство, по Вашему мнению (основной признак)? Опишите эту неисправность.

Anl_TC_EH_500_SPK9.indb 90 16.11.2017 15:22:05

Гарантийное свидетельство

Уважаемая покупательница, уважаемый покупатель,
наши продукты проходят тщательнейший контроль качества. Если это устройство все же не будет функционировать безупречно, мы просим Вас обратиться в наш сервисный отдел по адресу, указанному в этом гарантийном талоне. Мы также охотно ответим на Ваши вопросы по телефону, номер которого приведен ниже. При предъявлении гарантийных требований действуют следующие условия.

1. Настоящие правила гарантии действуют исключительно в отношении пользователей, т.е. физических лиц, которые не намереваются использовать настоящее изделие в рамках своей профессиональной или другой самостоятельной деятельности. Настоящие правила гарантии регулируют дополнительные условия оказания гарантийных услуг, которые нижеупомянутый производитель обеспечивает покупателям своих новых устройств в дополнение к условиям гарантии в соответствии с законом. Эти гарантийные обязательства не затрагивают Ваши законные гарантийные требования. Наши гарантийные услуги для Вас бесплатны.
2. Гарантийные услуги распространяются только на дефекты нового устройства нижеупомянутого производителя, которое вы приобрели, связанные с недостатком материала или производственным браком, и ограничиваются по нашему выбору устранением таких дефектов устройства или заменой устройства. Учтите, что наши устройства не предназначены для использования в промышленных целях, в ремесленном производстве и на профессиональной основе. Поэтому гарантийный договор считается недействительным, если устройство использовалось в течение гарантийного срока на кустарных, промышленных предприятиях или в ремесленном производстве, а также подвергалось сопоставимой нагрузке.
3. Наша гарантия не распространяется на:
   - повреждения устройства, возникшие в результате несоблюдения руководства по монтажу или неправильного монтажа, несоблюдения руководства по эксплуатации (например, при подключении к сети с неправильным напряжением или родом тока), несоблюдения требований касательно технического обслуживания и требований техники безопасности, воздействия на устройство аномальных условий окружающей среды или недостаточного ухода и технического обслуживания;
   - повреждения устройства, возникшие в результате неправильного или ненадлежащего использования (например, перегрузка устройства или применение не допущенных к использованию насадок или принадлежностей), попадания в устройство посторонних предметов (например, песка, камней или пыли, повреждения при транспортировке), применения силы или внешних воздействий (например, повреждения при падении);
   - повреждения устройства или частей устройства, связанные с износом в связи с эксплуатацией, обычным или другим естественным износом.
4. Гарантийный срок составляет 24 месяца, отсчет начинается со дня покупки устройства. Гарантийные права необходимо предъявлять до истечения срока гарантии в течении двух недель после того как будет обнаружена неисправность. Заявления на гарантийное обслуживание после истечения срока гарантии не принимаются. Ремонт или замена устройства не ведет к продлению гарантийного срока, также при оказании такой услуги отсчет нового гарантийного срока на устройство или возможно установленные детали не начинается заново. Это условие действует также при обращении в местный сервисный отдел.
5. Для предъявления гарантийных требований сообщите о неисправности устройства на сайте www.isc-gmbh.info. Приготовьте квитанцию о покупке или другие доказательства приобретения Вами нового устройства. Оказание гарантийных услуг применительно к устройствам, направленным на рассмотрение без соответствующих доказательств или фирменной таблички, исключается ввиду недостатка данных для идентификации таких устройств. Если наша гарантия распространяется на неисправность устройства, Вы немедленно получите отремонтированное или новое устройство.

Само собой разумеется, мы можем также устранить при оплате затрат неисправности устройства, которые не входят в объем гарантийных услуг или при истечении срока гарантии. Для этого Вам необходимо выслать устройство на адрес нашей службы сервиса.

Что касается быстроизнашивающихся, расходных деталей и недостающих компонентов, мы обращаем внимание на ограничения этой гарантии согласно информации о сервисном обслуживании настоящего руководства по эксплуатации.

Anl_TC_EH_500_SPK9.indb 91 16.11.2017 15:22:05

Nevarnost!
Pri uporabi naprav je potrebno upoštevati nekaj varnostnih ukrepov, da bi preprečili poškodbe in materialno škodo. Zato skrbno preberite ta navodila za uporabo/varnostne napotke. Le-te dobro shranite tako, da boste imeli zmeraj pri roki potrebne informacije. Če bi napravo izročili drugim osebam, Vas prosimo, da jim izročite tudi ta navodila za uporabo/varnostne napotke. Ne prevzemamo nobene odgovornosti za nezgode ali škodo, ki bi nastale zaradi neupoštevanja teh navodil za uporabo in varnostnih napotkov.

1. Varnostni napotki

Nevarnost!
Preberite varnostne napotke in navodila. Neupoštevanje varnostnih napotkov in navodil ima lahko za posledico električni udar, požar in/ali hude poškodbe. **Shranite vse varnostne napotke in navodila za kasnejšo uporabo.**

1. Preverite, če se napetost električnega omrežja ustreza napetosti, ki je navedena na tipski tablici. V primeru, da napetost električnega omrežja ni ustrezna, lahko to vodi do nenormalnega delovanja stroja in povzroči telesne poškodbe.
2. Pri oskrbi z električnim tokom mora biti prisotna tudi ozemljitev, oskrba z električnim tokom pa mora biti opremljena tudi z zaščitnim stikalom proti okvarnemu toku.
3. Prepovedano je dvigovanje tovora, katerega teža je večja od navedene nazivne teže.
4. Napravo uporabljajte le v namen, za katerega je ta naprava predvidena. Z dvigalno napravo na vrv nikoli ne dvigujte ljudi.
5. Nikoli ne vlecite za kabel z namenom, da bi tako potegnili električi vtikač iz električne priključne vtičnce. Kabel varujte pred vročino, oljem in ostrimi robovi.
6. Nikoli ne poskušajte z napravo dvigniti utrjen ali blokiran tovor.
7. Ko dvigalna naprava ni v rabi, jo izklopite iz električnega omrežja tako, da električni vtikač potegnete iz električne omrežne vtičnice.
8. Otroke in ostale nepooblaščene osebe ne pustite v bližino naprave.
9. Tovor je prepovedano vleči bočno ali z ene strani. Preprečite nihanje tovora.
10. Prepričajte se, da se kavelj preemika v isti smeri, kot je to prikazano na upravljalnem stikalu.
11. Dvigalno napravo na vrv je potrebno v rednih časovnih intervalih pregledati glede poškodb. Upravljalno stikalo mora biti v dobrem stanju.
12. Popravila in vzdrževalna dela na napravi se naj izvajajo pri pooblaščenih servisih preko strokovnjaka za elektriko. Popravila lahko izvaja le strokovnjak za elektriko, ker lahko v drugačnem primeru uporabniku preti nevarnost, da pride do nezgode.
13. Izogibajte se hitremu vklopu in izklopu (impulzno krmiljenje).
14. Pri upravljanju z dvigalno napravo na vrv morate biti ves čas pozorni.
15. Pod dvignjenim tovorom ne smete stati ali delati.

2. Opis naprave na obseg dobave

2.1 Opis naprave (Slika 1/2)
1. Pritrdilo
2. Luknja za pritrditev kavlja
3. Boben
4. Ročica za maksimalno dolžino vrvi
5. Ročica avtomatskega zavornega mehanizma
6. Jeklena vrv
7. Odklopna utež
8. Kavelj
9. Stikalo za izklop v sili
10. Tipka
11. Daljinsko upravljanje
12. Električni omrežni kabel
13. Kabel naprave za daljinsko upravljanje
14. Motor
15. Preusmerjevalni škripec
16. Dodatni kavelj
17. Vrv za daljinsko upravljanje

2.2 Obseg dobave
S pomočjo opisanega obsega dobave preverite, ali je artikel popoln. Če deli manjkajo, se najkasneje v 5 delovnih dnevih po nakupu izdelka obrnite na naš servisni center ali na prodajno mesto, kjer ste napravo kupili, in predložite račun. Upoštevajte preglednico garancijskih storitev ob koncu tega navodila.
- Odprite embalažo in previdno vzemite napravo iz embalaže.
- Odstranite embalažni material in embalažne in transportne varovalne priprave (če obstajajo).
- Preverite, če je obseg dobave popoln.
- Preverite morebitne poškodbe naprave in delov pribora, do katerih bi lahko prišlo med

Anl_TC_EH_500_SPK9.indb 92 16.11.2017 15:22:05

transportom.
- Po možnosti shranite embalažo do poteka garancijskega roka.

Nevarnost!
Naprava in embalažni material nista igrača za otroke! Otroci se ne smejo igrati s plastičnimi vrečkami, folijo in malimi deli opreme! Obstaja nevarnost zadušitve in zaužitja takšnih delov materiala!

- Originalna navodila za uporabo

3. Predpisana namenska uporaba

Dvigalna naprava je namenjena za dvigovanje in spuščanje tovora v zaprtih prostorih. Tovor mora biti primeren glede na zmogljivost naprave.

Ta stroj se lahko uporablja le v skladu z njegovo namembnostjo. Vsaka druga uporaba šteje kot nenamenska nedovoljena uporaba. Za kakršnekoli poškodbe ali škodo, ki bi nastale zaradi nedovoljene uporabe, nosi odgovornost uporabnik/upravljalec in ne proizvajalec.

Prosimo, da upoštevate, da naše naprave niso bile konstruirane za namene uporabe v obrtništvu ali industriji. Ne prevzemamo nobene odgovornosti, če je bila naprava uporabljana v obrtništvu ali industriji ter v podobnih dejavnostih.

4. Tehnični podatki

Napetost (V)	230 V ~ 50 Hz
Nazivni tok (A)	4,4
Sprejem moči (W)	1000
Način delovanja	S3 20% 10 min
Nazivna teža (kg)	250 / 500
Višina dviga (m)	11,5 / 5,7
Nazivna hitrost (m/min)	8 / 4
Premer jeklene vrvi (mm)	4,0
Natezna trdnost jeklene vrvi (N/mm^2)	1870
Izolacijski razred	B
Vrsta zaščite	IP 54
Razred pogonske naprave	M1
Neto teža (kg)	16,2

Delovanje v načinu S3 - 20% - 10 min: S3 = V prekinjenem načinu obratovanja brez vpliva zagonskega postopka. To pomeni, da znaša v času 10 minut max. čas obratovanja naprave 20% (2 minut).

Omejite hrupnost in vibracije na minimum!
- Uporabljajte samo brezhibne naprave.
- Redno vzdržujte in čistite napravo.
- Vaš način dela prilagodite napravi.
- Ne preobremenjujte naprave.
- Po potrebi dajte napravo v preverjanje.
- Izključite napravo, ko je ne uporabljate.
- Uporabljajte rokavice.

5. Pred uporabo

Pred priklopom se prepričajte, če se podatki na tipski podatkovni tablici skladajo s podatki o električnem omrežju.
Opozorilo!
Zmeraj izvlecite električni priključni vtikač preden začnete izvajati nastavitve na skobljiču.

- Dvigalna naprava na vrv ni primerna za transport vroče in/ali staljene mase, nadalje pa dvigalna naprava ni predvidena za upoprabo pri nizkih temperaturah in v agresivnem okolju.
- Mehanska skupina je M1.
- Amortizacijska doba dvigalne naprave na vrv je pribl. 8000 ciklov (razen deli, ki se hitro obrabijo). Ko dvigalna naprava odsluži 8000 ciklov, je potrebno mehanske dele pregledati in jih servisirati.
- Preden pričnete dvigalno napravo uporabljati, preberite navodila za uporabo.
- Prepričajte se, da bo uporabnik vedel kako stroj deluje in kako ga je potrebno uporabljati.
- Uporabnik mora stroj vedno uporabljati v skladu z navodili za uporabo.
- Dvigalna naprava ni namenjena za trajno uporabljanje. Način obratovanja: prekinjeno obnratovanje brez vpliva zagonskega postopka.
- Nazivna moč stroja se ne spreminja s položajem obremenitve.

5.1 Razpakirati
Po tem, ko odprete embalažo, je potrebno pregledati okvir, jekleno vrv, kavelj in električni kontrolni mehanizem glede eventualnih poškodb zaradi transporta.

Anl_TC_EH_500_SPK9.indb 93 16.11.2017 15:22:05

5.2 Montaža (Slika 5)
Dvigalna priprava je opremljena z 2 pritrdilnima ročajema (1), s katerima jo je potrebno pritrditi na štirikotno cev. Dimenzije previsnega nosilca se morajo skladati z velikostjo pritrdilnih ročajev (1) in nosilec mora zmožen nositi dvakratno nazivno breme. Priporočamo, da se obrnete na strokovno usposobljenega tehnika.
Vse vijake je potrebno pravilno priviti. Pred prvim zagonom pa naj kvalificirani tehnik preveri zasidranje previsnega nosilca.

5.3 Delo s pomočjo škripčevja (Slike 6 – 9)
Dvigalna naprava na vrv je opremljena s preusmerjevalnim škripcem (15) in z dodatnim kavljem (16). S pravilno uporabo lahko dvigalna naprava dvigne dvojni tovor.
Preusmerjevalni škripec (15) in dodaten kavelj (16) montirajte tako kot je to prikazano na slikah 6-8. Fiksno montiran kavelj (8) je potrebno obesiti v odprtino za pritrditev kavlja (2) (Slika 9).
Tovor se zdaj dviga s pomočjo dveh jeklenih vrvi, dvigalna naprava lahko tako dvigne dvojni tovor.

6. Uporaba

Nevarnost!
6.1 Navodila za delovanje
1. Pred prvo uporabo z bobna (3) odstranite lepilni trak.
2. Vrednost z A ocenjene emisije hrupa na delovnem mestu upravljavca je nižja kot 75dB (raven zvočnega tlaka LpA). Vrednosti hrupa in vibracij so bile izmerjene v skladu z EN 11201.
3. Napetost oskrbe z električnim tokom: 230 V ± 10%, 50 Hz ± 1%.
4. Dvigalno napravo na vrv se uporablja pri temperaturah okolja med 0 °C in 40 °C in pri relativni vlažnosti pod 50%. Do nadmorske višine: maks. 1000 m.
5. Stroj se lahko transportira in skladišči pri temperaturah med -25 °C in 55 °C. Najvišja dopustna temperatura ne sme presegati 70 °C.
6. Uporabnik mora tovor s tal dvigniti z najmanjšo možno hitrostjo. Tik preden se tovor začenja dvigovati, mora vrv biti napeta.
7. Motor (14) dvigalne naprave na vrv je opremljen s termostatskim stikalom. Zato lahko med delovanjem pride do zaustavitve motorja (14), ta pa se avtomatsko ponovno zažene, ko se ohladi.
8. Električna dvigalna naprava na vrv ni opremljena z omejevalom nazivne moči. Zato Vas prosimo, da v primeru, ko zaščita proti pregrevanju omeji delovanje, tovora ne poskušajte dvigovati dalje. V tem primeru je obremenitev večja od nazivne moči dvigalne naprave na vrv.
9. Nobenega tovora ne smete pustiti viseti nenadzorovano brez, da bi zagotovili preventivne varnostne ukrepe.
10. Da bi zavarovali električni krog, je napravo potrebno zavarovati z 10 A varovalko ali z 10 mA varnostnim stikalom proti okvarnemu toku.
11. Ročico (4/5) ne uporabljajte kot rutinsko zavorno napravo. Ta služi le kot naprava za zaustavitev v skrajni sili.
12. Preden začnete z delom, se prepričajte, da je jeklena vrv (6) pravilno navita okoli bobna (3) in da je razmak med navoji manjši od premera jeklene vrvi (Slika 3).
13. Poskrbite, da bo tovor, na primer pri delovanju s škripci, pravilno zavarovan na kavlju (8) in na dodatnem kavlju (16), vedno pa poskrbite tudi za varnostno razdaljo do tovora in do jeklene vrvi (6).

6.2 Delovanje (Slika 1)
- Preverite, če je stikalo za izklop v sili (9) aktivirano. Da bi stikalo sprostili, zavrtite rdeče zavorno stikalo v smeri urinega kazalca.
- Za dvigovanje tovora pritisnite na tipko ▲ (10).
- Za spuščanje tovora pritisnite na tipko ▼ (10).
- Ročica avtomatskega zavornega mehanizma (5): Ko je maksimalna dvižna višina dosežena, odklopna utež (7) pritisne ročico (5) navzgor. S tem se aktivira končno stikalo in tovora ni mogoče več dvigniti višje.
- Ročica za maksimalno dolžino vrvi (4): Ko tovor doseže najnižji možni položaj, se aktivira končno stikalo, ki onemogoča nadalnje spuščanje tovora. To končno stikalo bi preprečilo tudi delovanje dvižne naprave v nepravilno smer (kavelj se premika v nasprotni smeri, kot je prikazana na konzoli za daljinsko upravljanje).
- Če se aktivira stikalo za izklop v sili (9), se dvigalna naprava zaustavi.
- V skrajnem primeru sile takoj pritisnite na stikalo za izklop v sili (9), da s tem zaustavite dvigalno napravo. V primeru aktiviranja stikala za izklop v sili, je delo z dvigalno napravo onemogočeno.

Anl_TC_EH_500_SPK9.indb 94 16.11.2017 15:22:05

7. Zamenjava električnega priključnega kabla

Nevarnost!
Če se električni priključni kabel te naprave poškoduje, ga mora zamenjati proizvajalec ali njegova servisna služba ali podobno strokovno usposobljena oseba, da bi preprečili ogrožanje varnosti.

8. Čiščenje, vzdrževanje in naročanje nadomestnih delov

Nevarnost!
Pred izvajanjem vsakega čistilnega dela izvlecite električni priključni kabel.

8.1 Čiščenje

- Zaščitno opremo, zračne reže in ohišje motorja vzdržujte kar se le da v stanju brez prisotnosti prahu in umazanije. Napravo obrišite s suho krpo ali s komprimiranim zrakom pod nizkim pritiskom.
- Priporočamo, da napravo očistite neposredno po vsakem končanem delu.
- Redno čistite napravo z vlažno krpo in nekaj milnice. Ne uporabljajte nobenih čistilnih ali razredčilnih sredstev; le-ta lahko poškodujejo plastične dele naprave. Pazite na to, da ne pride voda v notranjost naprave. Vstop vode v električno napravo povečuje tveganje električnega udara.

8.2 Vzdrževanje
Nevarnost! Vedno, ko na stroju opravljate vzdrževalna del, se prepričajte, da stroj ni priključen na električno omrežje.

- V nadaljevanju: En ciklus ustreza enemu premiku tovora v smeri gor in dol. Periodična kontorla pomeni kontrolo po 100 ciklih.
- Periodično kontrolirajte, če končno stikalo dvigalne naprave deluje pravilno. Kontrolo izvedete na naslednji način: Ko jeklena vrv doseže maksimalno dvižno višino, se aktivira ročica avtomatskega zavornega mehanizma (5). Motor (14) se zdaj mora zaustaviti. (kontrolo izvedite brez tovora).
  Ko se jeklena vrv (6) odvije do konca, se aktivira ročica za maksimalno dolžino vrvi (4). Motor (14) se zdaj mora zaustaviti.
- Periodično izvršite kontrolo električnega omrežnega kabla (12) in kabla naprave za daljinsko upravljanje (13).
- Vsakih 200 ciklov je potrebno namazati jekleno vrv (6) in preusmerjevalni škripec (15).
- Vsakih 30 ciklov se je potrebno prepričati (kot je prikazano na sliki 4), da je celotna jeklena vrv (6) v dobrem stanju. V primeru, da je poškodovana, jo je potrebno zamenjati z jekleno vrvjo, ki ima ustrezne tehnične podatke.
- Vsakih 1000 ciklov preverite, če so vijaki pritrdil (1) in preusmerjevalnega škripca (15) dobro priviti.
- Redno mažite vrv, verigo, menjalnik, ležaj in kavlje.
- Vsakih 1000 ciklov preverite obrabne dele, kot so: vrv, veriga, kavlji, trakovi in zavorne obloge.
- Vsakih 1000 ciklov preverite, če sta kavelj (8/16) in preusmerjevalni škripec (15) v dobrem stanju.
- Pred vsako uporabo dvigalne naprave preverite, če sta stikalo za izklop v sili (9) in pritisna tipka (10) v brezhibnem obratovalnem stanju.
- Vsakih 1000 ciklov preverite zavorni sistem. Če motor (14) ustvarja nenavaden hrup ali ne more dvigniti nazivne teže, je možno, da je potrebno servisirati zavorni sistem:
  - Zamenjajte poškodovane ali obrabljene dele in shranite servisno dokumentacijo, ki spada zraven.
  - Za nenačrtovana vzdrževalna dela se obrnite na pooblaščeni servisni center.
- Električno orodje sme popravljati le usposobljeno osebje.

8.3 Naročanje nadomestnih delov:
Pri naročanju nadomestnih delov je potrebno navesti naslednje navedbe:

- Tip naprave
- Art. številko naprave
- Ident- številko naprave
- Številka potrebnega nadomestnega dela

Aktualne cene in informacije najdete na spletni strani www.isc-gmbh.info

Anl_TC_EH_500_SPK9.indb 95 16.11.2017 15:22:05

9. Odstranjevanje in ponovna uporaba

Naprava se nahaja v embalaži, da ne bi prišlo do poškodb med transportom. Ta embalaža je surovina in s tem ponovno uporabna ali pa jo je možno reciklirati. Naprava in njen pribor sta izdelana iz različnih materialov kot npr. kovine in plastika. Okvarjene naprave ne sodijo med gospodinjske odpadke. Napravo odložite na ustreznem zbirališču, da bo pravilno odstranjena. Če ne poznate primernih zbirališč, se pozanimajte pri svoji občinski upravi.

10. Skladiščenje

Napravo in pribor za napravo skladiščite na temnem, suhem in pred mrazom zaščitenem in za otroke nedostopnem mestu. Optimalna skladiščna temperature je med 5 in 30 ˚C. Električno orodje shranjujte v originalni embalaži.

Anl_TC_EH_500_SPK9.indb 96 16.11.2017 15:22:05

Samo za dežele EU

Električnega orodja ne mečite med gospodinjske odpadke!

V skladu z evropsko smernico 2012/19/EG o starih električnih in elektronskih napravah in v skladu z izvajanjem nacionalne zakonodaje morate ločeno zbirati izrabljena električna orodja in jih predati v okoljsko varno ponovno predelavo.

Reciklažna alternativa za poziv za vračanje:
Lastnik električne naprave je alternativno zavezan, da namesto vračanja sodeluje pri pri strokovno ustreznem recikliranju v primeru predaje lastnine. Staro napravo se lahko v ta namen tudi prepusti na odvzemnem mestu, ki izvaja odstranjevanje v smislu nacionalne zakonodaje o odstranjevanju takšnih odpadkov. To se ne nanaša na starim napravam priložene dele pribora in opreme brez električnih komponent.

Ponatis ali kakršnokoli razmnoževanje dokumentacije in spremljajočih papirjev o proizvodu, tudi po izvlečkih, je dovoljeno samo z izrecnim soglasjem ISC GmbH.

Pridržana pravica do tehničnih sprememb

Anl_TC_EH_500_SPK9.indb 97 16.11.2017 15:22:05

Servisne informacije

V vseh državah, ki so navedene v garancijski listini, sodelujemo s kompetentnimi servisnimi partnerji, katerih kontakti so razvidni iz garancijske listine. Na voljo so vam za vse potrebne servisne storitve, kot so popravila, oskrba z nadomestnimi in obrabnimi deli ali oskrba s potrošnimi materiali.

Upoštevajte, da so nekateri deli tega izdelka izpostavljeni naravni obrabi zaradi uporabe oz. da so nekateri deli potrošni material.

Kategorija	Primer
Obrabni deli*	Jeklena vrv, Kavelj, Preusmerjevalni škripec, Dodatni kavelj
Obrabni material/ obrabni deli*	
Manjkajoči deli	

* ni nujno, da je v obsegu dobave!

Pri pomanjkljivostih ali napakah vas prosimo, da napako prijavite na www.isc-gmbh.info. Napako kar najbolj natančno opišite in v vsakem primeru odgovorite na naslednja vprašanja:

Odgovorite na naslednja vprašanja:
- Je naprava nekoč delovala, ali je bila od vsega začetka okvarjena?
- Ste pred okvaro opazili kaj neobičajnega (simptom ali okvaro)?
- Kaj na napravi po vašem mnenju ne dela (glavni znak)?
  Opišite to napačno delovanje.

Anl_TC_EH_500_SPK9.indb 98 16.11.2017 15:22:05

Garancijska listina

Spoštovani uporabnik,
za naše izdelke izvajamo strogo končno kontrolo kakovosti. Če ta naprava kljub temu ne deluje brezhibno, to zelo obžalujemo in vas prosimo, da se obrnete na našo servisno službo na naslovu, ki je naveden na tej garancijski kartici. Z veseljem vam bomo svetovali tudi po telefonu na navedeni številki servisne službe. Za uveljavljanje garancijskih zahtevkov velja naslednje:

1. Ti garancijski pogoji so namenjeni izključno porabniku, tj. fizičnim osebam, ki tega izdelka ne bodo uporabljale za svojo obrt ali druge samostojne dejavnosti. Ti garancijski pogoji urejajo dodatne garancijske storitve, ki jih spodaj navedeni proizvajalec zagotavlja svojim kupcem novih naprav dodatno k zakonskemu jamstvu.Ta garancija ne vpliva na vaše zakonske garancijske zahtevke. Naše garancijske storitve so za vas brezplačne.
2. Garancijske storitve se nanašajo izključno na pomanjkljivosti na novih napravah zgoraj navedenega proizvajalca, ki ste jih kupili, in so posledica materialnih ali tovarniških napak, in ki jih po lastni presoji odpravimo na tej napravi ali napravo nadomestimo z drugo.
   Prosimo, upoštevajte, da naše naprave niso bile zasnovane za uporabo v poklicu, obrti ali za poklicno uporabo. Garancijska pogodba tako ne nastane, če napravo v garancijskem obdobju uporabljate za v obrtnih, rokodelskih ali industrijskih obratih ali če je bila izpostavljena obremenitvam, ki so temu enakovredna.
3. Iz garancije so izvzeti:
   - Škoda na napravi, ki je nastala zaradi neupoštevanja navodil za montažo ali zaradi nestrokovne inštalacije, neupoštevanja navodil za uporabo (kot npr. s priključitvijo na napačno omrežno napetost ali vrsto toka), neupoštevanja navodil za vzdrževanje in varnostnih določil ali zaradi izpostavitve naprave nenormalnim okoljskim pogojem ali zaradi neustrezne nege in vzdrževanja.
   - Škoda na napravi, ki je nastala zaradi nenamenske ali nestrokovne uporabe (npr. zaradi preobremenitve naprave ali uporabe v orodjih ali opremi, za katera ni odobrena), vdor tujkov v napravo (npr. peska, kamnov ali prahu, poškodb pri transportu), uporabe sile ali zunanje sile (npr. poškodbe pri padcih).
   - Škode na napravi ali delih naprave, ki je nastala kot posledica uporabe oz. običajne ali drugačne obrabe.
4. Garancijsko obdobje traja 24 mesecev in se začne z datumom nakupa naprave. Garancijske zahtevke je treba uveljaviti pred potekom garancijskega obdobja v roku dveh tednov, ko opazite okvaro. Uveljavljanje garancijskih zahtevkov po poteku garancijskega obdobja je izključeno. Popravilo ali menjava naprave ne podaljša garancijskega obdobja, niti ne predstavlja začetka novega garancijskega obdobja za storitev, izvedeno na napravi ali za morebitne vgrajene nadomestne dele. To velja tudi pri servisih na kraju samem.
5. Za uveljavljanje vašega garancijskega zahtevka okvarjeno napravo prijavite na: www.isc-gmbh.info. Pripravite račun ali drugo dokazilo o vašem nakupu nove naprave. Naprave, poslane brez ustreznega dokazila ali tipske tablice, so izključene iz garancijskih storitev, saj jih ni možno uvrstiti. Če je okvara zajeta v naših garancijskih storitvah, boste takoj prejeli popravljeno ali novo napravo.

Seveda bomo proti plačilu z veseljem odpravili tudi okvare na napravi, ki v garancijski obseg ne sodijo ali ne sodijo več. Napravo nam pošljite na spodaj naveden naslov servisa.

Opozarjamo na omejitve v okviru te garancije za obrabne, potrošne in manjkajoče dele v skladu s servisnimi informacijami, opisanimi v teh navodilih za uporabo.

Anl_TC_EH_500_SPK9.indb 99 16.11.2017 15:22:05

Veszély!
A készülékek használatánál, a sérülések és a károk megakadályozásának az érdekébe be kell tartani egy pár biztonsági intézkedést. Ezért ezt a használati utasítást / biztonsági utasításokat gondosan átolvasni. Őrizze ezeket jól meg, azért hogy mindenkor a rendelkezésére álljanak az információk. Ha más személyeknek adná át a készüléket, akkor kérjük kézbesítse ki vele együtt ezt a használati utasítást / biztonsági utasításokat is. Nem vállalunk felelőséget olyan balesetekért vagy károkért, amelyek ennek az utasításnak és a biztonsági utasításoknak a figyelmen kívül hagyásából keletkeznek.

1. Biztonsági utasítások

Veszély!
Olvason minden biztonsági utalást és utasítást el. A biztonsági utalások és utasítások betartásán belüli mulasztások következménye áramcsapás, tűz és/vagy nehéz sérülések lehetnek. **Őrizze meg a biztonsági utalásokat és utasításokat a jövőre nézve.**

1. Elleőrizze mindig le, hogy a hálózati feszültség a típustáblán levő feszültségnek megfelel e. Abban az esetben, ha nem megfelelő a hálózati feszültség, akkor ez a gép abnormális működéséhez és személysérülésekhez vezethet.
2. Az áramellátásnak földeléssel kell rendelkeznie és egy hibaáram védőkapcsolóval lebiztosítva lennie.
3. Tilos olyan terheknek az emelése, amelyek túllépik a névleges tehert.
4. A készüléket csak az előrelátott célra használni. Ne emeljen sohasem személyeket a kötélemelővonóval.
5. Ne húzzon a kábelon a dugó kihúzására. Tartsa a kábelt hőségtől, olajtól és éles szélektől távol.
6. Ne próbáljon sohasem feszes vagy blokkolt terheket megemelni.
7. Húzza ki a hálózati dugót, ha nincs használatban a kötélemelővonó.
8. Gyerkeket és más nem autorizált személyeket távol tartani a géptől.
9. Tilos terheket oldalvást vagy egy oldalról húzni. Kerülje el a teher lengését.
10. Biztosítsa, hogy a kampó ugyanabba az irányba mozog, mint ami a kezelőkapcsolón mutatva van.
11. Ellenőrizze rendszeresen le a kötélemelővonót sérülésekre. A kezelőkapcsolónak jó állapotban kell lennie.
12. A javítási és karbantartási munkákat csak egy feljogosított szakműhelyben, egy villamossági szakember által elvégeztetni. Javításokat csak egy villamossági szakember végezheti el, különben balesetek érhetik a használót.
13. Kerülje el a gyors be- és kikapcsolást (megérintésiüzem).
14. Legyen a kötélemelővonó kezelésénél mindig figyelmes.
15. Ne álljon vagy dolgozzon a felemelt teher alatt.

2. A készülék leírása és a szállítás terjedelme

2.1 A készülék leírása (képek 1/2)
1. Felerősítési fül
2. Felerősítési lyuk a kampónak
3. Dob
4. Kar a maximális kötélhosszúsághoz
5. Az automatikus stopmechanizmus karja
6. Acélkötél
7. Lekapcsolótömeg
8. Kampó
9. Vész-ki-kapcsoló
10. Nyomótaszter
11. Távirányító
12. Hálózati kábel
13. Vezérlővezeték
14. Motor
15. Terelőgörgő
16. Pótkampó
17. Kötél a távvezérléshez

2.2 A szállítás terjedelme
Kérjük a leírott szállítási terjedelem alapján leellenőrizni a cikk teljességét. Hiányzó részek esetén forduljon a cikk vásárlása után legkésőbb 5 munkanapon belül egy érvényes vásárlási igazolás felmutatása mellett a szervízközponthoz vagy a eladóhelyhez, ahol vette a készüléket. Kérjük vegye ehhez figyelembe az utasítás végén a szervíz-információkban található szavatossági táblázatot.
- Nyissa ki a csomagolást és vegye ki óvatosan a készüléket a csomagolásból.
- Távolítsa el a csomagolási anyagot valamint a csomagolási- / és szállítási biztosítékot (ha létezik).
- Ellenőrizze le, hogy teljes a szállítás terjedel-

Anl_TC_EH_500_SPK9.indb 100 16.11.2017 15:22:05

me.
- Ellenőrizze le a készüléket és a tartozékrészeket szállítási károkra.
- Ha lehetséges, akkor őrizze meg a csomagolást a garanciaidő lejáratának a végéig.

Veszély!
A készülék és a csomagolási anyag nem gyerekjáték! Nem szabad a gyerekeknek a műanyagtasakokkal, foliákkal és aprórészekkel játszaniuk! Fennáll a lenyelés és a megfulladás veszélye!

- Eredeti használati utasítás

3. Rendeltetésszerűi használat

A kötélemelővonó zárt termekben a készülékteljesítményének megfelelő terhek emelésére és leeresztésére szolgál.

A készüléket csak rendeltetése szerint szabad használni. Ezt túlhaladó bármilyen használat, nem számít rendeltetésszerűnek. Ebből adódó bármilyen kárért vagy bármilyen fajta sérülésért a használó ill. a kezelő felelős és nem a gyártó.

Kérjük vegye figyelembe, hogy a készülékeink rendeltetésük szerint nem az ipari, kézműipari vagy gyári használatra lettek konstruálva. Nem vállalunk szavatosságot, ha a készülék ipari, kézműipari vagy gyári üzemek területén valamint egyenértékű tevékenységek területén van használva.

4. Technikai adatok

Feszültség (V)	230 V ~ 50 Hz
Névleges áram (A)	4,4
Teljesítményfelvétel (W)	1000
Üzemmód	S3 20% 10 min
Névleges teher (kg)	250 / 500
Emelőmagasság (m	11,5 / 5,7
Névleges sebesség (m/perc)	8 / 4
Az acélkötél átmérője (mm)	4,0
Az acélkötél húzószilárdsága (N/mm^2)	1870
Izolációosztály	B
Védelmi osztály	IP 54
Hajtóműosztály	M1
Nettó tömeg (kg)	16,2

Üzemmód S3 - 20% - 10perc:
S3 = megszakításos üzem az indulási folyamat befolyása nélkül. Ez annyit jelent, hogy egy 10 perces időtartam alatt a max. üzemidő 20% (2 perc).

Csökkentse le a zajkibocsátást és a vibrálást egy minimumra!
- Csak kifogástalan készülékeket használni.
- A készüléket rendszeresen karbantartani és megtisztítani.
- Illessze a munkamódját a készülékhez.
- Ne terhelje túl a készüléket.
- Hagyja adott esetben leellenőrizni a készüléket.
- Kapcsolja ki a készüléket, ha nem használja.
- Hordjon kesztyűket.

5. Beüzemeltetés előtt

Győződjön meg a rákapcsolás előtt arról, hogy a típustáblán megadott adatok megegyeznek a hálózati adatokkal.
Figyelmeztetés!
Húzza mindig ki a hálózati csatlakozót, mielőtt beállításokat végezne el a készüléken.

- A kötélemelővonó nem alkalmas forró vagy olvadt tömegek szállítására, továbbá a kötélemelővonó nem lett alacsony hőmérsékleteknéli és agrasszív környezeten belüli használatra előrelátva.
- A mechanikus csoport az M1.
- A kötélemelővonó használati tartama cca. 8000 ciklus (exkl. a gyorsan kopó részek). Ha a vonó meghaladta a 8000 ciklust, akkor minden mechanikus részt le kell ellenőrizni és generáljavítást kell elvégezni rajtuk.
- Olvassa és értse meg a használati utasítást mielőtt használná a kötélemelővonót.
- Biztosítsa, hogy a kezelő személyzet tudja, hogy hogyan működik a gép és hogy hogyan kellene üzemeltetni.
- A használónak mindig a használati utasítással megegyezően kellen tevékenykednie.
- Az emelővonó nem lett tartósüzemre előrelátva. Az üzemód: megszakításos üzem az indulási folyamat befolyása nélkül.
- A gép névleges teljesítménye variál a megterhelés helyzetével.

Anl_TC_EH_500_SPK9.indb 101 16.11.2017 15:22:06

5.1 Kicsomagolni
A csomagolás kinyitása után ellenőrizze le a keretet, az acélkötelet, a kampót és az elektromos kontrollmechanizmust lehetséges szállítási károkra.

5.2 Összeszerelés (5-ös kép)
A kötélemelővonó 2 rögzítőfüllel (1) van felszerelve, amelyekkel egy négyszögű csőre kell felerősíteni. A kinyúlókar méreteinek meg kell egyeznie a rögzítőfül (1) nagyságával és a névleges teher kétszeresét kell tudnia hordani. Ajánljuk, hogy vegye fel a kapcsolatot egy kvalifikált technikussal.
Minden csavarnak helyesen meg kell húzva lennie. A beüzemeltetés előtt le kellene egy kvalifikált technikusnak ellenőriznie a kinyúlókar lerögzítését.

5.3 Emelő csigasorfunkció (képek 6-tól – 9-ig)
A kötélemelővonó egy terelőgörgővel (15) és egy kiegészítő kampóval (16) van felszerelve. Helyes használatnál a kötélemelővonó a dupla terhet tudja emelni.
A terelőgörgőt (15) és a pótkapmót (16) a 6-tól – 8-ig levő képeken mutatottak szerint felszerelni. A feszesen felszerelt kampót (8) be kell akasztani a rögzítőlyukba (2) (9-es kép).
A teher most két acélkötél segítségével lesz megemelve, így a kötélemelővonó a duplat terhet tudja megemelni.

6. Kezelés

Veszély!
6.1 Utasítások az üzemhez
1. Az első használat előtt távolítsa el a ragasztószalagot a dobról (3).
2. Az A-értékelt zajemisszió értéke az üzemeltető helyén 75dB-nél alacsonyabb (hangnyomásszint LpA). A zaj és a vibrálási értékek az EN ISO 11201-nek megfelelően lettek megállapítva.
3. Ellátófeszültség: 230V ± 10%, 50Hz ± 1%.
4. A kötélemelővonót 0°C és 40°C fok között, 50% alatti relatív nedvességű környezetben kell üzemeltetni. A tengerszint feletti magasság: max. 1000 m.
5. A szállításhoz és tároláshoz a hőmérsékletnek -25°C és 55°C között szabad lennie. A legnagyobb engedélyezett hőmérsékletnek nem szabad 70°C felett lennie.
6. A használónak a tehert a talajról a lehetséges legkisebb sebességgel kellene hogy megemelje. A kötélnek a teher megemelésénél feszítve kellene lennie.
7. A kötélemelővonó motorja (14) egy termosztátkapcsolóval van felszerelve. Ezért a kötélemelővonó üzemeltetése alatt lestoppolhat a motor (14), amely lehüles után automatikusan ismét beindul.
8. Az elektromos kötélemelővonó nincs egy névleges teljesítményhatárolóval felszerelve. Ezért kérjük ne próbálja tovább megemelni a tehert, ha a túlhevülés elleni védelem korlátolja az üzemet. Ebben az esetben túllépi a teher a kötélemelővonó névleges teljesítményét.
9. Ne hagyjon logó terheket, anélkül hogy megfelelő biztonsági intézkedéseket végezett volna el felügyelet nélkül.
10. Az áramkör biztosításához biztosítsa le a készüléket egy 10 A-os biztosítékkal vagy egy 10 mA-os hibaáram-védőkapcsolóval.
11. Ne használja a kart (4/5) rutin stopbrendezésként. Ez csak szükség esetén szolgál stopberendezésként.
12. Mielőtt kezdene, biztosítsa hogy az acélkötél (6) helyesen fel van tekerve a dobra (3) és a csavarulatok közötti távolság kisebb az acélkötéltől (3-as kép).
13. Biztosítsa, hogy a rakomány a kampón (8) illetve a láncos csigasoros üzemnél a pótkampón (16) helyesen biztosítva van és tartson mindig távolságot a teherhez és az acélkötélhez (6).

6.2 Üzem (1-es kép)
- Ellenőrizze le, hogy a vész-ki-kapcsoló (9) nyomva van e. Fordítsa kireteszeléshez a piros stopkapcsolót az óramutató forgási irányába.
- A teher megemeléséhez nyomja meg a nyomótasztert ▲ (10).
- A teher leeresztéséhez nyomja meg a nyomótasztert ▼ (10).
- Az automatikus stopmechanizmus (5) karja: Ha elérte a maximális emelőmagasság, akkor a lekapcsolótömeg (7) felnyomja a kart (5). Azáltal üzemeltetve lesz a végkapcsoló és nem lehet tovább felemelni a terhet.
- Kar a maximális kötélhosszúsághoz (4): Ha a teher elérte a lehető legalacsonyabb pozíciót, akor egy végkapcsoló üzemeltetve lesz, amely lehetetlené teszi a teher további leeresztését. Ez a végkapcsoló úgyszintén megakadá-

Anl_TC_EH_500_SPK9.indb 102 16.11.2017 15:22:06

lyozná a kötélemelővonónak a rosz irányba történő üzemét (a kampó a kezelőkapcsolón mutatott iránnyal ellenkezően mozog).
- Ha üzemeltetve lesz a vész-ki-kapcsoló (9), akkor megáll a kötélemelővonó.
- Egy vész szükség esetén, a kötélemelővonó megállításához azonnal üzemeltetni a vész-ki-kapcsolót (9). A kötélemelővonó kezelése nem lehetséges, ha a vész-ki-kapcsoló üzemeltetve lett.

7. A hálózati csatlakozásvezeték kicserélése

Veszély!
Ha ennek a készüléknek a hálózatra csatlakoztató vezetéke megsérült, akkor ezt a gyártó vagy annak a vevőszolgáltatása, vagy egy hasonlóan szakképzett személy által ki kell cseréltetni, azért hogy elkerülje a veszélyeztetéseket.

8. Tisztítás, karbantartás és pótalkatrészmegrendelés

Veszély!
Tisztítási munkák előtt húzza ki a hálózati csatlakozót.

8.1 Tisztítás
- Tartsa a védőberendezéseket, szellőztető réseket és a gépházat annyira por- és piszokmentesen, amennyire csak lehet. Dörzsölje le a készüléket egy tiszta posztóval vagy pedig fújja ki alacsony nyomás alatt sűrített levegővel.
- Ajánljuk, hogy minden használat után azonnal kitisztítsa a készüléket.
- A készüléket rendszeresen egy nedves posztóval és egy kevés kenőszappannal megtisztítani. Ne használjon tisztító vagy oldó szereket; ezek megtámadhatják a készülék műanyagrészeit. Ügyeljen arra, hogy ne kerüljön víz a készülék belsejébe. A víz elektromos készülékbe való behatolása megnöveli az áramcsapás veszélyét.

8.2 Karbantartás
Veszély! Mindig biztosítani, hogy a gép ápolásánál a gép nincs összekötve az áramhálózattal.
- Alábbi: Egy ciklus, egy tehernek a fel- és lefelé való mozgásának felel meg. A periodikus leellenőrzés, egy 100 ciklus utáni leellenőrzésnek felel meg.
- Ellenőrizze le periodikusan, hogy a kötélemelővonó végkapcsolója rendeltetésszerűen működik. A leellenőrzés a következő képpen történik: Ha a kötél elérte a maximális emelőmagasságot, akkor üzemeltetve lesz az automatikus stopmechanizmus (5) karja. A motornak (14) most le kell stoppolnia. (teher nélkül leellenőrizni).
  Ha az acélkötél (6) annyira le van tekerve amennyire csak lehet, akkor üzemeltetve lesz a maximális kötélhosszúság (4) karja. A motornak (14) most le kell stoppolnia.
- Ellenőrizze periodikusan le a hálózati kábelt (12) és a vezérlővezetéket (13).
- Minden 200 ciklusnál meg kell kenni az acélkötelet (6) és a terelőgörgőt (15).
- Minden 30 ciklusnál a 4-es képnek megfelelően le kell ellenőrizni, hogy az egész acélkötél (6) jó állapotban van e. Ha károsut, akkor ki kell cserélni a technikai adtoknak megfelelő acélkötéllel.
- Minden 1000 ciklusnál leellenőrizni, hogy a rögzítőfül (1) és a terelőgörgő (15) csavarjai jól megvannak e húzva.
- Minden 1000 ciklusnál leellenőrizni, hogy a kampók (8/16) és a terelőgörgő (15) jó állapotban van e.
- A kötelet, láncot, hajtóművet, csapágyat és a kampót rendszeresen kenni.
- Minden 1000 ciklus után leellenőrizni a gyorsan kopó részezeket, mint a: Kötelet, láncot, kampót, szallagokat és a fékbevonatokat.
- A kötélemelővonó minden használata előtt leellenőrizni, hogy a vész-ki-kapcsoló (9) és a nyomótaszter (10) kifogástalan üzemállapotban van e.
- Minden 1000 ciklusban leellenőrizni a fékszisztémát. Ha a motor (14) szokatlan zajokat bocsájtana ki vagy nem tudná megemelni a névleges tehert, akkor lehetséges, hogy a fékszisztémán egy generáljavítást kell elvégezni:
  - Cserélje ki a károsult vagy elkopott részeket és őrizze meg a hozzátartozó karbantartási dokumentációt.
  - A terven kívüli gondozási munkákhoz kérjük forduljon egy feljogosított szervízközponthoz.

Anl_TC_EH_500_SPK9.indb 103 16.11.2017 15:22:06

- Az elektromos szerszámát csak egy kvalifikált szakszemélyzet által javíttatni.

8.3 A pótalkatrész megrendelése:
Pótalkatrész megrendésénél a következő adatokat kellene megadni:
- A készülék típusát
- A készülék cikk-számát
- A készülék ident- számát
- A szükséges pótalkatrész pótalkatrész számát

Aktuális árak és inforációk a www.isc-gmbh.info alatt találhatóak.

9. Megsemmisítés és újrahasznosítás

A szállítási károk megakadályozásához a készülék egy csomagolásban található. Ez a csomagolás nyersanyag és ezáltal ismét felhasználható vagy pedig visszavezethető a nyersanyagi körforgáshoz. A készülék és annak a tartozékai különböző anyagokból állnak, mint például fémből és műanyagokból. Defektes készülékek nem tartoznak a házi hulladékok közé. Szakszerű megsemmisítéshez le kellene adni a készüléket egy megfelelő gyűjtőhelyen. Ha nem ismer gyűjtőhelyeket, akkor érdeklődjön ütánna a községi önkormányzatnál.

10. Tárolás

A készüléket és a készülék tartozékait egy sötét, száraz és fagymentes valamint gyerekek számára nem hozzáférhető helyen tárolni. Az optimális tárolási hőmérséklet 5 és 30 °C között van. Az elektromos szerszámot az eredeti csomagolásban őrizni.

Anl_TC_EH_500_SPK9.indb 104 16.11.2017 15:22:06

Csak az EU-országoknak

Ne dobja az elektromos szerszámokat a háztartási hulladék közé!

Az elektromos és elektronikus-öregkészülékek 2012/19/EG európai irányvonala és anemzeti jogba való átvétele szerint az elhasznált elektromos szerszámokat szétválasztva kell összegyüjteni és vissza kell vezetni egy környezetvédelemnek megfelelő újrafelhasználáshoz.

Recycling-alternatívák a visszaküldési felszólításhoz:
Az elektromos készülék tulajdonosa, a tulajdon feladása esetében köteles a visszaküldés helyett alternativ a szakszerű értékesítéssel kapcsolatban összedolgozni. Az öreg készüléket ehhez egy visszavevő helynek is át lehet hagyni, amely elvégzi a nemzeti körforgásipari- és hulladéktörvények értelmében levő megsemmisítést. Ez nem érrinti az öreg készülékek mellékelt elektromos alkotórészek nélküli tartozékait és segítőeszközeit

A termékek dokumentációjának és a kisérőpapírjainak az utánnyomtatása vagy egyébb sokszorosítása, kivonatosan is csak az iSC GmbH kihangsúlyozott beleegyezésével engedélyezett.

Technikai változtatások jogát fenntartva

Anl_TC_EH_500_SPK9.indb 105 16.11.2017 15:22:06

Szervíz-információk

A garanciaokmányokban megnevezett minden országban kompetens szervíz-partnereket tartunk fenn, akik kontaktusi lehetőségét kérjük vegye ki a garanciaokmányból. Ezek minden szervíz-ügyben mint javítás, pótalkatrész- és gyorsan kopó rész-ellátás vagy a fogyóeszközök megrendelhetőségével kapcsolatban a rendelkezésére állnak.

Figyelembe kell venni, hogy ennél a terméknél a következő részek már használat szerinti vagy természetes kopásnak vannak alávetve ill. a következő részekre van mint fogyóeszközökre szükség.

Kategória	Példa
Gyorsan kopó részek*	Acélkötél, Kampó, Terelőgörgő, Pótkampó
Fogyóeszköz/ fogyórészek*	
Hiányzó részek	

* nincs okvetlenül a szállítás terjedelmében!

Hiányok vagy hibák esetén kérjük a hibaesetet a www.isc-gmbh.info alatt bejelenteni. Kérjük ügyeljen egy pontos hibaleírásra és felelje meg mindenesetre a következő kérdéseket:

- Működött már egyszer a készülék, vagy elejétől kezdve már defekt volt?
- Feltünt Önnek a defekt fellépése előtt valami a készüléken (tünet a defekt előtt)?
- Az Ön véleménye szerint mi a készülék hibás működése (főtünet)?
  Írja le ezt a hibás működést.

Anl_TC_EH_500_SPK9.indb 106 16.11.2017 15:22:06

Garanciaokmány

Tisztelt Vevő,
termékeink szigorú minőségi ellenőrzés alá vannak vetve. Ha ez a készülék mégis egyszer nem működne kifogástalanul, akkor azt nagyon sajnáljuk és kérjük Önt forduljon a szervízszolgáltatásunkhoz amely ebben a garanciakártyában megadott cím alatt található. Szívesen állunk a rendelkezésére telefonon is, az alul megadott szervízszám alatt. A garanciaigény érvényesítésével kapcsolatban a következő érvényes:

1. Ezek a garanciafeltételek csak kizárólagosan a fogyasztóknak szólnak, ez annyit jelent hogy természetes személyeknek, akik nem szánják ezt a terméket sem üzemszerű sem egyébb önálló tevékenységeik körén belül használni. Ezek a garanciafeltételek szabályozzák a kiegészítő garanciateljesítményeket, amelyeket a lent megnevezett gyártó a vásárlóknak az új készülékeire igér a törvényileg előírt garanciaszolgálathoz kiegészítően. A jogi szavatossági igényei, nincsennek ez a garnacia által érintve. A garanciateljesítményünk az Ön számára díjmentes.
2. A garanciateljesítmény csak kizárólagosan az Ön által, a lent megnevezet gyártótol megvásárolt új készüléken felmerülő olyan hibákra terjed ki, amelyek bebizonyíthatóan egy anyaghibán vagy egy gyári hibán alapszanak és korlátolva van választásunk szerint, vagy ezeknek a hibáknak az elhárítására vagy a készülék kicserélésére.
   Kérjük vegye figyelembe, hogy a készülékeink rendeltetésük szerint nem az ipari, kézműipari vagy szakmai használatra lettek konstruálva. Ezért a garanciaszerződés nem jön létre, ha a készülék a garancia ideje alatt kisipari, kézműipari vagy ipari üzemek területén lett használva vagy ha, egyenértékű igénybevételnek lett kitéve.
3. A szavatosságunk alol ki vannak véve:
   - olyan károk a készüléken, amelyek az összeszerelési utasítás figyelmen kívül hagyása vagy amelyek a nem szakszerű felszerelés, a használati utasítás figyelmen kívül hagyása (mint például egy rossz hálózati feszültségre vagy áramfajtára való rákapcsolás), vagy a karbantartási és biztonsági határozatok figyelmen kívül hagyása vagy a készüléknek egy nem normális környezeti feltételeknek történő kitétele vagy egy hiányos ápolás és karbantartás által keletkeztek.
   - károk a készüléken, amelyek egy rossz bánásmód vagy nem szakszerű használatok (mint például a készülék túlterhelése vagy nem engedélyezett betétszerszámok vagy tartozékok használata), idegen testeknek a készülékbe levő behatolása (mint például homok, kövek és por, szállítási károk), erőszak kifejtése vagy idegenkezűség (mint például leesés általi károk) által jöttek létre.
   - károk a készüléken vagy a készülék részein, amelyek a használatnak megfelelő, szokásos vagy egyébb természetes elkopásra vezethetőek vissza.
4. A garancia időtartama 24 hónap és a készülék vásárlasi napjával kezdődik. Garanciaigényeket a garancia idő lejárata előtt kell, két héten belül, a defekt felismerése után érvényesíteni. Ki van zárva a garanciaigények érvényesítése a garanciaidő letelte után. A készülék javítása vagy kicserélése nem hosszabbítja meg a szavatosság idejét, se nem indul ez a teljesítmény által egy új garanciaidő a készülékre vagy az esetleg beépített pótalkatrészekre. Ez egy helyszíni szervíz esetében is érvényes.
5. A garanciajogának az érvénysítéséhez kérjük jelentse be a defektes készüléket a következő cím alatt: www.isc-gmbh.info. Kérjük tartsa készenlétben az új készülék ön általi vásárlásának a bizonylatát vagy más igazolásait. Olyan készülékeket, amelyek megfelelő igazolás vagy típustábla nélkül kerülnek beküldésre, azok hiányzó hozzárendelési lehetőség miatt ki vannak zárva a garnciateljesítmény alol. Ha a készülék defektjére kiterjed a garnciateljesítményünk, akkor azonnal visszakap egy megjavított vagy egy új készüléket.

Magától érthetődő, hogy a költségek megtérítése ellenében szívesen megjavítsuk azokat a készüléken levő defekteket, amelyek nem esnek a garancia terjedelme alá vagy amelyeket már nem érinti a garancia. Ehhez kérjük a készüléket a szervízcímünkre beküldeni.

Ennek a használati utasításnak a szervíz-információja szerint utalunk ennek a garanciának a gyorsan kopó részekkel, használati részekkel és hiányzó részekkel kapcsolatban fennálló fenntartásáira.

Anl_TC_EH_500_SPK9.indb 107 16.11.2017 15:22:06

Κίνδυνος!
Κατά τη χρήση των συσκευών πρέπει, προς αποφυγή τραυματισμών, να τηρούνται και να λαμβάνονται ορισμένα μέτρα ασφαλείας. Διαβάστε για το λόγο αυτό προσεκτικά τις Οδηγίες χρήσης / Υποδείξεις ασφαλείας. Φυλάξτε τις καλά για να έχετε τις πληροφορίες πάντα στη διάθεσή σας. Εάν παραδώσετε τη συσκευή σε άλλα άτομα, δώστε μαζί και αυτές τις Οδηγίες χρήσης / Υποδείξεις ασφαλείας. Δεν αναλαμβάνουμε καμία ευθύνη για ατυχήματα ή βλάβες που οφείλονται σε μη τήρηση αυτών των Οδηγιών χρήσης και των Υποδείξεων ασφαλείας.

1. Υποδείξεις ασφαλείας

Κίνδυνος!
Διαβάστε όλες τις Υποδείξεις ασφαλείας και τις Οδηγίες. Εάν δεν ακολουθήσετε τις Υποδείξεις ασφαλεία και τις Οδηγίες δεν αποκλείονται ηλεκτροπληξία, πυρκαγιά και/ή σοβαροί τραυματισμοί. **Φυλάξτε προσεκτικά όλες τις Υποδείξεις ασφαλεάις και τις Οδηγίες για το μέλλον.**

1. Να ελέγχετε πάντα εάν η τάση του δικτύου αντιστοιχεί στην τάση που αναγράφεται στην ετικέτα. Σε περίπτωση ακατάλληλης τάσης δικτύου, δεν αποκλείεται η όχι σωστή λειτουργία της μηχανής και η πρόκληση σωματικών βλαβών.
2. Η παροχή ρεύματος να διαθέτει γείωση και να ασφαλίζεται με διακόπτη διαρροής έντασης.
3. Απαγορεύεται η ανύψωση φορτίων που υπερρβαίνουν το ονομαστικό φορτίο.
4. Να χρησιμοποιε΄τιε τη συσκευή μόνο για το σκοπό για τον οποίο προορίζεται. Ποτέ μην μεταφέρετε άτομα με το παλάγκο.
5. Πην τραβάτε απ΄οτο καλώδιο για να βγ΄΄αλετε το βύσμα από την πρ΄ζια. Να προστατεύετε το καλώδιο από ψηλές θερμοκρασίες, λάδι και αιχμηρές άκρες.
6. Ποτέ μην προσπαθείτε να ανυψώσετε στερεά ή μπλοκαρισμένα φορτία.
7. Να βγάζετε το βύσμα από την πρίζα, όταν χρησιμοποιείτε το παλάγκο.
8. Να κρατάτε παιδιά και άλλα μη εξιουσιοδοτημένα άτομα μακριά από τη μηχανή.
9. Απαγορεύεται να τραβάτε φορτία από το πλάϊ ή προς το πλαϊ. Να αποφεύγετε την ταλάντωση των φορτίων.
10. Εξασφαλίστε την κίνηση των γάντζων προς την ίδια κατεύθυνση όπως εμφαν΄ζιεται στον διακόπτη χειρισμού.
11. Να ελέγχετε το παλάγκο τακτικά για ενδεχόμενες βλάβες. Ο διακόπτης χειρισμού να είναι πάντα σε καλή κατάσταση.
12. Οι επισκευές και εργασίες συντήρησης να εκτελούνται πάντα μόνο σε συμβεβλημένα συνεργεία από ειδικευμένους ηλεκτρολόγους. Οι επισκευές επιτρέπεται να εκτελούνται μόνο από ειδικευμένους ηλεκτρολόγους, διαφορετικά δεν αποκλείονται τραυματισμοί του χειριστή.
13. Να αποφεύγετε απότομη ενεργοποίηση και απενεργοποίηση (βηματική λειτουργία).
14. Κατά τον χειρισμό του παλάγκου να είστε πάντα ιδιαίτερα προσεκτικοί.
15. Μη στέκεστε και μην εργάζεστε κάτω από ανυψωμένο φορτίο.

2. Περιγραφή της συσκευής και συμπαραδιδόμενα

2.1 Περιγραφή της συσκευής (εικ. 1/2)
1. Βραχίονας στερέωσης
2. Τρύπα στερέωσης για το γάντζο
3. Κύλινδρος
4. Μοχλός για μέγιστο μήκος σχοινιού
5. Μοχλός του αυτόματου μηχανισμού στοπ
6. Ατσάλινο σχοινί
7. Βάρος απενεργοποίησης
8. Γάντζος
9. Διακόπτης ενεργοποίησης/απενεργοποίησης έκτακτης ανάγκης
10. Διακόπτης πίεσης
11. Τηλεχειρισμός
12. Καλώδιο σύνδεσης με το δίκτυο
13. Αγωγός ελέγχου
14. Κινητήρας
15. Τροχός ανατροπής
16. Πρόσθετος γάντζος
17. Σχοινί για τηλεχειρισμό

2.2 Συμπαραδιδόμενα
Βάσει της περιγραφής των συμπαραδιδόμενων παρακαλούμε να ελέγξετε την πληρότητα του προϊόντος. Σε περίπτωση ελλείψεων τμημάτων παρακαλούμε να αποτανθείτε εντός 5 εργάσιμων ημερών από την ημερομηνία αγοράς στο Κέντρο Σέρβις (Service Center) της εταιρείας μας ή στο κατάστημα από το οποίο αγοράσατε τη συσκευή, προσκομίζοντας την

Anl_TC_EH_500_SPK9.indb 108 16.11.2017 15:22:06

ισχύουσα απόδειξη αγοράς. Παρακαλούμε να προσέξετε τον πίνακα εγγύησης στους όρους εγγύησης στο τέλος των οδηγιών.

- Ανοίξτε τη συσκευασία και βγάλτε προσεκτικά τη συσκευή.
- Απομακρύντε τα υλικά συσκευασίας καθώς και τα συστήματα προστασίας της συσκευασίας / μεταφοράς (εάν υπάρχουν).
- Ελέγξτε εάν είναι πλήρες το περιεχόμενο.
- Ελέγξτε τη συσκευή και τα αξεσουάρ για ενδεχόμενες ζημιές από τη μεταφορά.
- Φυλάξτε τη συσκευασία αν γίνεται μέχρι την πάροδο της προθεσμάις της εγγύησης.

Κίνδυνος!
Η συσκευή και τα υλικά συσκευασίας δεν είναι παιχνίδια! Τα παιδιά δεν επιτρέπεται να παίζουν με πλαστικές σακούλες, πλαστικές μεμβράνες και μικροαντικείμενα! Υφίσταται κίνδυνος κατάποσης και ασφυξίας!

- Πρωτότυπες Οδηγίες χρήσης

3. Σωστή χρήση

Το παλάγκο προορίζεται για την ανύψωση και το χαμήλωμα φορτίων σε κλειστούς χ΄ρους ανάλογα με την ισχύ της συσκευής

Η μηχανή επιτρέπεται να χρησιμοποιηθεί μόνο για τον σκοπό για τον οποίο προορίζεται. Κάθε πέραν τούτου χρήση δεν ανταποκρίενται στο σκοπό για τον οποίο προορίζεται. Για βλάβες που οφείλονται σε παρόμοια χρήση ή για τραυματισμούς παντός είδους ευθύνεται ο χρήστης/χειριστής και όχι ο κατασκευαστής.

Παρακαλούμε να προσέξετε πως οι συσκευές μας δεν προορίζονται και δεν έχουν κατασκευαστεί για επαγγελματική, βιοτεχνική ή βιομηχανική χρήση. Δεν αναλαμβάνουμε εγγύηση σε περίπτωση κατά την οποία η συσκευή χρησιμοποιήθηκε σε συνεργεία, βιοτεχνίες ή στη βιομηχανία ή σε εργασίες παρόμοιες με αυτές.

4. Τεχνικά χαρακτηριστικά

Τάση (V) ..... 230 V ~ 50 Hz
Ονομαστικό ρεύμα (A)..... 4,4
Απορρόφηση ισχύος (W)..... 1000
Είδος λειτουργίας..... S3 20%:10 min
Ονομαστικό φορτίο (kg) .....250 / 500
Ύψος ανύψωσης (απλό/διπλό άγκιστρο)(m) .....
.....11,5 / 5,7
Ονομαστική ταχύτητα .....
(απλό/διπλό άγκιστρο) (m/min) .....8 / 4
Διάμετρος του ατσάλινου σχοινιού (mm) 4,0
Αντοχή σε εφελκυσμό του
ατσάλινου σχοινιού (N/mm^2)..... 1870
Κλάση μόνωσης .....B
Είδος προστασίας..... IP 54
Τάση προωστικού κινητήρα M1
Καθαρό βάρος (kg) 16,2

Είδος λειτουργίας S3 - 20%-10min:
S3 = λειτουργία διακοπής χωρίς επίδραση της διαδικασίας εκκίνησης Αυτό σημαίνει πως σε διάστημα 10 λεπτών η μέγιστη διάρκεια λειτουργίας ανέρχεται σε 20% (2,0 λεπτά).

Περιορίστε την δημιουργία θορύβου και τις δονήσεις στο ελάχιστο!

- Να χρησιμοποιείτε μόνο συσκευές σε άψογη κατάσταση.
- Να συντηρείτε και να καθαρίζετε τακτικά τη συκσευή.
- Να προσαρμόζετε στη συσκευή τον τρόπο εργασίας σας.
- Προσέξτε να μην υπερφορτώνετε τη συσκευή.
- Αφήστε τη συσκευή νδεχομένως να ελεγχθεί από ειδικό τεχνίτη.
- Να απενεργοποιείτε τη συσκευή όταν δεν την χρησιμοποιείτε.
- Να φοράτε γάντια.

Anl_TC_EH_500_SPK9.indb 109 16.11.2017 15:22:06

5. Πριν τη θέση σε λειτουργία

Πριν τη σύνδεση σιγουρευτείτε πως τα στοιχεία στην ετικέτα του συμφωνούν με τα στοιχεία του δικτύου.

Προειδοποίηση!
Πριν κάνετε ρυθμίσεις στη συσκευή να βγάζετε πάντα το βύσμα από την πρίζα.

- Το παλάγκο δεν είναι κατάλληλο για τη μεταφορά θερμών και/ή τηγμένων μαζών, επίσης δεν είναι κατάλληλο για τη χρήση σε χαμηλές θερμοκρασίες και σε διαβρωτικό περιβάλλον.
- Μηχανική ομάδα είναι M1.
- Η διάρκεια χρήσης του παλάγκου είναι περ. 8000 κύκλοι (εξαιρουμένων των αναλώσιμων). Όταν έχουν εκτελεσθεί 8000 κύκλοι, πρέπει να ελεγχθούν και να επιθεωρηθούν όλα τα μηχανικά τμήματα.
- Να διαβάσετε και να καταλάβετε τις Οδηγίες χρήσης πριιν τη χρήση του παλάγκου.
- Εξασφαλ΄σιτε πως ο χειριστ΄ςη γνωρίζει πώς λειτουργεί η μηχανή και πως πρέπει να χειριστεί.
- Ο χρήστης να ακολουθεί τις οδηγίες στις Οδηγίες χρήσης.
- Το παλάγκο δεν προορίζεται για συνεχή χρήση. Το είδος λειτουργίας είναι: λειτουργία διακοπής χωρίς επίδραση της διαδικασίας εκκίνησης
- Η ονομαστική ισχύς της μηχανής δεν διαφέρει ανάλογα με τη θέση του φορτίου.

5.1 Ξεπακετάρισμα
Αφού ανοίξετε τη συσκευασία, ελέγξτε πρώτα το πλαίσιο, το ατσάλινο σχοινί, τα γάντζα και τον ηλεκτρικό μηχανισμό ελέγχου για ενδεχόμενες ζημιές κατά τη μεταφορά.

5.2 Συναρμολόγηση (εικ. 5)
Η συσκευή ανύψωσης διαθέτει 2 βραχίονες στερέωσης (1), με τους οποίους πρέπει να στερεωθεί σε τετράγωνο σωλήνα. Οι διαστάσεις του προώστη πρέπει να συμφωνούν με το μέγεθος του βραχίονα στερέωσης (1) και πρέπει να μπορεί να φέρει το διπλό ονομαστικό φορτίο. Σας συνιστούμε να έλθετε σε επαφή με εξειδικευμένο τεχνικό.
Όλες οι βίδες πρέπει να είναι καλά σφιγμένες. Πριν τη θέση σε λειτουργία να ελέγξει ένας ειδικευμένος τεχνικός τη στερέωση του βραχίονα.

5.3 Λειτουργία του πάλαγκου (εικ. 6-9)
Το παλαγκο διαθέτει ένα τροχό ανατροπής (15) και ένα πρόσθετο γάντζο (16). Με σωστή χρήση το παλάγκο μπορεί να φέρει το διπλάσιο φορτίο. Στερεώστε τον τροχό ανατροπής (15) και τον πρόσθετο γάντζο (16) όπως παριστάνεται στην εικόνα 6-8. Ό σταθερά τοποθετημένος γάντζος (8) πρέπει να κρεμαστεί στην τρύπα στερέωσης (2) (απεικ. 9).
Το φορτίο ανυψώνεται με τη βοήθεια δύο ατσάλινων σχοινιών, έτσι το παλαγκο μπορεί να σηκώσει το διπλό φορτίο.

6. Χειρισμός

6.1 Υποδείξεις για το χειρισμό
1. Πριν την πρώτη χρήση αφαιρέστε την ταινία από τον κύλινδρο (3).
2. Η τιμή της εκπομπής θορύβου A στη θέση του χειριστή είναι κάτω των 75dB (στάθμη ηχητικής πίεσης! LpA) Ο θόρυβος και οι δονήσεις μετρήθηκαν σύμφωνα με το πρότυπο EN 11201.
3. Τάση τροφοδοσίας: 230V ± 10%, 50Hz ± 1%.
4. Το παλάγκο να χρησιμοποιείται σε θερμοκρασίες περιβάλλοντος μεταξύ 0°C και 40°C και σχετική υγρασία αέρα κάτω από 50%. Ύψος πάνω από το επίπεδο της θάλασσας: Μέγ. 1000 m.
5. Για μεταφορά και αποθήκευση η θερμοκρασία να κυμαίνεται μεταξύ -25 °C και 55 °C. Η μέγιστη επιτρεπτή θερμοκρας΄΄ια δεν επιτρέπεται να ανέρχεται πάνω από 70°C.
6. Ο χρήστης να ανυψώνει το φορτίο από το δάπεδο με τη χαμηλότερη δυνατή ταχύτητα. Το σχοινί να είναι τεντωμένο, όταν ανυψώνεται το φορτίο.
7. Ο κινητήρας (14) του παλάγκου είναι εξοπλισμένος με διακόπτη θερμοστάτη. Κατά τη διάρκεια της λειτουργίας του παλάγκου μπορεί να ΄διακοπεί η λειτουργία του κινητήρα (14), ο οποίος ξαναλειτουργεί αυτόματα όταν κρυώσει.
8. Το ηλεκτρικό παλαγκο δεν΄διαθέτει σύστημα περιορισμού της ονομαστικής ισχύος. Γιαυτό παρακαλούμε να μη προσπαθε΄τιε να ανασηκώσετε το φορτίο, όταν το σύστημα προστασίας από υπερθέρμανσης περιορίζει τη λειτουργία. Στην περίπτωση αυτή το φορτίο υπερβαίνει την ονομαστική ισχύ του παλαγκου.
9. Μην αφήνετε αιωρούμενα φορτία χωρίς

Anl_TC_EH_500_SPK9.indb 110 16.11.2017 15:22:06

επίβλεψη και χωρίς να έχετε λάβει τα απαιτούμενα μέτρα ασφαλείας.
10. Ασφαλίστε τη συσκευή με ασφάλεια 10A ή με διακόπτη διαρροής έντασης 10mA για να προστατέψετε το κύκλωμα.
11. Μη χρησιμοποιείτε τους μοχλούς (4/5) σαν σύστημα στοπ ρουτίνας. Οι μοχλοί αυτοί αποτελούν σύστημα διακοπής της λειτουργίας μόνο ια περίπτωση ανάγκης.
12. Πριν αρχίσετε, σιγουρευτείτε πως το ατσάλινο σχοινί (6) έχει τυλιχτεί σωστά γύρω από τον κύλινδρο (3) και πως η απόσταση μεταξύ των περιελίξεων είναι μικρότερη από το ατσάλινο σχοινί (εικ. 3)
13. Σιγουρευτε΄τιε πως το φορτίο κρέμετε σωστά στο γάντζο (8) ή σε περίπτωση λειτουργίας σύσπαστου, πως το φορτίο είναι καλά ασφαλισμένο στον πρόσθετο γάντζο (16). Να τηρε΄τιε πάντα απ΄σοταση προς το φορτίο και το ατσάλινο σχοινί (6).

6.2 Λειτουργία (εικ. 1)
- Ελέγξτε εάν είναι πιεσμένος ο διακόπτης έκτακτης ανάγκης (9). Στρίψτε δεξιόστροφα τον κόκκινο διακόπτη στοπ για να τον απομανδαλώσετε.
- Πιέστε τον διακόπτη πίεσης ▲ (10) για την ανύψωση του φορτίου.
- Πιέστε το διακόπτη πίεσης ▲ (10) για το χαμήλωμα του φορτίου.
- Μοχλός του αυτόματου μηχανισμού στοπ (5): Όταν επιτευχθεί το μέγιστο ύψος, το βάρος απενεργοποίησης (7) πιέζει το μοχλό (5) προς τα επάνω. έτσι ενεργοποιείται ο τερματικός διακόπτης και το φορτίο δεν μπορεί πλέον να ανασηκωθεί.
- Μοχλός για μέγιστο μήκος σχοινιού (4): Όταν το φορτίο φτάσει τη χαμηλότερη θέση, ενεργοποιείται ένας τερματικός διακόπτης, που δεν επιτρέπει το χαμήλωμα του φορτίου. Αυτός ο τερματικός διακόπτης θα εμπόδιζε και μία λειτουργία του παλάγκου προς τη λάθος κατεύθυνση (ο γάντζος κινείται αντίστροφα προς την κατεύθυνση που φαίνεται στο διακόπτη χειρισμού).
- Εάν ενεργοποιηθεί ο διακόπτης έκτακτης ανάγκης (9), διακόπτεται η κίνηση του παλάγκου.
- Σε περίπτωση κινδύνου, πιέστε αμέσως τον διακόπτη έκτακτης ανάγκης (9), για να διακόψετε την κίνηση του παλάγκου. Ο χειρισμός του παλάγκου δεν είναι δυνατός, όταν έχει γίνει χειρισμός το διακόπτη έκτακτης ανάγκης.

7. Αντικατάσταση του αγωγού σύνδεσης με το δίκτυο

Κίνδυνος!
Εάν πάθει βλάβη το καλώδιο σύνδεση της συσκευής με το δίκτυο, πρέπει προς αποφυγή κινδύνου, να αντικατασταθεί από τον κατασκευαστή ή το τμήμα του εξυπηρέτησης πελατών ή από παρόμοια εξειδικευμένο πρόσωπο.

8. Καθαρισμός, συντήρηση και παραγγελία ανταλλακτικών

Κίνδυνος!
Πριν από όλες τις εργασίες τοποθέτησης να βγάζετε το φις από την πρίζα

8.1 Καθαρισμός
- Να κρατάτε όσο πιο ελεύθερα από σκόνη και ακαθαρσίες γίνεται τα συστήματα προστασίας, τις σχισμές εξαερισμού και το κέλυφος του μοτέρ. Σκουπίζετε τη συσκευή με ένα καθαρό πανί, ή καθαρίστε το με πεπεισμένο αέρα σε χαμηλή πίεση.
- Συνιστούμε να καθαρίζετε τη συσκευή αμέσως μετά από κάθε χρήση.
- Να καθαρίζετε τη συσκευή τακτικά με ένα νωπό πανί και λίγο μαλακό σαπούνι. Μη χρησιμοποιείτε καθαριστικά ή διαλύτες, γιατί δεν αποκλείεται να καταστρέψουν την επιφάνεια της συσκευής. Προσέξτε να μην περάσει νερό στο εσωτερικό της συσκευής. Η διείσδυση νερού σε ηλεκτρική συσκευή αυξάνει τον κίνδυνο ηλεκτροπληξίας.

8.2 Συντήρηση
Κίνδυνος! Να σιγουρεύεστε πάντα πως η μηχανή δεν είναι συνδεδεμένη με το δίκτυο όταν περιποιήστε τη μηχανή.
- Προσοχή: Ένας κύκλος αντιστοιχεί στην κίνηση προς τα επάνω και προς τα κάτω ενός φορτίου. Έλεγχος κατά διαστήματα σημαίνει έλεγχος μετά από 100 κύκλους.
- Να ελέγχετε κατά διαστήματα, πως λειτουργούν άψογα οι τερματικοί διακόπτες του παλάγκου. Ο έλεγχος γίνεται ως εξής: Όταν το σχοινί φτάσει το μέγιστο ύψος, χειρίζεστε το μοχλό του αυτόματου μηχανισμού διακοπής λειτουργίας (5). Τώρα πρέπει να διακοπεί η λειτουργία του κινητήρα (14). (έλεγχος χωρίς φορτίο). Όταν ξετυλιχτεί το ατσάλινο σχοινί (6) μέχρι

Anl_TC_EH_500_SPK9.indb 111 16.11.2017 15:22:06

το τέρμα, γίενται χιερισμός του μοχλού για με΄γιστο μήκος σχοινιού (4). Τώρα πρέπει να διακοπεί η λειτουργία του κινητήρα (14).
- Παρακαλούμε να ελέγχετε κατά διαστήματα το καλώδιο (12) και τον αγωγό ελέγχου (13).
- Κάθε 200 κύκλους πρέπει να λιπαίνονται το ατσάλινο σχοινί (6) και ο τροχός ανατροπής (15).
- Κάθε 30 κύκλους πρέπει σύμφωνα με την εικόνα 4 να ελέγχετε, εάν είναι σε καλή κατάσταση όλο το ατσάλινο σχοινί (6). Εάν είναι ελαττωματικό, πρέπει να αντικαταστυαθεί από άλλο ατσάλινο σχοινί σύμφωνα με τα τεχνικά χαρακτηριστικά.
- Κάθε 1000 κύκλους να ελέγχετε εάν οι βίδες των βραχιόνων στερέωσης (1) και ο τροχός ανατροπής (15) είναι καλά σφικτές/οί.
- Να λαδώνετε τακτικά το σχοινί, το καλώδιο, το κιβώτιο, τα ρουλεμάν και άγκιστρα.
- Κάθε 1000 κύκλους εργασίας να ελέγχετε τα αναλώσιμα όπως π.χ. σχοινί, αλυσίδα, άγκσιτρα, ταινίες και τακάκια φρένων.
- Κάθε 1000 κύκλους να ελέγχετε, εάν οι γάντζοι (8/16) και ο τροχός ανατροπής (15) είναι σε καλή κατάσταση.
- Να ελέγχετε πριν από κάθε χρήση του παλάγκου, εάν ο διακόπτης έκτακτης ανάγκης (9) και ο διακόπτης πίεσης (10) είναι σε άψογη κατάσταση.
- Κάθε 1000 κύκλους να ελέγχετε το σύστημα πέδησης. Όταν ο κινητήρας (14) κάνει ασυνήθιστους θόρυβους ή δεν είναισε θέση να ανασηκώσει το ονομαστικό φορτίο, μπορεί να χρειάζεται έλεγχο το σύστημα πέδησης.
  - Να αντικαθίστανται τα ελαττωματικά ή φθαρμένα τμήματα και να φυλάγετε την τεκμηρίωση των εργασιών συντήρησης.
  - Για έκτακτες εργασίες έπισκευής, να επικοινωνείτε με συμβεβλημένο κέντρο σέρβις.
- Τα ηλεκτρικά εργαλεία να επισκευάζονται μόνο από εξειδικευμένους ηλεκτρολόγους.

8.3 Παραγγελία ανταλλακτικών:
Κατά την παραγγελία ανταλλακτικών να αναφέρετε τα εξής:
- Τύπος της συσκευής
- Αριθμός είδους της συσκευής
- Αριθμός ταύτισης της συσκευής
- Αριθμός ανταλλακτικού

Θα βρείτε τις ισχύουσες τιμές και πληροφορίες στην ιστοσελίδα www.isc-gmbh.info

9. Διάθεση στα απορρίμματα και επαναχρησιμοποίηση

Η συσκευή βρίσκεται σε μία συσκευασία προς αποφυγή ζημιών κατά τη μεταφορά Αυτή η συσκευασία αποτελείται από πρώτες ύλες και έτσι μπορεί να επαναχρησιμοποιηθεί ή να ανακυκλωθεί. Η συσκευή και τα εξαρτήματά της αποτελούνται από διάφορα υλικά, όπως π.χ. μέταλλο και πλαστικά υλικά. Δεν επιτρέπεται η απόρριψη ελαττωματικών συσκευών στα οικιακά απορρίμματα. Σωστή απόρριψη είναι η παράδοση σε κατάλληλα κέντρα συλλογής μεταχειρισμένων συσκευών. Εάν δεν γνωρίζετε πού βρίσκεται παρόμοιο κέντρο συλλογής μεταχειρισμένων συσκευών, ρωτήστε στη διοίκηση της κοινότητάς σας.

10. Φύλαξη

Να διατηρείτε τη συσκευή και ταξεσουάρ της σε σκοτεινό, στεγνό χώρο, χωρίς παγετό, και μακριά από παιδιά. Η ιδανική θερμοκρασία αποθήκευσης είναι μεταξύ 5 και 30 °C. Να φυλάξετε την ηλεκτρική σας συσκευή στην πρωτότυπη συσκευασία της.

Anl_TC_EH_500_SPK9.indb 112 16.11.2017 15:22:06

Μόνο για κράτη-μέλη της Ε.Ε.

Μη πετάτε τις ηλεκτρικές συσκευές στα οικιακάαπορρίμματα!

Σύμφωνα με την ευρωπαϊκή Οδηγία 2012/19/ΕΚ για απόβλητα ειδών ηλεκτρικού και ηλεκτρονικού εξοπλισμού και την ενσωμάτωσή της σε εθνικό δίκαιο, πρέπει η παλιές ηλεκτρικές συσκευές να συγκεντρώνονται και να παραδίδονται για ανακύκλωση φιλική για το περιβάλλον.

Εναλλακτική λύση ανακύκλωσης αντί για επιστροφή
Ο ιδιοκτήτης της ηλεκτρικής συσκευής υποχρεούται αντί της επιστροφής να συμβάλει στη σωστή ανακύκλωση σε περίπτωση που δεν συνεχίζει να χρησιμοποιεί τη συσκευή. Η παλιά συσκευή μπορεί να παραχωρηθεί σε κέντρο επιστροφής ηλεκτρικών συσκευών με την έννοια των εθνικών νόμων ανακύκλωσης και διαχείρισης αποβλήτων. Δεν συμπεριλαμβάνονται τα τμήματα παλιών συσκευών και τα βοηθητικά στοιχεία χωρίς ηλεκτρικά εξαρτήματα.

Η ανατύπωση ή οποιασδήποτε άλλης μορφής αναπαραγωγή της τεκμηρίωσης ή άλλων δικαιολογητικών που αναφέρονται στα προϊόντα, ακόμη και αποσπασματικά, επιτρέπεται μόνο με ρητή συγκατάθεση της iSC GmbH.

Με επιφύλαξη τεχνικών τροποποιήσεων

Ενημέρωση για το σέρβις

Σε όλες τις χώρες που αναφέρονται στην εγγύηση έχουμε αρμόδια συνεργεία που συνεργάζονται μαζί μας, η διεύθυνση των οποίων προκύπτει από την εγγύηση. Τα συνεργεία αυτά βρίσκονται στη διάθεσή σας για επισκευές, ανταλλακτικά ή αξεσουάρ ή για την αγορά αναλώσιμων.

Προσέξτε ότι στη συσκευή αυτή τα ακόλουθα εξαρτήματα υπόκεινται σε κοινή φθορά ή ότι χρειάζονται τα ακόλουθα αναλώσιμα.

Κατηγορία	Παράδειγμα
Φθειρόμενα εξαρτήματα*	Ατσάλινο σχοινί, Γάντζος, Τροχός ανατροπής, Πρόσθετος γάντζος
Αναλώσιμα υλικά/αναλώσιμα τμήματα*	
Ελλείψεις	

* δεν συμπεριλαμβάνονται υποχρεωτικά στο περιεχόμενο της συσκευασίας!

Σε περίπτωση ελαττωμάτων ή σφαλμάτων σας παρακαλούμε να δηλώστε την περίπτωση στο ίντερνετ στο www.isc-gmbh.info. Προσέξτε να περιγράψετε με ακρίβεια το σφάλμα και απαντήστε στις ακόλουθες ερωτήσεις:

- Λειτούργησε σωστά η συσκευή ή είχε από την αρχή κάποιο ελάττωμα?
- Μήπως προσέξατε κάτι περίεργο προτού παρουσιαστεί το ελάττωμα (σύμπτωμα ή βλάβη)?
- Ποια δυσλειτουργία παρατηρείται στη συσκευή (κύριο σύμπτωμα)?
  Περιγράψετε αυτή τη δυσλειτουργία.

Anl_TC_EH_500_SPK9.indb 114 16.11.2017 15:22:06

Εγγύηση

Αξιότιμη πελάτισα, αξιότιμε πελάτη,
τα προϊόντα μας υπόκεινται σε αυστηρό έλεγχο ποιότητας. Εάν η συσκευή αυτή παρ΄όλα αυτά κάποτε δεν λειτουργήσει άψογα, λυπούμαστε πολύ και σας παρακαλούμε να αποτανθείτε προς το τμήμα μας εξυπηρέτησης πελατών στην διεύθυνση που αναφέρεται στην κάρτα αυτή. Ευχαρίστως είμαστε και τηλεφωνικά στη διάθεσή σας στον αριθμό σέρβις που αναφέρεται στην κάρτα εγγύησης. Για την αξίωση της εγγύησης ισχύουν τα εξής:

1. Αυτοί οι όροι εγγύησης ισχύουν μόνο για καταναλωτές, δηλ. για φυσικά πρόσωπα που δεν χρησιμοποιούν το προϊόν αυτό ούτε για επαγγελματικούς σκοπούς ούτε για άλλη ανεξάρτητη απασχόληση. Αυτοί οι όροι εγγύησης ρυθμίζουν πρόσθετες παροχές εγγύησης που υπόσχεται ο πιο κάτω κατασκευαστής πέραν της νόμιμης εγγύησης στους αγοραστές των νέων συσκευών του. Δεν θίγονται από την εγγύηση αυτή οι νόμιμες αξιώσεις σας εγγύησης. Η εγγύησή μας σας παρέχεται δωρεάν.
2. Η εγγύηση επεκτείνεται αποκλειστικά και μόνο σε ελαττώματα σε μία συσκευή του πιο κάτω κατασκευαστή και που αφορούν ελαττώματα υλικού ή κατασκευής και περιορίζεται ατά την κρίση μας στην αποκατάσταση αυτών των ελαττωμάτων της συσκευής ή στην αντικατάστασή της. Παρακαλούμε να προσέξετε πως οι συσκευές μας δεν προορίζονται για επαγγελματική, βιοτεχνική ή βιομηχανική χρήση. Για το λόγο αυτό δεν συνάπτεται σύμβαση εγγύησης σε περίπτωση κατά την οποία η συσκευή χρησιμοποιήθηκε κατά τη διάρκεια της εγγύησης σε βιομηχανικές ή βιοτεχνικές επιχειρήσεις ή εάν εκτέθηκε σε παρόμοια εντατική χρήση.
3. Από την εγγύησή μας εξαιρούνται τα εξής:
   - Βλάβες της συσκευής που οφείλονται σε μη τήρηση των οδηγιών συναρμολόγησης ή σε όχι σωστή εγκατάσταση, μη τήρηση των οδηγιών χρήσης (όπως π.χ. σύνδεση σε εσφαλμένη τάση ή σε λάθος είδος ρεύματος) ή σε μη τήρηση των όρων συντήρησης και ασφαλείας ή σε περίπτωση έκθεσης της συσκευής σε ασυνήθιστες καιρικές συνθήκες ή σε έλλειψη φροντίδας και συντήρησης.
   - Βλάβες της συσκευής που οφείλονται σε καταχρηστική ή εσφαλμένη χρήση (όπως π.χ. υπερφόρτωση της συσκευής ή χρήση μη εγκεκριμένων εργαλείων ή αξεσουάρ), σε είσοδο ξένων αντικειμένων στη συσκευή (όπως π.χ. άμμος, πέτρες ή σκόνη, βλάβες μεταφοράς), άσκηση βίας ή ξένη επέμβαση (όπως π. χ. βλάβη από πτώση).
   - Βλάβες της συσκευής ή τμημάτων της συσκευής που οφείλονται σε συνήθη ή φυσική φθορά.
4. Η διάρκεια της εγγύησης ανέρχεται σε 24 μήνες και αρχίζει από την ημερομηνία της αγοράς της συσκευής. Οι αξιώσεις εγγύησης πρέπει να εγερθούν πριν τη λήξη της διάρκειας της εγγύησης εντός δύο εβδομάδων από την διαπίστωση του ελαττώματος. Αποκλείονται αξιώσεις εγγύησης μετά την πάροδο της διάρκειας της εγγύησης. Η επισκευή ή η αντικατάσταση δεν συνεπάγεται την επέκταση της διάρκειας της εγγύησης ούτε την νέα έναρξη της διάρκειας της εγγύησης για τη συσκευή ή για ενδεχομένως χρησιμοποιηθέντα νέα ανταλλακτικά. Αυτό ισχύει και στην περίπτωση σέρβις επί τόπου.
5. Για την αξίωση της εγγύησης παρακαλούμε να δηλώσετε την ελαττωματική σας συσκευή στο: www.isc-gmbh.info. Να έχετε μαζί σας την απόδειξη της νέας συσκευής. Οι συσκευές που αποστέλλονται χωρίς αποδείξεις και χωρίς πινακίδα στοιχείων, αποκλείονται από την εγγύηση λόγω μη δυνατότητας ταξινόμησης. Εάν το ελάττωμα καλύπτεται από την εγγύηση, θα σας επιστραφεί αμέσως είτε η επισκευασμένη συσκευή είτε μία καινούργια συσκευή.

Ευχαρίστως επισκευάζουμε ελαττώματα της συσκευής έναντι πληρωμής, εάν τα ελαττώματα αυτά δεν καλύπτονται από την εγγύηση. Για το σκοπό αυτό παρακαλούμε να στείλετε τη συσκευή στη διεύθυνση του σέρβις μας.

Για αναλώσιμα και σε περίπτωση που λείπουν εξαρτήματα παραπέμπουμε στους περιορισμούς αυτής της εγγύησης σύμφωνα με τους πληροφορίες σέρβις αυτών των οδηγιών χρήσης.

Converter Container

Network parameters:

General	
Standard	IEC
Attitude of Site	< 1000 m

Medium Voltage	
Rated voltage	6.6 kV
Relative operating voltage at feeding point	100 %
Voltage factor c max	1.1
Voltage factor c min	1
Max./Min short-circuit power	92.71 / 92.71 MVA
Max./Min. short-circuit current	8.11 / 8.11 kA
Neutral System	Low-resistance
Relation R1/X1	0.2

Low Voltage	
Rated voltage	620 V
System configuration	TN-S
Frequency	50 Hz
Tolerable touch voltage	50 V
Ambient temperature of devices	30 °C
Voltage factor c max	1.1
Voltage factor c min	0.9
Base point of voltage drop calculation	Transformer-secondary terminals
Max. permissible voltage drop in network	8 %

Defined network modes for calculation and dimensioning:

Operating mode: Betriebsart 1

Starting point	Target point	Connection	Status
Transformer 18T1	LVMD 4	LVMD 4.1	On

List of devices:

Sources of feeding:

Transformers:

Designation	Type	Sn [kVA]	ukr [%]	Uprim [kV]/ Usec [V]	Pk [kW]	P0 [kW]	Vector group	Δu_transformer [%]	Air forced	Catalog Reference
Transformer 18T1		1,250	6	6.6/ 620	1.8	0.252	Dyn5	3.629	No	-

Output Δu_transformer [%] is independent from defined reference point for voltage drop calculation.

Switches/Fuses:

Circuit Breaker/Miniature circuit-breaker:

Place	Designation	Catalog Reference	In [A]	Icu/Icn [kA]	Icu/Icn [kA] required	Release type / characteristics	Quantity
CONV	-80Q1	3WL11122BB611AA2	1,250	42	17.603	ETU15B	1

Connections and line distribution:

Cable/Conductor Low voltage:

Loads:

Stationary loads:

Designation	Place	Pn [kW]	In [A]	Un [V]	cos φ	ai	Phase connection	Type of load	Quantity
CONV	Inner zone	1,000	1,164.013	620	0.8	1	L1-L2-L3-N	inductive	1

Messages

Designation	Message
LVMD 4.1	Protective device required due to possible selectivity requirement

Personal protection against electric shock

All circuits of the project have a permissable break time ta-req > ta-cur and therefor fulfill the requirements for Personal protection against electric shock.

Disclaimer:

Dimensioned protection devices inside tap-off units of busbar trunking systems may not correspond to the actual available devices for those components. Please verify the dimensioning results in the device lists and correct them accordingly.

Symbols legend:

Symbol [Unit]	Description
ai	Load factor
cos φ	Power factor
ftot	Derating factor
Ia/In	Inrush current relation
Ib [A] Iz [A]	Operating current / allowed load capacity
Icu(fuse) [kA]	Rated ultimate short-circuit breaking capacity - fuse
Icu [kA] Icn [kA]	Rated ultimate short-circuit breaking capacity according to IEC 60947-2 Rated short-circuit breaking capacity according to IEC 60898-1
Icu/Icn [kA] required	the required breaking capacity of the protection device at installation location
Icw 1s [kA]	Rated short-time withstand current 1s
IΔn [mA]	Residual current - RCD
Ik1max	Maximum single phase short-circuit current
Ik1min	Minimum single phase short-circuit current
Ik3max	Maximum three phase short-circuit current
Ik3min	Minimum three phase short-circuit current
Ik1D [kA]	single pole uninterrupted short-circuit current
Ik3D [kA]	three pole uninterrupted short-circuit current
Ikmax/Ikmin	Relation of maximum and minimum short-circuit current
Ikre	Short-circuit current recovery factor
In [A]	Nominal current
P0 [kW]	No-load losses
Pk [kW]	Short-circuit losses
Pmech [kW]	mechan. Power
Pn [kW]	Active power
R0 N [mΩ]	Zero phase-sequence resistance phase-neutral conductor
R0 PE(N) [mΩ]	Zero phase-sequence resistance phase-PE(N) conductor
R0/R1	Resistance relation positive / zero phase-sequence system
r1 [%]	Relative value of positive phase-sequence resistance
R1 [mΩ]	Positive phase-sequence resistance

Sn [kVA]	Nominal apparent power
ukr [%]	Short-circuit voltage
Un [V]	Nominal voltage
Uprim [kV]	Primary voltage
Usec [V]	Secondary voltage
X0 N [mΩ]	Zero phase-sequence reactance phase-neutral conductor
X0 PE(N) [mΩ]	Zero phase-sequence reactance phase-PE(N) conductor
X0/X1	Reactance relation positive / zero phase-sequence system
X1 [mΩ]	Positive phase-sequence reactance
xd" [%]	Subtransient reactance
Z1 max	Maximum impedance in positive phase-sequence system
Z1 min	Minimum impedance in positive phase-sequence system
Zs	Faulted circuit impedance
Zs max	Maximum faulted circuit impedance
Zs min	Minimum faulted circuit impedance
u [%] / Δu [%] / ∑ Δu [%]	Relative nominal voltage / voltage drop between beginning and end of a section / cumulated voltage drop from the transformer primary/ secondary clamps to the specified point
θΔu [°C] / θIkmax [°C] / θIkmin [°C]	Conductor temperature of MV cable / Conductor temperature of LV cable for voltage drop / on beginning of short circuit / for disconnection
η	Efficiency
φ [°]	Phase angle
φ1 min/max [°]	Phase angle at Ik1 min/max
φ3 min/max [°]	Phase angle at Ik3 min/max

Standards for computation:

Title	IEC	HD	EN	DIN VDE
Low-voltage electrical installations *	60364-1…6	384		0100 – 100...710

Messages

Designation	Message
NSHV 3.2	Protective device required due to possible selectivity requirement

Personal protection against electric shock

All circuits of the project have a permissable break time ta-req > ta-cur and therefor fulfill the requirements for Personal protection against electric shock.

Disclaimer:

Dimensioned protection devices inside tap-off units of busbar trunking systems may not correspond to the actual available devices for those components. Please verify the dimensioning results in the device lists and correct them accordingly.

Symbols legend:

Symbol [Unit]	Description
ai	Load factor
cos φ	Power factor
ftot	Derating factor
Ia/In	Inrush current relation
Ib [A] Iz [A]	Operating current / allowed load capacity
Icu(fuse) [kA]	Rated ultimate short-circuit breaking capacity - fuse
Icu [kA] Icn [kA]	Rated ultimate short-circuit breaking capacity according to IEC 60947-2 Rated short-circuit breaking capacity according to IEC 60898-1
Icu/Icn [kA] required	the required breaking capacity of the protection device at installation location
Icw 1s [kA]	Rated short-time withstand current 1s
IΔn [mA]	Residual current - RCD
Ik1max	Maximum single phase short-circuit current
Ik1min	Minimum single phase short-circuit current
Ik3max	Maximum three phase short-circuit current
Ik3min	Minimum three phase short-circuit current
Ik1D [kA]	single pole uninterrupted short-circuit current
Ik3D [kA]	three pole uninterrupted short-circuit current
Ikmax/Ikmin	Relation of maximum and minimum short-circuit current
Ikre	Short-circuit current recovery factor
In [A]	Nominal current
P0 [kW]	No-load losses
Pk [kW]	Short-circuit losses
Pmech [kW]	mechan. Power
Pn [kW]	Active power
R0 N [mΩ]	Zero phase-sequence resistance phase-neutral conductor
R0 PE(N) [mΩ]	Zero phase-sequence resistance phase-PE(N) conductor
R0/R1	Resistance relation positive / zero phase-sequence system
r1 [%]	Relative value of positive phase-sequence resistance
R1 [mΩ]	Positive phase-sequence resistance

Sn [kVA]	Nominal apparent power
ukr [%]	Short-circuit voltage
Un [V]	Nominal voltage
Uprim [kV]	Primary voltage
Usec [V]	Secondary voltage
X0 N [mΩ]	Zero phase-sequence reactance phase-neutral conductor
X0 PE(N) [mΩ]	Zero phase-sequence reactance phase-PE(N) conductor
X0/X1	Reactance relation positive / zero phase-sequence system
X1 [mΩ]	Positive phase-sequence reactance
xd" [%]	Subtransient reactance
Z1 max	Maximum impedance in positive phase-sequence system
Z1 min	Minimum impedance in positive phase-sequence system
Zs	Faulted circuit impedance
Zs max	Maximum faulted circuit impedance
Zs min	Minimum faulted circuit impedance
u [%] / Δu [%] / ∑ Δu [%]	Relative nominal voltage / voltage drop between beginning and end of a section / cumulated voltage drop from the transformer primary/ secondary clamps to the specified point
θΔu [°C] / θIkmax [°C] / θIkmin [°C]	Conductor temperature of MV cable / Conductor temperature of LV cable for voltage drop / on beginning of short circuit / for disconnection
η	Efficiency
φ [°]	Phase angle
φ1 min/max [°]	Phase angle at Ik1 min/max
φ3 min/max [°]	Phase angle at Ik3 min/max

Network parameters:

General	
Standard	IEC
Attitude of Site	< 1000 m

Medium Voltage	
Rated voltage	6.6 kV
Relative operating voltage at feeding point	100 %
Voltage factor c max	1.1
Voltage factor c min	1
Max./Min short-circuit power	91.452 / 91.452 MVA
Max./Min. short-circuit current	8 / 8 kA
Neutral System	Low-resistance
Relation R1/X1	0.2

Low Voltage	
Rated voltage	400 V
System configuration	TN-S
Frequency	50 Hz
Tolerable touch voltage	50 V
Ambient temperature of devices	30 °C
Voltage factor c max	1.1
Voltage factor c min	0.9
Base point of voltage drop calculation	Transformer-secondary terminals
Max. permissible voltage drop in network	8 %

Defined network modes for calculation and dimensioning:

Operating mode: Betriebsart 1

Starting point	Target point	Connection	Status

Messages

Designation	Message
NSHV 3.2	Protective device required due to possible selectivity requirement

Personal protection against electric shock

All circuits of the project have a permissable break time ta-req > ta-cur and therefor fulfill the requirements for Personal protection against electric shock.

Disclaimer:

Dimensioned protection devices inside tap-off units of busbar trunking systems may not correspond to the actual available devices for those components. Please verify the dimensioning results in the device lists and correct them accordingly.

Symbols legend:

Symbol [Unit]	Description
ai	Load factor
cos φ	Power factor
ftot	Derating factor
Ia/In	Inrush current relation
Ib [A] Iz [A]	Operating current / allowed load capacity
Icu(fuse) [kA]	Rated ultimate short-circuit breaking capacity - fuse
Icu [kA] Icn [kA]	Rated ultimate short-circuit breaking capacity according to IEC 60947-2 Rated short-circuit breaking capacity according to IEC 60898-1
Icu/Icn [kA] required	the required breaking capacity of the protection device at installation location
Icw 1s [kA]	Rated short-time withstand current 1s
IΔn [mA]	Residual current - RCD
Ik1max	Maximum single phase short-circuit current
Ik1min	Minimum single phase short-circuit current
Ik3max	Maximum three phase short-circuit current
Ik3min	Minimum three phase short-circuit current
Ik1D [kA]	single pole uninterrupted short-circuit current
Ik3D [kA]	three pole uninterrupted short-circuit current
Ikmax/Ikmin	Relation of maximum and minimum short-circuit current
Ikre	Short-circuit current recovery factor
In [A]	Nominal current
P0 [kW]	No-load losses
Pk [kW]	Short-circuit losses
Pmech [kW]	mechan. Power
Pn [kW]	Active power
R0 N [mΩ]	Zero phase-sequence resistance phase-neutral conductor
R0 PE(N) [mΩ]	Zero phase-sequence resistance phase-PE(N) conductor
R0/R1	Resistance relation positive / zero phase-sequence system
r1 [%]	Relative value of positive phase-sequence resistance
R1 [mΩ]	Positive phase-sequence resistance

Sn [kVA]	Nominal apparent power
ukr [%]	Short-circuit voltage
Un [V]	Nominal voltage
Uprim [kV]	Primary voltage
Usec [V]	Secondary voltage
X0 N [mΩ]	Zero phase-sequence reactance phase-neutral conductor
X0 PE(N) [mΩ]	Zero phase-sequence reactance phase-PE(N) conductor
X0/X1	Reactance relation positive / zero phase-sequence system
X1 [mΩ]	Positive phase-sequence reactance
xd" [%]	Subtransient reactance
Z1 max	Maximum impedance in positive phase-sequence system
Z1 min	Minimum impedance in positive phase-sequence system
Zs	Faulted circuit impedance
Zs max	Maximum faulted circuit impedance
Zs min	Minimum faulted circuit impedance
u [%] / Δu [%] / ∑ Δu [%]	Relative nominal voltage / voltage drop between beginning and end of a section / cumulated voltage drop from the transformer primary/ secondary clamps to the specified point
θΔu [°C] / θIkmax [°C] / θIkmin [°C]	Conductor temperature of MV cable / Conductor temperature of LV cable for voltage drop / on beginning of short circuit / for disconnection
η	Efficiency
φ [°]	Phase angle
φ1 min/max [°]	Phase angle at Ik1 min/max
φ3 min/max [°]	Phase angle at Ik3 min/max

Warning notice system

This manual contains notices you have to observe in order to ensure your personal safety, as well as to prevent damage to property. The notices referring to your personal safety are highlighted in the manual by a safety alert symbol, notices referring only to property damage have no safety alert symbol. These notices shown below are graded according to the degree of danger.

⚠ DANGER
indicates that death or severe personal injury **will** result if proper precautions are not taken.

⚠ WARNING
indicates that death or severe personal injury **may** result if proper precautions are not taken.

⚠ CAUTION
indicates that minor personal injury can result if proper precautions are not taken.

NOTICE
indicates that property damage can result if proper precautions are not taken.

If more than one degree of danger is present, the warning notice representing the highest degree of danger will be used. A notice warning of injury to persons with a safety alert symbol may also include a warning relating to property damage.

Qualified Personnel

The product/system described in this documentation may be operated only by **personnel qualified** for the specific task in accordance with the relevant documentation, in particular its warning notices and safety instructions. Qualified personnel are those who, based on their training and experience, are capable of identifying risks and avoiding potential hazards when working with these products/systems.

Proper use of Siemens products

Note the following:

⚠ WARNING
Siemens products may only be used for the applications described in the catalog and in the relevant technical documentation. If products and components from other manufacturers are used, these must be recommended or approved by Siemens. Proper transport, storage, installation, assembly, commissioning, operation and maintenance are required to ensure that the products operate safely and without any problems. The permissible ambient conditions must be complied with. The information in the relevant documentation must be observed.

Trademarks

All names identified by ® are registered trademarks of Siemens AG. The remaining trademarks in this publication may be trademarks whose use by third parties for their own purposes could violate the rights of the owner.

Disclaimer of Liability

We have reviewed the contents of this publication to ensure consistency with the hardware and software described. Since variance cannot be precluded entirely, we cannot guarantee full consistency. However, the information in this publication is reviewed regularly and any necessary corrections are included in subsequent editions.

Preface

Preface

This document is part of the **SIMOTION P documentation package**.

This documentation describes the SIMOTION P320-4 hardware platform which can be delivered in the SIMOTION P320-4 E and SIMOTION P320-4 S hardware versions:

- SIMOTION P320-4 E with the Windows Embedded Standard 7 32-bit operating system and real-time expansion for SIMOTION.
  Successor to SIMOTION P320-3.
- SIMOTION P320-4 S with the Windows 7 Ultimate 32-bit operating system and real-time expansion for SIMOTION.
  Successor to SIMOTION P350-3.

References

The following documents contain the descriptions for the SIMOTION P hardware platform:

- SIMOTION P320-4 E / P320-4 S, Manual, Edition 10/2016
- SIMOTION P320-4 E / P320-4 S, Commissioning and Hardware Installation Manual, Edition 10/2016

Validity range

This Commissioning and Hardware Installation Manual is valid for the SIMOTION P320-4 E and SIMOTION P320-4 S devices as of product level SIMOTION V4.5.

Standards

The SIMOTION system has been developed in accordance with ISO 9001 quality guidelines.

Sections in this documentation

The following sections describe the purpose and the use of this documentation:

- Safety instructions
  This section contains fundamental safety instructions for SIMOTION and specific safety instructions for the SIMOTION P320-4.
- Industrial Security
  You can find important information on industrial security here. What is industrial security? Which specific measures can be taken to protect your system from threats.
- Description
  System overview and product description for the SIMOTION P320-4.
  The communication versions are displayed.

- Application planning
  Points to note in advance:
  Upon delivery, the permitted installation positions, environmental and ambient conditions and electromagnetic compatibility.
  You will find this information in the manual SIMOTION P320-4 E / P320-4 S.
- Installation
  Description of the installation, mounting and assembly of the SIMOTION P320-4.
- Connection
  This section describes the requirements for connecting and the connection overview for the SIMOTION P320-4, and information on the connection of PROFINET, PROFIBUS and Ethernet.
- Power on and software installation
  Information on the first power-up of the SIMOTION P320-4 and additional software for HMI.
- Operation (hardware)
  Detailed description of the SIMOTION P State application.
- Parameter assignment / addressing
  This section contains the requirements for parameter assignment / addressing and an overview of the factory settings.
  One section describes the SIMOTION P Control Manager.
  Communication with Ethernet and PC internal is described.
  References are supplied for the PROFINET and PROFIBUS communication.
- Commissioning (software)
  This section contains information, notes and requirements for the commissioning and a recommended sequence for the first commissioning of the SIMOTION P320-4.
  The topics data backup, data storage concept and SIMOTION P general reset are described.
- Service and maintenance
  Information on the recording of diagnostics data, restoring factory settings, installing and removing the backup battery.
  Description of special power-up situations.
- Alarm, fault, and system messages
  Information on diagnostics via LED displays.
  Description of possible alarm and fault messages.
- Troubleshooting/FAQs
  List of possible errors and their remedies.
- Appendix
  The appendices contain information on standards and approvals, on the ESD guideline as well as a list of abbreviations.
- Index
  Alphabetical directory for locating information.

SIMOTION Documentation

An overview of the SIMOTION documentation can be found in the SIMOTION Documentation Overview document.

This documentation is included as electronic documentation in the scope of delivery of SIMOTION SCOUT. It comprises ten documentation packages.

The following documentation packages are available for SIMOTION product version V5.2:

- SIMOTION Engineering System Handling
- SIMOTION System and Function Descriptions
- SIMOTION Service and Diagnostics
- SIMOTION IT
- SIMOTION Programming
- SIMOTION Programming - References
- SIMOTION C
- SIMOTION P
- SIMOTION D
- SIMOTION Supplementary Documentation

Hotline and Internet addresses

SIMOTION at a glance

We have compiled an overview page from our range of information about SIMOTION with the most important information on frequently asked topics - which can be opened with only one click.

Whether beginner or experienced SIMOTION user – the most important downloads, manuals, tutorials, FAQs, application examples, etc. can be found at

https://support.industry.siemens.com/cs/ww/en/view/109480700

Additional information

Click the following link to find information on the following topics:

- Documentation overview
- Additional links to download documents
- Using documentation online (find and search manuals/information)

https://support.industry.siemens.com/cs/ww/en/view/109479653

My Documentation Manager

Click the following link for information on how to compile documentation individually on the basis of Siemens content and how to adapt it for the purpose of your own machine documentation:

https://support.industry.siemens.com/My/ww/en/documentation

Training

Click the following link for information on SITRAIN - Siemens training courses for automation products, systems and solutions:

http://www.siemens.com/sitrain

FAQs

Frequently Asked Questions can be found in SIMOTION Utilities & Applications, which are included in the scope of delivery of SIMOTION SCOUT, and in the Service&Support pages in **Product Support**:

https://support.industry.siemens.com/cs/de/en/ps/14505/faq

Technical support

Country-specific telephone numbers for technical support are provided on the Internet under **Contact**:

https://support.industry.siemens.com/cs/ww/en/sc/2090

Table of contents

Preface **3**

1 Safety notes **13**

1.1 Fundamental safety instructions 13
1.1.1 General safety instructions 13
1.1.2 Safety instructions for electromagnetic fields (EMF) 16
1.1.3 Handling electrostatic sensitive devices (ESD) 16
1.1.4 Security information 17
1.1.5 Danger to life due to software manipulation when using removable storage media 17
1.1.6 Residual risks of power drive systems 18

1.2 Specific safety instructions for SIMOTION P320-4 19
1.2.1 General safety instructions for the SIMOTION P320-4 19
1.2.2 Notes on use 21

2 Industrial security **23**

2.1 Security concept for SIMOTION P320-4 23
2.1.1 Security 23

2.2 Why is industrial security so important? 26
2.2.1 Trends in the IT sector 26
2.2.2 Possible corporate security holes 27

2.3 General security measures 28
2.3.1 Overview 28
2.3.2 Plant security 29
2.3.2.1 Physical protection of critical production areas 29
2.3.3 Network security 30
2.3.3.1 Network segmentation 30
2.3.4 System integrity 33
2.3.4.1 System hardening 33

2.4 Product-specific measures 35
2.4.1 Virus scanners, Windows security patches, SIMOTION P 35
2.4.2 Changing the Windows user password 36
2.4.3 Changing the AutoLogin 40
2.4.3.1 SIMOTION P AutoLogin 40
2.4.4 Deactivating the remote desktop connection 47

3 Description **51**

3.1 System overview 51

3.2 SIMOTION P320-4 product description 53
3.2.1 SIMOTION P320-4 overview 53
3.2.2 Features 54
3.2.3 SIMOTION P320-4 (hardware) structure 56
3.2.4 Interfaces and operating elements 57
3.2.5 SIMOTION P Runtime (software) structure 57
3.2.6 Components 58

3.3 HMI and SIMOTION SCOUT....61
3.3.1 HMI and SIMOTION SCOUT Overview....61
3.3.2 Local HMI or ES on SIMOTION P320-4....61
3.3.2.1 Setting up a network bridge - MAC bridge miniport....63
3.3.3 HMI or ES via PROFINET....74
3.3.4 HMI or ES via Ethernet....75
3.3.5 HMI or ES via IsoPROFIBUS (optional)....76

4 Use planning....77

5 Mounting....79

5.1 Installation overview....79

5.2 Headless operation....80
5.2.1 SIMOTION P320-4 - Headless operation....80
5.2.2 Deactivating the remote desktop connection....80

5.3 Decentralized structure....83

5.4 Important information about installation....84

5.5 Withdrawing/inserting the CFast card....85
5.5.1 Automatic restart for SIMOTION P Runtime....87

5.6 Installing the SIMOTION P320-4 in the control cabinet....89
5.6.1 Notes on installation....89
5.6.2 Standard rail mounting....89
5.6.3 Vertical mounting....92

5.7 SIMOTION P AutoLogin....94

6 Connection....101

6.1 Connection requirements....101

6.2 Overview of connections....102

6.3 Connecting PROFINET....104
6.3.1 PROFINET onboard....104
6.3.2 Connection....105

6.4 Mounting a strain relief....107

6.5 Connecting PROFIBUS....108
6.5.1 Requirement....108
6.5.2 SYNC I/O connecting cable / Plugging in the IsoPROFIBUS board....109
6.5.3 Connecting the IsoPROFIBUS board....111
6.5.4 IsoPROFIBUS board and PROFIBUS DP....114
6.5.5 Connecting the bus connectors for the X101 and X102 interfaces (IsoPROFIBUS)....114
6.5.6 PROFIBUS cable....115

6.6 Connecting Ethernet....117

6.7 Connecting the keyboard and mouse....118

6.8 Connecting the power supply....119
6.8.1 Safety rules....119
6.8.2 Standards and Regulations....119
6.8.3 Connecting the power supply....120
6.8.4 Protective conductor connection and potential equalization....120

7 Power on and software installation....123

7.1 Power-up....123

7.2 Additional software for HMI....124

7.3 Customer-specific software....125

8 Operator Control (hardware)....127

8.1 SIMOTION P state application....127
8.1.1 SIMOTION P State application overview....127
8.1.2 LED display....128
8.1.3 Mode selector....129
8.1.4 Current operating status....129
8.1.5 Function elements....130
8.1.6 SIMOTION P State - menus....131

9 Parameter assignment/addressing....135

9.1 Parameter assignment / addressing requirements....135

9.2 Factory settings....136
9.2.1 Factory settings overview....136
9.2.2 Ethernet - TCP/IP local....136

9.3 SIMOTION P control manager....137
9.3.1 Requirement....137
9.3.2 SIMOTION P Control Manager overview....137
9.3.3 Calling SIMOTION P Control Manager from the control panel....137
9.3.4 Administration tab....138
9.3.4.1 Start SIMOTION P....140
9.3.4.2 Automatic Restart By Plug-In External Memory Card....141
9.3.4.3 Runtime Network Connections....142
9.3.5 License tab....144

9.4 Local communication via PC internal....146
9.4.1 Local communication (PC-internal) overview....146
9.4.2 Checking the PC-internal settings....146
9.4.3 Station Configurator....147

9.5 Ethernet communication....150
9.5.1 Ethernet communication overview....150
9.5.2 Ethernet interface....150
9.5.3 Default IP addresses for Windows and SIMOTION P Runtime....153
9.5.4 Communication via an Ethernet interface....153
9.5.5 Establishing the active flag for an external PG/PC....157

9.6 PROFINET communication....158
9.6.1 Documentation....158

9.7 PROFIBUS communication....159
9.7.1 Documentation....159

9.8 Project download....160

9.9 Battery monitoring....162

Safety notes

1

1.1 Fundamental safety instructions

1.1.1 General safety instructions

⚠ DANGER

Danger to life due to live parts and other energy sources

Death or serious injury can result when live parts are touched.

- Only work on electrical devices when you are qualified for this job.
- Always observe the country-specific safety rules.

Generally, six steps apply when establishing safety:

1. Prepare for shutdown and notify all those who will be affected by the procedure.
2. Disconnect the machine from the supply.
   - Switch off the machine.
   - Wait until the discharge time specified on the warning labels has elapsed.
   - Check that it really is in a no-voltage condition, from phase conductor to phase conductor and phase conductor to protective conductor.
   - Check whether the existing auxiliary supply circuits are de-energized.
   - Ensure that the motors cannot move.
3. Identify all other dangerous energy sources, e.g. compressed air, hydraulic systems, or water.
4. Isolate or neutralize all hazardous energy sources by closing switches, grounding or short-circuiting or closing valves, for example.
5. Secure the energy sources against switching on again.
6. Ensure that the correct machine is completely interlocked.

After you have completed the work, restore the operational readiness in the inverse sequence.

⚠ WARNING

Danger to life from hazardous voltage when connecting an unsuitable power supply

Touching live components can result in death or severe injury.

- Only use power supplies that provide SELV (Safety Extra Low Voltage) or PELV (Protective Extra Low Voltage) output voltages for all connections and terminals of the electronics modules.

⚠ WARNING

Danger to life from touching live parts on damaged devices

Improper handling of devices can result in damage.

For damaged devices, hazardous voltages can be present at the enclosure or at exposed components; if touched, this can result in death or severe injury.

- Observe the limit values specified in the technical specifications during transport, storage, and operation.
- Do not use damaged devices.

⚠ WARNING

Danger to life through electric shock due to unconnected cable shields

Hazardous touch voltages can occur through capacitive cross-coupling due to unconnected cable shields.

- As a minimum, connect cable shields and the cores of power cables that are not used (e.g. brake cores) at one end at the grounded housing potential.

⚠ WARNING

Danger to life due to electric shock when not grounded

For missing or incorrectly implemented protective conductor connection for devices with protection class I, high voltages can be present at open, exposed parts, which when touched, can result in death or severe injury.

- Ground the device in compliance with the applicable regulations.

⚠ WARNING

Danger to life due to fire spreading if housing is inadequate

Fire and smoke development can cause severe personal injury or material damage.

- Install devices without a protective housing in a metal control cabinet (or protect the device by another equivalent measure) in such a way that contact with fire inside and outside the device is prevented.
- Ensure that smoke can only escape via controlled and monitored paths.

⚠ WARNING

Danger to life from unexpected movement of machines when using mobile wireless devices or mobile phones

Using mobile radios or mobile phones with a transmit power > 1 W closer than approx. 2 m to the components may cause the devices to malfunction, influence the functional safety of machines therefore putting people at risk or causing material damage.

- Switch off wireless devices or mobile phones in the immediate vicinity of the components.

⚠ WARNING

Danger to life due to fire if overheating occurs because of insufficient ventilation clearances

Inadequate ventilation clearances can cause overheating of components followed by fire and smoke development. This can cause death or serious injury. This can also result in increased downtime and reduced service life for devices/systems.

- Ensure compliance with the specified minimum clearance as ventilation clearance for the respective component.

⚠ WARNING

Danger of an accident occurring due to missing or illegible warning labels

Missing or illegible warning labels can result in accidents involving death or serious injury.

- Check that the warning labels are complete based on the documentation.
- Attach any missing warning labels to the components, in the national language if necessary.
- Replace illegible warning labels.

⚠ WARNING

Danger to life when safety functions are inactive

Safety functions that are inactive or that have not been adjusted accordingly can cause operational faults on machines that could lead to serious injury or death.

- Observe the information in the appropriate product documentation before commissioning.
- Carry out a safety inspection for functions relevant to safety on the entire system, including all safety-related components.
- Ensure that the safety functions used in your drives and automation tasks are adjusted and activated through appropriate parameterizing.
- Perform a function test.
- Only put your plant into live operation once you have guaranteed that the functions relevant to safety are running correctly.

Note

Important safety notices for safety functions

If you want to use safety functions, you must observe the safety notices in the safety manuals.

1.1.2 Safety instructions for electromagnetic fields (EMF)

⚠ WARNING

Danger to life from electromagnetic fields

Electromagnetic fields (EMF) are generated by the operation of electrical power equipment such as transformers, converters or motors.

People with pacemakers or implants are at a special risk in the immediate vicinity of these devices/systems.

- Ensure that the persons involved are the necessary distance away (minimum 2 m).

1.1.3 Handling electrostatic sensitive devices (ESD)

Electrostatic sensitive devices (ESD) are individual components, integrated circuits, modules or devices that may be damaged by either electric fields or electrostatic discharge.

NOTICE

Damage through electric fields or electrostatic discharge

Electric fields or electrostatic discharge can cause malfunctions through damaged individual components, integrated circuits, modules or devices.

- Only pack, store, transport and send electronic components, modules or devices in their original packaging or in other suitable materials, e.g conductive foam rubber of aluminum foil.
- Only touch components, modules and devices when you are grounded by one of the following methods:
  - Wearing an ESD wrist strap
  - Wearing ESD shoes or ESD grounding straps in ESD areas with conductive flooring
- Only place electronic components, modules or devices on conductive surfaces (table with ESD surface, conductive ESD foam, ESD packaging, ESD transport container).

1.1.4 Security information

Siemens provides products and solutions with industrial security functions that support the secure operation of plants, systems, machines and networks.

In order to protect plants, systems, machines and networks against cyber threats, it is necessary to implement – and continuously maintain – a holistic, state-of-the-art industrial security concept. Siemens' products and solutions constitute one element of such a concept.

Customers are responsible for preventing unauthorized access to their plants, systems, machines and networks. Such systems, machines and components should only be connected to an enterprise network or the internet if and to the extent such a connection is necessary and only when appropriate security measures (e.g. firewalls and/or network segmentation) are in place.

For additional information on industrial security measures that may be implemented, please visit (https://www.siemens.com/industrialsecurity).

Siemens' products and solutions undergo continuous development to make them more secure. Siemens strongly recommends that product updates are applied as soon as they are available and that the latest product versions are used. Use of product versions that are no longer supported, and failure to apply the latest updates may increase customers' exposure to cyber threats.

To stay informed about product updates, subscribe to the Siemens Industrial Security RSS Feed under (https://www.siemens.com/industrialsecurity).

1.1.5 Danger to life due to software manipulation when using removable storage media

⚠ WARNING

Danger to life due to software manipulation when using removable storage media

The storage of files on removable storage media involves a high risk of infection, e.g. via viruses or malware. Incorrect parameter assignment can cause machines to malfunction, which can lead to injuries or death.

- Protect the files on removable storage media against harmful software through appropriate protective measures, e.g. virus scanners.

1.1.6 Residual risks of power drive systems

When performing the risk assessment for a machine or plant in accordance with the respective local regulations (e.g. EC Machinery Directive), the machine manufacturer or plant constructor must take into account the following residual risks associated with the control and drive components of a drive system:

1. Unintentional movements of driven machine or system components during commissioning, operation, maintenance and repairs caused by, for example:
   - Hardware and/or software errors in the sensors, control system, actuators, and cables and connections
   - Response times of the control system and of the drive
   - Operation and/or environmental conditions outside the specification
   - Condensation/conductive contamination
   - Parameterization, programming, cabling, and installation errors
   - Use of wireless devices / mobile phones in the immediate vicinity of electronic components
   - External influences/damage
   - X-rays, ionizing radiation and cosmic radiation
2. Unusually high temperatures, including open flames, as well as emissions of light, noise, particles, gases, etc., can occur inside and outside the components under fault conditions caused by, for example:
   - Component failure
   - Software errors
   - Operation and/or environmental conditions outside the specification
   - External influences/damage
3. Hazardous shock voltages caused by, for example:
   - Component failure
   - Influence during electrostatic charging
   - Induction of voltages in moving motors
   - Operation and/or environmental conditions outside the specification
   - Condensation/conductive contamination
   - External influences/damage
4. Electrical, magnetic and electromagnetic fields generated in operation that can pose a risk to people with a pacemaker, implants or metal replacement joints, etc., if they are too close
5. Release of environmental pollutants or emissions as a result of improper operation of the system and/or failure to dispose of components safely and correctly

For more information about the residual risks of the drive system components, see the relevant sections in the technical user documentation.

1.2 Specific safety instructions for SIMOTION P320-4

1.2.1 General safety instructions for the SIMOTION P320-4

⚠ WARNING

Life-threatening voltages are present with an open control cabinet

When you install the device in a control cabinet, some areas or components in the open control cabinet may be carrying life-threatening voltages.

If you touch these areas or components, you may be killed by electric shock.

Switch off the power supply to the cabinet before opening it.

System expansions

NOTICE

Damage through system expansions

Device and system expansions may be faulty and can affect the entire machine or plant.

The installation of expansions can damage the device, machine or plant.

Device and system expansions may violate safety rules and regulations regarding radio interference suppression.

If you install or exchange system expansions and damage your device, the warranty becomes void.

Note the following for system expansions:

- Only install system expansion devices designed for this device. Contact your technical support team or where you purchased your PC to find out which system expansion devices may safely be installed.
- Observe the information on electromagnetic compatibility (Page 227).

NOTICE

"Open Type" UL508

Note that the device is classified as "Open Type" for use in the area of Industrial Control Equipment (UL508). Installation of the device in an enclosure according to UL508 is conditional for approval or operation according to UL508.

Battery and rechargeable battery

⚠ WARNING

Risk of explosion and release of harmful substances

Improper handling of lithium batteries can result in an explosion of the batteries.

Explosion of the batteries and the released pollutants can cause severe physical injury. Worn batteries jeopardize the function of the device.

Note the following when handling lithium batteries:

- Replace used batteries in good time, see the section "Replacing the backup battery" in the Commissioning and Hardware Installation Manual.
- Replace the lithium battery only with an identical battery or types recommended by the manufacturer (Article No.: A5E30314053).
- Do not throw lithium batteries into fire, do not solder on the cell body, do not recharge, do not open, do not short-circuit, do not reverse polarity, do not heat above 100°C and protect from direct sunlight, moisture and condensation.

High frequency radiation

NOTICE

Unintentional operating situations

High frequency radiation, e g. from a cellular phone, interferes with device functions and can result in malfunctioning of the device.

Persons are injured and the plant is damaged.

Avoid high-frequency radiation:

- Remove radiation sources from the environment of the device.
- Switch off radiating devices.
- Reduce the radio output of radiating devices.
- Observe the information on electromagnetic compatibility (Page 227).

ESD Guideline

Electrostatic sensitive devices can be labeled with an appropriate symbol.

NOTICE

Electrostatic sensitive devices (ESD)

When you touch electrostatic sensitive components, you can destroy them through voltages that are far below the human perception threshold.

If you work with components that can be destroyed by electrostatic discharge, observe the ESD Guideline.

Further information

You can find more detailed information about the **EGB Guideline** in Annex B in the section with the same name.

1.2.2 Notes on use

⚠ WARNING

Hazards on an unprotected machine or plant

According to the results of a risk analysis, hazards can occur on an unprotected machine. The hazards can result in personal injury.

According to the risk analysis, the risk of personal injury can be avoided with the following measures:

- Additional protective devices on the machine or plant. With this, especially the programming, configuration and wiring of the inserted I/O modules have to be executed, in accordance with the necessary risk analysis identified safety performance (SIL, PL or Cat.).
- The correct use of the device has to be verified with a function test on the system. This test can detect programming, configuration and wiring errors.
- Documentation of the test results that you can enter in the relevant safety records when required.

NOTICE

Ambient conditions

Ambient conditions for which the device is not suitable can cause faults or damage the device.

Note the following:

- Operate the device only in closed rooms. Failure to comply nullifies the warranty.
- Operate the device only in accordance with the ambient conditions specified in the technical specifications.
- Protect the device against dust, moisture and heat.
- Do not expose the device to direct sunlight or other strong sources of light.
- Without additional measures, such as a supply of clean air, the device may not be used in locations with harsh operating conditions caused by acidic vapors or gases.
- Observe the permissible mounting positions of the device.
- Do not obstruct the venting slots of the device.

Note

Use in an industrial environment without additional protective measures

This device was designed for use in a normal industrial environment according to IEC 60721-3-3.

Industrial security

2

2.1 Security concept for SIMOTION P320-4

2.1.1 Security

Note

Observe the general security information in this documentation for Industrial security.

Regular change of the Windows password

Note

Changing the Windows password

For security reasons, the Windows password should be changed regularly.

It is essential that the AutoLogin is also adapted for this purpose.

You can find instructions in the following sections:

- Changing the Windows user password (Page 36)
- AutoLogin for SIMOTION P (Page 40).

Unlocking Windows

Note

Windows locked

Windows may be accidentally locked, e.g. through shortcut key Windows + L.

If you do not know the password for the SIMOTION P320-4, please contact the Siemens Industry Online Support (https://support.industry.siemens.com).

Windows firewall

Note

Windows firewall

To allow the Windows IP to be accessed externally, this must be set as an exception in the Windows firewall **File and Printer Sharing**. Otherwise, there is only limited access to Windows from outside.

Security and networks

Note

You will find information on the security of networks in Section General security measures (Page 28).

Remote desktop connection

Note that for the SIMOTION P320-4 with Headless operation, you require a user name and password for a remote desktop connection. Per default, the remote desktop connection is already set up.

Note

Deactivating the remote desktop connection

If you do **not** use the remote desktop connection, it must be deactivated for security reasons.

See Section Deactivating the remote desktop connection (Page 47)

SIMOTION IT

Note

Security concept

Note the security concept of HTTP/S, FTP and Telnet access on the Web server when working with SIMOTION IT.

You will find information in the SIMOTION IT Diagnostics and Configuration Diagnostics Manual or the SIMOTION online help in Section Security concept.

Note

User administration

Note the information on the user administration when working with SIMOTION IT.

You will find information in the SIMOTION IT Diagnostics and Configuration Diagnostics Manual or the SIMOTION online help in Section User administration.

Information on industrial security

The following sections are taken from the Motion Control Industrial Security Configuration Manual:

- Why is industrial security so important? (Page 26)
- General security measures (Page 28)
- Product-specific measures (virus scanners) (Page 35)

You can view the entire document in the Industry Online Support (https://support.industry.siemens.com/cs/ww/en/view/108862708).

2.2 Why is industrial security so important?

The topic of data security and access protection (security) is becoming more and more important in industrial environments. The progressive networking of entire industrial plants, the vertical integration and networking of the individual levels of a company, and new technologies, such as remote maintenance and remote access, are leading to increased requirements for protecting industrial plants.

The threats are diverse and the consequences far-reaching.

Possible threats:

- Espionage of data, recipes, etc.
- Sabotage of production plants
- System stoppage, e.g. due to virus infection and malware
- Manipulation of data or application software
- Unauthorized use of system functions

Possible effects of a security incident

- Loss of intellectual property
- Loss of production or reduced product quality
- Company image and economic damage
- Catastrophic environmental influences
- Danger to persons and machines

2.2.1 Trends in the IT sector

Overview

There are many new trends which affect industrial security:

- Cloud computing in general
  The number of network connections across the world is constantly increasing. This enables innovations such as cloud computing and the applications that go hand in hand with it. In conjunction with cloud computing, there has been a massive increase in the number of mobile devices, such as mobile phones and tablet PCs.
- Wireless technology
  On the other hand, the increasing use of mobile devices has only become possible thanks to the ubiquitous availability of mobile networks. Wireless LAN is also becoming increasingly available.
- Smart Grid
  Networking is not only limited to data networks, it also influences our energy infrastructure.

- Worldwide remote access to plants, machines and mobile applications
- The "Internet of things"
  Millions of electronic devices are becoming network-capable and are communicating via the Internet, such as onboard computers in cars, which send warranty information to dealers, or water meter sensors that transmit water consumption data to municipal water suppliers via radio.

However, in order for everything from cloud computing to sensors to work without service disruptions, you need reliable network infrastructures that are well protected against attacks from malware and hackers.

2.2.2 Possible corporate security holes

Possible security holes or weak points

The security chain of a company is only as strong as its weakest link. Security holes can exist at numerous points. The following list gives only a few examples:

- Employees
- Production plants
- Network infrastructure
- Data centers
- PC workstations
- Laptops
- Tablet PCs
- Printers
- Smartphones
- Portable storage media
- Guidelines and regulations

For this reason, a holistic approach is required to deal with the issue of security. Coordinated guidelines and regulations are required that cover all areas: Devices, systems, processes and employees.

2.3 General security measures

2.3.1 Overview

In the following section you will learn about the general security measures you can take in order to protect your system from threats. All of the measures are recommended.

Additional specific security measures for SINUMERIK, SIMOTION and SINAMICS products can be found in Section Product-specific security measures (Page 35).

Basically, the measures should be coordinated with one another and correspond to the ring-shaped principle of the "Defense in Depth" strategy. The measures are structured according to the "onion" principle and each measure forms an additional protective layer around the core: the production plant.

Figure 2-1 Defense in depth strategy

- **Plant security**
  Plant security represents the outermost protective ring. Plant security includes comprehensive physical security measures, e.g. entry checks, which should be closely coordinated with protective measures for IT security.
- **Network security**
  The measures, grouped under the keyword "Network security", form the core of the protective measures. This refers to the segmentation of the plant network with limited and secure communication between subnetworks ("secure islands") and the interface check with the use of firewalls.
- **System integrity**
  "System integrity" represents the combination two major measures. PC-based systems and the control level must be protected against attacks. Steps include the following measures:
  - User authentication for machine or plant operators with individual authorization levels
  - Integrated access protection mechanisms in the automation components to prevent unauthorized changes via the engineering system or during maintenance
  - The use of antivirus and whitelisting software to protect PC systems against malware
  - Maintenance and update processes to keep the automation systems up-to-date (e.g. patch management, firmware updates, etc.)

2.3.2 Plant security

2.3.2.1 Physical protection of critical production areas

Unauthorized persons may be able to enter the production site/building and damage or alter production equipment as a result of gaps in a company's physical security. Confidential information can also be lost. This can be prevented if both the company's site and the production areas are protected accordingly.

Company security

The company's physical security can be ensured via the following measures:

- Closed off and monitored company premises
- Entry control, keys / card readers and/or security personnel
- Escorting of external personnel by company employees

Physical production security

The physical security of a production location can also be ensured via the following measures:

- Separate access control for production areas.
- Installation of critical components in securely lockable cabinets / switching rooms including monitoring and alarm signaling options
- Prohibited production areas with restricted access rights

- Configuration of the radio field to restrict the WLAN range so that it is not available outside the defined areas (e.g. factory building).
- Guidelines that prevent the use of third-party data storage media (e.g. USB sticks) and IT devices (e.g. notebooks) classified as insecure on the control.

Further information

Further information on integrated security solutions can be found on the Surveillance page (http://www.buildingtechnologies.siemens.com/bt/global/en/security-solution/Pages/security-solution.aspx).

2.3.3 Network security

2.3.3.1 Network segmentation

Separation between production and office networks

One important protective measure for your control is the strict separation of the production networks and the other company networks. This separation creates protection zones for your production networks.

Note

The products – drives, controllers, commissioning tools (e.g. STARTER or Startdrive) – described in this manual must only be operated in protection zones.

Separation by means of a firewall system

In the simplest scenario, separation is achieved by means of an individual firewall system which controls and regulates communication between networks.

Separation via a DMZ network

In the more secure version, the coupling is established via a separate DMZ network. In this case, direct communication between the production network and the company network is completely prevented by firewalls and only takes place indirectly via servers in the DMZ network.

Note

The production networks should also be divided into separate automation cells in order to protect critical communication mechanisms.

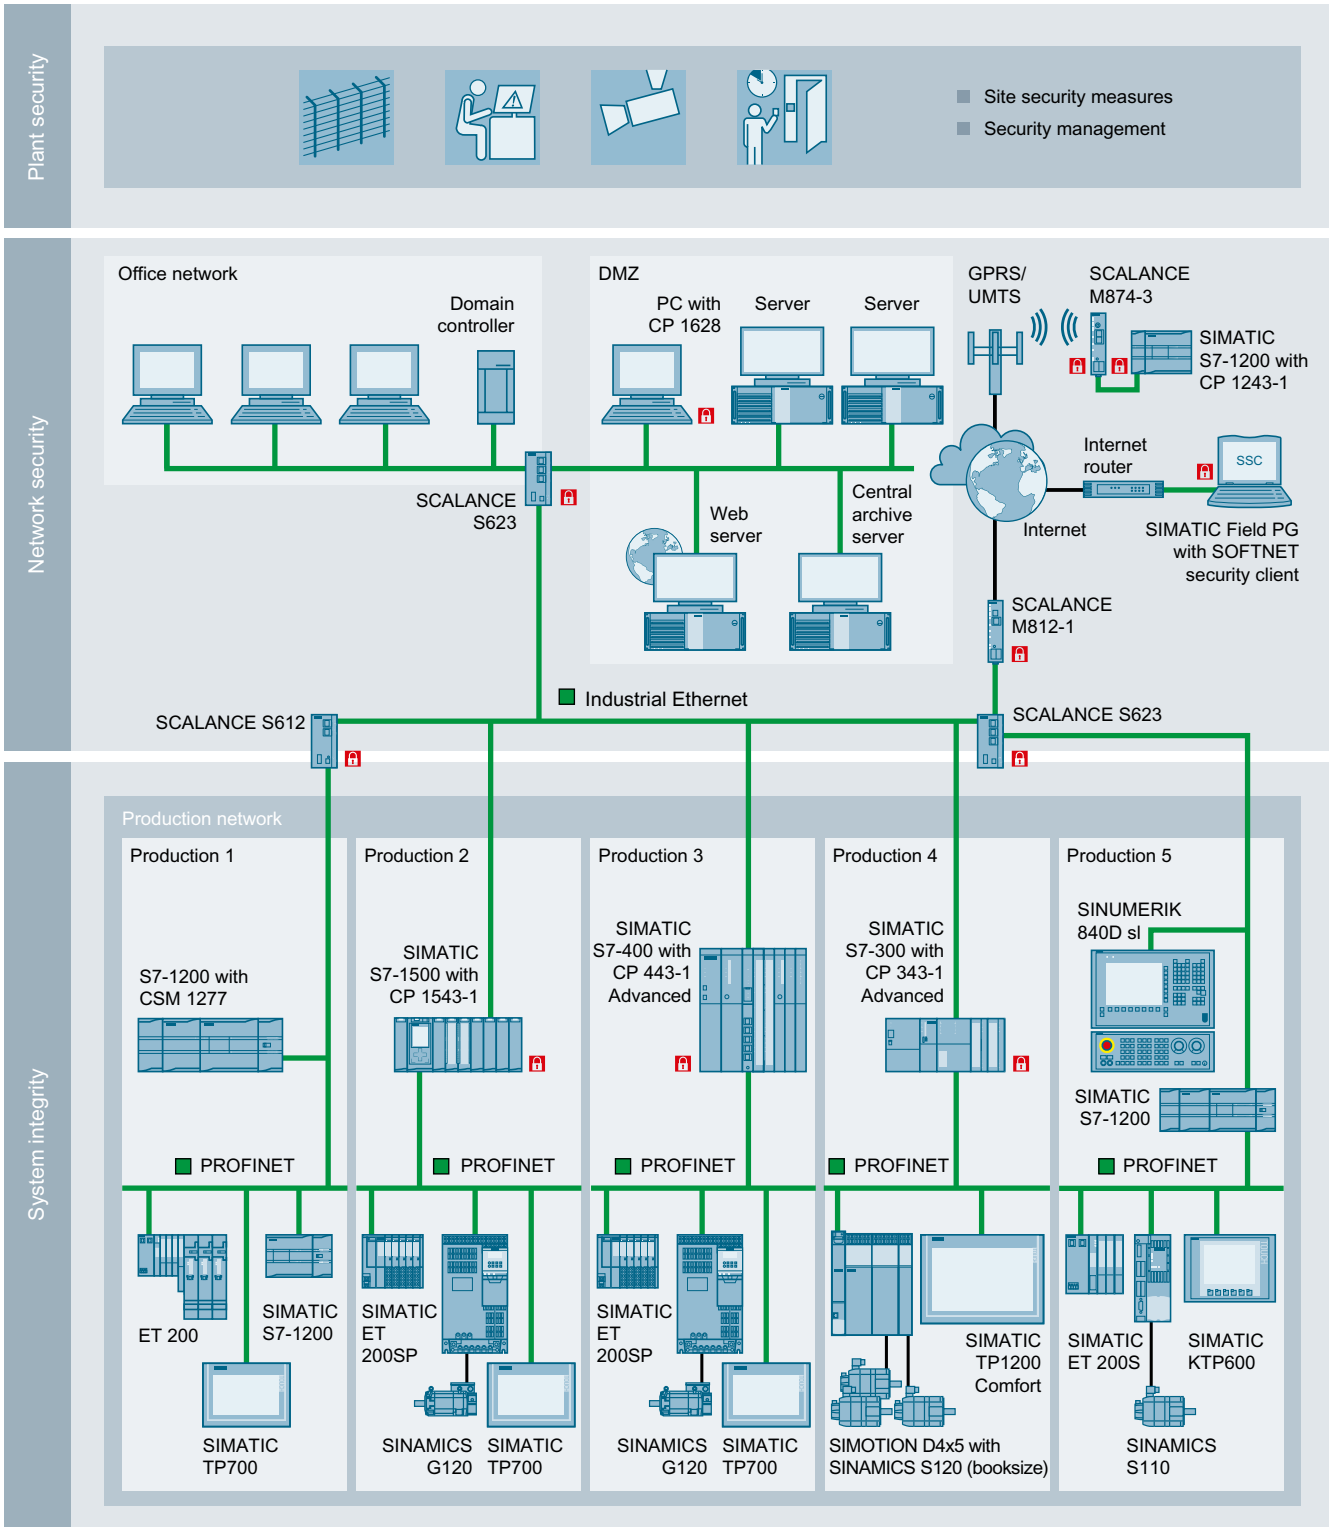
General security measures

Observe the general security measures even within protection zones, for example:

- Virus scanners (Page 33)
- Reduction of attack points (Page 33)

Network segmentation with SCALANCE S

Siemens provides SCALANCE S security modules to meet network protection and network segmentation requirements.



SCALANCE S security modules

SCALANCE S security modules with Security Integrated provide:

- Stateful inspection firewall
  In order to implement user-specific control and logging, firewall rules can also be specified that only apply to certain users.
- VPN via IPsec (data encryption and authentication)
  This establishes a secure tunnel between authenticated users whose data cannot be intercepted or manipulated. The most important aspect is the protection against external access via the Internet.
- NAT/NATP (address translation)
- Router functionality (PPPoE, DDNS) for broadband Internet access (DSL, cable)
- S623 with additional VPN port (DMZ) enables the secure connection of an additional network for service and remote maintenance purposes. S623 also permits the secure, redundant connection of subordinate networks by means of routers and firewall redundancy.

Principle

This application example shows cell segmentation by several SCALANCE S modules, each of which is upstream of the automation cell. The data traffic to and from the devices within automation cells can be filtered and controlled with the SCALANCE S firewall. If required, the traffic between the cells can be encrypted and authenticated. Secure channels and client access from the PCs to the cells can be established via SOFTNET Security Client, VPN client software for PCs.

2.3.4 System integrity

2.3.4.1 System hardening

Reduction of attack points

Network services and ports

Activated services represent a risk. To minimize the risk, only the necessary services for all of the automation components should be activated. Ensure that all activated services are taken into account (especially web servers, FTP, remote maintenance, etc.) in the security concept.

A description of the ports used can be found in the Manuals and Function Manuals of the respective products.

User accounts

Any active user account allows access to the system is thus a potential risk. Therefore, take the following security measures:

- Reduction of configured/activated user accounts to the actually needed minimum
- Use of secure access data for existing accounts
- Regular checks, especially of the locally configured user accounts
- Regular change of passwords

Passwords

NOTICE
Changing default passwords The misuse of passwords can also represent a considerable security risk. We recommend that default passwords be changed during the commissioning and changed at regularly defined intervals as required.

Virus scanner

The use of a virus scanner must not impact the production operations of a plant. As the last consequence, this will lead to even a virus-infected computer not being permitted to immediately shut down if this would cause the control of the production process to be lost.

In order to be used on industrial control components, a virus scanner should therefore meet the following requirements:

Virus scanner requirements

- If a local firewall that has been adapted to the production operations is used, it must be possible to install the virus scanner without its own firewall.
- The virus scan clients can be divided into (product- and task-specific) groups and configured separately.
- It must be possible to deactivate the automatic distribution of the virus signatures and other updates.
- It must be possible to carry out the distribution of the virus signatures and updates manually and in groups.
- It must be possible to conduct a file scan and system scan manually and in groups.
- For the virus detection scenario, a message can be configured without a file action such as "Delete", "Clean", etc. being automatically carried out.
- It must be possible to log all of the messages on the virus scan server.
- On a virus scan client, it must be possible to suppress the local message window because it could obscure important messages from the production process.

Note

Installation of software

The installation of software is often a process which represents a serious and complicated change to the respective system. The storage location of the files to be installed must always be free of viruses (e.g. a file server with its own virus scanner or DVD checked for viruses).

Patch management

Microsoft security updates

The **WSUS** (Windows Server Update Service) system functionality provided by Microsoft is available for current Windows systems. WSUS supports administrators by providing Microsoft updates in large local networks. WSUS automatically downloads update packages from the Internet (Microsoft Update) and offers them to the Windows clients for installation.

The fully automatic update process ensures that Microsoft security updates are always available on Siemens clients.

2.4 Product-specific measures

2.4.1 Virus scanners, Windows security patches, SIMOTION P

General information on virus scanners

Once an industrial PC system is connected to the Internet, either directly or via an internal company network, there is a danger that it can become infected with a virus. However, malicious software is not only able to reach the system via the Intranet/Internet, but also, for example, via a removable storage device (such as a USB memory stick) attached to the system for backing up data.

SIMOTION P320-4 virus scanners

A virus scanner that runs on Microsoft Windows, as used in office or home computers, has a deep impact on a system's processes. There are, for example, processes such as real-time scans or regular system scans. Such interventions can cause performance issues for the system, and as a result, for the SIMOTION Runtime software. Although the SIMOTION Runtime software runs in a real-time environment, it still depends on the available system resources.

Note

Because of the resulting performance impairments, the installation and use of a standard virus scanner on a SIMOTION P320-4 during system runtime does not make sense and is not permitted.

Using a virus scanner

As a standard virus scanner cannot be used for SIMOTION P320-4, an alternative procedure is followed. The virus scanner is installed to a separately bootable Windows PE operating system. It is started, for example, from a CD or a USB storage device and then performs a virus scan.

Note

FAQ in Industry Online Support

More information on using a virus scanner on a SIMOTION P320-4 can be found in the FAQ "How can a virus scanner be used on a SIMOTION P320-4?" (https://support.industry.siemens.com/cs/ww/en/view/59381507), which is available as a download from the Industry Online Support portal.

Windows security patches

A brief test is performed when a new SIMOTION version is released. During this brief test, a check is performed to establish whether the installation of the security update has affected any basic functions.

2.4.2 Changing the Windows user password

Permitting the Windows password to be changed

Before the Windows password can be changed, it must be permitted for the user.

If the following procedure is not observed, an error message is issued and the Windows password cannot be changed.

Note the following procedure:

1. Select the entry point **Control Panel > All Control Panel Items > Administrative Tools > Computer Management**.
   Double-click **Computer Management**.

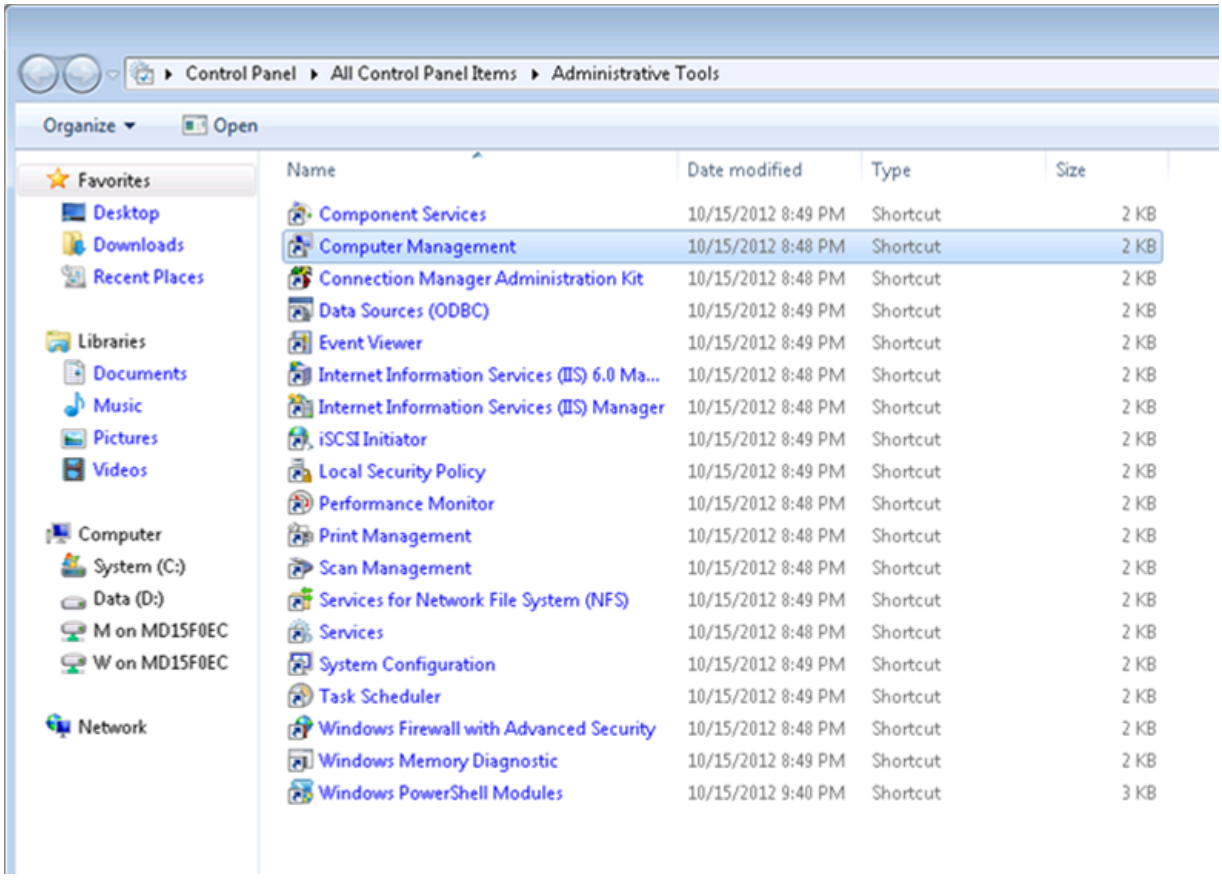

Figure 2-2 Homepage:

2. The **Users** folder is displayed at **Local Users and Groups** in the **Computer Management** window.
   Click the **Users** folder. The available user groups are displayed.

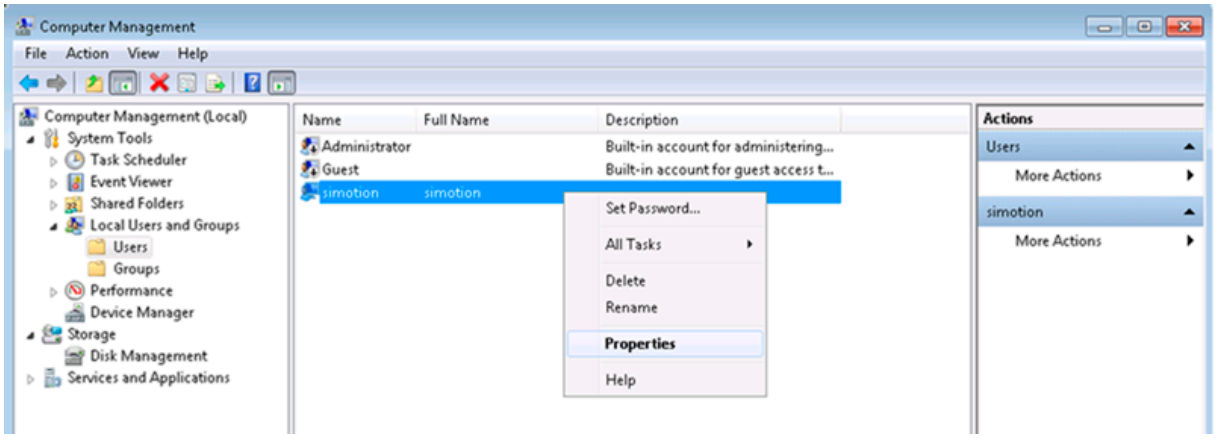

Figure 2-3 Computer management

3. With the selection of **Users simotion**, you can display the properties via **Properties**.
4. Deactivate the "**User cannot change password**" checkbox in the **General** tab on the **simotion Properties** dialog box.
   This checkbox must be deactivated for the user to change the Windows password.

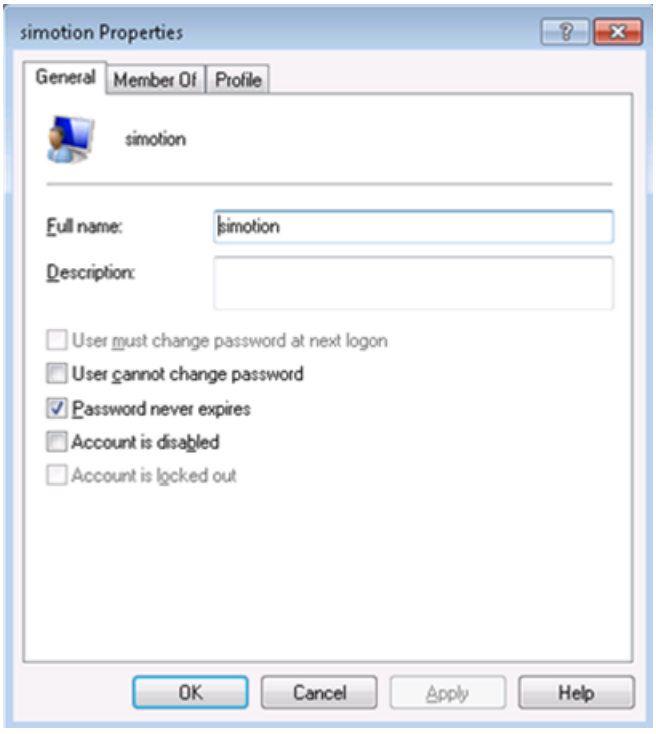

Figure 2-4 SIMOTION properties

Changing the Windows password

You can find general information on the Windows password on the website at Microsoft - Changing des Windows-password (http://windows.microsoft.com/en-us/windows/change-windows-password#change-windows-password=windows-7).

To change the Windows password, proceed as follows:

1. Press Ctrl+Alt+Del. The following Windows window opens.

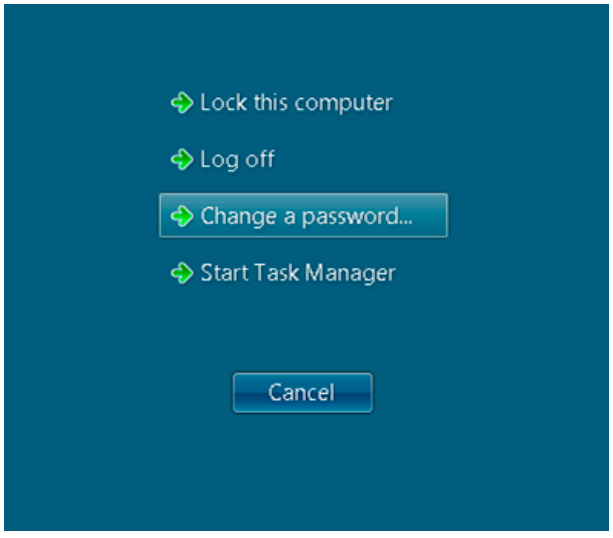

Figure 2-5 Changing the Windows password

2. After you have confirmed **Change a password...** , the Windows window to change the Windows password opens.
   First enter your current password and then the new Windows password. You must enter the new Windows password a second time for confirmation.

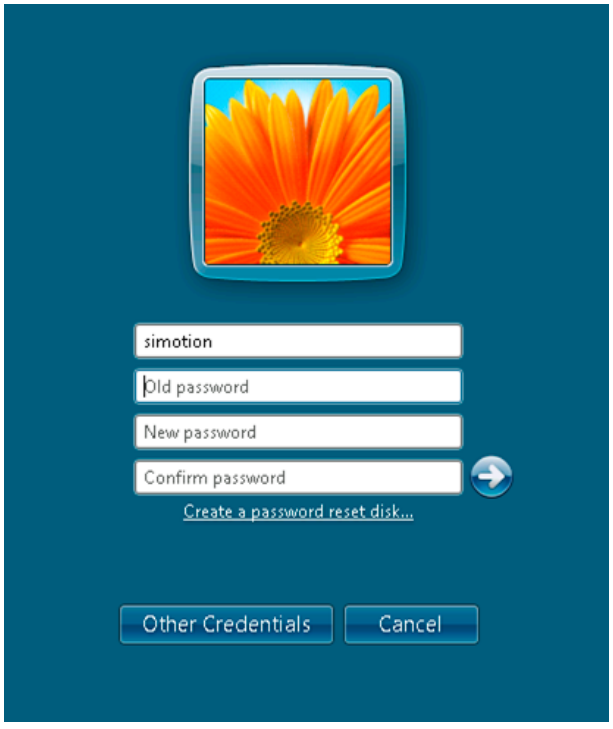

Figure 2-6 Entering the new Windows password

3. The password was changed successfully.

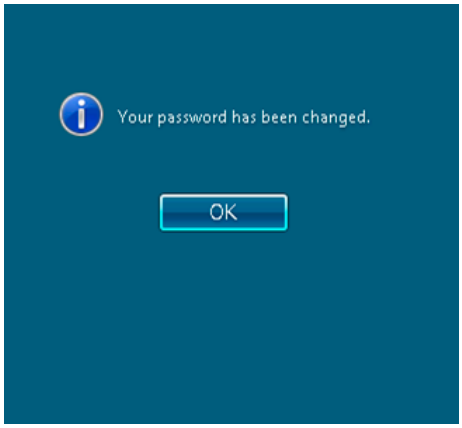

Figure 2-7 Confirmation of change

4. In the event of an error when the "User cannot change password" checkbox is activated, the following error message is displayed.
The Windows password has not been changed.

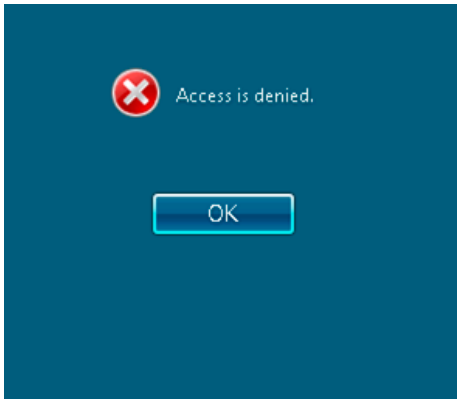

Figure 2-8 Error message when changing the Windows password has not been permitted.

2.4.3 Changing the AutoLogin

2.4.3.1 SIMOTION P AutoLogin

The password for the AutoLogin must be changed when the user has changed the Windows password.

The Windows user password is changed in the normal way, e.g. "Change Password" screen.
See also Section Changing the Windows user password (Page 36).

Automatically Log On

SIMOTION P320-4 is preset so that the user does not have to enter the user name and the password to log on.

Preparation for changing the AutoLogin

In order that an AutoLogin still functions after changing the Windows password, the password for the AutoLogin must be changed.

The required procedure is shown in the following so that the change of the AutoLogin for SIMOTION P320-4 can be prepared:

1. Open the **Computer Management** window via **Control Panel > All Control Panel Items > Administrative Tools** .

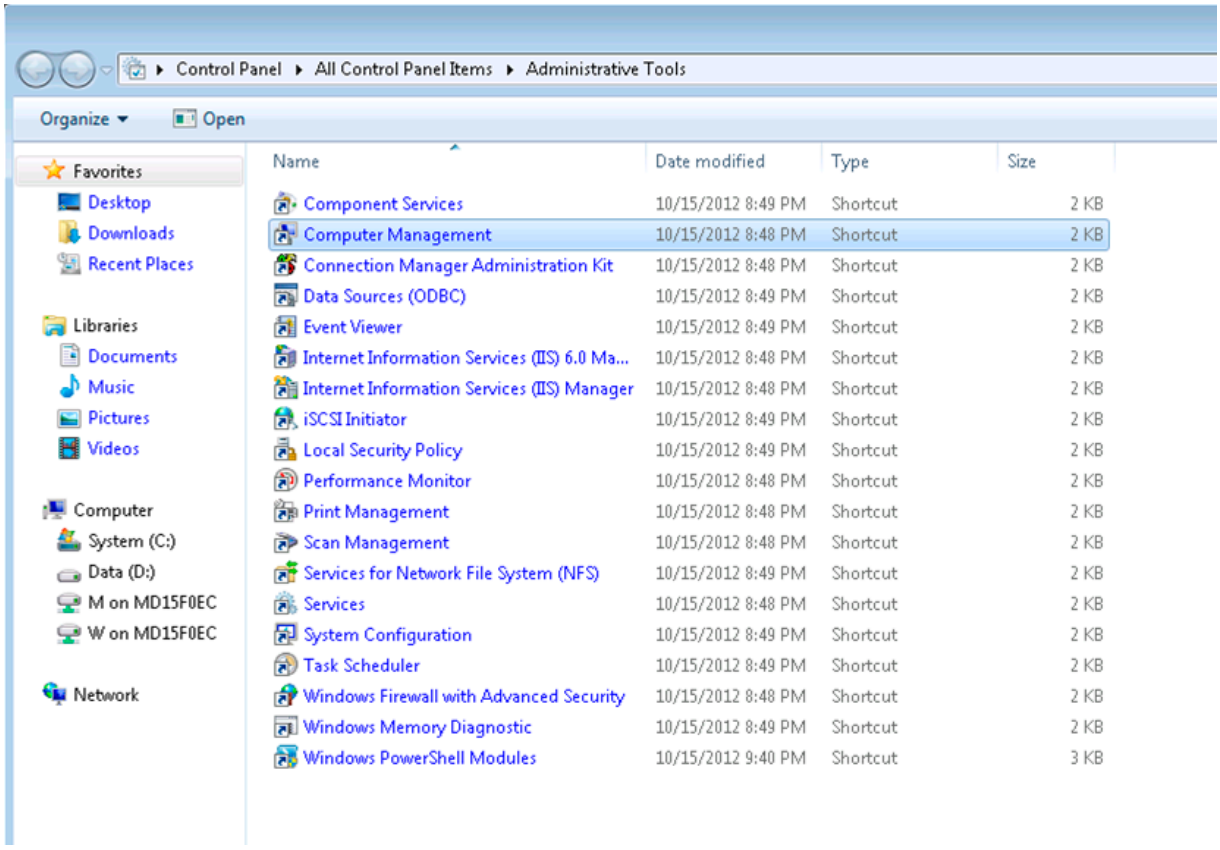

Figure 2-9 Computer Management entry point

2. The **Users** folder is displayed at **Local Users and Groups** in the **Computer Management** window.
   Click the **Users** folder. The available user groups are displayed.

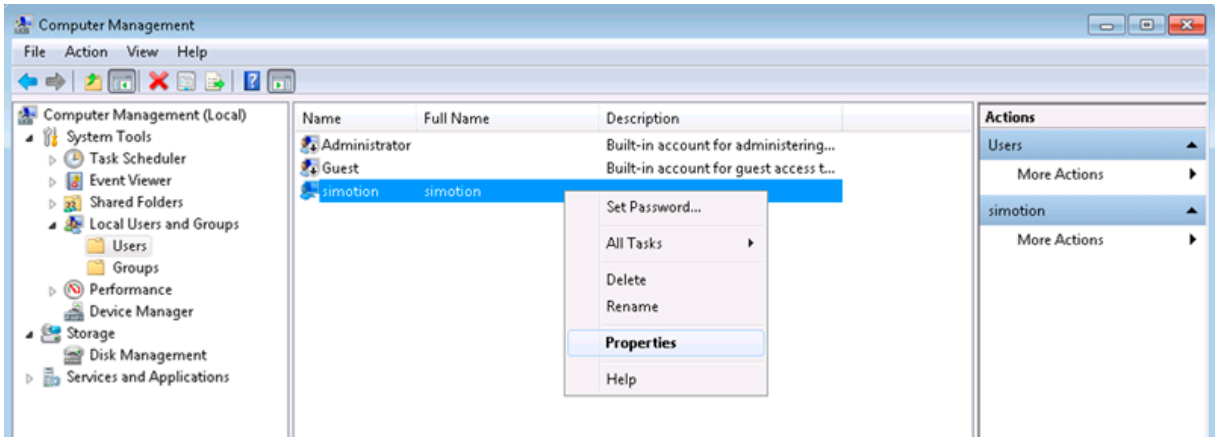

Figure 2-10 Computer Management - Users

3. With the selection of **Users> simotion**, you can display the properties via **Properties**.

4. Deactivate the **User cannot change password** checkbox in the **simotion Properties** dialog box.

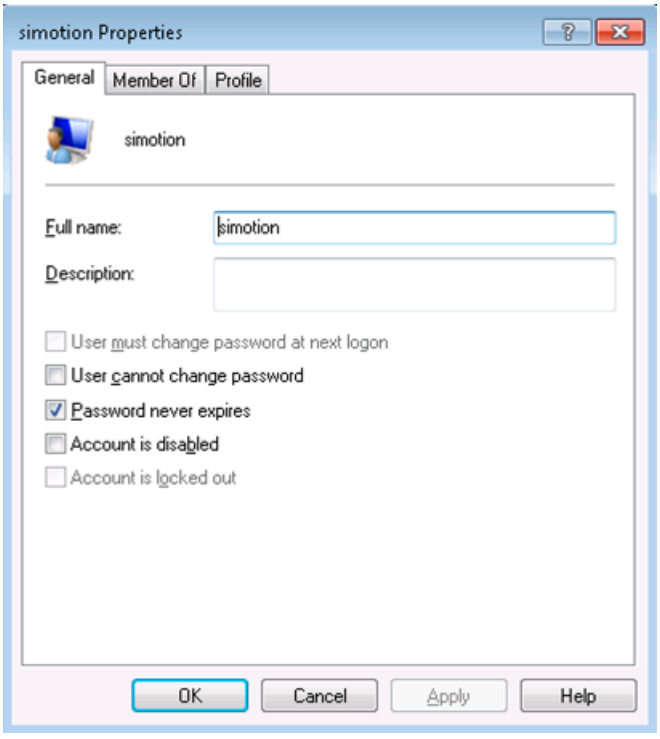

Figure 2-11 simotion Properties - General dialog box

5. Confirm with **OK.**

Changing the password for AutoLogin

To change the password for the AutoLogin, proceed as follows:

1. Open the search via **Windows-Start** and enter: **netplwiz**

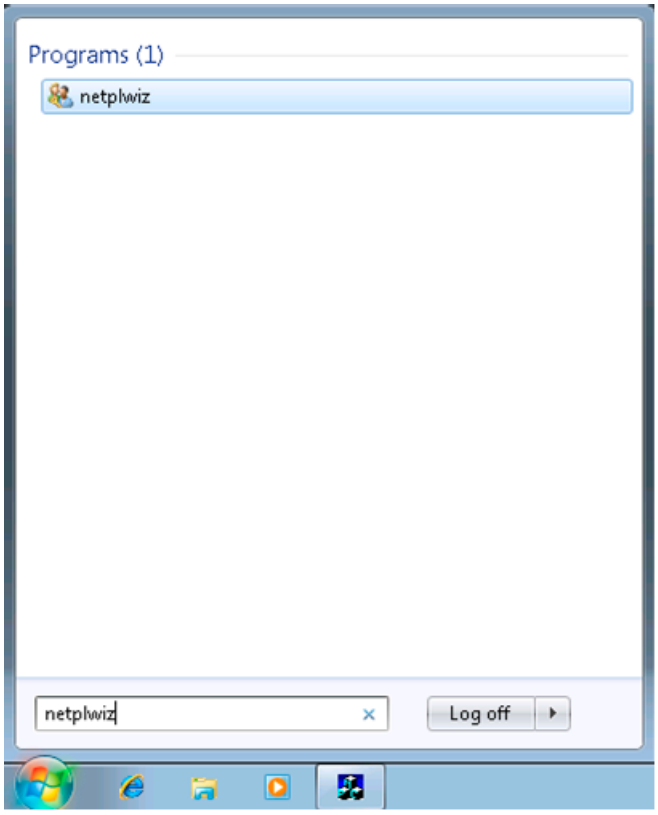

Figure 2-12 Programs netplwiz

2. The following **User Accounts** dialog box opens.

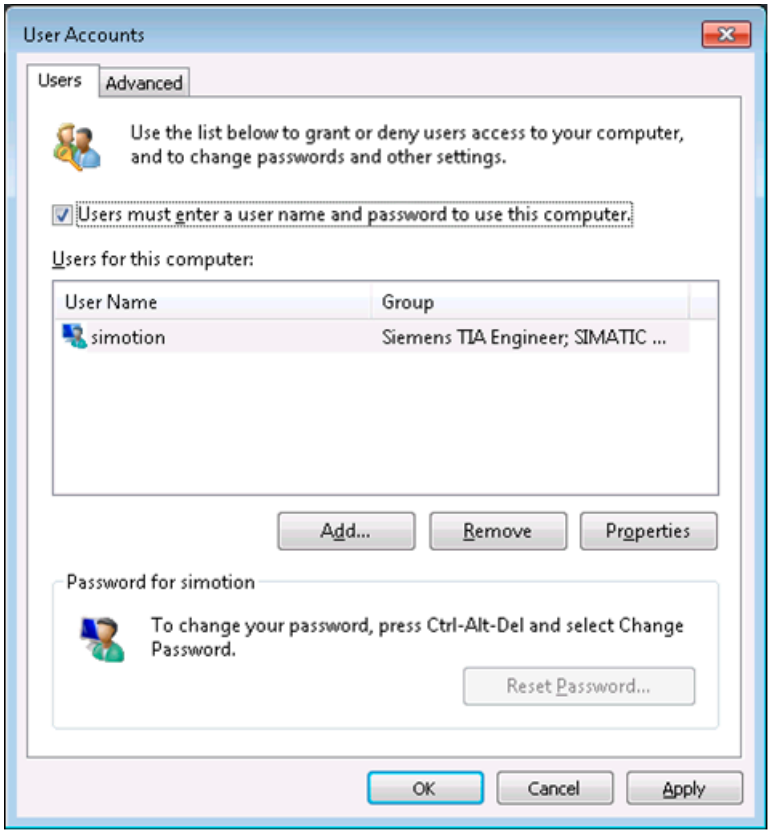

Figure 2-13 User Accounts

3. In the **Users** tab, activate the **Users must enter a user name and password to use this computer** checkbox.
   The **Apply** button is now active. Deactivate the checkbox and accept the changes now with the **OK** or **Apply** button.
   This is necessary so that the **Automatically Log On** dialog box is subsequently displayed.

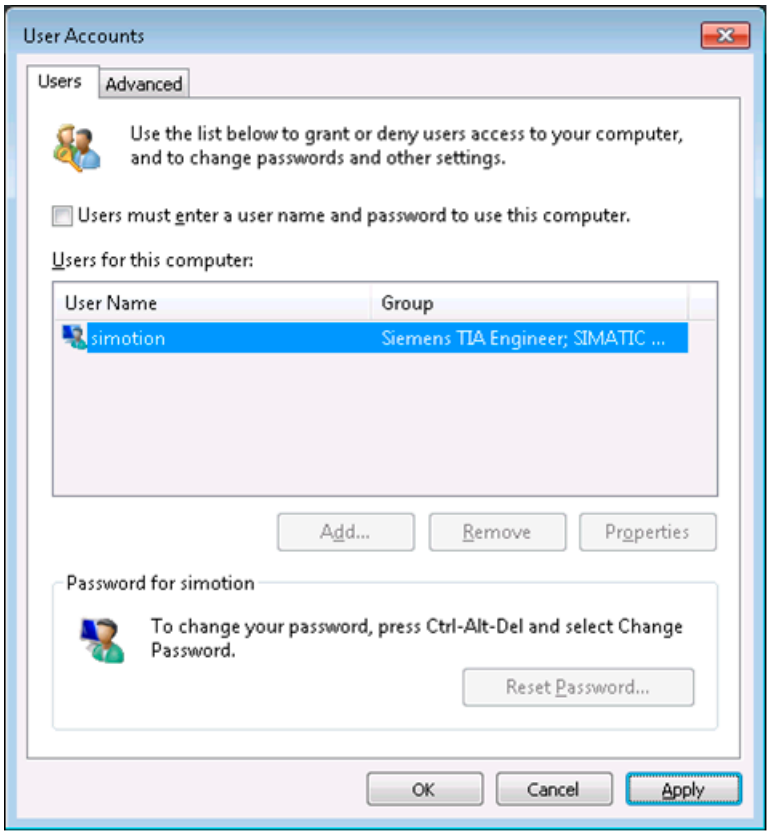

Figure 2-14 User accounts

4. Enter your changed Windows user password in the **Automatically Log On** dialog box and confirm it by entering it a second time.

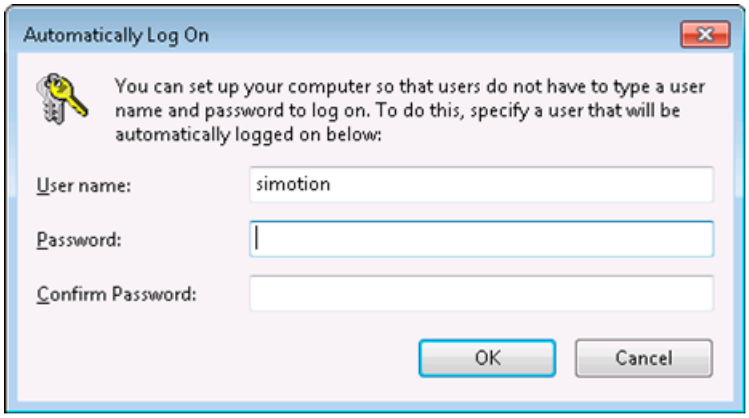

Figure 2-15 Automatically Log On dialog box

5. Confirm the password with **OK**.

2.4.4 Deactivating the remote desktop connection

Deactivating the remote desktop connection

If you do not use the headless mode and do not require a remote desktop connection, we recommend that you explicitly disable the remote desktop connection.

NOTICE
Deactivating the remote desktop connection To ensure that the remote desktop connection is not used, it must be explicitly deactivated.

Procedure for deactivating the remote desktop connection

1. Using the Control Panel, select **System** > **Remote settings**.

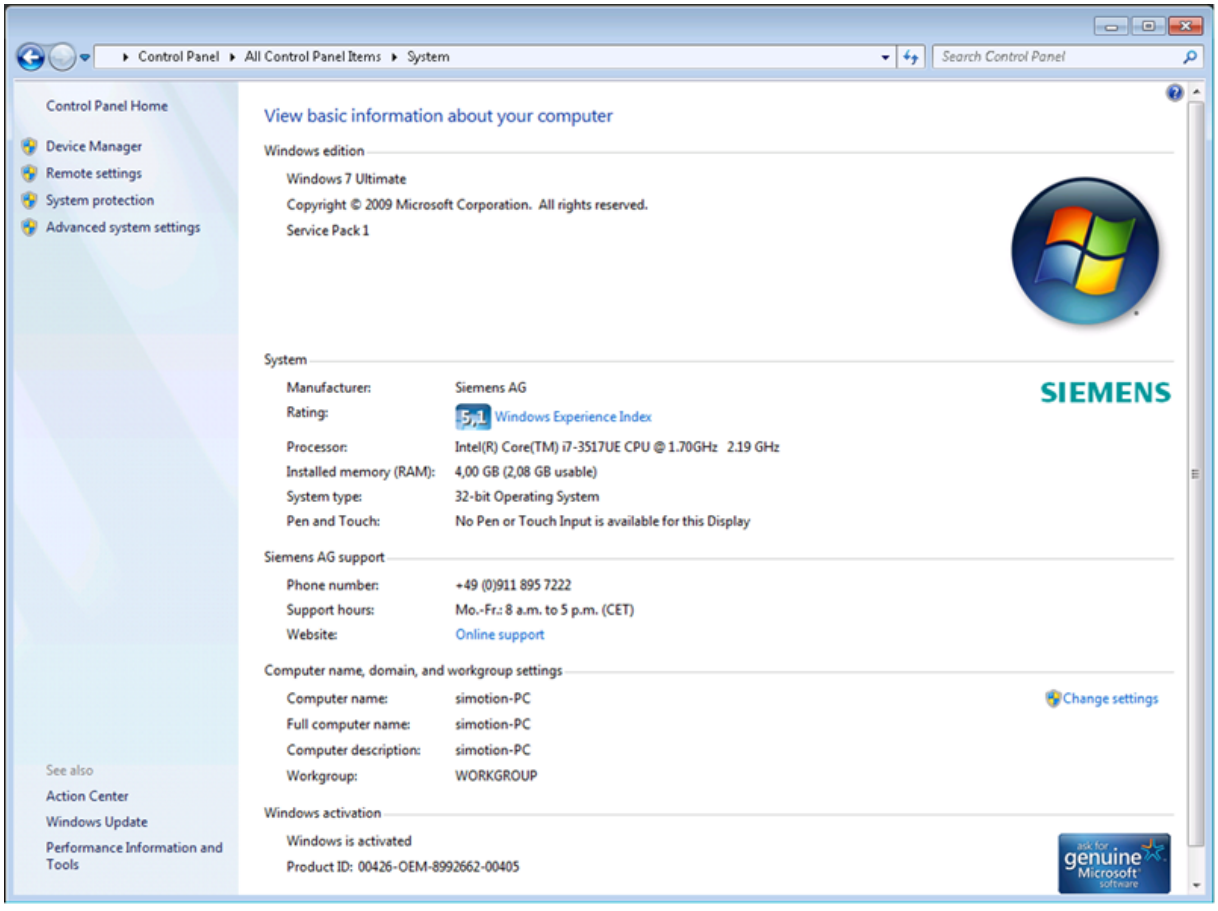

Figure 2-16 Remote settings

2. Select the **Remote** tab in the **System Properties** dialog box.

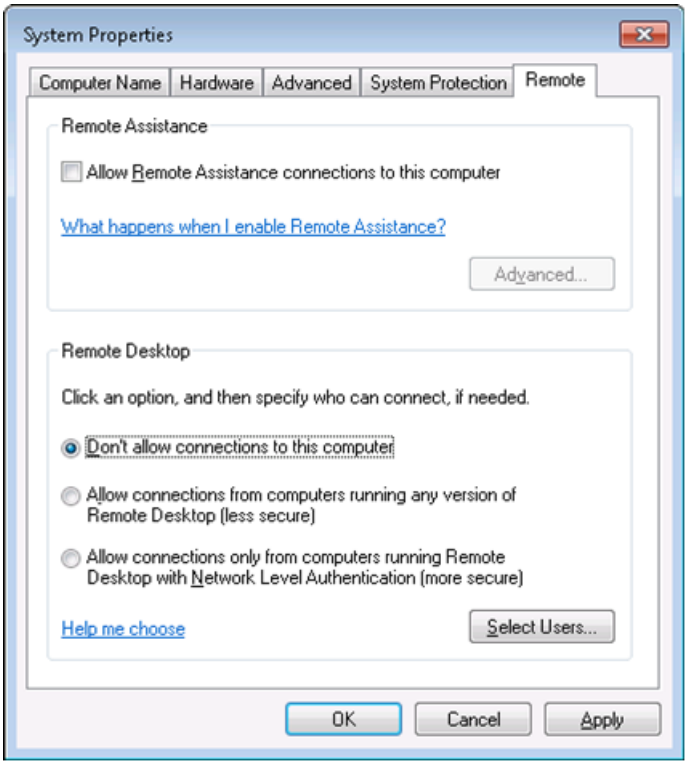

Figure 2-17 System Properties dialog box

3. Select the **Don't allow connections to this computer** option at **Remote Desktop**.
4. Confirm with **OK**.

Any remote desktop access is deactivated with this operation.

Description 3

3.1 System overview

Overview

SIMOTION P is a PC-based, open Motion Control System from SIMOTION.
Control, motion control, and HMI functions are executed together with standard PC applications on the SIMOTION P hardware platform. SIMOTION P combines the compatibility of the Windows operating system with real-time capability of SIMOTION P Runtime.

The fully independent SIMOTION P Runtime runs in parallel to Windows on SIMOTION P. This real-time expansion makes it possible to implement demanding motion control applications with high performance requirements on platforms of the SIMOTION P range. The hardware consists of a computing unit with innovative Intel technology, which is ready for operation at the time of delivery.

The drives and I/O devices are connected either via PROFINET onboard or IsoPROFIBUS board (optional).

The SIMATIC Flat Panel IFP1500, IFP1900 and IFP2200 can be used for the operation of the SIMOTION P320-4 hardware platform in a distributed configuration.

SIMOTION P320-4 versions

The SIMOTION P320-4 can control various I/O systems and HMI components via PROFINET onboard or the optional IsoPROFIBUS board.
If required, a USB DVD drive can be connected, for example.

The following versions of the SIMOTION P320-4 are available:

- SIMOTION P320-4 E
  with the Windows Embedded Standard 7 32-bit operating system and real-time expansion for SIMOTION.
- SIMOTION P320-4 S
  with the Windows 7 Ultimate 32-bit operating system and real-time expansion for SIMOTION.

Application

The SIMOTION P320-4 applications are directed at machines that require a high level of integration of PLC, motion control and technology functions on account of the increasing use of servo drives:

- Packaging machines
- Plastic and rubber processing machines
- Presses, wire-drawing machines
- Textile machines

- Printing machines
- Machines for processing wood, glass, ceramics, and stone
- Production lines in the renewable energy sector, e.g. solar technology, wind power installations

3.2 SIMOTION P320-4 product description

3.2.1 SIMOTION P320-4 overview

The SIMOTION P320-4 provides high-level industrial performance. It features:

- Compact design
- Maintenance-free operation
- High degree of ruggedness
- Long-term availability

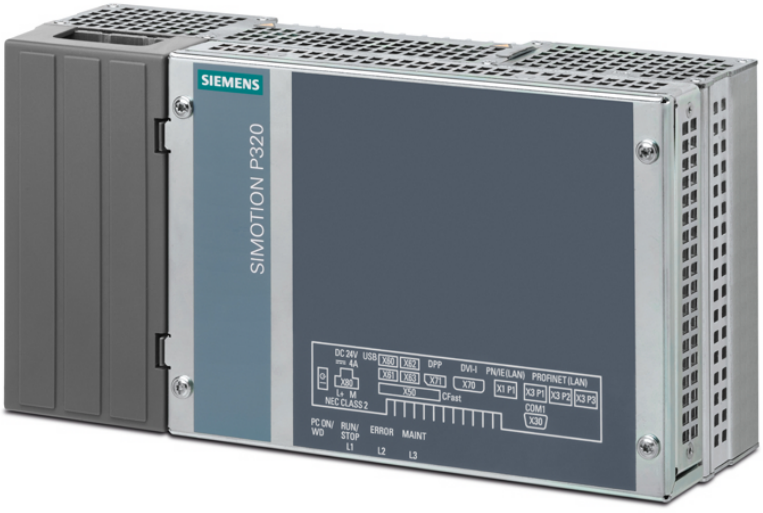

Figure 3-1 SIMOTION P320-4 view

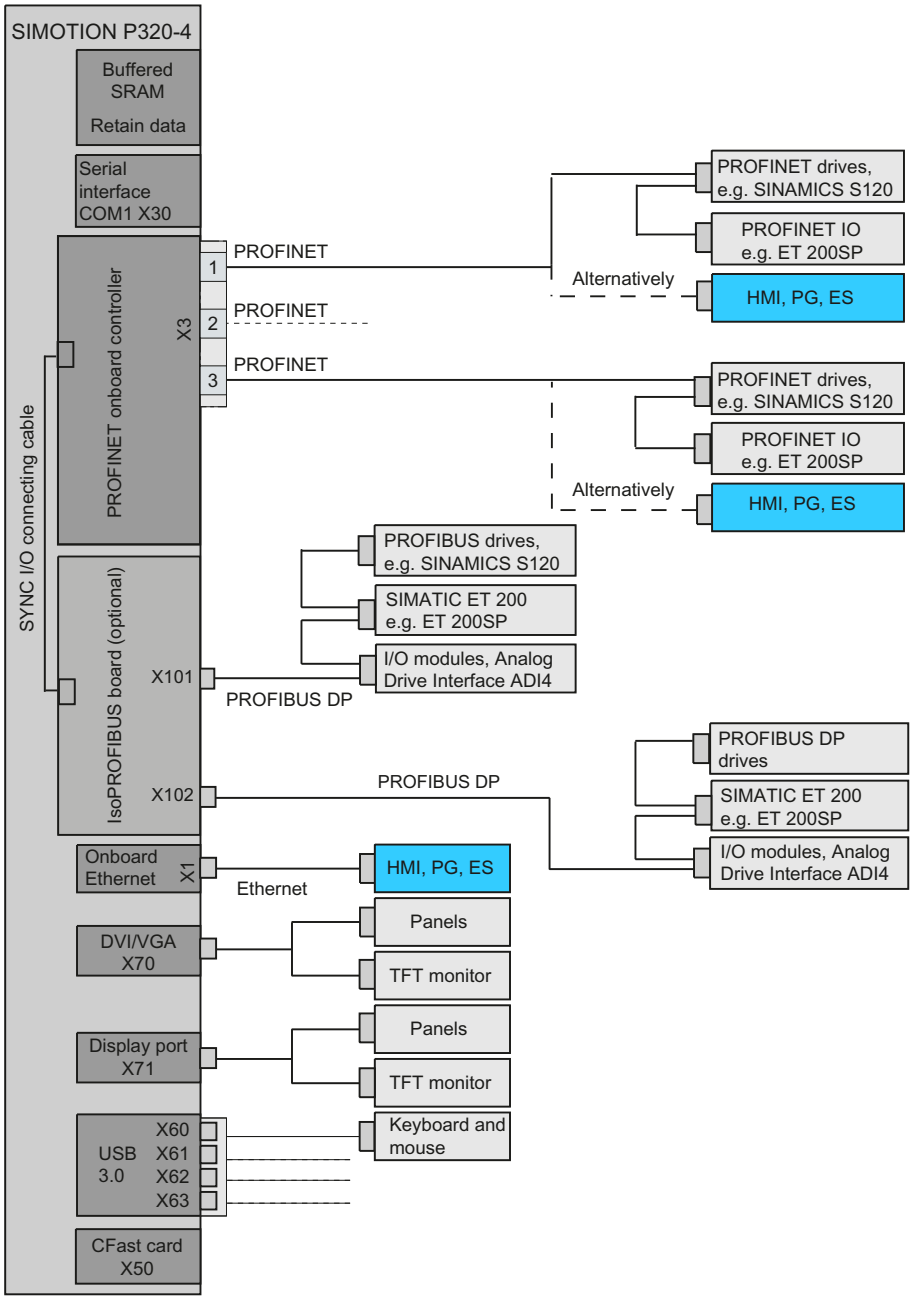
Figure 3-2 SIMOTION P320-4 (open perspective) with plugged-in optional IsoPROFIBUS board

3.2.2 Features



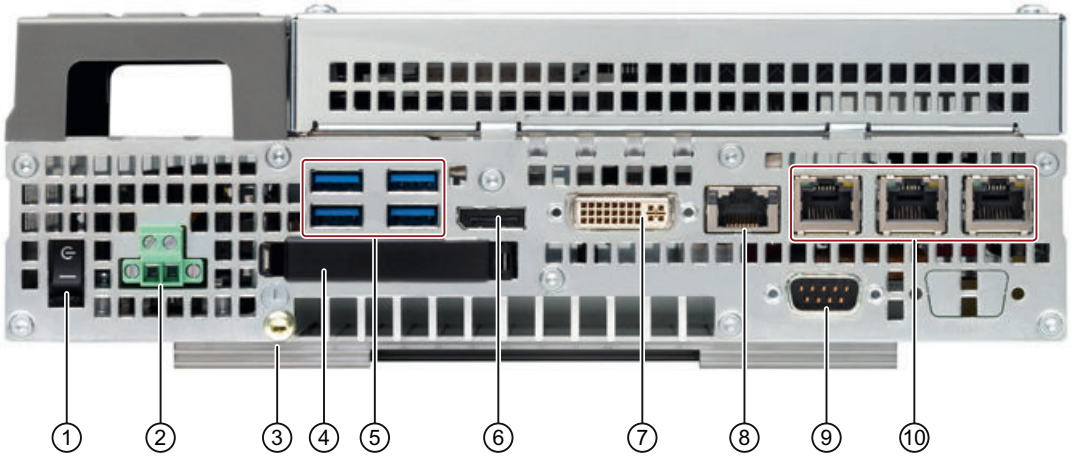
Basic data	
Installation	• Standard rail mounting • Vertical mounting
Processor	
P320-4 E **P320-4 S**	Intel Core i3-3217UE, 2 x 1.6 GHz, 3 MB cache Intel Core i7-3517UE, 2 x 1.7 GHz, 4 MB cache
Main memory	4 GB DDR3 RAM
Optional IsoPROFIBUS board (PROFIBUS DP)	2 x SUB-D socket with configurable baud rates (9.6 Kbit/s - 12 Mbps)
Graphics	• Integrated Intel HD2000 or HD4000 • DVI resolution of 640 × 480 pixels up to 1920 × 1200 pixels • Display port resolution max. 1920 × 1200 pixels • Graphics memory is occupied in the main memory (dynamic UMA)
Power supply	24 VDC (-20%/+20%) max. 4 A
Operating conditions	Operation without fan
Drives and storage media	
CFast card or SSD (Solid State Disk)	Depending on the hardware version of the SIMOTION P320-4

Basic data	
P320-4 E	**2 x CFast card** Internal interface: CFast External interface: CFast
P320-4 S	**SSD (Solid State Disk)** Internal interface: SSD **CFast card** External interface: CFast
USB stick	External, can be connected via USB interface
Interfaces	
Serial	COM (RS 232)
Graphics	DVI-I: Suitable for use as DVI or VGA DPP++: Display port, DVI via DPP-to-DVI adapter
USB	4 × USB 3.0, simultaneous operation of high current, backward compatible with USB 2.0/1.1
Ethernet	1 × RJ45 (10/100/1000 Mbps)
PROFINET I/O	3 × RJ45 (100 Mbps)
Keyboard, mouse	Can be connected via USB interface

Software	
Operating systems	
P320-4 E	Windows Embedded Standard 7 32-bit
P320-4 S	Windows 7 Ultimate 32-bit

3.2.3 SIMOTION P320-4 (hardware) structure

The following figure shows the integration of the SIMOTION P320-4 with integrated PROFINET onboard and optional IsoPROFIBUS board in a target system.



HMI Human Machine Interface
PG Programming device
ES Engineering system

Figure 3-3 SIMOTION P320-4 system overview

3.2.4 Interfaces and operating elements

SIMOTION P320-4

①	On/off switch	Position **OFF** is the delivery state. The on/off switch does not isolate the device from the power supply.
②	24 V DC	Power supply connection
③	Protective conductor	Protective conductor terminal
④	Memory card slot	Cover for the CFast card
⑤	4 × USB 3.0	USB 3.0 high current, backward compatible with USB 2.0/1.1
⑥	Display port	Display port connection for digital monitor
⑦	DVI-I	DVI connector for CRT or LCD monitor with DVI interface
⑧	Ethernet	RJ45 Ethernet connection for 10/100/1000 Mbps
⑨	COM1	Serial interface
⑩	3 × PROFINET	PROFINET ports with three RJ45 sockets

3.2.5 SIMOTION P Runtime (software) structure

SIMOTION P Runtime contains the SIMOTION P Kernel which performs the motion control and interface control.

A SIMOTION project is planned, configured, assigned parameters, commissioned and programmed via the SIMOTION SCOUT engineering system (ES).

The user data can be stored on the data media of the SIMOTION P320-4 .

Siemens WinCC flexible software can be used to visualize operational sequences or to operate the machine. Third-party systems can be linked via the OPC interface.

SIMOTION P Runtime

With the SIMOTION P320-4, the PLC and motion control functionality (starting from position controller upwards) is located centrally in a strictly deterministic task outside the Windows operating system.

Its main field of application is centralized motion control and control tasks requiring close coordination between multiple axes and/or input/output modules.

Functionality ranges from simple positioning to high-performance synchronous operation.

SIMOTION SCOUT

The SIMOTION SCOUT engineering system can be installed on the SIMOTION P320-4 S or connected via the interfaces integrated in SIMOTION P320-4 .

SIMOTION SCOUT TIA

As of version V4.5, the SIMOTION SCOUT TIA engineering system no longer supports the Windows 7 32-bit operating system and therefore cannot be installed.

HMI software

HMI/Runtime software can be operated on the same PC, e.g. the Siemens WinCC flexible software. Other software packages can be linked by means of the OPC interface.

The **HMI software** is used as the general term in the following.

Internal communication

A locally installed HMI can use the local communication to access the following:

- Variables in SIMOTION RT
- Drives on PROFINET IO or PROFIBUS DP
- Other SIMOTION devices on PROFINET IO or PROFIBUS DP

Scope of delivery

The system software supplied with the SIMOTION P320-4 is either already installed on the SIMOTION P320-4 storage medium or is ready to be installed:

- SIMOTION P Kernel
- SIMOTION IT
- SIMOTION IT VM Virtuell Machine (subject to license)

3.2.6 Components

The most important components of the SIMOTION P320-4 and their functions are listed below.

Distributed I/O systems (PROFINET)

Table 3-1 Components for distributed I/O

Component	Function
SIMATIC ET 200M	Modular I/O system for cabinet installation and high channel densities.
SIMATIC ET 200S	Finely modular I/O system for cabinet installation including motor starters, safety technology, and individual grouping of the load groups.
SIMATIC ET 200SP	Finely scalable I/O system for cabinet installation; SIMATIC ET 200SP features a single-cable and multi-cable connection with push-in terminals, compact dimensions, high performance, and low part variety.
SIMATIC ET 200MP	Modular I/O system for cabinet installation and high channel densities in the SIMATIC S7-1500 packaging system. SIMATIC ET 200MP permits the shortest bus cycle times and fastest response time even with large volumes of data.
SIMATIC ET 200eco	I/O system with IP67 degree of protection for machine-related, cabinet-free applications, featuring a flexible and fast connection system in ECOFAST or M12.
SIMATIC ET 200pro	Modular I/O system with IP65/67 degree of protection for machine-related, cabinet-free applications, including motor starters.

Note

Note that not all modules of the above-mentioned I/Os or I/O systems have been released for SIMOTION.

There may also be system-dependent functional differences with regard to the use on SIMOTION and on SIMATIC.
For example, special process-control functions (e.g. HART modules, etc.) are not supported by SIMOTION for the ET 200M distributed I/O system.

For a detailed and routinely updated list of I/O modules enabled with SIMOTION as well as application information, visit us online at:

SIEMENS Industry Online Support - Product support - Supplementary system components (https://support.industry.siemens.com/cs/de/en/view/11886029)

Further modules are integrated via the GSD file of the device's manufacturer.

Note

Note that in individual cases, additional supplementary conditions must be fulfilled.

Drive systems (via PROFINET IO)

Table 3-2 List of typically connected drive systems

Component	Function
SINAMICS S120	Servo drives, innovative single-axis and multi-axis solution

Optional components

Table 3-3 Optional components

Centralized I/O	Function
IsoPROFIBUS board	PROFIBUS connection
UPS	Uninterruptible Power Supply The drivers for the UPS are not pre-installed on the PC. Install the current drivers that are supplied with the UPS.

Note

An IsoPROFIBUS board may be inserted in addition to the PROFINET onboard.

3.3 HMI and SIMOTION SCOUT

3.3.1 HMI and SIMOTION SCOUT Overview

The operational sequences on the SIMOTION P320-4 are either monitored via the HMI system (Human Machine Interface) or the SIMOTION SCOUT engineering system.

The HMI or ES software can be connected using the following versions:

- Local (Page 61)
- via PROFINET (Page 74)
- via Ethernet (Page 75)
- via IsoPROFIBUS (optional) (Page 76)

Local communication of the HMI/ES

If HMI or ES is installed locally on the SIMOTION P320-4, **PC internal** can establish a connection to the local **SIMOTION P Runtime** . Only a local connection is permitted.

See section Local HMI or ES on SIMOTION P320-4 (Page 61)

Communication of the HMI / ES via PROFINET / Ethernet / PROFIBUS

By using one of these communication versions, you can control and monitor several SIMOTION devices.

3.3.2 Local HMI or ES on SIMOTION P320-4

The model described below is used for the communication of the SIMOTION P320-4 with a local HMI or ES. The SIMOTION SCOUT engineering system or the HMI system can be installed directly on the **SIMOTION P320-4 S**.

For this model, you must set the communication (access point) to **TCP/IP** .

The SIMOTION P320-4 is already configured for this communication version at the time of delivery.

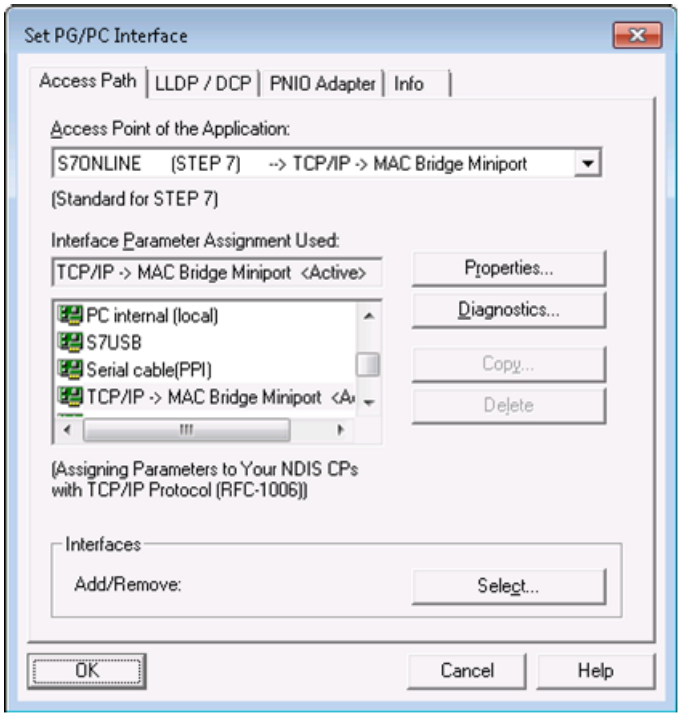


Figure 3-4 Set PG/PC Interface - TCP/IP -> MAC Bridge Miniport dialog box

Note

Local communication via Ethernet (TCP/IP)

For the communication via Ethernet (TCP/IP) to function locally, a link must be available to the Ethernet interface or a LAN cable must be connected **or** the MAC bridge set up.

Note

Setting up the MAC bridge miniport

See also Section Setting up a network bridge - MAC bridge miniport (Page 63)

Note

Only HMI-Runtime can be installed on the **SIMOTION P320-4 E** version.

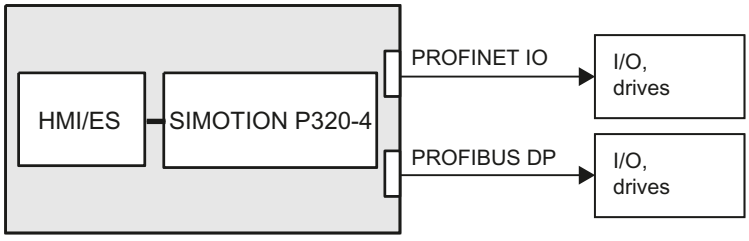

Figure 3-5 Model: Local HMI or ES

Alternatively to TCP/IP , SIMOTION SCOUT can also communicate locally via PC internal (local) .

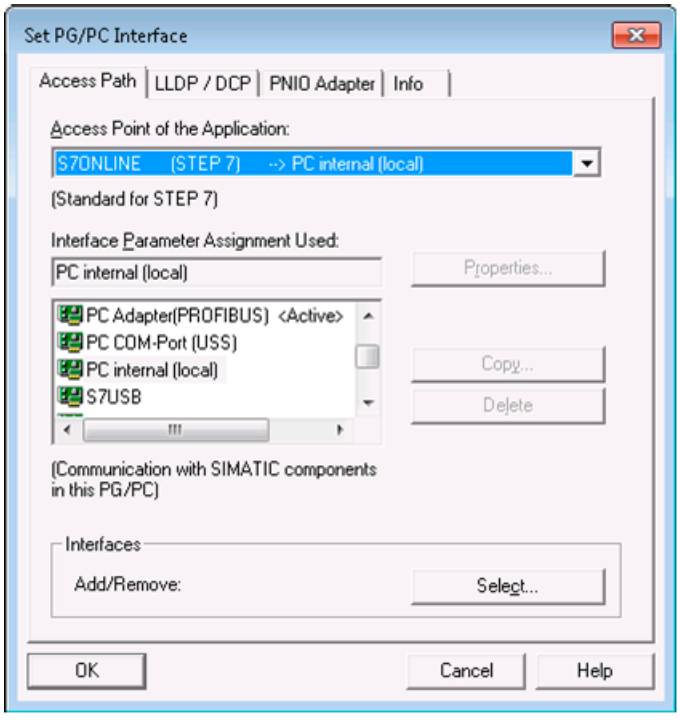

Figure 3-6 Set PG/PC Interface - PC internal (local) dialog box

3.3.2.1 Setting up a network bridge - MAC bridge miniport

Note

If you are working with SIMOTION P320-4 version V4.5, the Network Bridge is already preset.

The network bridge must be preset, configured via script and set up as described in the following. Note that the MAC address of the network bridge is different to the MAC address of the Ethernet adapter.

The following is a step-by-step description of how the network bridge **MAC Bridge Miniport** is set up.

Network connections initial situation

Open the **Network and Internet** via the Control Panel.

- Select **Control Panel > All Control Panel Items > Network and Sharing Center > Change adapter settings**.
- Open the **Network and Internet > Network Connections** dialog box.
  The network connections of your PC are shown here.

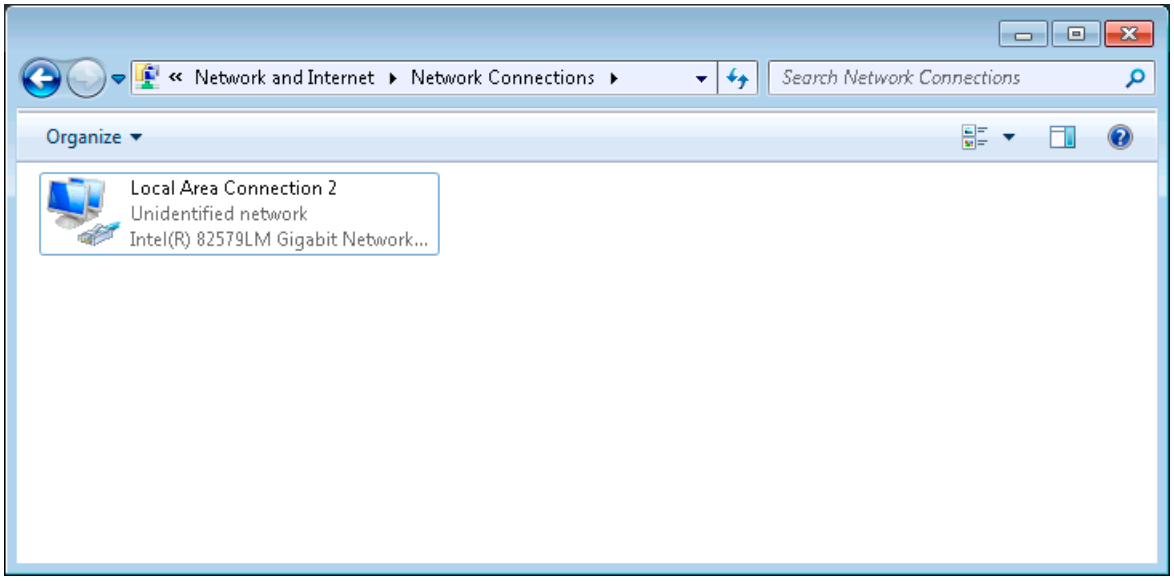

Figure 3-7 Initial situation - Network connections

Device Manager

Open the Device Manager via the Control Panel:

Control Panel > All Control Panel Items > System > Device Manager.

1. Select the **Network adapters** in the dialog box below the "SIMOTION PC".
   The available network connections are shown here.

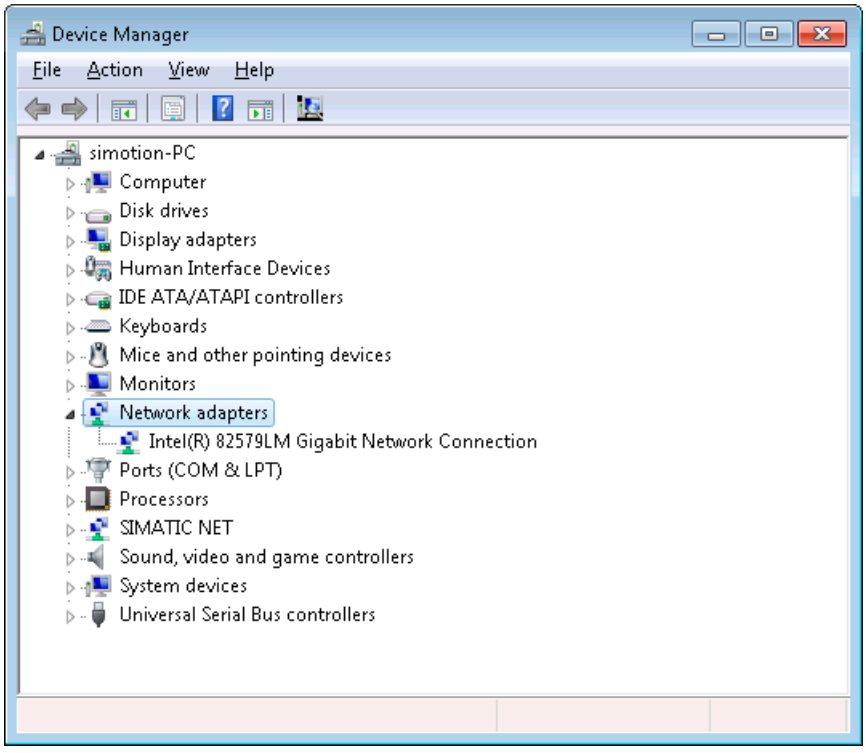

Figure 3-8 Opening the Device Manager

2. Install the **Microsoft Loopback Adapter** via the Device Manager.
3. To do this, select the menu **Action > Add legacy hardware**.
   The **Add Hardware Wizard** then opens.

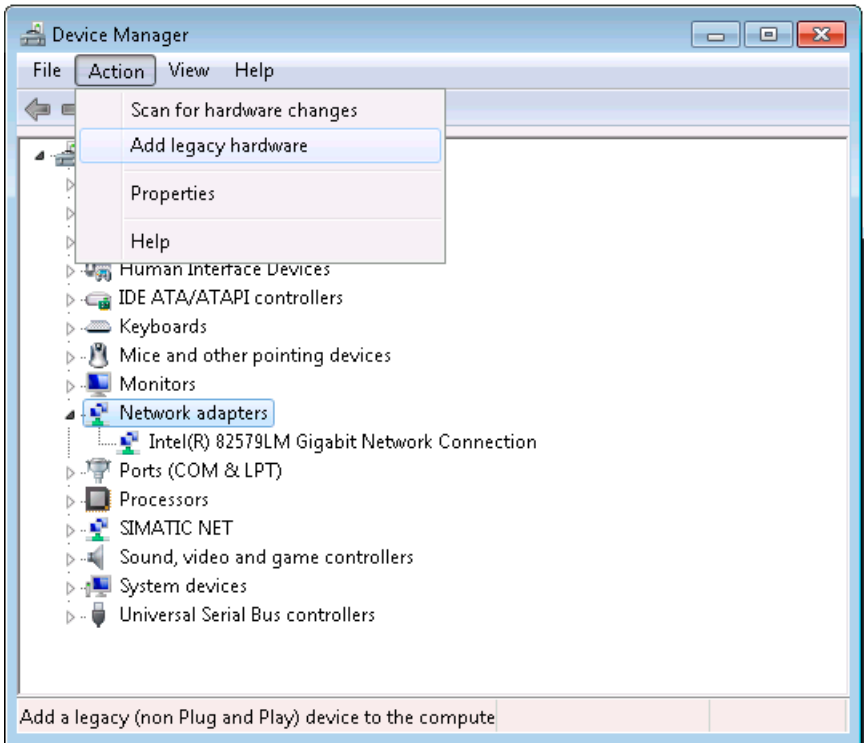

Figure 3-9 Device Manager - Action menu

Add Hardware Wizard

Use the **Add Hardware Wizard** to install the network bridge.

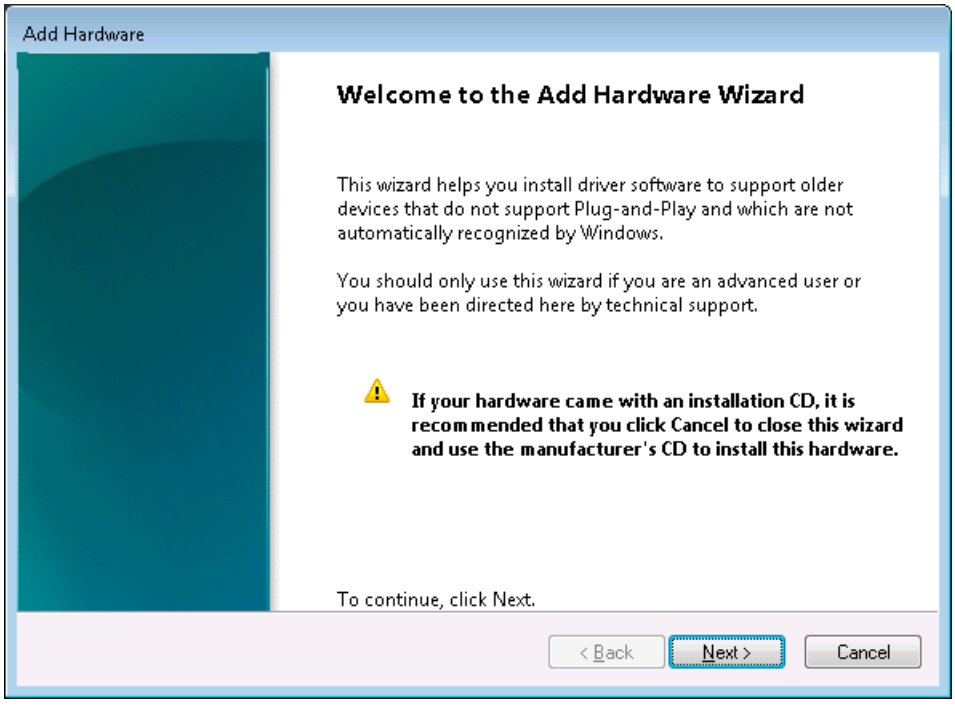

Figure 3-10 Add Hardware - Starting the wizard

1. Click **Next** to start the software wizard.
2. Select the option: **Install the hardware that I manually select from a list (Advanced)** and continue in the wizard with **Next**.

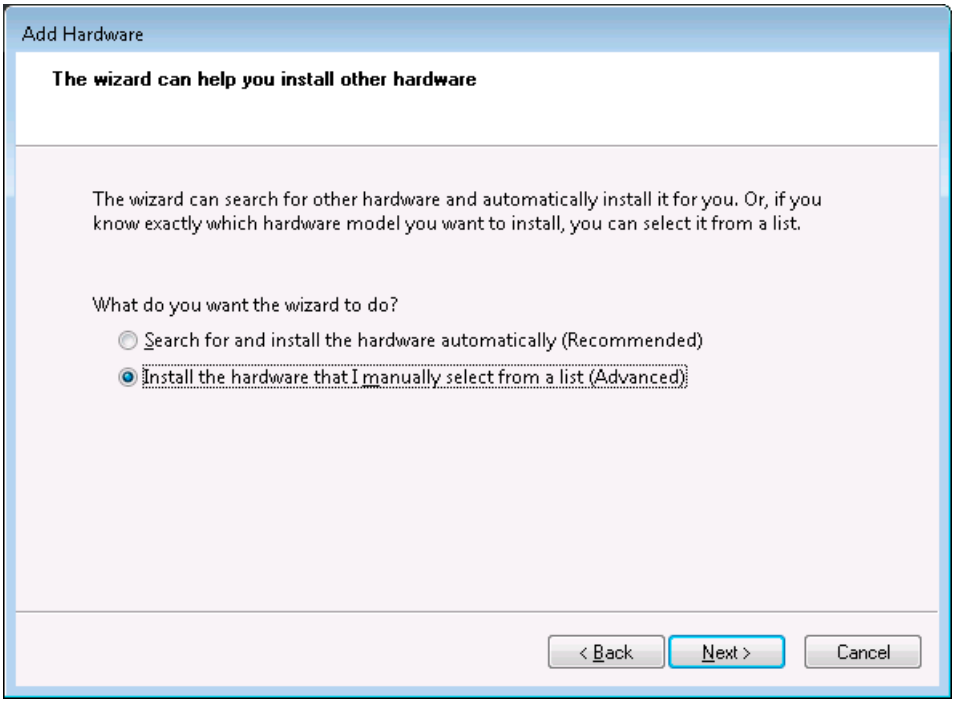

Figure 3-11 Add Hardware - Manual selection from a list

3. Select **Network adapters** in the dialog box now open and continue in the wizard with **Next**.

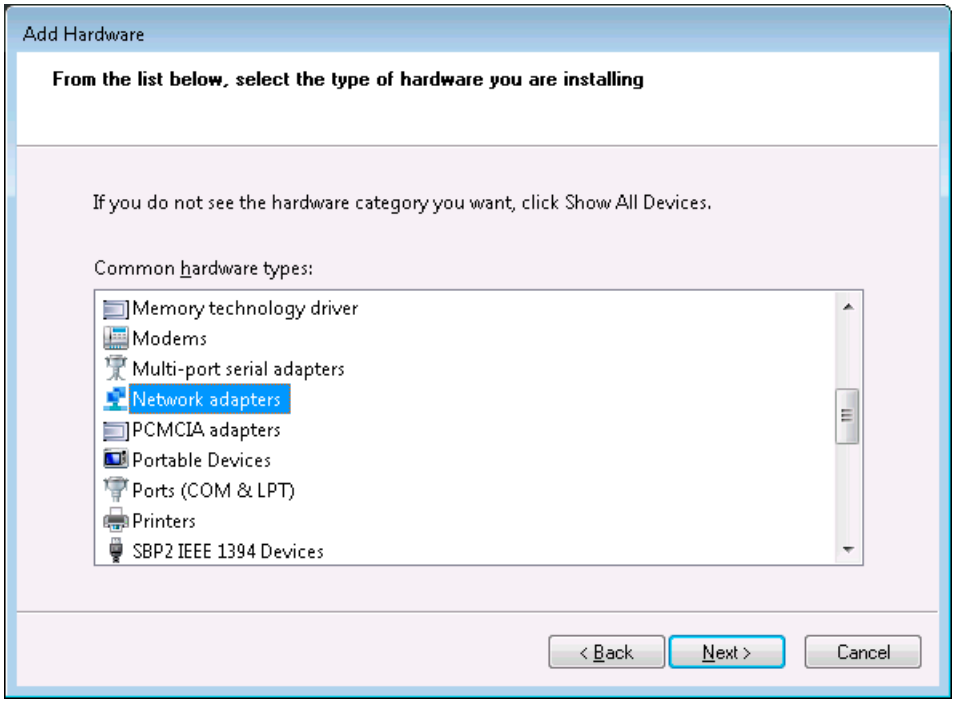

Figure 3-12 Select Add Hardware - Network adapters

4. In the following dialog box, select the **Microsoft Loopback Adapter**.
5. To do this, select Microsoft at **Manufacturer** and the Microsoft Loopback Adapter at **Network Adapter**.

6. Continue in the wizard with **Next**.

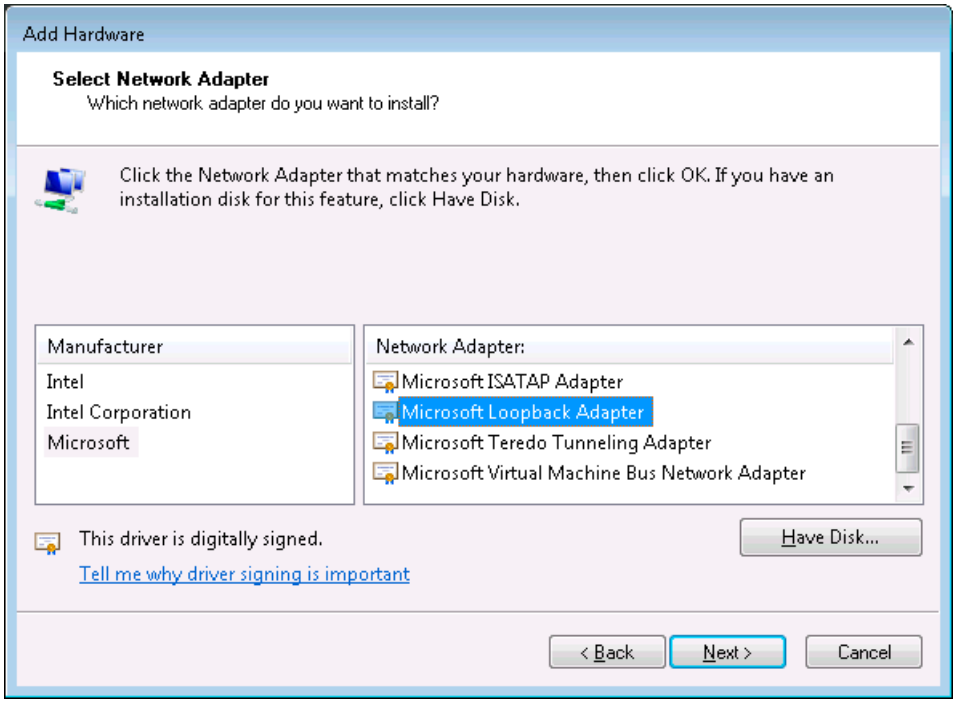

Figure 3-13 Add Hardware - Selecting the desired Network Adapter

7. The selected Network Adapter is shown in the following dialog box.
   Click **Next** to confirm and install.

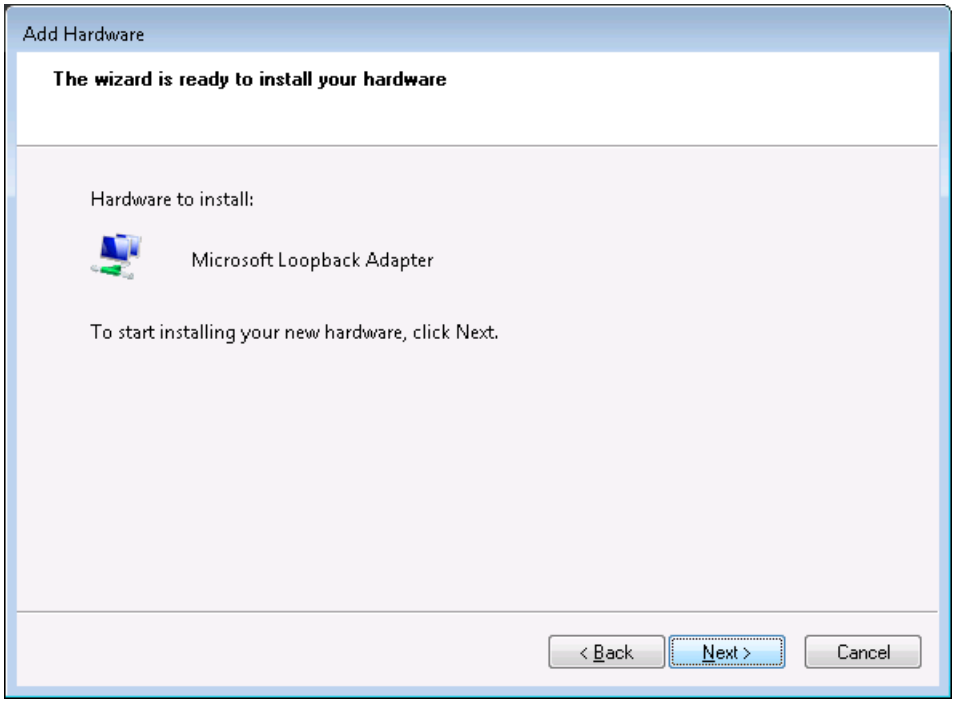

Figure 3-14 Add Hardware - Selected Network Adapter can be installed

8. After finishing the installation, the following dialog box is displayed.
   Exit the wizard with **Finish**.

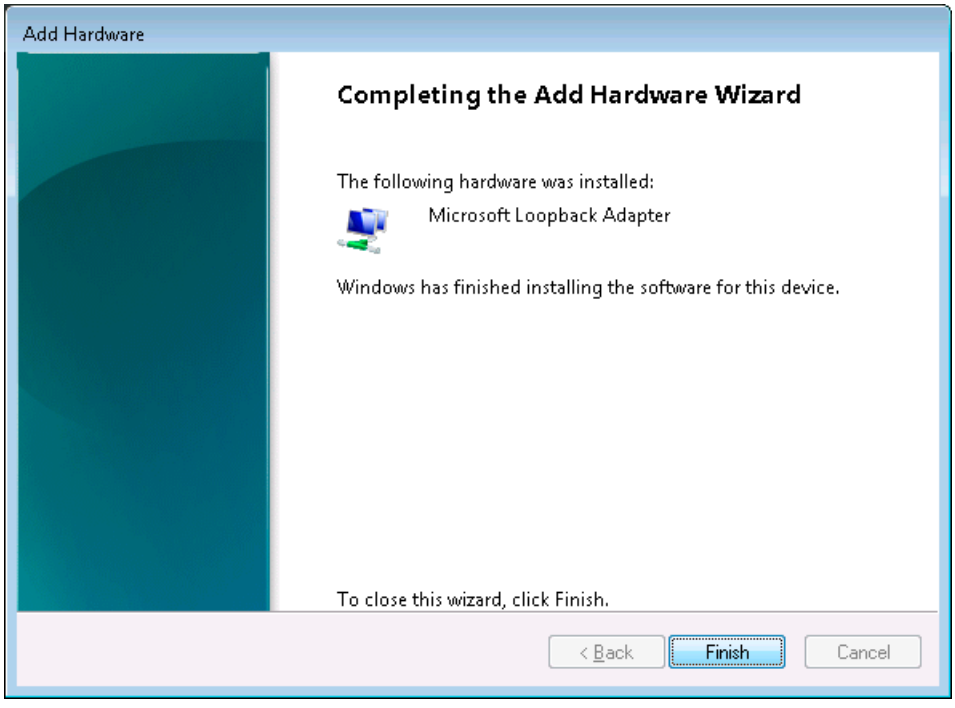

Figure 3-15 Add Hardware - Installation of the Microsoft Loopback Adapter is finished

Checking the installation of the network adapter

You can check the successful installation of the **Microsoft Loopback Adapters** in the

- Device Manager
- Internet connections

Device Manager

The Microsoft Loopback Adapter is displayed at **Network adapters** in the Device Manager.

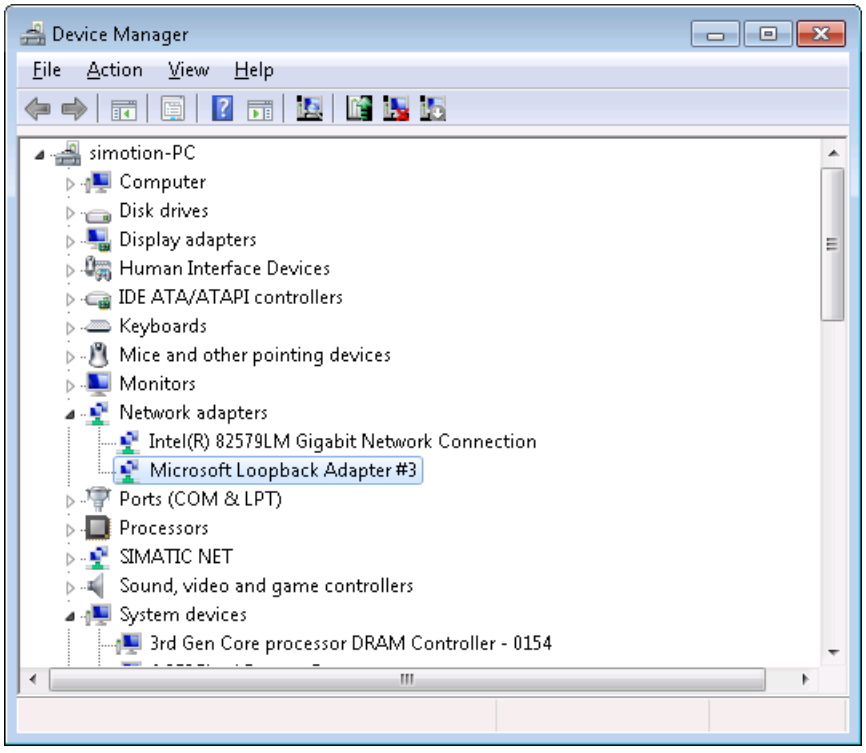

Figure 3-16 Device Manager - Microsoft loopback adapter

Network connections

The newly installed Microsoft Loopback Adapter is also displayed at **Network Connections**.

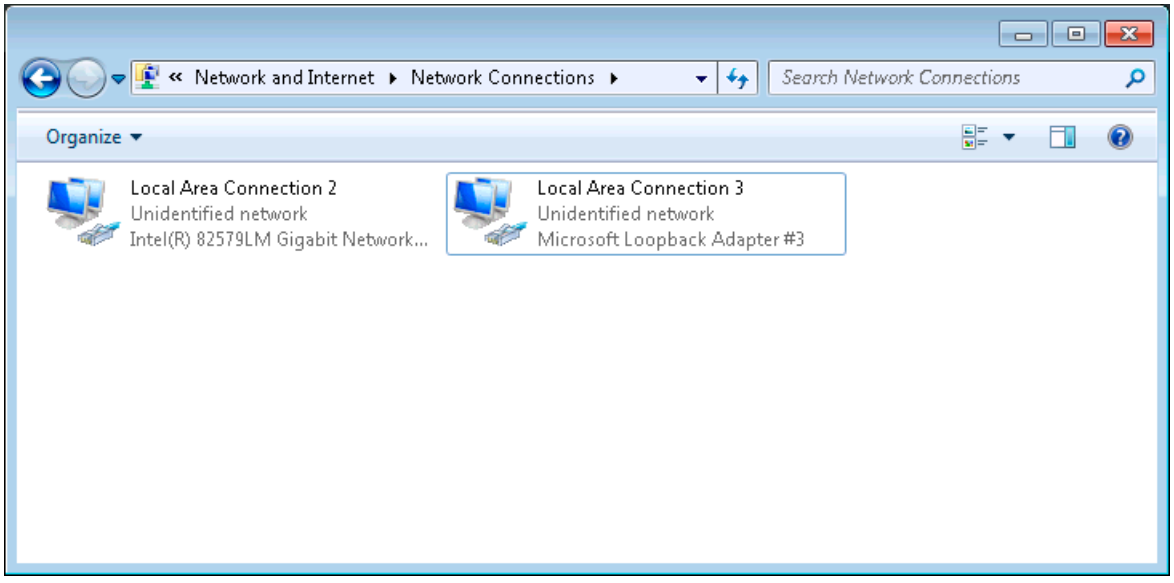

Figure 3-17 Network connections - Display of the newly installed Microsoft loopback adapter

Creating the network bridge

To activate the network bridge, proceed as follows:

1. Select both adapters at Network Connections
2. Select Bridge Connections via the context menu.

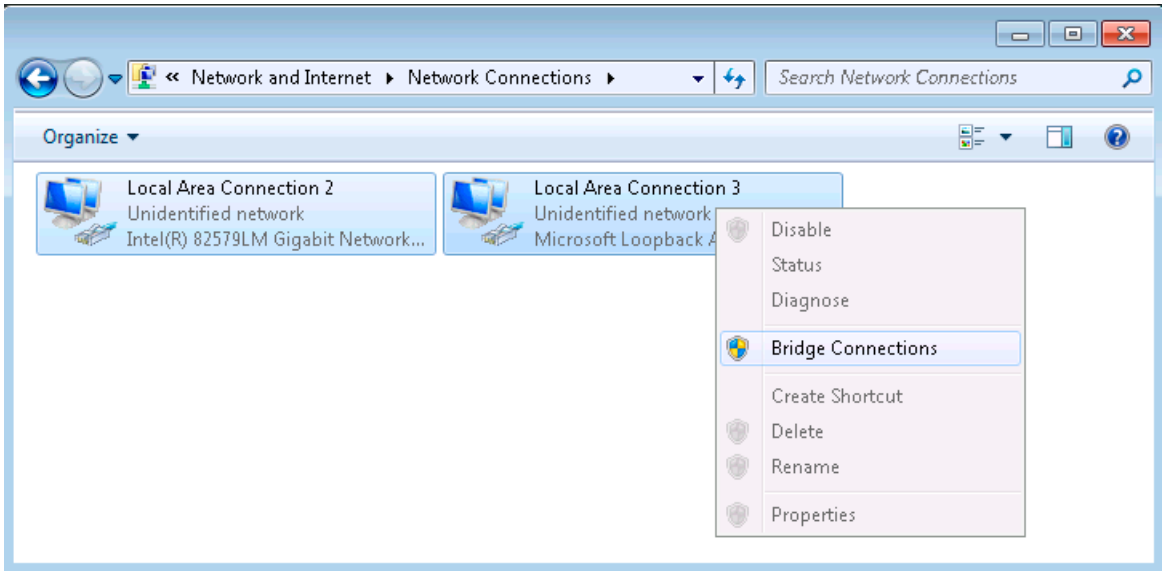

Figure 3-18 Network Connections - Setting the Bridge Connection

3. The Network Bridge MAC Bridge Miniport is displayed.

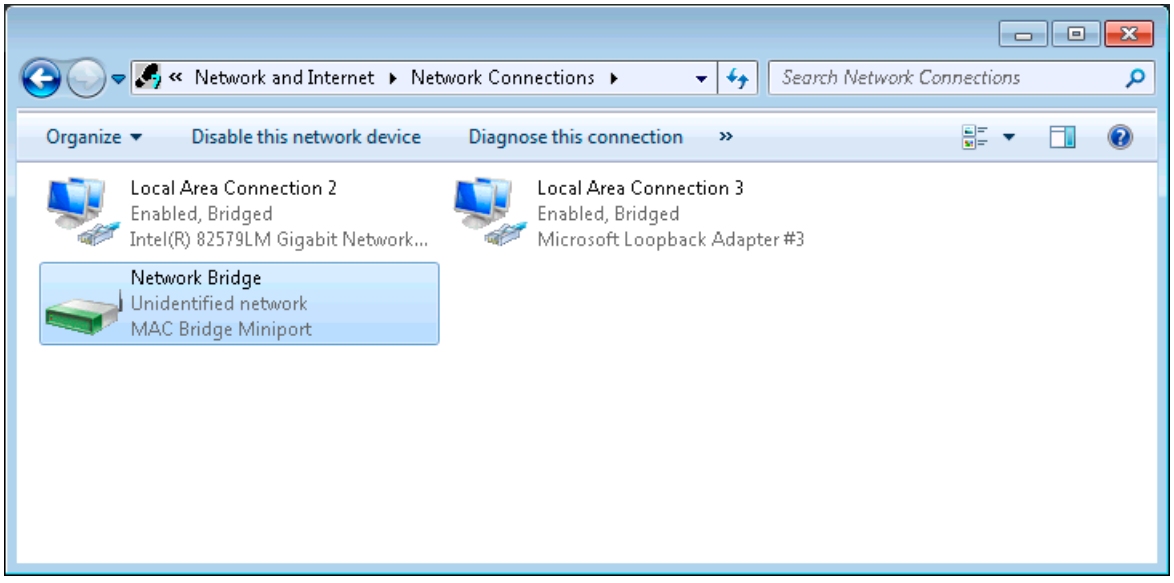

Figure 3-19 Network Connections - Display of the Network Bridge MAC Bridge Miniport

4. To initialize the network bridge, execute the **sp_bridge.cmd** Windows command script.
   The additional script can be found at C:\SiMotion\tools\sp_bridge.cmd
   After executing the batch file, the network bridge has been set up.

Setting "Set PG/PC interface"

Now open the PG/PC interface to complete the setting for the **Network Bridge** .

1. Open the **Set PG/PC Interface** dialog box via the **Control Panel** entry point.
2. Deactivate the **MAC Bridge Miniport DCP** checkbox in the **LLDP / DCP** tab.
   If you do not deactivate the MAC Bridge Miniport DCP, the SIMOTION P320-4 may not be found via Accessible nodes.

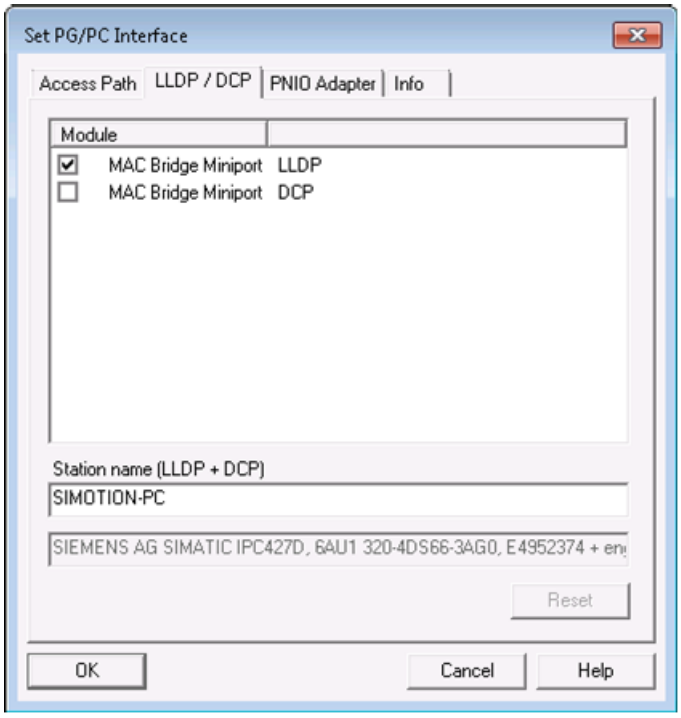

Figure 3-20 Set PG/PC interface

The settings for the network bridge have now been completed.

3.3.3 HMI or ES via PROFINET

Networking via PROFINET

PROFINET is the innovative and open Industrial Ethernet standard (EN 61158) for industrial automation. With PROFINET, devices can be linked up from the field level through to the management level.

With PROFINET, an external HMI or ES can also be integrated into the network and data can be exchanged directly with the SIMOTION P320-4 device.

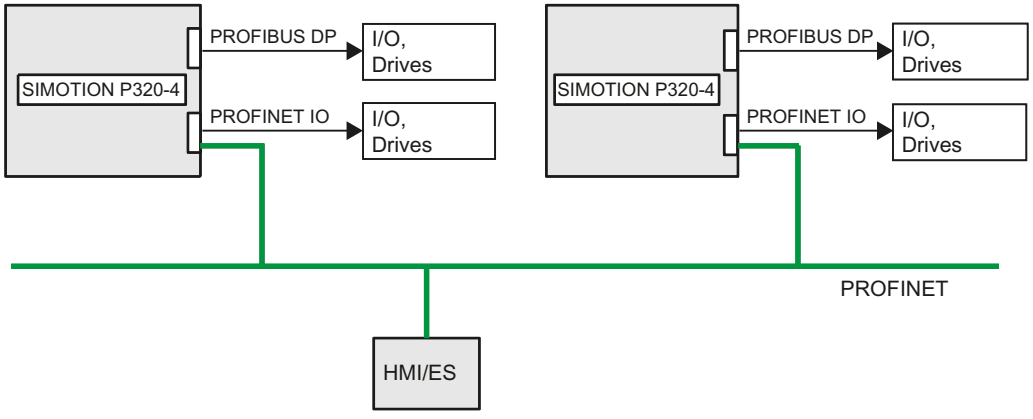

Figure 3-21 Model: Networking via PROFINET

References

You can find further information on the HMI in the documentation:

- SIMOTION Runtime Basic Functions, Section HMI (Human Machine Interface) coupling.
- SIMOTION SCOUT, Configuration Manual
- SIMOTION SCOUT TIA, Configuration Manual
- SIMOTION SCOUT TIA Device Proxy, Configuration Manual

3.3.4 HMI or ES via Ethernet

Networking via Ethernet

A complex interconnection with several HMIs or ESs is only possible using an Ethernet communication. This allows both an external HMI or ES to access several SIMOTION devices or one SIMOTION device to access another one, for example, to display the production data.

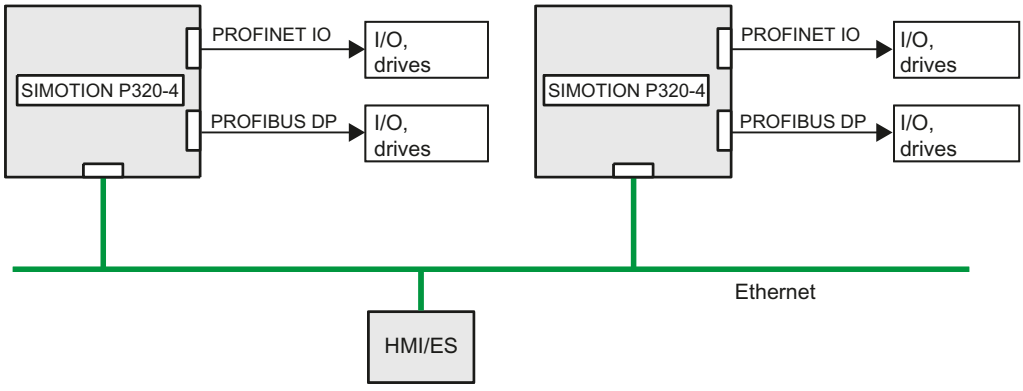

Figure 3-22 Model: Networking via Ethernet

The following services are possible on a SIMOTION device via Ethernet:

- HMI software
  WinCC flexible or the OPC server can use Ethernet to access one or more SIMOTION devices.
- SIMOTION SCOUT Engineering System
  SIMOTION SCOUT can also use Ethernet to access one or more SIMOTION devices.
- SIMOTION IT
  SIMOTION P320-4 offers communication with standard IT protocols (HTTP) over the integrated Ethernet interface.
  This makes it possible to access data or diagnostic information in the SIMOTION P320-4 from any location via intranet or the Internet.
- HTTP (browser, OPC XML)
  Setting in WebCFG.xml - default 80

- HTTPS (browser, OPC XML)
  Setting in WebCfg.xml - default 443
- FTP 21
- Telnet

References

You can find further information in the documentation for SIMOTION IT:

- SIMOTION IT Diagnostics and Configuration
- SIMOTION IT Programming and Web Services
- SIMOTION IT Virtual Machine and Servlets

3.3.5 HMI or ES via IsoPROFIBUS (optional)

Networking via PROFIBUS DP

If you connect a central HMI via PROFIBUS DP, the X101 and X102 interfaces of the IsoPROFIBUS board are available.

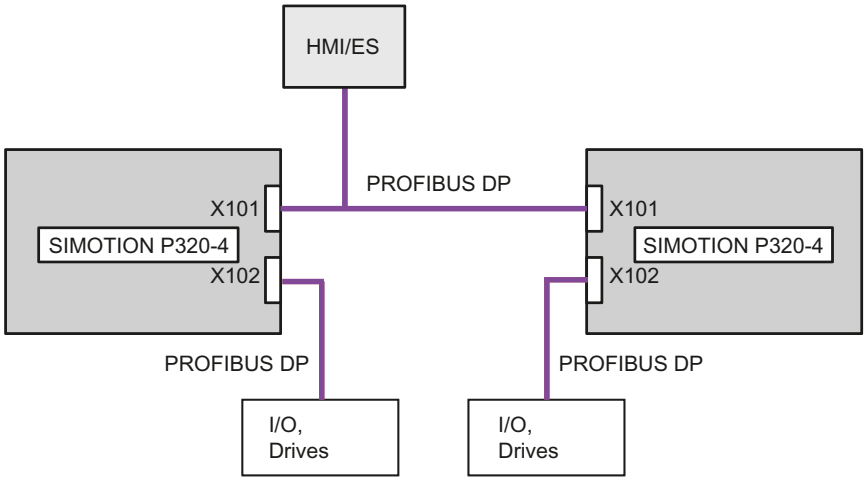

Figure 3-23 Model: Networking via PROFIBUS DP

References

You can find further information on the HMI in the documentation:

- SIMOTION Runtime Basic Functions, section HMI (Human Machine Interface) coupling.

Use planning

4

The use planning is described in the SIMOTION P320-4 E / P320-4 S manual.
There you receive the following information:

- Unpacking and checking the delivery
- Device identification data
- Information about the permitted mounting positions
- Environmental conditions
- Electromagnetic compatibility
  Link to further information about relevant standards for electromagnetic compatibility (EMC).

Mounting

5

5.1 Installation overview

The SIMOTION P320-4 is installed in a cabinet or in a controller housing.

Unlocking Windows

Note

Windows locked

Windows may be accidentally locked, e.g. through shortcut key Ctrl+L. If you do not know the password for the SIMOTION P320-4, please contact the Siemens Industry Online Support (https://support.industry.siemens.com/cs/ww/en/).

Operating mode

Two operating modes are available for the installation of a SIMOTION P320-4:

- SIMOTION P320-4 - Headless operation (Page 80)
- Distributed configuration of the SIMOTION P320-4 with a remote panel (Page 83)

5.2 Headless operation

5.2.1 SIMOTION P320-4 - Headless operation

The SIMOTION P320-4 is operated without a screen, e.g. SIMATIC panel, SIMOTION P320-4 is installed in a cabinet.

The maintenance and configuration is performed via a computer that accesses the SIMOTION P320-4 by means of remote desktop.

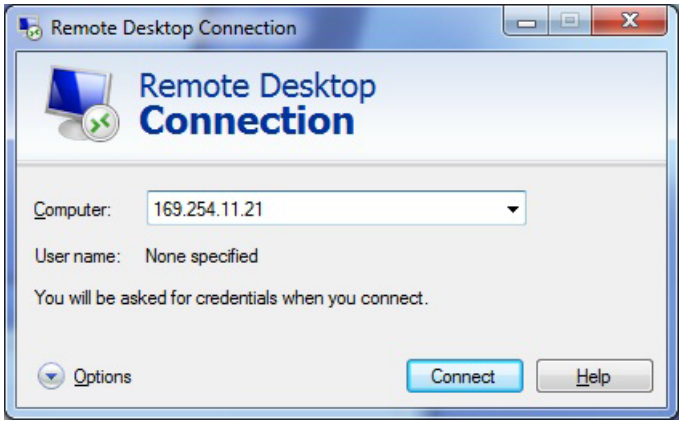

Figure 5-1 Headless to be accessed by means of remote desktop connection

Note

Headless operation or remote desktop connection

To log in via a remote desktop connection, you require a user name and a password.

If you do not have a password, please contact the hotline.

Siemens Industry Online Support (https://support.industry.siemens.com/cs/ww/en/)

5.2.2 Deactivating the remote desktop connection

Deactivating the remote desktop connection

If you do not use the headless mode and do not require a remote desktop connection, we recommend that you explicitly disable the remote desktop connection.

NOTICE
Deactivating the remote desktop connection
To ensure that the remote desktop connection is not used, it must be explicitly deactivated.

Procedure for deactivating the remote desktop connection

1. Using the Control Panel, select **System** > **Remote settings**.

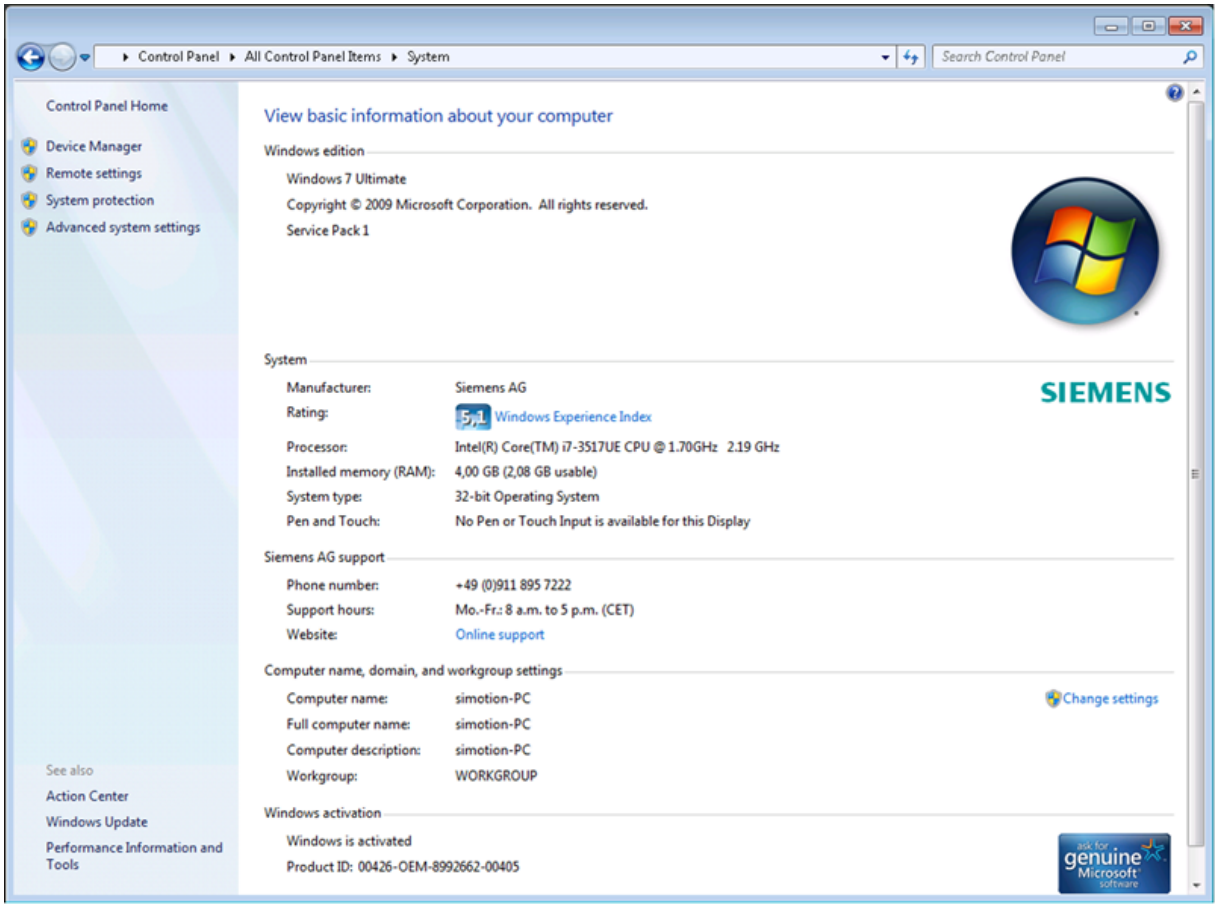

Figure 5-2 Remote settings

2. Select the **Remote** tab in the **System Properties** dialog box.

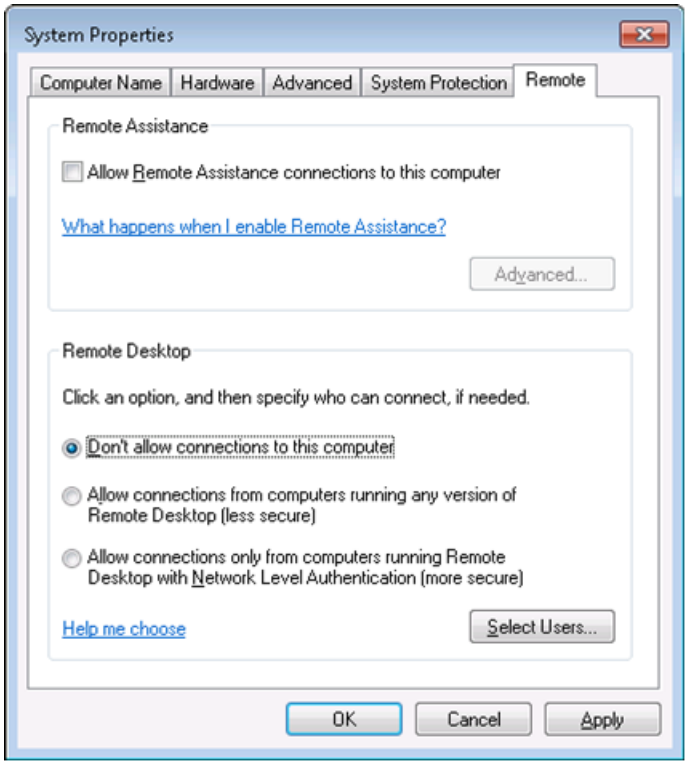

Figure 5-3 System Properties dialog box

3. Select the **Don't allow connections to this computer** option at **Remote Desktop**.
4. Confirm with **OK**.

Any remote desktop access is deactivated with this operation.

5.3 Decentralized structure

Distributed configuration of the SIMOTION P320-4 with a remote panel

The distributed configuration provides greater flexibility in terms of location and enables the SIMOTION P320-4 to be positioned in non-critical areas of the plant (e.g. cabinet).

The distributed configuration of a panel with the SIMOTION P320-4 can be performed via the DisplayPort or DVI connection. Please note the cable lengths that are supported for the panel.

5.4 Important information about installation

When installing the unit in an enclosed housing, make sure that sufficient space is available for air circulation.

Ensure that the clearance to other components or the sides of cabinets is at least 50 mm above and 100 mm below the device.

The maximum ambient temperature of the SIMOTION P320-4 depends on the mounting position:

- Horizontal (preferred position): Maximum +55° C (in RAL)
- Vertical (power supply at the top): Maximum +45° C
- Suspended: Maximum +40° C
- Vertical mounting: Maximum +45° C

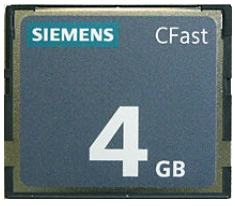
RAL = Restricted Access Location (installation of device in operating facilities with restricted access, for example, a locked control cabinet)

Further information can be found in the SIMOTION P320-4 E / P320-4 S Manual.

5.5 Withdrawing/inserting the CFast card

SIMOTION P320-4 has an external slot for a CFast card on the interface side. Always use SIMATIC IPC CFast cards for industrial applications.

The CFast card is mandatory for operation of the SIMOTION P320-4. The CFast card is supplied with the SIMOTION P320-4.



NOTICE
Damage to the device The CFast and CompactFlash connections are not compatible. The device will be damaged. Use the slot described in this section only for a CFast card.

Note

Note the version of the CFast card

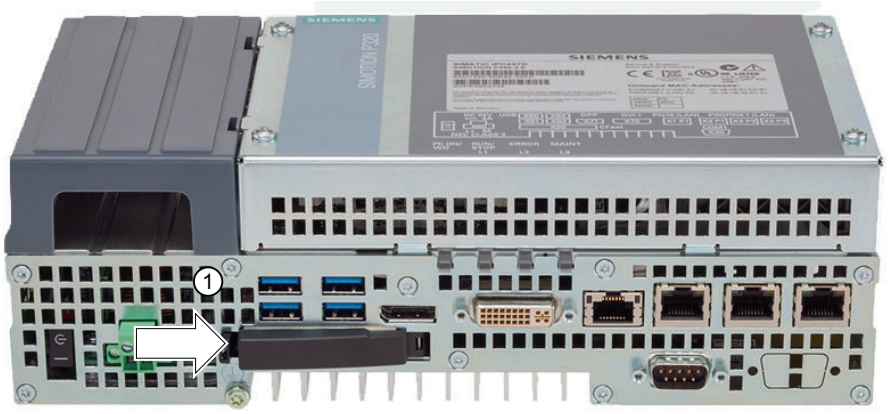
Note the following:

- **Always** insert a CFast card as of production version 02.
- Always replace a CFast card with a CFast card of the same or higher production version.
- The production version can be found on the CFast card (see marking).

CFast card - ordering data			
Designation	**Article number**	**Further information**	
CFast	6ES7648-2BF10-0XG0	4 GB	INDUSTRIAL GRADE

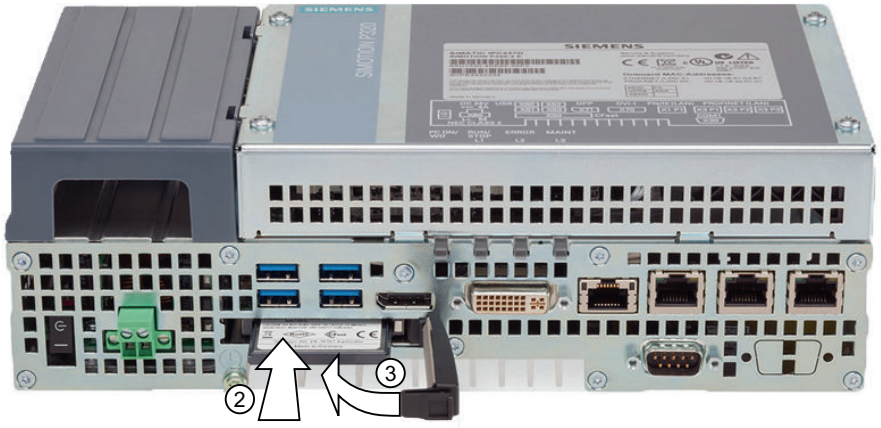
Note

Only use the CFast card specified with the article number above for the external interface.



Requirement

- The device is switched off.
- SIMATIC IPC CFast card approved for industrial applications.



Withdrawing the CFast card

To withdraw the CFast card, proceed as follows:

1. Release the lock of the cover. Push against the cover in the direction indicated.
   Open the cover completely.

2. Remove the CFast card from the memory card slot by pushing it in until it is ejected by about 5 mm (ball-point pen mechanism).
   Then withdraw the CFast card from the memory card slot.

3. After removing the CFast card, close and lock the cover.

Inserting the CFast card

NOTICE
Inserting the CFast card If you insert a CFast card into a built-in SIMOTION P320-4 in a system, observe the safety regulations for working with electrical systems. Insert the CFast card carefully into the slot, and without applying excess force.

To insert the CFast card into the memory card slot again:

Push the CFast card into the memory card slot until it locks into place (ball-point pen mechanism).

5.5.1 Automatic restart for SIMOTION P Runtime

Note

Not a Windows restart

Note that this is not a Windows restart!

Starting the SIMOTION P320-4 with withdrawn CFast card

Power-up of the SIMOTION P Runtime is **not** possible without the CFast card. A prompt referring to the missing CFast card is displayed. The prompt is displayed until the CFast card is inserted. The power-up is then continued and the prompt closed automatically.

The automatic restart of the SIMOTION P Runtime is performed when the **Enabled** checkbox is activated in the **SIMOTION P Control Manager** in the **Administration** tab at **Automatic Restart By Plug-In External Memory Card**.

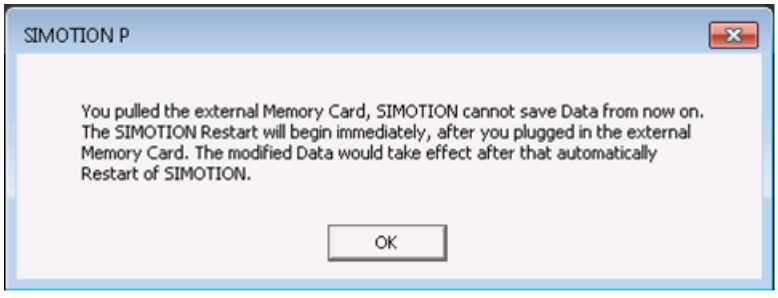


Figure 5-4 Prompt about the missing CFast card - automatic restart Enabled

Note

The prompt does not close automatically after inserting the CFast card.

If the prompt shown above is not automatically closed after inserting the CFast card and there is no automatic restart of the SIMOTION P Runtime, check the BIOS settings.

See Section Hotplug Enabled BIOS settings (Page 221).

If the **Disabled** status has been selected in the SIMOTION P Control Manager, there is no automatic restart of the SIMOTION P Runtime after the CFast card has been inserted. In this case, the following prompt is displayed.

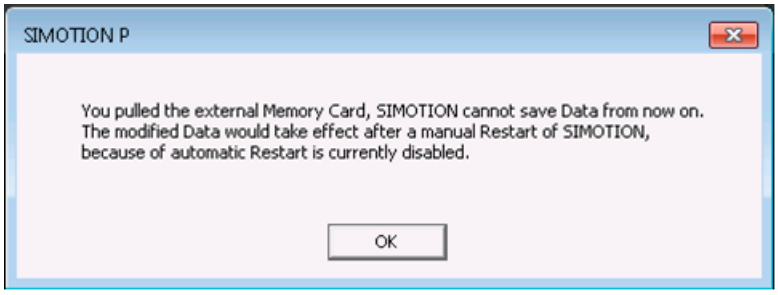

Figure 5-5 Prompt about the missing CFast card - automatic restart Disabled

CFast card withdrawn during operation

If the CFast card is withdrawn during normal operation, the SIMOTION P Runtime goes into the **General reset request** state.

This state can be exited through MRES (general reset) on the mode selector or a restart via SIMOTION P State.

In addition to the general reset request, a prompt is also displayed informing about the withdrawn CFast card and whether an automatic restart of the SIMOTION P Runtime will be performed.

Note

Automatic restart for SIMOTION P Runtime setting

The automatic restart settings are made in the SIMOTION P Control Manager.

The default setting in the Administration tab at Start SIMOTION P is Enabled.

Further information can be found in Section **SIMOTION P Control Manager > Administration tab >** Automatic Restart By Plug-In External Memory Card (Page 141).

5.6 Installing the SIMOTION P320-4 in the control cabinet

5.6.1 Notes on installation

Requirement

Before you install the device, observe the following installation notes:

NOTICE
Observe the DIN/VDE requirements Adhere to the relevant DIN/VDE requirements or the country-specific regulations when installing in cabinets.

NOTICE
Observe UL508 For use in the area of **Industrial Control Equipment** (**UL508**), remember that SIMOTION P320-4 is classified as **Open type**. Installation of the device in an enclosure according to **UL508** is conditional for approval or operation according to **UL508**.

Types of installation

The following SIMOTION P320-4 installation types are permitted and described in the following sections:

- Standard rail mounting (Page 89)
- Vertical mounting (Page 92)

5.6.2 Standard rail mounting

Mounting the SIMOTION P320-4 on a standard rail

Note

Use of Siemens 35 mm standard mounting rail is recommended.

Mounting the standard mounting rail clip

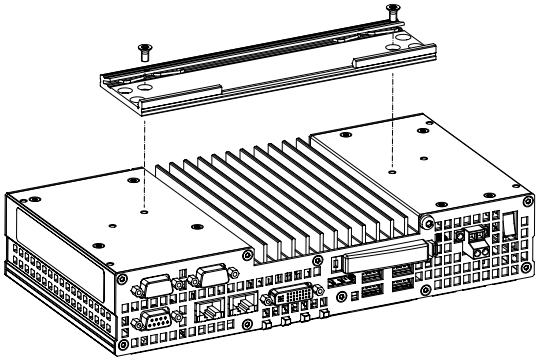
Before you can install the device on a standard mounting rail, you will need to attach the standard mounting rail clip included in the scope of delivery.

The fasteners and screws required are supplied with the device for mounting depending on the order number.

Requirement

- 1 standard mounting rail clip
- 2 screws
- 1 T20 screwdriver

Use the two screws to mount the standard mounting rail clip on the SIMOTION P320-4 enclosure.



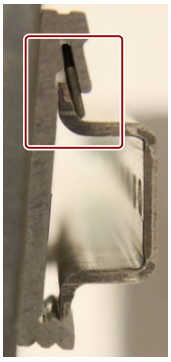


Figure 5-6 Mounting the standard mounting rail clip

Standard rail mounting

Steps for mounting on standard rail

Proceed as follows:

1. First place the SIMOTION P320-4, which is equipped with rail clips, at an angle on the upper rail guide.

2. Press the SIMOTION P320-4 slightly downward.
3. Swivel the SIMOTION P320-4 completely onto the rail until both clamps lock completely into place.
   Ensure that the locking into place of the SIMOTION P320-4 is audible.

Note

To ensure secure vertical mounting on standard rails, a standard rail ground terminal should be mounted beneath the device.

Mounting/installing the device

Examples of mounting types		
Material	**Bore diameter**	**Fixing**
Concrete	8 mm diameter 60 mm depth	Wall plug: 8 mm diameter 50 mm length Screws: 4 mm diameter 50 mm length
Plasterboard (min. 13 mm thick)	14 mm diameter	Cavity fixings: 4 mm diameter 50 mm length
Metal (min. 2 mm thick)	5 mm diameter	Metal screws M 4: 4 mm diameter 15 mm length

NOTICE

Observe the total weight of the SIMOTION P320-4

Ensure that the wall can hold four times the total weight of the device (including mounting rail and additional expansion modules).

Removing the device from the mounting rails

- Push the device down until the bottom clamp releases the device.
- Swing the device away from the rails.

Additional references

Further information on standard rail and vertical mounting can be found in the SIMOTION P320-4 E / P320-4 S Manual.

5.6.3 Vertical mounting

The optionally available vertical mounting front kit allows a space-saving installation.

Note

Vertical mounting front kit - SIMOTION P320-4

Only use the mounting kit that is specified for SIMOTION P320-4.

Mounting kits for previous versions cannot be used.

Fixing the vertical mounting bracket to the device

Note

Information on installation and operation is available in the supplement of the accessories.

Spare parts and accessories			
Parts for the SIMOTION P320-4	**Article number**	**Scope of delivery**	**Accessories**
Vertical mounting front kit	6ES7648-1AA20-0YP0	-	x

You can order the vertical mounting front kit via the Siemens Industry Mall (https://mall.industry.siemens.com).

Additional references

Further information on standard rail mounting and vertical mounting can be found in the SIMOTION P320-4 E / P320-4 S Manual.

5.7 SIMOTION P AutoLogin

The password for the AutoLogin must be changed when the user has changed the Windows password.

The Windows user password is changed in the normal way, e.g. "Change Password" screen. See also Section Changing the Windows user password (Page 36).

Automatically Log On

SIMOTION P320-4 is preset so that the user does not have to enter the user name and the password to log on.

Preparation for changing the AutoLogin

In order that an AutoLogin still functions after changing the Windows password, the password for the AutoLogin must be changed.

The required procedure is shown in the following so that the change of the AutoLogin for SIMOTION P320-4 can be prepared:

1. Open the **Computer Management** window via **Control Panel > All Control Panel Items > Administrative Tools** .

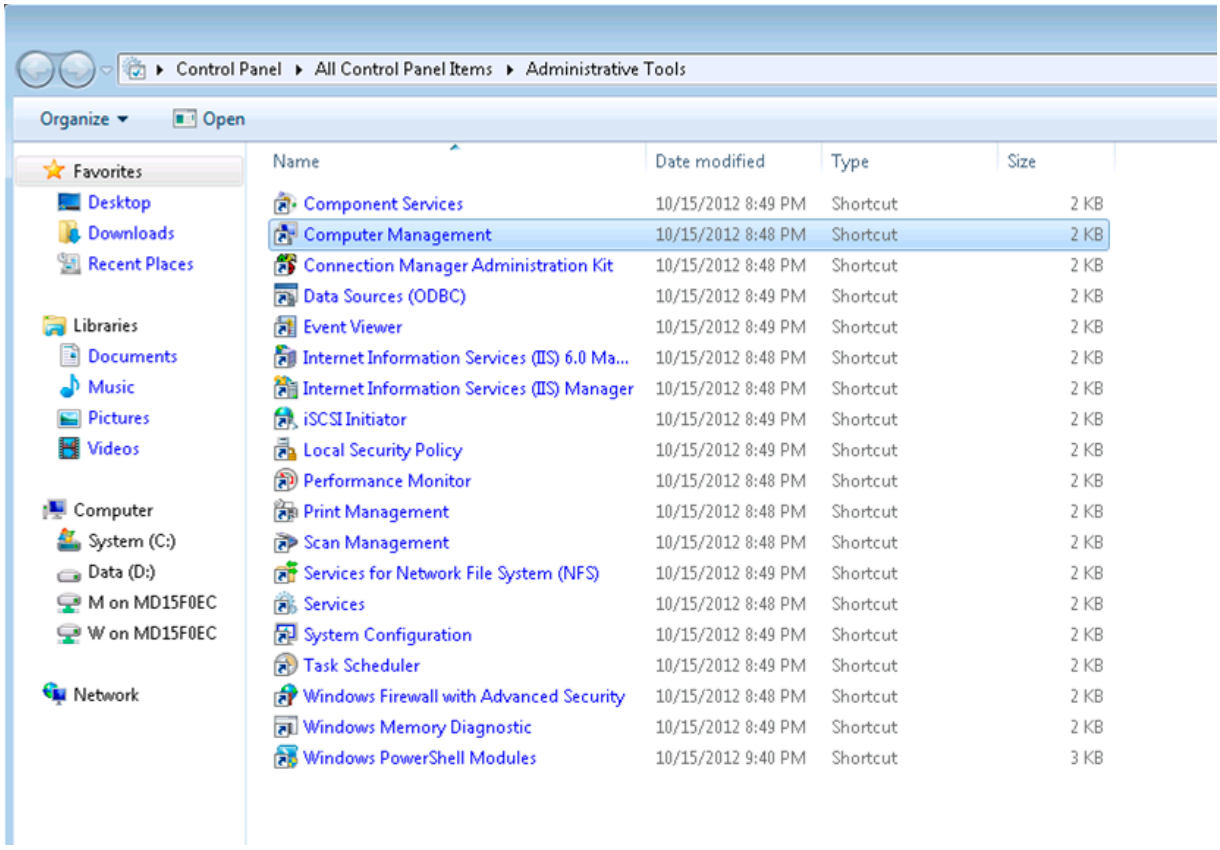

Figure 5-7 Computer Management entry point

2. The **Users** folder is displayed at **Local Users and Groups** in the **Computer Management** window.
   Click the **Users** folder. The available user groups are displayed.

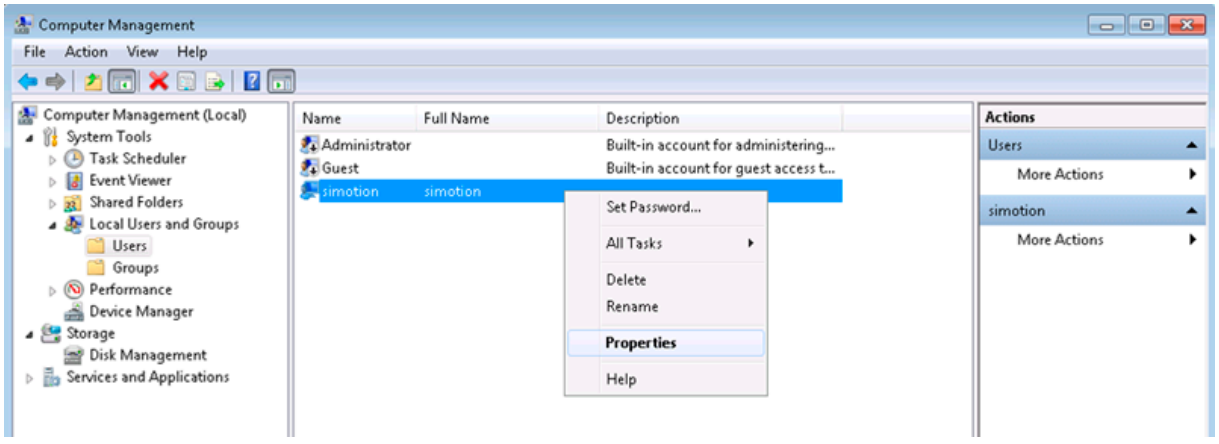

Figure 5-8 Computer Management - Users

3. With the selection of **Users> simotion**, you can display the properties via **Properties**.

4. Deactivate the **User cannot change password** checkbox in the **simotion Properties** dialog box.

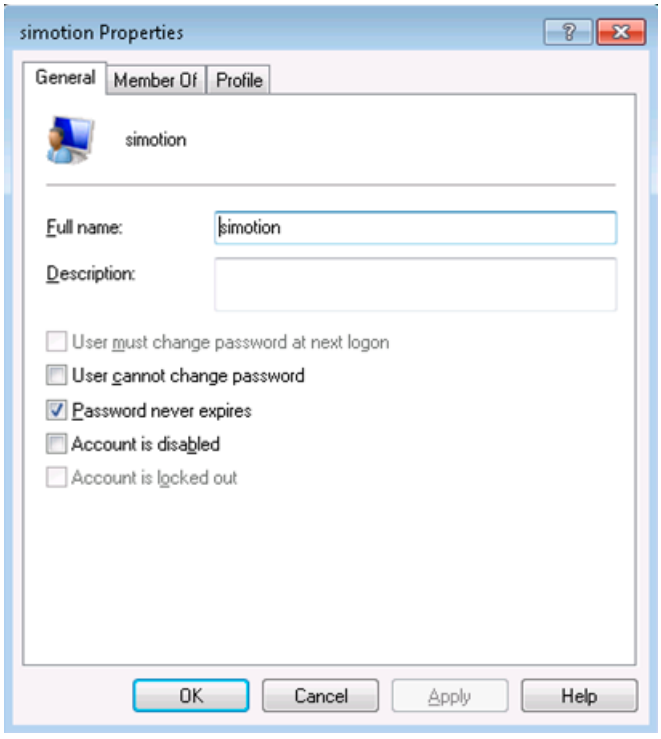

Figure 5-9 simotion Properties - General dialog box

5. Confirm with **OK.**

Changing the password for AutoLogin

To change the password for the AutoLogin, proceed as follows:

1. Open the search via **Windows-Start** and enter: **netplwiz**

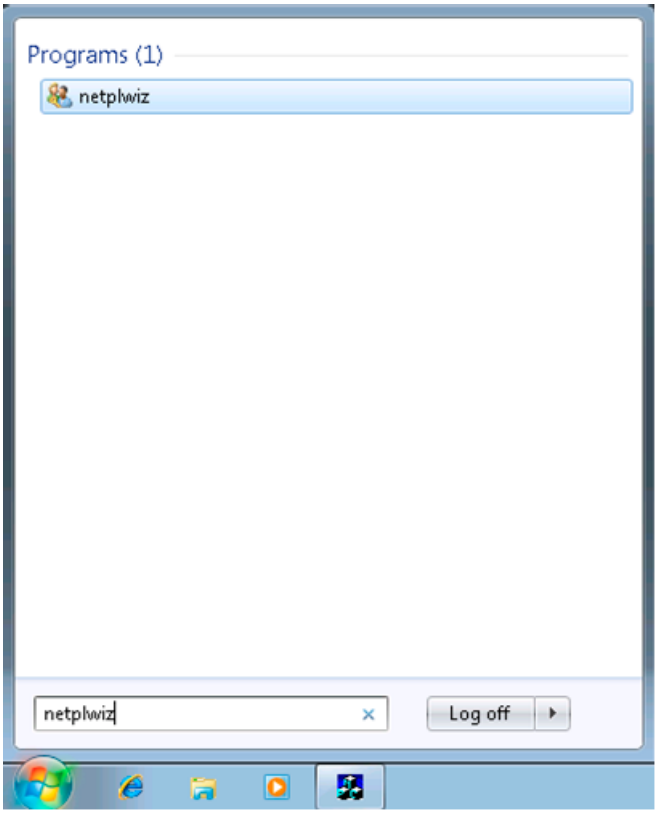

Figure 5-10 Programs netplwiz

2. The following **User Accounts** dialog box opens.

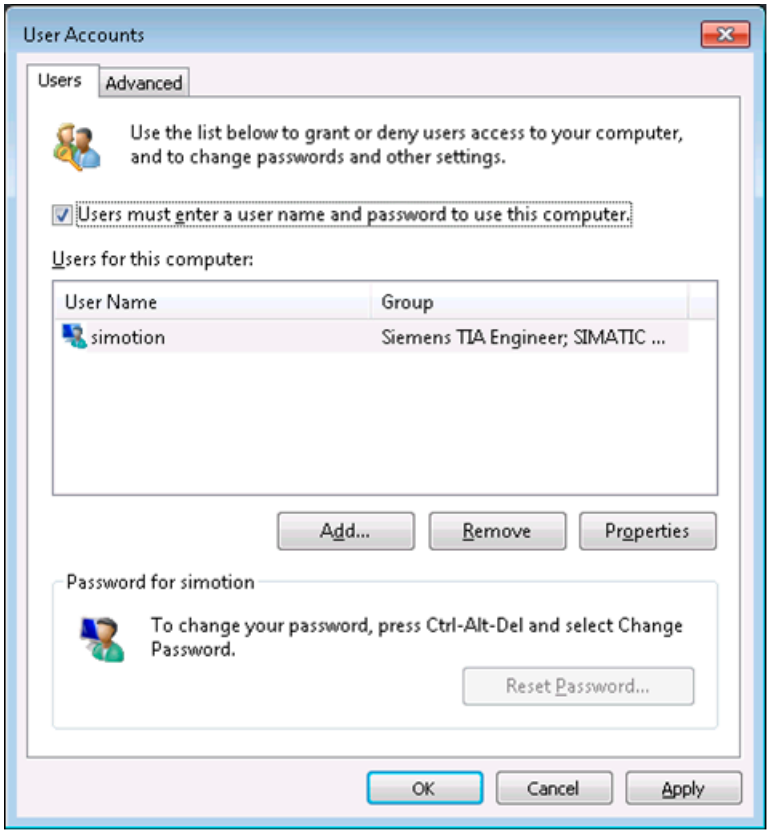

Figure 5-11 User Accounts

3. In the **Users** tab, activate the **Users must enter a user name and password to use this computer** checkbox.
   The **Apply** button is now active. Deactivate the checkbox and accept the changes now with the **OK** or **Apply** button.
   This is necessary so that the **Automatically Log On** dialog box is subsequently displayed.

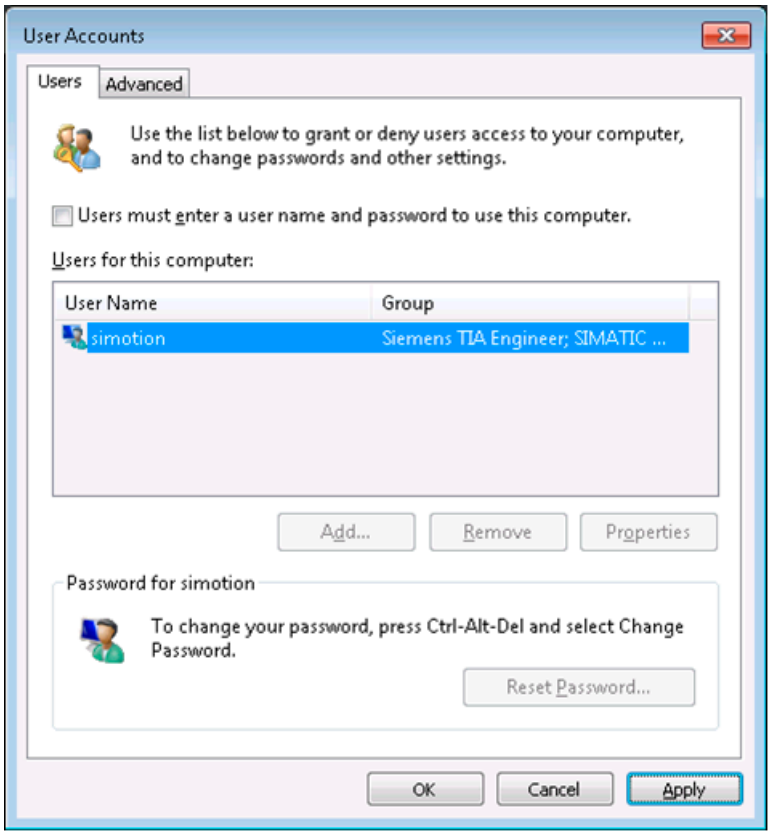

Figure 5-12 User accounts

4. Enter your changed Windows user password in the **Automatically Log On** dialog box and confirm it by entering it a second time.

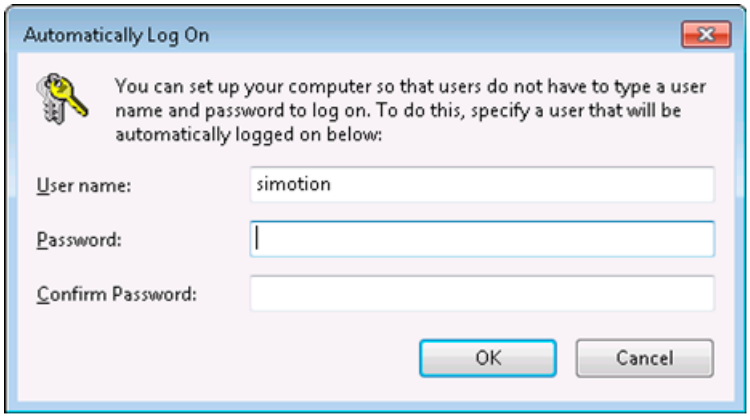

Figure 5-13 Automatically Log On dialog box

5. Confirm the password with **OK**.

Connection

6

6.1 Connection requirements

In this section it is described how the components of SIMOTION P320-4 are connected and the elements for communication prepared.

During the installation of SIMOTION modules, you must pay attention to the electrical configuration design.

You obtain information on wiring and networking a complete SIMOTION system.

Requirement

The SIMOTION P320-4 is already installed in a cabinet or in a controller housing.

Open equipment

These modules are open equipment. Therefore, only install modules in housings, cabinets, or in electrical equipment rooms that can only be entered or accessed with a key or tool. Only instructed or authorized personnel have access.

Observe the following points during installation:

- The device may only be connected to 24 VDC power supplies that meet the requirements in accordance with SELV. The cable cross-section must be chosen large enough to ensure that no damage can result from cable overheating in the event of a short-circuit in the SIMOTION P320-4.
- Protect the device against dust, moisture, heat and severe vibration.
- Do not subject the SIMOTION P320-4 to direct sunlight.
- Install the device in such a way that it cannot present a hazard (e.g. by toppling).
- Ensure that the clearance to other components or the sides of cabinets is at least 50 mm above and 100 mm below the device.

6.2 Overview of connections

Below the SIMOTION P320-4 interfaces to which the I/O devices can be connected are shown.

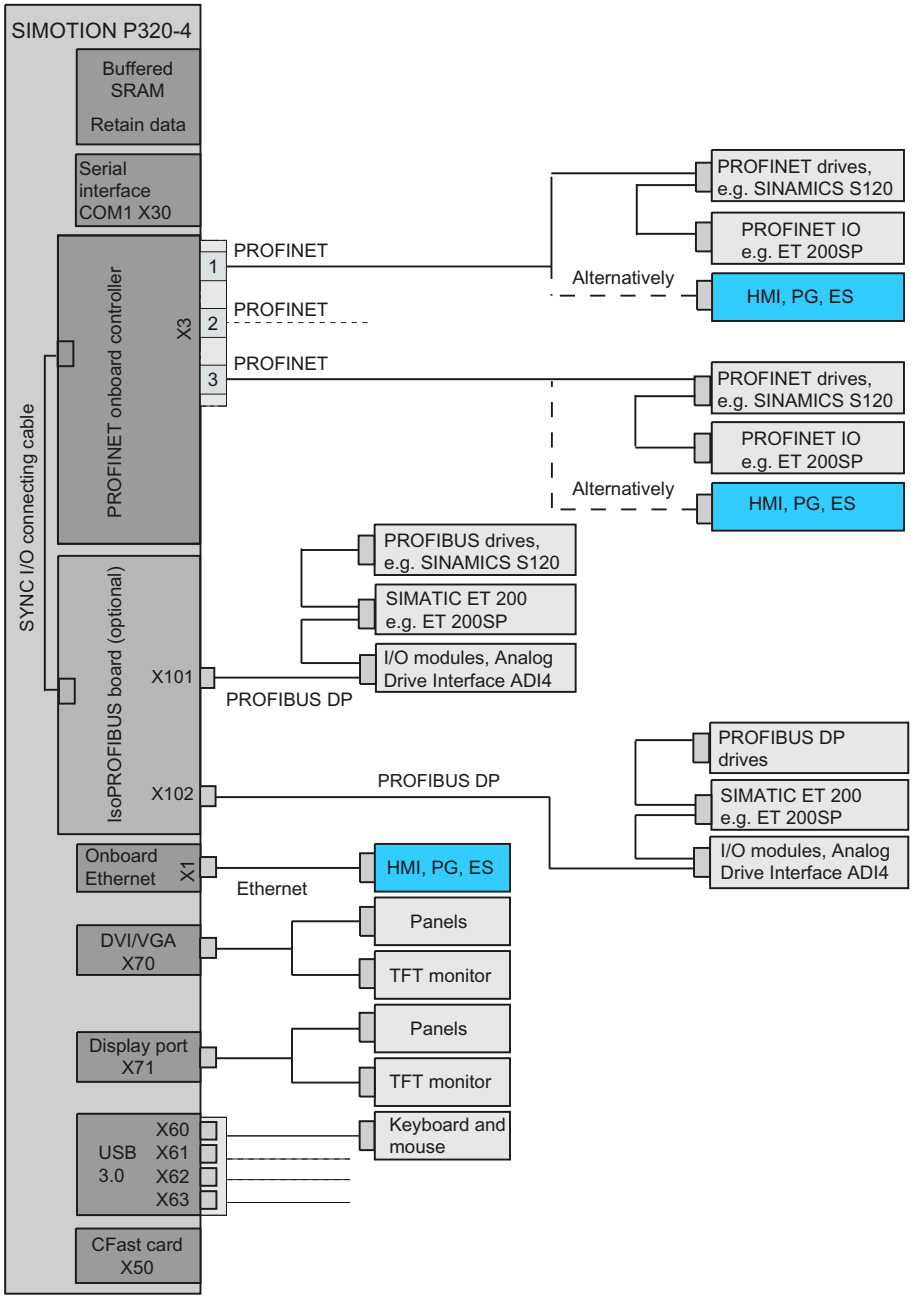

Figure 6-1 System overview SIMOTION P320-4 (hardware)

The cabling for all elements and components of the complete system must only be carried out when disconnected from the mains.
It does not matter in which order connection takes place.

The connection of the individual elements is described in the following sections:

- Connecting PROFINET (Page 104)
- Inserting IsoPROFIBUS (Page 108)
- Connecting Ethernet (Page 117)
- Connecting keyboard/mouse (Page 118)
- Connecting the power supply (Page 119)

6.3 Connecting PROFINET

6.3.1 PROFINET onboard

The system is connected to the Real-time Ethernet (PROFINET IO with RT and IRT) using the permanently integrated PROFINET interface. The device has a PROFINET interface with 3 ports.

The PROFINET IO with IRT allows IT services to be performed in parallel to the real-time communication on an Ethernet cable, where the PROFINET IO with IRT has a reserved area that provides a decoupling from the standard communication.

Note

PROFINET onboard is not a plug-in board. Instead, it is integrated in the SIMOTION P320-4.

6.3.2 Connection

Connection example

The figure shows a connection example of a PROFINET application with SIMOTION P320-4, SINAMICS S120 (CU320-2) and ET 200 PN.

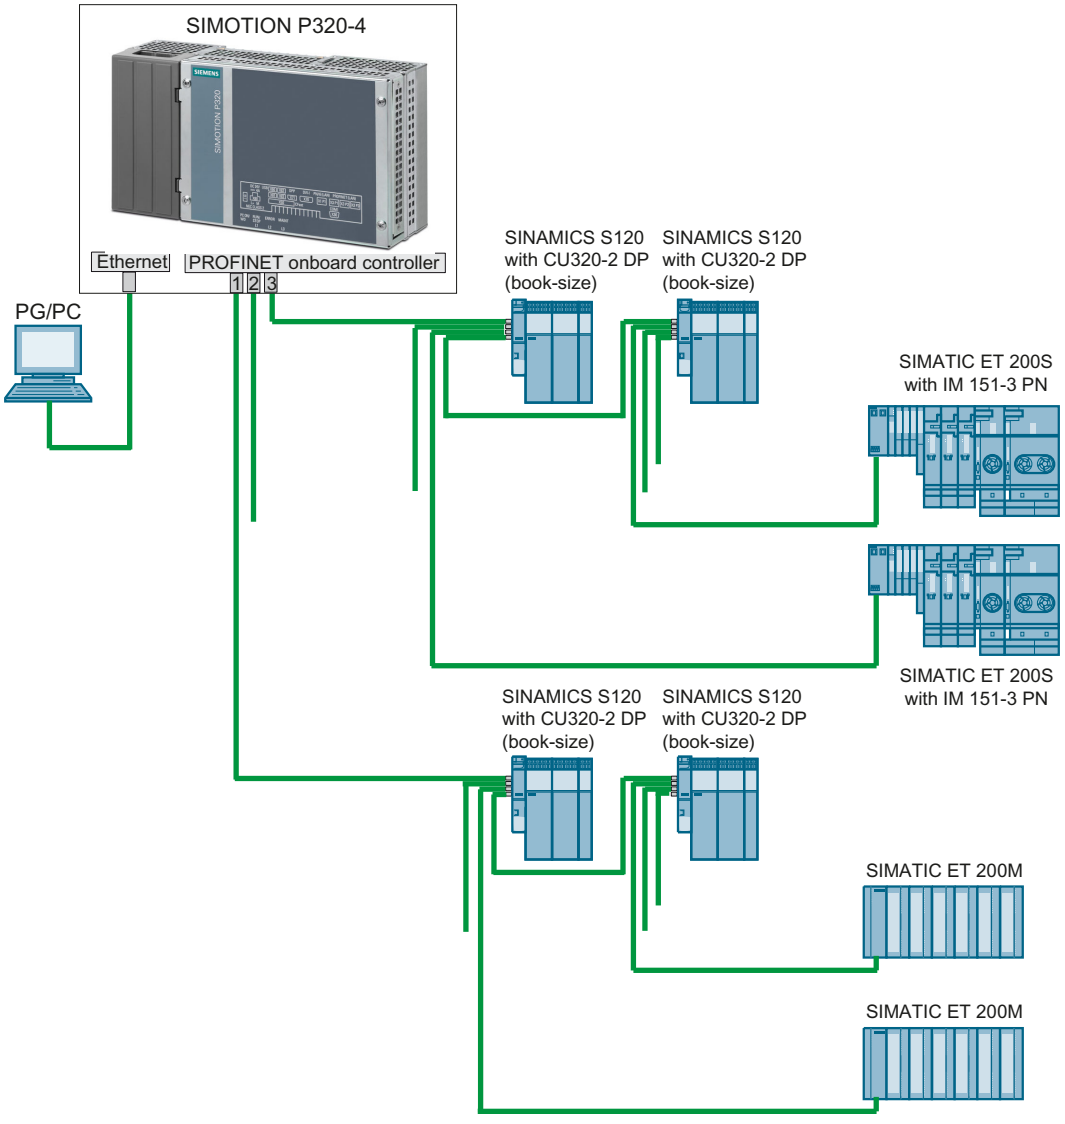

Figure 6-2 Example for a PROFINET application

Note

If the integrated ports of SIMOTION P320-4 and SINAMICS are not sufficient, an external SCALANCE switch can be used.
If PROFINET IO with IRT communication is to be enabled downstream of the switch, then a suitable switch (which supports IRT) must be used.

Cable

4-wire, shielded installation cables are used as PROFINET cables for IE FC RJ45.

Connector

RJ45 PN connectors with straight or angled exit can be used. Standard RJ45 connectors cannot be used.

Strain relief

When inserted, a PROFINET cable will cause unwanted forces to be exerted on the sockets of the PROFINET onboard (strain, lateral pressure). In order to prevent the sockets being subjected to these forces, you must install the strain-relief bracket and attach the cable tie supplied in the accessory kit.

For further information see Mounting a strain relief (Page 107).

Additional references

You can find further information on the website www.siemens.com/simotion (www.siemens.com/simotion):

- Drives and I/O modules that are released for SIMOTION
- You will also find current brochures and catalogs

6.4 Mounting a strain relief

A strain relief for SIMOTION P320-4 is included in the scope of delivery.

The strain relief is designed to prevent the lines connected to the device from being accidentally pulled out.

Note

One cable tie is required for each interface. The cable ties are not included in the scope of delivery and must be ordered separately.

Requirement

- 1 strain relief
- 2 screws
- 1 T10 screwdriver

Procedure

Proceed as follows to secure the strain relief:

1. Remove the marked countersunk screws of the SIMOTION P320-4.

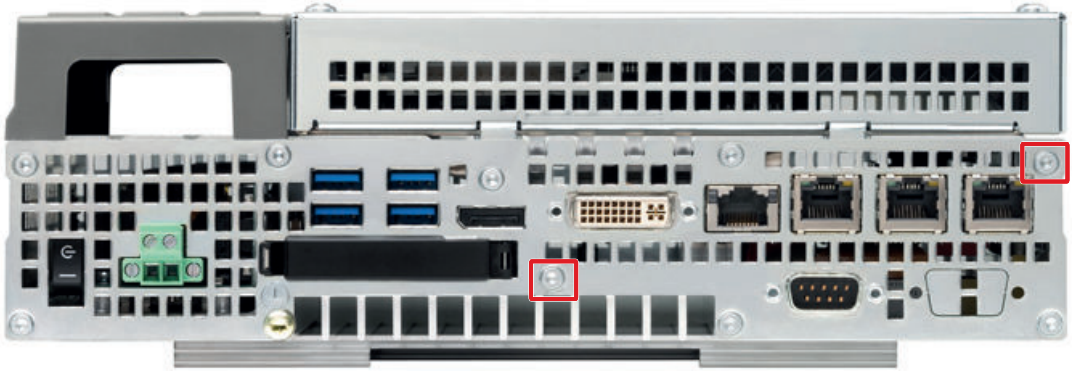

Figure 6-3 Strain relief - marking of the screws

2. Secure the strain relief at the marked points.
   Only use the enclosed lens head screws for securing the strain relief.

6.5 Connecting PROFIBUS

6.5.1 Requirement

- SIMOTION P320-4 is switched off and disconnected from the mains
- IsoPROFIBUS board (Article No. 6AU1390-0AA00-0AA1)

6.5.2 SYNC I/O connecting cable / Plugging in the IsoPROFIBUS board

To be able to plug in the IsoPROFIBUS board, the device must be opened and the SYNC I/O connecting cable must be rerouted:

1. Remove the screws of the upper cover plate and open the SIMOTION P320-4.
   At the factory, the SYNC I/O connecting cable is secured in the device using an adhesive tape.

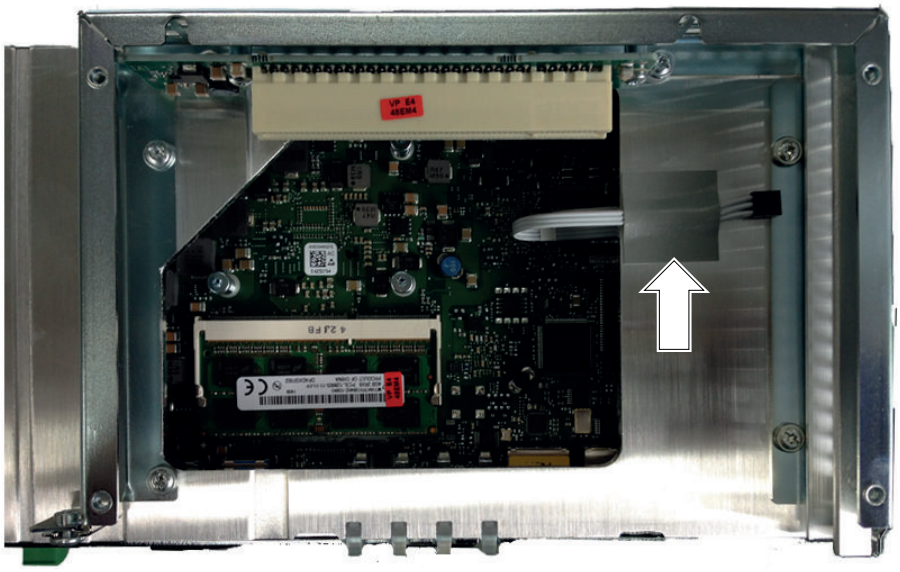

Figure 6-4 Opened SIMOTION P320-4 with SYNC I/O connecting cable as delivered ex works

2. Remove the adhesive tape and change the position of the SYNC I/O connecting cable as follows:
   the SYNC I/O connecting cable is routed to the interface side of the device and secured there again.

Figure 6-5 SIMOTION P320-4 with changed position of the SYNC I/O connecting cable

3. Remove the slot plate on the left side to expose the cutout for the interfaces of the IsoPROFIBUS board.
4. The IsoPROFIBUS board is inserted in the next step:
   Slide the IsoPROFIBUS board on the left into the guide rail of the previously removed slot plate and push it backward guided by the rail.

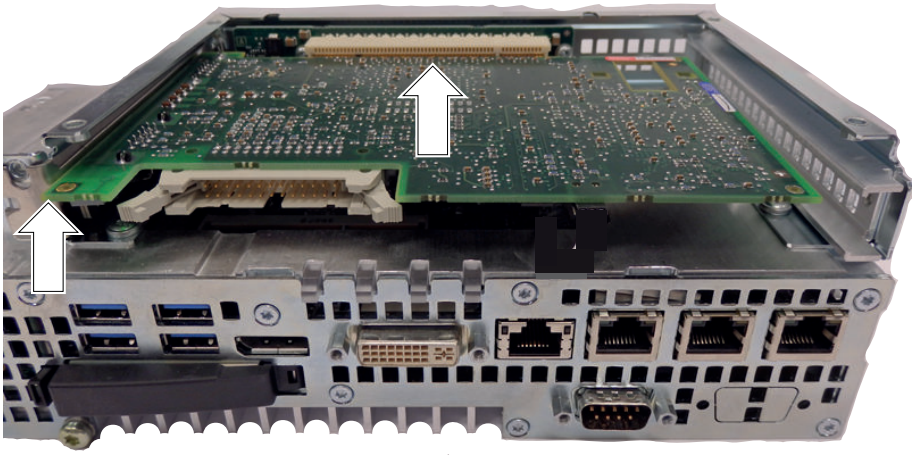

Figure 6-6 Inserting the IsoPROFIBUS board

5. The IsoPROFIBUS board is inserted into the rear PCI slot by applying slight pressure.

6. Then the SYNC I/O connecting cable is connected to the IsoPROFIBUS board.
   The cable is plugged directly into the 3-pole socket on the IsoPROFIBUS board for this purpose.

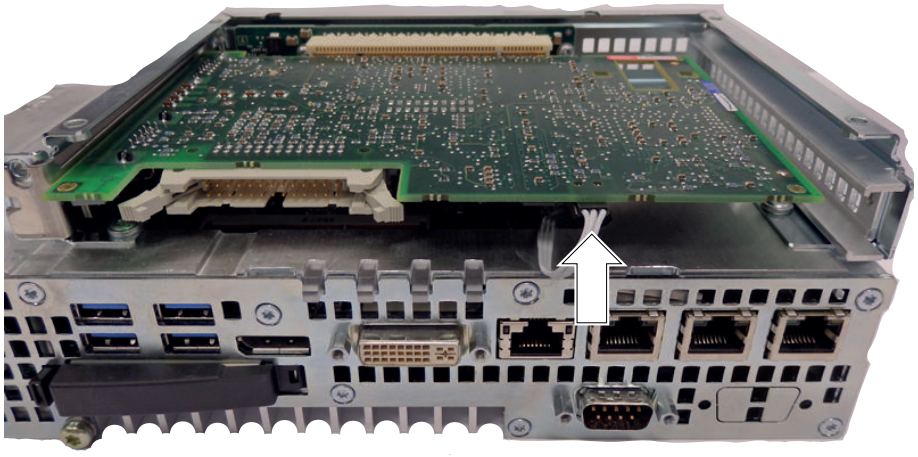

Figure 6-7 Plugging in the SYNC I/O connecting cable

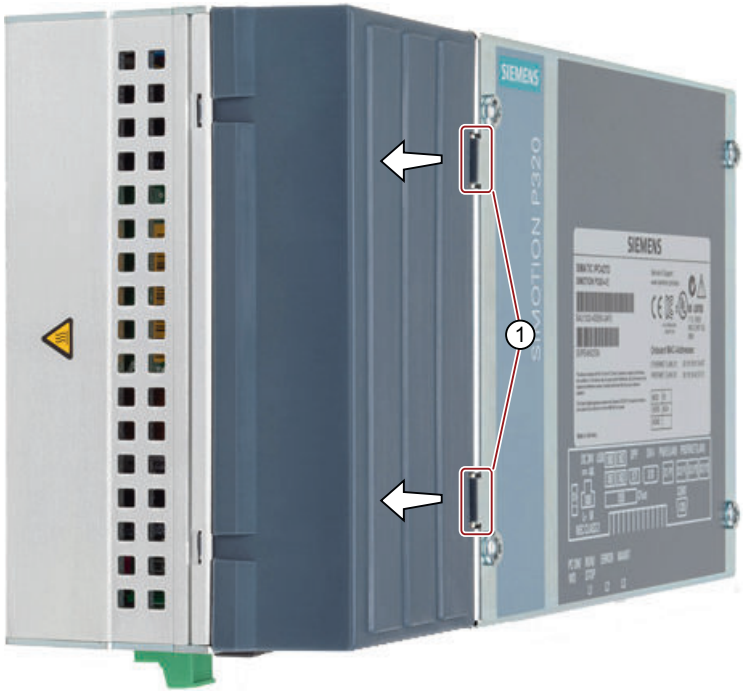
7. Close the cover plate of the SIMOTION P320-4 and fasten the screws.

6.5.3 Connecting the IsoPROFIBUS board

The interface for the optional IsoPROFIBUS board is protected by a cover. There are two holes in the cover for wiring.



Requirement

The device is switched off.

Procedure

To connect the IsoPROFIBUS board, proceed as follows:

1. Unlock the cover by pushing the latches in the direction of the arrow;
   swivel the released cover in the direction of the arrow and remove it. The interfaces for the optional IsoPROFIBUS board are then free.

2. Connect the IsoPROFIBUS board to the slots shown.

3. Place the cover on the positions shown and close it.
   Make sure that the latches engage to secure the cover in its position.

6.5.4 IsoPROFIBUS board and PROFIBUS DP

PROFIBUS DP connection example

Both interfaces of the IsoPROFIBUS board can be used as PROFIBUS DP interfaces. The following screen shows an example of a PROFIBUS application.

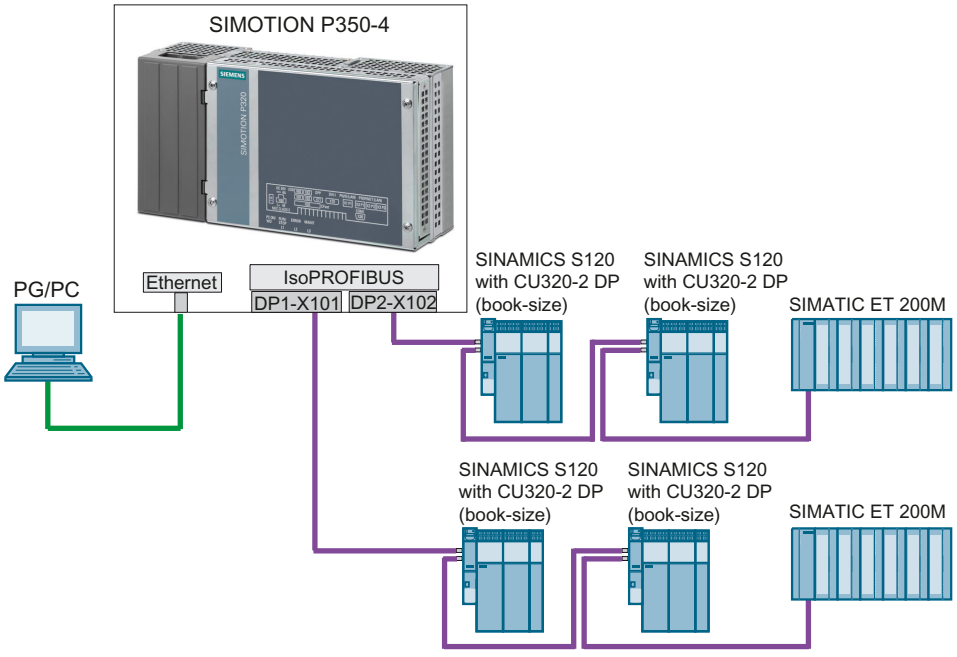


Figure 6-8 Example for a PROFIBUS application

6.5.5 Connecting the bus connectors for the X101 and X102 interfaces (IsoPROFIBUS)

The bus connector is used to connect the PROFIBUS cable to the IsoPROFIBUS interface (X101, X102). thus establishing a connection to additional stations.

Connecting the bus connector

Proceed as follows to connect the bus connector:

1. Plug the bus connector into the IsoPROFIBUS interface on the module.
2. Screw the bus connector onto the interface.
3. If the bus connector is located at the start or end of a segment, you must connect the terminating resistor (switch position "ON").

Terminating resistor connected 

Terminating resistor not connected 

Figure 6-9 Bus connector: Terminating resistor switched on and off

⚠ WARNING

Data exchange on the bus can be interrupted!

A bus segment must always be terminated with the terminating resistor at both ends. This is not the case, for example, if the last node with a bus connector is de-energized. Because the bus connector takes its voltage from the station, this terminating resistor is ineffective.

Make sure that the stations at which the terminating resistor is connected are always energized.

6.5.6 PROFIBUS cable

Properties of the PROFIBUS cable

The PROFIBUS cable is a two-stranded, twisted, and shielded cable.

Table 6-1 Properties of the PROFIBUS cable

Features	Values
Surge impedance	Approximately 135 to 160 Ω (f = 3 to 20 MHz)
Loop resistance	≤ 115 Ω/km
Operating capacity	30 nF/km
Attenuation	0.9 dB/100 m (f = 200 kHz)
Permitted strand cross-section	0.3 mm^2 to 0.5 mm^2
Permissible cable diameter	8 mm ± 0.5 mm

Rules for laying

When you install a PROFIBUS cable, you must not:

- Twist
- Stretch
- Or compress it.

When installing the indoor bus cable, you should also remember the following boundary conditions (d_A = outer diameter of the cable):

Table 6-2 Boundary conditions for indoor routing of bus cable

Features	General conditions
Bending radius for a single bend	≥ 80 mm (10 × d_A)
Bend radius for multiple bends	≥160 mm (20 × d_A)
Permissible temperature range for installation	- 5° C to + 50° C
Temperature range for storage and stationary operation	- 30° C to + 65° C

Note

The length codes for the pre-assembled cables can be found on the website www.siemens.com/simotion (www.siemens.com/simotion).

6.6 Connecting Ethernet

Procedure

Plug the LAN cable into the Ethernet interface of the SIMOTION P320-4. You must hear the connection engage properly.

Cables

Standard shielded twisted pair cables are used for the networking in this case.

The following connection cables are recommended:

- SIMATIC NET, ind. Ethernet TP XP CORD RJ45/RJ45, TP CORD assembled with 2 RJ45 connectors, send and receive cables crossed (cross-over)
  Order no.: 6XV1850-2H*)
- SIMATIC NET, ind. Ethernet TP CORD RJ45/RJ45, TP CORD assembled with 2 RJ45 connectors
  Order no.: 6XV1850-2G*)

*) Length code		Dimensions
	E50	0.5 m
	H10	1 m
	H20	2 m
	H60	6 m
	N10	10 m

Note

Further information on the use of these cables can be found in the SIMATIC NET Twisted-Pair and Fiber-Optic Networks Manual (https://support.industry.siemens.com/cs/ww/en/view/8763736).

6.7 Connecting the keyboard and mouse

USB interfaces

You can connect the keyboard and the mouse to the USB interfaces of the SIMOTION P320-4.

6.8 Connecting the power supply

6.8.1 Safety rules

Basic rules

Only the basic rules for electrical installation can be described in this section on account of the diverse applications possible. At a minimum, you must comply with these basic rules to ensure problem-free operation.

Rules for safe operation

In order to ensure safe operation of your equipment, implement the following measures, adapting them to suit your conditions:

- An EMERGENCY OFF concept in accordance with the generally accepted rules of current engineering practice (e.g. European standards EN 60204, EN 418, and similar).
- Additional measures for limiting the end position of axes (e.g. hardware limit switches).
- Equipment and measures for protection of motors and power electronics in accordance with the SIMOTION installation guidelines.
  In order to identify hazards, we also recommend that a risk analysis be conducted on the entire system in accordance with the basic safety requirements set out in Appendix 1 of EU machinery directive.

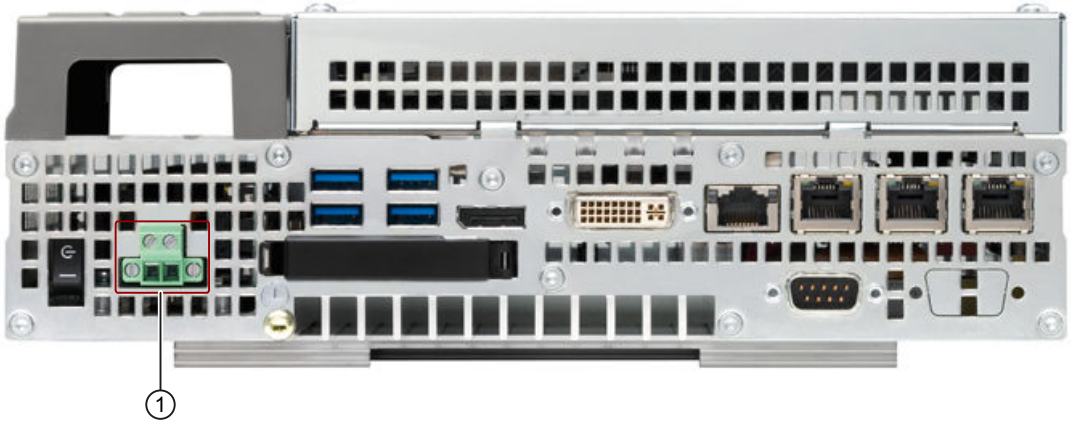
Additional references

- Guidelines on Handling Electrostatic Sensitive Devices (ESD), see Appendix ESD Guidelines (Page 229).
- For installing a system with SIMATIC ET 200 I/O (e.g. ET 200S, ET 200M, etc.), refer to the documentation for the relevant ET 200 I/O systems.

6.8.2 Standards and Regulations

VDE guideline compliance

During wiring, you must observe the appropriate VDE guidelines, in particular VDE 0100 and VDE 0113 for tripping devices and short-circuit and overload protection.



System start-up after specific events

The following list identifies considerations required for startup of a system following certain events.

- If the system starts up again following a voltage drop or power failure, all hazardous operating states must be prevented from occurring. If necessary, force an EMERGENCY OFF.
- If the system starts up again after the EMERGENCY OFF apparatus is released, the startup must not be unchecked or undefined.

6.8.3 Connecting the power supply

Connect your power supply (e.g. SITOP smart 24 V / 10 A) directly to the power-supply socket of the SIMOTION P320-4.

① 24 VDC power supply

Figure 6-10 Power supply connection

⚠ WARNING
On/Off switch
The On/Off switch does not disconnect the device from the power supply system.
To remove power from the device, the power supply plug must be removed.

6.8.4 Protective conductor connection and potential equalization

Connect the equipotential bonding strip on the SIMOTION P320-4 (large surface, large-area contact) with the central grounding point of the cabinet or system in which the devices are installed.
The protective conductor must not have less than a minimum core cross-section of 2.5 mm^2.

① Protective conductor connection / potential equalization

Power on and software installation

7

7.1 Power-up

SIMOTION P320-4 is supplied with pre-installed software modules. After activation, Windows with SIMOTION P is powered up automatically.

The SIMOTION P320-4 issues the following message after successful power-up:

Figure 7-1 SIMOTION P320-4 after power-up

The SIMOTION P320-4 responds in this way to every subsequent power-up.

7.2 Additional software for HMI

Note

Action before installing additional software

Before installing additional software, make sure that you terminate the runtime of the SIMOTION P.

You terminate SIMOTION P in the application SIMOTION P State using the button **Terminate SIMOTION P**.

If required, the following software can be installed directly on the SIMOTION P320-4:

- WinCC flexible Runtime
- WinCC flexible engineering system for P320-4 S
- OPC client from other manufacturers
- Utilities of the OEMs
- SIMATIC NET

This software must be purchased separately and is not contained in the SIMOTION P320-4 scope of delivery.

Please refer to the documentation supplied with the software for details regarding the procedure for installing the respective software.

7.3 Customer-specific software

To ensure high-quality and reliable working of the device, SIMOTION P320-4 is fully configured and ready for operation at the time of delivery.

For this purpose, the system components used are subject to a certification procedure with Siemens as the system manufacturer. The certification process establishes and documents the real-time features of the complete system.

NOTICE
Changes or expansions of PC components (hardware or software) by a third party If PC components (hardware or software) are modified or expanded by a third party, compliance with product features cannot be guaranteed. The OEM or user involved must assume sole responsibility for such components. Compliance with product features can only be guaranteed by SIEMENS.

Operator Control (hardware)

8

8.1 SIMOTION P state application

8.1.1 SIMOTION P State application overview

The LEDs, mode selector, and CF card handling indicators, which are implemented as hardware on other SIMOTION platforms, are visualized on the screen for SIMOTION P320-4.

The display is performed by the **SIMOTION P State** application. The following figures show SIMOTION P State in the started state with/without inserted IsoPROFIBUS board.

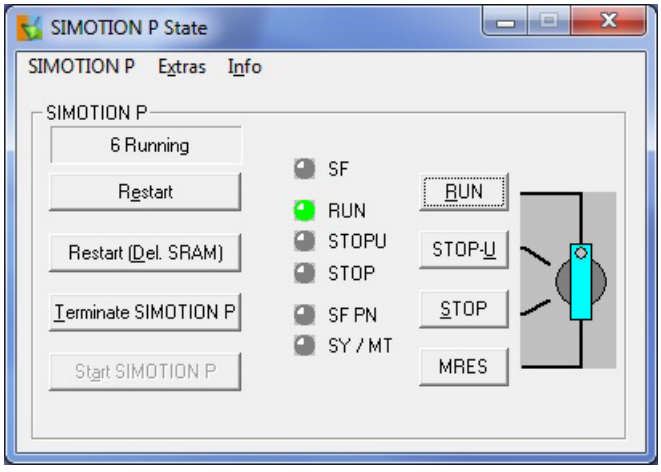


Figure 8-1 SIMOTION P State - PROFINET onboard

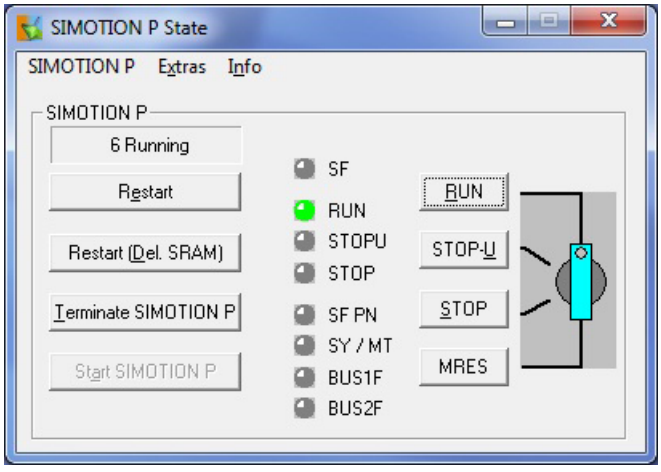

Figure 8-2 SIMOTION P State - PROFINET onboard and additionally with optional IsoPROFIBUS board

Note

The SIMOTION P State application is in English.

Generally, only English is supported on the SIMOTION P320-4, this also applies for the Win7 operating system.

8.1.2 LED display

Meaning of LEDs

The meaning of the LEDs and their colors is described in the table below.

LED display		Meaning	Description
SF	Red	Fault	The fault state of the SIMOTION P320-4 is displayed.
RUN	Green	SIMOTION P320-4 in RUN mode	The user program is running.
STOPU	Yellow	SIMOTION P320-4 in the STOP User Program	The technology packages (e.g. synchronous operation, cam) are active. Test and commissioning functions can be executed without a user program. The user program is not active.
STOP	Yellow	SIMOTION P320-4 in STOP mode	There is no user program running. The technology packages are not active.
SF PN	Red	PROFINET bus fault	A fault state is displayed on the PROFINET interface (X3).
SY/MT	Yellow	Sync of the PROFINET interface	It is displayed whether the PROFINET interface has been synchronized.
BUS1F	Red	Group fault	A fault state is displayed on the IsoPROFIBUS interface (X101).
BUS2F	Red	Group fault	A fault state is displayed on the IsoPROFIBUS interface (X102).

Note

LEDs for IsoPROFIBUS board

The LEDs BUS1F and BUS2F are **only** shown if an IsoPROFIBUS board is connected.

Additional references/information

You can find additional information at:

- Diagnostics via LED displays (Page 207) (for a more accurate diagnosis of an LED state)
- Operating displays (SIMOTION P320-4 E / P320-4 S Manual: Information on display modes, of the SF PROFINET LEDs only displayed on the hardware side, in the operating displays section)
- PROFINET bus error occurs (Page 215)

8.1.3 Mode selector

Mode selector in SIMOTION P State

Use the mode selector to set the SIMOTION P320-4 to different states. The controller can be switched in **RUN** or **STOP** / **STOPU** mode and perform an overall reset.

The change of the operating state with the mode selector has **priority** over a state selected via SIMOTION SCOUT.

Note

Setting the operating state via the mode selector

The **STOP**/**STOPU** switch position cannot be set to **RUN** via the SIMOTION SCOUT.

To change the operating state, use the mode selector.

Further information

Further information can be found in Section Overall reset with the mode selector (on the screen) (Page 186).

8.1.4 Current operating status

The current state of the SIMOTION P320-4 is displayed in the upper left area of the **SIMOTION P State** application.

Table 8-1 The following state displays are possible:

Not started	SIMOTION P320-4 is not started.
0 … 5	The progress of the SIMOTION P320-4 power-up is displayed.
6 Running	SIMOTION P320-4 has completed power up and the cyclic tasks are activated.
Disabled	SIMOTION P320-4 is deactivated.

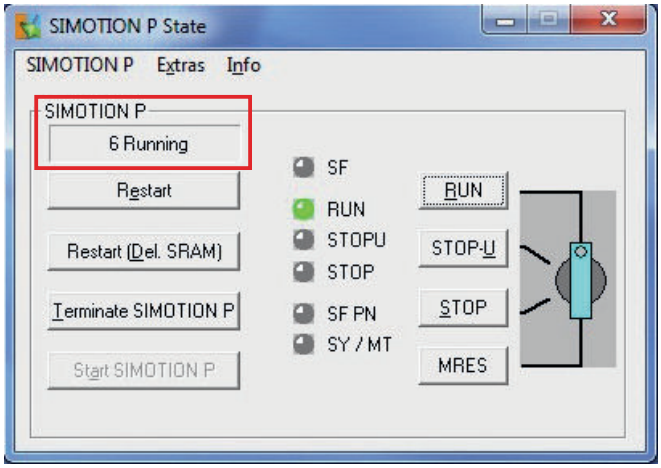

Figure 8-3 SIMOTION P State - state display

The status LEDs and the current operating state are also displayed in the Windows task bar:

RUN state: Green

STOP state: Yellow

NOT STARTED state: Gray

Note

FAQs can be found in Section Troubleshooting/FAQs (Page 219).

8.1.5 Function elements

Functions of the buttons

Below the current SIMOTION P320-4 status display, you will find a selection of buttons which can only be operated with administrator rights.

Description of the button functions:

Table 8-2 Function of the buttons in SIMOTION P State

Button	Function
Restart	Restarting SIMOTION P320-4. The information in the SRAM is retained. If RamToRom is called beforehand, the project backup is restored. **Note** This is only possible if SIMOTION P320-4 has been powered up (status not "0" to "5", "not started").
Restart (Del. SRAM)	Restarts SIMOTION P320-4 and deletes the information in the SRAM. If RamToRom is called beforehand, the project backup is restored. **Note** This is only possible if SIMOTION P320-4 has been powered up (status not "0" to "5", "not started").
Terminate SIMOTION P	Stop SIMOTION P320-4. **Note** This is possible only if SIMOTION P320-4 has powered up.
Start SIMOTION P	Start SIMOTION P320-4. **Note** This is possible only if SIMOTION P320-4 has not been started

Resetting to the delivery condition

SIMOTION P320-4 can be reset to the default settings at the time of delivery (Page 195) via SIMOTION P State.

8.1.6 SIMOTION P State - menus

The menus of the SIMOTION P State application are described below:

- SIMOTION P
- Options
- Info

SIMOTION P menu

SIMOTION P	Description
Temperature	Display of the temperatures in the device, monitoring of the threshold value. An alarm (Page 211) is issued when a threshold value is reached or exceeded.
Set Diagnostic Switch	Diagnostic switch for recording diagnostic data and backing up the non-volatile SIMOTION data on the external CFast card. Diagnostics data can be recorded during power-up and during operation for the error diagnostics. The diagnostics switch is automatically reset after writing the data. **See also the following sections**: Recording diagnostic data (Page 193). Backing up non-volatile SIMOTION data (retain data) (Page 179)
Webserver	Access to the SIMOTION IT Web server is protected by a multi-level security concept. Upon delivery, the security level is low to allow configuration of the device. The security state of the Web server can be set here. The following selection options are available: • Security Level: normal • Security Level: low

Temperature specifications

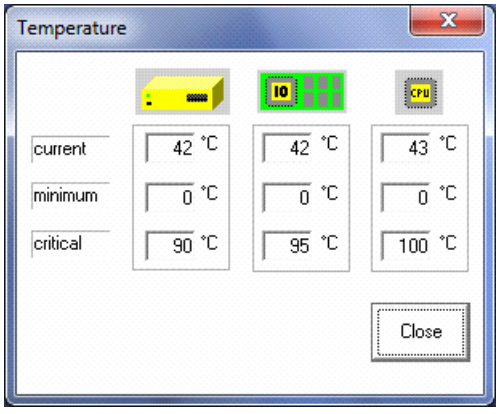

Figure 8-4 Dialog Temperature

The temperature specifications for the SIMOTION P320-4 can be found at **SIMOTION P > Temperature**.

The current, the minimum and the critical temperature are determined at the housing, mainboard and CPU measuring points and displayed in this dialog box.

Options menu

Options	Description
Reset to factory default	Restore the factory default. This will delete the following data: • The non-volatile SIMOTION data (retain data) in the SIMOTION device • The backup of the non-volatile SIMOTION data on the external CFast card (PMEMORY.XML/PMEMORY.BAK) • The user data from the "Volatile SIMOTION data" area (RAM) and on the external CFast card (ROM) • The communication configuration (IP and DP parameters) on the external CFast card is set to the factory settings. The licenses on the CFast card are retained.

Note

Station Configurator settings

Settings made with the Station Configurator are reset to the default values at the time of delivery as well.

Further information

can be found in Section Defined states > Restore the factory settings using SIMOTION P State (Page 182)

Info menu

Info	Description
Hardware Version	Display of the hardware information.
Software Version	Display of the software versions.
Info about SIMOTION P State	Display of the SIMOTION P version.

Note

The versions in the **Info** menu only become visible after the Windows power-up after the SIMOTION P320-4 has been started once.

Parameter assignment/addressing 9

9.1 Parameter assignment / addressing requirements

The following actions should be completed before you start parameterizing or addressing:

- The SIMOTION P320-4 and the other hardware are installed.
- The devices are connected.
- The required software is installed.
- The SIMOTION P320-4 has been switched on.

The actual state should be saved after the parameterization.

9.2 Factory settings

9.2.1 Factory settings overview

Requirement

You have obtained information about the various communications models. Further information can be found under HMI and SIMOTION SCOUT (Page 61).

You are familiar with the Windows Control Panel.

Resetting the factory settings

It is possible to reset SIMOTION P320-4 to the factory settings (see section Resetting the SIMOTION P to the initial state (Page 196)).

9.2.2 Ethernet - TCP/IP local

SIMOTION P320-4 delivery state

Local communication in the SIMOTION P320-4 between Windows programs such as HMI and the SIMOTION P Runtime software is handled via the preset **TCP/IP** Ethernet communication.

As an alternative to TCP/IP, the **PC internal (local)** communication can also be used. Further information on how to check the settings in the Windows Control Panel can be found in Section Check PC internal settings (Page 146).

9.3 SIMOTION P control manager

9.3.1 Requirement

NOTICE
SIMOTION P Control Manager Because the settings made via the SIMOTION P Control Manager change the factory default parameters, they should only be made by authorized persons.

9.3.2 SIMOTION P Control Manager overview

The SIMOTION P Control Manager is used to configure the SIMOTION P software.

Call

The SIMOTION P Control Manager is only used by the **administrator**. Only the administrator is authorized to make changes.

The **SIMOTION P Control Manager application** is called by means of the operating system's Control Panel.

Properties

SIMOTION P Control Manager has the following features:

- The following settings take effect immediately after a change:
  - Start SIMOTION P
  - Automatic Restart By Plug-In External Memory Card
  - Ethernet-IP address
- The values to be set are generally required only by the administrator.
  These are:
  - License handling
  - IP addresses

9.3.3 Calling SIMOTION P Control Manager from the control panel

You can call the SIMOTION P Control Manager in the Windows Control Panel (Start > Control Panel).

The call can only be made as administrator. If you are not logged on as administrator, a prompt will appear notifying you of this fact.

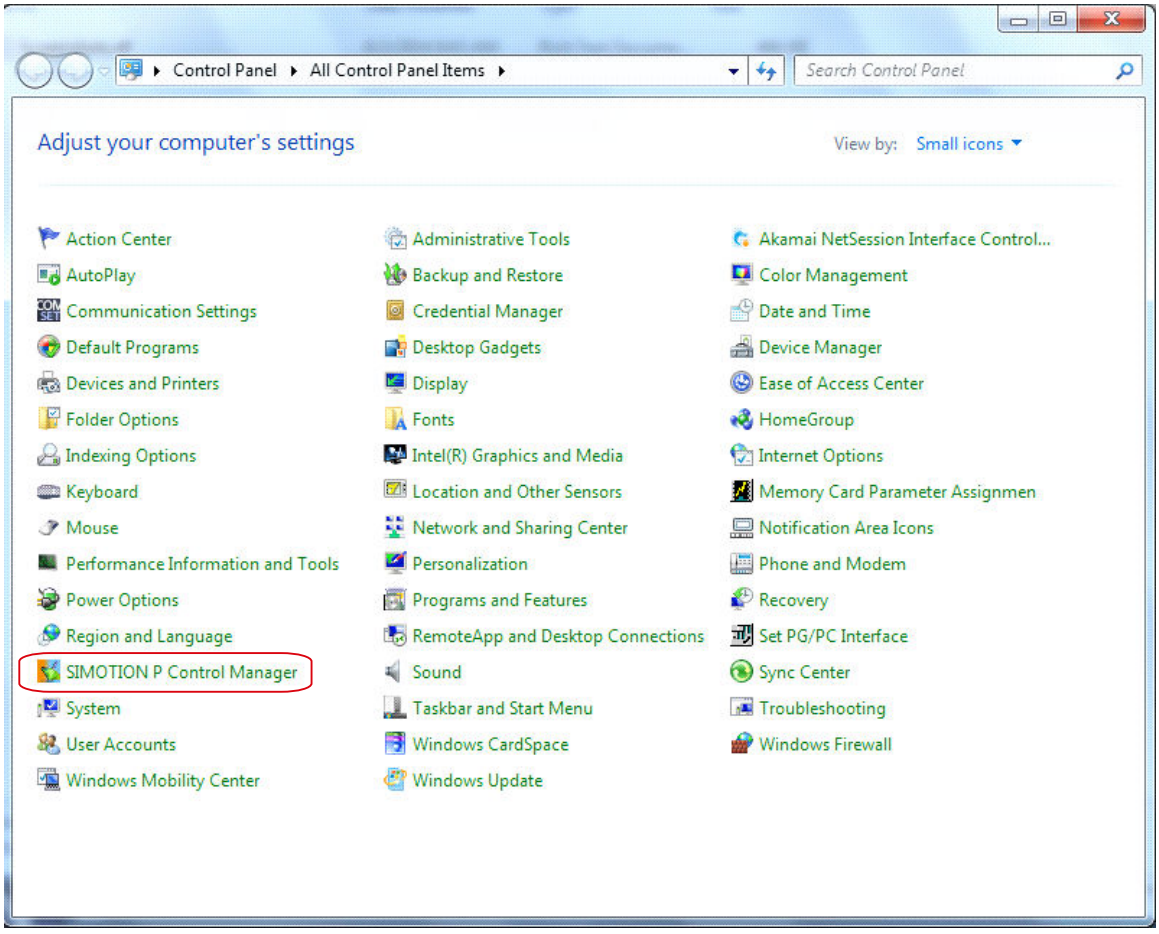

Figure 9-1 Calling the SIMOTION P Control Manager

If the call was successful, the **SIMOTION P Control Manager** dialog, **Administration** tab, is displayed.

The SIMOTION P Control Manager application is in English.

9.3.4 Administration tab

The **Administration** tab contains:

- Start SIMOTION P (Page 140)
- Automatic Restart By Plug-In External Memory Card (Page 141)
- Runtime Network Connections (Page 142)

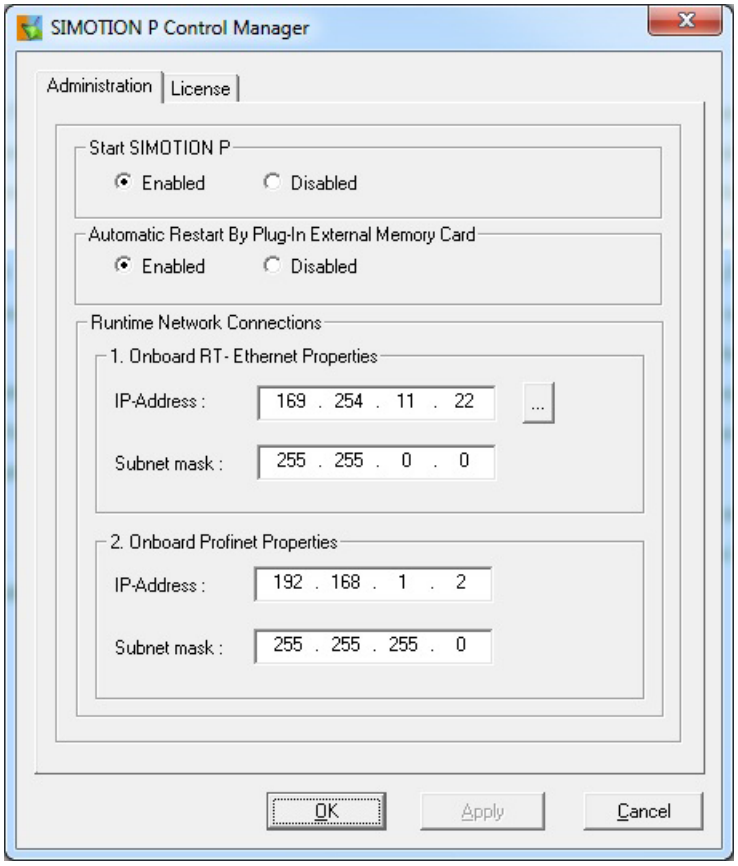

Figure 9-2 SIMOTION P Control Manager - Administration tab

9.3.4.1 Start SIMOTION P

The following settings are possible:

- **Enabled**
  Immediately cancels the lock set with **Disabled**. The SIMOTION P320-4 must be booted to automatically start SIMOTION P.
  SIMOTION P can also be started by means of the SIMOTION P State application using the **Start SIMOTION P** button.
- **Disabled**
  Prevents the automatic starting of SIMOTION P while the Windows system is booting up. SIMOTION P cannot be started until this lock is canceled.

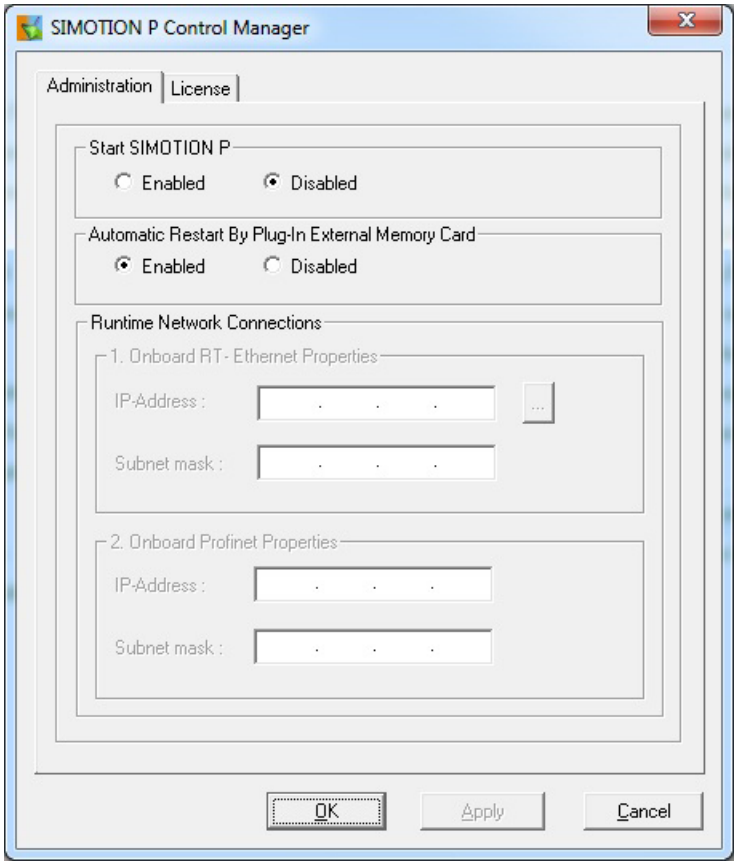

Figure 9-3 Start SIMOTION P - Disabled

SIMOTION P State display

If "Disabled" is selected in the **Administration** tab at **Start SIMOTION P**, the "Disabled" status is also displayed at **SIMOTION P State** .

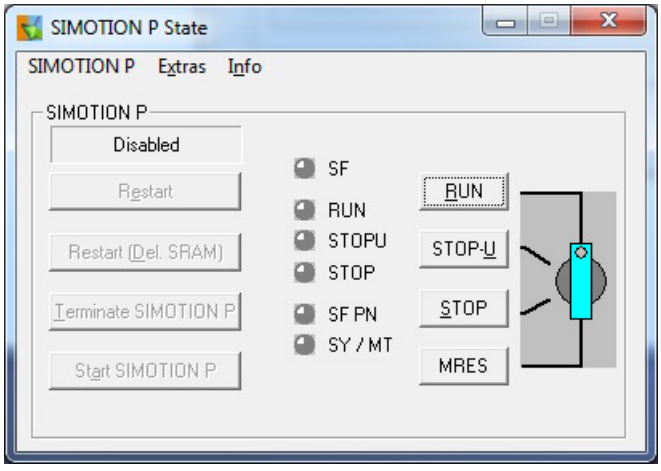

Figure 9-4 SIMOTION P State - Disabled status

9.3.4.2 Automatic Restart By Plug-In External Memory Card

Note

Not a Windows restart

Note that this is not a Windows restart!

The following settings are possible:

- **Enabled**
  An automatic restart of the SIMOTION P Runtime is performed at the start of the SIMOTION P320-4 with withdrawn CFast card or for a CFast card withdrawn during operation.
  The automatic restart of the SIMOTION P Runtime for the Enabled default setting is performed when the CFast card is inserted.

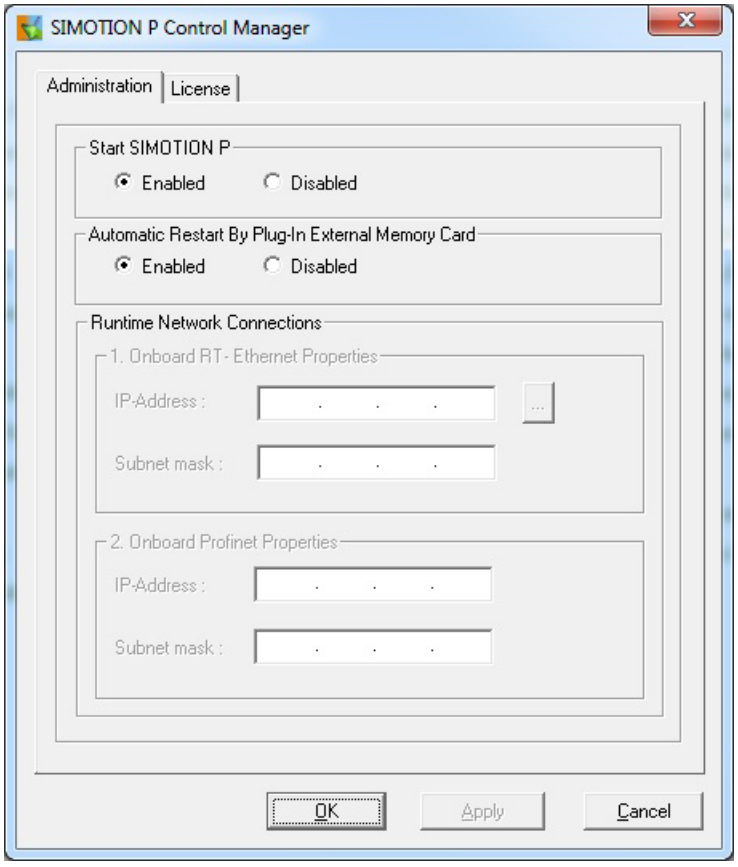

Figure 9-5 Administration tab - Automatic Restart By Plug-In External Memory Card

- **Disabled**
  The automatic restart of the SIMOTION P Runtime is prevented after inserting the CFast card.

Note

Behavior with withdrawn CFast card

Further information on the behavior of the SIMOTION P320-4 with withdrawn CFast card can be found in Section Automatic restart of the SIMOTION P Runtime (Page 87).

9.3.4.3 Runtime Network Connections

The Ethernet interface of the SIMOTION P320-4 is displayed here. It can be addressed via the SIMOTION P Runtime.

The IP address can be set here, however, it is not permanent.

The IP address set here loses its validity when the following actions are carried out:

- Booting of the SIMOTION P320-4
- Downloading a project to the SIMOTION P320-4
- Exiting the SIMOTION P Runtime (Terminate SIMOTION P)
- Restarting SIMOTION P Runtime (Restart)

The IP address in SIMOTION SCOUT can be changed permanently using the HW Config or user program.

Changing the IP address

You can change the IP settings after selecting the button, the **Onboard RT - Ethernet Properties** dialog box opens.

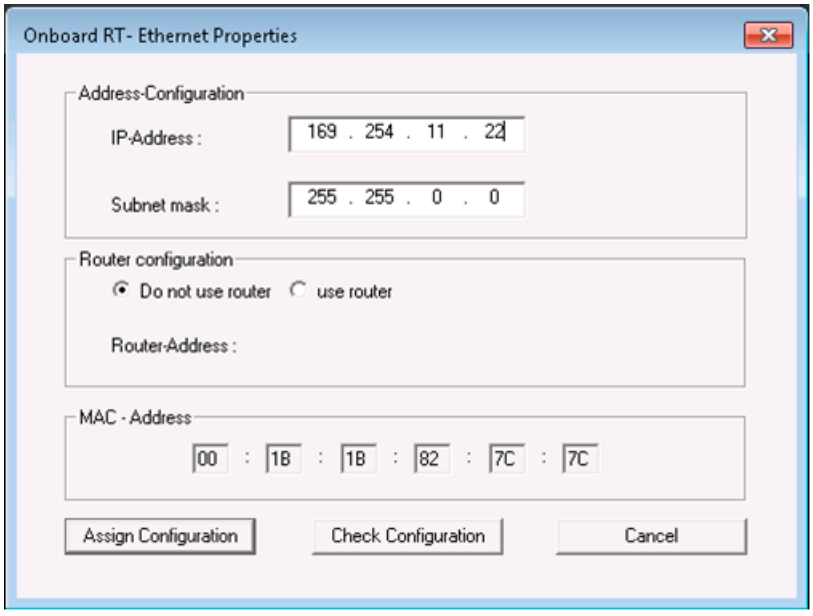

Figure 9-6 Onboard RT - Ethernet Properties

Click **Check Configuration** to validate the settings of the Runtime Ethernet configuration and check for agreement with the Windows Ethernet interface.
You can find further information about this in Section Ethernet communication overview (Page 150).

Click **Assign Configuration** to also check the settings and accept them.

Note

The IP data is only displayed when the SIMOTION P320-4 is started.

9.3.5 License tab

The **License** tab can be used

- To view currently installed licenses
- To enter new License Keys.

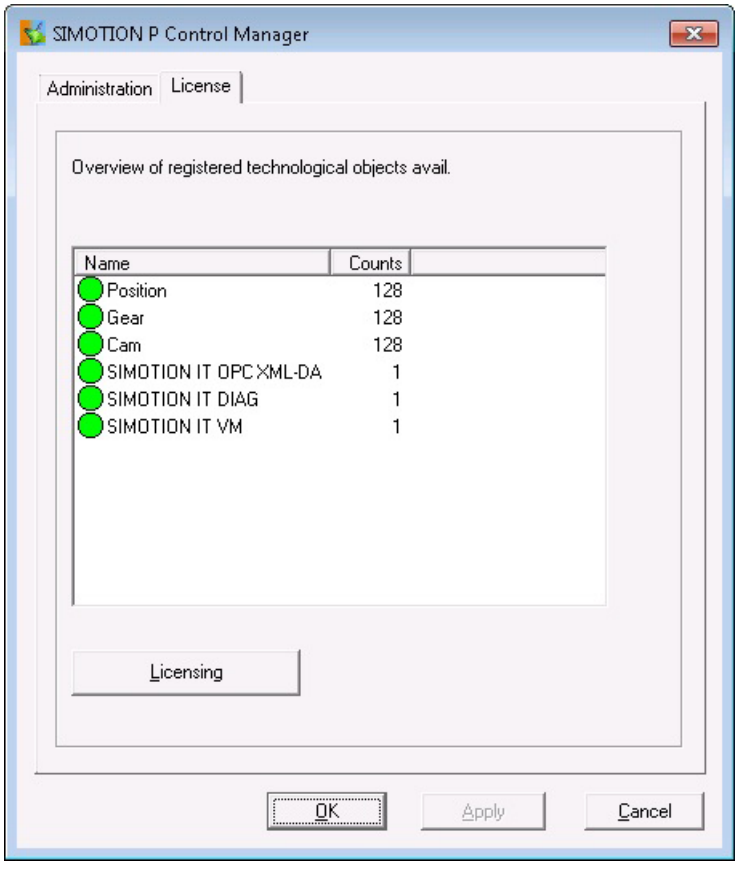

Figure 9-7 License tab

This tab displays the licenses currently installed on this hardware. If you wish to modify the licensing of this hardware, click the **Licensing** button.

The **License Manager** dialog box is displayed; here you enter a new **License Key**.

License Manager

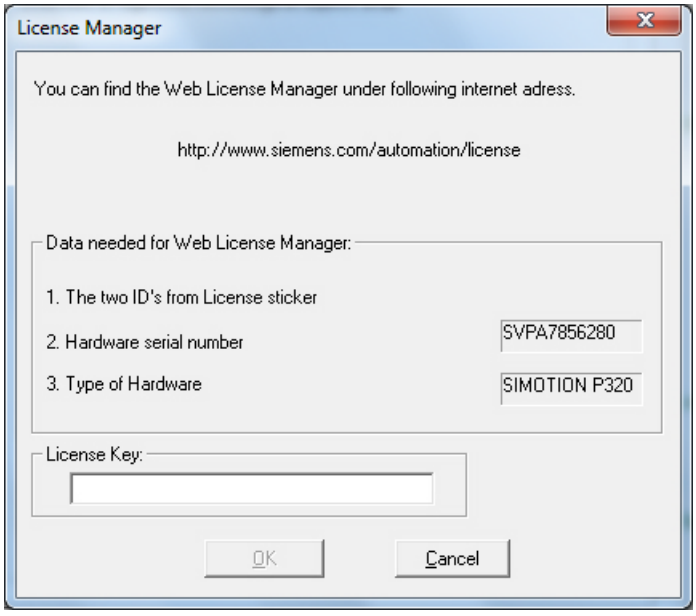

Figure 9-8 Dialog License Manager

Impact of hardware replacement on licensing:

The replacement of the SIMOTION P320-4 means that the License Keys which were generated for the previous SIMOTION P320-4 must be regenerated and transferred to the new SIMOTION device.

In this case, contact the hotline: http://support.automation.siemens.com

Note

You must restart the SIMOTION P320-4 after licensing. To do this, in SIMOTION P State press

- either the **Restart** button
- or the "**Terminate SIMOTION P**" button and then **Start SIMOTION P**.

Note

For more information on licensing, see the SIMOTION SCOUT Configuration Manual.

9.4 Local communication via PC internal

9.4.1 Local communication (PC-internal) overview

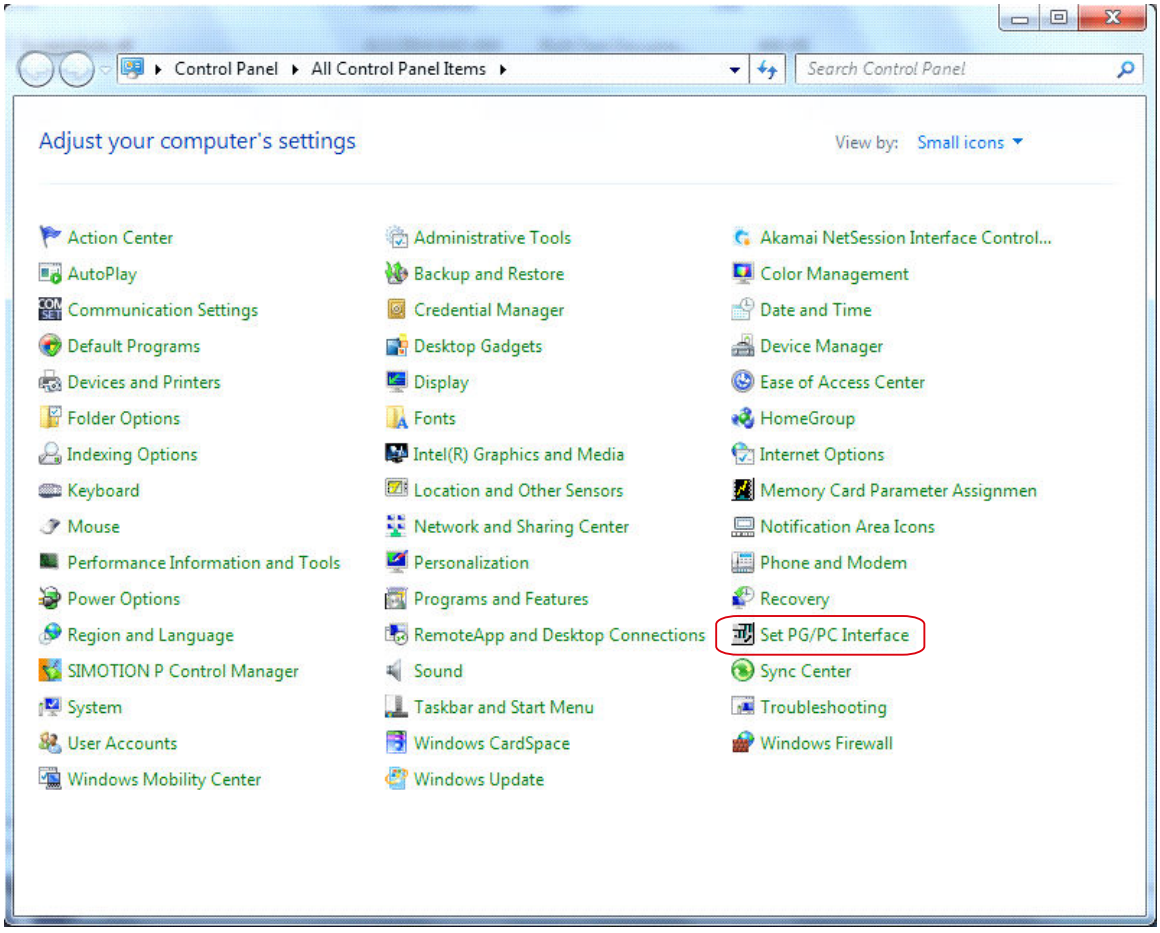
Local communication in the SIMOTION P320-4 between Windows programs such as HMI and the SIMOTION P runtime software is handled by the PC's internal communications mechanisms.

9.4.2 Checking the PC-internal settings

Configuration in the Windows Control Panel of the SIMOTION P320-4

To enable local communication the following settings must have been made:

You can access the settings via the Control Panel of Windows:



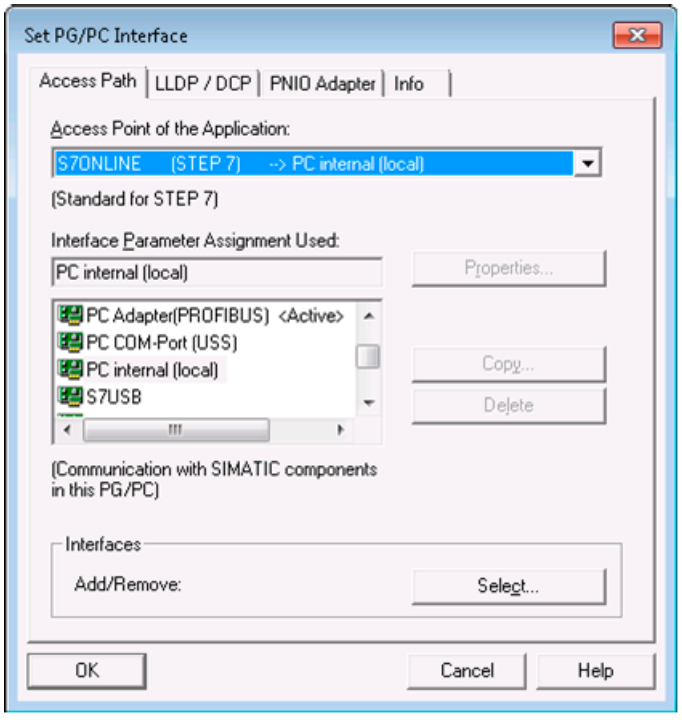


Figure 9-9 Control Panel - Set PG/PC Interface

Procedure

Proceed as follows to set the local communication to "PC internal (local)":

1. Call **Set PG/PC Interface**.
2. In the **Access Path** tab, set the field **Interface Parameter Assignment Used** to **PC internal (local)**.

3. Confirm with **OK**.

Note

SIMOTION P320-4 delivery condition

The preset communication version for the SIMOTION P320-4 is TCP/IP.

Further information can be found in Section Local HMI or ES on SIMOTION P320-4 (Page 61).

9.4.3 Station Configurator

The **Station Configurator** is required to configure the communication paths for the HMI software.

The Station Configurator is provided directly as desktop icon of the SIMOTION P320-4.

Figure 9-10 SIMOTION desktop with Station Configurator

Note

Changes via Station Configurator

If you want to make changes via the **Station Configurator** , it is essential that you terminate SIMOTION P before calling the function (with **Terminate SIMOTION P** in the SIMOTION P State application).

Observe uniform configuration

Check if the offline configuration set via SIMOTION SCOUT (HW Config) corresponds exactly to the online configuration set in the Station Configurator :

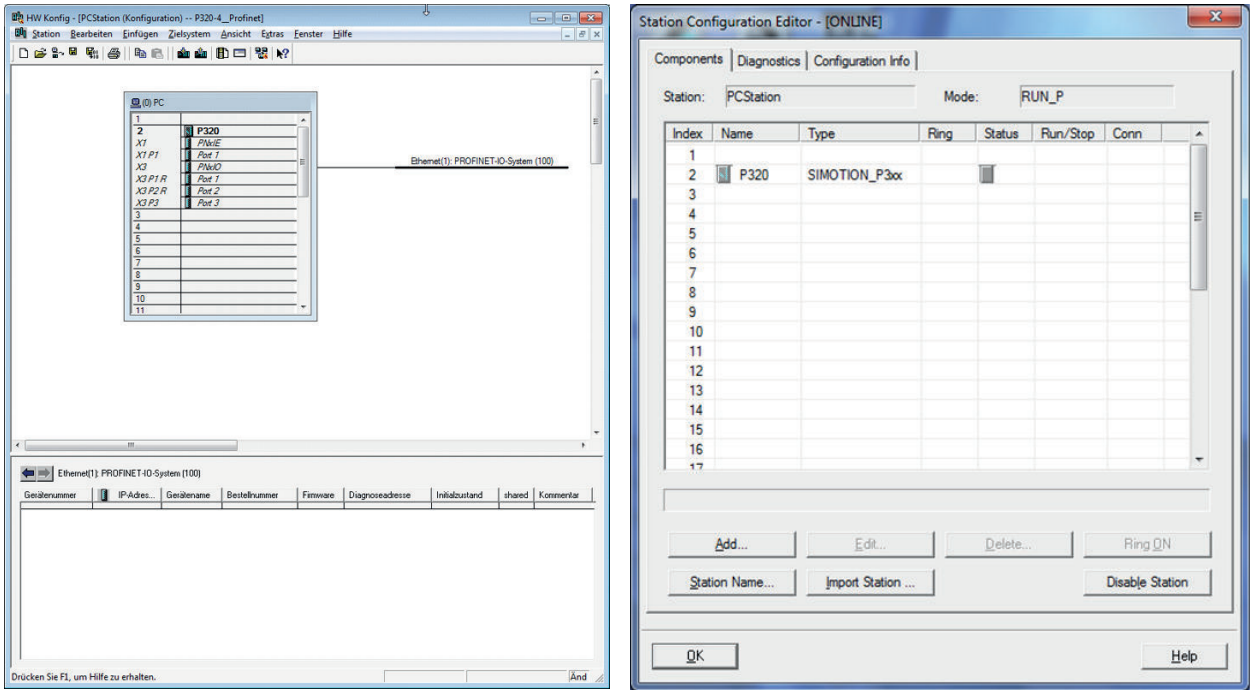

Figure 9-11 Illustration of the offline HW Config (left) - online Station Configurator (right)

9.5 Ethernet communication

9.5.1 Ethernet communication overview

SIMOTION P320-4 has one onboard Ethernet interface.

NOTICE
SIMOTION P Runtime During SIMOTION P Runtime, the onboard Ethernet interface must be **activated** under Windows. The onboard Ethernet interface must not be deactivated or activated during operation.

You can connect Industrial Ethernet to the Ethernet interface X1.

Industrial Ethernet is a communication network with a transmission rate of 10/100/1000 Mbps.

Note

Operating Ethernet locally

The SIMOTION P320-4 is configured for the **TCP/IP** communication version in the delivery condition.

See also Local HMI or ES on SIMOTION P320-4 (Page 61).

9.5.2 Ethernet interface

SIMOTION P320-4 has an onboard Ethernet interface.

An Ethernet interface can always have two IP addresses, one for Windows and one for the access from SIMOTION.

Table 9-1 Ethernet ports overview

Ethernet ports	Access to/from the SIMOTION P Runtime	Access to/from Windows
Onboard Ethernet 1	X	X
PROFINET onboard	X	-

The IP addresses have been set to the default values.

- Onboard Ethernet interface X1 reserved for Windows/SIMOTION (see section Default IP addresses for Windows and SIMOTION P (Page 153))
  - Windows setting: Default address
  - SIMOTION P Runtime: Default address

If the Windows IP address is taken from a DHCP server, the assignment of the runtime IP address and runtime subnet mask must also be selected in accordance with the default setting of the DHCP server.

The following applies (see Section Communication via an Ethernet interface (Page 153)):

- Windows IP address ≠ runtime IP address
- Windows IP address and runtime IP address must be in the same subnet

Ethernet interface for SIMOTION P Runtime

The IP address of the **Ethernet interface for SIMOTION P Runtime** can be:

- Displayed and changed via SIMOTION SCOUT
- Displayed in the **Administration** tab via the SIMOTION P Control Manager application. Here, however, the IP address can only be changed temporarily.
  Its validity ends with:
  - Booting, downloading, as well as terminating or restarting of SIMOTION P Runtime.
    Further information can be found in Section Administration tab (Page 138).

Ethernet interface for Windows

The IP address of the **Ethernet interface for Windows** can **only** be modified via the Windows Control Panel > Network and Sharing Center.

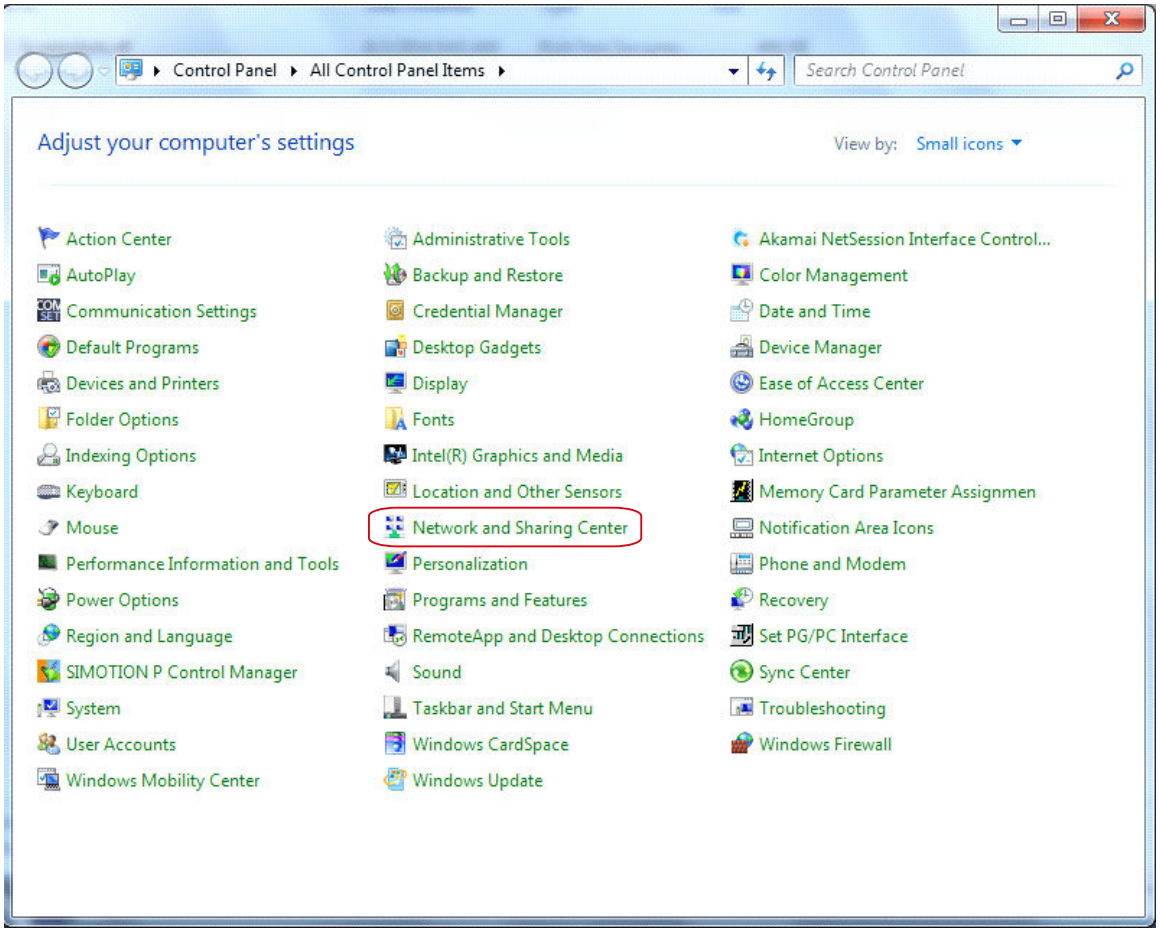

Figure 9-12 Windows Control Panel-Network and Sharing Center

Note

Windows Firewall

To allow the Windows IP to be accessed externally, this must be set as an exception in the Windows firewall **File and Printer Sharing**. Otherwise, there is only limited access to Windows from outside.

9.5.3 Default IP addresses for Windows and SIMOTION P Runtime

Default Ethernet addresses for use from Windows and SIMOTION P are preset.

Table 9-2 Default Ethernet address for Windows and SIMOTION P Runtime

Ethernet interface	Windows	SIMOTION P Runtime
Onboard Ethernet 1	169.254.11.21	169.254.11.22

The default IP address for Windows can result in IP addresses being assigned twice, e.g. during series commissioning (see Troubleshooting/FAQs (Page 219)).

If DHCP is set under Windows, the IP addresses for Windows are determined automatically.

9.5.4 Communication via an Ethernet interface

If both Windows and SIMOTION use the onboard Ethernet interface X1, the following configuration is present:

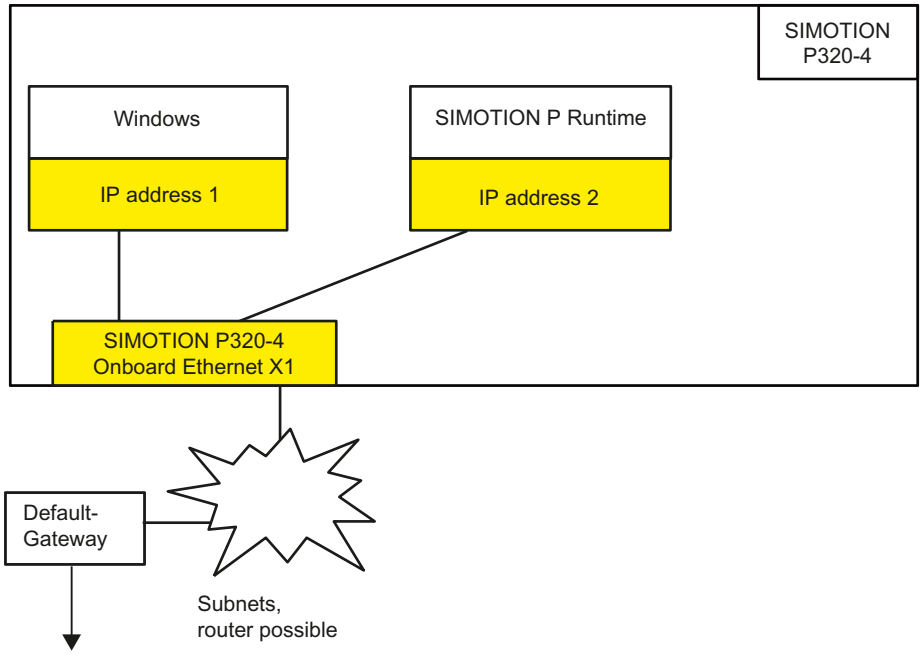

Figure 9-13 Distribution of the IP addresses for Windows and SIMOTION P Runtime

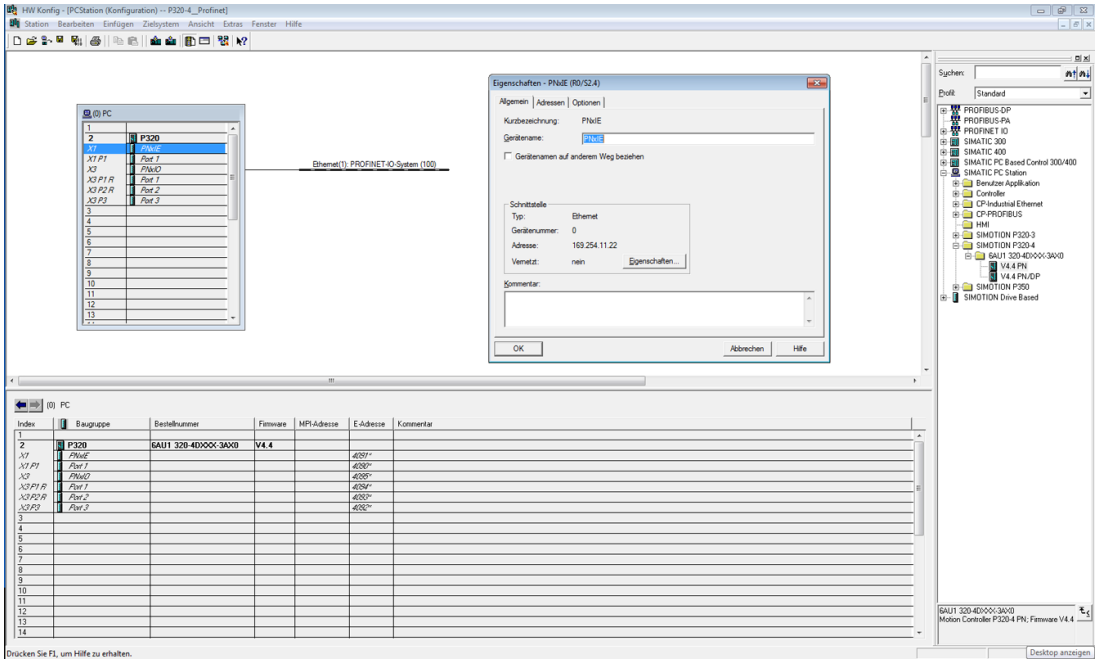
Note

If no change of the default IP addresses is desired, all conditions with the default IP addresses are fulfilled and no change is required.

The following conditions apply:



- IP address 1 ≠ IP address 2
- IP address 1 is in the same subnet as IP address 2
- IP address 1 is configured as of Windows 7 under > Control Panel > Network and Sharing Center.

Note

The setting for the default gateway must be identical for the IP addresses 1 and 2.

Procedure in HW Config to change the default IP addresses

1. Double-click **PNxIE** of the PC station. The following dialog box is opened.

2. Click the **Properties...** button of the Properties - PNxIE dialog box.

3. Enter the **IP address** for SIMOTION in the entry field (the default IP address is shown here).

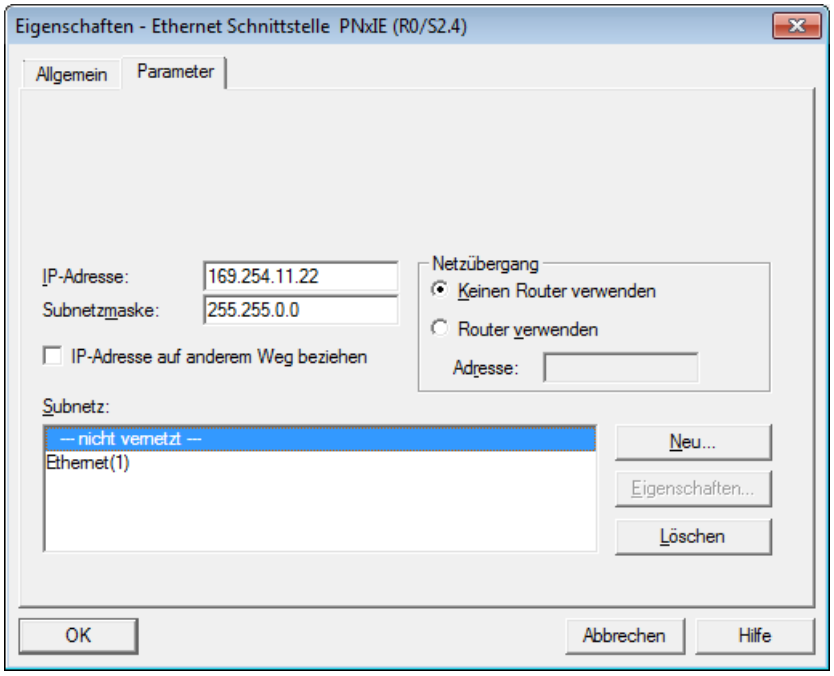


Figure 9-14 Changing the RT address for onboard Ethernet (1) - Properties dialog box

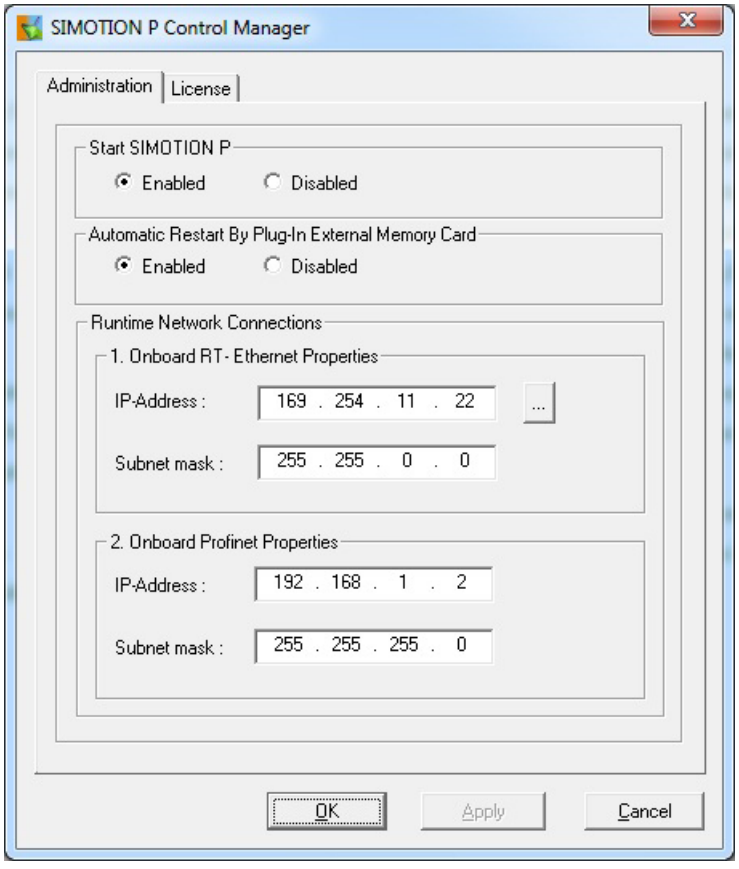
4. Enter the desired subnet mask in the **Subnet mask** entry field and, if required, a router that is to be used as default gateway.
5. Confirm with **OK**.

Activation state of the onboard Ethernet interfaces

The onboard Ethernet interface must be activated for the SIMOTION P Runtime (default setting = activated).

You can check the activation via the **Administration** tab of the **SIMOTION P Control Manager** (accessible via the Windows Control Panel with Start > Control Panel).

The **Activate Device** checkbox is displayed after selecting the button for **Onboard RT - Ethernet Properties**.



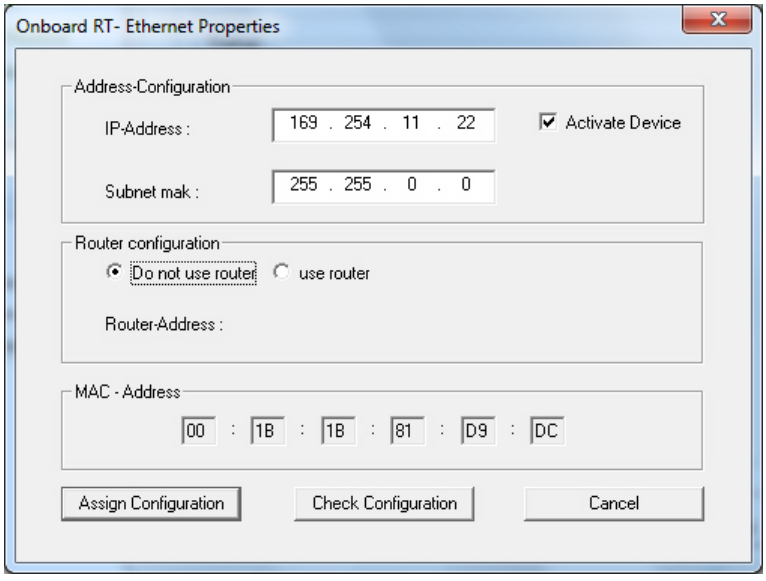


Figure 9-15 SIMOTION P Control Manager - Administration

NOTICE
SIMOTION P Runtime During the runtime of SIMOTION P, the Windows settings must be **activated** for the onboard Ethernet interface. The onboard Ethernet interface must not be deactivated or activated during operation.

9.5.5 Establishing the active flag for an external PG/PC

Requirement

A PG/PC is required to create projects and download them to the target device.
SIMOTION SCOUT can only be installed on the SIMOTION P320-4 S.

Note

Observe the online access point for SIMOTION P320-4 S

For SIMOTION P320-4 S, use **S7ONLINE** as access point to avoid inconsistencies.

Procedure

Proceed as follows to open NetPro and assign an interface in the PG/PC:

1. Open the project in SIMOTION SCOUT.
2. Click the button **Open NetPro**.
   NETPRO is accessed, and the configured network is graphically displayed. The PG/PC connection to the configured network is shown not bold and in a color **other than** yellow.
3. Double-click on the PG/PC that you would like to configure.
   The **Properties - PG/PC** dialog box is displayed with the **Assignment** tab in the foreground.
4. In the field **Assigned:** select the interface and activate S7ONLINE access by clicking the corresponding checkbox.
5. Accept the settings by clicking **OK**.
   The PG/PC connection to the configured network is now displayed in **bold** and **yellow**.
6. Save the changes via **Network > Save and compile** and upload them to SIMOTION P320-4.

Result

Now you can go online via the PG/PC.

9.6 PROFINET communication

9.6.1 Documentation

Description of PROFINET communication

A detailed description of PROFINET communication can be found in:

- SIMOTION Communication System Manual or
- SIMOTION SCOUT Online Help under **Basics** > **Communication** > **PROFINET IO**.

9.7 PROFIBUS communication

9.7.1 Documentation

Description of PROFIBUS communication

A detailed description of PROFIBUS communication can be found in:

- SIMOTION Communication System Manual or
- SIMOTION SCOUT Online Help under **Basics** > **Communication** > **PROFIBUS DP**.

9.8 Project download

Requirement

The **P320-4 PN** and **P320-4 PN/DP** modules have the same article number. For this reason, there is no distinction between the device during a download.

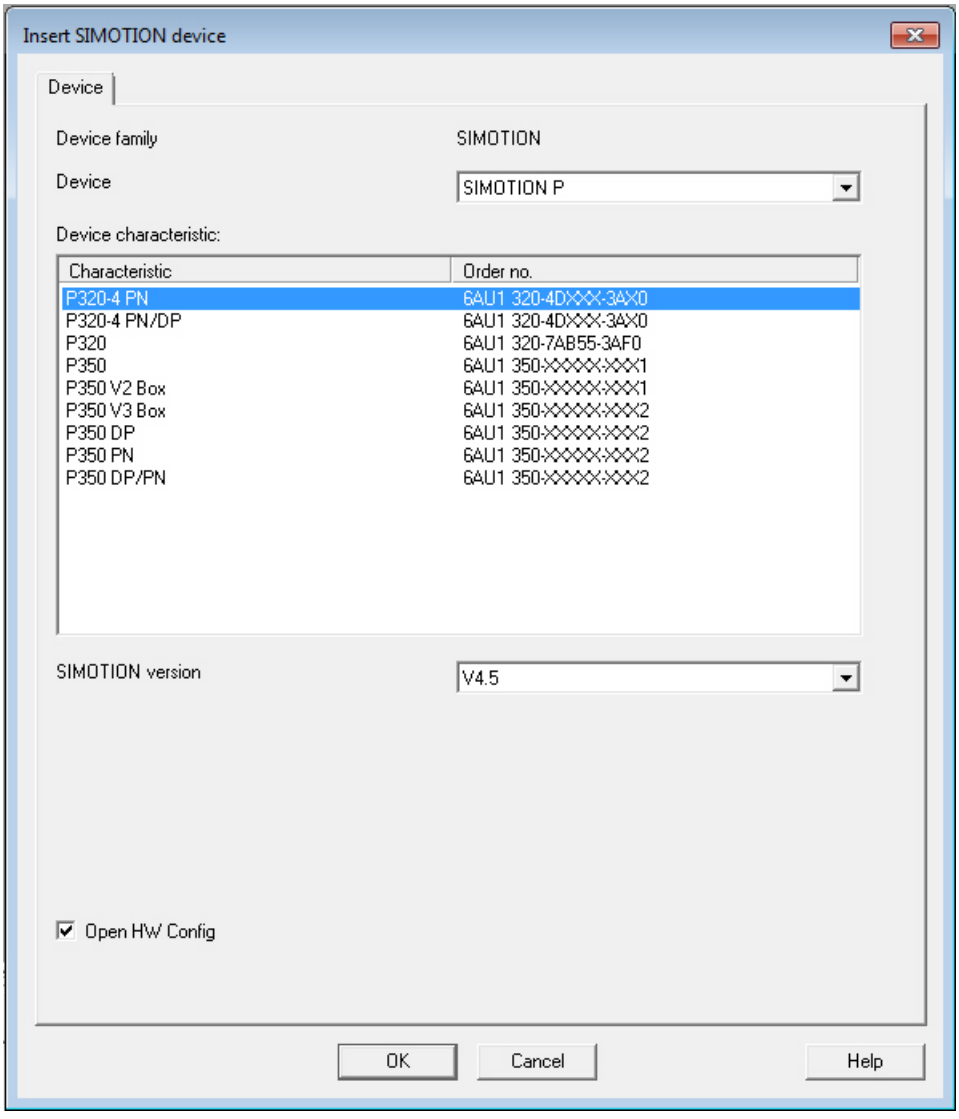

Figure 9-16 Inserting a SIMOTION device - selecting the device version

Behavior of the P320-4 PN device with the P320-4 PN/DP module

- If a **P320-4 PN** device with created PN line is loaded to a **P320-4 PN/DP module**, the project runs exactly as on a **P320-4 PN module**.

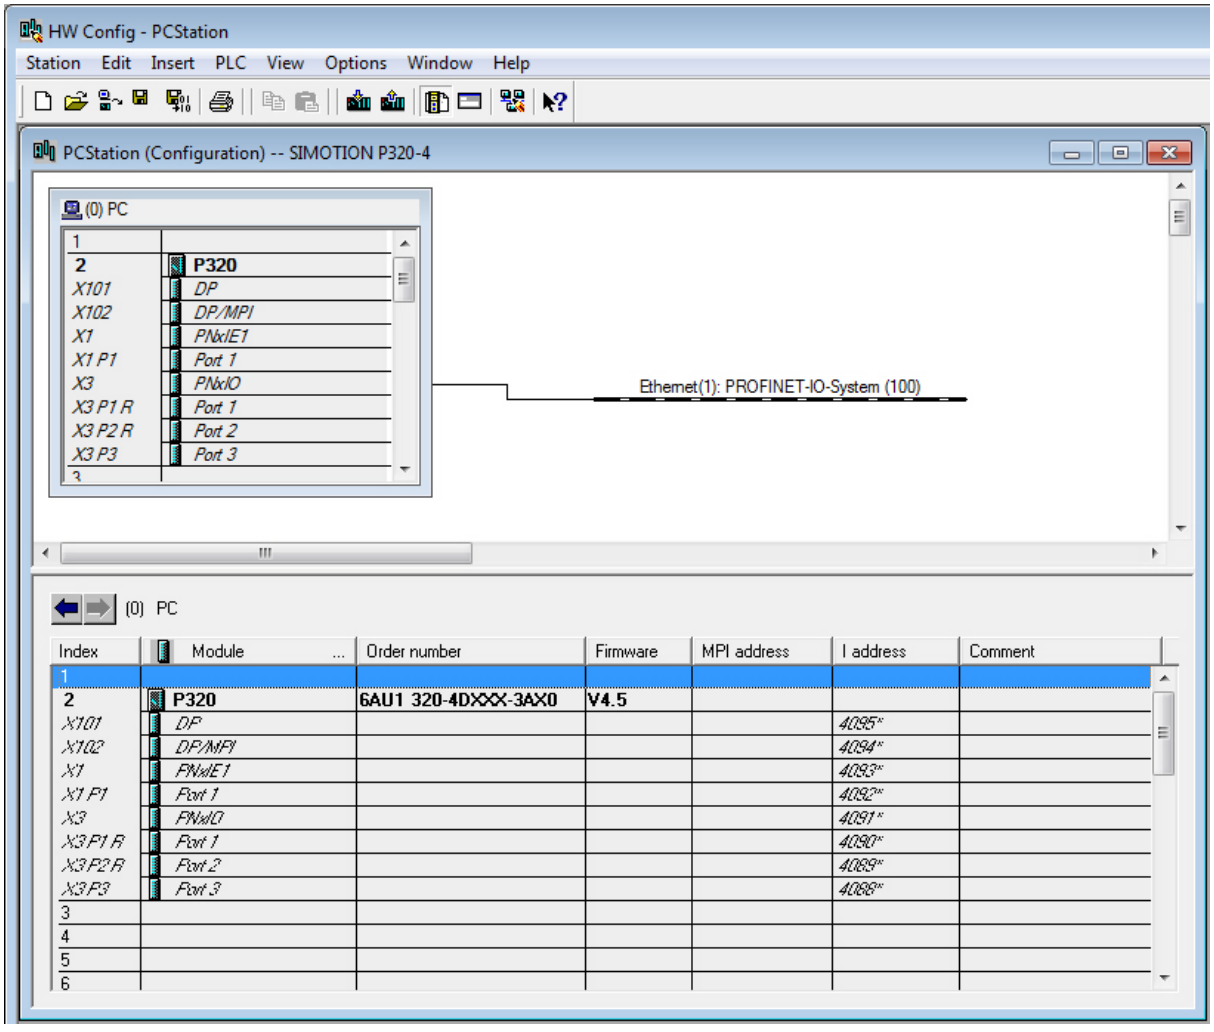

Figure 9-17 P320-4 PN/DP with created PN line (PROFINET-IO system)

- If a **P320-4 PN** device without created PN line is loaded to a **P320-4 PN/DP module**, there is no guarantee that the module runs with the configured base cycle clock.

Behavior of the P320-4 PN/DP device with the P320-4 PN module

Note

A **P320-4 PN/DP** device generally does not run on a **P320-4 PN module**.

The following message is displayed in the diagnostic buffer:

"Source 0 could not be loaded (inconsistency)".

The loaded configuration is not suitable.

9.9 Battery monitoring

The installed buffer battery has a service life of at least 5 years. The status can be checked with two-tier battery monitoring.

When the first warning level is reached, the remaining service life of the battery for buffering CMOS data and buffered SRAM is at least 1 month.

You will find further information on the battery warning at: Two-stage battery monitoring (Page 199)

Lithium battery - ordering data		
Designation	**Article number**	**Further information**
Lithium battery	A5E30314053	Spare part

Commissioning (software) 10

10.1 Note before commissioning

Delivery condition

SIMOTION P320-4 is delivered with:

- Windows operating system
- SIMOTION P Runtime application

NOTICE
Risk of damage to the SIMOTION P320-4
If condensation has developed, wait at least 12 hours before commissioning the device.

10.2 Basic commissioning - initial startup

Requirement

The following requirements must be met before initial commissioning:

- The device is connected to the 24 VDC power supply.
- Equipotential bonding is connected.

10.3 Commissioning requirements

Prior activities

You have already performed the following actions:

- Your system has been installed and wired.
- The installation and parameterization has been completed.
- When networking via PROFINET, the PROFINET addresses of the bus nodes with which the SIMOTION P320-4 communicates are set.

See also

Connection requirements (Page 101)

Parameter assignment / addressing requirements (Page 135)

10.4 Notes on commissioning

Starting up communications

The following components must be commissioned:

- SIMOTION P320-4
- PROFINET component

Commissioning is performed either via the programming device or by installing the software required for commissioning on the SIMOTION P320-4.

If a panel is used, it must be connected.

Commissioning the components

Please refer to the relevant documentation for the commissioning of the components used with SIMOTION P320-4:

- ET 200 PN I/O
- PROFINET IO drives,

10.5 Recommended order for first commissioning

The individual steps for first commissioning are listed below in the recommended order.

1. The complete system is connected mechanically and electrically, and has been verified.
   - SIMOTION P320-4
   - Drives
   - Motors
   - SIMATIC S7 I/O components
   - HMI user interfaces
2. The article numbers of the drives and SIMATIC S7 I/O components should be available. You need these order numbers when setting up a SIMOTION project to verify that the components selected from the hardware catalog in the **HW Config** application correspond to the ones used in the system.
3. Prepare the drives for communication on the PROFINET IO.
4. Commission the drives via PROFINET IO.
   Literature: Function description of the associated drives
5. Carry out a test run for all axes.
6. Perform the optimization of the drives.
7. Switch on and power up the SIMOTION P320-4; all the basic settings are made automatically.

See also

License tab (Page 144)

10.6 Data backup

10.6.1 Memory media

The storage media of the SIMOTION P320-4 are divided into internal and external memories on drives C: and D:.

The SIMOTION P Kernel and Windows system software are located on the internal storage medium on drive C:.

Media

The following figure shows the partitioning of the storage medium in the delivery state, depending on the version of the SIMOTION P320-4.

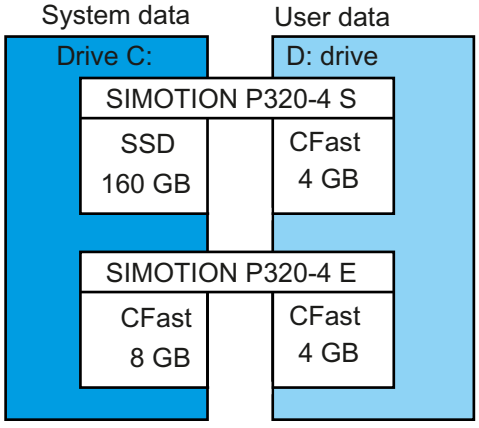

Figure 10-1 Storage media of the SIMOTION P320-4

Drive C:

Drive C: reserved for the Windows system software, SIMOTION P kernel, etc.

NOTICE
Compression for drive C: Not permissible Compression must not be activated for files and folders on drive C: for correct operation of the SIMOTION P320-4.

Drive D:

Drive D: contains the **user data**, e.g. programs, configuration data, parameter assignments of SIMOTION P Runtime.

Note

Storage of user data

It is recommended that only the user data be saved on drive D:.

10.6.2 SIMATIC data backup

Data backup under Windows Embedded Standard 7 32-bit / Windows 7 Ultimate 32-bit

For backing up data under Windows Embedded Standard 7 32-bit and Windows 7 Ultimate 32-bit, we recommend the software tool **SIMATIC IPC Image & Partition Creator** (as of V3.3.1). This tool allows the easy backing up and quick restoration of entire memory cards.

The SIMATIC IPC Image & Partition Creator only supports the burning of DVD media.

This software is available via the online ordering system Siemens Industry Mall (http://www.siemens.com/industrymall). You can find more accurate information about the tool in the associated product documentation.

10.6.3 Restore DVD

SIMOTION P320-4 is supplied with pre-installed hardware and software and is therefore ready for connection and operation.

The delivery kit includes a restore DVD. Using the restore DVD, you can restore the delivery state of the SIMOTION P320-4, e.g. in case of a problem when installing additional software packages such as HMI software.

It is recommended that you create a data backup after commissioning by the OEM. Save the data backup on an external hard disk or a USB flash drive.

The fundamentals of the data storage concept and the various types of data back-ups of the SIMOTION P320-4 are described in the section on the Data storage concept (Page 171).

Note

SIMOTION licenses

SIMOTION Runtime licenses are retained (e.g. axis licenses) when the SIMOTION P320-4 is restored to its delivery state.

Only the licenses of the **Automation License Manager** are deleted (e.g. for the SIMOTION SCOUT engineering system).

10.7 Power-up of the SIMOTION P Kernel

The SIMOTION P Kernel is started by default when Windows is booting. It is therefore available after each power-up of the SIMOTION P320-4. The startup process is triggered by an installed service, the **SIMOTION P Startup Service**. This service ensures that the SIMOTION P Kernel starts automatically during the Windows power-up.

SIMOTION P320-4 is started with the project last saved from RAM to ROM and starts running immediately if the operating state was set to RUN when the system was switched off.

If you want to explicitly terminate the SIMOTION P320-4 without exiting Windows, use the **SIMOTION P State** application.

To do this, you must be logged on with administrator privileges. Only the administrator is offered the button for the **Terminate SIMOTION P** function.

After explicitly terminating the SIMOTION P Kernel via the SIMOTION P State application, the SIMOTION P Kernel can be restarted via this application (Start SIMOTION P button). A restart of Windows also results in a restart of the SIMOTION P Kernel.

You can find more detailed information about SIMOTION P State in Section SIMOTION P State application (Page 127).

10.8 Data storage concept

10.8.1 Data storage concept overview

Overview

The backup possibilities described in the following section can be used to backup and restore the complete SIMOTION P320-4 installation with the current configuration and customization.

The SIMOTION version on the target device does not need to match the version of the device on which the backup was created.
Under certain preconditions, e.g. identical hardware for storage medium image, series commissioning can also be carried out using these backup and restoration mechanisms.

Storage medium image

With a storage medium image, the entire storage medium can be backed up and restored. This allows series commissioning to be performed (requirement: identical hardware!).

A storage medium image must be created both for the internal storage medium (Drive C) and for the external CFast card (Drive D). When creating the image with the **SIMATIC IPC Image Creator**, an image can be created jointly for one internal and one external storage medium.

When loading an image, be aware that the images for the internal and external storage media must be loaded separately and that the wizard must therefore be run twice. It is not possible to load the image onto both drives in a single process.

The restore DVD contains a storage medium image of the plant with which the delivery state of the SIMOTION P320-4 can be restored.

Various mechanisms are available for backing up and restoring data for the SIMOTION P320-4.

These mechanisms are described in the following sections, starting with the largest possible scope of a backup to the backing up of variables.

Although the backup/restore of data in many cases is initiated by the user, it is sometimes also performed automatically or started by the user program.

In addition to restoring defined states and updating/reloading a project in the target device, data backups are also needed to prevent data loss resulting from a hardware defect or failure of the backup battery.

Project update

The Project update (Page 173) section describes options for updating/retransferring or backing up a SIMOTION project.

Application

- Transfer of a project to the newly installed SIMOTION P320-4
- Series commissioning

Advantage

Series commissioning is also possible without a programming device or using remote maintenance.

Disadvantages

The SIMOTION version on the target device must exactly match the version of the device on which the backup was created.

Single backups

The Single backups (Page 177) section describes the options for backing up and restoring retain variables, retain TOs, unit variables, and global device variables.

Application

- Data backup when replacing the SIMOTION P320-4
- Restore the SRAM after a failed consistency check (battery failure,…)
- Backup the data for Unit variables and device-global variables from the RAM
- Backup values (variables) from the RAM
- Restore a defined state of the machine

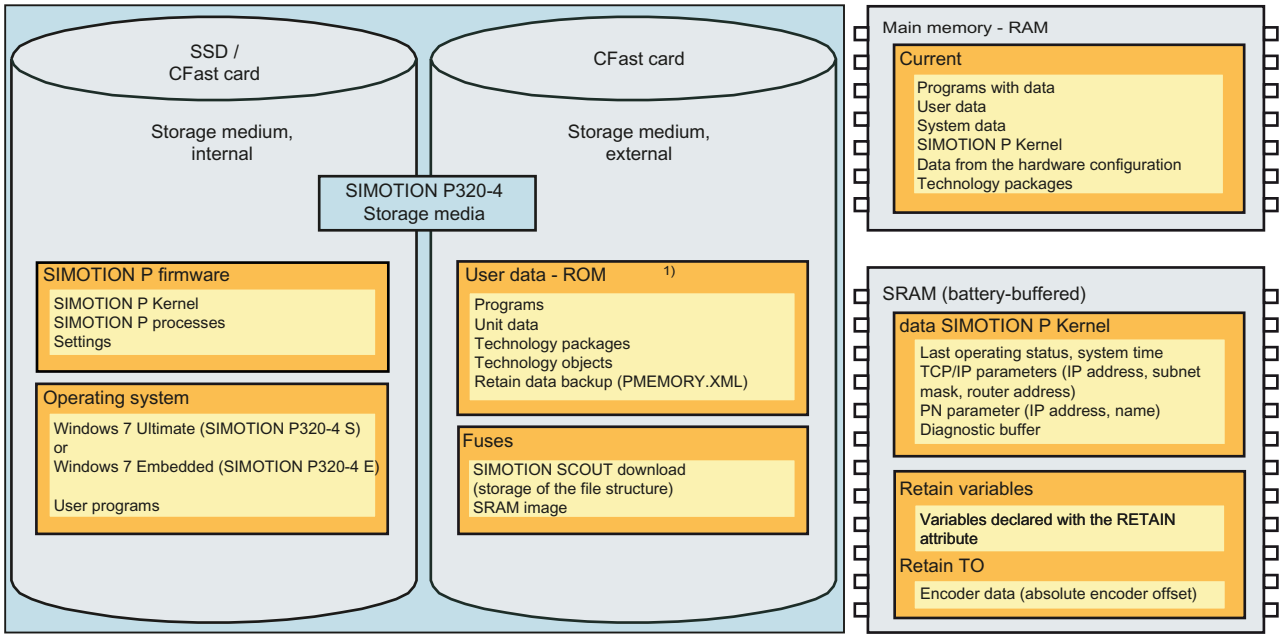
Advantages

- The user program can use system functions to perform a backup
- Version-independent restoration of the retain data (non-volatile SIMOTION data)

Disadvantages

No complete backup

Defined states



The Defined states (Page 181) section describes the options for restoring a defined state / initial state.

Application

- System defect
- Windows defect
- Restore a defined initial state, for example, during commissioning

10.8.2 Memory model

The following figure shows which data memories are used by SIMOTION P320-4 and which data is saved in them.

1) The user data must not be written by Windows during runtime (SIMOTION P State = RUN).
User data can be written from the Explorer or other applications in the **Terminate SIMOTION P** state.

Figure 10-2 SIMOTION P320-4 memory model

10.8.3 Project update

10.8.3.1 Overview

The backup possibilities described in the following section can be used to update, retransmit or back up a SIMOTION project.

The **download of project data** (file structure or ZIP file) via **SIMOTION SCOUT** can be used to perform series commissioning of a SIMOTION project.

SIMOTION IT allows series commissioning using remote maintenance via a web browser. Supported web browsers are, for example, Internet Explorer or Mozilla Firefox.

Detailed information about the backup options for the project update can be found at:

- SIMOTION Project Download online (Page 174)
- SIMOTION SCOUT - download of the project data (file structure) (Page 174)
- SIMOTION SCOUT - download of the project data with SIMOTION IT (ZIP file) (Page 175)
- Backing up and restoring project data (file structure) (Page 177)

10.8.3.2 SIMOTION Project Download online

The project data is loaded from a programming device with engineering system to the work memory (RAM) and selected parameters (e.g. TCP/IP) to the SRAM or exchanged between SRAM and work memory (RAM).

The explicit import of user data into the external CFast card is initiated by SIMOTION SCOUT (**Copy RAM to ROM**).

Note

Identical names in SIMOTION SCOUT / Station Configurator are essential

It is essential for the download that the name of the station is identical in the engineering system (SIMOTION SCOUT) and in the Station Configurator of the SIMOTION P320-4.

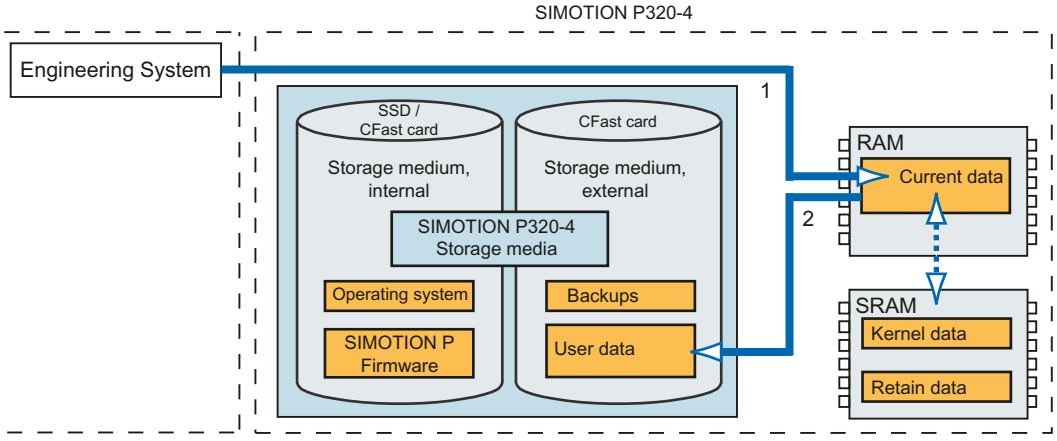


Figure 10-3 SIMOTION SCOUT download from the engineering system

SCOUT project download online process

1. Load the project data via **SIMOTION SCOUT**, menu **Target system > Load > Load project into target system...**, into the working memory of the SIMOTION P320-4.
2. To transfer the data to the external storage medium, use the menu **Target system > Copy RAM to ROM** in SIMOTION SCOUT.

The project data is transferred to the controller.

10.8.3.3 SIMOTION SCOUT - download of the project data (file structure)

The project data is saved by SIMOTION SCOUT in the form of the file structure in a file system (e.g. a programming device with an engineering system).
The user copies this file structure to the external CFast card of the SIMOTION P320-4.

This permits a series commissioning of SIMOTION programs.

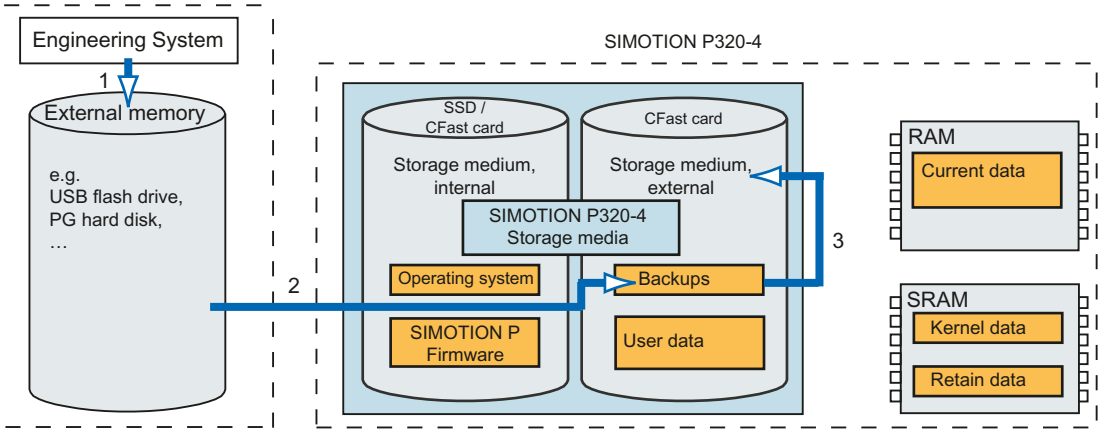

Figure 10-4 SCOUT download (file structure)

Download of the project data process (file structure)

1. Save the data via SIMOTION SCOUT, menu **Edit > Load to file system ...** (option **Save normally**), on the file system of your programming device.
2. Copy this data (file structure) to the external CFast card (drive D) of SIMOTION P320-4 (e.g. with USB memory stick and Windows Explorer).
   SIMOTION P must be in the **terminated** state for this.

Note

Note the SIMOTION version

The SIMOTION version on the target device must exactly match the version of the device on which the backup was created.

10.8.3.4 SIMOTION SCOUT - download of the project data with SIMOTION IT (ZIP file)

SIMOTION SCOUT stores the project data in the form of a ZIP file to a file system (e.g. a programming device with engineering system). This ZIP file can be transferred by the user to the SIMOTION IT web server with the web browser and it is then automatically imported into the user data.

This permits a project download using remote maintenance or series commissioning.

Note

Note the SIMOTION version

The SIMOTION version on the target device must exactly match the version of the device on which the backup was created.

After the upload of a SIMOTION project into the SIMOTION P320-4 (SIMOTION device update), the time stamps in the user data and the SIMOTION SCOUT project are different. The project is shown as inconsistent in SIMOTION SCOUT.
The consistency can be established via a project download or a download of the HW Config in the SIMOTION SCOUT.

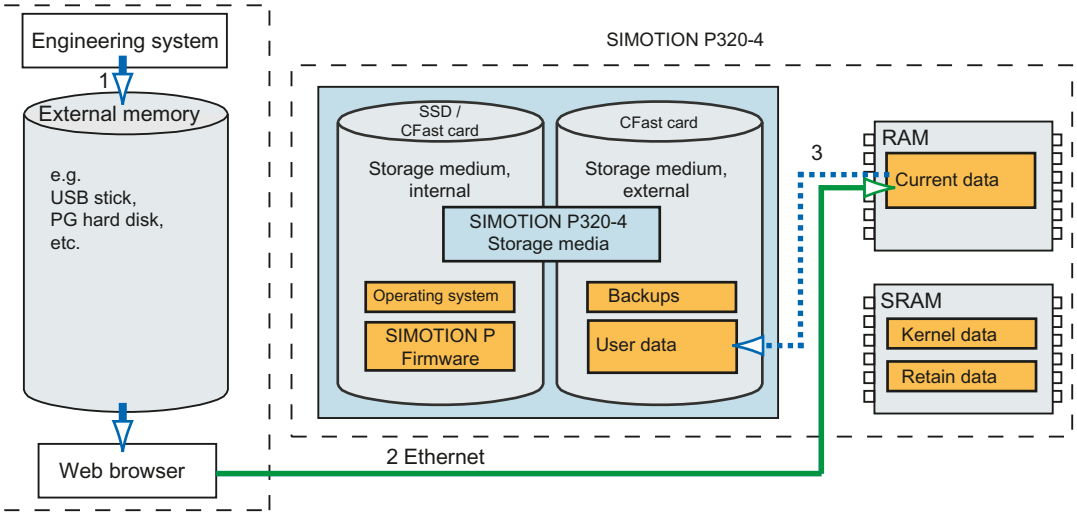

Figure 10-5 SIMOTION SCOUT download (ZIP file)

Download of the project data process (ZIP file)

1. Save the data via SIMOTION SCOUT, menu **Edit > Load to file system ...** (option Save compressed), on the file system of your programming device.
2. Transfer the ZIP file via the web browser and the project download of SIMOTION IT: **Manage Config** > [Login dialog] > **Device Update** > **Send new update data (*.ZIP)**
3. The unpacking and the import of the data into the user data on the external CFast card is performed automatically.

Note

SIMOTION IT

You can find further information about SIMOTION IT in the following documentation:

- SIMOTION IT Diagnostics and Configuration Diagnostics Manual
- SIMOTION IT Programming and Web Services Programming Manual
- SIMOTION IT Virtual Machine and Servlets Programming Manual

10.8.3.5 Backing up and restoring project data (file structure)

The project data (file structure) is located in the **USER** directory on the **external CFast card** (drive D) of the SIMOTION P320-4.

1. To save the project data, copy the USER directory from the external CFast card, e.g. to a storage medium of the SIMOTION P320-4 or to a USB flash drive.
2. To restore the project data, copy the USER directory, e.g. from a storage medium of the SIMOTION P320-4 or a USB flash drive, to the external CFast card and replace the existing directory.

This also enables series commissioning without a programming device or SIMOTION SCOUT.

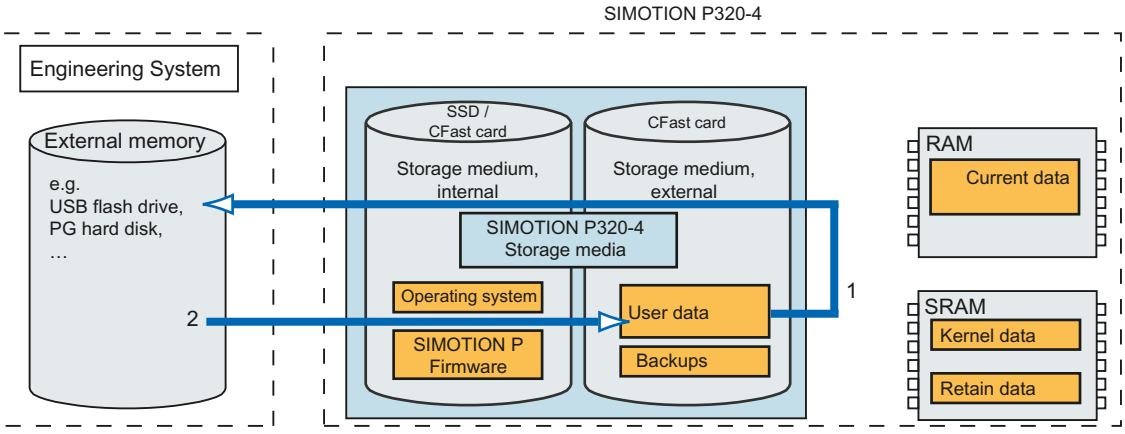

Figure 10-6 Backing up and restoring a file system

Sequence of a series commissioning

Copy the **USER** directory from a storage medium to the external CFast card (Drive D) of the SIMOTION P320-4 to be newly commissioned.

SIMOTION P320-4 must be in the **terminated** state for this.

10.8.4 Single backups

10.8.4.1 Overview

The backup options described in the following section can be used to back up and restore retain variables, retain TOs, unit variables and global device variables.

If the consistency check results in an SRAM error (because of a power failure if the battery has fallen below the threshold value) or the SIMOTION P320-4 is replaced, the backup can be used to restore the contents of the SRAM.

A user program can use system functions to initiate a backup.

Unit variables and global device variables can be backed up from the RAM to allow them to be recovered in the event of a power failure, for example.

This allows the initial state of the machine (reference points, sensor values, …) to be restored.

Detailed information about the individual backup options can be found under:

- Backup/restore SRAM (Page 178)
- Backing up non-volatile SIMOTION data (retain data) (Page 179)
- Restoring non-volatile SIMOTION data (retain data) (Page 180)
- Backing up unit variables and global device variables (Page 181)

10.8.4.2 Back up/restore SRAM

The correct shutdown of Windows automatically initiates **Terminate SIMOTION P** (SIMOTION P State). This automatically saves the retain data from the SRAM to the external CFast card.

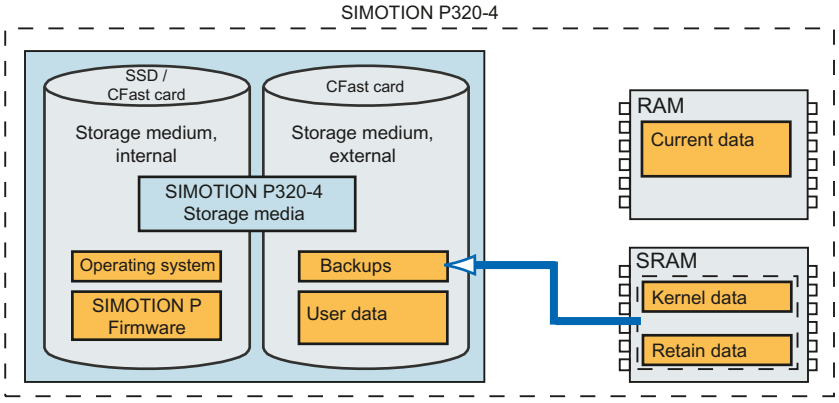

Figure 10-7 Saving SRAM with Terminate SIMOTION P

A consistency check of the SRAM is performed at each SIMOTION power-up. If an error is detected here, the SRAM data will be restored from the backup.

If, for example, the SIMOTION P320-4 needs to be replaced, this backup/restore mechanism allows the data to be transferred to the SIMOTION P320-4.

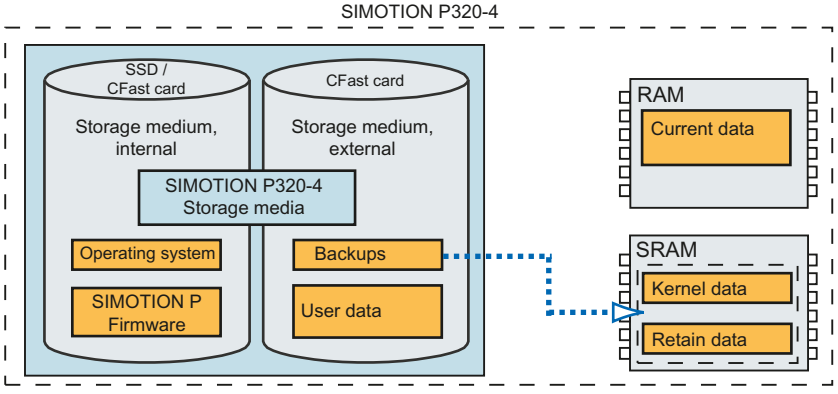

Figure 10-8 SRAM restore at startup

Further information

can be found in the section Non-volatile data and SRAM handling (Page 203).

10.8.4.3 Backing up non-volatile SIMOTION data (retain data)

The non-volatile SIMOTION data (retain data) can be backed up from the user program and via SIMOTION SCOUT.

You can use the backup to restore the retain data independent of the version after an update or a hardware replacement (SIMOTION P320-4) or to create a current backup to use in the event of an inadvertent deletion.

You can save the retain data as follows:

- From the user program with the **_savePersistentMemoryData()** system function
  The contents are saved to the "PMEMORY.XML" backup file in the "USER\SIMOTION" directory.
  The data is saved in the PMEMORY.XML file on the external CFast card.
- To back up the retain data via SIMOTION SCOUT , go online and in the context menu of a created source, execute **Save variables...**.
  The data is saved in the **unitdata.xml** file on the computer with SIMOTION SCOUT .
- Alternatively, the retain data is saved via the **SIMOTION P State** application, via the **SIMOTION P > Set Diagnostic Switch** menu.
  The contents are saved to the "PMEMORY.XML" backup file in the "USER\SIMOTION\HMI\SYSLOG\DIAG" directory.
- To restore the retain data via SIMOTION SCOUT, go online and execute **Restore variables...** in the menu.
  Restores the saved variables, also over different versions.

On the system side, the **_savePersistentMemoryData()** system function ensures that a consistent overall image of the non-volatile SIMOTION data is always available the next time the device is switched on, even if there is a power failure during backup.

An already existing backup file is renamed to "PMEMORY.BAK" before a new backup file is generated. If the save operation to the new backup file fails (e.g. because the capacity of the external CFast card is insufficient), this backup copy of the backup file is used the next time an attempt is made to restore the non-volatile SIMOTION data content. If the new file is successfully created, the backup copy of the backup file is deleted.

NOTICE
Loss of data due to failure to make backup copies Back up the non-volatile SIMOTION data on the CFast card. Non-backed-up non-volatile SIMOTION data can be lost on hardware replacement (module defect). For example, failing to back up the current values of the retain variables will result in them being lost and reset to their initial values.

NOTICE
Homing required again after absolute encoder overflow If an absolute encoder overflow occurs after _savePersistentMemoryData, the actual position value is no longer correct after the non-volatile data is restored. In this case, homing (absolute encoder adjustment) must be repeated.

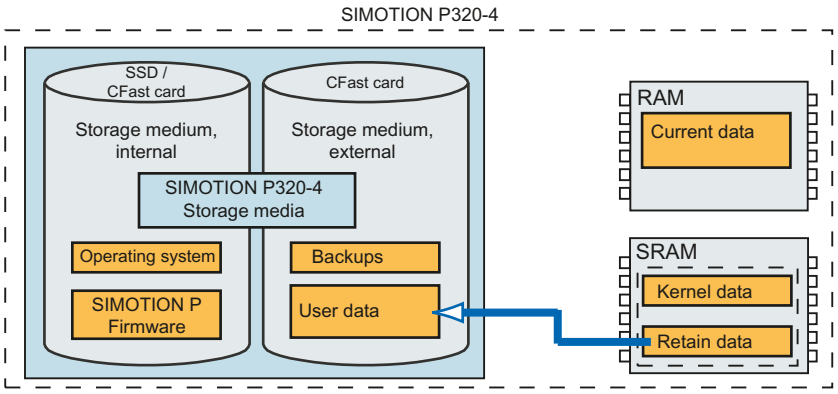

Figure 10-9 Save retain data

10.8.4.4 Restoring non-volatile SIMOTION data (retain data)

The backup of the non-volatile SIMOTION data (variables declared as retain) is restored in the memory if a data inconsistency is detected after a power failure (the backup battery has fallen below a threshold value) or a general reset has been performed on the CPU. This means that the user can perform a general reset to force the data to be reloaded.

Condition for restoring is that the **PMEMORY.XML** file is present on the external CFast card and the content of this backup file matches the project on the external CFast card.

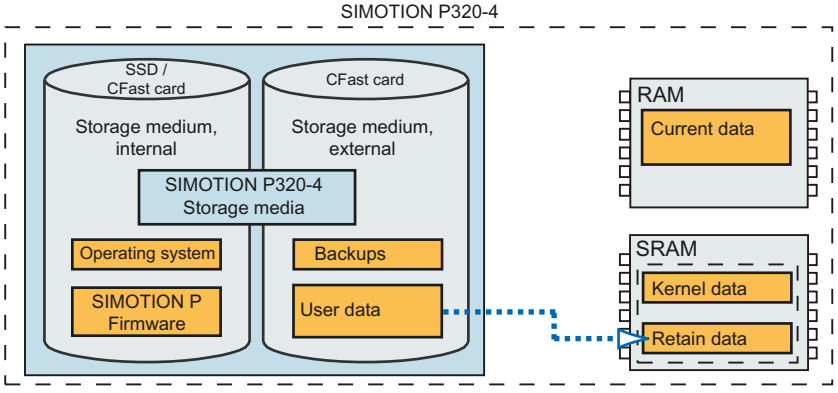

Figure 10-10 Restore retain data

Note

In the event of a power failure of the SIMOTION P320-4, the retain data in PMEMORY.XML will **not** be restored automatically.

Note

If a data inconsistency exists in the event of a power failure because the backup battery has fallen below a threshold value, the data backup from PMEMORY.XML will be written back into the SRAM.

10.8.4.5 Save unit variables and global device variables

Unit variables and global device variables are never retentive; the data will be lost in the event of a power failure.

If the unit variables and global device variables which have not been declared as retain variables are to be recovered after a power failure, the user program can use system functions to save this data to data sets (files on the external CFast card).

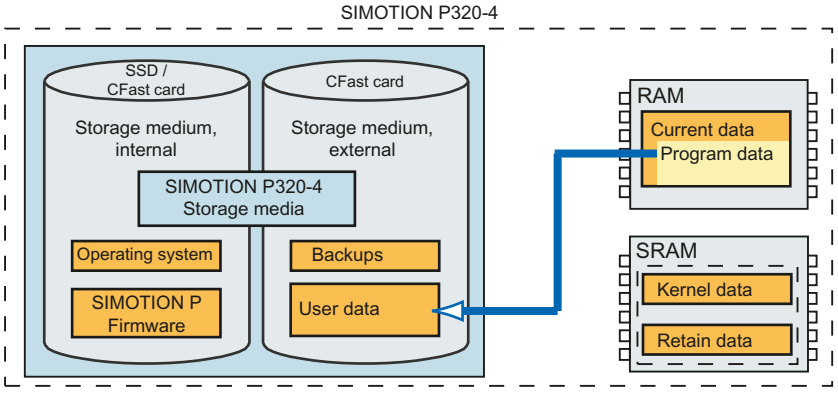

Figure 10-11 Saving unit variables and global device variables

System functions for backing up / restoring unit variables and global device variables:

- _loadUnitDataset()
- _saveUnitDataset()
- _importUnitDataset()
- _exportUnitDataset()

With unit variables, however, generally only unit variables of the interface section can be saved. In addition, all variables of the unit declared as retain variables will be saved.

Save variables… SIMOTION SCOUT function:

- The data is saved in the unitdata.xml file on the SIMOTION SCOUT computer.

Restore variables… SIMOTION SCOUT function:

- Restores the saved retain variables, also across different versions.

10.8.5 Defined states

10.8.5.1 Overview

An initial state can be restored by loading data backups, as described in the section Project update (Page 173), or via the reset functions of the **SIMOTION P State** application.

Transfer backup from the file system

Download backups that were stored on the file system using the backup mechanisms described previously.

For further information see Single backups (Page 177).

Detailed information about the backup options for detailed states can be found at:

- Restore the factory setting using SIMOTION P State (Page 182)
- Overall reset using SIMOTION P State - operating mode switch setting MRES (Page 183)
- Delete SRAM via SIMOTION P State - button Restart (Del. SRAM) (Page 183)

10.8.5.2 Restore the factory setting using SIMOTION P State

The condition on delivery is restored via the menu item **Extras > Reset to factory default**.

Note

The SRAM and the PMEMORY.XML file will also be deleted.

The controller is restarted automatically.

Any licenses on the card will not be deleted.

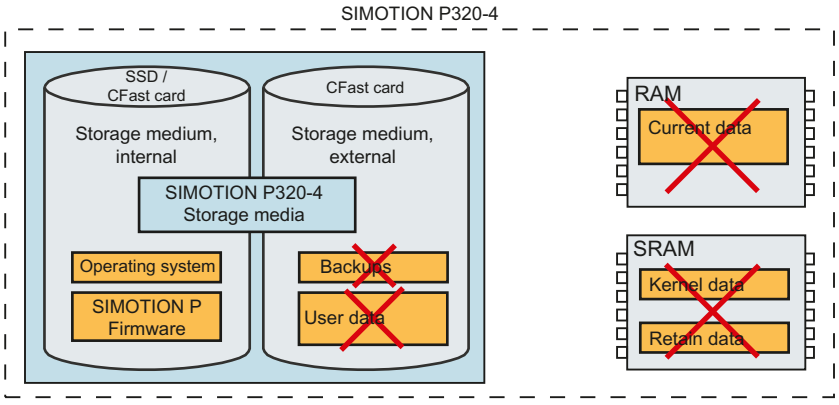

Figure 10-12 Restoring factory settings

Further information

on the SIMOTION P State - menus (Page 131)

10.8.5.3 Overall reset using SIMOTION P State - operating mode switch setting MRES

A general reset deletes the non-volatile SIMOTION data and retain data.

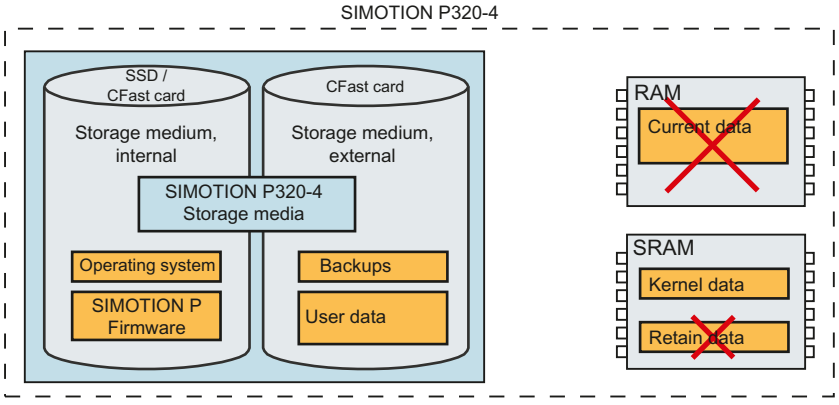

Figure 10-13 General reset

If a backup of the retain data (PMEMORY.XML) exists, this data will be accepted after the general reset. Thus, the user can perform a general reset to force the saved retain data to be restored.

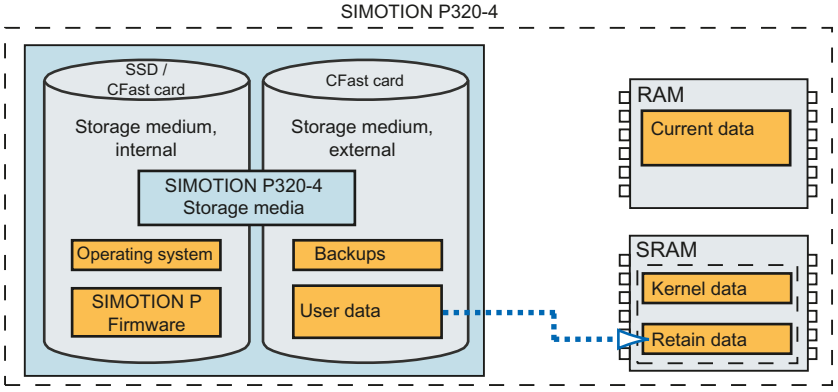

Figure 10-14 Restore retain data

10.8.5.4 Delete SRAM via SIMOTION P State - button Restart (Del. SRAM)

SIMOTION P320-4 will be restarted and the data in the SRAM will also be deleted.

The loading of a backup allows the SIMOTION P320-4 to be returned to a defined initial state. The backed up program variables and retain variables and thus the encoder values, homing data will be restored.

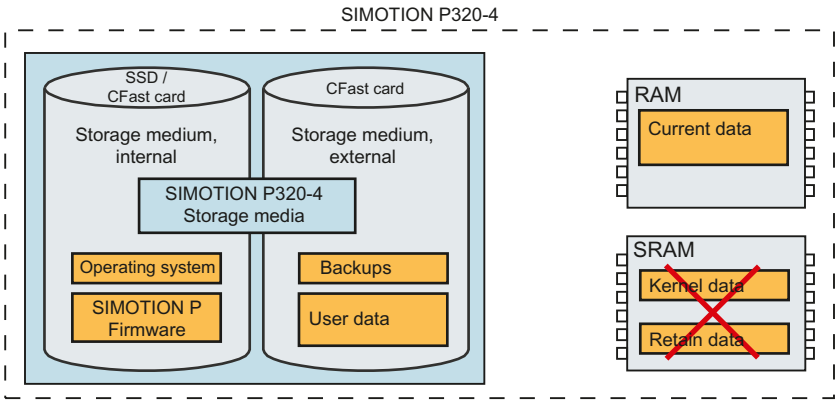

Figure 10-15 Delete SRAM - Restart (Del. SRAM)

If the SIMOTION SCOUT function **Target system > Copy RAM to ROM** was called previously, the saved project will be reloaded.

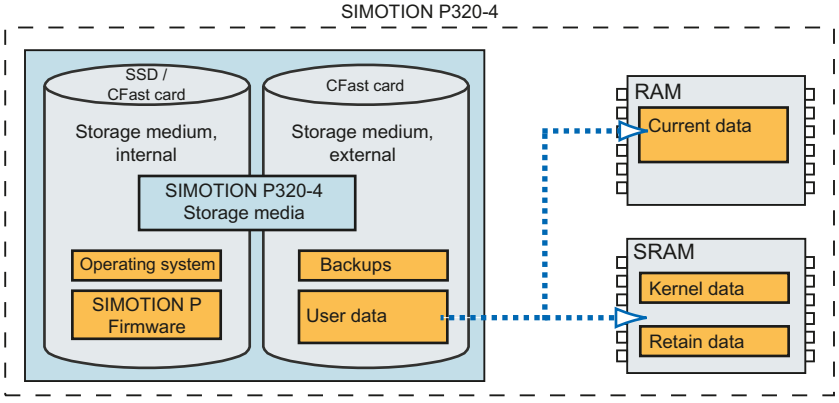

Figure 10-16 Load project after Restart (Del. SRAM)

Further information

on the SIMOTION P State buttons can be found in the Function elements (Page 130) section.

10.9 SIMOTION P overall reset

10.9.1 SIMOTION P overall reset overview

Introduction

When a general reset is performed, the RAM on the SIMOTION P320-4 will be cleared along with any non-volatile data in the SRAM - with the exception of the communication configuration (e.g. baud rates and network addresses). For further information see Non-volatile data and SRAM handling (Page 203).

Below is a list of the data that is either capable or not capable of withstanding a general reset. Data on the external CFast card is retained.

When must a general reset be performed on SIMOTION P320-4?

If you wish to undo changes in your user data (programs, configuration data, parameter assignments) in the **volatile data** area of the SIMOTION P320-4.

NOTICE
Differences when performing a general reset in connection with the RAM to ROM function
The following generally applies:
If **no** RAM to ROM was executed before the general reset, all programs and parameter assignments are considered as **data deleted on general reset**.
If data was backed up **with** RAM to ROM before the general reset, this data is considered as **data not deleted on general reset**.

Data deleted on general reset

The following data is deleted on the SIMOTION P320-4:

- Configuration data
- Programs
- Parameter assignments
- Technology packages
- Data from absolute encoders (absolute encoder adjustment, cyclic range overflows)

  Note

  Absolute encoder data is deleted during a general reset operation and must, therefore, be readjusted after the general reset.

- Retain variables
  Retain variables are variables that are defined as **non-volatile data** in the user program by the key word **Retain**.

Data not deleted on general reset

The following data is retained:

- Baud rate
- PROFINET IP address / name of the SIMOTION P320-4
- IP addresses
- Contents of the diagnostics buffer
- Data that was saved with the _savePersistentMemoryData(), _saveUnitDataSet(), _exportUnitDataSet() commands and with RAM to ROM.
  If the retain data is backed up (with _savePersistentMemoryData()), this data is backed up again to the non-volatile data after the general reset. Thus, the user can perform a general reset to force the saved retain data to be restored.
- Licenses

The technology packages and user data (configuration data, programs, parameter assignments) previously backed up to an external CFast card by means of the **Copy RAM to ROM** menu command are transferred to the **volatile data** area of the SIMOTION P320-4 after the general reset.
Thus, an existing configuration on the external CFast card is loaded to the SIMOTION device following the general reset.

Further information

Data storage concept overview (Page 171)

10.9.2 Overall reset using the mode selector (on screen)

For SIMOTION P320-4, the overall reset using a simulated mode selector is performed using the SIMOTION P State application.

Note

MRES mode switch position

If you set **MRES** via the SIMOTION P State application, the SIMOTION P320-4 automatically goes into the **STOP** operating state.

Proceed as follows to initiate an overall reset:

1. Turn the mode selector to **MRES** and keep **MRES** pressed until the **STOP** LED stops flashing.
   When the LED permanently lights up yellow, the **STOP** operating state has been reached.

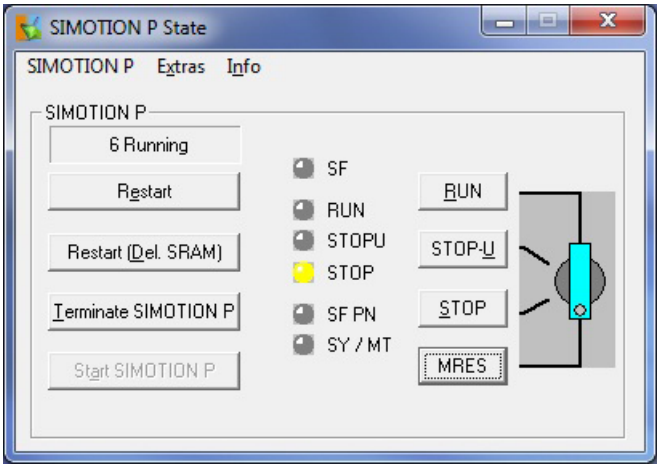

Figure 10-17 SIMOTION P State - STOP operating state

2. When you release **MRES**, the mode selector points to the **STOP** position again.

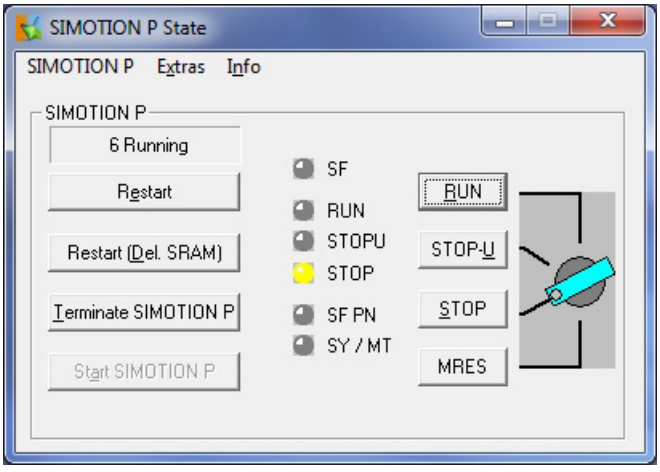

Figure 10-18 SIMOTION P State - Mode selector from position MRES to STOP

3. You must turn the switch back to the **MRES** position within three seconds.
   MRES is then displayed in the status.

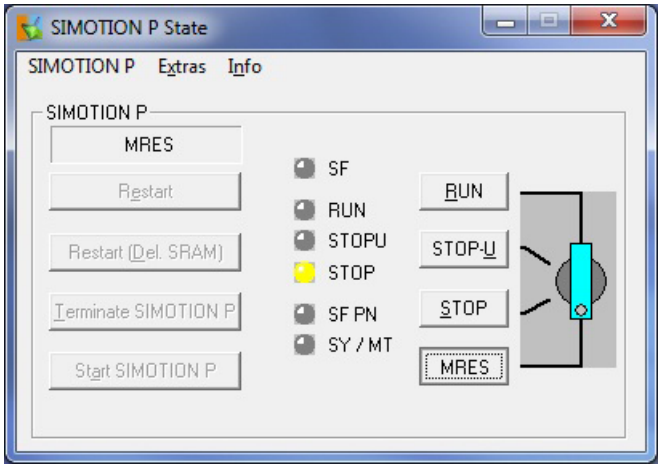

Figure 10-19 SIMOTION P State - status MRES

The mode selector then goes into the **STOP** position.

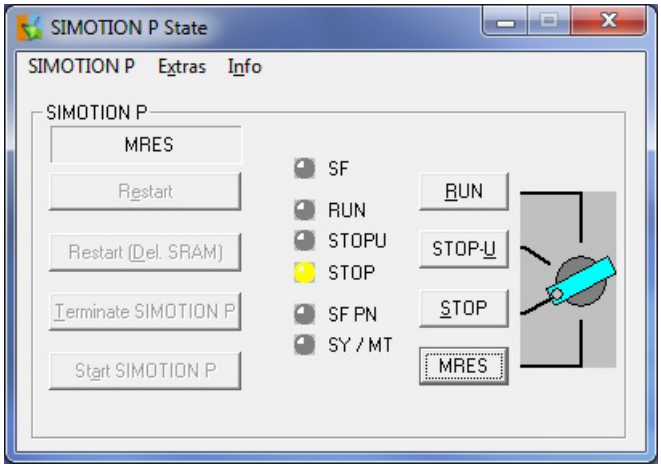

Figure 10-20 SIMOTION P State - status MRES, mode selector STOP

4. The SIMOTION P320-4 then restarts automatically.

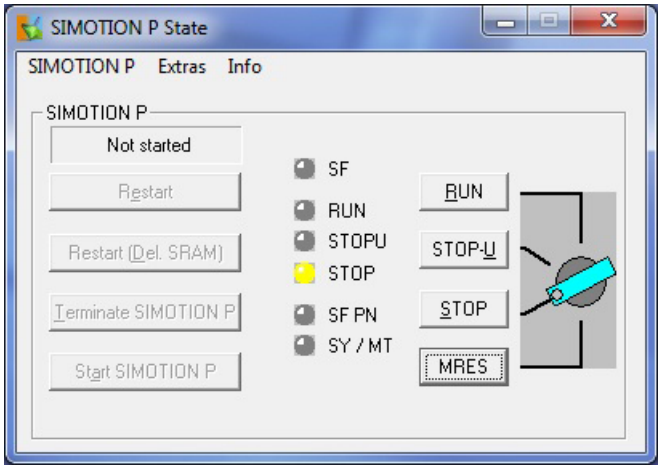

Figure 10-21 SIMOTION P State - status before the automatic restart

10.10 Deleting user data on the CFast card

Requirement

You can delete the user data with SIMOTION SCOUT. The SIMOTION P320-4 must be online. The user data in the RAM, the persistent data in the SRAM (except for the communication configuration), and the user data on the CFast card are deleted. You can thus continue to access the SIMOTION P320-4 with your PG/PC.

Procedure

To delete the user data:

1. In SIMOTION SCOUT, open the project you want to edit.
2. Go online with SIMOTION P320-4.
3. Select **Target system > Delete user data on card...**.

The data is deleted.

10.11 Switching off

Windows

To ensure the safe operation of the SIMOTION P320-4, Windows must be properly shut down before the SIMOTION P320-4 is switched off.

Note

Use the Windows start menu to correctly shut down the Windows system: **Start > Shut down**

If Windows is not shut down properly, the Windows installation may become damaged to the extent that it may no longer be possible to run the SIMOTION P320-4.

Note

Only applies to the SIMOTION P320-4 E

SIMOTION P320-4 E is delivered with deactivated EWF (Enhanced Write Filter).

After commissioning the SIMOTION P320-4 E, activate the EWF for drive C:, which ensures:

- An extended service life for the **internal** CFast card
- No data loss on the **internal** CFast card when switching the device off via the line side switch or through disconnection from the power supply

NOTICE
Do not protect external CFast cards with EWF
Drive D: - the **external** CFast card - must not be protected with EWF as otherwise the functionality of SIMOTION cannot be assured.

NOTICE
Threat of data loss
Always shut down SIMOTION correctly as otherwise there is a threat of data loss.

SIMOTION P320-4

If Windows is shut down properly, the SIMOTION P320-4 will also be shut down properly.

If the SIMOTION P320-4 is switched off before Windows is shut down correctly, the POWER FAIL functionality causes the following events to occur.

- SIMOTION P320-4 is stopped correctly
- The SIMOTION P retain variables are saved in the non-volatile memory of the SIMOTION P320-4.

When SIMOTION P320-4 powers up again, the backed-up user data will be available once more.

This means that the SIMOTION P320-4 is ready to run immediately without loss of data, provided that the Windows installation was not damaged by the switch-off.

Behavior with Shut down, Logoff or Restart

If a Windows Shutdown, Logoff or Restart is initiated although the SIMOTION P320-4 is still in the **Running** state, the SIMOTION P320-4 is terminated automatically.

With large projects, a black screen may be displayed in Windows with the message **Waiting for SIMOTION P – Please wait - SIMOTION P is terminating**.

The termination of the SIMOTION P Runtime can vary depending on the size of the project.

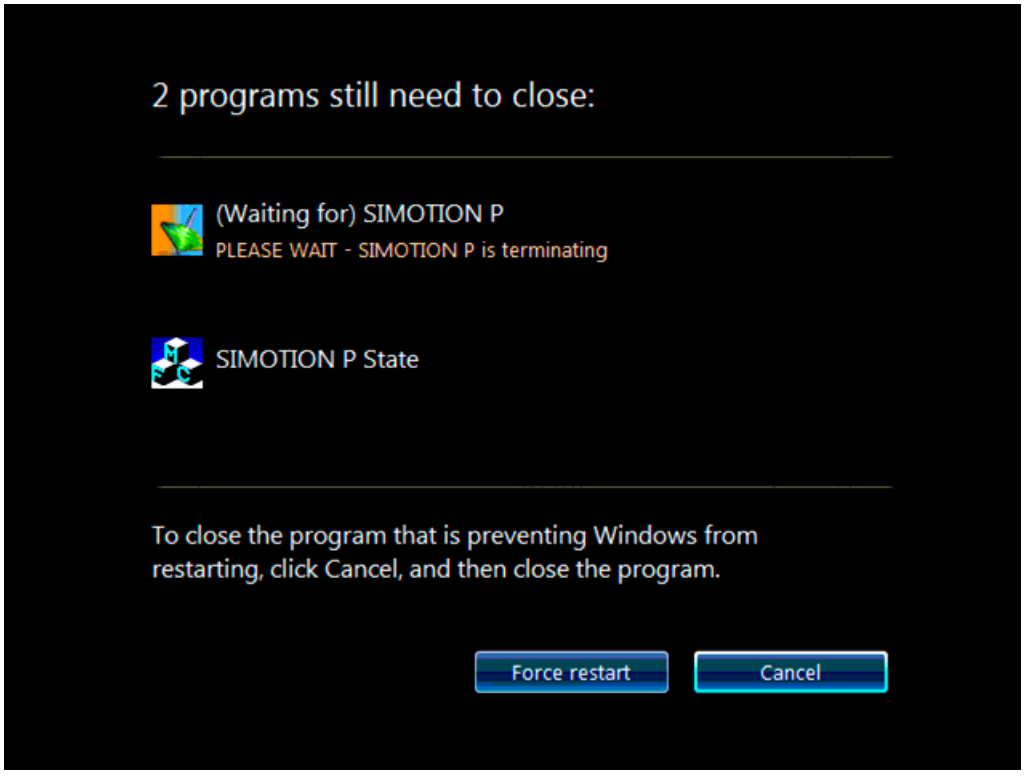

Figure 10-22 Black screen

Service and maintenance 11

11.1 Recording diagnostic data

Diagnostics data can be recorded during power-up and operation for the diagnostics and error analysis.

Saving diagnostic data during power-up

1. Terminate the SIMOTION P320-4 via the **Terminate SIMOTION P** button of the **SIMOTION P State** application.
2. Activate the diagnostics switch via the following option:
   SIMOTION P State, menu item **SIMOTION P > Set Diagnostic Switch**.
   The diagnostic data is recorded during power-up and the **SIMOTION P > Set Diagnostic Switch** switch automatically reset after writing the data.
3. After writing the diagnostic data, **SIMOTION P** must be terminated (RUN LED flashes continuously green).

Saving diagnostic data during operation

1. Make sure that the SIMOTION P320-4 has been started and powered up, e.g. with SIMOTION P State.
2. Activate the diagnostics switch via the following option:
   SIMOTION P State, menu item **SIMOTION P > Set Diagnostic Switch**

The diagnostic data is recorded during operation and the **SIMOTION P > Set Diagnostic Switch** switch automatically reset after writing the data.

Backing up diagnostic data

Following a fault on a SIMOTION device, diagnostic data (e.g. diagnostic buffer content, current content of website, etc.) can provide important information on the cause of the fault. The diagnostic data can be recorded during power-up or operation and backed up on the external CFast card by means of a simple operation as described below.

External CFast card

You can copy the backed-up data from the external CFast card.

Path: D:\USER\SIMOTION\HMI\SYSLOG\DIAG

SIMOTION IT / FTP

You can load the backed-up diagnostic data by means of SIMOTION IT or FTP:

You can find more detailed information at:

- SIMOTION IT Diagnostics and Configuration Diagnostics Manual
- SIMOTION online help

Evaluating diagnostic data

You can also use the diagnostic data for diagnostic purposes or forward it to Technical Support for evaluation purposes.

Further information

SIMOTION P State - menus (Page 131)

Diagnostics via LED displays (Page 207)

Single backups (Page 177)

11.2 Restoring factory settings

11.2.1 Overview of restoring the factory settings

Note

When the factory settings are reset/restored, licenses are retained.

11.2.2 Resetting the SIMOTION P320-4 to the delivery status

The **SIMOTION P State** application is used for this function.

Procedure

Proceed as follows to restore the delivery status of SIMOTION P320-4:

1. First, terminate SIMOTION P320-4 via the **Terminate SIMOTION P** button of the SIMOTION P State application.
2. Then select **Extras > Reset to factory default** in the menu.

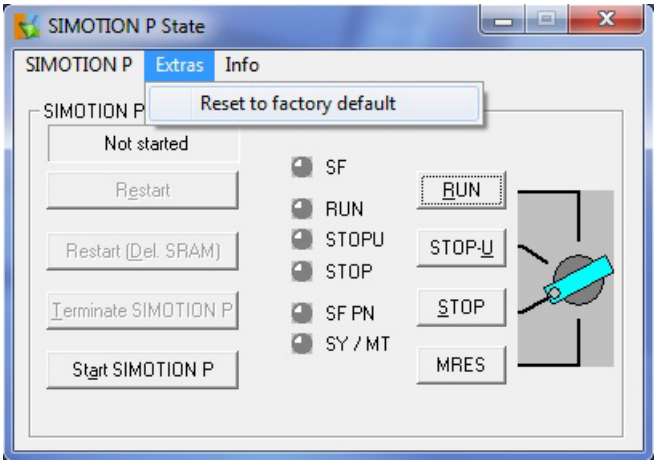

Figure 11-1 Restoring the delivery status

NOTICE
Note the consequences of user changes!
All data and settings for SIMOTION P320-4 changed by the user will be deleted!
The settings made using the **Station Configurator** will also be reset to the delivery status.

11.2.3 Reset SIMOTION P320-4 to the initial state

If an error occurred during parameter assignment, download, or when other settings were configured or if you are not sure whether you have specified all the information correctly, it may be useful or necessary to reset the SIMOTION P320-4 to its state prior to parameter assignment.

Requirements

You have saved an image of the memory medium on a remote computer/remote medium.

You can now use this image to reset the SIMOTION P320-4 to the factory settings. Note that the changes made on the SIMOTION P320-4 will be lost in the process.

NOTICE
Retain data Once the image has been loaded, the user may have to delete the retain data.

Procedure

Use the **Restart (Del. SRAM)** function from the SIMOTION P State application to reset.

Further information

Function elements (SIMOTION P State) (Page 130)

11.3 Upgrading runtime and firmware

As of the SIMOTION P320-4 Box, the current software version is always supplied. The previous version is available on the included restore DVD.

The upgrade to the latest hotfix (HF) can be performed via a setup.

Procedure

Possible types of upgrade:

- Upgrade with external DVD drive.
  First, the upgrade software must be copied to an external DVD or USB memory stick.
- Upgrade using a remote computer in the network (connect the SIMOTION P320-4 to the drive of the remote computer via the network)

Start the upgrade by calling the **Setup.exe** file.

See also

Further information on upgrading can be found in the following documentation:

- Updating SIMOTION devices
- SIMOTION online help

11.4 Installing/removing the back-up battery of the SIMOTION P320-4

11.4.1 Preventive maintenance

To maintain high system availability, we recommend the preventative exchange of those PC components that are subject to wear. The table below indicates the intervals for this exchange.

Component	Exchange interval:
CMOS backup battery	4 years

11.4.2 Replacing the backup battery

Note

The service life of the backup battery is approximately 5 - 8 years, depending on the environmental conditions.

To be noted before you replace the battery

NOTICE

Risk of damage!

The lithium battery may only be replaced with an identical battery or with a type recommended by the manufacturer (article number: A5E30314053)

⚠ WARNING

Risk of explosion and release of harmful substances!

Therefore, do not throw lithium batteries into an open fire, do not solder or open the cell body, do not short-circuit or reverse the polarity, do not heat to above 100° C, dispose of them in accordance with regulations, and protect them from direct exposure to sunlight, humidity, and condensation.

Note

A backup battery maintains the contents of the SRAM data on the SIMOTION P320-4 after the supply power is switched off.

Battery monitoring

The 3 V lithium battery to back up the SRAM and the clock module is monitored in two stages:

Table 11-1 Two-stage battery monitoring

Battery voltage	Message
2.7 V ± 0.1 V	Diagnostic buffer entry: Battery warning Battery warning threshold reached
2.25 V ± 0.25 V	Diagnostic buffer entry: Battery error Voltage below limit

In order to prevent data being lost, the battery should be replaced once the **Battery warning** entry appears in the diagnostics buffer or, at the very latest, the first time the **Battery error** entry appears in the diagnostics buffer.

Disposal

NOTICE
Dispose of batteries properly Batteries must be disposed of in accordance with local regulations.

Preparation

Note

The configuration data and contents of the SRAM in the device are buffered for at least 30 seconds when the battery is replaced.

Preparation – make a note of the BIOS settings

Note

Note specific BIOS setup settings if changes have been made.

Preparation – save SRAM data

As a result of replacing the battery (SRAM not backed up during this time), data loss may occur in the SRAM of the SIMOTION P320-4 if the battery replacement takes longer than 30 seconds.

1. To avoid a lengthy repeat of the commissioning procedure, ensure that a backup of the non-volatile data is available before changing the battery. This is performed, for example, automatically when Windows is shutdown correctly.
2. Shut down the SIMOTION PP320-4 or Windows correctly via:
   Windows taskbar: **Start > Shut down**
3. Isolate the device from the power supply and disconnect all connecting cables.

Note

If Windows was not shut down properly before backup battery replacement, loss of bit values in SRAM memory cells during battery replacement cannot be detected reliably.

SIMOTION P320-4 must then undergo an overall reset.

Tools

You will need a T10 screwdriver to open the battery compartment.

Replacing the battery

NOTICE
Switch off the device before replacing the battery The battery can also be exchanged when the device is operating. However, we recommend switching off the device beforehand.

NOTICE
Time setting is lost If the battery change takes longer than 30 seconds, the time setting is deleted. The time on the device is no longer synchronized. Time-controlled programs no longer run or they run at the wrong time. This can damage the system. Set the device time again.

Procedure

Steps for replacing the battery:

1. Open the battery compartment.

2. Remove the battery holder.
3. Unplug the battery connector.

4. Connect the battery plug to the new battery.
5. Remove the old battery from the holder.
6. Secure the new battery in the holder.
7. Close the battery compartment.

Reconfiguring the BIOS Setup

The battery change does not take longer than 30 seconds with the device switched off, the BIOS settings are retained.

The SRAM and CMOS data of the SIMOTION P320-4 is certainly deleted only when the battery is disconnected for a longer period of time (more than 15 minutes) and in the switched-off state.

The BIOS Setup must be performed again if the data has been cleared. The CMOS data must be restored to the default values; the date, time, and any special settings must be set again.

Note

Exception:

If the CMOS data has been saved previously with a USER profile, only the date and the time may be set again. All other settings will be made automatically. This means that the default values may **not** be loaded in this special case.

11.5 Special power-up situations

11.5.1 Special startup situations overview

The special power-up situations are described in the following:

- Non-volatile data and SRAM handling (Page 203)
- After new installation / update of the SIMOTION P Kernel (Page 205)
- After importing a backup copy (Page 205)
- After a power failure/POWER FAIL (Page 205)

Requirements

You are familiar with the user storage concept of the non-volatile data on the SIMOTION P320-4.

11.5.2 Non-volatile data and SRAM handling

Non-volatile data, also called retain data, is retained when SIMOTION P320-4 suffers a power failure. The data is buffered with the battery in the static memory area (SRAM) on the SIMOTION P320-4.

SRAM handling

If the serial number of the SIMOTION P320-4 is known:

The serial number of the SIMOTION P320-4 corresponds to the one that was last saved on the SIMOTION P320-4.

SRAM image (storage medium) or SRAM backup (storage medium) is **OK**, if:

- The SIMOTION software release of the SRAM image/backup matches the installed software release.
- Windows has been shut down properly (the POWER FAIL mechanism of SIMOTION P does not suffice here).
- The checksum test on the SRAM image/backup was successful.
- The battery status was good when the SRAM image was backed up.

Table 11-2 SRAM handling if the serial number is known

SRAM "OK"?	SRAM image (storage medium) "OK"?	SRAM backup (storage medium) "OK"?	User data used	Note
Yes	Not applicable	Not applicable	Board [1)]	Normal statup
No	Yes	Not applicable	IMAGE [2)]	No message box or alarms

SRAM "OK"?	SRAM image (storage medium) "OK"?	SRAM backup (storage medium) "OK"?	User data used	Note
No	No	Yes	BACKUP [3]	No message box or alarms
No	No	No	Overall reset	Required

[1] The user data backed up in the SRAM of the SIMOTION P320-4 is used.

[2] The user data backed up in the SRAM image on the storage medium of the SIMOTION P320-4 is used.

[3] The user data backed up in the SRAM backup on the storage medium of the SIMOTION P320-4 is used.

If the serial number of the SIMOTION P320-4 is not known:

The serial number of the SIMOTION P320-4 does not correspond to the one that was last saved on the SIMOTION P320-4, for example, after the replacement of the SIMOTION P320-4.

SRAM image (storage medium) or SRAM backup (storage medium) is **OK**, if:

- The SIMOTION software release of the SRAM image/backup matches the installed software release.
- Windows has been shut down properly (the POWER FAIL mechanism of SIMOTION P does not suffice here).
- The checksum test on the SRAM image/backup was successful.
- The battery status was good when the SRAM image was backed up.

Table 11-3 SRAM handling if the serial number is unknown

SRAM "OK"?	SRAM image (storage medium) "OK"?	SRAM backup (storage medium) "OK"?	User data used	Note
Yes	Yes	Not applicable	Board [1] or IMAGE [2]	Query made
Yes	No	Yes	Board [1] or BACK-UP [3]	Query made
Yes	No	No	Board [1]	No message box
No	Yes	Not applicable	IMAGE [2]	No message box
No	No	Yes	BACKUP [3]	No message box or alarms
No	No	No	Overall reset	Required

[1] The user data backed up in the SRAM of the SIMOTION P320-4 is used.

[2] The user data backed up in the SRAM image on the storage medium of the SIMOTION P320-4 is used.

[3] The user data backed up in the SRAM backup on the storage medium of the SIMOTION P320-4 is used.

11.5.3 After new installation / update of the SIMOTION P Kernel

If a compatible SIMOTION P Kernel is installed on an already commissioned SIMOTION P320-4, the user data backed up in the SRAM is retained.

However, the current software version of the SIMOTION PP320-4 must be identical to the software version with which the backed-up user data of the SRAM was created.

Now SIMOTION P320-4 is immediately ready to run again.

Note

If you do not want the backed up user data to be used again, you will have to recommission the SIMOTION P320-4.

Note

Restart of SIMOTION P320-4 required

After a new installation or update of the SIMOTION P Kernel, a restart of the SIMOTION P320-4 is generally required.

If the device is not restarted, the new SIMOTION P Kernel is not activated and you continue to work with the old firmware.

11.5.4 After restoring a backup copy

If a backup copy (storage medium image) of a commissioned SIMOTION P320-4 is reloaded, the backed-up user data stored in the SRAM of the SIMOTION P320-4 is used.

Now SIMOTION P320-4 is immediately ready to run again.

11.5.5 After a power failure/POWER FAIL

Case 1: SRAM saved

In the event of a power failure, the POWER FAIL detection feature integrated in the SIMOTION P320-4 will automatically cause the SIMOTION P firmware to save the user data in the SRAM of the SIMOTION P320-4. An SRAM image, however, cannot be created any more in this case.

When the power supply returns or when the system is booted again, the data is available again.

Now SIMOTION P320-4 is immediately ready to run again.

Note

Backup of the user data in the SRAM of the SIMOTION P320-4 in case of power failure is only guaranteed if the SIMOTION P320-4 is operated within its defined specifications.

Case 2: SRAM not saved

If the hardware of the SIMOTION P320-4 was operated outside of the defined specifications, the user data might not have been backed up in the SRAM of the SIMOTION P320-4 under certain circumstances.

Alarm, error and system messages

12

12.1 Diagnosis using the LEDs

Each LED can assume various states, such as ON, OFF, flashing. The status of the respective LED indicates the current status of the device.

Table 12-1 Diagnostics LEDs of the SIMOTION P320-4

LED display		Meaning	Meaning
SF	Red	**System fault**	This LED indicates that a fault has occurred on SIMOTION P320-4.
LED	On		An interrupt which can be acknowledged is present (alarm, message, note). (See Diagnostics Guide)
LED flashing	0.5 Hz		No license exists for technology/optional objects under license. Licensing must be performed to correct the fault, see License tab.
	5 Hz		FAULT state SIMOTION software does not run in the FAULT state (all LEDs flash simultaneously).
LED	Off		SIMOTION P320-4 works error-free.
RUN	Green	**SIMOTION P in RUN mode**	This LED indicates the state of the user program.
LED	On		The user program is running.
LED flashing	2 Hz		When the **RUN** operating state is selected, the LED will flash until the operating state is actually attained.
	5 Hz		FAULT state SIMOTION software does not run in the FAULT state (all LEDs flash simultaneously).
STOPU	Yellow	**SIMOTION P in the STOP user program**	This LED indicates that the technology packages are active. No user program is being executed.
LED flashing	2 Hz		When the **STOPU** operating state is selected, the LED will flash until the operating state is actually attained.
	5 Hz		FAULT state SIMOTION software does not run in the FAULT state (all LEDs flash simultaneously).
STOP	Yellow	**SIMOTION P in STOP mode**	This LED indicates that no user program is running.
LED	On		The technology packages are not active.
LED flashing	0.5 Hz		An overall reset request is indicated by slow flashing, see Overall reset with the mode selector (on the screen) (Page 186).
	2 Hz		When the **STOP** operating state is selected, the LED will flash until the operating state is actually attained.
	5 Hz		FAULT state SIMOTION software does not run in the FAULT state (all LEDs flash simultaneously).

LED display		Meaning	Meaning
SF PN		**PROFINET bus error**	
LED	Red		This LED indicates a fault at the PROFINET interface.
LED	Off		PROFINET onboard interface is operating without error; the data exchange to all configured I/O devices is running.
LED	On		Bus fault
LED flashes	2 Hz		Failure of a connected I/O device. At least one of the assigned I/O devices cannot be addressed. Configuring error.
	5 Hz		FAULT state SIMOTION software does not run in the FAULT state (all LEDs flash simultaneously).
SY/MT		**Sync of PROFINET interface**	
LED	Yellow		This LED indicates whether the PROFINET interface has been synchronized.
LED	Off		The PROFINET interface has not yet synchronized with the send cycle clock of PROFINET IO with IRT, or PROFINET IO with IRT has not been configured.
LED	On		The PROFINET interface has synchronized to the send cycle clock of PROFINET IO with IRT.
LED flashes	2 Hz		A PROFINET firmware download is in progress.
	5 Hz		FAULT state SIMOTION software does not run in the FAULT state (all LEDs flash simultaneously).
BUS1F **BUS2F**	X101 X102	**Status of IsoPROFIBUS interface**	
LED	Red		If this LED is red, it indicates a fault at the IsoPROFIBUS interface.
LED	On		Bus fault Parameter assignment error
LED	Green		If this LED is green, it indicates the bus status of the IsoPROFIBUS interface.
LED	On		Cyclic data exchange
LED flashes	2 Hz		Bus status "Clear"
	5 Hz		FAULT state SIMOTION software does not run in the FAULT state (all LEDs flash simultaneously).
LED	Off		No fault or no interface configured.

LED combinations

STOP

When the user program reaches a breakpoint, SIMOTION P320-4 then assumes the **HALT** state.
A LED display indicates this state. The **HALT** state is also left when the breakpoint is left.

Table 12-2 LED combinations

LED	SF	RUN	STOPU	STOP	SF PN	SY/MT	BUSF1	BUSF2
STOP	x	0.5	1	1	x	x	x	x

x Not applicable
0.5 Flashes with a frequency of 0.5 Hz.
1 ON

DCP flashing

The DCP flashing function checks the correct assignment of a module and its interfaces.

The DCP flashing function is accessed via:

- Accessible nodes
- HW Config
- NetPro

Start the **Accessible nodes** function in SIMOTION SCOUT . Select a device and "Flashing" or "Stop flashing" is selected via the context menu.

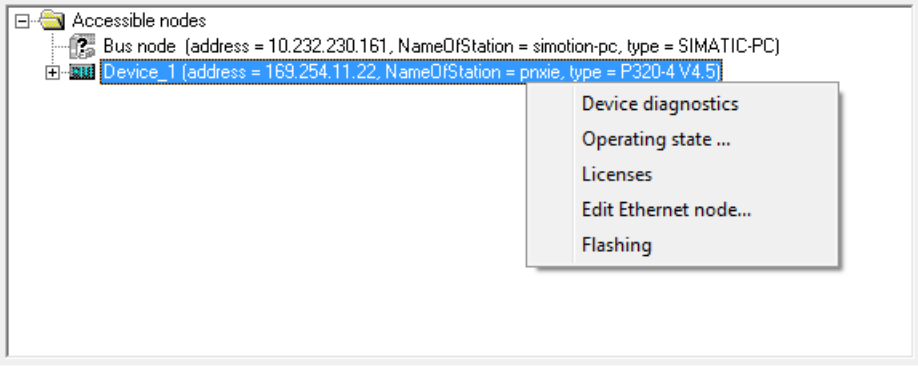

Figure 12-1 Accessible nodes

Alternatively, you can also activate the DCP flashing function in **HW Config** or in **NetPro** under the following path:

Target system > Ethernet > Edit Ethernet node... via the **Browse...** button, in the **Search Network** dialog box via the **Flashing** button of STEP 7.

The LED combination flashes as long as the dialog box is open and the **Flashing** function has not been deactivated.

If the dialog box is closed without deactivating the **Flashing** function, the previous state of the LED becomes active again.

Table 12-3 LED combinations

LED	SF	RUN	STOPU	STOP	SF PN	SY/MT	BUSF1	BUSF2
DCP flashing	x	2 (green/yel-low)	x	x	x	x	x	x

x Not applicable
1 ON
2 Flashes with a frequency of 2 Hz.

Note

You can carry out a detailed diagnosis using a PG/PC and the Engineering System.

FAULT

A fault has occurred to which the user program cannot respond.

The following actions may be required to rectify the fault:

- Power OFF/ON
- Recommissioning

Table 12-4 LED combinations

LED	SF	RUN	STOPU	STOP	SF PN	SY/MT	BUSF1	BUSF2
FAULT	5 (red)	5 (red)	5 (red)	5 (red)	5 (red)	5 (red)	5 (red)	5 (red)

5 Flashes with a frequency of 5 Hz.

12.2 Temperature alarm

For SIMOTION P320-4, two different temperatures are monitored in the device as regard to whether they reach their respective threshold value.

System variables

_cpudata.temperature

_cpudata.moduletemperature

Error response

An I/O alarm is activated.

Cause of error / troubleshooting

One of the two monitored temperatures has reached or exceeded its threshold.
The temperature must fall below the threshold value before the alarm is reset.

If the temperature alarm is issued, the user and/or the machine manufacturer (user program) must decide whether or not processing should be interrupted and SIMOTION P320-4 exited and switched off.

The user can program a customized response to this and allow the program to continue, if appropriate.

The default response is for the operating mode to switch to **STOP**.

Note

Further information on programming alarm responses can be found in the SIMOTION Runtime Basic Functions Function Manual.

12.3 Battery alarm

When the critical battery status is reached, the battery must be replaced as quickly as possible. Because the SIMOTION P320-4 often cannot be shut down at short notice during operation, it is important to perform a programmable response to this battery state.

For this case, the system variable

- persistentdatapowermonitoring.warningbatteryvoltagelevel1

can be used to catch the complete loss of the retain data if the battery cannot be replaced fast enough.

Users should periodically save their retain data (e.g. with the _savePersistentMemoryData function). This ensures that the operating state established after the next start up represents the most current status of the retain data possible.

⚠ WARNING

System variable persistentDataPowerMonitoring

If no response to this system variable has been programmed, there is the danger of the complete loss of retain data if a power failure occurs before the battery can be replaced.

In this case, only the retain data for the last back up, normally the last shut down of the SIMOTION P320-4, is available after the next power-up.

12.4 Power failure / POWER FAIL

In the event of a power failure, the consequences described below must be considered separately.

SIMOTION P Runtime

If a power failure occurs, the POWER FAIL functionality of the SIMOTION P Runtime will perform the following steps:

- SIMOTION P Runtime is shut down correctly
- The user data marked as retain is saved in the non-volatile memory of the SIMOTION P320-4

The backed-up user data is available again at the next power-up of the SIMOTION P Runtime. SIMOTION P Runtime is therefore ready for operation again without any data loss.

Note

Backup of the user data in the SRAM of the SIMOTION P320-4 in case of power failure is only guaranteed if the SIMOTION P320-4 is operated within its defined specifications.

The message **POWER FAIL** is displayed if the supply voltage for SIMOTION P320-4 falls below 20.4 V. In this case, check the voltages in the external power supply:

1. Check if the input voltage (mains voltage) for the external power supply has the rated value.
2. If so, check the output voltage of the external power supply. If the voltage is not within the limits for the supply voltage of the SIMOTION P320-4 (19.2 … 28.8 VDC), then change the external power supply.

Windows

If the SIMOTION P320-4 is shut down during operation, the Windows installation may be damaged.

The consistency of Windows applications cannot be guaranteed during a power failure.

In these cases, we strongly recommend use of an EWF or a UPS system.

NOTICE
Do not protect external CFast cards with EWF Drive D: - the **external** CFast card - must not be protected with EWF as otherwise the functionality of SIMOTION cannot be assured.

Note

Only applies to the SIMOTION P320-4 E

SIMOTION P320-E is delivered with deactivated EWF (Enhanced Write Filter).

After the device is commissioned, activate the EWF for drive C: because this ensures:

- An extended service life for the **internal** CFast card
- No data loss on the **internal** CFast card when switching the device off via the line side switch or through disconnection from the power supply

NOTICE

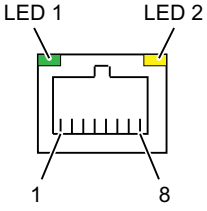
Data loss on the external CFast card

Always shut down SIMOTION correctly as otherwise there is a threat of data loss on the **external** CFast card.

See also Section: Switching off (Page 191).

12.5 PROFINET bus error occurs

The flashing red **SF PN** LED on the SIMOTION P320-4 indicates a problem of an I/O device on the bus or a configuring error.



Information about further display modes of the LED can be found under SIMOTION P State application > LED display (Page 128).

Error causes with flashing

- Failure of a connected I/O device
- At least one of the assigned I/O devices cannot be addressed
- Incorrect or no configuration.

PROFINET (LAN) X3 Port P1, P2, P3

The two LEDs on the respective PROFINET ports also provide information on the current connection status:

PROFINET interface		
		
LED 1	On	Lights up green: Link
	Off	No physical connection available. Troubleshooting: Check for loose connector, defective cable, etc.
LED 2	On	Lights up yellow: Activity
	Off	No logical connection, i.e. no Ethernet telegrams are exchanged. Troubleshooting: Check IP configurations, parameterize required router, etc.

12.6 Under-licensing

Error

The red system error LED (**SF**) flashes at 0.5 Hz.

Cause

No license exists for technology/optional objects under license.

Licensing must be performed to correct the error.

Note

Further information for the licensing of technology/option objects can be found in the SIMOTION SCOUT Configuration Manual.

12.7 Boot error messages

During power-up (the boot process), the BIOS first performs a **P**ower **O**n **S**elf **T**est (POST) and checks as to whether certain functional units of the PC are operating correctly. The boot sequence is immediately interrupted if critical errors occur.

If the POST does not return an error, the BIOS initializes and tests further functional units. In this startup phase, the graphics controller is initialized and any error messages are output to the screen.

The following lists the error messages from the system BIOS. For information on error messages output by the operating system or programs, refer to the corresponding manuals.

Error messages on the screen

Error message on the screen	Meaning / suggestions
Operating system not found	Possible causes: • No operating system present • Incorrect active boot partition • Wrong drive settings in SETUP

Troubleshooting/FAQs

13

13.1 Error correction

This section provides you with tips on how to locate and troubleshoot common problems.

FAQs / error correction	Possible cause	Possible remedy
The device is not operational.	There is no power supply to the device.	• Check whether the 24 VDC power supply is connected. See SIMOTION P320-4 E / P320-4 S Manual, Section Connecting the power supply (24 VDC). • Check whether the line side switch is activated. See SIMOTION P320-4 E / P320-4 S Manual, Section Operator controls.
SIMOTION P does not start after connecting the CFast card.	BIOS settings are not set to Hotplug Enabled.	You can find out how to check and correct the BIOS settings in Section Hotplug Enabled BIOS settings (Page 221).
SIMOTION P does not start after a reboot.	The user is not logged in automatically.	Set the password for the AutoLogin (Automatically Log On). See Section SIMOTION P AutoLogin (Page 94).
The monitor remains dark.	The monitor is switched off.	Switch on the monitor.
	The monitor is in "power-save" mode.	Press any key on the connected keyboard.
	The brightness button has been set to dark.	Set the monitor brightness button to obtain more light. For detailed information, refer to the monitor operating instructions.
	The power cord or the monitor cable is not connected.	• Check whether the power cord has been properly connected to the monitor and to the system unit or to the grounded shockproof outlet. • Check whether the monitor cable has been properly connected to the system unit and to the monitor.
		If the monitor screen still remains dark after you have performed these checks, please contact your technical support team.
The mouse pointer does not appear on the screen.	The mouse driver is not loaded.	Check whether the mouse driver is properly installed and present when you start the application program. For more detailed information on the mouse driver, refer to the documentation for the mouse or application programs.
	The mouse is not connected.	Check whether the mouse is properly connected to the system unit. If you use an adapter or extension on the mouse cable, also check the connectors.
		If the cursor still does not appear on the screen after you have performed these checks and measures, please contact your technical support team.

FAQs / error correction	Possible cause	Possible remedy
Error message on the screen: Operating system not found	• No operating system present. • Incorrect active boot partition. • Incorrect drive entries in the SETUP.	Check whether one of the specified causes is present:
Wrong time and/or date on the PC.	-	• Press <ESC> during the boot sequence to open BIOS Setup. Detailed information on the BIOS setup can be found in the section Starting Bios settings Hotplug Enabled - BIOS Setup (Page 221). • Set the time and date in the setup menu.
Although the BIOS setting is OK, the time and date are still wrong.	The backup battery is empty.	Replace the backup battery. See Section Service and maintenances > Replacing the back-up battery (Page 198). If the problem cannot be resolved by replacing the battery, then contact your technical support team.
UPS does not function.	The operating system does not have a suitable driver for the UPS.	Install a suitable driver; the correct driver can often be downloaded from the homepage of the device's manufacturer. See also Section Customer-specific software (Page 125).
IP address assigned twice (e.g. through series commissioning).	Default IP address for Windows See Default IP addresses for Windows and SIMOTION P (Page 153).	Assign a new IP address for Windows. The IP address must be different to the previous specified IP address and must not have been assigned already in the network.
The display in the BIOS for the PROFINET MAC address is incorrect (00:00:00:00:00:00).	-	The correct MAC addresses can be taken from the rating plate on the housing. See also Manual SIMOTION P320-4 E / P320-4 S Manual, Section Device identification data, MAC addresses.

13.2 Hotplug Enabled BIOS settings

Starting the BIOS setup

Proceed as follows:

1. Reset the SIMOTION P320-4 (warm or cold restart).
   Depending on the device version, the default settings may differ from the following figures.
2. After completing the startup test, you can start the program setup with BIOS.
   The following message is shown on the display:

Figure 13-1 SIEMENS Press Esc boot options

Press **Esc**.

3. After booting, the BIOS selection menu is displayed:

Figure 13-2 BIOS selection menu

4. The following buttons are available in the BIOS selection menu:

Button	Function
Continue	Exit BIOS menu, continue with the startup process
Boot Manager	Selection of the boot drive
Boot From File	Starting from a .EFI file
SCU	Device configurator (Setup Configuration Utility)
BIOS Update	BIOS update from USB stick
MEBx	Start the Intel Management Engine BIOS Extension

5. Select the **SCU** device configurator.

6. In the BIOS window, select the **Advanced** tab using the arrow keys and then select **IDE Configuration**.
   Press Enter to confirm the selection.

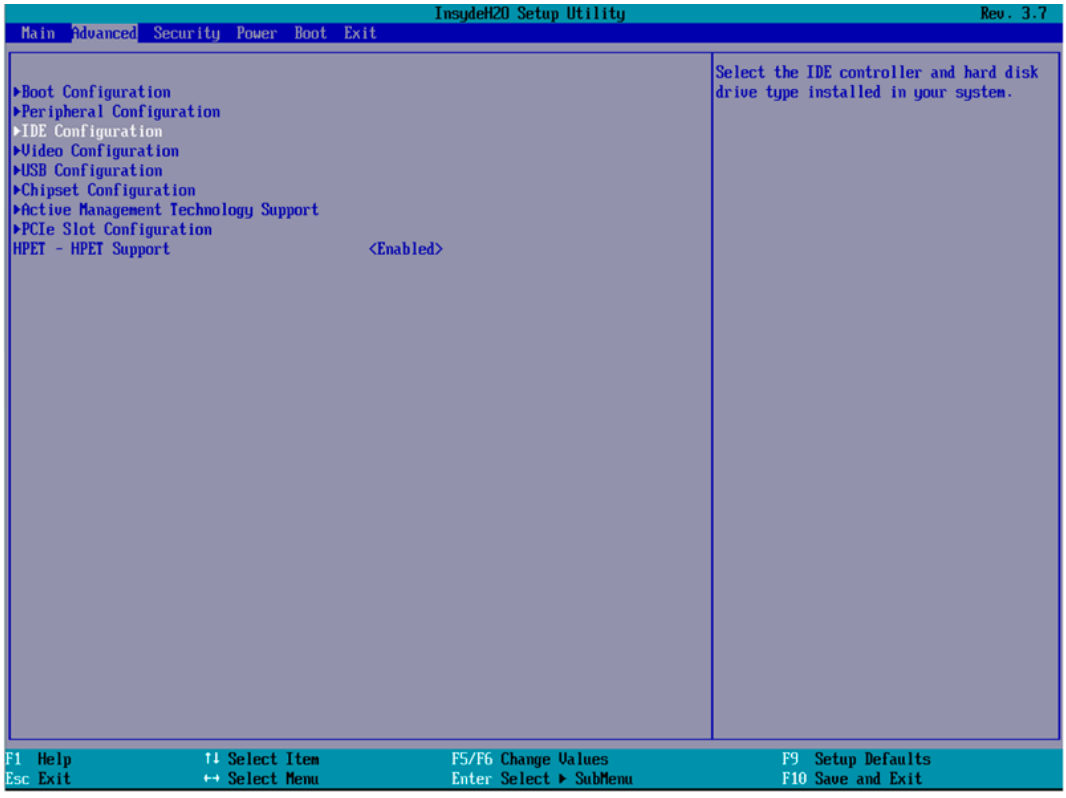


Figure 13-3 Advanced > IDE configuration

7. In the **IDE Configuration** window, select **SATA Port 2 HotPlug**.

8. Change the **Disabled** selection shown here to **Enabled**.

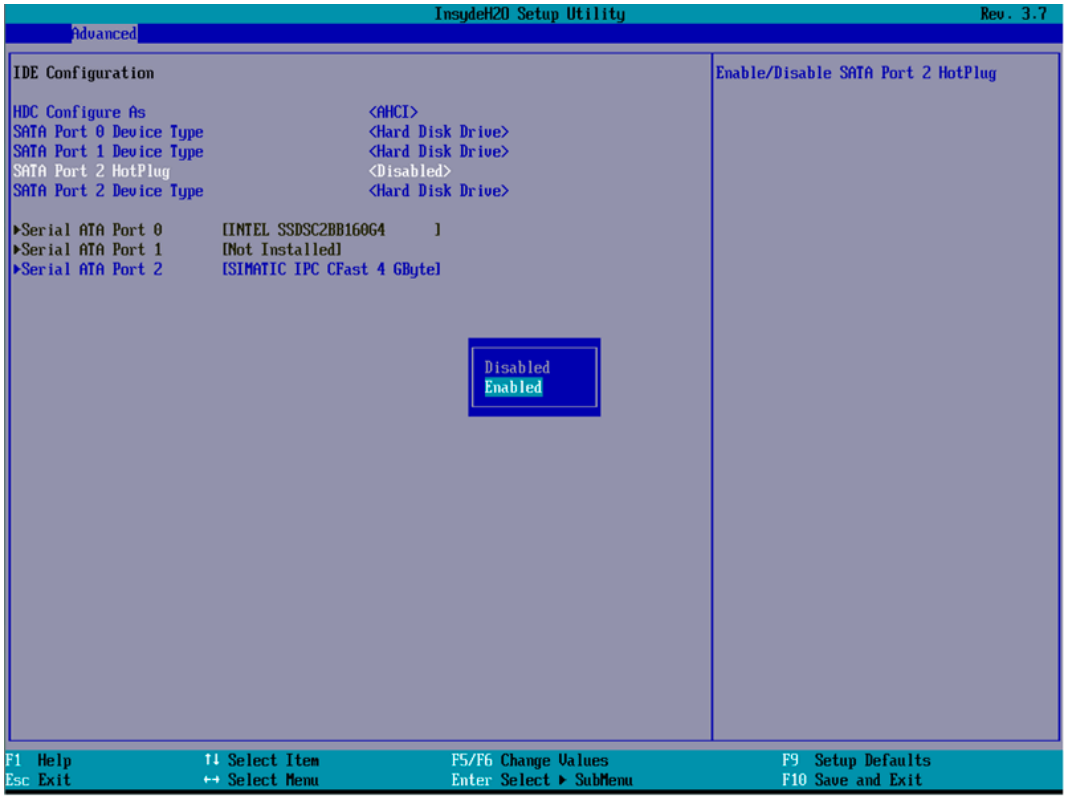

Figure 13-4 IDE Configuration > SATA Port 2 HotPlug

9. Press **F10** Save and Exit. The new entries are accepted.
10. Confirm the subsequent prompt to save the settings and exit the BIOS setup with **Yes**.

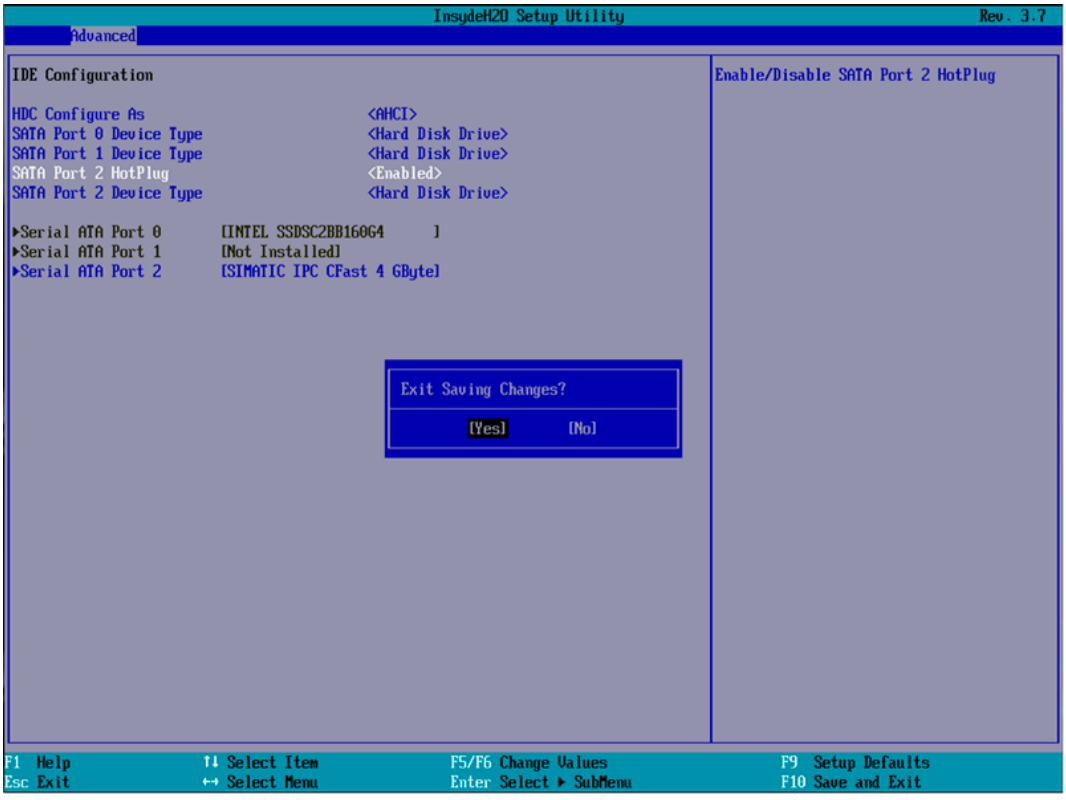

Figure 13-5 Confirming SATA Port 2 HotPlug > Enabled

Standards and approvals

A

A.1 General rules

CE marking

CE	Our products satisfy the requirements and protection objectives of the EC Directives and comply with the harmonized European standards (EN).

Electromagnetic compatibility

Standards for EMC are satisfied if the EMC Installation Guideline is observed.

SIMOTION products are designed for industrial use in accordance with product standard DIN EN 61800-3, Category C2.

cULus approval

c UL us	Listed component mark for United States and the Canada Underwriters Laboratories (UL) according to Standard UL 508, File E164110, File E115352, File E85972.

You can find further information on the respective device on the Internet at http://database.ul.com/cgi-bin/XYV/template/LISEXT/1FRAME/index.htm Enter the first seven characters of the article number at **Keyword**. Then click **Search**.

Korea certification

KC	KC registration number: KCC-REM-S49-SIMOTION Note that this device complies with limit class A with regard to the emission of radio frequency interference. This device can be used in all areas except residential areas. 이 기기는 업무용(A급) 전자파적합기기로서 판매자 또는 사용자는 이 점을 주의하시기 바라며, 가정외의 지역에서 사용하는 것을 목적으로 합니다.

Declaration of conformity

The current Declaration of conformity is available on the Internet at Declaration of conformity (http://support.automation.siemens.com/WW/view/en/10805446/134200).

ESD guidelines

B

B.1 ESD definition

What does ESD mean?

Electrostatic sensitive devices (ESDs) are individual components, integrated circuits, modules or devices that may be damaged by either electrostatic fields or electrostatic discharge.

NOTICE

Damage caused by electric fields or electrostatic discharge

Electric fields or electrostatic discharge can result in malfunctions as a result of damaged individual parts, integrated circuits, modules or devices.

- Only pack, store, transport and send electronic components, modules or devices in their original packaging or in other suitable materials, e.g conductive foam rubber or aluminum foil.
- Only touch components, modules and devices if you are first grounded by applying one of the following measures:
  - Wearing an ESD wrist strap
  - Wearing ESD shoes or ESD grounding straps in ESD areas with conductive flooring
- Only place electronic components, modules or devices on conductive surfaces (table with ESD surface, conductive ESD foam, ESD packaging, ESD transport container).

B.2 Electrostatic charging of individuals

Any person who is not conductively connected to the electrical potential of the environment can accumulate an electrostatic charge.

This figure indicates the maximum electrostatic charges that can accumulate on an operator when he comes into contact with the indicated materials. These values comply with the specifications in IEC 801-2.

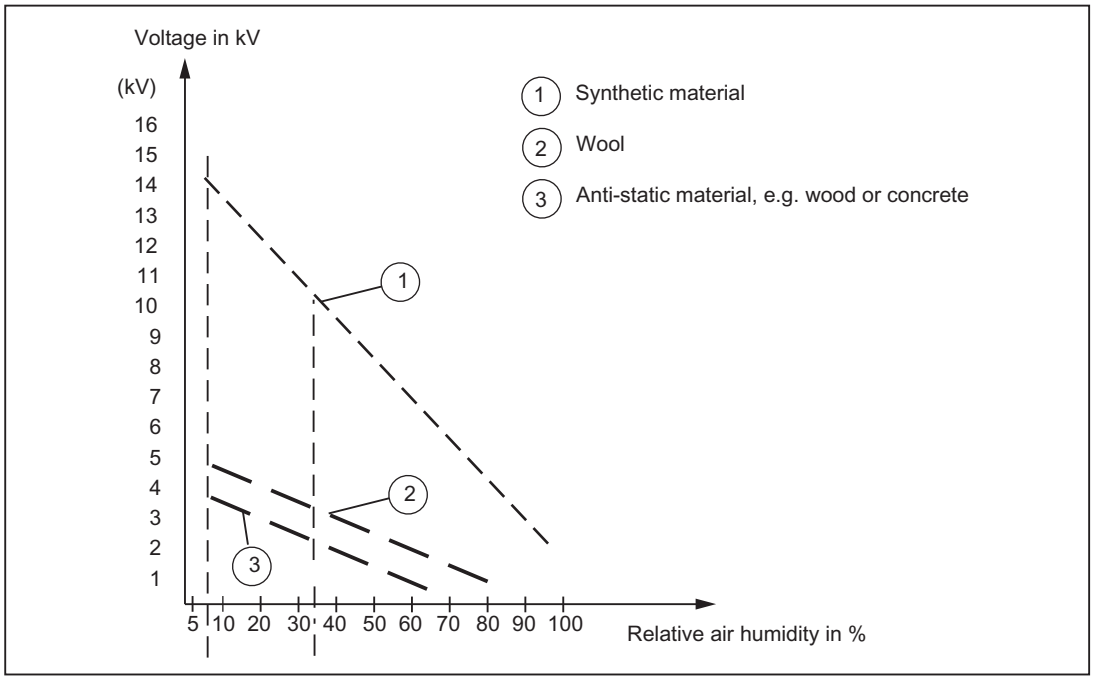

Figure B-1 Electrostatic voltage that can accumulate on operating personnel

B.3 Basic measures for protection against discharge of static electricity

Ensure sufficient grounding

When working with electrostatic sensitive devices, make sure that the you, your workstation, and the packaging are properly grounded. This prevents the accumulation of static electricity.

Avoid direct contact

You should only touch ESD components if unavoidable (for example, during maintenance work). When you touch modules, make sure that you do not touch either the pins on the modules or the printed conductors. If you follow these instructions, electrostatic discharge cannot reach or damage sensitive components.

If you have to take measurements on a module, make sure that you first discharge any static that may have accumulated in your body. To do this, touch a grounded metal object. Only use grounded measuring instruments.

List of abbreviations

C

C.1 Commissioning Manual, Abbreviations

Abbreviation	Term	Meaning
CE	Communauté Européenne (CE-Symbol)	The product is in conformance with all applicable EC directives.
CMOS	Complementary Metal Oxide Semiconductor	Complementary metal oxide semiconductors
COM	Communications Port	Term for the serial interface
CPU	Central Processing Unit	CPU
CRT	Cathode Ray Tube	-
CSA	Canadian Standards Association	Canadian organization for tests and certifications according to own or binational standards (with UL / USA) standards
CTS	Clear To Send	Clear to send
DRAM	Dynamic Random Access Memory	Dynamic RAM
DC	Direct Current	DC current
DMA	Direct Memory Access	Direct memory access
DP	Distributed I/O	-
DQS	Deutsche Gesellschaft zur Zertifizierung von Management-Systemen	-
DSR	Data Set Ready	Ready for operation
DTR	Data Terminal Ready	Data terminal is ready
DVI-I	Digital Visual Interface	Digital display interface with digital and VGA signals
ESD	Components sensitive to electrostatic charge	-
EN	European standard	-
EWF	Enhanced Write Filter	Configurable write filter (SIMOTION P320-4 E)
FAQ	Frequently Asked Questions	FAQs
GND	Ground	Chassis ground
HMI	Human Machine Interface	User interface
HW	Hardware	-
I/O	Input/Output	Data input/output on computers
IEC	International Electronical Commission	-
IP	Ingress Protection	Degree of protection
IRQ	Interrupt Request	Interrupt request
LAN	Local Area Network	Computer network that is limited to a local area.
LCD	Liquid Crystal Display	Liquid crystal display
LED	Light Emmitting Diode	Light emitting diode
MUI	Multilanguage User Interface	Language localization in Windows
NC	Not Connected	Not connected
OPC	OLE for Process Control	Standardized interface for industrial processes

Abbreviation	Term	Meaning
PC	Personal Computer	-
PCI	Peripheral Component Interconnect	High-speed expansion bus
PE	Protective Earth	Protective conductor
PG	Programming device	-
POST	Power On Self Test	-
RAL	Restricted Access Location	Installation of device in operating facilities with restricted access, for example, a locked switchgear cabinet
RAM	Random Access Memory	RAM
ROM	Read-Only Memory	-
RTS	Reliable Transfer Service	Request to send
RxD	Receive Data	Data transfer signal
SDRAM	Synchronous DRAM	-
SELV	Safety Extra Low Voltage	Safety extra low voltage
SRAM	Static Random Access Memory	Static RAM
SVP	Serial No. of the device	-
SW	Software	-
TFT	Thin-Film-Transistor	Type of LCD flat-screen
TxD	Transmit Data	Data transfer signal
UL	Underwriters Laboratories Inc.	US organization for tests and certifications according to own or binational standards (with CSA / Canada) standards
UMA	Unified Memory Architecture	Video memory
USB	Universal Serial Bus	-
UPS	Uninterruptible power supply	-
VCC	-	Positive supply voltage of integrated circuits
VDE	Verein deutscher Elektrotechniker (Union of German Electrical Engineers)	-
VGA	Video Graphics Array	Video adapter which meets industrial standard
WD	Watchdog	Program monitoring with error detection and alarming.

Warning notice system

This manual contains notices you have to observe in order to ensure your personal safety, as well as to prevent damage to property. The notices referring to your personal safety are highlighted in the manual by a safety alert symbol, notices referring only to property damage have no safety alert symbol. These notices shown below are graded according to the degree of danger.

⚠ DANGER
indicates that death or severe personal injury **will** result if proper precautions are not taken.

⚠ WARNING
indicates that death or severe personal injury **may** result if proper precautions are not taken.

⚠ CAUTION
indicates that minor personal injury can result if proper precautions are not taken.

NOTICE
indicates that property damage can result if proper precautions are not taken.

If more than one degree of danger is present, the warning notice representing the highest degree of danger will be used. A notice warning of injury to persons with a safety alert symbol may also include a warning relating to property damage.

Qualified Personnel

The product/system described in this documentation may be operated only by **personnel qualified** for the specific task in accordance with the relevant documentation, in particular its warning notices and safety instructions. Qualified personnel are those who, based on their training and experience, are capable of identifying risks and avoiding potential hazards when working with these products/systems.

Proper use of Siemens products

Note the following:

⚠ WARNING
Siemens products may only be used for the applications described in the catalog and in the relevant technical documentation. If products and components from other manufacturers are used, these must be recommended or approved by Siemens. Proper transport, storage, installation, assembly, commissioning, operation and maintenance are required to ensure that the products operate safely and without any problems. The permissible ambient conditions must be complied with. The information in the relevant documentation must be observed.

Trademarks

All names identified by ® are registered trademarks of Siemens AG. The remaining trademarks in this publication may be trademarks whose use by third parties for their own purposes could violate the rights of the owner.

Disclaimer of Liability

We have reviewed the contents of this publication to ensure consistency with the hardware and software described. Since variance cannot be precluded entirely, we cannot guarantee full consistency. However, the information in this publication is reviewed regularly and any necessary corrections are included in subsequent editions.

Preface

Preface

This document is part of the **SIMOTION P documentation package**.

This documentation describes the SIMOTION P320-4 hardware platform which can be delivered in the SIMOTION P320-4 E and SIMOTION P320-4 S hardware versions:

- SIMOTION P320-4 E with the Windows Embedded Standard 7 32-bit operating system and real-time expansion for SIMOTION.
  Successor to SIMOTION P320-3.
- SIMOTION P320-4 E with the Windows 7 Ultimate 32-bit operating system and real-time expansion for SIMOTION.
  Successor to SIMOTION P350-3.

References

The following documents contain the descriptions for the SIMOTION P hardware platform:

- SIMOTION P320-4 E / P320-4 S, Manual, Edition 11/2016
- SIMOTION P320-4 E / P320-4 S, Commissioning and Hardware Installation Manual, Edition 11/2016

Validity range

This manual applies to the SIMOTION P320-4 E and SIMOTION P320-4 S devices as of product level SIMOTION V4.5.

Standards

The SIMOTION system was developed in accordance with ISO 9001 quality guidelines.

Chapters in this documentation

The following sections describe the purpose and the use of this documentation:

- Safety instructions
  Contains fundamental safety instructions for SIMOTION and specific safety instructions for SIMOTION P320-4.
- Description
  System overview and product description for SIMOTION P320-4. The communication versions are also described.
- Use planning
  Points to note in advance: upon delivery, the permitted installation positions, environmental and ambient conditions and electromagnetic compatibility.

- Interfaces
  Description of the interfaces and operator control and display elements for SIMOTION P320-4.
- Installation/mounting
  An overview of the installation of the SIMOTION P320-4 taking into account the mounting positions.
- Connecting
  This section provides general information and important notes that you must observe when connecting the SIMOTION P320-4.
- Troubleshooting/FAQs
  List of possible errors and their remedies.
- Technical specifications
  This section contains an overview of the technical data, which is listed in detail for the individual components.
- Dimension drawings
  In this section you can find dimension drawings and dimensions of the SIMOTION P320-4.
- Spare parts
  You can find information about the spare parts for the SIMOTION P320-4 here.
- Appendix
  In addition to the safety information, the annexes also contain information about the standards, approvals and EGB guideline.
- Index
  Alphabetical directory for locating information.

SIMOTION Documentation

An overview of the SIMOTION documentation can be found in the SIMOTION Documentation Overview document.

This documentation is included as electronic documentation in the scope of delivery of SIMOTION SCOUT. It comprises ten documentation packages.

The following documentation packages are available for SIMOTION V4.5:

- SIMOTION Engineering System Handling
- SIMOTION System and Function Descriptions
- SIMOTION Service and Diagnostics
- SIMOTION IT
- SIMOTION Programming
- SIMOTION Programming - References
- SIMOTION C
- SIMOTION P

- SIMOTION D
- SIMOTION Supplementary Documentation

Hotline and Internet addresses

SIMOTION at a glance

We have compiled an overview page from our range of information about SIMOTION with the most important information on frequently asked topics - which can be opened with only one click.

Whether beginner or experienced SIMOTION user – the most important downloads, manuals, tutorials, FAQs, application examples, etc. can be found at

https://support.industry.siemens.com/cs/ww/en/view/109480700

Additional information

Click the following link to find information on the following topics:

- Documentation overview
- Additional links to download documents
- Using documentation online (find and search manuals/information)

https://support.industry.siemens.com/cs/ww/en/view/109479653

My Documentation Manager

Click the following link for information on how to compile documentation individually on the basis of Siemens content and how to adapt it for the purpose of your own machine documentation:

https://support.industry.siemens.com/My/ww/en/documentation

Training

Click the following link for information on SITRAIN - Siemens training courses for automation products, systems and solutions:

http://www.siemens.com/sitrain

FAQs

Frequently Asked Questions can be found in SIMOTION Utilities & Applications, which are included in the scope of delivery of SIMOTION SCOUT, and in the Service&Support pages in **Product Support**:

https://support.industry.siemens.com/cs/de/en/ps/14505/faq

Technical support

Country-specific telephone numbers for technical support are provided on the Internet under **Contact**:

https://support.industry.siemens.com/cs/ww/en/sc/2090

Disposal and recycling of the device

The disposal of the products described in this manual must be performed in compliance with the valid national regulations.

To a great extent, the products can be recycled owing to their low pollutant content. To recycle and dispose of your old device in an environmentally friendly way, please contact a waste disposal service certified for electronic waste.

If you have any further questions about disposal and recycling, please contact your local Siemens contact person. Contact details can be found in our contacts database on the Internet at: http://www.automation.siemens.com/partner/index.asp

Table of contents

Preface **3**

1 Safety instructions **11**

1.1 Fundamental safety instructions 11
1.1.1 General safety instructions 11
1.1.2 Safety instructions for electromagnetic fields (EMF) 14
1.1.3 Handling electrostatic sensitive devices (ESD) 14
1.1.4 Industrial security 15
1.1.5 Danger to life due to software manipulation when using removable storage media 16
1.1.6 Residual risks of power drive systems 16

1.2 Specific safety instructions for the SIMOTION P320-4 17
1.2.1 General safety instructions for the SIMOTION P320-4 17
1.2.2 Notes on use 20

2 Industrial security **21**

2.1 Security concept for SIMOTION P320-4 21
2.1.1 Security 21

2.2 Why is industrial security so important? 23
2.2.1 Trends in the IT sector 24
2.2.2 Possible corporate security holes 24

2.3 General security measures 25
2.3.1 Overview 25
2.3.2 Plant security 27
2.3.2.1 Physical protection of critical production areas 27
2.3.3 Network security 28
2.3.3.1 Network segmentation 28
2.3.4 System integrity 31
2.3.4.1 System hardening 31
2.3.4.2 Patch management 32

2.4 Product-specific measures 33
2.4.1 Virus scanners, Windows security patches, SIMOTION P 33
2.4.2 Changing the Windows user password 34
2.4.3 Changing the AutoLogin 38
2.4.4 Deactivating the remote desktop connection 45

B.2 Electrostatic charging of individuals....141
B.3 Basic measures for protection against discharge of static electricity....142
Index....143

Safety instructions

1

1.1 Fundamental safety instructions

1.1.1 General safety instructions

⚠ DANGER

Danger to life due to live parts and other energy sources

Death or serious injury can result when live parts are touched.

- Only work on electrical devices when you are qualified for this job.
- Always observe the country-specific safety rules.

Generally, six steps apply when establishing safety:

1. Prepare for shutdown and notify all those who will be affected by the procedure.
2. Disconnect the machine from the supply.
   - Switch off the machine.
   - Wait until the discharge time specified on the warning labels has elapsed.
   - Check that it really is in a no-voltage condition, from phase conductor to phase conductor and phase conductor to protective conductor.
   - Check whether the existing auxiliary supply circuits are de-energized.
   - Ensure that the motors cannot move.
3. Identify all other dangerous energy sources, e.g. compressed air, hydraulic systems, or water.
4. Isolate or neutralize all hazardous energy sources by closing switches, grounding or short-circuiting or closing valves, for example.
5. Secure the energy sources against switching on again.
6. Ensure that the correct machine is completely interlocked.

After you have completed the work, restore the operational readiness in the inverse sequence.

⚠ WARNING

Danger to life from hazardous voltage when connecting an unsuitable power supply

Touching live components can result in death or severe injury.

- Only use power supplies that provide SELV (Safety Extra Low Voltage) or PELV (Protective Extra Low Voltage) output voltages for all connections and terminals of the electronics modules.

⚠ WARNING

Danger to life from touching live parts on damaged devices

Improper handling of devices can result in damage.

For damaged devices, hazardous voltages can be present at the enclosure or at exposed components; if touched, this can result in death or severe injury.

- Observe the limit values specified in the technical specifications during transport, storage, and operation.
- Do not use damaged devices.

⚠ WARNING

Danger to life through electric shock due to unconnected cable shields

Hazardous touch voltages can occur through capacitive cross-coupling due to unconnected cable shields.

- As a minimum, connect cable shields and the cores of power cables that are not used (e.g. brake cores) at one end at the grounded housing potential.

⚠ WARNING

Danger to life due to electric shock when not grounded

For missing or incorrectly implemented protective conductor connection for devices with protection class I, high voltages can be present at open, exposed parts, which when touched, can result in death or severe injury.

- Ground the device in compliance with the applicable regulations.

⚠ WARNING

Danger to life due to fire spreading if housing is inadequate

Fire and smoke development can cause severe personal injury or material damage.

- Install devices without a protective housing in a metal control cabinet (or protect the device by another equivalent measure) in such a way that contact with fire inside and outside the device is prevented.
- Ensure that smoke can only escape via controlled and monitored paths.

⚠ WARNING

Danger to life from unexpected movement of machines when using mobile wireless devices or mobile phones

Using mobile radios or mobile phones with a transmit power > 1 W closer than approx. 2 m to the components may cause the devices to malfunction, influence the functional safety of machines therefore putting people at risk or causing material damage.

- Switch off wireless devices or mobile phones in the immediate vicinity of the components.

⚠ WARNING

Danger to life due to fire if overheating occurs because of insufficient ventilation clearances

Inadequate ventilation clearances can cause overheating of components followed by fire and smoke development. This can cause death or serious injury. This can also result in increased downtime and reduced service life for devices/systems.

- Ensure compliance with the specified minimum clearance as ventilation clearance for the respective component.

⚠ WARNING

Danger of an accident occurring due to missing or illegible warning labels

Missing or illegible warning labels can result in accidents involving death or serious injury.

- Check that the warning labels are complete based on the documentation.
- Attach any missing warning labels to the components, in the national language if necessary.
- Replace illegible warning labels.

⚠ WARNING

Danger to life when safety functions are inactive

Safety functions that are inactive or that have not been adjusted accordingly can cause operational faults on machines that could lead to serious injury or death.

- Observe the information in the appropriate product documentation before commissioning.
- Carry out a safety inspection for functions relevant to safety on the entire system, including all safety-related components.
- Ensure that the safety functions used in your drives and automation tasks are adjusted and activated through appropriate parameterizing.
- Perform a function test.
- Only put your plant into live operation once you have guaranteed that the functions relevant to safety are running correctly.

Note

Important safety notices for safety functions

If you want to use safety functions, you must observe the safety notices in the safety manuals.

1.1.2 Safety instructions for electromagnetic fields (EMF)

⚠ WARNING

Danger to life from electromagnetic fields

Electromagnetic fields (EMF) are generated by the operation of electrical power equipment such as transformers, converters or motors.

People with pacemakers or implants are at a special risk in the immediate vicinity of these devices/systems.

- Ensure that the persons involved are the necessary distance away (minimum 2 m).

1.1.3 Handling electrostatic sensitive devices (ESD)

Electrostatic sensitive devices (ESD) are individual components, integrated circuits, modules or devices that may be damaged by either electric fields or electrostatic discharge.

NOTICE

Damage through electric fields or electrostatic discharge

Electric fields or electrostatic discharge can cause malfunctions through damaged individual components, integrated circuits, modules or devices.

- Only pack, store, transport and send electronic components, modules or devices in their original packaging or in other suitable materials, e.g conductive foam rubber of aluminum foil.
- Only touch components, modules and devices when you are grounded by one of the following methods:
  - Wearing an ESD wrist strap
  - Wearing ESD shoes or ESD grounding straps in ESD areas with conductive flooring
- Only place electronic components, modules or devices on conductive surfaces (table with ESD surface, conductive ESD foam, ESD packaging, ESD transport container).

1.1.4 Industrial security

Note

Industrial security

Siemens provides products and solutions with industrial security functions that support the secure operation of plants, systems, machines and networks.

In order to protect plants, systems, machines and networks against cyber threats, it is necessary to implement – and continuously maintain – a holistic, state-of-the-art industrial security concept. Siemens' products and solutions only form one element of such a concept.

Customer is responsible to prevent unauthorized access to its plants, systems, machines and networks. Systems, machines and components should only be connected to the enterprise network or the internet if and to the extent necessary and with appropriate security measures (e.g. use of firewalls and network segmentation) in place.

Additionally, Siemens' guidance on appropriate security measures should be taken into account. For more information about industrial security, please visit http://www.siemens.com/industrialsecurity.

Siemens' products and solutions undergo continuous development to make them more secure. Siemens strongly recommends to apply product updates as soon as available and to always use the latest product versions. Use of product versions that are no longer supported, and failure to apply latest updates may increase customer's exposure to cyber threats.

To stay informed about product updates, subscribe to the Siemens Industrial Security RSS Feed under http://www.siemens.com/industrialsecurity..

⚠ WARNING

Danger as a result of unsafe operating states resulting from software manipulation

Software manipulation (e.g. by viruses, Trojan horses, malware, worms) can cause unsafe operating states to develop in your installation which can lead to death, severe injuries and/or material damage.

- Keep the software up to date.
  Information and newsletters can be found at:
  http://support.automation.siemens.com
- Incorporate the automation and drive components into a state-of-the-art, integrated industrial security concept for the installation or machine.
  For more detailed information, go to:
  http://www.siemens.com/industrialsecurity
- Make sure that you include all installed products into the integrated industrial security concept.

1.1.5 Danger to life due to software manipulation when using removable storage media

⚠ WARNING

Danger to life due to software manipulation when using removable storage media

The storage of files on removable storage media involves a high risk of infection, e.g. via viruses or malware. Incorrect parameter assignment can cause machines to malfunction, which can lead to injuries or death.

- Protect the files on removable storage media against harmful software through appropriate protective measures, e.g. virus scanners.

1.1.6 Residual risks of power drive systems

When performing the risk assessment for a machine or plant in accordance with the respective local regulations (e.g. EC Machinery Directive), the machine manufacturer or plant constructor must take into account the following residual risks associated with the control and drive components of a drive system:

1. Unintentional movements of driven machine or system components during commissioning, operation, maintenance and repairs caused by, for example:
   - Hardware and/or software errors in the sensors, control system, actuators, and cables and connections
   - Response times of the control system and of the drive
   - Operation and/or environmental conditions outside the specification
   - Condensation/conductive contamination
   - Parameterization, programming, cabling, and installation errors
   - Use of wireless devices / mobile phones in the immediate vicinity of electronic components
   - External influences/damage
   - X-rays, ionizing radiation and cosmic radiation
2. Unusually high temperatures, including open flames, as well as emissions of light, noise, particles, gases, etc., can occur inside and outside the components under fault conditions caused by, for example:
   - Component failure
   - Software errors
   - Operation and/or environmental conditions outside the specification
   - External influences/damage

3. Hazardous shock voltages caused by, for example:
   - Component failure
   - Influence during electrostatic charging
   - Induction of voltages in moving motors
   - Operation and/or environmental conditions outside the specification
   - Condensation/conductive contamination
   - External influences/damage
4. Electrical, magnetic and electromagnetic fields generated in operation that can pose a risk to people with a pacemaker, implants or metal replacement joints, etc., if they are too close
5. Release of environmental pollutants or emissions as a result of improper operation of the system and/or failure to dispose of components safely and correctly

For more information about the residual risks of the drive system components, see the relevant sections in the technical user documentation.

1.2 Specific safety instructions for the SIMOTION P320-4

1.2.1 General safety instructions for the SIMOTION P320-4

⚠ WARNING

Life-threatening voltages are present with an open control cabinet

When you install the device in a control cabinet, some areas or components in the open control cabinet may be carrying life-threatening voltages.

If you touch these areas or components, you may be killed by electric shock.

Switch off the power supply to the cabinet before opening it.

System expansions

NOTICE

Damage through system expansions

Device and system expansions may be faulty and can affect the entire machine or plant.

The installation of expansions can damage the device, machine or plant.

Device and system expansions may violate safety rules and regulations regarding radio interference suppression.

If you install or exchange system expansions and damage your device, the warranty becomes void.

Note the following for system expansions:

- Only install system expansion devices designed for this device. Contact your technical support team or where you purchased your PC to find out which system expansion devices may safely be installed.
- Observe the information on electromagnetic compatibility (Page 139).

NOTICE

"Open Type" UL508

Note that the device is classified as "Open Type" for use in the area of Industrial Control Equipment (UL508). Installation of the device in an enclosure according to UL508 is conditional for approval or operation according to UL508.

Battery and rechargeable battery

⚠ WARNING

Risk of explosion and release of harmful substances

Improper handling of lithium batteries can result in an explosion of the batteries.

Explosion of the batteries and the released pollutants can cause severe physical injury. Worn batteries jeopardize the function of the device.

Note the following when handling lithium batteries:

- Replace used batteries in good time, see the section "Replacing the backup battery" in the Commissioning and Hardware Installation Manual.
- Replace the lithium battery only with an identical battery or types recommended by the manufacturer (Article No.: A5E30314053).
- Do not throw lithium batteries into fire, do not solder on the cell body, do not recharge, do not open, do not short-circuit, do not reverse polarity, do not heat above 100°C and protect from direct sunlight, moisture and condensation.

High frequency radiation

NOTICE

Unintentional operating situations

High frequency radiation, e g. from a cellular phone, interferes with device functions and can result in malfunctioning of the device.

Persons are injured and the plant is damaged.

Avoid high-frequency radiation:

- Remove radiation sources from the environment of the device.
- Switch off radiating devices.
- Reduce the radio output of radiating devices.
- Observe the information on electromagnetic compatibility (Page 139).

ESD Guideline

Electrostatic sensitive devices can be labeled with an appropriate symbol.

NOTICE

Electrostatic sensitive devices (ESD)

When you touch electrostatic sensitive components, you can destroy them through voltages that are far below the human perception threshold.

If you work with components that can be destroyed by electrostatic discharge, observe the ESD Guideline.

Further information

You can find more detailed information about the **EGB Guideline** in Annex B in the section with the same name.

1.2.2 Notes on use

⚠ WARNING

Hazards on an unprotected machine or plant

According to the results of a risk analysis, hazards can occur on an unprotected machine. The hazards can result in personal injury.

According to the risk analysis, the risk of personal injury can be avoided with the following measures:

- Additional protective devices on the machine or plant. With this, especially the programming, configuration and wiring of the inserted I/O modules have to be executed, in accordance with the necessary risk analysis identified safety performance (SIL, PL or Cat.).
- The correct use of the device has to be verified with a function test on the system. This test can detect programming, configuration and wiring errors.
- Documentation of the test results that you can enter in the relevant safety records when required.

NOTICE

Ambient conditions

Ambient conditions for which the device is not suitable can cause faults or damage the device.

Note the following:

- Operate the device only in closed rooms. Failure to comply nullifies the warranty.
- Operate the device only in accordance with the ambient conditions specified in the technical specifications.
- Protect the device against dust, moisture and heat.
- Do not expose the device to direct sunlight or other strong sources of light.
- Without additional measures, such as a supply of clean air, the device may not be used in locations with harsh operating conditions caused by acidic vapors or gases.
- Observe the permissible mounting positions of the device.
- Do not obstruct the venting slots of the device.

Note

Use in an industrial environment without additional protective measures

This device was designed for use in a normal industrial environment according to IEC 60721-3-3.

Industrial security

2

2.1 Security concept for SIMOTION P320-4

2.1.1 Security

Note

Observe the general security information in this documentation for Industrial security (Page 15).

Regular change of the Windows password

Note

For security reasons, the Windows password should be changed regularly.

It is essential that the AutoLogin is also adapted for this purpose.

You can find instructions in the following sections:

- Changing the Windows user password (Page 34)
- AutoLogin for SIMOTION P (Page 38).

Unlocking Windows

Note

Windows locked

Windows may be accidentally locked, e.g. through shortcut key Windows + L.

If you do not know the password for the SIMOTION P320-4, please contact the Siemens Industry Online Support (https://support.industry.siemens.com/cs/?lc=en-DE).

Windows firewall

Note

Windows firewall

To allows the Windows IP to be accessed externally, this must be set as an exception in the Windows firewall **File and Printer Sharing**. Otherwise, there is only limited access to Windows from outside.

Security and networks

Note

You will find information on the security of networks in Section General security measures (Page 25).

Remote desktop connection

Note that for the SIMOTION P320-4 with Headless operation, you require a user name and password for a remote desktop connection. Per default, the remote desktop connection is already set up.

Note

Deactivating the remote desktop connection

If you do **not** use the remote desktop connection, it must be deactivated for security reasons.

See Section Deactivating the remote desktop connection (Page 45)

SIMOTION IT

Note

Security concept

Note the security concept of HTTP/S, FTP and Telnet access on the Web server when working with SIMOTION IT.

You will find information in the SIMOTION IT Diagnostics and Configuration Diagnostics Manual or the SIMOTION online help in Section Security concept.

Note

User administration

Note the information on the user administration when working with SIMOTION IT.

You will find information in the SIMOTION IT Diagnostics and Configuration Diagnostics Manual or the SIMOTION online help in Section User administration.

Information on industrial security

The following sections are taken from the Motion Control Industrial Security Configuration Manual:

- Why is industrial security so important? (Page 23)
- General security measures (Page 25)
- Product-specific measures (virus scanners) (Page 33)

You can view the entire document in the Industry Online Support (https://support.industry.siemens.com/cs/ww/en/view/108862708).

2.2 Why is industrial security so important?

The topic of data security and access protection (security) is becoming more and more important in industrial environments. The progressive networking of entire industrial plants, the vertical integration and networking of the individual levels of a company, and new technologies, such as remote maintenance and remote access, are leading to increased requirements for protecting industrial plants.

The threats are diverse and the consequences far-reaching.

Possible threats:

- Espionage of data, recipes, etc.
- Sabotage of production plants
- System stoppage, e.g. due to virus infection and malware
- Manipulation of data or application software
- Unauthorized use of system functions

Possible effects of a security incident

- Loss of intellectual property
- Loss of production or reduced product quality
- Company image and economic damage

- Catastrophic environmental influences
- Danger to persons and machines

2.2.1 Trends in the IT sector

Overview

There are many new trends which affect industrial security:

- Cloud computing in general
  The number of network connections across the world is constantly increasing. This enables innovations such as cloud computing and the applications that go hand in hand with it. In conjunction with cloud computing, there has been a massive increase in the number of mobile devices, such as mobile phones and tablet PCs.
- Wireless technology
  On the other hand, the increasing use of mobile devices has only become possible thanks to the ubiquitous availability of mobile networks. Wireless LAN is also becoming increasingly available.
- Smart Grid
  Networking is not only limited to data networks, it also influences our energy infrastructure.
- Worldwide remote access to plants, machines and mobile applications
- The "Internet of things"
  Millions of electronic devices are becoming network-capable and are communicating via the Internet, such as onboard computers in cars, which send warranty information to dealers, or water meter sensors that transmit water consumption data to municipal water suppliers via radio.

However, in order for everything from cloud computing to sensors to work without service disruptions, you need reliable network infrastructures that are well protected against attacks from malware and hackers.

2.2.2 Possible corporate security holes

Possible security holes or weak points

The security chain of a company is only as strong as its weakest link. Security holes can exist at numerous points. The following list gives only a few examples:

- Employees
- Production plants
- Network infrastructure
- Data centers
- PC workstations

- Laptops
- Tablet PCs
- Printers
- Smartphones
- Portable storage media
- Guidelines and regulations

For this reason, a holistic approach is required to deal with the issue of security. Coordinated guidelines and regulations are required that cover all areas: Devices, systems, processes and employees.

2.3 General security measures

2.3.1 Overview

In the following section you will learn about the general security measures you can take in order to protect your system from threats. All of the measures are recommended.

Additional specific security measures for SINUMERIK, SIMOTION and SINAMICS products can be found in Section Product-specific security measures (Page 33).

Basically, the measures should be coordinated with one another and correspond to the ring-shaped principle of the "Defense in Depth" strategy. The measures are structured according to the "onion" principle and each measure forms an additional protective layer around the core: the production plant.

Figure 2-1 Defense in depth strategy

- **Plant security**
  Plant security represents the outermost protective ring. Plant security includes comprehensive physical security measures, e.g. entry checks, which should be closely coordinated with protective measures for IT security.
- **Network security**
  The measures, grouped under the keyword "Network security", form the core of the protective measures. This refers to the segmentation of the plant network with limited and secure communication between subnetworks ("secure islands") and the interface check with the use of firewalls.
- **System integrity**
  "System integrity" represents the combination two major measures. PC-based systems and the control level must be protected against attacks. Steps include the following measures:
  - User authentication for machine or plant operators with individual authorization levels
  - Integrated access protection mechanisms in the automation components to prevent unauthorized changes via the engineering system or during maintenance
  - The use of antivirus and whitelisting software to protect PC systems against malware
  - Maintenance and update processes to keep the automation systems up-to-date (e.g. patch management, firmware updates, etc.)

2.3.2 Plant security

2.3.2.1 Physical protection of critical production areas

Unauthorized persons may be able to enter the production site/building and damage or alter production equipment as a result of gaps in a company's physical security. Confidential information can also be lost. This can be prevented if both the company's site and the production areas are protected accordingly.

Company security

The company's physical security can be ensured via the following measures:

- Closed off and monitored company premises
- Entry control, keys / card readers and/or security personnel
- Escorting of external personnel by company employees

Physical production security

The physical security of a production location can also be ensured via the following measures:

- Separate access control for production areas.
- Installation of critical components in securely lockable cabinets / switching rooms including monitoring and alarm signaling options
- Prohibited production areas with restricted access rights
- Configuration of the radio field to restrict the WLAN range so that it is not available outside the defined areas (e.g. factory building).
- Guidelines that prevent the use of third-party data storage media (e.g. USB sticks) and IT devices (e.g. notebooks) classified as insecure on the control.

Further information

Further information on integrated security solutions can be found on the Surveillance page (http://www.buildingtechnologies.siemens.com/bt/global/en/security-solution/Pages/security-solution.aspx).

2.3.3 Network security

2.3.3.1 Network segmentation

Separation between production and office networks

One important protective measure for your control is the strict separation of the production networks and the other company networks. This separation creates protection zones for your production networks.

Note

The products – drives, controllers, commissioning tools (e.g. STARTER or Startdrive) – described in this manual must only be operated in protection zones.

Separation by means of a firewall system

In the simplest scenario, separation is achieved by means of an individual firewall system which controls and regulates communication between networks.

Separation via a DMZ network

In the more secure version, the coupling is established via a separate DMZ network. In this case, direct communication between the production network and the company network is completely prevented by firewalls and only takes place indirectly via servers in the DMZ network.

Note

The production networks should also be divided into separate automation cells in order to protect critical communication mechanisms.

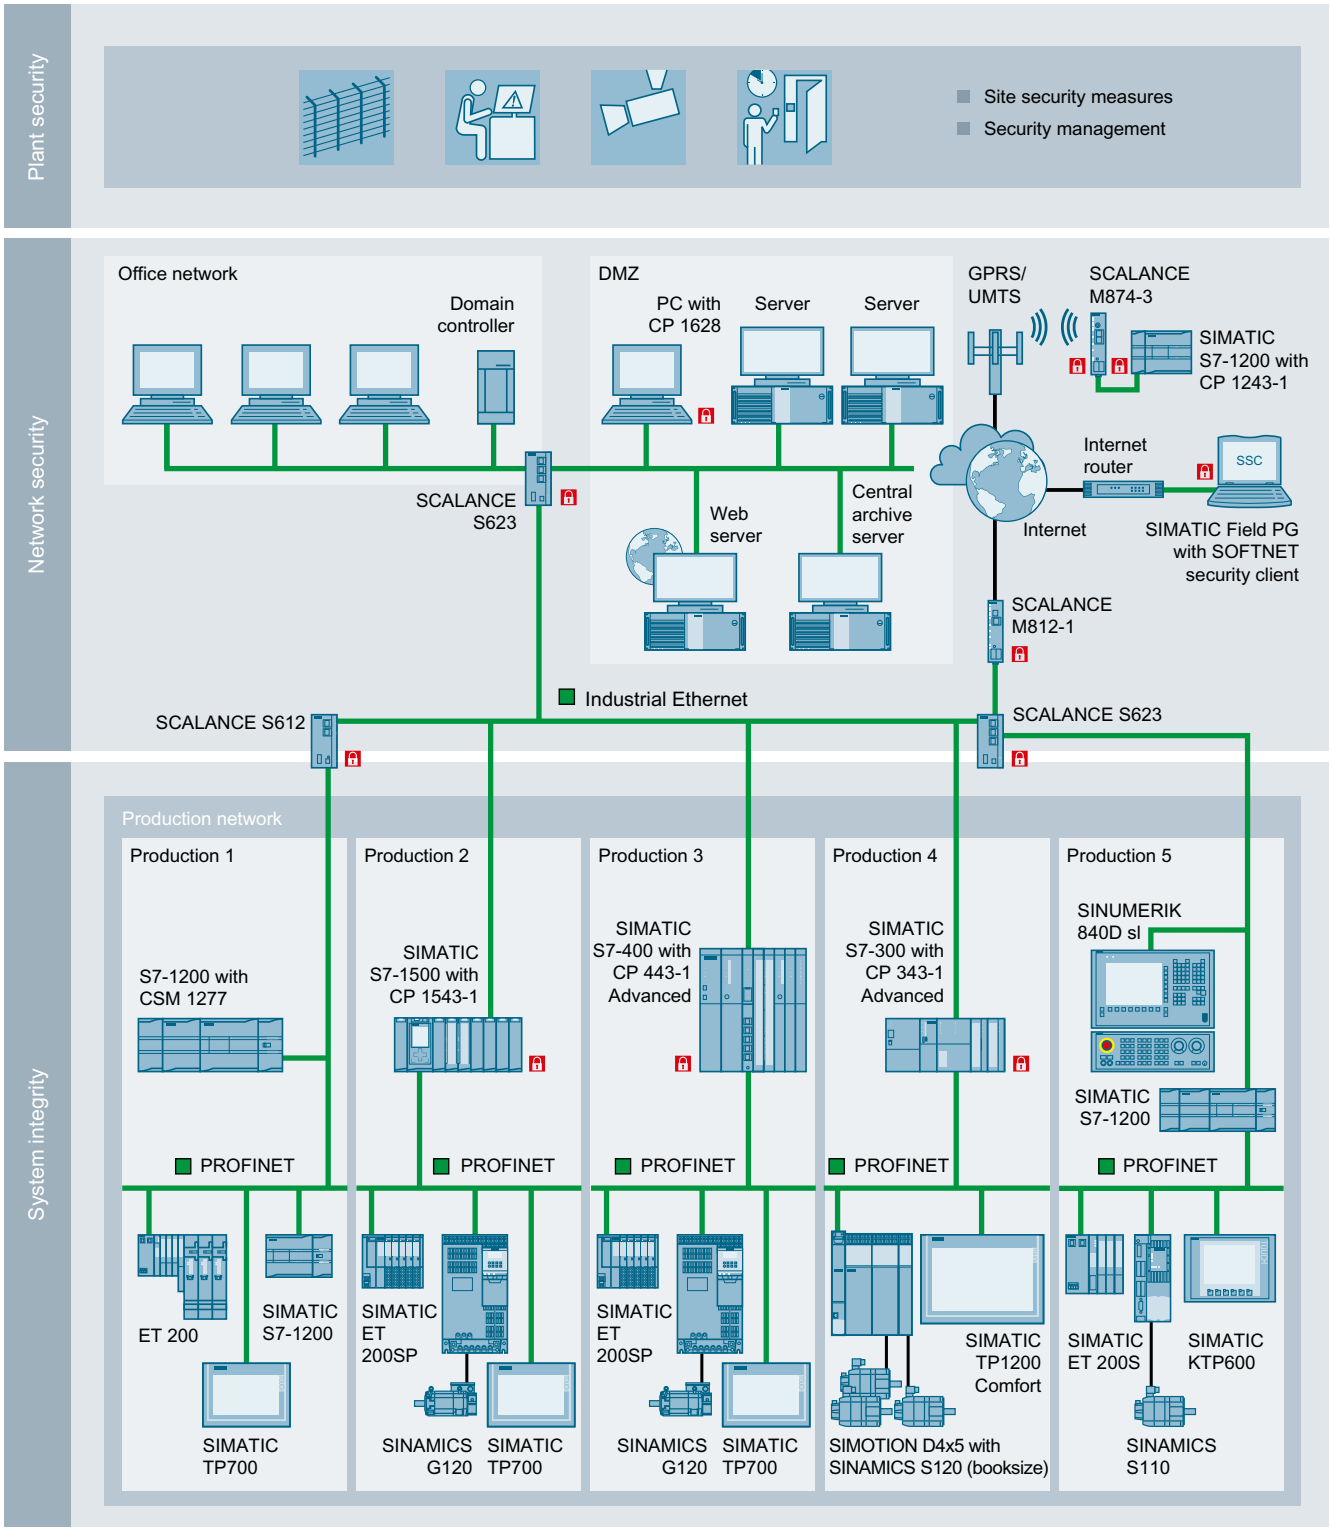
General security measures

Observe the general security measures even within protection zones, for example:

- Virus scanners (Page 31)
- Reduction of attack points (Page 31)

Network segmentation with SCALANCE S

Siemens provides SCALANCE S security modules to meet network protection and network segmentation requirements.



SCALANCE S security modules

SCALANCE S security modules with Security Integrated provide:

- Stateful inspection firewall
  In order to implement user-specific control and logging, firewall rules can also be specified that only apply to certain users.
- VPN via IPsec (data encryption and authentication)
  This establishes a secure tunnel between authenticated users whose data cannot be intercepted or manipulated. The most important aspect is the protection against external access via the Internet.
- NAT/NATP (address translation)
- Router functionality (PPPoE, DDNS) for broadband Internet access (DSL, cable)
- S623 with additional VPN port (DMZ) enables the secure connection of an additional network for service and remote maintenance purposes. S623 also permits the secure, redundant connection of subordinate networks by means of routers and firewall redundancy.

Principle

This application example shows cell segmentation by several SCALANCE S modules, each of which is upstream of the automation cell. The data traffic to and from the devices within automation cells can be filtered and controlled with the SCALANCE S firewall. If required, the traffic between the cells can be encrypted and authenticated. Secure channels and client access from the PCs to the cells can be established via SOFTNET Security Client, VPN client software for PCs.

2.3.4 System integrity

2.3.4.1 System hardening

Reduction of attack points

Network services and ports

Activated services represent a risk. To minimize the risk, only the necessary services for all of the automation components should be activated. Ensure that all activated services are taken into account (especially web servers, FTP, remote maintenance, etc.) in the security concept.

A description of the ports used can be found in the Manuals and Function Manuals of the respective products.

User accounts

Any active user account allows access to the system is thus a potential risk. Therefore, take the following security measures:

- Reduction of configured/activated user accounts to the actually needed minimum
- Use of secure access data for existing accounts
- Regular checks, especially of the locally configured user accounts
- Regular change of passwords

Passwords

NOTICE
Changing default passwords The misuse of passwords can also represent a considerable security risk. We recommend that default passwords be changed during the commissioning and changed at regularly defined intervals as required.

Virus scanner

The use of a virus scanner must not impact the production operations of a plant. As the last consequence, this will lead to even a virus-infected computer not being permitted to immediately shut down if this would cause the control of the production process to be lost.

In order to be used on industrial control components, a virus scanner should therefore meet the following requirements:

Virus scanner requirements

- If a local firewall that has been adapted to the production operations is used, it must be possible to install the virus scanner without its own firewall.
- The virus scan clients can be divided into (product- and task-specific) groups and configured separately.
- It must be possible to deactivate the automatic distribution of the virus signatures and other updates.
- It must be possible to carry out the distribution of the virus signatures and updates manually and in groups.
- It must be possible to conduct a file scan and system scan manually and in groups.
- For the virus detection scenario, a message can be configured without a file action such as "Delete", "Clean", etc. being automatically carried out.
- It must be possible to log all of the messages on the virus scan server.
- On a virus scan client, it must be possible to suppress the local message window because it could obscure important messages from the production process.

Note

Installation of software

The installation of software is often a process which represents a serious and complicated change to the respective system. The storage location of the files to be installed must always be free of viruses (e.g. a file server with its own virus scanner or DVD checked for viruses).

2.3.4.2 Patch management

Microsoft security updates

The **WSUS** (Windows Server Update Service) system functionality provided by Microsoft is available for current Windows systems. WSUS supports administrators by providing Microsoft updates in large local networks. WSUS automatically downloads update packages from the Internet (Microsoft Update) and offers them to the Windows clients for installation.

The fully automatic update process ensures that Microsoft security updates are always available on Siemens clients.

2.4 Product-specific measures

2.4.1 Virus scanners, Windows security patches, SIMOTION P

General information on virus scanners

Once an industrial PC system is connected to the Internet, either directly or via an internal company network, there is a danger that it can become infected with a virus. However, malicious software is not only able to reach the system via the Intranet/Internet, but also, for example, via a removable storage device (such as a USB memory stick) attached to the system for backing up data.

SIMOTION P320-4 virus scanners

A virus scanner that runs on Microsoft Windows, as used in office or home computers, has a deep impact on a system's processes. There are, for example, processes such as real-time scans or regular system scans. Such interventions can cause performance issues for the system, and as a result, for the SIMOTION Runtime software. Although the SIMOTION Runtime software runs in a real-time environment, it still depends on the available system resources.

Note

Because of the resulting performance impairments, the installation and use of a standard virus scanner on a SIMOTION P320-4 during system runtime does not make sense and is not permitted.

Using a virus scanner

As a standard virus scanner cannot be used for SIMOTION P320-4, an alternative procedure is followed. The virus scanner is installed to a separately bootable Windows PE operating system. It is started, for example, from a CD or a USB storage device and then performs a virus scan.

Note

FAQ Service & Support portal

More information on using a virus scanner on a SIMOTION P320-4 can be found in the FAQ "How can a virus scanner be used on a SIMOTION P320-4?" (https://support.industry.siemens.com/cs/ww/en/view/59381507) which is available as a download from the Service & Support portal.

Windows security patches

A brief test is performed when a new SIMOTION version is released. During this brief test, a check is performed to establish whether the installation of the security update has affected any basic functions.

2.4.2 Changing the Windows user password

Permitting the Windows password to be changed

Before the Windows password can be changed, it must be permitted for the user.

If the following procedure is not observed, an error message is issued and the Windows password cannot be changed.

Note the following procedure:

1. Select the entry point **Control Panel** > **All Control Panel Items** > **Administrative Tools** > **Computer Management**.
   Double-click **Computer Management**.

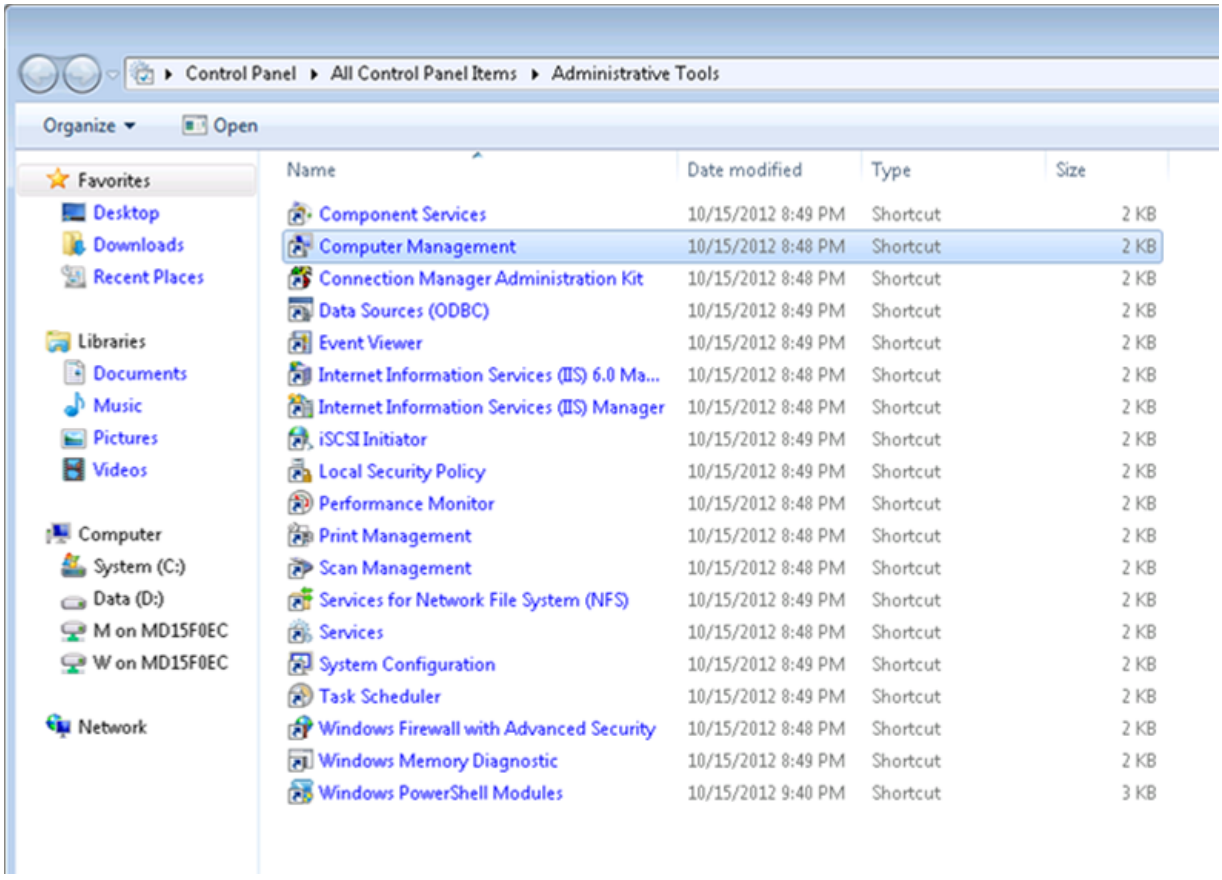

Figure 2-2 Homepage:

2. The **Users** folder is displayed at **Local Users and Groups** in the **Computer Management** window.
   Click the **Users** folder. The available user groups are displayed.

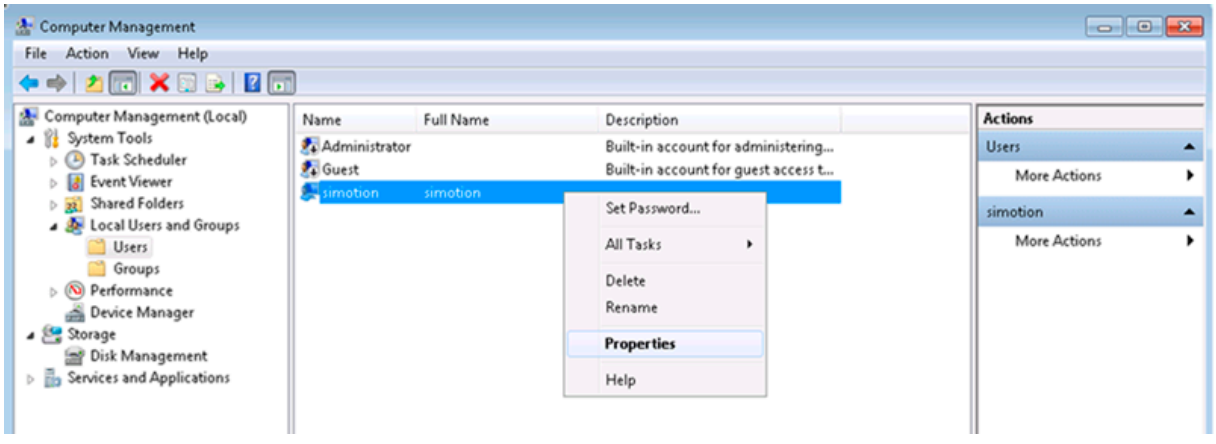

Figure 2-3 Computer management

3. With the selection of **Users simotion**, you can display the properties via **Properties**.
4. Deactivate the "**User cannot change password**" checkbox in the **General** tab on the **simotion Properties** dialog box.
   This checkbox must be deactivated for the user to change the Windows password.

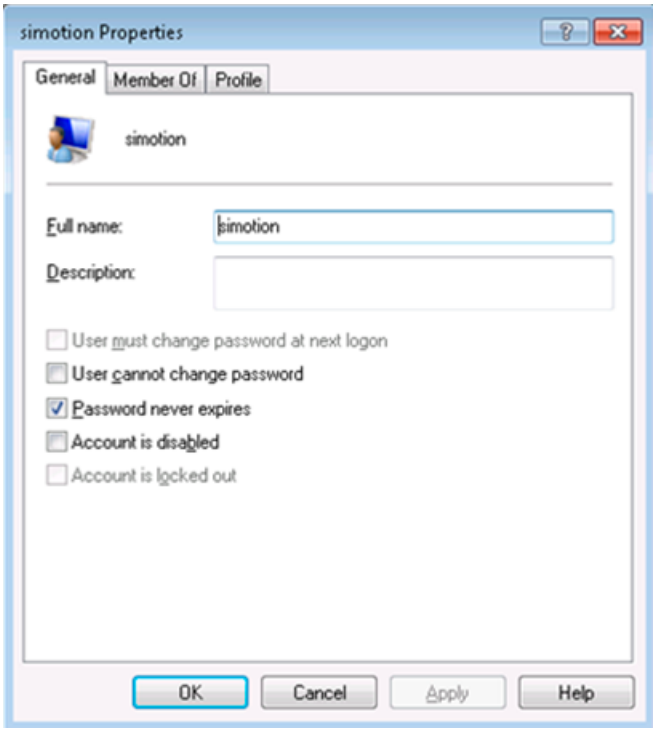

Figure 2-4 SIMOTION properties

Changing the Windows password

You can find general information on the Windows password on the website at Microsoft - Changing des Windows-password (http://windows.microsoft.com/en-us/windows/change-windows-password#change-windows-password=windows-7).

To change the Windows password, proceed as follows:

1. Press Ctrl+Alt+Del. The following Windows window opens.

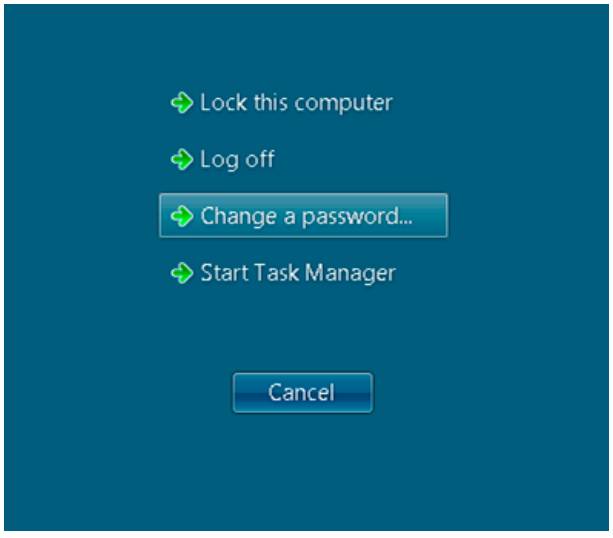

Figure 2-5 Changing the Windows password

2. After you have confirmed **Change a password...** , the Windows window to change the Windows password opens.
   First enter your current password and then the new Windows password. You must enter the new Windows password a second time for confirmation.

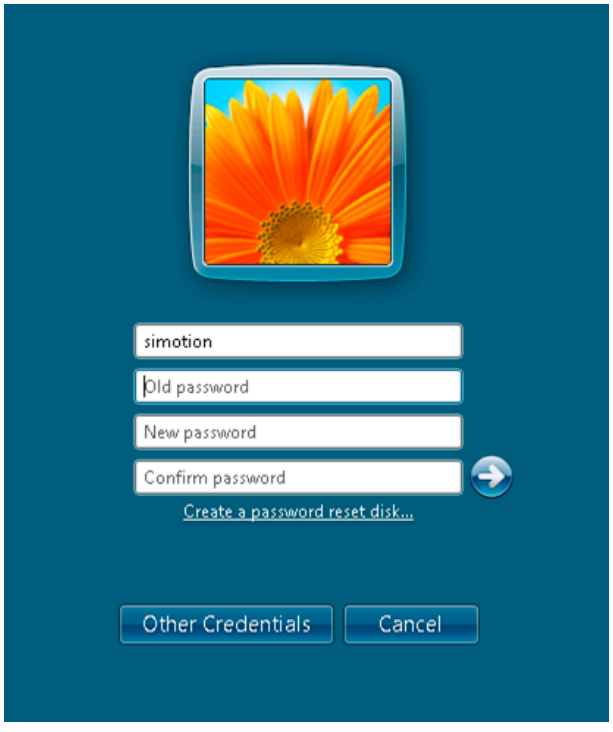

Figure 2-6 Entering the new Windows password

3. The password was changed successfully.

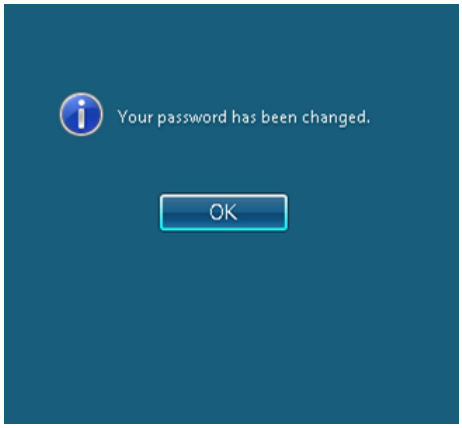

Figure 2-7 Confirmation of change

4. In the event of an error when the "User cannot change password" checkbox is activated, the following error message is displayed.
The Windows password has not been changed.

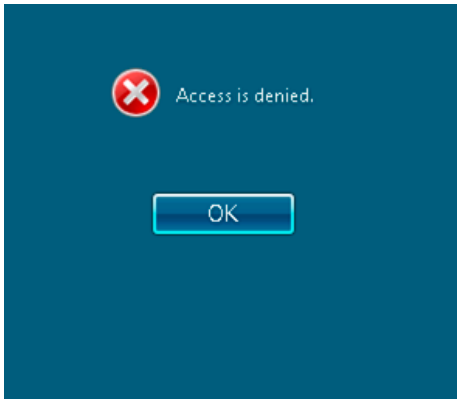

Figure 2-8 Error message when changing the Windows password has not been permitted.

2.4.3 Changing the AutoLogin

The password for the AutoLogin must be changed when the user has changed the Windows password.

The Windows user password is changed in the normal way, e.g. "Change Password" screen.
See also Section Changing the Windows user password (Page 34).

Automatically Log On

SIMOTION P320-4 is preset so that the user does not have to enter the user name and the password to log on.

Preparation for changing the AutoLogin

In order that an AutoLogin still functions after changing the Windows password, the password for the AutoLogin must be changed.

The required procedure is shown in the following so that the change of the AutoLogin for SIMOTION P320-4 can be prepared:

1. Open the **Computer Management** window via **Control Panel > All Control Panel Items > Administrative Tools** .

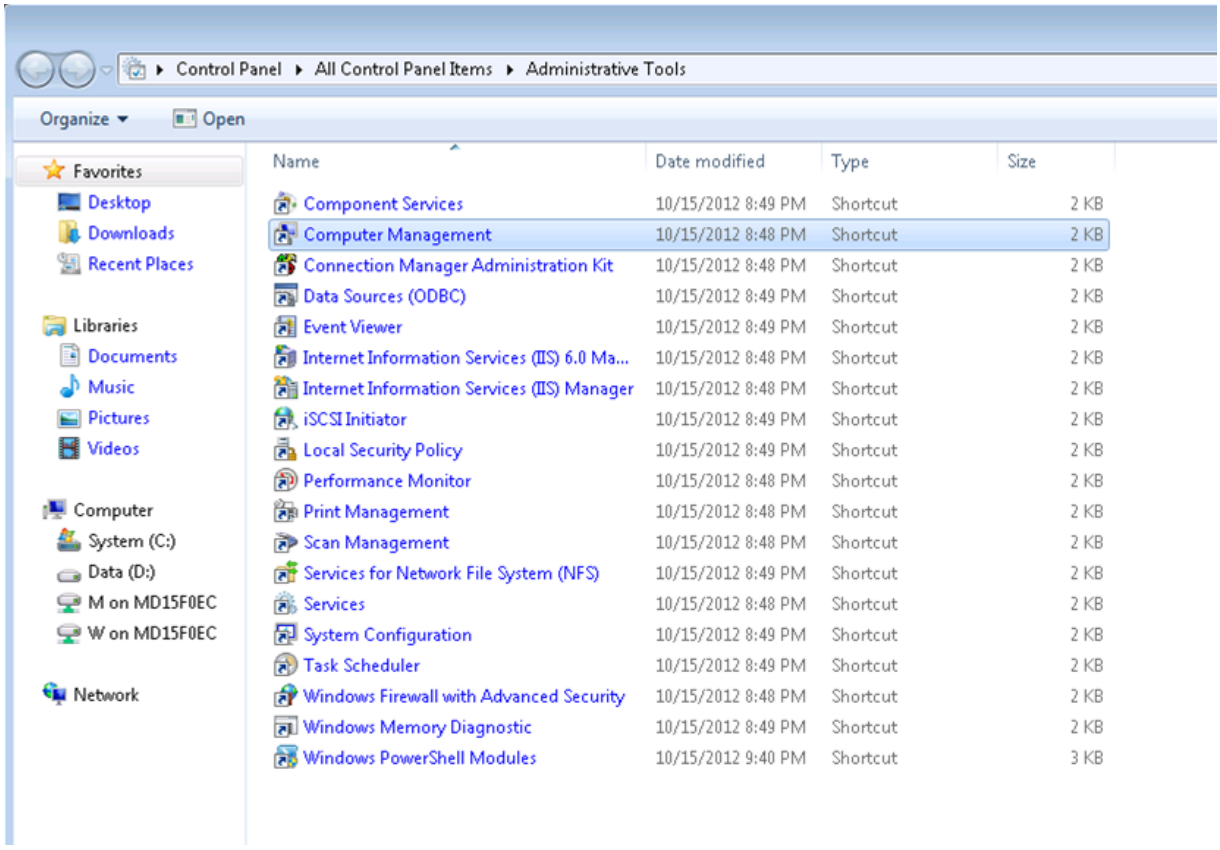

Figure 2-9 Computer Management entry point

2. The **Users** folder is displayed at **Local Users and Groups** in the **Computer Management** window.
   Click the **Users** folder. The available user groups are displayed.

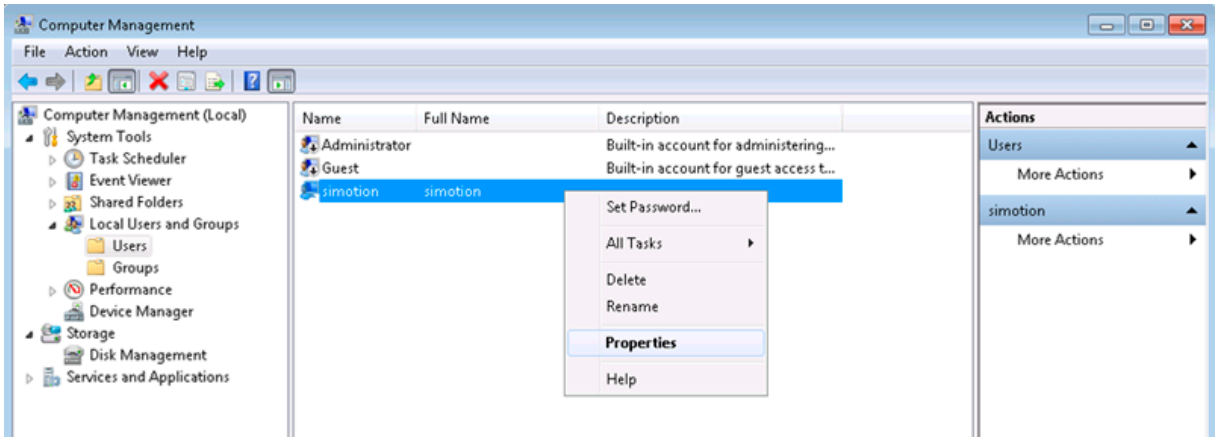

Figure 2-10 Computer Management - Users

3. With the selection of **Users> simotion**, you can display the properties via **Properties**.
4. Deactivate the **User cannot change password** checkbox in the **simotion Properties** dialog box.

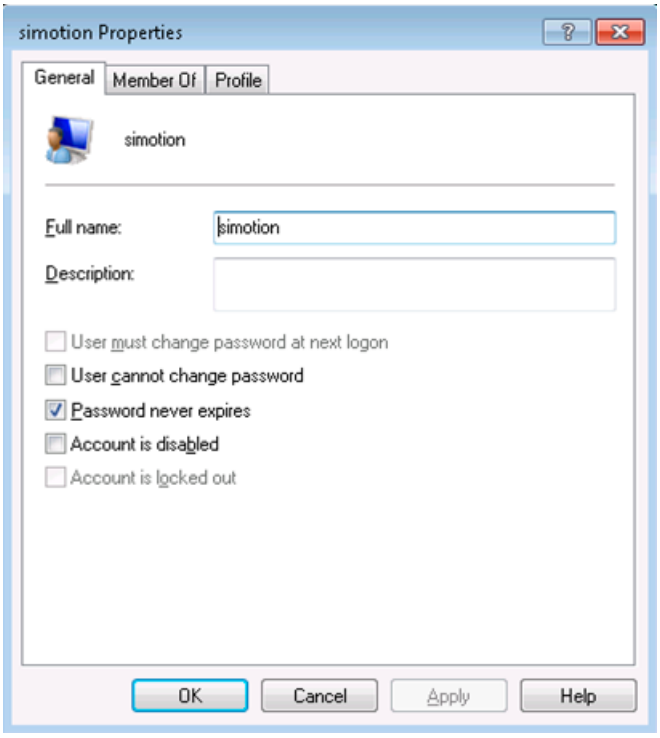

Figure 2-11 simotion Properties - General dialog box

5. Confirm with **OK.**

Changing the password for AutoLogin

To change the password for the AutoLogin, proceed as follows:

1. Open the search via **Windows-Start** and enter: **netplwiz**

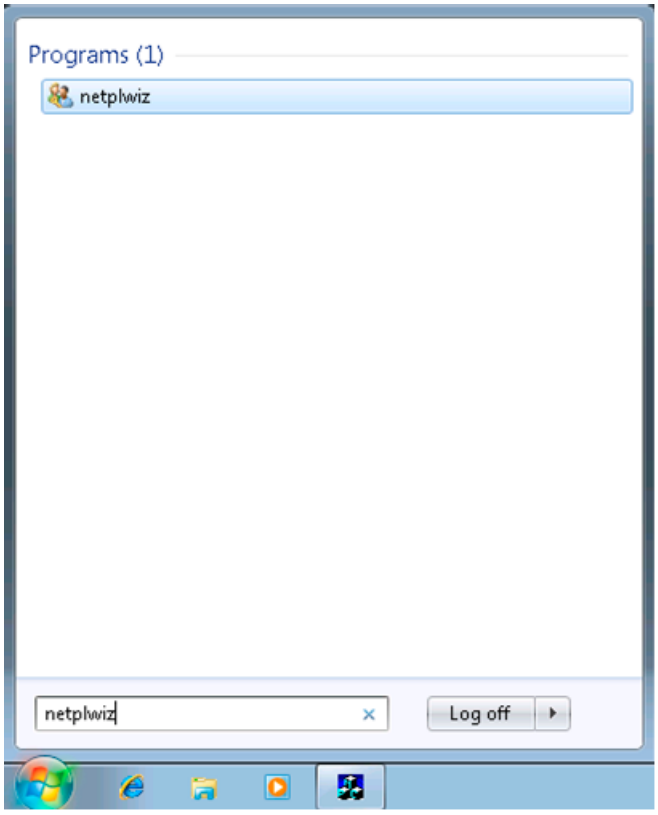

Figure 2-12 Programs netplwiz

2. The following **User Accounts** dialog box opens.

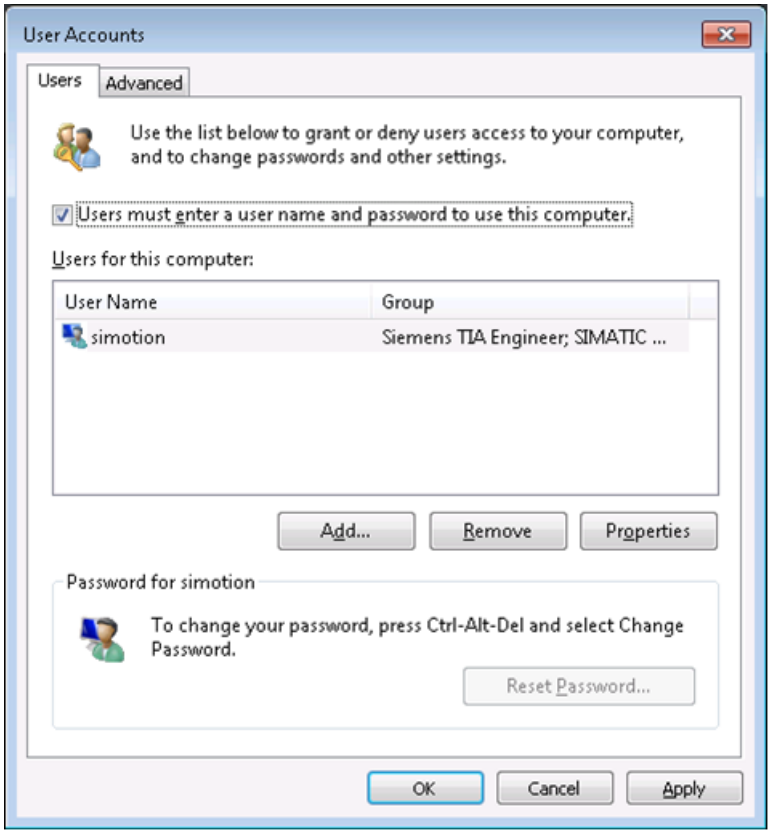

Figure 2-13 User Accounts

3. In the **Users** tab, activate the **Users must enter a user name and password to use this computer** checkbox.
   The **Apply** button is now active. Deactivate the checkbox and accept the changes now with the **OK** or **Apply** button.
   This is necessary so that the **Automatically Log On** dialog box is subsequently displayed.

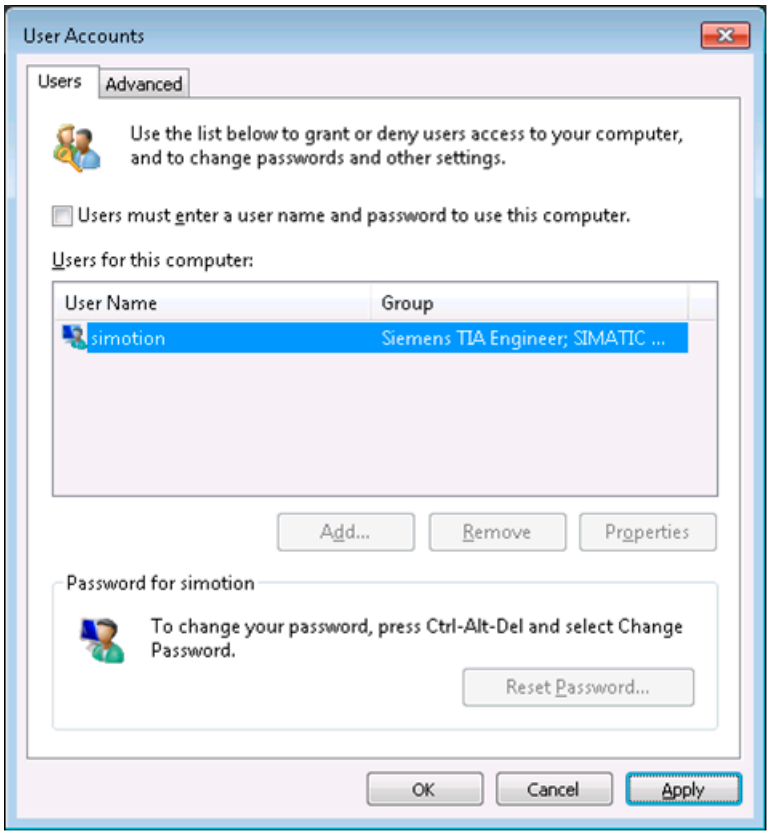

Figure 2-14 User accounts

4. Enter your changed Windows user password in the **Automatically Log On** dialog box and confirm it by entering it a second time.

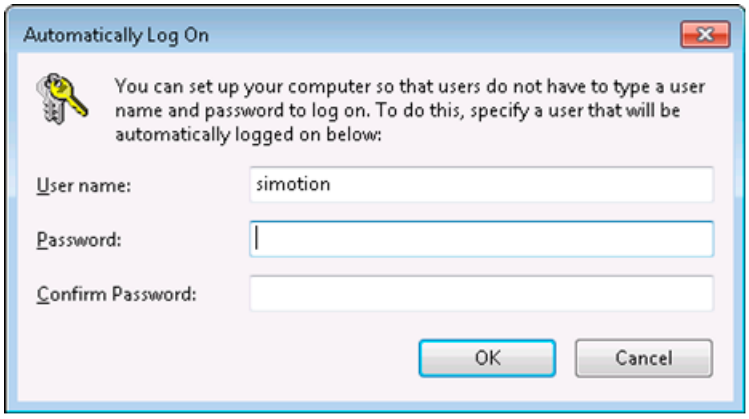

Figure 2-15 Automatically Log On dialog box

5. Confirm the password with **OK**.

2.4.4 Deactivating the remote desktop connection

Deactivating the remote desktop connection

NOTICE
Deactivating the remote desktop connection
To ensure that the remote desktop connection is not used, it must be explicitly deactivated.

Procedure for deactivating the remote desktop connection

1. Using the Control Panel, select **System** > **Remote settings**.

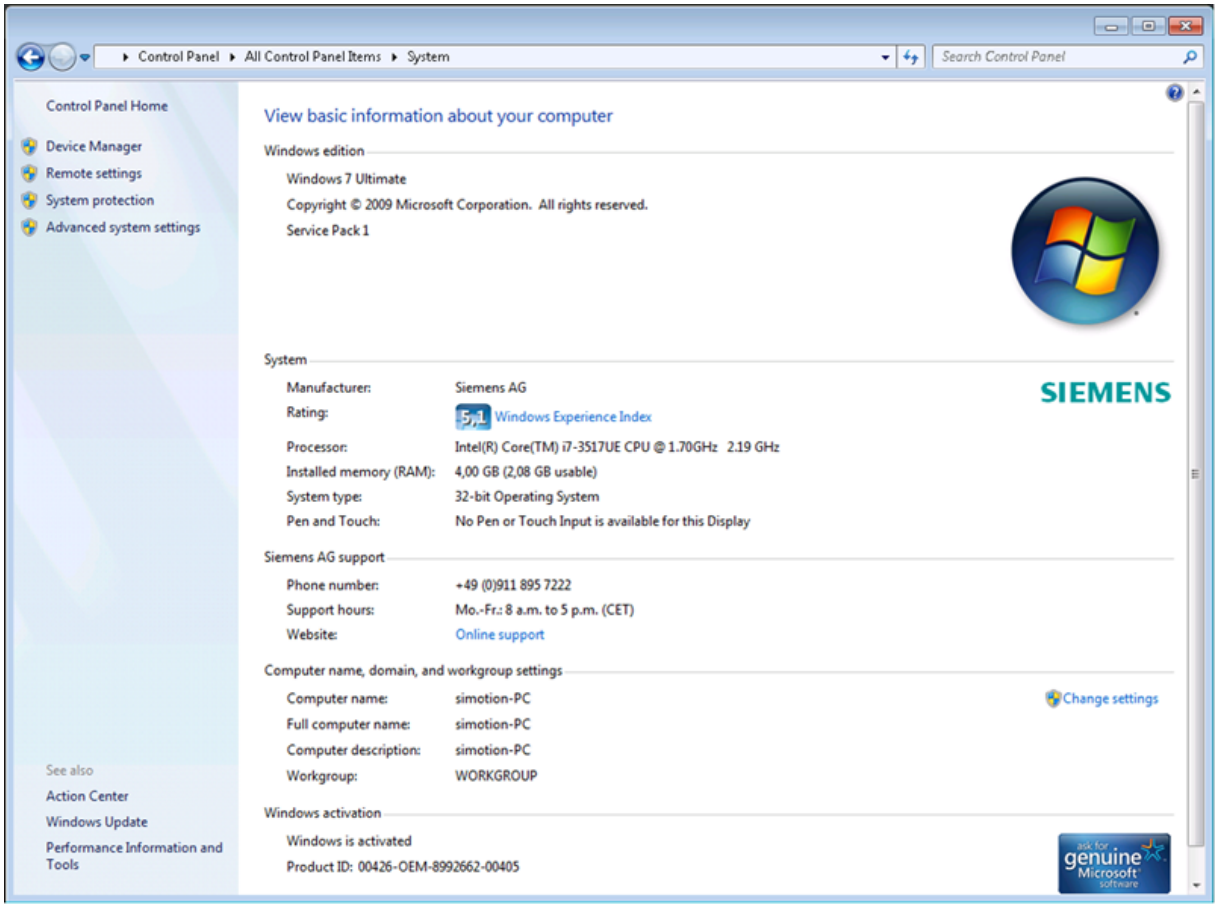

Figure 2-16 Remote settings

2. Select the **Remote** tab in the **System Properties** dialog box.

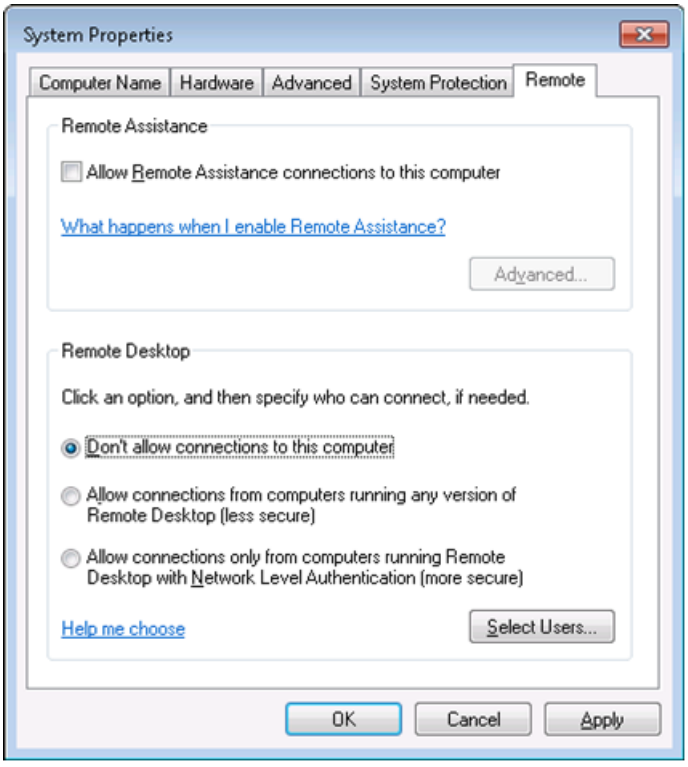

Figure 2-17 System Properties dialog box

3. Select the **Don't allow connections to this computer** option at **Remote Desktop**.
4. Confirm with **OK**.

Any remote desktop access is deactivated with this operation.

Description

3

3.1 System overview

Overview

SIMOTION P is a PC-based, open Motion Control System from SIMOTION.
Control, motion control, and HMI functions are executed together with standard PC applications on the SIMOTION P hardware platform. SIMOTION P combines the compatibility of the Windows operating system with real-time capability of SIMOTION P Runtime.

The fully independent SIMOTION P Runtime runs in parallel to Windows on SIMOTION P. This real-time expansion makes it possible to implement demanding motion control applications with high performance requirements on platforms of the SIMOTION P range. The hardware consists of a computing unit with innovative Intel technology, which is ready for operation at the time of delivery.

The drives and I/O devices are connected either via PROFINET onboard or IsoPROFIBUS board (optional).

The SIMATIC Flat Panel IFP1500, IFP1900 and IFP2200 can be used for the operation of the SIMOTION P320-4 hardware platform in a distributed configuration.

SIMOTION P320-4 versions

The SIMOTION P320-4 can control various I/O systems and HMI components via PROFINET onboard or the optional IsoPROFIBUS board.
If required, a USB DVD drive can be connected, for example.

The following versions of the SIMOTION P320-4 are available:

- SIMOTION P320-4 E
  with the Windows Embedded Standard 7 32-bit operating system and real-time expansion for SIMOTION.
- SIMOTION P320-4 S
  with the Windows 7 Ultimate 32-bit operating system and real-time expansion for SIMOTION.

Application

The SIMOTION P320-4 applications are directed at machines that require a high level of integration of PLC, motion control and technology functions on account of the increasing use of servo drives:

- Packaging machines
- Plastic and rubber processing machines
- Presses, wire-drawing machines
- Textile machines

- Printing machines
- Machines for processing wood, glass, ceramics, and stone
- Production lines in the renewable energy sector, e.g. solar technology, wind power installations

3.2 SIMOTION P320-4 product description

3.2.1 SIMOTION P320-4 overview

The SIMOTION P320-4 provides high-level industrial performance. It features:

- Compact design
- Maintenance-free operation
- High degree of ruggedness
- Long-term availability

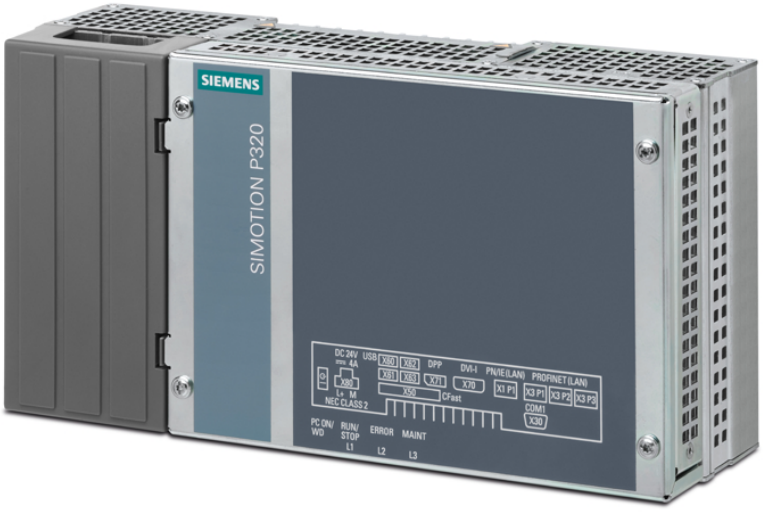

Figure 3-1 SIMOTION P320-4 view

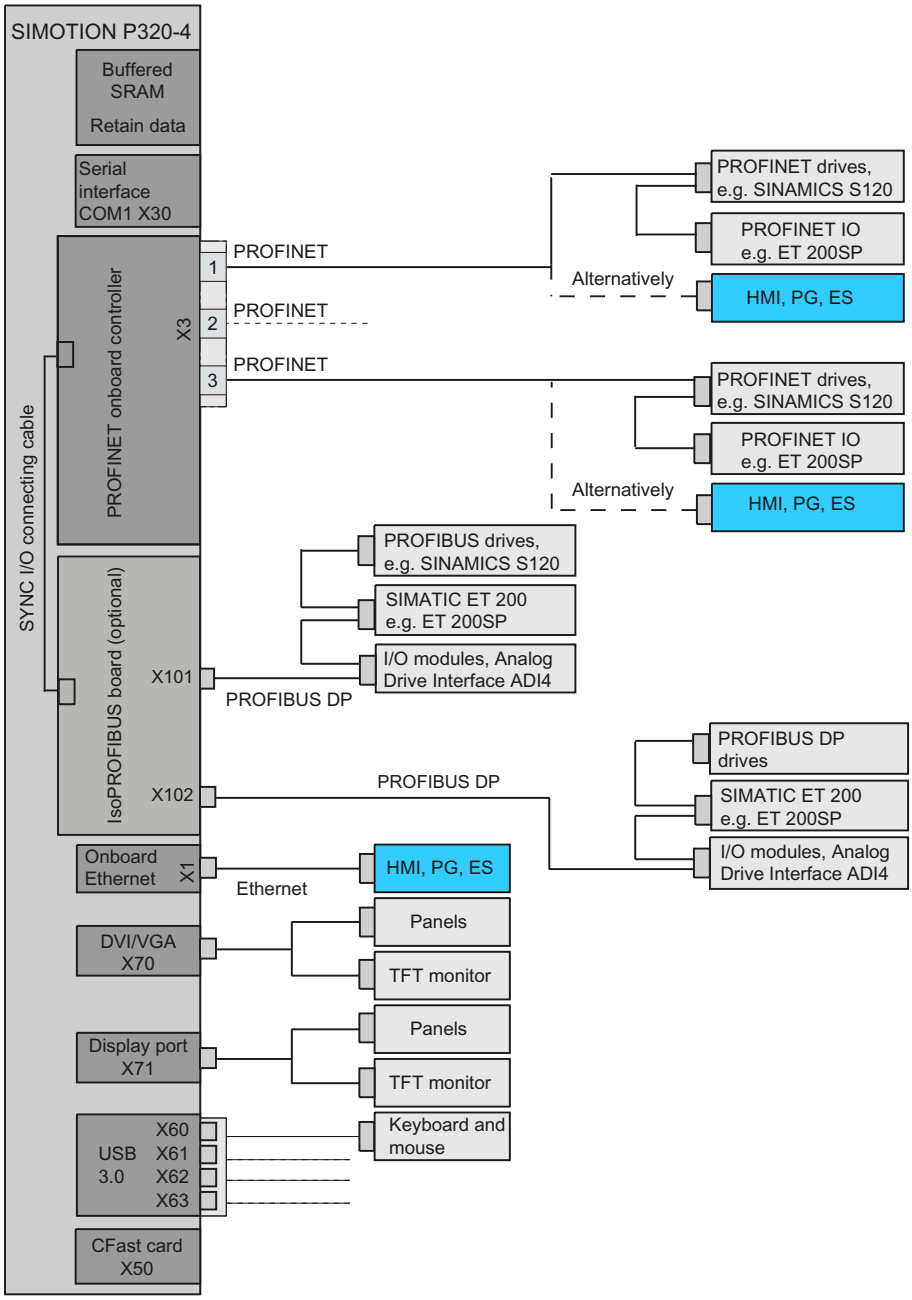
Figure 3-2 SIMOTION P320-4 (open perspective) with plugged-in optional IsoPROFIBUS board

3.2.2 Features



Basic data	
Installation	• Standard rail mounting • Vertical mounting
Processor	
P320-4 E **P320-4 S**	Intel Core i3-3217UE, 2 x 1.6 GHz, 3 MB cache Intel Core i7-3517UE, 2 x 1.7 GHz, 4 MB cache
Main memory	4 GB DDR3 RAM
Optional IsoPROFIBUS board (PROFIBUS DP)	2 x SUB-D socket with configurable baud rates (9.6 Kbit/s - 12 Mbps)
Graphics	• Integrated Intel HD2000 or HD4000 • DVI resolution of 640 × 480 pixels up to 1920 × 1200 pixels • Display port resolution max. 1920 × 1200 pixels • Graphics memory is occupied in the main memory (dynamic UMA)
Power supply	24 VDC (-20%/+20%) max. 4 A
Operating conditions	Operation without fan
Drives and storage media	
CFast card or SSD (Solid State Disk)	Depending on the hardware version of the SIMOTION P320-4

Basic data	
P320-4 E	**2 x CFast card** Internal interface: CFast External interface: CFast
P320-4 S	**SSD (Solid State Disk)** Internal interface: SSD **CFast card** External interface: CFast
USB stick	External, can be connected via USB interface
Interfaces	
Serial	COM (RS 232)
Graphics	DVI-I: Suitable for use as DVI or VGA DPP++: Display port, DVI via DPP-to-DVI adapter
USB	4 × USB 3.0, simultaneous operation of high current, backward compatible with USB 2.0/1.1
Ethernet	1 × RJ45 (10/100/1000 Mbps)
PROFINET I/O	3 × RJ45 (100 Mbps)
Keyboard, mouse	Can be connected via USB interface

Software	
Operating systems

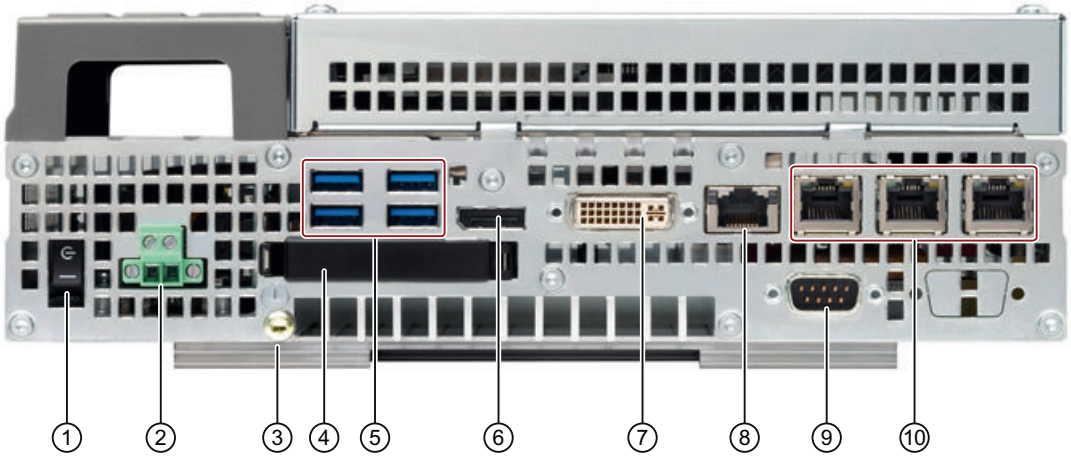
P320-4 S	Windows 7 Ultimate 32-bit

3.2.3 SIMOTION P320-4 (hardware) structure

The following figure shows the integration of the SIMOTION P320-4 with integrated PROFINET onboard and optional IsoPROFIBUS board in a target system.



HMI Human Machine Interface
PG Programming device
ES Engineering system

Figure 3-3 SIMOTION P320-4 system overview

3.2.4 Interfaces and operating elements

SIMOTION P320-4

①	On/off switch	Position **OFF** is the delivery state. The on/off switch does not isolate the device from the power supply.
②	24 V DC	Power supply connection
③	Protective conductor	Protective conductor terminal
④	Memory card slot	Cover for the CFast card
⑤	4 × USB 3.0	USB 3.0 high current, backward compatible with USB 2.0/1.1
⑥	Display port	Display port connection for digital monitor
⑦	DVI-I	DVI connector for CRT or LCD monitor with DVI interface
⑧	Ethernet	RJ45 Ethernet connection for 10/100/1000 Mbps
⑨	COM1	Serial interface
⑩	3 × PROFINET	PROFINET ports with three RJ45 sockets

3.2.5 SIMOTION P Runtime (software) structure

SIMOTION P Runtime contains the SIMOTION P Kernel which performs the motion control and interface control.

A SIMOTION project is planned, configured, assigned parameters, commissioned and programmed via the SIMOTION SCOUT engineering system (ES).

The user data can be stored on the data media of the SIMOTION P320-4 .

Siemens WinCC flexible software can be used to visualize operational sequences or to operate the machine. Third-party systems can be linked via the OPC interface.

SIMOTION P Runtime

With the SIMOTION P320-4, the PLC and motion control functionality (starting from position controller upwards) is located centrally in a strictly deterministic task outside the Windows operating system.

Its main field of application is centralized motion control and control tasks requiring close coordination between multiple axes and/or input/output modules.

Functionality ranges from simple positioning to high-performance synchronous operation.

SIMOTION SCOUT

The SIMOTION SCOUT engineering system can be installed on the SIMOTION P320-4 S or connected via the interfaces integrated in SIMOTION P320-4 .

SIMOTION SCOUT TIA

As of version V4.5, the SIMOTION SCOUT TIA engineering system no longer supports the Windows 7 32-bit operating system and therefore cannot be installed.

HMI software

HMI/Runtime software can be operated on the same PC, e.g. the Siemens WinCC flexible software. Other software packages can be linked by means of the OPC interface.

The **HMI software** is used as the general term in the following.

Internal communication

A locally installed HMI can use the local communication to access the following:

- Variables in SIMOTION RT
- Drives on PROFINET IO or PROFIBUS DP
- Other SIMOTION devices on PROFINET IO or PROFIBUS DP

Scope of delivery

The system software supplied with the SIMOTION P320-4 is either already installed on the SIMOTION P320-4 storage medium or is ready to be installed:

- SIMOTION P Kernel
- SIMOTION IT
- SIMOTION IT VM Virtuell Machine (subject to license)

3.2.6 Components

The most important components of the SIMOTION P320-4 and their functions are listed below.

Distributed I/O systems (PROFINET)

Table 3-1 Components for distributed I/O

Component	Function
SIMATIC ET 200M	Modular I/O system for cabinet installation and high channel densities.
SIMATIC ET 200S	Finely modular I/O system for cabinet installation including motor starters, safety technology, and individual grouping of the load groups.
SIMATIC ET 200SP	Finely scalable I/O system for cabinet installation; SIMATIC ET 200SP features a single-cable and multi-cable connection with push-in terminals, compact dimensions, high performance, and low part variety.
SIMATIC ET 200MP	Modular I/O system for cabinet installation and high channel densities in the SIMATIC S7-1500 packaging system. SIMATIC ET 200MP permits the shortest bus cycle times and fastest response time even with large volumes of data.
SIMATIC ET 200eco	I/O system with IP67 degree of protection for machine-related, cabinet-free applications, featuring a flexible and fast connection system in ECOFAST or M12.
SIMATIC ET 200pro	Modular I/O system with IP65/67 degree of protection for machine-related, cabinet-free applications, including motor starters.

Note

Note that not all modules of the above-mentioned I/Os or I/O systems have been released for SIMOTION.

There may also be system-dependent functional differences with regard to the use on SIMOTION and on SIMATIC.
For example, special process-control functions (e.g. HART modules, etc.) are not supported by SIMOTION for the ET 200M distributed I/O system.

For a detailed and routinely updated list of I/O modules enabled with SIMOTION as well as application information, visit us online at:

SIEMENS Industry Online Support - Product support - Supplementary system components (https://support.industry.siemens.com/cs/de/en)

Further modules are integrated via the GSD file of the device's manufacturer.

Note

Note that in individual cases, additional supplementary conditions must be fulfilled.

Drive systems (via PROFINET IO)

Table 3-2 List of typically connected drive systems

Component	Function
SINAMICS S120	Servo drives, innovative single-axis and multi-axis solution

Optional components

Table 3-3 Optional components

Centralized I/O	Function
IsoPROFIBUS board	PROFIBUS connection
UPS	Uninterruptible Power Supply The drivers for the UPS are not pre-installed on the PC. Install the current drivers that are supplied with the UPS.

Note

An IsoPROFIBUS board may be inserted in addition to the PROFINET onboard.

3.3 HMI and SIMOTION SCOUT

3.3.1 HMI and SIMOTION SCOUT Overview

The operational sequences on the SIMOTION P320-4 are either monitored via the HMI system (Human Machine Interface) or the SIMOTION SCOUT engineering system.

The HMI or ES software can be connected using the following variants:

- Local (Page 58)
- via PROFINET (Page 70)
- via Ethernet (Page 71)
- via IsoPROFIBUS (optional) (Page 73)

Local communication of the HMI/ES

Only one local connection to the local SIMOTION Runtime is possible. If HMI or ES is also installed locally, **PC internal** can access other controllers/devices via PROFINET / PROFIBUS.

See Section Local HMI or ES on SIMOTION P320-4 (Page 58).

Communication of the HMI / ES via PROFINET / Ethernet / PROFIBUS

By using one of these communication variants, you can control and monitor several SIMOTION devices.

3.3.2 Local HMI or ES on SIMOTION P320-4

The model described below is used for the communication of the SIMOTION P320-4 with a local HMI or ES. The SIMOTION SCOUT engineering system or the HMI system can be installed directly on the **SIMOTION P320-4 S**.

For this model, you must set the communication (access point) to **TCP/IP** .

The SIMOTION P320-4 is already configured for this communication version at the time of delivery.

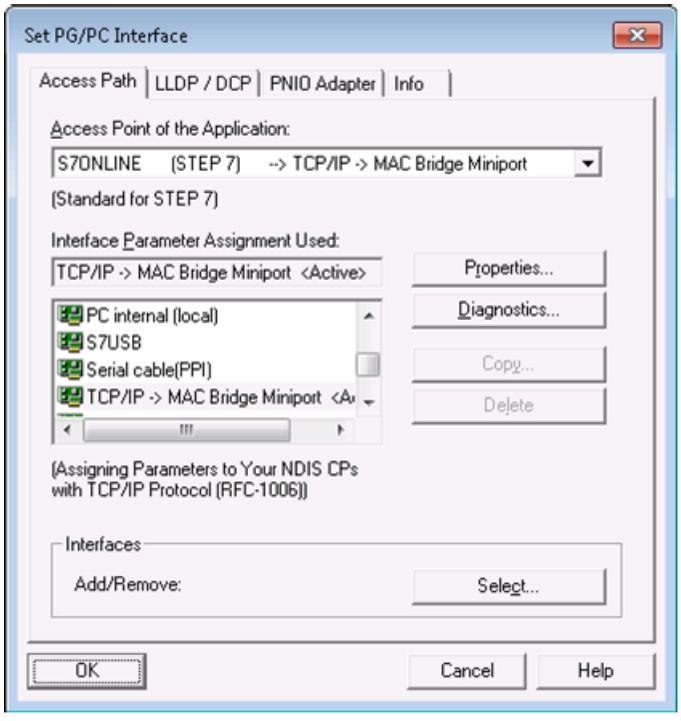


Figure 3-4 Set PG/PC Interface - TCP/IP -> MAC Bridge Miniport dialog box

Note

Local communication via Ethernet (TCP/IP)

For the communication via Ethernet (TCP/IP) to function locally, a link must be available to the Ethernet interface or a LAN cable must be connected **or** the MAC bridge set up.

Note

Setting up the MAC bridge miniport

See also Section Setting up a network bridge - MAC bridge miniport (Page 59)

Note

Only HMI-Runtime can be installed on the **SIMOTION P320-4 E** version.

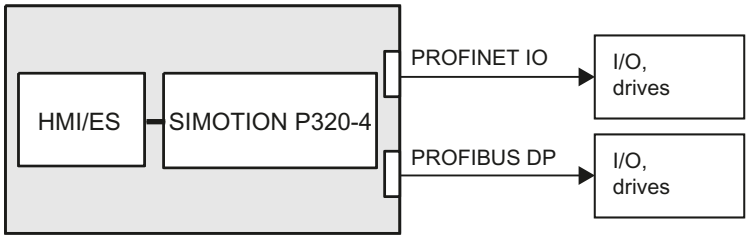

Figure 3-5 Model: Local HMI or ES

Alternatively to TCP/IP , SIMOTION SCOUT can also communicate locally via PC internal (local) .

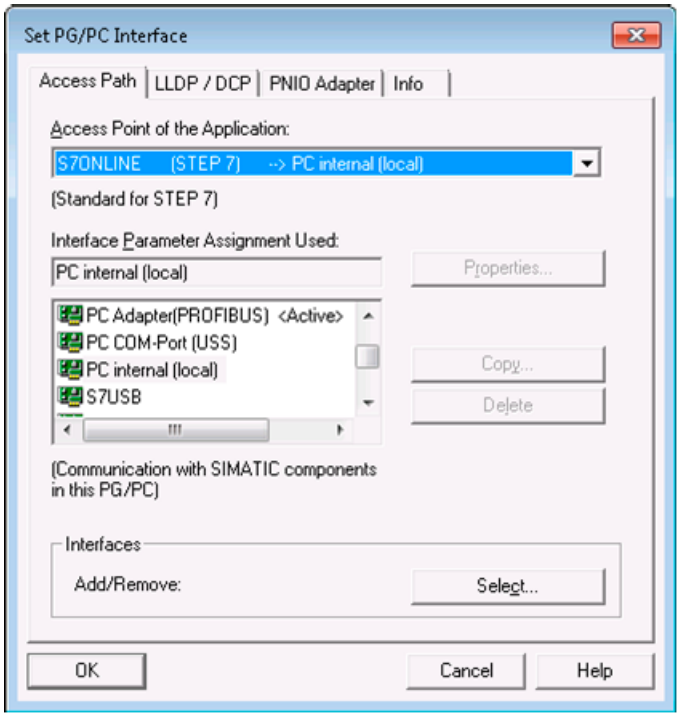

Figure 3-6 Set PG/PC Interface - PC internal (local) dialog box

3.3.2.1 Setting up a network bridge - MAC bridge miniport

Note

If you are working with SIMOTION P320-4 version V4.5, the Network Bridge is already preset.

The network bridge is not preset for version V4.4 and must be set up as described in the following.

The following is a step-by-step description of how the network bridge **MAC Bridge Miniport** is set up.

Network connections initial situation

Open the **Network and Internet** via the Control Panel.

- Select **Control Panel** > **All Control Panel Items** > **Network and Sharing Center** > **Change adapter settings**.
- Open the **Network and Internet** > **Network Connections** dialog box.
  The network connections of your PC are shown here.

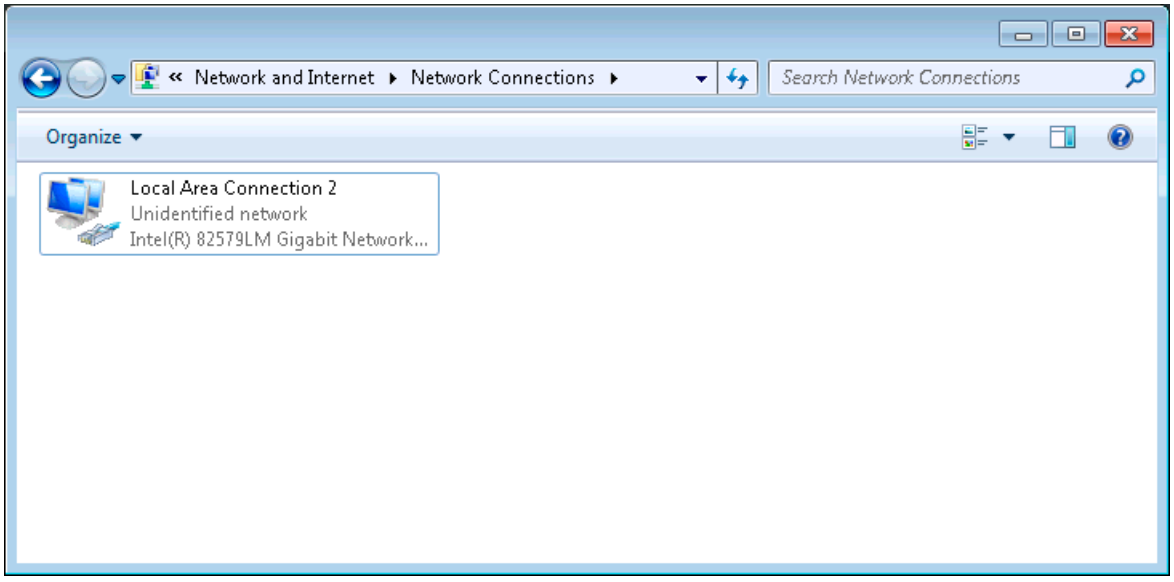

Figure 3-7 Initial situation - Network connections

Device Manager

Open the Device Manager via the Control Panel:

Control Panel > All Control Panel Items > System > Device Manager.

1. Select the **Network adapters** in the dialog box below the "SIMOTION PC".
   The available network connections are shown here.

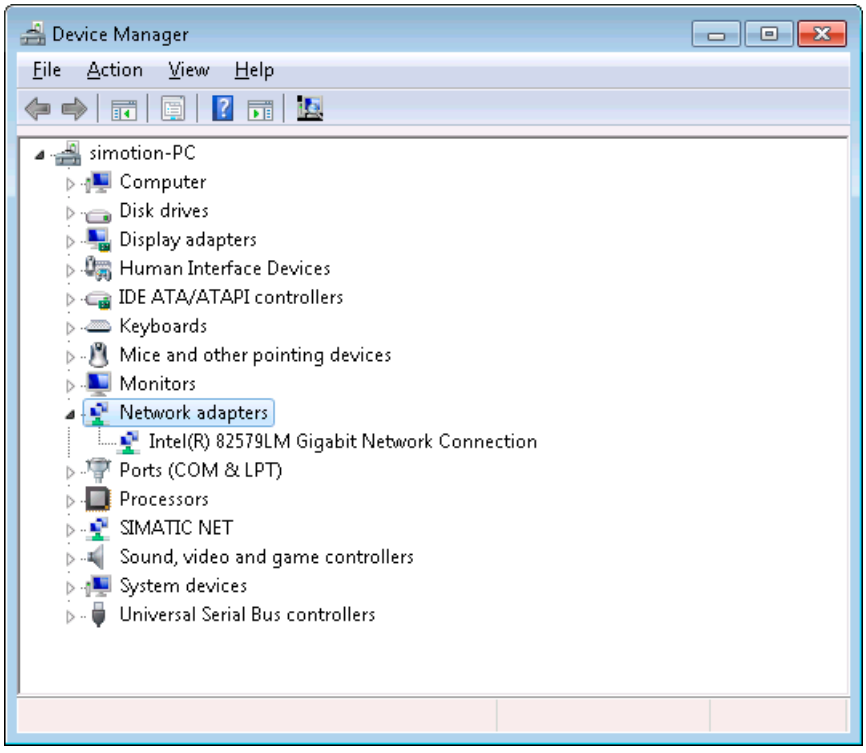

Figure 3-8 Opening the Device Manager

2. Install the **Microsoft Loopback Adapter** via the Device Manager.
3. To do this, select the menu **Action > Add legacy hardware**.
   The **Add Hardware Wizard** then opens.

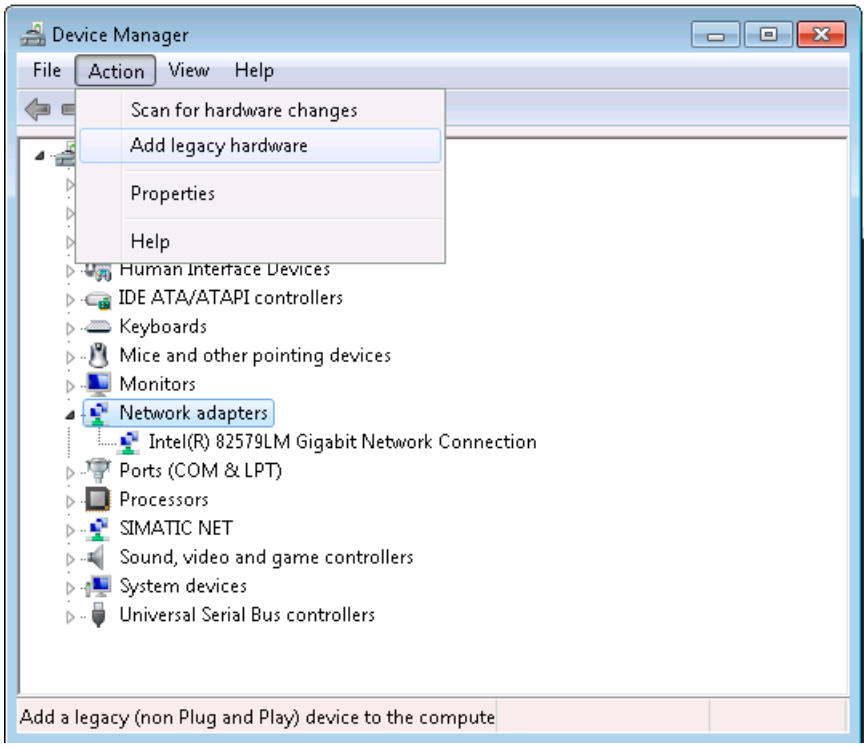

Figure 3-9 Device Manager - Action menu

Add Hardware Wizard

Use the **Add Hardware Wizard** to install the network bridge.

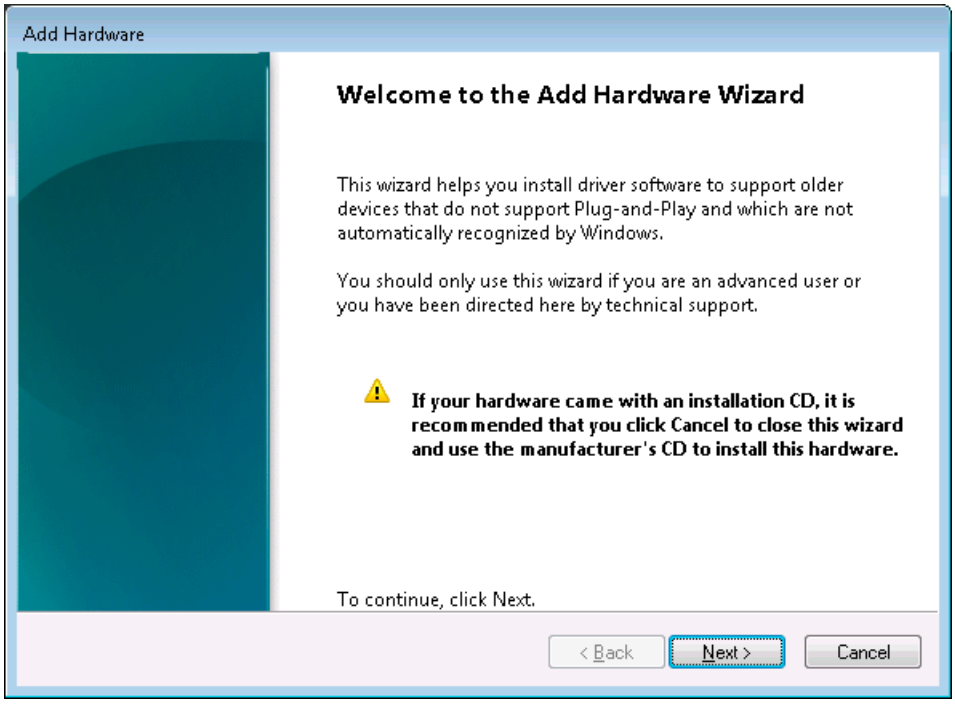

Figure 3-10 Add Hardware - Starting the wizard

1. Click **Next** to start the software wizard.
2. Select the option: **Install the hardware that I manually select from a list (Advanced)** and continue in the wizard with **Next**.

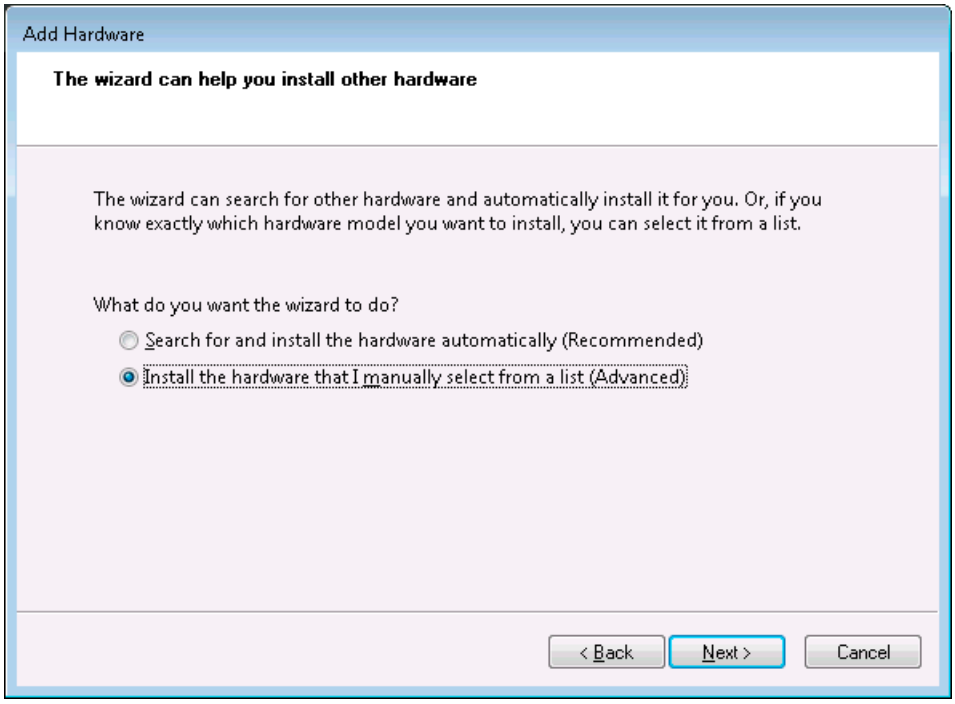

Figure 3-11 Add Hardware - Manual selection from a list

3. Select **Network adapters** in the dialog box now open and continue in the wizard with **Next**.

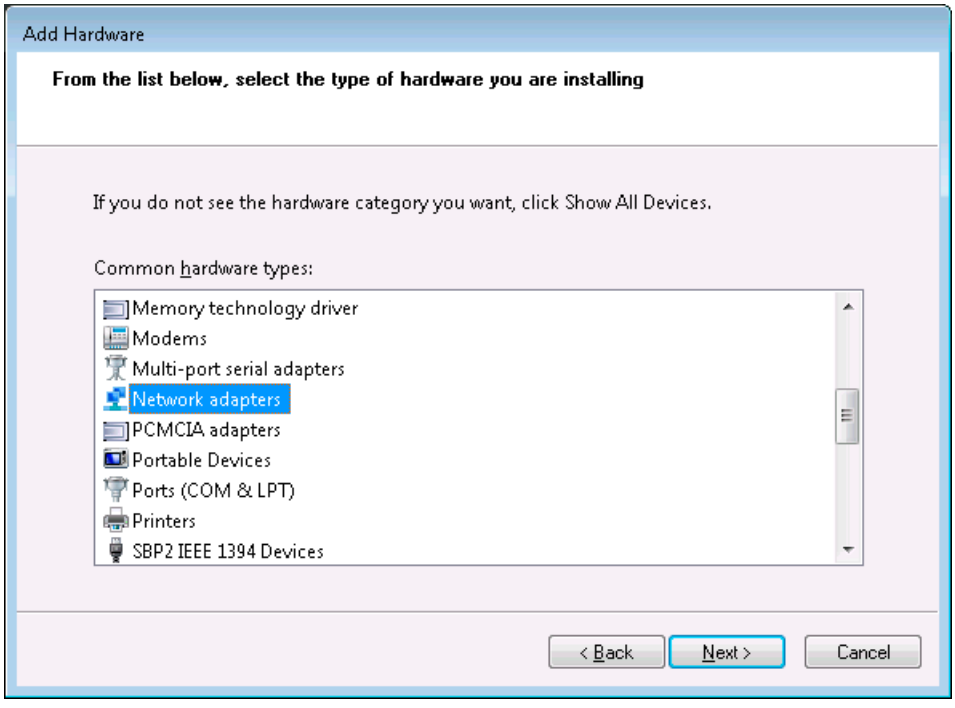

Figure 3-12 Select Add Hardware - Network adapters

4. In the following dialog box, select the **Microsoft Loopback Adapter**.
5. To do this, select Microsoft at **Manufacturer** and the Microsoft Loopback Adapter at **Network Adapter**.
6. Continue in the wizard with **Next**.

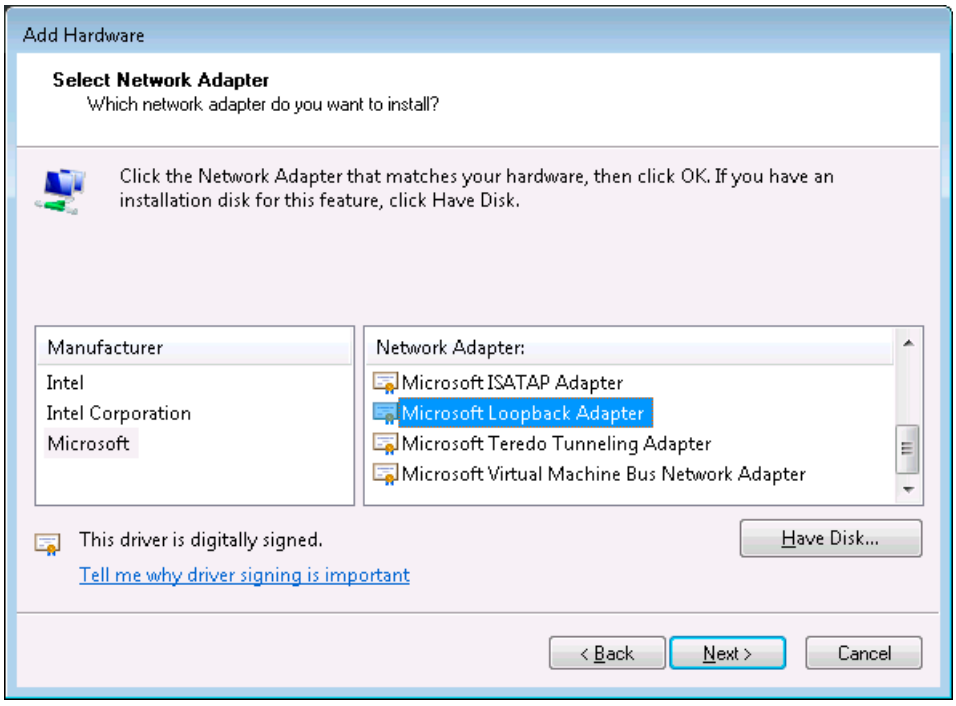

Figure 3-13 Add Hardware - Selecting the desired Network Adapter

7. The selected Network Adapter is shown in the following dialog box.
   Click **Next** to confirm and install.

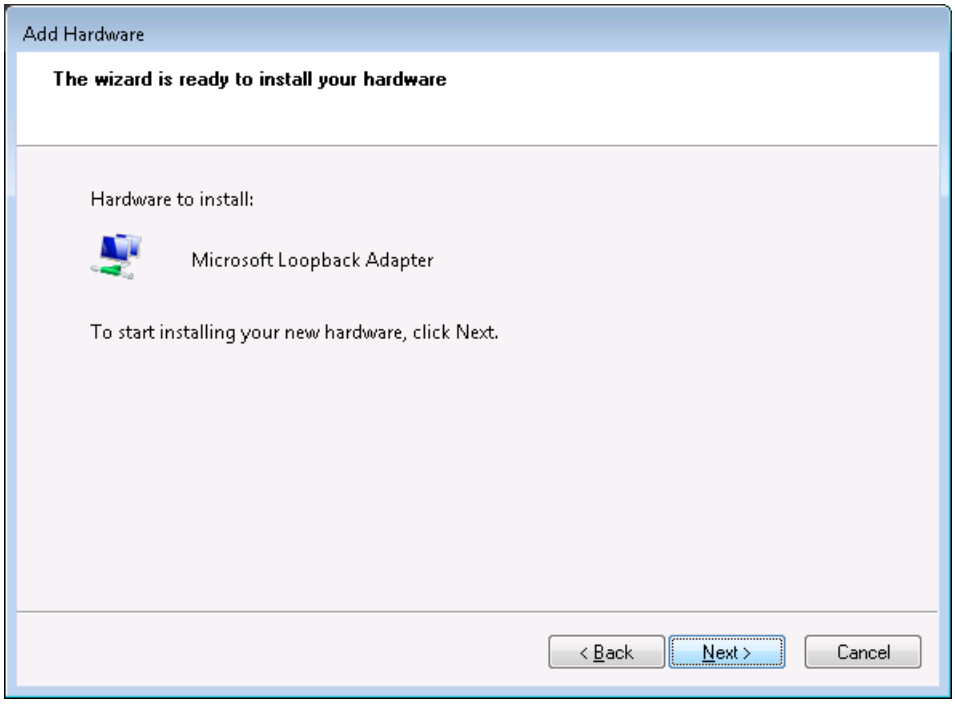

Figure 3-14 Add Hardware - Selected Network Adapter can be installed

8. After finishing the installation, the following dialog box is displayed.
   Exit the wizard with **Finish**.

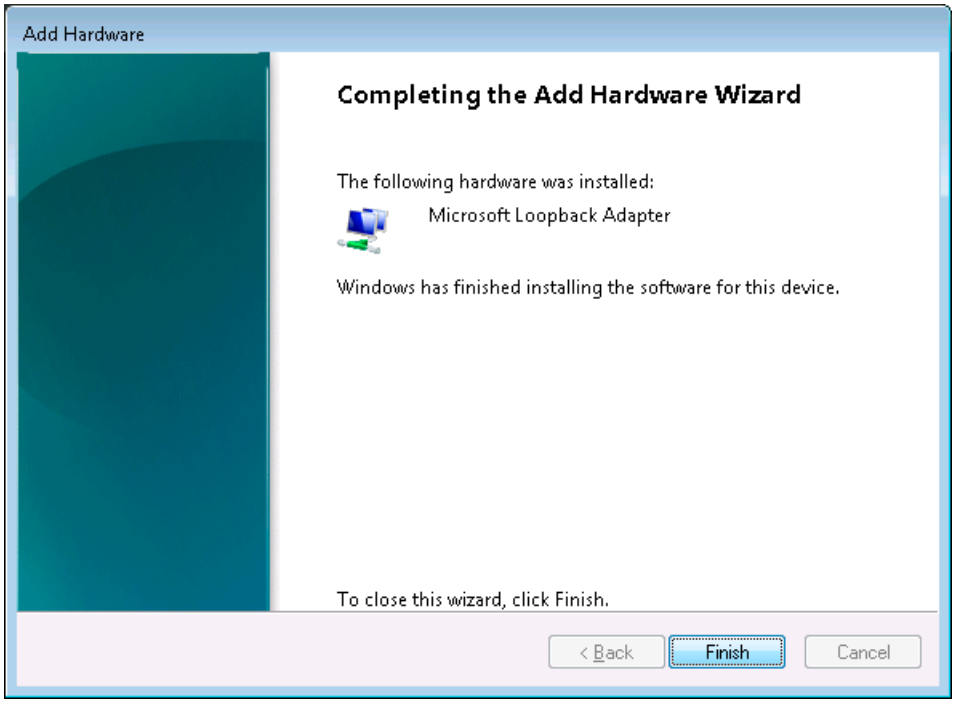

Figure 3-15 Add Hardware - Installation of the Microsoft Loopback Adapter is finished

Checking the installation of the network adapter

You can check the successful installation of the **Microsoft Loopback Adapters** in the

- Device Manager
- Internet connections

Device Manager

The Microsoft Loopback Adapter is displayed at **Network adapters** in the Device Manager.

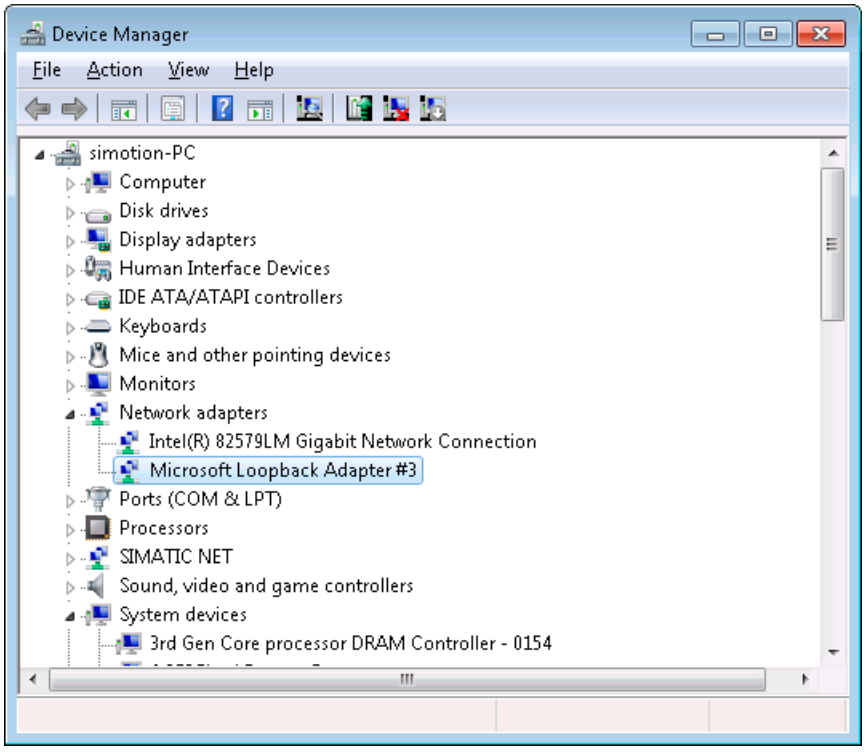

Figure 3-16 Device Manager - Microsoft loopback adapter

Network connections

The newly installed Microsoft Loopback Adapter is also displayed at **Network Connections**.

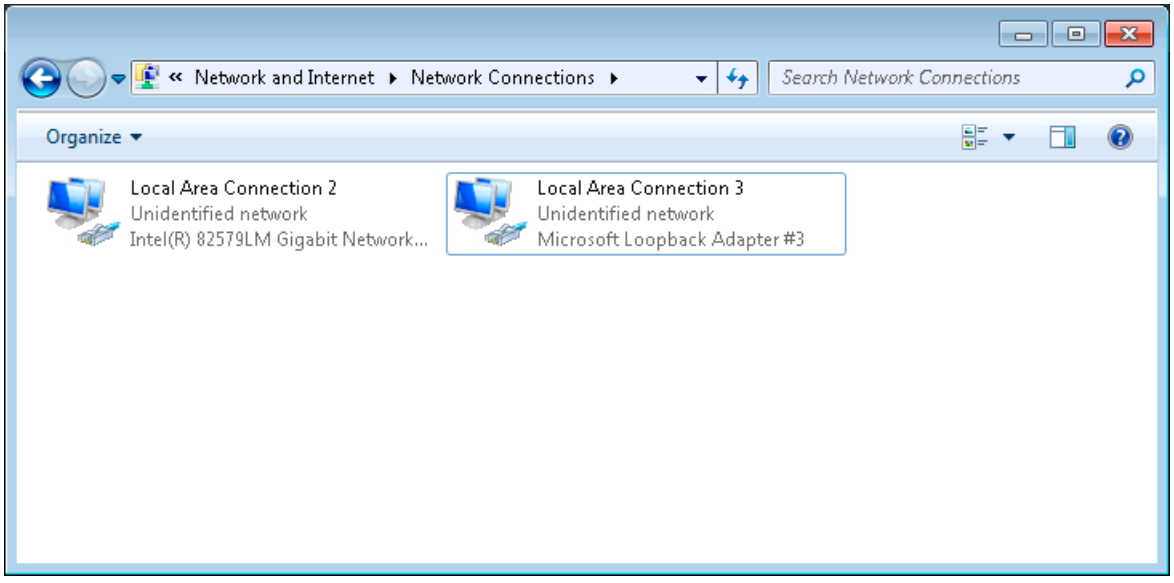

Figure 3-17 Network connections - Display of the newly installed Microsoft loopback adapter

Creating the network bridge

To activate the network bridge, proceed as follows:

1. Select both adapters at Network Connections
2. Select Bridge Connections via the context menu.

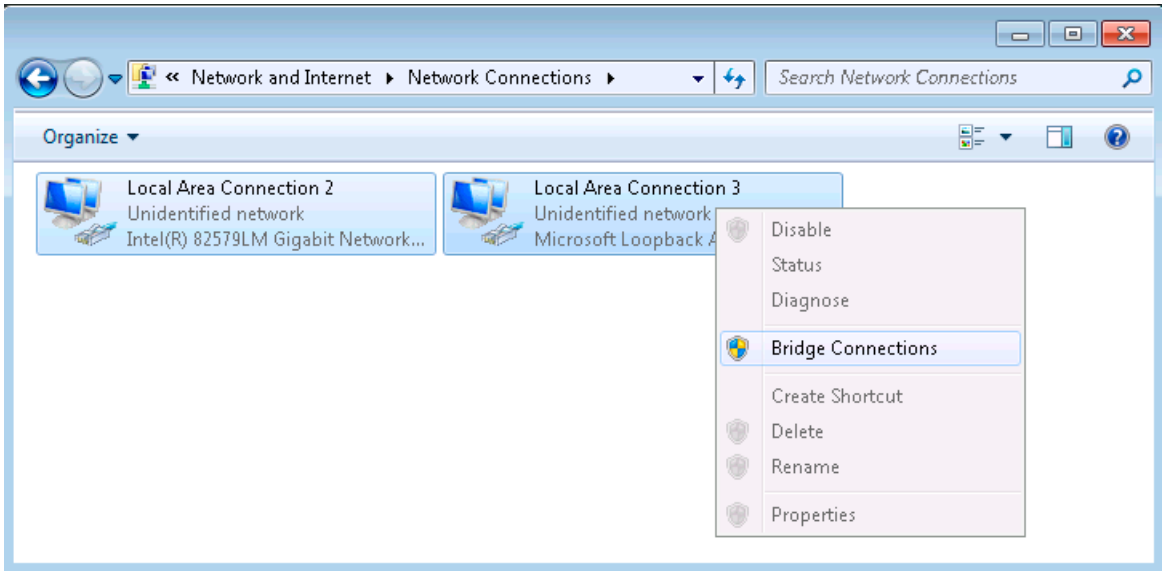

Figure 3-18 Network Connections - Setting the Bridge Connection

3. The Network Bridge MAC Bridge Miniport is displayed.

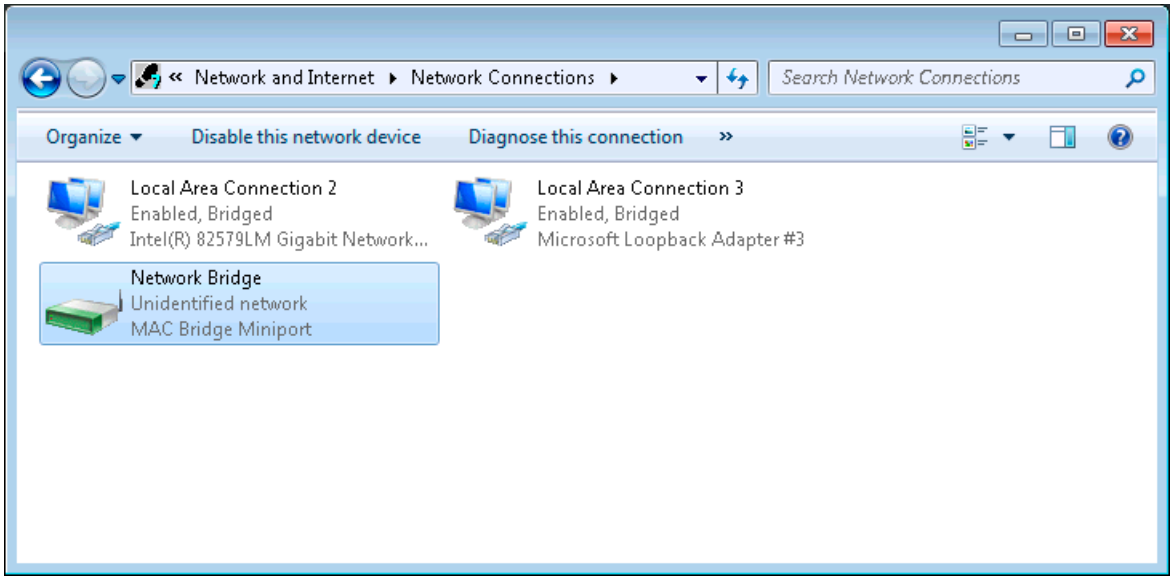

Figure 3-19 Network Connections - Display of the Network Bridge MAC Bridge Miniport

4. To initialize the network bridge, execute the **sp_bridge.cmd** Windows command script.
   The additional script can be found at C:\SiMotion\tools\sp_bridge.cmd
   After executing the batch file, the network bridge has been set up.

Setting "Set PG/PC interface"

Now open the PG/PC interface to complete the setting for the **Network Bridge** .

1. Open the **Set PG/PC Interface** dialog box via the **Control Panel** entry point.
2. Deactivate the **MAC Bridge Miniport DCP** checkbox in the **LLDP / DCP** tab.
   If you do not deactivate the MAC Bridge Miniport DCP, the SIMOTION P320-4 may not be found via Accessible nodes.

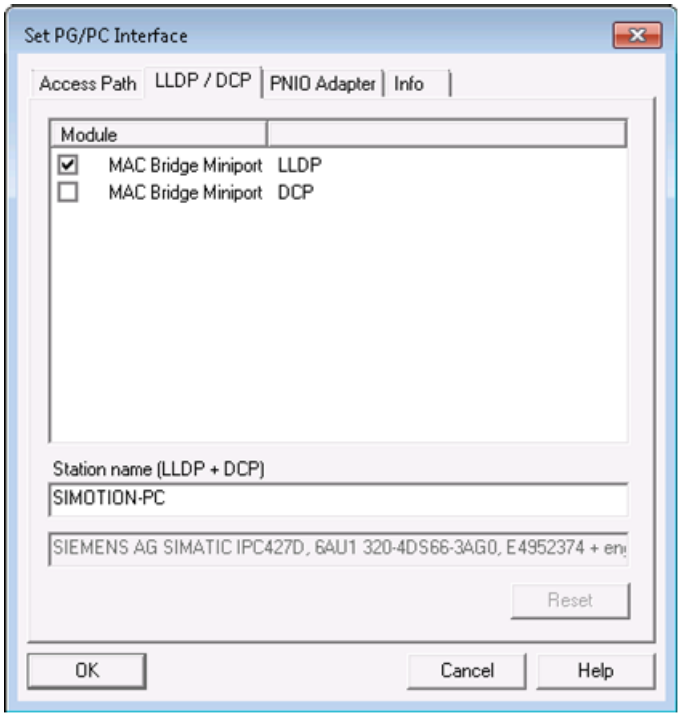

Figure 3-20 Set PG/PC interface

The settings for the network bridge have now been completed.

3.3.3 HMI or ES via PROFINET

Networking via PROFINET

PROFINET is the innovative and open Industrial Ethernet standard (EN 61158) for industrial automation. With PROFINET, devices can be linked up from the field level through to the management level.

With PROFINET, an external HMI or ES can also be integrated into the network and data can be exchanged directly with the SIMOTION P320-4 device.

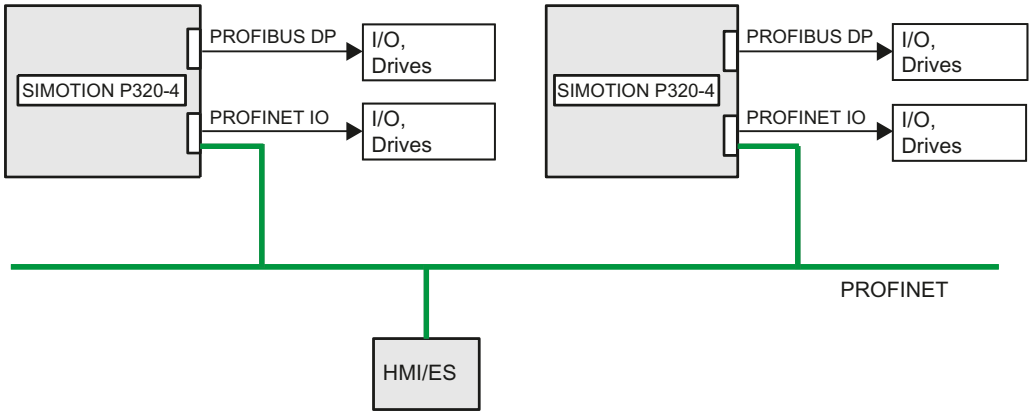

Figure 3-21 Model: Networking via PROFINET

References

You can find further information on the HMI in the documentation:

- SIMOTION Runtime Basic Functions, Section HMI (Human Machine Interface) coupling.
- SIMOTION SCOUT, Configuration Manual
- SIMOTION SCOUT TIA, Configuration Manual
- SIMOTION SCOUT TIA Device Proxy, Configuration Manual

3.3.4 HMI or ES via Ethernet

Networking via Ethernet

A complex interconnection with several HMIs or ESs is only possible using an Ethernet communication. This allows both an external HMI or ES to access several SIMOTION devices or one SIMOTION device to access another one, for example, to display the production data.

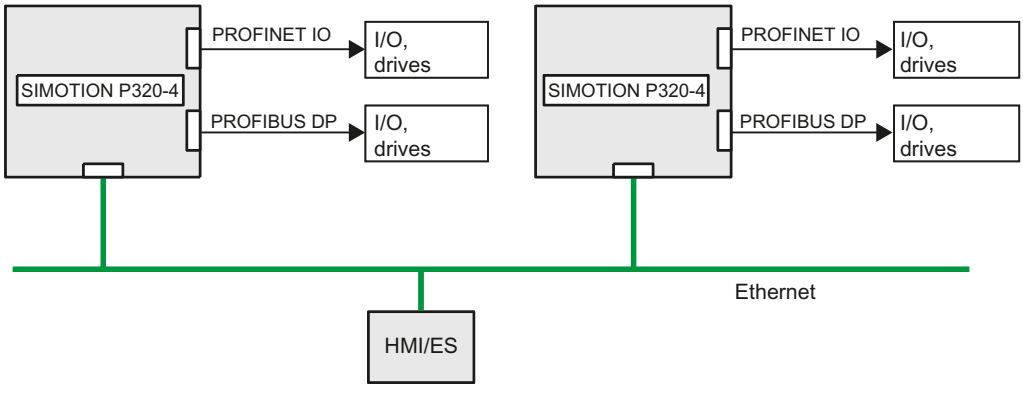

Figure 3-22 Model: Networking via Ethernet

The following services are possible on a SIMOTION device via Ethernet:

- HMI software
  WinCC flexible or the OPC server can use Ethernet to access one or more SIMOTION devices.
- SIMOTION SCOUT Engineering System
  SIMOTION SCOUT can also use Ethernet to access one or more SIMOTION devices.
- SIMOTION IT
  SIMOTION P320-4 offers communication with standard IT protocols (HTTP) over the integrated Ethernet interface.
  This makes it possible to access data or diagnostic information in the SIMOTION P320-4 from any location via intranet or the Internet.
- HTTP (browser, OPC XML)
  Setting in WebCFG.xml - default 80
- HTTPS (browser, OPC XML)
  Setting in WebCfg.xml - default 443
- FTP 21
- Telnet

Note

Information on the SIMOTION IT security concept

More detailed information on the SIMOTION IT security concept of HTTP/S, FTP and Telnet access on the Web server can be found in the following documentation:

- SIMOTION IT Diagnostics and Configuration, Diagnostics Manual, Section security concept

References

You can find further information in the documentation for SIMOTION IT:

- SIMOTION IT Diagnostics and Configuration
- SIMOTION IT Programming and Web Services
- SIMOTION IT Virtual Machine and Servlets

3.3.5 HMI or ES via IsoPROFIBUS (optional)

Networking via PROFIBUS DP

If you connect a central HMI via PROFIBUS DP, the X101 and X102 interfaces of the IsoPROFIBUS board are available.

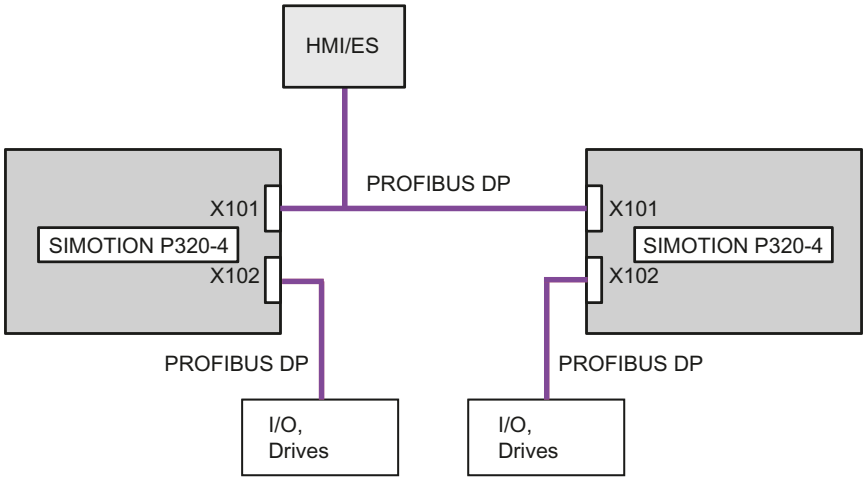

Figure 3-23 Model: Networking via PROFIBUS DP

References

You can find further information on the HMI in the documentation:

- SIMOTION Runtime Basic Functions, section HMI (Human Machine Interface) coupling.

Application planning

4

4.1 Unpacking and checking the delivery

Procedure

1. When accepting a delivery, please check the packaging for visible transport damage.
2. If any transport damage is present at the time of delivery, lodge a complaint at the shipping company in charge. Have the shipper confirm the transport damage immediately.
3. Unpack the device at its installation location.
4. Keep the **original packaging** in case you have to transport the device again.

   Note

   Damage to the device during transport and storage

   If a device is transported or stored without packaging, then shocks, vibrations, pressure and moisture may impact the unprotected device.
   A damaged packaging indicates that ambient conditions have already had a massive impact on the device.

   The device may be damaged.

   Do not dispose of the original packaging. Pack the device for transport and storage in the **original packaging**.

5. Check the contents of the packaging and any accessories you may have ordered for completeness and damage.

6. If the contents of the packaging are incomplete, damaged or do not match your order, inform the responsible delivery service **immediately**.

⚠ WARNING

Electric shock and fire hazard due to damaged device

A damaged device can be under hazardous voltage and trigger a fire in the machine or plant. A damaged device has unpredictable properties and states.

Death or serious injury could occur.

Make sure that the damaged device is not inadvertently installed and put into operation. Label the damaged device and keep it locked away. Send off the device for immediate repair.

NOTICE

Damage from condensation

If the device is subjected to low temperatures or extreme fluctuations in temperature during transportation, for example in cold weather, moisture could build up on or inside the HMI device.

Moisture can result in short-circuits in electrical circuits and damage the device.

In order to prevent damage to the device, proceed as follows:

- Store the device in a dry place.
- Bring the device to room temperature before starting it up.
- Do not expose the device to direct heat radiation from a heating device.
- If condensation develops, wait approximately 12 hours or until the device is completely dry before switching it on.

7. Please keep the enclosed documentation, it belongs to the device. You need the documentation when you commission the device for the first time.
8. Write down the identification data of the device.

4.2 Identification data of the device

Based on the identification data, the SIMOTION P320-4 device can be identified when service is required or in case of theft.

You also require the identification data in order to view further information on your SIMOTION P320-4 in the **Product Equipment Data** (PED) database.
All the important components of your SIMOTION P320-4 are stored in the PED. The entire history of the device is stored there, including the service reports.
To identify yourself in the PED database, enter the article number and the serial number of your device.

Link to the PED database

The Product Equipment Data database is available on the Internet via the following link (http://www.siemens.com/ped).

Identification data

Enter the identification data in the following table:

Identification data	Source	Value
Serial number	Rating plate	S VP ...
Article number of the device	Rating plate	6AU1320-...
Microsoft Windows Product Key Certificate of Authenticity (COA)	Rear of the device	Only devices with preinstalled Windows operating systems have COA labels
Ethernet address 1	BIOS setup, menu "Advanced", "Peripheral Configuration"	Input by the user.
PROFINET onboard MAC Address Layer 2		
PROFINET onboard MAC Address PROFINET		

SIMOTION P320-4 rating plate

Example of SIMOTION P320-4 S (standard)

You will find the following data on the rating plate of the SIMOTION P320-4:

- Device designation (here): SIMOTION P320-4 S
- Article number of the device (here): 6AU1320-4DS66-3AG0
- Serial number S VP<...>
  The computing unit is uniquely identifiable with the serial number at S VP <...>.
  <...> is an 8-digit character string.
- cULus Approval
- CE marking

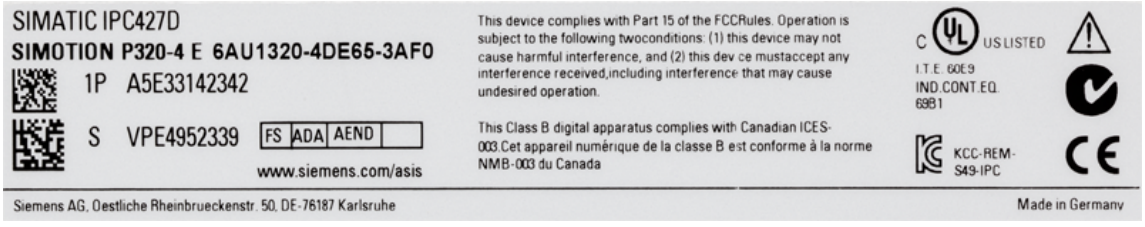

Figure 4-1 SIMOTION P320-4 rating plate

MAC addresses

Example of SIMOTION P320-4 S (standard)

In addition to the data that is found on the SIMOTION P320-4 rating plate, the MAC address plate also contains the **Onboard MAC addresses** for:

- ETHERNET (LAN) X1: VIPCTYSMAC1
- PROFINET (LAN) X3: VIPCTYSPROFINET

The data cited here is not real data.

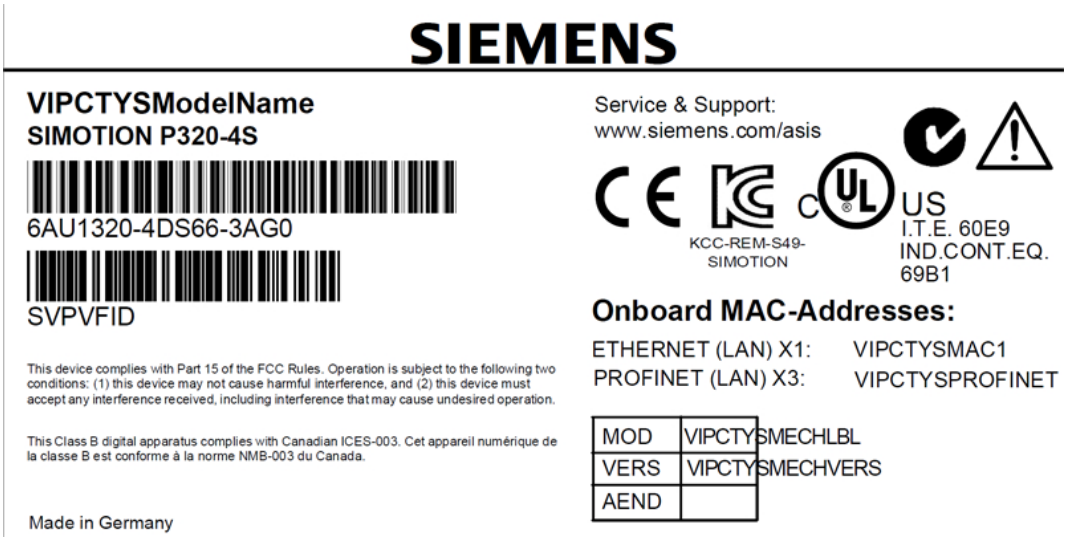

Figure 4-2 SIMOTION P320-4 S rating plate - MAC addresses

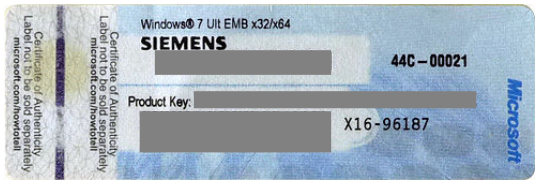
Example of a COA label



Microsoft Windows "Product Key" of the "Certificate of Authenticity" (COA):
The COA label is attached to the rear of all devices containing a Windows Embedded Standard 7 or Windows 7 operating system.

- COA label of a device with Windows Embedded Standard 7 32-bit operating system

Figure 4-3 ipc477d label coa 01

- COA label of a device with Windows 7 operating system

4.3 Permissible mounting positions

Information on the permissible mounting positions for the SIMOTION P320-4 can be found in the section Installation/mounting > Permissible mounting positions (Page 95).

4.4 Environmental conditions

Operating conditions

The SIMOTION P320-4 is designed for use in stationary, weather-protected locations.
The operating conditions exceed requirements according to EN 61131-2.

Observe the following points during installation:

- Note the climatic and mechanical environmental conditions specified in Section Technical specifications (Page 121).
- The device is designed for use in a normal industrial environment. Without additional protective measures (such as the provision of clean air), the SIMOTION P320-4 computing unit cannot be used in places with severe operating environments, for example, locations with corrosive vapors or gases.
- The clearance in the area of the ventilation slots must be at least 100 mm, so that the SIMOTION P320-4 receives sufficient ventilation.
- Do not cover the ventilation slots of the device.
- The DC power supply does not meet requirements according to EN 60950-1 in the area of the power unit connection. As such, SIMOTION P320-4 must be installed so that it is part of an operating area with restricted access (e.g. a locked control cabinet, console or server room).
- Always observe the mounting positions permitted for this device.
- The connected or installed I/O should not generate a reverse voltage greater than 0.5 V in the device.

⚠ WARNING

Invalidation of the approvals

Failure to adhere to these conditions when installing the system will invalidate approvals according to UL 60950-1, UL 508, and EN 60950-1!

Use prohibition

Without additional measures, the SIMOTION P320-4 should not be used in

- Locations with a high percentage of ionizing radiation
- Aggressive environments characterized, for example, by:
  - Dust accumulation
  - Corrosive vapors or gases
- at locations outside of the prescribed ambient conditions
- Installations requiring special monitoring such as:
  - Elevator installations
  - Electrical plants in particularly hazardous areas

An additional measure for using the SIMOTION P320-4 could be its installation in a cabinet.

Ambient conditions

For the mechanical and climatic environmental conditions, refer to the technical specifications in the section Ambient conditions (Page 124).

4.5 Electromagnetic compatibility

Definition

Standards for electromagnetic compatibility (EMC) are fulfilled if the EMC Installation Guideline is complied with.

See also:

Further information is provided in the Appendix, Section General regulations (Page 139).

Interfaces

5

5.1 Hardware components of the SIMOTION P320-4

Note

The article numbers of the components listed below can be obtained from the online catalog in the Siemens Industry Mall (http://www.siemens.com/industrymall).

SIMOTION P320-4 complete system

The SIMOTION P320-4 device is supplied with the integrated PROFINET onboard communication module.

An additional IsoPROFIBUS board can be inserted as required.

SIMOTION P320-4 spare parts

The SIMOTION P320-4 consists of the following hardware components:

- **SIMOTION P320-4** computing unit
- **Back-up battery** for the motherboard of the SIMOTION P320-4
- IsoPROFIBUS board (optional communication module for the SIMOTION P320-4)

Operation and display

The following hardware components for operation and display can be used:

- SIMATIC Industrial Flat Panel, in the variants IFP1500, IFP1900 or IFP2200.

Power supply of the SIMOTION P320-4

The power supply must satisfy the requirements as described in section Connecting the power supply (24 VDC) (Page 109). This can be ensured by using the following devices, for example:

- SITOP smart 24 V / 10 A
- 24 VDC UPS (optional)

Drives and I/O modules

The drives and I/O modules released for use with SIMOTION are specified on the website: www.siemens.com/simotion (www.siemens.com/simotion)

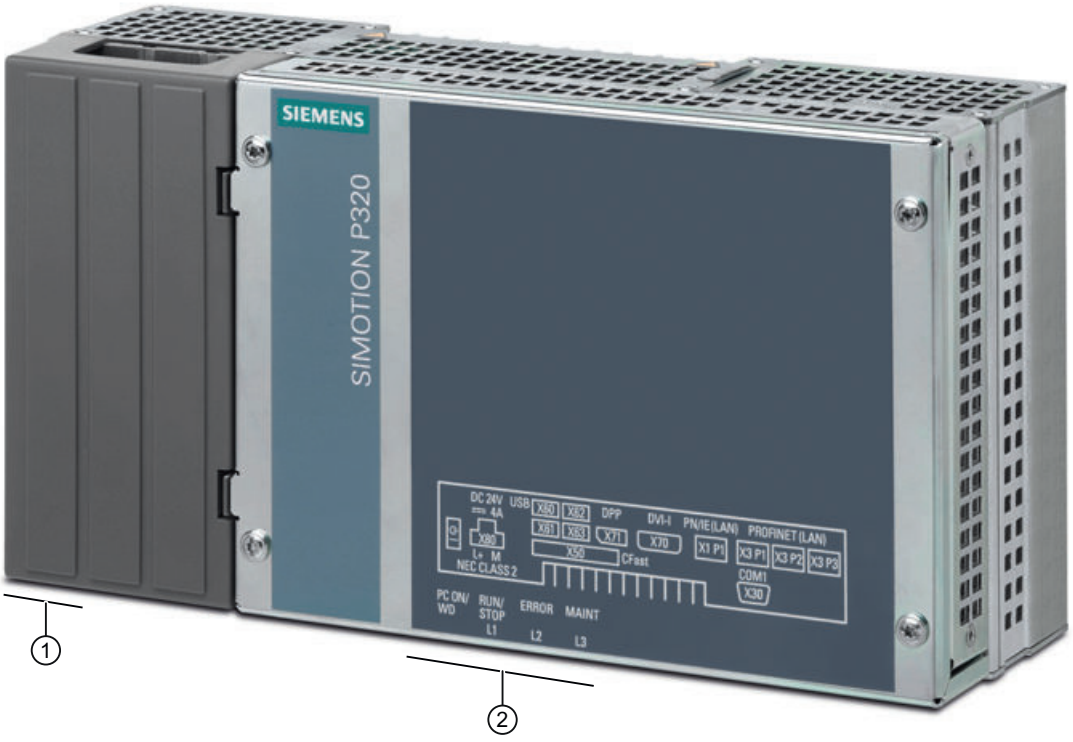
Note

Please note that not all modules of the I/O or I/O systems mentioned are approved for SIMOTION. Moreover, system-related functional differences can occur when these I/O or I/O systems are used on SIMOTION rather than SIMATIC. For example, special process-control functions (hot swapping, etc.) are not supported by SIMOTION for the ET 200M distributed I/O system.

A detailed and routinely updated list of I/O modules released for SIMOTION as well as instructions on their use is provided on the Internet at Siemens Product Support (https://support.industry.siemens.com/cs/ww/en/view/11886029).

In addition to the I/O modules approved for SIMOTION, all certified standard slaves can, in principle, be connected to SIMOTION provided that they support the following data traffic:

- Cyclic data traffic (DP V0)
- Acyclic data traffic (DP V1)
- Isochronous data traffic (DP V2)



These modules are integrated via the GSD file of the device's manufacturer.

Note

Please note that in individual cases, additional boundary conditions must be fulfilled in order to integrate a standard slave into SIMOTION.

5.2 Overview of operator control and display elements

The following figure shows the arrangement of the indication and control elements of the SIMOTION P320-4.

① On/Off switch
② Operating displays (LEDs)

Figure 5-1 SIMOTION P320-4 control and display elements

5.3 Control elements

On/Off switch

① **Requirement**:
The BIOS setup entry **After Power Failure** is set to **Power on**.
The On/Off switch is used to switch the SIMOTION P320-4 on.

Figure 5-2 SIMOTION P320-4 - operator controls

⚠ WARNING

De-energize the SIMOTION P320-4!

The On/Off switch does not disconnect the device from the power supply system.
When the switch is in position **0** (Off), the device is still supplied with mains voltage.

To remove power from the device, the power supply plug must be removed.

NOTICE

Close down the operating system first

First close down the operating system before switching off the device with the on/off switch, otherwise data may get lost.

5.4 Status displays

The status indicators below the interfaces are described in the following table.

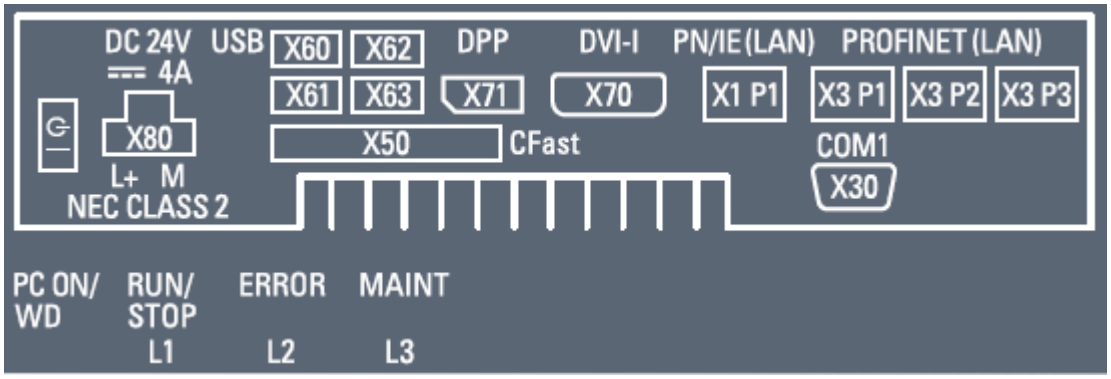


Figure 5-3 SIMOTION P320-4 status indicator

LED	Meaning	State	Description
PC ON/ WD	Power supply	Green	BIOS ready to boot. Indicates the correct supply voltage of 3.3 V, 5 V and 12 V from the integrated power unit.
		Off	Not relevant.
		Green/yellow flash-ing (1 Hz)	BIOS in POST, power switch on.
		Yellow	Idle state
RUN/STOP or L1	RUN STOP	Off	SIMOTION P Runtime is not running.
		Green	SIMOTION P320-4 in RUN.
		Yellow	SIMOTION P320-4 in STOP.
		Green/yellow: Flashes quickly (2 Hz)	DCP flashing
		Yellow: Flashes quickly (5 Hz)	FAULT state (only in combination with L2 and L3)

LED	Meaning	State	Description
ERROR or L2 (SF PROFINET LED)	-	Off	SIMOTION P320-4 is working error-free.
	Error	Red: Continuous light	Bus error at the PROFINET interface.
		Red: Flashes quickly (2 Hz)	Erroneous configuration.
		Red: Flashes quickly (5 Hz)	FAULT state (only in combination with L1 und L3)
	INIT	Red: Flashes slowly (0.5 Hz)	During the INIT process, the SF PROFINET LED is controlled by the boot loader. The precise flashing behavior therefore cannot be determined and displayed. In the INIT state, 0.5 Hz flashing is displayed in the SIMOTION P State. If no project has yet been loaded, 0.5 Hz flashing is also displayed for the INIT, which, in this case, is also retained in the Running state.
MAINT or L3 (SF LED)	-	Off	SIMOTION P320-4 works error-free.
	Error	Red	An event has occurred which needs to be acknowledged (alarm, message, notification). (See Diagnostics Guide)
		Red: Flashes slowly (0.5 Hz)	License missing for licensed technology objects. Carry out the licensing to correct the error. Further information on the licensing can be found in the SIMOTION P320-4 E / SIMOTION P320-4 S Commissioning and Hardware Installation Manual.
		Red: Flashes quickly (5 Hz)	FAULT state (only in combination with L1 and L2) A fault has occurred to which the user program cannot respond. The following actions may be required to rectify the fault: • Power OFF/ON • Recommissioning

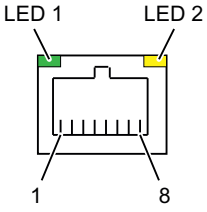
5.5 Overview of the SIMOTION P320-4 interfaces

The following table provides an overview of the SIMOTION P320-4 interfaces.

Table 5-1 Overview of the interfaces

Interface	Description	Further information
PROFINET	Three PROFINET ports with RJ45 socket	PROFINET onboard interface (Page 87)
Ethernet	1 x 8-pole RJ45 interface	Ethernet RJ45 interface (Page 88)
DVI-I	26-pin socket for connection of a CRT or LCD monitor with DVI interface or VGA with DVI/VGA adapter	DVI-I interface (Page 88)

Interface	Description	Further information
Display port	20-pole DPP interface	Display port interface (Page 90)
USB 3.0	Lower USB channel 0, upper USB channel 1 Lower USB channel 2, upper USB channel 3	USB 3.0 interface (Page 90)
CFast card	Slot for CFast card 50-pin CF socket, types I/II	CFast card (Page 91)
COM1	Serial interface *V.24*	Serial interface COM1 (Page 92)
IsoPROFIBUS board (optional)	2 x 9-pin socket	IsoPROFIBUS board (optional) (Page 92)



5.6 PROFINET onboard

Interface assignment

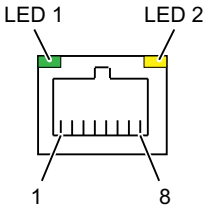
Designation: PROFINET LAN, X3, 3 ports: P1, P2, P3

Type: 8-pin RJ45 socket

PROFINET onboard LAN (X3) interface

Pin no.	Short description	Meaning	Input/output
1	RD+	Receive data [2]	Input
2	RD-	Receive data [2]	Input
3	TD+	Send data [2]	Output
4, 5 [1]	SYMR	Internal 75 Ohm terminating resistor	-
6	TD-	Receive data [2]	Output
7, 8 [1]	SYMT-	Internal 75 Ohm terminating resistor	-
S	-	Shield	-
-	LED 1	Lights up green: Link	-
-	LED 2	Lights up yellow: Activity	-

[1] Optional product feature



[2] Autonegotiation and autocrossover are supported.

5.7 Ethernet

Interface assignment

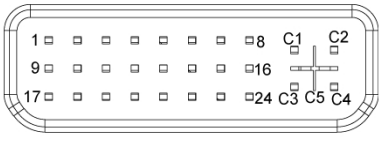
Designation: PN/IND. Ethernet (LAN), X1

Type: 8-pin RJ45 socket

Ethernet RJ45 interface			
			
Pin no.	**Short description**	**Meaning**	**Input/output**
1	BI_DA+	Bi-directional data A+	Input/output
2	BI_DA-	Bi-directional data A-	Input/output
3	BI_DB+	Bi-directional data B+	Input/output
4	BI_DC+	Bi-directional data C+	Input/output
5	BI_DC-	Bi-directional data C-	Input/output
6	BI_DB-	Bi-directional data B-	Input/output
7	BI_DD+	Bi-directional data D+	Input/output
8	BI_DD-	Bi-directional data D-	Input/output
S	–	Shield	–
	LED 1	Off: 10 Mbps Green light: 100 Mbps Orange light: 1000 Mbps	–
	LED 2	Lit: Active connection, e.g., to a hub Flashing: Activity	–

Note

The interfaces available on the device have been numbered for unique identification.



This numbering may deviate, however, from the numbering assigned by the operating system.

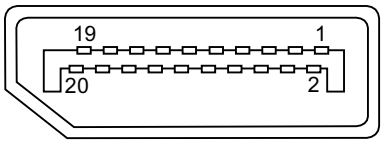
5.8 DVI-I

Interface assignment

Designation: DVI/VGA, X70

Type: 26-pin socket

DVI-I interface (standard socket)			
			
Pin no.	**Short description**	**Meaning**	**Input/output**



DVI-I interface (standard socket)			
1	TMDS Data2-	DVI data channel	Output
2	TMDS Data2+	DVI data channel	Output

6	ML_Lane1-	DP data 1-	Output
7	ML_Lane2+	DP data 2+	Output
8	GND	Ground	-
9	ML_Lane2-	DP data 2-	Output
10	ML_Lane3+	DP data 3+	Output
11	GND	Ground	-
12	ML_Lane3-	DP data 3-	Output
13	CONFIG1 CAD	Cable Adapter Detect	Input
14	CONFIG2	Ground (PullDown)	-
15	AUX_CH+	Auxiliary channel+	Bidirectional
16	GND	Ground	-
17	AUX_CH-	Auxiliary channel-	Bidirectional
18	HPD	Hot Plug Detect	Input
19	GND	Ground	-
20	DP_PWR	+3.3V (fused)	Output

5.10 USB 3.0

Interface assignment

Designation: USB X62, X61, X62, X63

Type: 9-channel *high current*

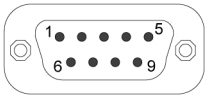
USB 3.0 interface			
			
Pin no.	**Short designation**	**Meaning**	**Input/output**
1	VBUS	+ 5 V (fused)	Output
2	D-	Data line	Input/output

USB 3.0 interface			
3	D+	Data line	Input/output
4	GND	Ground	–
5	RX-	Data line	Input
6	RX+	Data line	Input
7	GND	Ground	–
8	TX-	Data line	Output
9	TX+	Data line	Output

5.11 CFast card

Pin assignment of the interface

Designation: CFast X50



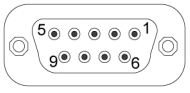
Pin no.	Short designation	Meaning
S1	SGND	Signal GND (ground for signal integrity)
S2	A+	SATA differential
S3	A-	SATA differential
S4	SGND	Signal GND (ground for signal integrity)
S5	B-	SATA differential
S6	B+	SATA differential
S7	SGND	Signal GND (ground for signal integrity)
PC1	CDI	Card Detect Out
PC2	GND	Device GND
PC3	TBD	TBD (not connected)
PC4	TBD	TBD (not connected)
PC5	TBD	TBD (not connected)
PC6	TBD	TBD (not connected)
PC7	GND	Device GND
PC8	LED1	LED Output (not connected)
PC9	LED2	LED Output (not connected)
PC10	IO1	Reserved Input/Output (not connected)
PC11	IO2	Reserved Input/Output (not connected)
PC12	IO3	Reserved Input/Output (not connected)
PC13	PWR	Device Power (3.3V)
PC14	PWR	Device Power (3.3V)
PC15	GND	Device GND
PC16	GND	Device GND
PC17	CDO	Card Detect In

5.12 COM1

Interface assignment

Designation: COM1, X30

Type: 9-pin (connector)



Serial interface COM1			
			
Pin no.	**Short designation**	**Meaning**	**Input/output**
1	DCD	Data carrier detect	Input
2	RxD	Receive data	Input
3	TxD	Transmit data	Output
4	DTR	Data terminal ready	Output
5	GND	Ground	-
6	DSR	Data set ready	Input
7	RTS	Request to send	Output
8	CTS	Clear to send	Input
9	RI	Incoming call	Input

5.13 IsoPROFIBUS board (optional)

Interface assignment

Designation: PROFIBUS, X101, X102

Type: 9-pin (socket)

PROFIBUS interface		
		
Pin no.	**Short designation**	**Meaning**
1-2	NC	Not connected
3	LTG_B	Data line (I/O)
4	RTS_AS	AS request to send (O)
5	GND	Ground electrically isolated
6	P5V_dp_fused	+5 V / max. 90 mA (fused) electrically isolated
7	NC	Not connected
8	LTG_A	Data line (I/O)
9	RTS_PG	PG request to send (O)

Installation/mounting 6

6.1 Installing the device

SIMOTION P320-4 is particularly suitable for installation in consoles, control cabinets and switchboards.

⚠ WARNING

Perform function test while installing the device in machines or plants

Following the results of a risk analysis, additional protection equipment on the machine or the system is necessary to avoid endangering persons. With this, especially the programming, configuration and wiring of the inserted I/O modules have to be executed, in accordance with the necessary risk analysis identified safety performance (SIL, PL or Cat.). The intended use of the device has to be secured.

The correct use of the device has to be verified with a function test on the system. This test can detect programming, configuration and wiring errors. The test results have to be documented and if necessary inserted into the relevant inputs.

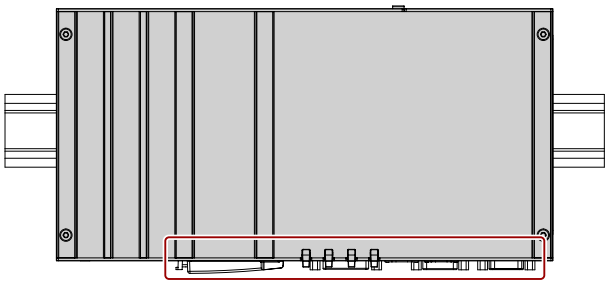
6.2 Permissible mounting positions

Note

The SIMOTION P320-4 is approved for operation in closed rooms only.

Ensure the required minimum clearance to other components or enclosure panels:

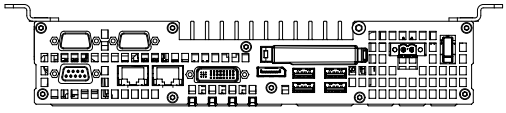
- Below at least 100 mm
- Above at least 50 mm



The permissible mounting positions for the SIMOTION P320-4 are standard rail mounting and vertical mounting.

Standard rail mounting

Horizontal mounting is the preferred position.

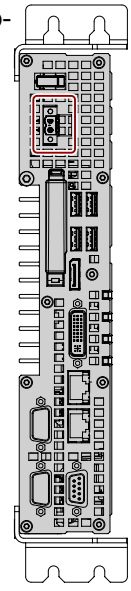


The following horizontal mounting option is permitted:

The interfaces are at the bottom.

The figure shows the interfaces on the front for representation purposes only.

For rail mounting, the interfaces always point downward.



You can find mounting information under Standard rail mounting (Page 97).

Vertical mounting

The following vertical mounting option is permitted:

The interfaces are at the front. The power supply connection is at the top.

You can find information on mounting under Vertical mounting (Page 98).

Ambient conditions

Observe the permissible temperature range for operation in the respective mounting position as described in Section "Technical data > Ambient conditions (Page 124)".

6.2.1 Standard rail mounting and vertical mounting

6.2.1.1 Standard rail mounting

Requirement

- Standard mounting rail, 35 mm standard profile
  The standard mounting rail is installed at the installation site.
- The standard mounting rail clip is attached to the SIMOTION P320-4.

Note

Ensure that the wall or ceiling can hold four times the total weight of the SIMOTION P320-4 including the standard mounting rail and additional expansion cards. See section Notes on installation (Page 99).

Mounting the standard mounting rail clip

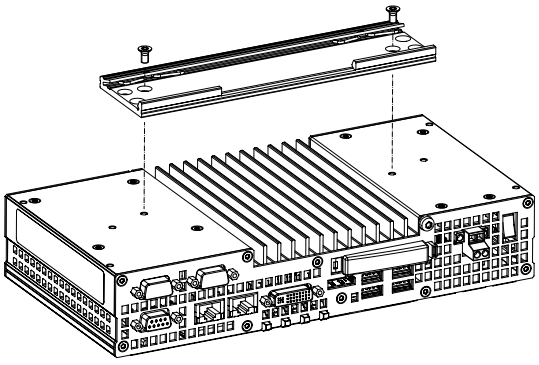
Before you can install the device on a standard mounting rail, you will need to attach the standard mounting rail clip included in the scope of delivery.

The fasteners and screws required are supplied with the device for mounting depending on the order number.

Requirement

- 1 standard mounting rail clip
- 2 screws
- 1 T20 screwdriver

Use the two screws to mount the standard mounting rail clip on the SIMOTION P320-4 enclosure.



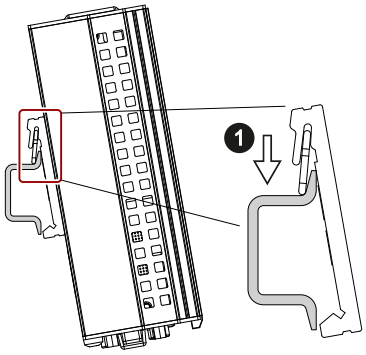


Figure 6-1 Mounting the standard mounting rail clip

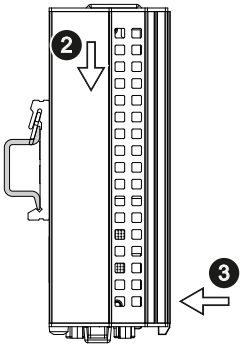


Mounting

1. Place the SIMOTION P320-4 and rail clip on the upper edge of the standard profile rail at the position shown.

2. Press the SIMOTION P320-4 slightly downward.
3. Once the rail clip slides over the bottom edge of the standard mounting rail, push the device onto the rail.

   Ensure that you hear the SIMOTION P320-4 snapping into place.

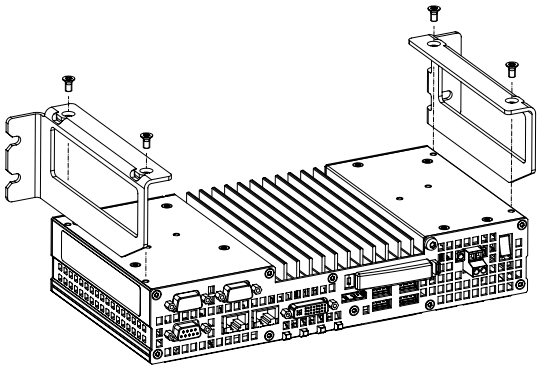
Note

To ensure secure vertical mounting on standard mounting rails, install a standard rail ground terminal beneath the device.

Removing

1. Press the SIMOTION P320-4 down until the rail clip releases the device.
2. Swing the SIMOTION P320-4 away from the standard mounting rail.
3. Lift the device up and off.

6.2.1.2 Vertical mounting



The fasteners and screws required are supplied with the device for the selected mounting option.

Requirement

- 2 mounting brackets
- 4 screws
- 1 T20 screwdriver

Procedure

1. Secure each mounting bracket with two screws.

6.3 Installation notes

Note the following:

- The SIMOTION P320-4 is approved for operation in closed rooms only.
- For installation in a control cabinet, observe the SIMATIC installation guidelines and applicable DIN/VDE requirements or other applicable country-specific regulations.
- When the device is used in the area of Industrial Control Equipment according to UL508, note that the device is classified as "Open Type". The installation of the device in a housing according to UL508 is therefore a mandatory requirement for approval or operation in according to UL508.

Securely fastening the SIMOTION P320-4

NOTICE
Insufficient load carrying capacity If the wall it is mounted on does not have a sufficient load-bearing capacity, the device may fall and be damaged. Ensure that the mounting surface on the wall can bear four times the total weight of the device, including fixing elements.

NOTICE
Incorrect fixing elements The device may not be securely fitted if you use dowels and screws other than those specified below for mounting. The device can fall and may be damaged. Use only the dowels and screws specified in the following table.

Connecting elements

The connecting elements for each mounting position are listed in the following:

- Standard rail mounting

Material	Bore diameter	Fastener
Metal, min. 2 mm thickness	5 mm	• 2 x M4 screws • 2 x M4 nuts
Concrete	6 mm, 40 mm depth	• 4 x dowels, ∅ 6 mm, 40 mm length • 4 x screws, ∅ 4 mm, 40 mm length
Plasterboard, min. 13 mm thickness	14 mm	4 x toggle bolts, ∅ 4 mm, 50 mm length

- Vertical mounting

Material	Bore diameter	Fastener
Concrete	6 mm, 40 mm depth	• 4 x dowels, ∅ 6 mm, 40 mm length • 4 x screws, ∅ 4 mm, 40 mm length
	8 mm, 40 mm depth	• Dowel, ∅ 8 mm, 40 mm length • Screw, ∅ 5 mm, 40 mm length
Plasterboard, min. 13 mm thickness	14 mm	Toggle bolt, ∅ 4 mm, 50 mm length

Mounting positions

The following mounting positions are permitted for the SIMOTION P320-4 and are described in detail in the following sections:

- Standard rail mounting (Page 95)
- Vertical mounting (Page 96)

6.4 Overview of operating modes for the SIMOTION P320-4

Overview

The following operating modes are available for mounting the SIMOTION P320-4.

The operating modes are:

- Decentralized structure
  The SIMOTION P320-4 is mounted separately from a panel in a decentralized structure.
- Headless operation
  The SIMOTION P320-4 is operated without panel.

Before mounting, the following must be noted:

Before you mount the SIMOTION P320-4 in a control cabinet or a rack, optional components are installed to expand the SIMOTION P320-4.

Example: installation of the optional IsoPROFIBUS board.

To do this, open the device and note the following procedure:

1. Open the cover of the SIMOTION P320-4.
2. Insert the optional IsoPROFIBUS board.
3. Plug in the SYNC I/O cable for synchronizing with PROFINET.
4. Close the cover.
5. Mount the SIMOTION P320-4.

Note

The installation and removal of components as well as the mounting of the SIMOTION P320-4 are described in detail in the SIMOTION P320-4 E / P320-4 S Commissioning and Hardware Installation Manual.

NOTICE
Avoid loss of warranty If you install or exchange system expansions and damage your device, the warranty becomes void.

6.5 Decentralized structure

Overview

The decentralized structure provides greater flexibility in terms of location and enables the SIMOTION P320-4 to be positioned in non-critical areas of the plant (e.g. control cabinet).

The decentralized structure of a panel with the SIMOTION P320-4 can be performed via the display port, USB or DVI connection. Please note the cable lengths that are supported for the panel.

For the use of an HMI system, the SIMATIC IFP, for example, can be connected by means of the described interfaces.

Connection

7

7.1 Requirements

General information

During the configuration of SIMOTION modules, you must pay attention to the "Electrical configuration design".

The following section provides information on wiring and networking the complete SIMOTION system.

Further information about the connection of the complete system and the individual components can be found in the SIMOTION P320-4 E / P320-4 S Commissioning and Hardware Installation Manual.

Open equipment

These modules are open equipment. This means they may only be installed in housings, cabinets, or in electrical equipment rooms that can only be entered or accessed with a key or tool. Housings, cabinets, or electrical equipment rooms may only be accessed by trained or authorized personnel. An external fire-protection housing is required.

Observe the following points during installation:

- The device should be connected only to **24 VDC** power supply networks that meet the requirements of **safety extra-low voltage** (**SELV**). The cable cross-section must be chosen large enough to ensure that no damage can result from cable overheating in the event of a short-circuit in the SIMOTION P320-4.
- Avoid extreme ambient conditions.
- Protect the device against dust, moisture, heat and severe vibration.
- Do not subject the SIMOTION P320-4 to direct sunlight.
- Install the device in such a way that it poses no danger, for example, by falling over.
- The clearance around the SIMOTION P320-4 must be at least 100 mm to ensure adequate ventilation.
- Do not cover the ventilation slots.

7.2 Overview of connections

The connection overview shows the SIMOTION P320-4 interfaces to which the appropriate I/O devices can be connected.

Note

The cabling for all elements and components of the complete system can only be carried out when disconnected from the mains.

It does not matter in which order connection takes place.

The connection of the individual components in the SIMOTION P320-4 E / P320-4 S Commissioning and Hardware Installation Manual.

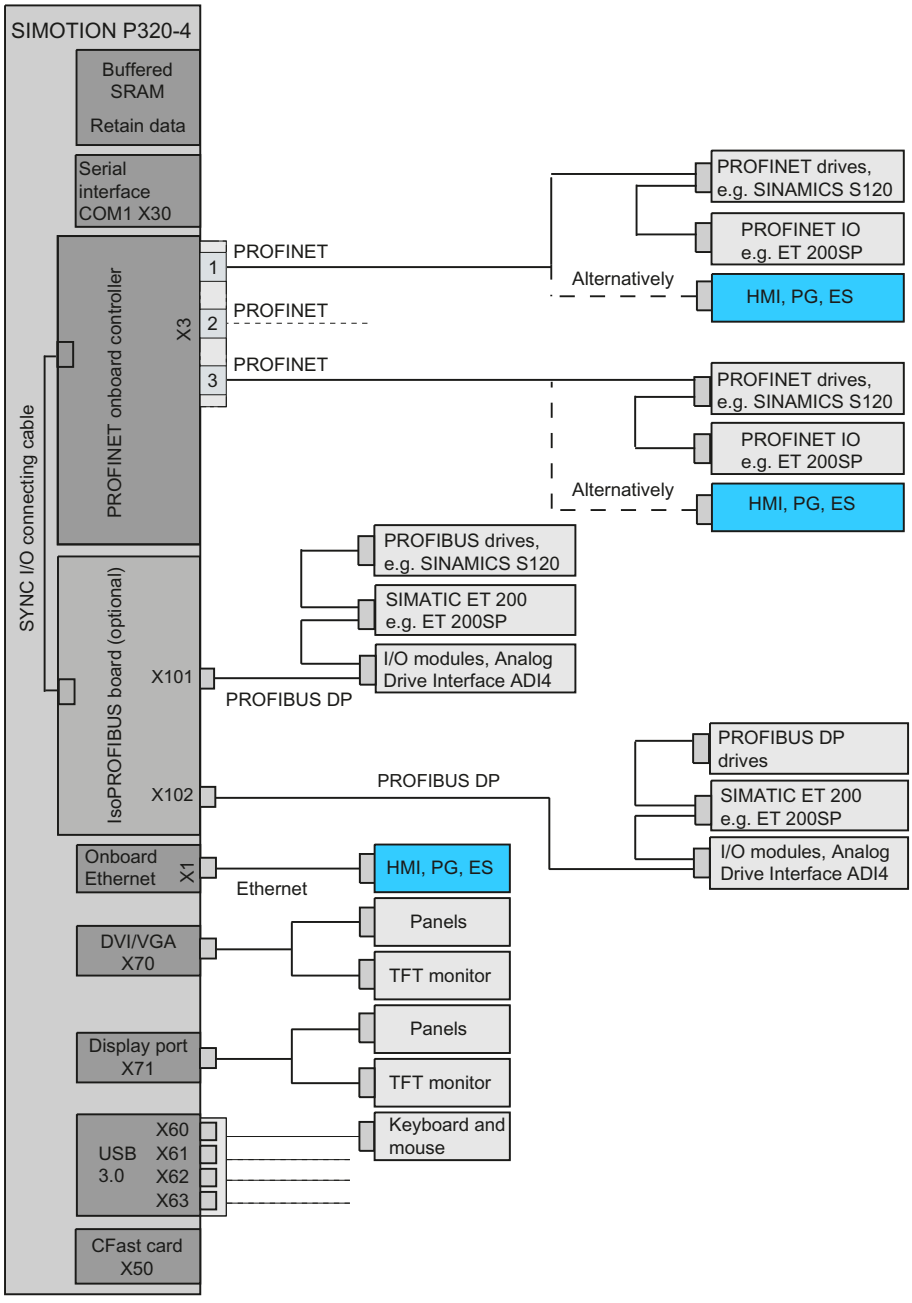


Figure 7-1 Hardware system overview - example with PROFINET onboard and optional IsoPROFIBUS board

7.3 Notes on connecting

⚠ WARNING

Risk of fire and electric shock

The On/Off switch does not isolate the device from the power supply. Risk of electric shock if the device is opened incorrectly or defective. There is also a risk of fire if the device or connecting lines are damaged.

You should therefore protect the device as follows:

- Always pull out the power plug when you are not using the device or if the device is defective. The power plug must be freely accessible.
- Connect the device to a protective conductor as instructed, see Section "Connecting the protective conductor".
- Use a central isolating switch in the case of cabinet installation.

⚠ WARNING

Risk of lightning strikes

A lightning strike may enter the mains cables and data transmission cables and reach to a person.

Death, serious injury and burns can be caused by lightning.

Take the following precautions:

- Disconnect the device from the power supply in good time when a thunderstorm is approaching.
- Do not touch mains cables and data transmission cables during a thunderstorm.
- Keep a sufficient distance from electric cables, distributors, systems, etc.

NOTICE

Fault caused by I/O devices

The connection of I/O devices can cause faults in the device.

The result may be personal injury and damage to the machine or plant.

Note the following when connecting I/O devices:

- Read the documentation of the I/O devices. Follow all instructions in the documentation.
- Only connect I/O devices which are approved for industrial applications in accordance with EN 61000-6-2 and IEC 61000-6-2.
- I/O devices that are not hotplug-capable may only be connected after the device has been disconnected from the power supply.

NOTICE

Damage through regenerative feedback

Regenerative feedback of voltage to ground by a connected or installed component can damage the device.

Connected or built-in I/Os, for example, a USB drive, are not permitted to supply any voltage to the device. Regenerative feedback is generally not permitted.

7.4 Protective conductor connection and potential equalization

The protective conductor connection is needed to protect the device and helps ensure that interference signals generated by power lines, signal lines or lines to I/O devices are safely discharged to earth.

The protective conductor connection on the device must be connected to the protective conductor of the control cabinet or system in which the device is installed.

⚠ WARNING

Electrical shock hazard and risk of fire

Internal components of a faulty device may carry dangerous voltages that pose the risk of fire or electrical shock. Risk of death and serious injury.

- Always connect the ground conductor before you commission the device.
- Never operate the device without protective conductor.
- Take a faulty device out of service immediately and mark it accordingly.

Requirement

- The device has been installed.
- 1 protective conductor, minimum cross section 2.5 mm^2
- 1 T20 screwdriver
- 1 x M4 cable lug

Procedure

1. Crimp the cable lug onto the protective conductor.
2. Screw the cable lug onto the protective conductor connection as shown.

① Protective conductor connection / potential equalization

3. Wire the protective conductor to the protective conductor connection of the control cabinet in which the device is installed.

7.5 Connecting peripheral equipment

Note

Observe suitability for industrial applications

Only connect I/O devices that are suitable for industrial applications in accordance with EN IEC 61000-6-2.

Note

I/O devices capable of hot-plugging (USB)

Hot-plug I/O devices (USB) may be connected while the PC is in operation.

NOTICE
Non-hot-plug I/O devices I/O devices that do not support hot-plugging may not be connected until the device is powered down. Strictly adhere to the specifications for peripheral equipment.

Note

Wait at least ten seconds before you reinsert USB devices.

Note that the EMC immunity of standard USB devices is designed only for office environments. These USB devices are appropriate for handling commissioning and service tasks. You may only use USB devices that are suitable for industrial applications. The USB devices are developed and marketed by the respective supplier. The respective product supplier provides support for the USB devices. The manufacturer's terms of liability shall apply.

Note

The connected or built-in I/Os, such as USB drives, should not introduce a counter EMF into the device.

Reverse voltages exceeding 0.5 V to ground that are generated by connected or installed components may prevent proper operation of the device or lead to its destruction.

7.6 Connecting the power supply (24 VDC)

Please note the following to ensure you operate the device safely and in accordance with regulations:

⚠ WARNING

Electrical shock hazard and risk of fire

Voltage exceeding SELV levels may cause fire or electric shock. Death or serious physical injury can result.

- Always wire the device to a 24 VDC power supply that is compliant with SELV requirements.
- You need a corresponding NEC Class 2 power source to comply with requirements to UL 50950-1 and UL 508 when operating the device on a wall, in an open frame, or at any other location.
- In all other cases (IEC / EN / DIN EN 60950-1), either a current source of limited output (LPS = Low Power Source), or a line-side fuse or a line-side circuit breaker is necessary. Current must be limited to 4.16 A. This requires a 4 A fuse max.

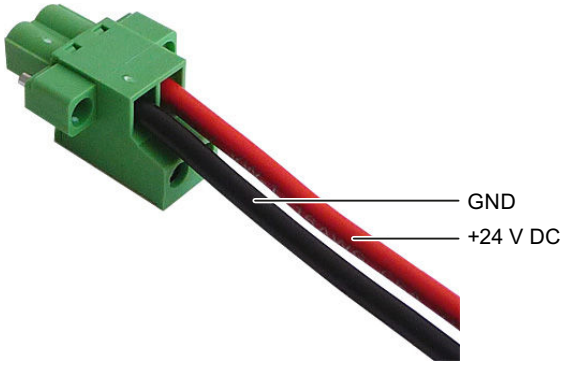
The device has reverse polarity protection.

Requirement

- The device has been installed.
- The protective conductor is connected.
- One wired terminal.
  The corresponding 24 VDC power supply is off.
- One 0.5 × 3 Philips screwdriver.

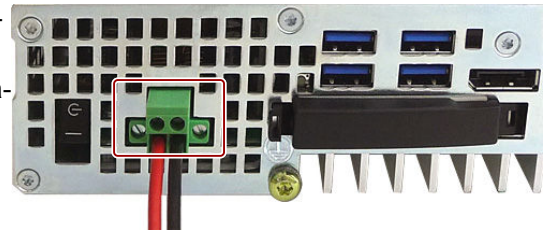
NOTICE
Damage to the device Do not turn the screws of the terminal when the terminal is inserted in the device. The device can be damaged through the pressure of the screwdriver on the terminal and consequently the connection socket. Only connect the wires to the terminal when it is unplugged.

Note



Make sure that the wires are not accidentally swapped over. Note the labeling for the contacts on the front cover of the device.

The terminal to connect the power supply is attached to the device. The terminal is designed for wires with a cross-section of 0.25 mm² to 2.5 mm². Only connect wires with a cross-section ≥ 0.5 mm².



Solid or flexible cables can be used for the connection. Ferrules are not required.

Procedure

1. Connect the cables as shown.
   Note the position of the terminal.

2. Insert the terminal at the marked position.
3. Secure the terminal using the integrated screws.

7.7 Connecting the device to networks

Ethernet can be used for integrating the device into existing or planned networks.

Ethernet

The integrated Ethernet interface can be used for communication and for data exchange with automation devices such as SIMOTION SCOUT, SIMATIC S7.

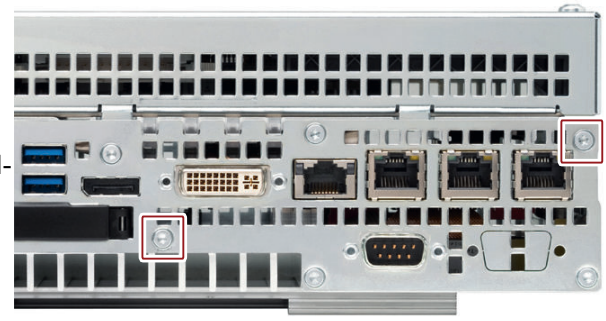
Further information

Further information is available on the Internet at the Siemens Industry Mall (www.siemens.com/industrymall), the catalog and ordering system for automation and drives.

7.8 Installing the strain relief

Strain relief for the device is provided in the scope of delivery. The strain relief is designed to prevent the lines connected to the device from being accidentally pulled out.

Attaching PROFINET strain relief



Requirement

- 1 strain relief
- 2 screws
- 1 T10 screwdriver

Mounting

1. Remove the marked countersunk screws.

2. Fasten the strain relief at the PROFINET interface(s).
   Use the oval head screws included with the strain relief.

Removing

Follow the mounting procedure in reverse to remove the strain relief.

Securing cables generally

Secure all cables connected to the device at the cable grip, each with a cable tie. The required cable ties are not part of the scope of delivery.

Requirement

- Maximum of 6 cable ties for USB, Ethernet, PROFIBUS
  Maximum cable tie width 3 mm.
- 1 cutting tool

Procedure

1. Place the cable tie around the attachment plate of the strain-relief assembly and secure the plugged-in cables.
2. Cut off the cable tie overhang.

Troubleshooting/FAQs

8

8.1 Error correction

This section provides you with tips on how to locate and troubleshoot common problems.

FAQs / error correction	Possible cause	Possible remedy
The device is not operational.	There is no power supply to the device.	• Check whether the 24 VDC power supply is connected. See Connecting the power supply (24 VDC) (Page 107). • Check whether the line side switch is activated. See Operator controls (Page 84).
SIMOTION P does not start after connecting the CFast card.	BIOS settings are not set to Hotplug Enabled.	You can find out how to check and correct the BIOS settings in Section Hotplug Enabled BIOS settings (Page 115).
SIMOTION P does not start after a reboot.	The user is not logged in automatically.	Set the password for the AutoLogin (Automatically Log On). See Section Changing the AutoLogin > SIMOTION P AutoLogin (Page 38).
The monitor remains dark.	The monitor is switched off.	Switch on the monitor.
	The monitor is in "power-save" mode.	Press any key on the connected keyboard.
	The brightness button has been set to dark.	Set the monitor brightness button to obtain more light. For detailed information, refer to the monitor operating instructions.
	The power cord or the monitor cable is not connected.	• Check whether the power cord has been properly connected to the monitor and to the system unit or to the grounded shockproof outlet. • Check whether the monitor cable has been properly connected to the system unit and to the monitor.
		If the monitor screen still remains dark after you have performed these checks, please contact your technical support team.
The mouse pointer does not appear on the screen.	The mouse driver is not loaded.	Check whether the mouse driver is properly installed and present when you start the application program. For more detailed information on the mouse driver, refer to the documentation for the mouse or application programs.
	The mouse is not connected.	Check whether the mouse is properly connected to the system unit. If you use an adapter or extension on the mouse cable, also check the connectors.
		If the cursor still does not appear on the screen after you have performed these checks and measures, please contact your technical support team.

FAQs / error correction	Possible cause	Possible remedy
Error message on the screen: Operating system not found	• No operating system present. • Incorrect active boot partition. • Incorrect drive entries in the SETUP.	Check whether one of the specified causes is present:
Wrong time and/or date on the PC.	-	• Press <ESC> during the boot sequence to open BIOS Setup. • Set the time and date in the setup menu.
Although the BIOS setting is OK, the time and date are still wrong.	The backup battery is empty.	Replace the backup battery. See SIMOTION P320-4 E / P320-4 S Commissioning and Hardware Installation Manual > Service and maintenances > Replacing the backup battery. If the problem cannot be resolved by replacing the battery, then contact your technical support team.
UPS does not function.	The operating system does not have a suitable driver for the UPS.	Install a suitable driver; the correct driver can often be downloaded from the homepage of the device's manufacturer. Note the SIMOTION P320-4 E / P320-4 S Commissioning and Hardware Installation Manual > Power on and software installation > Customer-specific software.
The display in the BIOS for the PROFINET MAC address is incorrect (00:00:00:00:00:00).	-	The correct MAC addresses can be taken from the rating plate on the housing. See also Device identification data (Page 76), Section MAC addresses.

8.2 Hotplug Enabled BIOS settings

Starting the BIOS setup

Proceed as follows:

1. Reset the SIMOTION P320-4 (warm or cold restart).
   Depending on the device version, the default settings may differ from the following figures.
2. After completing the startup test, you can start the program setup with BIOS.
   The following message is shown on the display:

Figure 8-1 SIEMENS Press Esc boot options

Press **Esc**.

3. After booting, the BIOS selection menu is displayed:

Figure 8-2 BIOS selection menu

4. The following buttons are available in the BIOS selection menu:

Button	Function
Continue	Exit BIOS menu, continue with the startup process
Boot Manager	Selection of the boot drive
Boot From File	Starting from a .EFI file
SCU	Device configurator (Setup Configuration Utility)
BIOS Update	BIOS update from USB stick
MEBx	Start the Intel Management Engine BIOS Extension

5. Select the **SCU** device configurator.

6. In the BIOS window, select the **Advanced** tab using the arrow keys and then select **IDE Configuration**.
   Press Enter to confirm the selection.

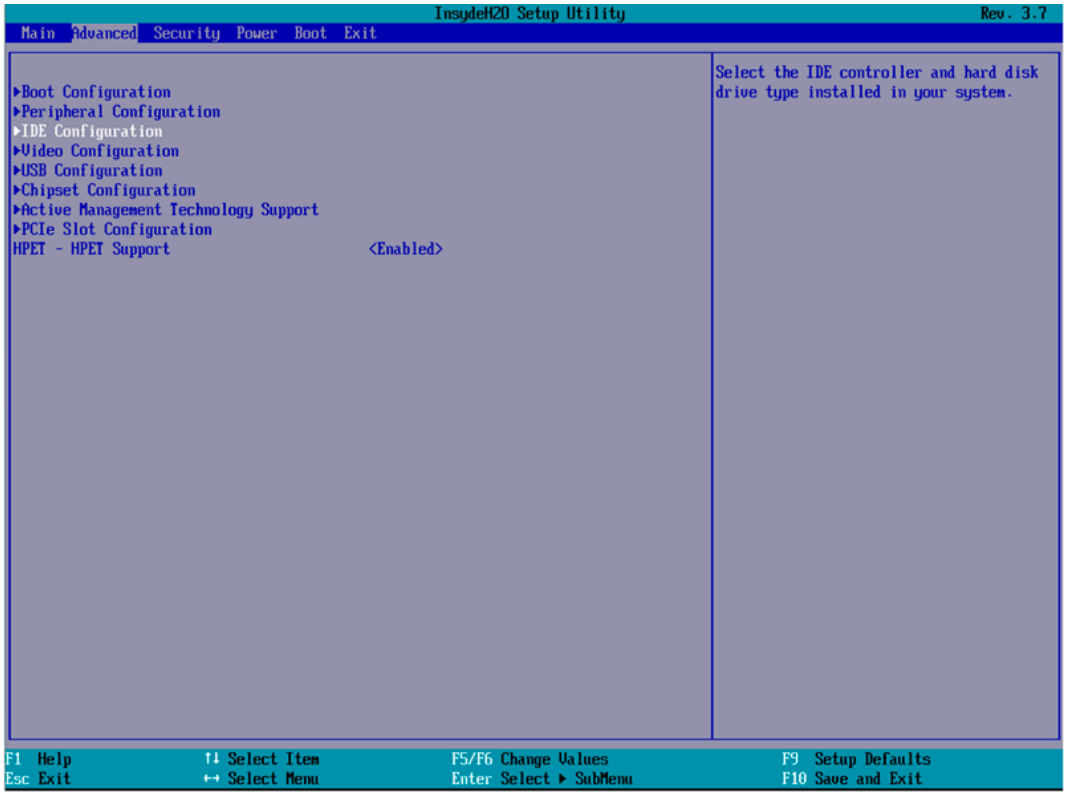


Figure 8-3 Advanced > IDE configuration

7. In the **IDE Configuration** window, select **SATA Port 2 HotPlug**.

8. Change the **Disabled** selection shown here to **Enabled**.

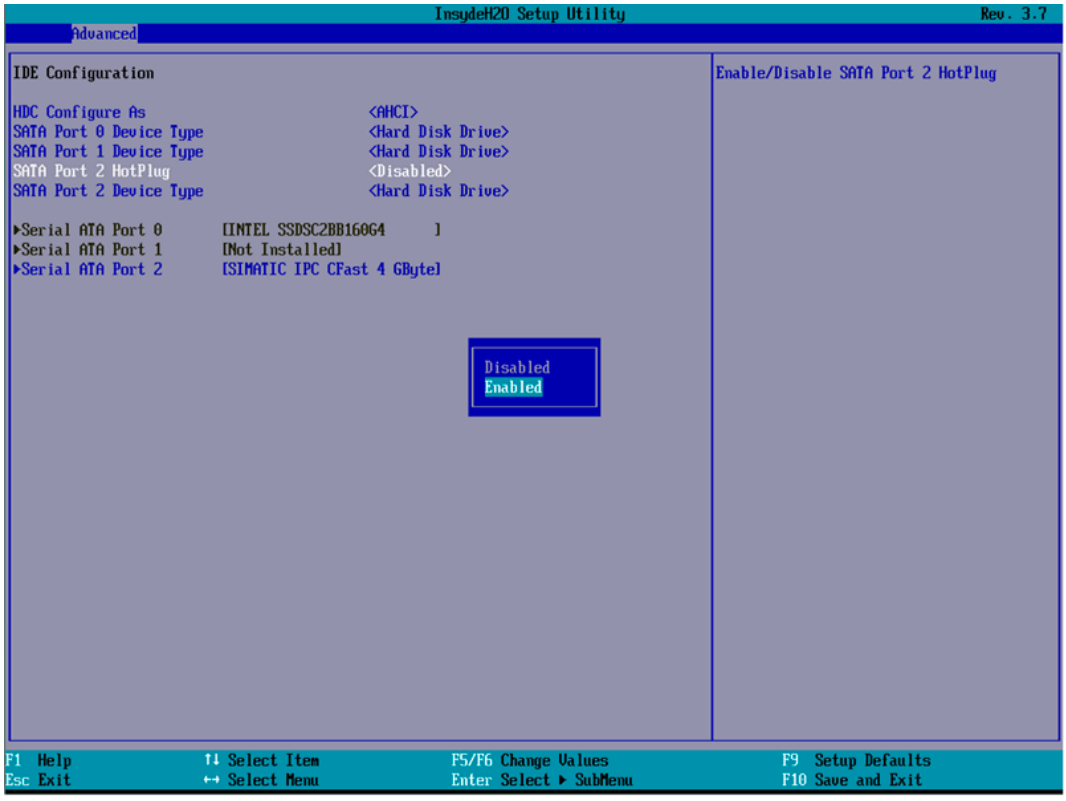

Figure 8-4 IDE Configuration > SATA Port 2 HotPlug

9. Press **F10** Save and Exit. The new entries are accepted.
10. Confirm the subsequent prompt to save the settings and exit the BIOS setup with **Yes**.

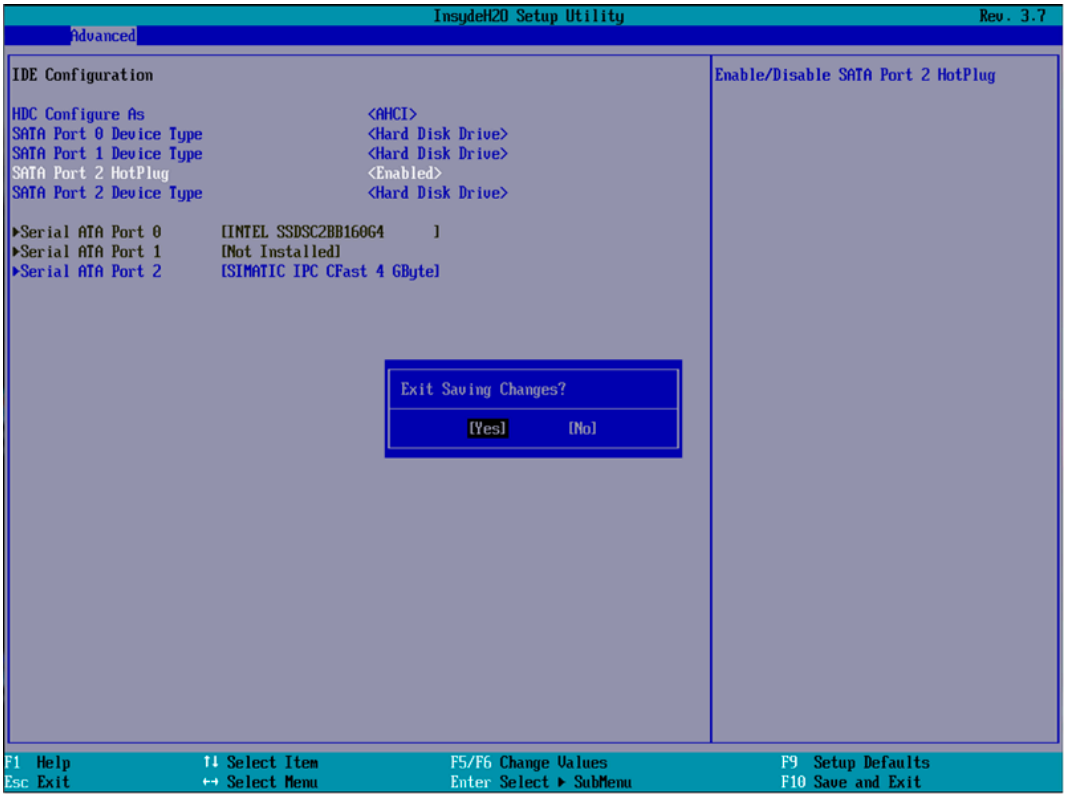

Figure 8-5 Confirming SATA Port 2 HotPlug > Enabled

Technical data

9

9.1 Overview of the technical specifications

Overview

The following technical specifications are available for SIMOTION P320-4 and the associated hardware components:

- General SIMOTION P320-4 technical specifications (Page 121)
- Ambient conditions (Page 124)
  - Climatic conditions
  - Mechanical conditions
- Technical specifications of the IsoPROFIBUS board (Page 125)
- Power requirement of the components (Page 126)
- Integrated DC voltage supply (Page 127)
- Technical specifications of the SITOP smart 24 V / 10 A (Page 127)
- Typical power consumption (Page 129)

9.2 General technical specifications

General technical specifications

General technical specifications for SIMOTION P320-4	
Article numbers	**SIMOTION P320-4 E** • 6AU1320-4DE65-3AF0 **SIMOTION P320-4 S** • 6AU1320-4DS66-3AG0
Dimensions	262 × 133 × 50.5 (W × H × D in mm)
Weight	Approximately 2 kg
Supply voltage (DC) [1]	24 VDC [1] (-20%/+20%)
Short-term voltage interruption in accordance with Namur	Min. 15 ms (at 20.4 V) Max. 10 events/h; recovery time min. 1 s
Max. power consumption	64.8 W (at 24 V)
Degree of protection	IP 20 according to IEC 60529
Protection class	Protection class I according to IEC 61140

General technical specifications for SIMOTION P320-4	
Safety regulations	EN 60950-1; UL 60950-1; UL 508;
Noise emission	<40dB (A) to DIN 45635-1
Quality assurance	In accordance with ISO 9001

[1] The upstream power supply must generate a safety extra-low voltage with safe electrical isolation according to IEC 60364-4-41 or an NEC Class 2 SELV and LPS according to IEC/ UL/EN/ DIN-EN 60950-1 (see the section "Connecting the power supply (24 V DC) (Page 107)").

Electromagnetic compatibility

Electromagnetic compatibility	
Interference emission	EN 61000-6-3, EN 61000-6-4, CISPR220 class B; FCC class A
Immunity with regard to conducted interference on the supply lines	± 2 kV according to IEC 61000-4-4; burst ± 1 kV according to IEC 61000-4-5; symmetrical surge ± 2 kV according to IEC 61000-4-5; asymmetrical surge
Noise immunity on signal lines	± 1 kV according to IEC 61000-4-4; burst; length < 3 m ± 2 kV according to IEC 61000-4-4; burst; length > 3 m ± 2 kV according to IEC 61000-4-5; surge; length > 30 m
Immunity to electrostatic discharge	± 6 kV contact discharge according to IEC 61000-4-2 ± 8 kV air discharge according to IEC 61000-4-2
Immunity to RF interference	10 V/m 80–1000 MHz and 1.4–2 GHz, 80% AM according to IEC 61000-4-3 1 V/m 2–2.7 GHz, 80% AM according to IEC 61000-4-3 10 V 10 kHz to 80 MHz, 80% AM according to IEC 61000-4-6
Immunity to magnetic fields	100 A/m, 50/60 Hz according to IEC 61000-4-8

Motherboard

Motherboard	
Processor	• Intel Core i3-3217UE 1.6 GHz, 3 MB SLC (SIMOTION P320-4 E) • Intel Core i7-3517UE 1.7 GHz, 4 MB SLC (SIMOTION P320-4 S)
Main memory	4 GB
Buffer memory	512 KB MRAM

Drive and memory media

Drive and memory media	
Solid State Disk (SSD)	≥ 80 GB Standard (SIMOTION P320-4 S)
CFast card	≥ 4 GB

Graphics

Graphics	
Graphics controller	Integrated Intel HD2000 or HD4000
Graphics memory	32 - 512 MB Shared Memory
Resolutions, frequencies, color depth	DVI-I: 640 × 480 to 1920 × 1200 / 60 Hz Display port: max. 1920 ×1200 / 60 Hz

Interfaces

Interfaces	
COM1	RS232, 115 kbps max., 9-pin SUB-D, male
DVI-I	Connection of display devices with DVI connector
Display port (DPP)	Connection of display devices with DPP connector
Keyboard	USB support
Mouse	USB support
USB	4 × USB 3.0
PROFINET	3 × RJ45 connector, onboard interface on ERTEC 400 basis, 100 Mbps electrically isolated
Ethernet	1 × Ethernet interface (RJ45) 10/100/1000 Mbps, electrically isolated, with teaming function

9.3 Ambient conditions

Climatic conditions

Temperature	Tested according to IEC 60068-2-1, IEC 60068-2-2, IEC 60068-2-14
- During operation	**Standard rail mounting (preferred mounting position)**:
	Operation with CFast card and/or SSD: • With max. 1 expansion card (max. load 10 W): 0 to +40° C • With max. 1 expansion card (max. load 10 W) in RAL [2]: 0 to +50° C [1] Operation with CFast card: • Without expansion cards in RAL [2]: 0 to +55° C [1]
	Vertical mounting:
	Operation with CFast card and/or SSD: • Without expansion cards: 0 to +40° C Operation with SSD: • With max. 1 expansion card (max. load 10 W) in RAL [2]: 0 to +45° C [1] Operation with CFast card: • Without expansion cards in RAL [2]: 0 to +50° C [1] • With max. 1 expansion card (max. load 10 W): 0 to +40° C • With max. 1 expansion card (max. load 10 W) in RAL [2]: 0 to +50° C [1]
- During storage/shipping	-40 °C to +70 °C (for devices with CFast or SSD)
- Gradient	Operating mode: Max. 10° C/h; Storage: 20° C/h; no condensation
Relative humidity	Tested according to IEC 60068-2-78, IEC 60068-2-30
- During operation	5% to 80% at 25° C (no condensation)
- During storage/shipping	5% to 95% at 25° C (no condensation)
Air pressure	
- During operation	1080 to 795 hPa (corresponds to an altitude of -1000 m to 2000 m)
- During storage/shipping	1080 to 660 hPa (corresponds to an altitude of -1000 m to 3500 m)

[1] For P320-4 S you must set "Turbo Mode Level" to "Temperature optimized" in the "Power" menu, selection "Advanced CPU Control", of the BIOS Setup; otherwise you have to reduce the maximum ambient temperature by 5 °C.

[2] RAL = Restricted Access Location
Installation of device in operating facilities with restricted access, for example, a locked control cabinet.

Mechanical conditions

Vibration	Tested according to DIN IEC 60068-2-6
- During operation	With CFast card or SSD: 5 to 9 Hz: 3.5 mm 9 to 500 Hz: 9.8 m/s2
- During storage/shipping	5 to 9 Hz: 3.5 mm 9 to 500 Hz: 9.8 m/s2
Resistance to shock	Tested according to DIN IEC 60068-2-27
- During storage/shipping	250 m/s^2, 6 ms

9.4 Technical data of the IsoPROFIBUS board

Technical specifications of the IsoPROFIBUS board (optional)

Table 9-1

IsoPROFIBUS board		
Power consumption for + 5 V PCI voltage		
Standard	2.5 W	
Maximum	3.5 W	
Permissible ambient conditions		
Heat dissipation	Open circuit ventilation	
Temperature	**Operation**	**Storage/transport**
• IsoPROFIBUS board in the SIMOTION P320-4	5° C to 45° C	-20° C to 60° C
Tested according to	EN 60068-2-1, EN 60068-2-2, EN 60068-2-14	
Relative atmospheric humidity	**Operation**	**Storage/transport**
• IsoPROFIBUS board in the SIMOTION P320-4	5 % … 80 %	5 % … 95 %
Tested according to	EN 60068-2-30	
Temperature change	Max. 10 K per hour in operation	
Moisture condensation and ice formation	Not permissible	
Design		
Module	Card (3.3 V/5 V, 32 bits)	
Dimensions (H x D) in mm	107 x 170	
Weight	150 g	
Space requirements	Short PCI slot	

Safety

Safety	
Degree of protection	IP20 in mounted state
Protection class	I complies with VDE 0106
Safety regulations	EN 60950
Approvals	CE, UL508, cULus

Quality assurance

Quality assurance complies with ISO 9001.

Note

The safety regulations, approvals, protection type and protection class specified are valid only if the module is inserted in a SIMOTION P320-4.

9.5 Power requirements of the components

Maximum power consumption of the auxiliary components

Auxiliary components		Maximum permitted power consumption			Max. total power
		+5 V	+3.3 V	+12 V	
USB device	High current	900 mA	-	-	10 W (for all USB devices)
Display port		-	500 mA	-	
DVI-I		500 mA	-	-	
PROFIBUS		500 mA	-	-	
PCI modules	Per slot	-	1.5 A	0.5 A	10 W (for entire device)
	Total	-	2 A	1 A	

[1] The total power of the PCI and USB cards may not exceed 15 W

Note

Device can overheat!

To avoid overheating, the power loss per PCI slot should not exceed 5 watts.

9.6 Integrated DC power supply

Technical specifications

DC power supply	
Input voltage	24 V DC (-20%/+20%)
Power consumption [1]	Max. 90 W
Power failure buffering	hold-up time = 20 ms at 20.4 V (DC_FAIL is active after > 5 ms)
Maximum continuous output power [1]	80 W
Degree of protection	IP 20
Protection class	Protection class I (a protective conductor must be connected to the device)

[1] The power specifications apply to the power supply component not to the device.

Note

Inrush current

The device requires an inrush current of at least 6.5 A for 50 ms.

The peak value of the startup current depends on the input voltage and the impedance of the 24 V power source. Peak currents greater than 6.5 A are possible. This will not have a negative impact on device functionality.

9.7 Technical data for the SITOP smart 24 V/10 A

Table 9-2 Technical specifications for the SITOP smart 24 V / 10 A

SITOP smart 24 V/10 A	
Input data	
Input voltage rated value	120/230 VAC
Input voltage range	85 to 132 VAC / 170 to 264 VAC
Power failure bridging	> 20 ms at V_{in} = 93/187 V
Mains frequency rated value	50/60 Hz
Mains frequency range	47 … 63 Hz
Input current rated value	4.1/2.4 A
Switch-on current (at +25° C)	< 65 A
Recommended miniature circuit breaker	10 A, Characteristic C
Output data	
Output voltage rated value	24 VDC
Output voltage tolerance	± 3 %
Residual ripple/spikes	< 150/240 mV_{pp}
Output voltage adjustment range	22.8 to 28 VDC

SITOP smart 24 V/10 A	
Output current rated value	10 A (12 A up to +45° C)
Efficiency	Typ. 90%
Electronic short-circuit protection	Yes; constant current approx. 1.3 × output current rated value; for 5 seconds extra power at 1.5 × output current rated value
Ambient conditions	
Ambient temperature during storage and transport	-40° … +85° C
Ambient temperature during operation	0° … +60° C
Humidity class	Climate class 3K3 according to EN 60721; relative atmospheric humidity 5 to 95%; no condensation
Degree of protection (EN 60529)	IP20
Radio suppression level (EN 55022)	Class B
Line harmonic limitation according to EN 61000-3-2	No
EMC immunity	EN 61000-6-2; EN 61000-4-2/-3/-4/-5/-6/-11
EMC interference emission	EN 61000-6-4
Safety	
Safety class (IEC 536; VDE 1006 T1)	Class I
Primary/secondary galvanic isolation	SELV output voltage according to EN 60950 and EN 50178; transformer according to EN 61558-2-17; overvoltage protection in the event of an internal error U_a < 60 V
Dimensions and weight	
Dimensions (W x H x D) in mm	70 x 125 x 125
Weight	Approximately. 0.75 kg
Certifications and approvals	
CE	CE conformity according to 98/336 EEC and 73/23 EEC
UL/CSA	UL 508 (Listed, File E197259); CSA C22.2 No 14, No 60950-1-03
Shipbuilding	Germanischer Lloyd
Directive 94/9/EC	Declaration of conformity according to EN 60079-15: ATEX94/9/EC Cat.3;Eex, nA, II, T4 U
C-Tick	AS/NZS 2064:1997
Article numbers	
	6EP1334-2AA01, 6EP1334-2BA01

9.8 Typical power consumption

Technical specifications

Typical current and power consumption of the device at a rated voltage of 24 V

Description	Current consumption	Power consumption
Device with core i3 or core i7 processor	950 mA	23 W
Fieldbus (PROFINET)	120 mA	3 W
USB expansion [1]	Max. 500 mA	Max. 12 W
PCI expansion [1]	Max. 500 mA	Max. 12 W

[1] The total power of the PCI and USB expansion may not exceed 15 W

Dimension drawings

10

10.1 Overview of the dimensional drawings

This section contains the dimension drawings for the SIMOTION P320-4:

- Standard rail mounting (Page 131)
- Vertical mounting (Page 133)
- SIMOTION P320-4 with an expansion card (Page 135)

10.2 Device dimension drawing for standard rail mounting

Various views of the standard rail mounting with dimensions are shown in the following:

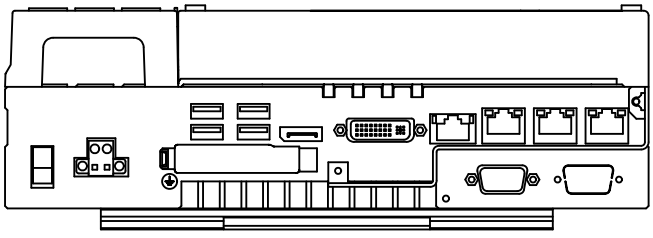

Figure 10-1 Standard rail mounting, bottom view

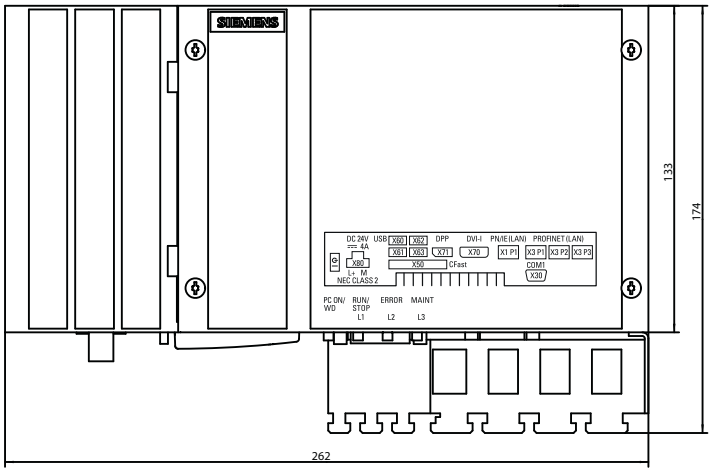

Figure 10-2 Standard rail mounting, front view

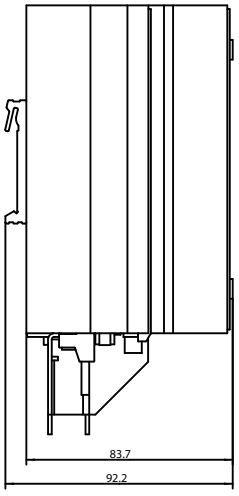

Figure 10-3 Standard rail mounting, side left view

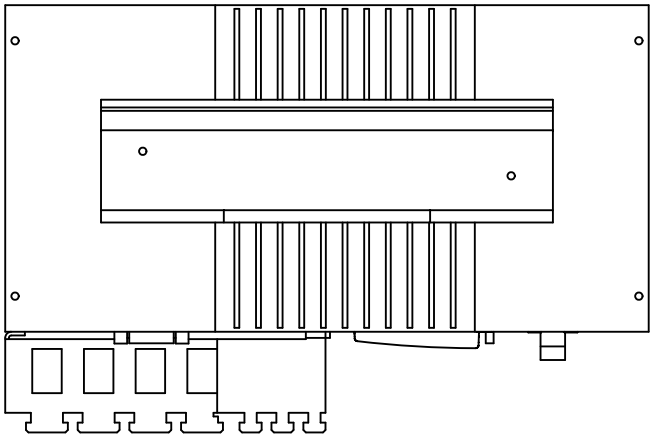

Figure 10-4 Standard rail mounting, rear view

All dimensions in mm.

10.3 Device dimension drawing for vertical mounting

Various views of the vertical mounting with dimensions are shown in the following:

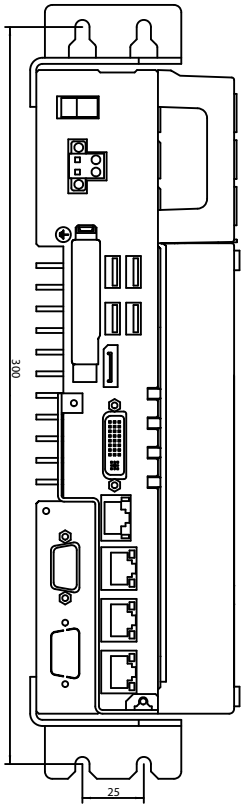

Figure 10-5 Vertical mounting, front view

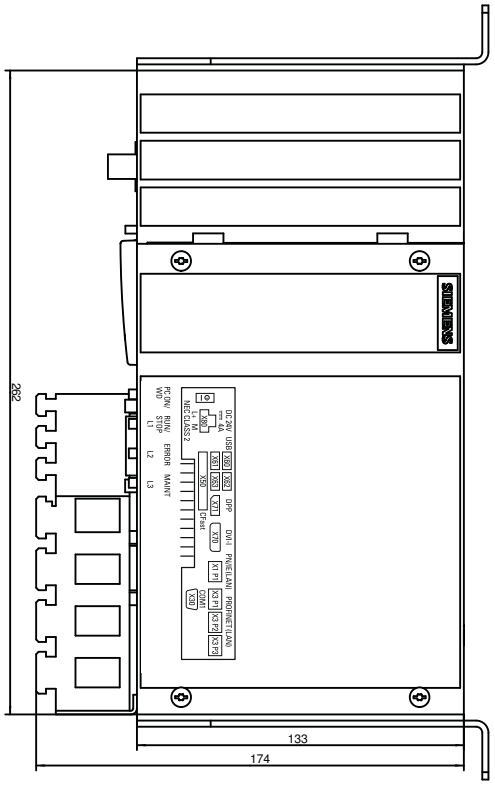

Figure 10-6 Vertical mounting, front side view

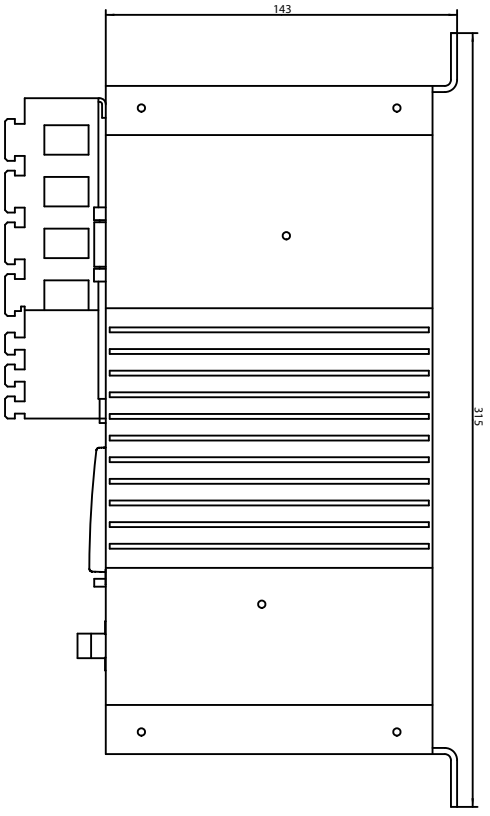

Figure 10-7 Vertical mounting, rear side view

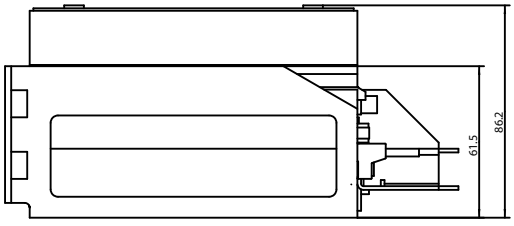

Figure 10-8 Vertical mounting, view from above

All dimensions in mm.

Spare parts

11

11.1 Available spare parts for SIMOTION P320-4

You can order the accessories via the Siemens Industry Mall (www.siemens.com/industrymall).

The following spare parts are available for SIMOTION P320-4:

Spare parts for SIMOTION P320-4			
Spare parts	**Article number**	**Scope of delivery**	**Accessories**
Lithium battery	A5E30314053	x	x
External CFast card The external CFast card contains user data. If a CFast card is used as a replacement for the external memory card, **no** Restore DVD or image is necessary.	6ES7648-2BF10-0XG0	x	x
IsoPROFIBUS board	6AU1390-0AA00-0AA1	-	x

Spares On Web

Spares On Web (http://support.automation.siemens.com/WW/view/en/16612315) is an information system that enables you to find out which spare parts are available for your device.

Standards and approvals

A

A.1 General rules

CE marking

CE	Our products satisfy the requirements and protection objectives of the EC Directives and comply with the harmonized European standards (EN).

Electromagnetic compatibility

Standards for EMC are satisfied if the EMC Installation Guideline is observed.

SIMOTION products are designed for industrial use in accordance with product standard DIN EN 61800-3, Category C2.

cULus approval

c UL us	Listed component mark for United States and the Canada Underwriters Laboratories (UL) according to Standard UL 508, File E164110, File E115352, File E85972.

You can find further information on the respective device on the Internet at http://database.ul.com/cgi-bin/XYV/template/LISEXT/1FRAME/index.htm Enter the first seven characters of the article number at **Keyword**. Then click **Search**.

Korea certification

KC	KC registration number: KCC-REM-S49-SIMOTION Note that this device complies with limit class A with regard to the emission of radio frequency interference. This device can be used in all areas except residential areas. 이 기기는 업무용(A급) 전자파적합기기로서 판매자 또는 사용자는 이 점을 주의하시기 바라며, 가정외의 지역에서 사용하는 것을 목적으로 합니다.

Declaration of conformity

The current Declaration of conformity is available on the Internet at Declaration of conformity (http://support.automation.siemens.com/WW/view/en/10805446/134200).

ESD Guideline

B

B.1 ESD definition

What does ESD mean?

Electrostatic sensitive devices (ESDs) are individual components, integrated circuits, modules or devices that may be damaged by either electrostatic fields or electrostatic discharge.

NOTICE

Damage caused by electric fields or electrostatic discharge

Electric fields or electrostatic discharge can result in malfunctions as a result of damaged individual parts, integrated circuits, modules or devices.

- Only pack, store, transport and send electronic components, modules or devices in their original packaging or in other suitable materials, e.g conductive foam rubber or aluminum foil.
- Only touch components, modules and devices if you are first grounded by applying one of the following measures:
  - Wearing an ESD wrist strap
  - Wearing ESD shoes or ESD grounding straps in ESD areas with conductive flooring
- Only place electronic components, modules or devices on conductive surfaces (table with ESD surface, conductive ESD foam, ESD packaging, ESD transport container).

B.2 Electrostatic charging of individuals

Any person who is not conductively connected to the electrical potential of the environment can accumulate an electrostatic charge.

This figure indicates the maximum electrostatic charges that can accumulate on an operator when he comes into contact with the indicated materials. These values comply with the specifications in IEC 801-2.

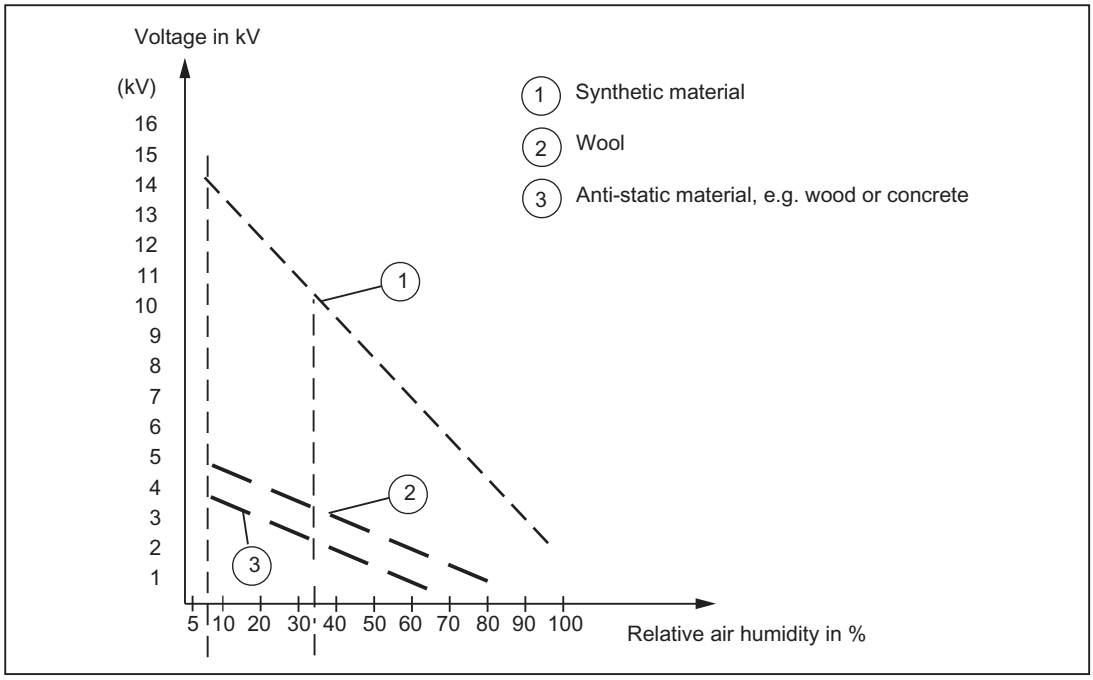

Figure B-1 Electrostatic voltage that can accumulate on operating personnel

B.3 Basic measures for protection against discharge of static electricity

Ensure sufficient grounding

When working with electrostatic sensitive devices, make sure that the you, your workstation, and the packaging are properly grounded. This prevents the accumulation of static electricity.

Avoid direct contact

You should only touch ESD components if unavoidable (for example, during maintenance work). When you touch modules, make sure that you do not touch either the pins on the modules or the printed conductors. If you follow these instructions, electrostatic discharge cannot reach or damage sensitive components.

If you have to take measurements on a module, make sure that you first discharge any static that may have accumulated in your body. To do this, touch a grounded metal object. Only use grounded measuring instruments.

A - INTRODUZIONE / *Preliminary Introduction*

The present report refers to the inspection visit carried out on 17/07/2024 at Frequon, **27336 Rethem, Germany.**
The following inspection activities were witnessed by Rosetti Marino and they have performed:

Attendees the test:

Lambertini Andrea QC Insp (Rosetti Marino)

Area of concern
None

Original document

This document is an original document of FREQCON GmbH.

1 About this Document

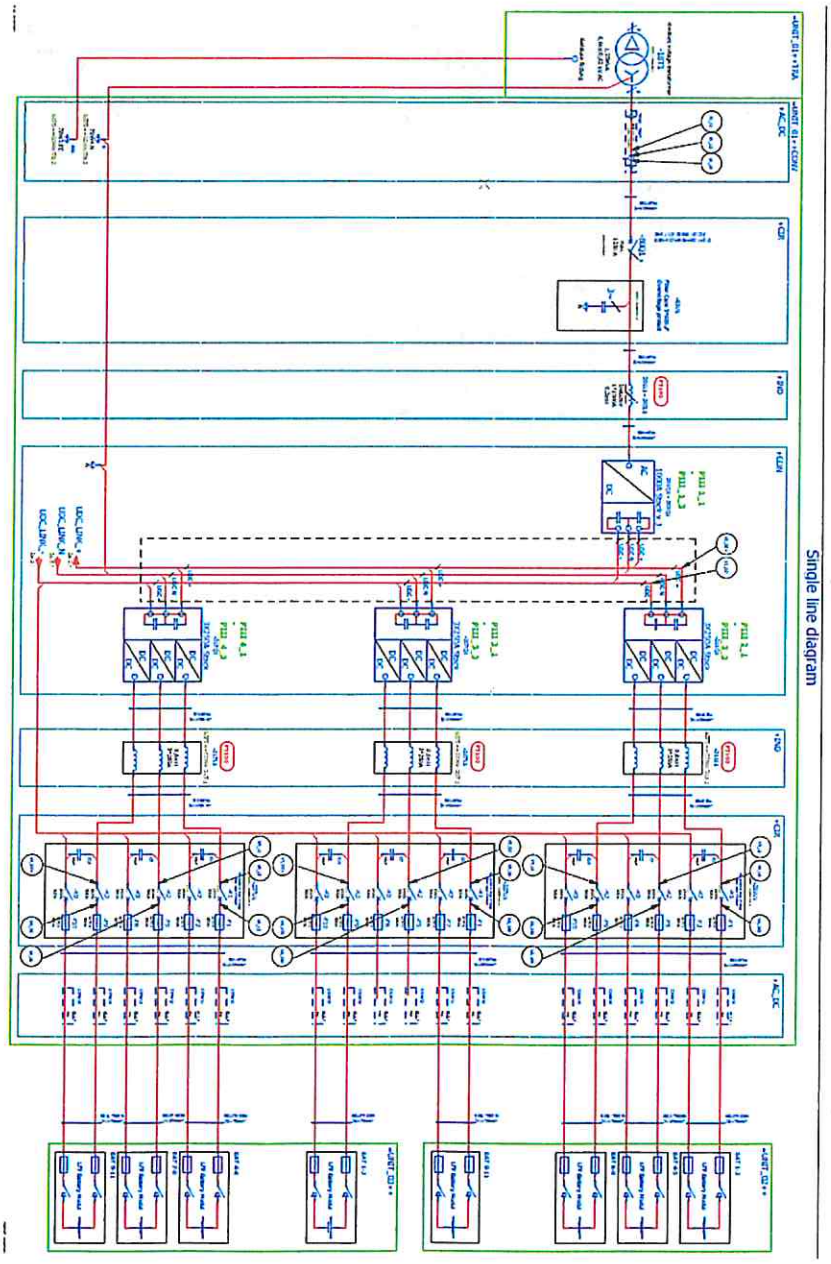
The test report for site acceptance test (SAT) is intended to qualify whether the system fulfils the design requirements and the customer's requirements.

The site acceptance test (SAT) is carried out by specialised personnel after delivery of the system at customer site and the result is checked by the customer.

2 Responsibility

2.1 Responsibility of FREQCON GmbH

- Preparation and review of the acceptance report
- Carrying out the acceptance test (SAT), documentation of the results
- Elimination of identified deviations
- Preparation and review of the acceptance report



2.2 Responsibility of the customer

- Sending personnel to site, checking the test result and the data
- Approve the SAT protocol

Profinet interface list	23A2007_240628_PROFINET_Register BESS_V1_0_0_3
FAT punchlist tracker	20240828 - punchlist - FRQ comments v2.4

4.2 PCS Prerequisites

Carefully qualify that this SAT protocol has been approved and the equipment has been inspected by the quality control department. Ensure that all requirements for the SAT are met. And then record the qualification results in the TR01 test report.

The following documents must be available in electronic form or as a printout for the SAT:

1. Circuit diagram of the system
2. Manual in the current version
3. General arrangement overview
4. Interface documentation (if available)

No category A open punch list items are outstanding.

The following power sources are required to perform the activities listed in the following paragraphs. Please ensure the main power source is LOTO before starting operation and follow the correct procedures to power up any circuit.

- 400VAC aux PCS – *auxiliary load BESS B-200 <> 84W2*

Remarks:

4.3 Visual inspection of Control Cabinet 1

Check all system components, including external ones, to ensure that they are in perfect condition. Document the qualification results in the following table.

TR01	Test		Result
4.3.1	**Cleanliness**	**Test Layout:** Check covers and cabinet interior for cleanliness and rust. **Pass Fail Criteria:** Covers and interior are clean, without dirt or rust.	☒ OK ☐ Defects ☐ N/A
4.3.2	**Metal sheets**	**Test Layout:** Check metal sheets for sharp edges and damages **Pass Fail Criteria:** No sharp edges or recognisable damage present.	☒ OK ☐ Defects ☐ N/A
4.3.3	**Wires and cables**	**Test Layout:** Visually inspect cable connections and wires inside the converter cabinets for perfect condition and loose parts. **Pass Fail Criteria:** Cable connections are in perfect condition, no loose parts present.	☒ OK ☐ Defects ☐ N/A
4.3.4	**Compliance with circuit diagram**	**Test Layout:** • Check if main components of the control cabinet are installed in accordance with the circuit diagram. • Check if labelling of the components in the control cabinet corresponds to the circuit diagram (exemplary test of some components). **Pass Fail Criteria:** • Essential parts of the control cabinet are available in accordance with the circuit diagram. • Labelling of the components in the control cabinet corresponds to the circuit diagram. **Reference document:** 10354_23A2007_YYMMDD_Operating_Manual_ Statron_Shell Crosswind BESS FQ 1MW 5MWh Offshore_EN_vx.x	☒ OK ☐ Defects ☐ N/A
4.3.5	**Touch panel**	**Test Layout:** Check if touch panel of HMI user interface is clean and without damage **Pass Fail Criteria:** The user interface of the touch panel is clean without damage	☒ OK ☐ Defects ☐ N/A
4.3.6	**Punch List Items Closed**	**Test Layout:** Review and confirm no category A open punch list items are outstanding. **Pass Fail Criteria:** No category A open punch list items are outstanding.	☒ OK ☐ Defects ☐ N/A
4.3.7	**LOTO**	**Apply LOTO as required.**	☒ OK ☐ Defects ☐ N/A

Completed by	Witnessed by	Date
ALESSANDRO SUTTO GERRY MCCAN FREDERIC HEIN	CARLOS PALENZUELA	23-11-2024

Remarks:

Missing lables on interface cable

13.03.25 - lables added

4.4 Visual inspection of Control Cabinet 2

Check all system components, including external ones, to ensure that they are in perfect condition. Document the qualification results in the following table.

TR02	Test		Result
4.4.1	**Cleanliness**	**Test Layout:** Check covers and cabinet interior for cleanliness and rust.	☒ OK ☐ Defects ☐ N/A
		Pass Fail Criteria: Covers and interior are clean, without dirt or rust.	
4.4.2	**Metal sheets**	**Test Layout:** Check metal sheets for sharp edges and damages	☒ OK ☐ Defects ☐ N/A
		Pass Fail Criteria: No sharp edges or recognisable damage present.	
4.4.3	**Wires and cables**	**Test Layout:** Visually inspect cable connections and wires inside the converter cabinets for perfect condition and loose parts.	☒ OK ☐ Defects ☐ N/A
		Pass Fail Criteria: Cable connections are in perfect condition, no loose parts present.	
4.4.4	**Compliance with circuit diagram**	**Test Layout:** • Check if main components of the control cabinet are installed in accordance with the circuit diagram. • Check if labelling of the components in the control cabinet corresponds to the circuit diagram (exemplary test of some components).	☒ OK ☐ Defects ☐ N/A
		Pass Fail Criteria: • Essential parts of the control cabinet are available in accordance with the circuit diagram. • Labelling of the components in the control cabinet corresponds to the circuit diagram. **Reference document:** 10354_23A2007_YYMMDD_Operating_Manual_Statron_Shell Crosswind BESS FQ 1MW 5MWh Offshore_EN_vx.x	
4.4.5	**Punch List Items Closed**	**Test Layout:** Review and confirm no category A open punch list items are outstanding.	☒ OK ☐ Defects ☐ N/A
		Pass Fail Criteria: No category A open punch list items are outstanding.	
4.4.6	**LOTO**	**Apply LOTO as required.**	☐ OK ☐ Defects ☒ N/A

Completed by	Witnessed by	Date
ALESSANDRO SUTO GERRY MCCAN FREDERIC KEIN	CARLOS PALENTUELA	28-11-2024

Remarks:

Naming labels on interface cables

13.03.25 – cables added

4.5 Visual inspection of Converter Cabinets

Check all system components, including external ones, to ensure that they are in perfect condition. Document the qualification results in the following table.

TR03	Test		Result
4.5.1	Cleanliness	Test Layout: Check covers and cabinet interior for cleanliness and rust. Pass Fail Criteria: Covers and interior are clean, without dirt or rust.	☒ OK ☐ Defects ☐ N/A
4.5.2	Metal sheets	Test Layout: Check metal sheets for sharp edges and damages Pass Fail Criteria: No sharp edges or recognisable damage present.	☒ OK ☐ Defects ☐ N/A
4.5.3	Wires and cables	Test Layout: Visually inspect cable connections and wires inside the converter cabinets for perfect condition and loose parts. Pass Fail Criteria: Cable connections are in perfect condition, no loose parts present.	☒ OK ☐ Defects ☐ N/A
4.5.4	Control elements description	Test Layout: Check if the operating elements are explained in the operating manual. Pass Fail Criteria: The operating elements are explained in the operating manual. Reference document: 10354_23A2007_YYMMDD_Operating_Manual_Statron_Shell Crosswind BESS FQ 1MW 5MWh Offshore_EN_vx.x	☒ OK ☐ Defects ☐ N/A
4.5.5	Punch List Items Closed	Test Layout: Review and confirm no category A open punch list items are outstanding. Pass Fail Criteria: No category A open punch list items are outstanding.	☒ OK ☐ Defects ☐ N/A
4.5.6	LOTO	Apply LOTO as required.	☒ OK ☐ Defects ☐ N/A

Completed by	Witnessed by	Date
ALESSANDRO SUTTO GERRY MCCAN FREDERIC HEIN	CARLOS PALENUELA	28-11-2024
Remarks:		

4.6 Visual Inspection of Converter Cooling System and Heat Exchanger

Check the correct installation and connection of the cooling system. Document the qualification results in the following table.

TR04	Test		Result
4.6.1	**Water drop check**	**Test Layout:** Check that no drops of water can be seen at the connection points of the coolant hoses.	☒ OK ☐ Defects ☐ N/A
		Pass Fail Criteria: No water on the connection points of coolant hoses.	
4.6.2	**Heat exchanger visual inspection**	**Test Layout:** Check the external heat exchanger for proper connection and mechanical stability.	☒ OK ☐ Defects ☐ N/A
		Pass Fail Criteria: Heat exchanger is properly mechanically installed	
4.6.3	**I/O check**	**Test Layout:** Check the electrical connection to the Heat exchanger unit	☒ OK ☐ Defects ☐ N/A
		Pass Fail Criteria: Heat exchanger is properly connected	

Completed by	Witnessed by	Date
~~ALEF~~ ADNAN AKCAM	ALESSANDRO TUTTO	14.3.2025
Remarks:		

4.7 Power On

Sequentially power on all the subsystems. Document the qualification results in the following table.

Please refer to the SLD on page 1a and 2a of the overall schematics for PCS:
10354_23A2007_CAE_Statron_Shell Crosswind BESS FQ 1MW 5MWh Offshore_20241105_V1.2

Note:
Prior to carrying out any work, the commissioning engineer to check the current version of the reference document is available.

TR05	Test		Result
4.7.1	**Check LOTO of subsystem**	**Test Layout:** Check that all breakers feeding subsystems are turned to OFF position and LOTO **Pass Fail Criteria:** LOTO confirmed	☑ OK ☐ Defects ☐ N/A
4.7.2	**Remove LOTO from main feeding source (RM board)**	**Test Layout:** Remove LOTO from main feeding source and measure voltage across incoming cable. **Pass Fail Criteria:** Voltage is read at incoming feeding terminals.	☒ OK ☐ Defects ☐ N/A
4.7.3	**Supply voltage control cabinet**	**Test Layout:** Switch on 190F3 **Pass Fail Criteria:** Cabinet lights and socket power up	☒ OK ☐ Defects ☐ N/A
4.7.4	**Supply voltage control cabinet**	**Test Layout:** Switch on 191F1 **Pass Fail Criteria:** Clima 1 power up	☒ OK ☐ Defects ☐ N/A
4.7.5	**Supply voltage control cabinet**	**Test Layout:** Switch on 191F2 **Pass Fail Criteria:** Clima 2 power up	☒ OK ☐ Defects ☐ N/A
4.7.6	**Supply voltage control cabinet**	**Test Layout:** Switch on 101Q1. The control unit starts up properly. **Pass Fail Criteria:** Pass: - Simotion turns on - HMI turns on properly and WebVisualization (WebVisu) access is active Access to Simotion WebVisu is established and "Run" state of Simotion can be confirmed	☒ OK ☐ Defects ☐ N/A
4.7.7	**Supply voltage control cabinet**	**Test Layout:** Remove LOTO and switch on 84F2 **Pass Fail Criteria:** Voltage read at feeding terminals	☒ OK ☐ Defects ☐ N/A
4.7.8	**Supply voltage control cabinet**	**Test Layout:** Switch on 183F1	

TR05	Test		Result
		Pass Fail Criteria: No breaker trip or issue and Relative circuit power up	☑ OK ☐ Defects ☐ N/A
4.7.9	**Supply voltage control cabinet**	**Test Layout:** Switch on 183F2	☒ OK ☐ Defects ☐ N/A
		Pass Fail Criteria: No breaker trip or issue and Relative circuit power up	
4.7.10	**Supply voltage control cabinet**	**Test Layout:** Switch on 185F1	☒ OK ☐ Defects ☐ N/A
		Pass Fail Criteria: No breaker trip or issue and Relative circuit power up	
4.7.11	**Supply voltage control cabinet**	**Test Layout:** switch on 185F2	☒ OK ☐ Defects ☐ N/A
		Pass Fail Criteria: No breaker trip or issue and Relative circuit power up	
4.7.12	**Supply voltage control cabinet**	**Test Layout:** Switch on 187F1	☑ OK ☐ Defects ☐ N/A
		Pass Fail Criteria: No breaker trip or issue and Relative circuit power up	
4.7.13	**Supply voltage control cabinet**	**Test Layout:** Switch on 181Q1	☒ OK ☐ Defects ☐ N/A
		Pass Fail Criteria: No breaker trip or issue and Relative circuit power up	
4.7.14	**Supply voltage control cabinet**	**Test Layout:** Switch on 181Q2	☒ OK ☐ Defects ☐ N/A
		Pass Fail Criteria: No breaker trip or issue and Relative circuit power up	
4.7.15	**Supply voltage control cabinet**	**Test Layout:** Switch on 182Q1	☑ OK ☐ Defects ☐ N/A
		Pass Fail Criteria: No breaker trip or issue and Relative circuit power up	

Completed by	Witnessed by	Date
GERRY MCCAN FREDERIC HEIN		21-11-2024
Remarks:		

4.8 Software and Function Tests

Check the following software functions. Document the qualification results in the following table.

TR06	Test		Result	Completed by	Witnessed by	Date
4.8.1	Leakage and connections check	**Test Layout:** Check the converter water cooling system for proper connection and leaks. Run cooling system and perform visual check of connections and check for leaks **Pass Fail Criteria:** All connections are properly connected and no leakage present.	☑ OK ☐ Defects ☐ N/A	A. SUTO A. AKCAM		14.3.25
4.8.2	Pressure check	**Test Layout:** Check whether the pressure of the cooling system is above 3 bar. Check on the manometer of the converter cooling system cabinet (COSY) and verify value on HMI/WebVisu. **Pass Fail Criteria:** Manometer and HMI/WebVisu indicate a pressure of 3 bar.	☑ OK ☐ Defects ☐ N/A	A. SUTO A. AKCAM		14.3.25
4.8.3	Check pre-heating 4.5 FAT	**Test Layout:** Connecting the converter via interface: • Check the pre-heating of the converter for proper functionality • Check the pre-charge and DC link control for proper functionality **Pass Fail Criteria:** - Heat exchanger switches on and off correctly (visual check) - Preheating status is correctly indicated by the HMI/WebVisu. - Pump is running (visual check) - Heater is heating up the coolant (check coolant temperature on HMI/WebVisu)	☑ OK ☐ Defects ☐ N/A	A. SUTO A. AKCAM		14.3.25
4.8.4	UPS 4.13 FAT	**Test Layout:** Checking the UPS functionality. If the auxiliary supply fails (e.g. by activating the fuse of the AC power supply unit), the control cabinet continues to be supplied by the UPS. **Pass Fail Criteria:** After the defined time, the control cabinet is switched off completely. When the voltage returns, the control unit starts up again and the UPS battery is charged.	☑ OK ☐ Defects ☐ N/A	A. SUTO A. AKCAM		14.3.25
4.8.5	Smoke detectors	**Test Layout:** Test the smoke detector in PCS CON-cabinet with test spray.				

TR06	Test		Result	Completed by	Witnessed by	Date
		Pass Fail Criteria: The smoke detectors trigger accordingly and an error (Error level 4) is generated.	☑ OK ☐ Defects ☐ N/A	A SUTTO A AKRAM		14.3.25
4.8.6	**Communication test interface signals FREQCON->Customers**	**Test Layout:** Connecting communication interface to customer higher level controller. Transferring status signals to customer via comm interface. Check all signals listed in the comm interface list. **Reference document:** 23A2007_240628_PROFINET_Register BESS_V1_0_0_3 **Pass Fail Criteria:** The transmitted signals received via Profinet interface is plausible and correct.	☑ OK ☐ Defects ☐ N/A	ALESSANDRO SUTTO ADNAN AKRAM	FABIO SIEGEN	14.3.25
4.8.7	**Communication test interface signals Customer->Freqcon** MODBUS	**Test Layout:** MODBUS Connecting ~~Profinet~~ interface to customer higher level controller. Transferring control signals from customer higher level controller to BESS main controller via ~~Profinet~~ MODBUS interface. Check all signals listed in the comm interface list. **Reference document:** 23A2007_240628_PROFINET_Register BESS_V1_0_0_3 **Pass Fail Criteria:** The transmitted signals received via ~~Profinet~~ interface are plausible and lead to foreseen behaviour.	☑ OK ☐ Defects ☐ N/A	A. SUTTO ADNAN AKRAM	FABIO SIEGEN	14.3.25

5.2 BESS Prerequisites

Carefully qualify that this SAT protocol has been approved and the equipment has been inspected by the quality control department. Ensure that all requirements for the SAT are met. And then record the qualification results in the TR0x test report.

The following documents must be available in electronic form or as a printout for the SAT:

1. Circuit diagram of the system
2. Manual in the current version
3. General arrangement overview
4. Interface documentation (if available)

No category A open punch list items are outstanding. Any re-work on the electrical installation is completed.

- LOTO equipment
- Gas test spray equipment

The following power sources are required to perform the activities listed in the following paragraphs. Please ensure the main power source is LOTO before starting operation and follow the correct procedures to power up any circuit.

- 400 VAC Aux BESS – auxiliary load BESS B-200 <> 84W2
- Temporary 230 V AC Multiple socket outlet (e.g. to supply Laptop, temporary lights etc.)

Remarks:

5.3 Container Visual Inspection BESS 1

Check all system parts, including external and internal parts, to ensure that they are in perfect condition. Document the qualification results in the following table.

TR07	Examination		Result
5.3.1	Damage	The container is free of dents and unusual rust (minor rust spots, e.g. on crane eyes, are unavoidable)	☑ OK ☐ Defects ☐ N/A
5.3.2	Earthing connections	The earthing lugs are in the correct position (compare CAD) and are not painted	☑ OK ☐ Defects ☐ N/A
5.3.3	Warnings	The required warning signs are located on the personnel doors	☑ OK ☐ Defects ☐ N/A
5.3.4	Accessibility	The clearances in the container correspond to the CAD. All enclosure doors are in the correct position and accessible	☑ OK ☐ Defects ☐ N/A
5.3.5	Installation of components and cables in the container	All components such as switch cabinets, cable trays, air conditioning units, etc. are properly installed and cannot fall or tip over.	☑ OK ☐ Defects ☐ N/A
5.3.6	Cable bushings	All cable ducts are present (possibly not fitted) and comply with the client's specification. Covers, cable bushings or similar are available for all openings in the container	☑ OK ☐ Defects ☐ N/A
5.3.7	LOTO	Apply LOTO as required.	☑ OK ☐ Defects ☐ N/A

5.4 Container Visual Inspection BESS 2

Check all system parts, including external and internal parts, to ensure that they are in perfect condition. Document the qualification results in the following table.

TR08	Examination		Result
5.4.1	Damage	The container is free of dents and unusual rust (minor rust spots, e.g. on crane eyes, are unavoidable)	☒ OK ☐ Defects ☐ N/A
5.4.2	Earthing connections	The earthing lugs are in the correct position (compare CAD) and are not painted	☒ OK ☐ Defects ☐ N/A
5.4.3	Warnings	The required warning signs are located on the personnel doors	☒ OK ☐ Defects ☐ N/A
5.4.4	Accessibility	The clearances in the container correspond to the CAD. All enclosure doors are in the correct position and accessible	☒ OK ☐ Defects ☐ N/A
5.4.5	Installation of components and cables in the container	All components such as switch cabinets, cable trays, air conditioning units, etc. are properly installed and cannot fall or tip over.	☒ OK ☐ Defects ☐ N/A
5.4.6	Cable bushings	All cable ducts are present (possibly not fitted) and comply with the client's specification. Covers, cable bushings or similar are available for all openings in the container	☒ OK ☐ Defects ☐ N/A
5.4.7	LOTO	Apply LOTO as required.	☒ OK ☐ Defects ☐ N/A

6.2 Prerequisites

Carefully qualify that this SAT protocol has been approved and the equipment has been inspected by the quality control department. Ensure that all requirements for the SAT are met. And then record the qualification results in the TR12 test report.

The following documents must be available in electronic form or as a printout for the SAT:

1. Circuit diagram of the system
2. Manual in the current version
3. General arrangement overview
4. Interface documentation (if available)

No category A open punch list items are outstanding. Any re-work on the electrical installation is completed.

The following power sources are required to perform the activities listed in the following paragraphs. Please ensure the main power source is LOTO before starting operation and follow the correct procedures to power up any circuit.

- 400 VAC aux BESS – *auxiliary load BESS B-200 <> 84W2*

Note – the battery modules have been tested after assembly for quality assessment (reports available) and have been tested for functionality and capacity prior to shipping (reports available).

Remarks:

6.3 Installation Report

Check the correct installation and connection of the battery modules in the BESS 1 and BESS 2 containers. Document the qualification results in the following table.

TR12	Test		Result	Completed by	Witnessed by	Date
6.3.1	**Installation report for cabinets**	**Test Layout:** Report issued for the following racks: BESS 1 ☑ 1 ☑ 2 ☑ 3 ☑ 4 ☑ 5 ☑ 6 ☑ 7 ☑ 8 ☑ 9 ☑ 10 ☑ 11 BESS 2 ☑ 1 ☑ 2 ☑ 3 ☑ 4 ☑ 5 ☑ 6 ☑ 7 ☑ 8 ☑ 9 ☑ 10 ☑ 11	☑ OK ☐ Defects ☐ N/A	A. SUTO, ADNAN AKYOL		11.3.25
		Pass Fail Criteria: All cabinets have been checked and report is available				
6.3.2	**LOTO**	Check DC fused are disconnected.	☑ OK ☐ Defects ☐ N/A			

7 System Tests

7.1 Reference Documents

These documents are not physically included in this report but are externally available.

Document Title	Document Name
Overall Schematics (print out)	10354_23A2007_CAE_Statron_Shell Crosswind BESS FQ 1MW 5MWh Offshore_20241105_V1.2

7.2 Prerequisites

Carefully qualify that this SAT protocol has been approved and the equipment has been inspected by the quality control department. Ensure that all requirements for the SAT are met. And then record the qualification results in the TR0x test report.

The following documents must be available in electronic form or as a printout for the SAT:

1. Circuit diagram of the system
2. Manual in the current version
3. General arrangement overview
4. Interface documentation (if available)

No category A open punch list items are outstanding. Any re-work on the electrical installation is completed.

The following power sources are required to perform the activities listed in the following paragraphs. Please ensure the main power source is LOTO before starting operation and follow the correct procedures to power up any circuit.

- 400VAC aux BESS – *auxiliary load BESS B-200 <> 84W2*
- 6.6 kV AC
- (FREQCON) power meter needs to be connected to AC busbars for voltage measurement before energization

Remarks:

7.1 Software and Function Tests

Check the following software functions. Document the qualification results in the following table.

Note – in the event that BLPH control system connections are not available at this time, consideration must be given to implement temporary safety measures e.g. use of local temporary pushbutton in lieu of no trip signal from BLPH control system. To be fully risk assessed at site prior to any implementation.

TR13	Test		Result	Completed by	Witnessed by	Date
7.1.1	**LOTO main connection and electro mechanical lock in place**	**Test Layout:** Confirm BESS AC connection is LOTO and captive key to earth the transformer is available before energizing the system. Confirm all system mains (80Q1) is open. **Pass Fail Criteria:** Transformer connections are correct. Captive key is retrieved, transformer is grounded. 80Q1 open.	☑ OK ☐ Defects ☐ N/A	A. AKRAM	A. SUTO	14.3.25
7.1.2	**Transformer inspection**	**Test Layout:** MV and LV connections are completed and according to as built electrical drawings. After visual inspection, lock the door and extract the captive key for energization. **Pass Fail Criteria:** Transformer connections are correct. Key is available for energization	☑ OK ☐ Defects ☐ N/A	A. AKRAM	A. SUTO	14.3.25
7.1.3	**Energize AC connection**	**Test Layout:** Energize main AC connection. - Transformer is energized - Turn on mains (80Q1). **Pass Fail Criteria:** Inverter units energized, no unexpected trips.	☑ OK ☐ Defects ☐ N/A	A. AKRAM	A. SUTO	14.3.25
7.1.4	**Check pre-charging and DC link control** 4.7 FAT	**Test Layout:** Connecting the converter via interface: • Check the pre-charge and DC link control for proper functionality **Pass Fail Criteria:** **Precharge:** - Precharging process is indicated by HMI/WebVisu. - After precharging process is done, the green "Ready for Operation" is indicated by HMI/WebVisu. **DC Link Control:** - Verify correct DC-link voltage level was successfully reached and held via HMI/WebVisu.	☑ OK ☐ Defects ☐ N/A	A. AKRAM	A. SUTO	14.3.25

TR13	Test		Result	Completed by	Witnessed by	Date
7.1.5	Check IGBTs	**Test Layout:** Check IGBT activation. **Pass Fail Criteria:** - IGBTs can be switched without any problems - Operating status is indicated by by HMI/WebVisu.	☑ OK ☐ Defects ☐ N/A	A AKKAM	A. SUTO	24.3.25
7.1.6	Check DC ports	**Duration: After reaching 250 A test duration is 10 min.** **Test Layout:** **<u>DC ports:</u>** Connection to customer AC mains is performed in order to work AC power. Each port will be charged with 250 kW which corresponds to a current of 250 A. DC ports connection Increase the DC current setpoint slowly to 250 A and keep this value for 10 minutes. **<u>Heat run:</u>** Check if temperatures of - IGBTs - Inductors - Coolant of converter cooling system are within the permissible ranges by verifying the temperature values displayed on the HMI/WebVisu. **Pass Fail Criteria:** **<u>DC Ports:</u>** DC current output of 250 A is displayed on the HMI/WebVisu according to setpoint. **<u>Heat Run:</u>** IGBT, inductor and converter cooling system coolant temperatures are below the temperature thresholds set in the control system.	☑ OK ☐ Defects ☐ N/A	A. AKKAM	A. SUTO	24.3.25

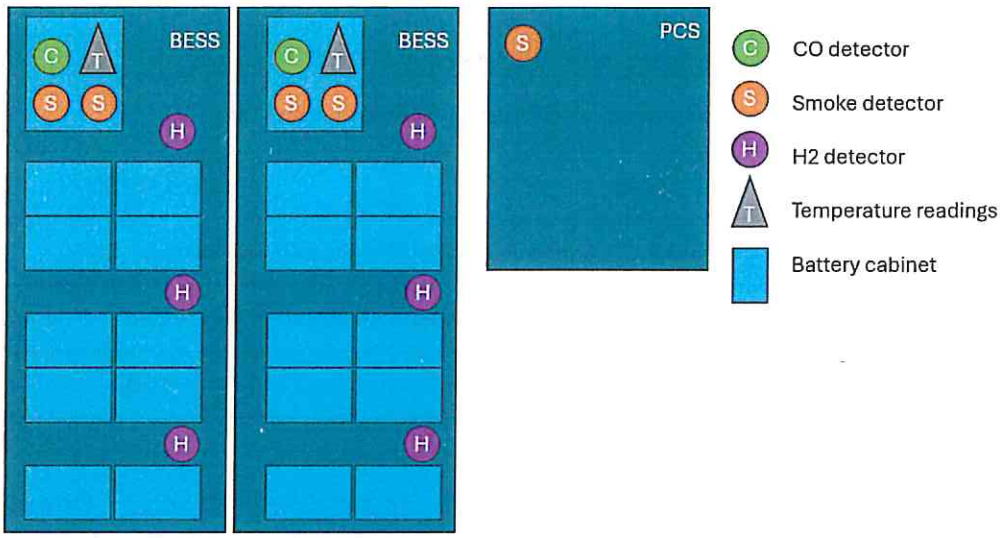
TR13	Test		Result	Completed by	Witnessed by	Date
7.1.7	**Check DC port current/offset control**	**Test Layout:** Check the DC port current control / offset control and check for oscillations. **Pass Fail Criteria:** Oscillations are within the permissible range of +/- 10% of 250A.	☑ OK ☐ Defects ☐ N/A	A. AKCAM	A. SUTO	14.3.25
7.1.8	**Check temperature values**	**Test Layout:** Check all temperature values displayed on the HMI/WebVisu for plausibility. **Pass Fail Criteria:** The temperature values indicated on the HMI/WebVisu are plausible. IGBTs: 30 ... 65 °C Inductors: 30 ... 120°C Cooling water: 27 ... 55 °C	☑ OK ☐ Defects ☐ N/A	A. AKCAM	A. SUTO	14.3.25
7.1.9	**Measurements** 4.11 FAT	**Test Layout:** Check if the measured values (voltages and currents) are properly collected by the Simotion (PCS main controller) and verify by using a multimeter or current clamp at DC and AC side. **Pass Fail Criteria:** Values measured with multimeter correspond +/-5% to the values displayed on the HMI/WebVisu.	☑ OK ☐ Defects ☐ N/A	A. AKCAM	A. SUTO	14.3.25
7.1.10	**Check temperature derating functionality**	**Test Layout:** Check the temperature derating for proper functionality. For this purpose, lower the temperature setpoints. **Pass Fail Criteria:** PCS lowers power according to the set derating thresholds.	☑ OK ☐ Defects ☐ N/A	A. AKCAM	A. SUTO	08.04.25
7.1.11	**Switching-off** 4.12 FAT	**Test Layout:** Switching off the inverter. The inverter is properly switched off by removing the control bits. **Pass Fail Criteria:** "OFF" state is indicated by the HMI/WebVisu.	☑ OK ☐ Defects ☐ N/A	A. AKCAM	A. SUTO	08.04.25

TR13	Test		Result	Completed by	Witnessed by	Date
7.1.12	Battery capacity test	**Test Layout:** Capacity test / load test as required. Check the temperature behavior of the converter system during the test. Make sure plots include: - Power AC - Power DC - Voltage DC - Cell voltage max and min - Cell temp max and min - Room temperatures - Filter temperature - SOC **Pass Fail Criteria:** Capacity was successfully reached without power derating and all temperatures in acceptable ranges.	☐ OK ☐ Defects ☒ N/A			
7.1.13	Performance Test AC output	**Test Layout:** **Duration: After reaching 1000 A duration test of 10 min.** **Test Layout:** Increase the AC current setpoint value slowly to 1000 A output and keep this value for 10 minutes. **Pass Fail Criteria:** AC current output of 1000 A is displayed correctly on the HMI/WebVisu according to setpoint.	☒ OK ☐ Defects ☐ N/A	A. AKCAM	A. SUTO	08.06.25

REMARK
7.1.12 test will be completed after installation at final location. It is not considered necessary currently as part of SAT

8 Employees Present

Identify each employee involved in the execution of this protocol. Document the employee 's name, signature, name abbreviation and date in the following table:



Company Name	Employee Name	Employee Signature	Abbreviation	Date
FREQCON	Md. Adnan Akram		MAA	08.04.25
CROSSWIND	ALESSANDRO SUTTO		ASU	08.04.25
CROSSWIND	JOHN MACKILLOP		JM	08.04.25
CROSSWIND	DAVE MUSGROVE		DM	08/04/2025

	Yes/No
All persons involved in the SAT were documented.	☒ Y ☐ N

Remarks:
B Punches C30000871, C30000874 remain open (Door handle on BESS 2 door & identifyer stickers for containers) to BE adressed

9 Appendix

9.1 Fire and Gas Cause and Effect

Simplified representation of the location of different components within the BESS system.

9.1.1 PCS container

1x smoke detector – trigger 1-out-of-1 – it can be reset remotely.
Once triggered it sends 85-XA-002 (confirmed smoke) hardwired signal to EMCS.
PCS Control Cabinet XT1-3&4

9.1.2 BESS container

3x H2 detectors – trigger is 2-out-of-3.
It generates 85-XA-001 (confirmed gas) hardwired signal to EMCS.
PCS Control Cabinet XT1-1&2

9.1.3 BESS cabinets (1 to 11 in each container) - independent reaction

1x CO detector – trigger is 1-out-of-1
2x Smoke detectors – trigger is 2-out-of-2
Module Temperature reading (from BMS) – trigger is > 60°C
They generate 85-XA-004 (Confirmed Thermal Runaway) hardwired signal to EMCS
Note: each detector type works independently. The first one to reach the triggers conditions will activate the HW signal to EMCS.

10 Check and Approval

The SAT protocol becomes the SAT report when it has been completed as the individual test reports have been completed and labelled with a test date. The SAT report is submitted to the customer for confirmation and the results must be documented in TR14.

TR14	Examination and authorisation of execution
Check the test results and the original data. Final assessment for SAT	
☒ PASS	☐ NOT PASSED
If there are any unresolved discrepancies, please fill in the following "remarks" table.	
Specify whether or not these unresolved discrepancies may affect the completion of the SAT.	
☐ YES	☒ NO

Remarks:
8 Punches C30000871, C30000874 remain Open
(Door handle on BESS2 & identifyer Sticker for BESS1&2)
to be adressed - not affecting completion of SAT

Safety Data Sheet according to Regulation (EC) No. 1907/2006 (REACH) & HazCom 2012

5852 Baker Road
Minnetonka, MN 55345
USA

SDSR# FU004
DATE: 05/16

SECTION 1: Identification of the Substance/Mixture and of the Company/undertaking Product Identifier

Stat-X® Condensed Aerosol Generators - Models 30 to 2500.

Details of the supplier of the safety data sheet:
Fireaway Inc., 5852 Baker Road, Minnetonka, MN, 55345, USA
Telephone +1 (952) 935-9745, Fax +1 (952) 935-9757
Email address of the competent person: info@statx.com

For information only, call 1-952-935-9745.
For emergencies, call CHEMTREC: DOMESTIC NORTH AMERICA 800-424-9300 INTERNATIONAL 703-527-3887 (COLLECT)

SECTION 2: Hazards Identification

Possible exposure to aerosol suppression agent if generator is activated. May cause temporary, mild irritation of mucous membranes if inhaled.

SECTION 3: Composition/Information on Ingredients

Hazardous components: Does not contain dangerous materials as defined by ordinance on hazardous materials.

Components – Chemical (Hazardous Components ≥ 1%)	**CAS#**	**COMMENTS:**
Potassium Nitrate	7757-79-1	Components are blended and pressed into a highly stable, molded form. Molded composition is contained within a sealed double-walled stainless steel housing – no environmental exposure.
DCDA	461-58-5	
Organic Resin	9003-35-4	
Appearance & Odor:		Beige to white in color. No odor.
Auto-Ignition Temperature:		300°C
Solubility in Water:		Slightly Soluble

SECTION 4: First aid measures

Contact Method:	**Procedure:**
Inhalation	Remove to fresh air
Eye Contact	Flush with water
Skin Contact	Wash with soap and water.
Ingestion	Not a likely route of exposure.
Seek medical attention for further treatment, observation, and support if necessary.	

SECTION 5: Firefighting Measures

In the event of a fire, evacuate the area and inform emergency services. Ignition of Stat-X produces a fire-suppression aerosol. Water may be used as an additional suppression agent.

SECTION 6: Accidental Release Measures

If these devices are spilled they can be safely recovered by hand and should be inspected for damage prior to repacking. Suspect or damaged articles should be labeled and consigned for correct destruction.

SECTION 7: Handling and Storage

Store in temperate conditions. Avoid shock, electric currents, static discharge, excessive heat and extended periods of storage at temperatures greater than 65°C.

SECTION 8: Exposure Controls/Personal Protection

Respiratory Protection	Ventilate area completely after discharge. Do not enter area prior to complete venting of enclosure. Use filter mask as necessary during clean-up.
Hand Protection	Wear gloves if handling generators prior to cooling.
Eye Protection	Safety glasses are advisable.
Skin Protection	N/A

SECTION 9: Physical and Chemical Properties

Appearance:	Stainless Steel Cylinder up to 270 mm in length

SECTION 10: Stability and Reactivity

These devices are extremely stable below 125°C. They should be protected from fire, sources of electrical power, shock, and high temperatures.

SECTION 11: Toxicological Information

Toxic by-products of combustion are extremely low. Main by-products are listed below with 15-minute TWA values for a maximum 100g/m^3 concentration in a hermetically sealed volume.

Gas	15 minute Time Weighted Average in parts per million
NO_2	1.08
NO	0.97
CO	84.20

SECTION 12: Ecological Information

These devices are sealed and present no ecological hazards. The aerosol produced upon ignition has ver low global warming potential and an ozone depletion potential = 0.

SECTION 13: Disposal Considerations

Comply with all local, state, and federal/international regulations.

SECTION 14: Transport Information

UN Number: 3178	Shipping Limitations:	
UN Classification: UN3178, Flammable Solid, Inorganic, n.o.s, (contains potassium nitrate), 4.1, PG III	Cargo Air	Max single packaging – 100 kgs.
Packaging Group: III	Passenger Air	Max single packaging – 25 kgs.
Division 4.1 articles present no significant hazard as packaged for transport.		

SECTION 15: Regulatory Information

S15	Keep away from heat
S33	Take precautionary measures against risk of static discharge
S35	This material and its container must be disposed of in a safe way
S38	In case of insufficient ventilation wear suitable respiratory equipment
S39	Wear eye/face protection

SECTION 16: Other Information

Comply with manufacturer's installation and maintenance procedures.

Disclaimer:

The information contained herein is accurate to the best knowledge and belief of Fireaway Inc., and is intended to describe the product for health, safety, and environmental requirements only. It is not intended and should not be construed as a warranty. Consult Fireaway for further information.

PUMA AIR

OPERATING AND MAINTENANCE INSTRUCTIONS

TWIN FAN EXTRACT DIRECT DRIVEN UNITS – RUN & STANDBY

DESCRIPTION

All units are manufactured to a very high standard of construction.

The casing, internal fan plates, lid and spigots are formed from 18 swg or 16 swg mild steel plate. The units are generally finished in an attractive RAL 5017 blue polyester powder coat for weather proof units. Internal units have galvanised panels or powder coated to RAL 9005 satin black.

The supply and extract fans are of the double inlet, direct drive centrifugal type fitted with single phase motors to class E insulation. They are sized to suit the duty required with allowances for internal pressure drop within the unit. The extract air section is insulated with 25mm thick pyrosorb class O insulation, this has excellent noise absorption qualities and anti-condensation properties.

OPERATION

The twin fan units generally require a 240 Vac single phase supply. Where specified a 380/415 V ac 3 phase and neutral supply may be required (check serial plate on side of unit or sales literature).

Each unit is provided with cable entry glands and suitable terminal block. This is wired through a mains isolator switch.

Internal speed control devices for each fan are available to commission fan airflow duties when required.

All twin fan extract units require a Puma auto changeover panel to operate correctly.

When energised, the selected fan will run as the duty fan, if the fan fails then an airflow switch automatically switches on the standby fan and illuminates a fan fail (red) light on the auto changeover panel (see data sheet on auto changeover panels for differences in the basic and deluxe panel models). The duty fan can be manually selected by the fan selector switch on the auto changeover panel.

Unit C Alexander Bell Centre, Hopkinson Way, West Portway Business Park, Andover, Hampshire, England, SP10 3UR
Telephone: 0044 1264 333310 Co Reg No 12192146
Email: sales@pumaair.co.uk Website: www.pumaproducts.co.uk
Director Mr Phillip Newton M Inst.R, M.A.S.H.R.A.E.

INSTALLATION

The unit must be situated in a position with sufficient access to the removable panel/s. A distance given on the certified drawing of the unit must be allowed for access to the serviceable components.

The units are suitable for floor mounting on 'tico' pad or anti-vibration isolators if required (by others). Flexible connections may be required between spigot connections and solid ductwork if noise levels are appropriate (by others).

Twin fan extract units are available as weather proof versions (denoted WTFE). Anti-vibration isolators are recommended when installed on flat roofs.

SERVICE AND MAINTENANCE

The mains supply to all units must be disconnected at source before removing the lid.

The airflow failure switches should be checked for free movement and electrical conductance.

These fans are fitted with direct drive motors with sealed for life bearings that require no maintenance.

Refer to Puma colour technical sales leaflet for further information regarding dimensions, weights and unit performance and fan curves.

Unit C Alexander Bell Centre, Hopkinson Way, West Portway Business Park, Andover, Hampshire, England, SP10 3UR
Telephone: 0044 1264 333310 Co Reg No 12192146

Director Mr Phillip Newton M Inst.R, M.A.S.H.R.A.E.

FAULT FINDING

FAN/MOTOR FAILS TO RUN

1. Check the unit is connected correctly, as per the supplied wiring diagram.
2. Check the mains supply.
3. Check the control circuit fuse.
4. Is there a voltage at the fan? Yes would indicate motor failure or a neutral/phase problem. If no follow steps 4-7 below.
5. Check the mains isolator fitted to the side of the unit, if ok is the SR link (where fitted L1 L2 or SR1 SR2) in place.
6. Check the fan fuse, located below the isolator.(single phase fans only)
7. Three phase fans and belt driven units check the MCB is on, and the fan overload is on by pushing the manual reset button(red) on the fan contactor.(usually situated to the side of the fan on the fan plate left or right depending on handing of the unit)
8. If the MCB keeps tripping check the phases are ok, on belt drive units check the belt tension is correct and the fan motor overload is set to the rating of the motor. See motor serial plate for size/rating.

Most faults/problems can be resolved by following the above if the unit still fails to work correctly please contact Puma Air Movement Ltd for technical assistance.

Commissioning Query Form

CROSSWIND
ROSETTI MARINO

		QUERY NUMBER	*CQ-017*			
SITE ORIGINATOR TO COMPLETE		**ORIGINATING LOCATION REF. NO**				
		DISCIPLINE:	**Electrical**	LOCATION:	**BESS**	
		WORKPACK REF:				
		SYSTEM:82		SUB SYSTEM:	82-10	
			Print: John Mackillop	*Sign:* John Mackillop	*Date: 07.04.25*	
		DESCRIPTION OF QUERY				
		During commissioning testing of the BESS, it was noticed the secondary voltage to the BESS was 587v, The vendor was expecting 620v, due to the Tx being 7kv/0.62kv. However the supply voltage being sent from SG-100D1 is 6.6Kv. The vendor believed the low secondary voltage was causing the BESS to trip on high loads (950kw+). It was agreed to change the tap setting on transformer 18T1 from 0% to -5% to complete the testing, this gave a secondary voltage of approx. 610v. This allowed testing to be completed up to 1MW. *Can we please have clarification if this is acceptable to remain in place and what else this will affect downstream?*

1. Description

Reference documents / Aconex unique numbers:

For the BESS package, there is an open point from the SAFOP Review Qworkshop as detailed below.

Sr No.	Item	Description	Recommendation	Action	Responsible
32	Electrocution by direct contact	Manual operation (door opening, entrance etc.) training, guidelines and safety indicators	Check IEC and Dutch standard on live rooms	1. Review the standards and ensure compliance. 2. Ensure the possibility of locking electrical spaces while not under maintenance to avoid unwanted access	Freqcon

To resolve this issue, Crosswind are proposing the following system for Key Interlock.

Proposed Solution

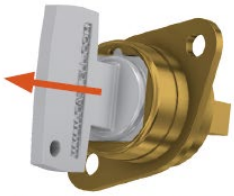
It is proposed to use Castel captive key interlock system (or similar) to restrict access to the BESS PCS transformer enclosure by interlocking the BESS feeeder switchgear in MV Switchbaord SG-100D1 to ensure that the MV supply to the transformer is de-energised & safe before the transformer enclosure doors can be opened.

This communication is issued for the recipient's information and to facilitate the obligations of the Parties under the Contract. This communication has no authority to amend or vary the Contract nor relieve either Party of any duties, obligations or responsibilities.

Suggested Sequence of Operation

1. The 6.6kV BESS latched contactor feeder in MV switchboard SG-100D1 to be fitted with Castell safety Interlock & PCS (Transformer doors) key.

The FS/Q switchgear interlocks are designed to control the operation of HV/LV switchgear.



FS/Q switchgear interlock

1 **Key is trapped, HV/LV circuit is closed.**

While the key is trapped, the isolator is closed providing the power supply.

2 **Turn and release key to open the HV/LV circuit.**

Turning the key opens the isolator. The key can then be released.

3 **Key is free and the HV/LV circuit is open.**

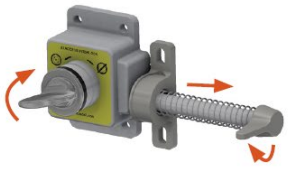
The free key can be used to operate either a parallel supply stream or an access interlock.

The FS/Q switchgear interlocks are available in a clockwise or in an anti-clockwise mounting position.

A set range of rotational movement and spigot lengths are available (see page 5 for ordering details).

2. When BESS switchgear is isolated and earthed, the trapped PCS key can be released from the BESS feeder switchgear. The PCS key can be taken to the BESS PCS container.

3. PCS key can be inserted into the Access Interlock on the PCS container transformer door, to release the bolt to open the transformer door.



AI single key access interlock
(bolt trapped - key free)

1 **Key is free, bolt is trapped**

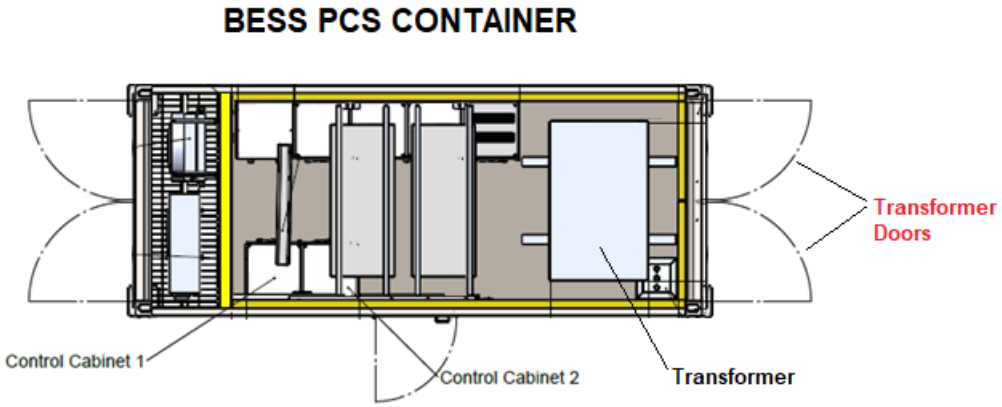
While the key is free, the bolt of the AI is trapped in the mechanism. The door is locked.

2 **Insert and turn key, then turn and release bolt**

By inserting and turning the key in the AI, the bolt is then free to be turned and released, which will trap the key in the lock.

3 **Key is trapped, bolt is unlocked**

The key stays trapped while the bolt is released and the door is open.



Transformer will remain de-Energised until sequence is reversed.

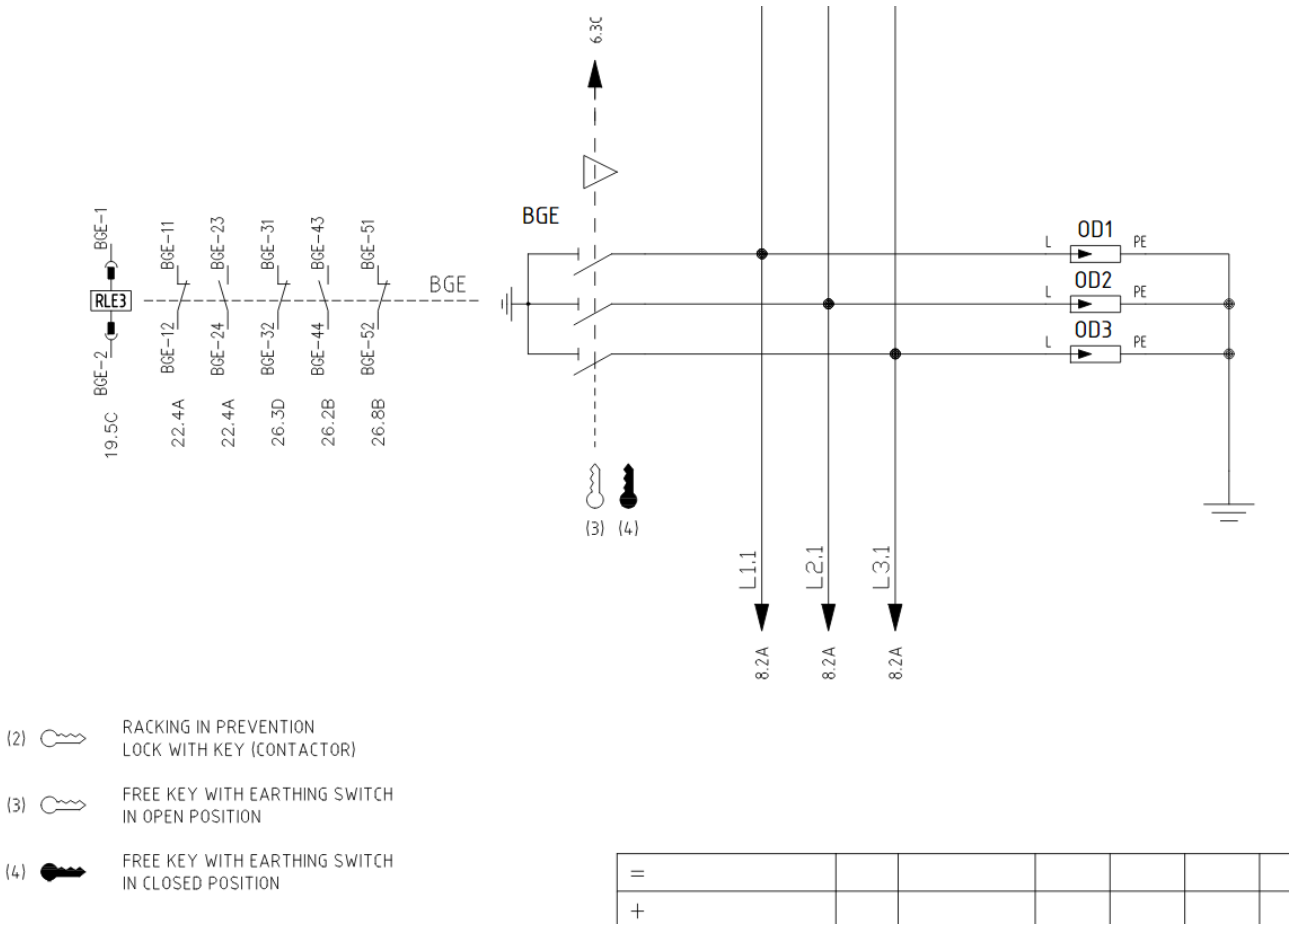
Items required

FS/Q Switchgear Interlock FS_Q_Jan_23.pdf (castell.com)
FS System Key, KEYS_Oct_22.pdf (castell.com)
AI Single Key Access Interlock, AI_Jan_2023.pdf (castell.com)

This communication is issued for the recipient's information and to facilitate the obligations of the Parties under the Contract. This communication has no authority to amend or vary the Contract nor relieve either Party of any duties, obligations or responsibilities.

Freqcon / Suretank will provide suitable mounting on plates the two PCS container access doors to the transformer enclosure (as below) to allow mounting of the Single key access system (Castell or similar) as per the attached datasheet. No other equipment necessary.

COMPANY requests CONTRACTOR to provide engineering design to supply, install and commission suitable Interlocking kit system complete consisting of:



1. Switchgear interlock system suitable for the MV switchgear and earth switch
2. System Key – matched to switchgear interlock and Access Bolt Interlock
3. Single Key Access bolt interlock that will be mounted on plates provided by Freqcon/Suretank.

2. Response

Reference documents / Aconex unique numbers
1723002197-EL-DG-00017 - SG-100D1 MV SWBD 6,6kV - FUNCTIONAL DIAGRAM BESS FEEDER A-8500

As shown on the project documentation relevant to the 6.6 kV switchgear SG-100D1, each breaker/contactor trolley, as well each earthing switch is provided with keys interlocked with the corresponding mechanism.
In particular, as shown on the schematic drawing 1723002197-EL-DG-00017, the earthing switch on the BESS feeder is provided with the two keys shown in the following extract:

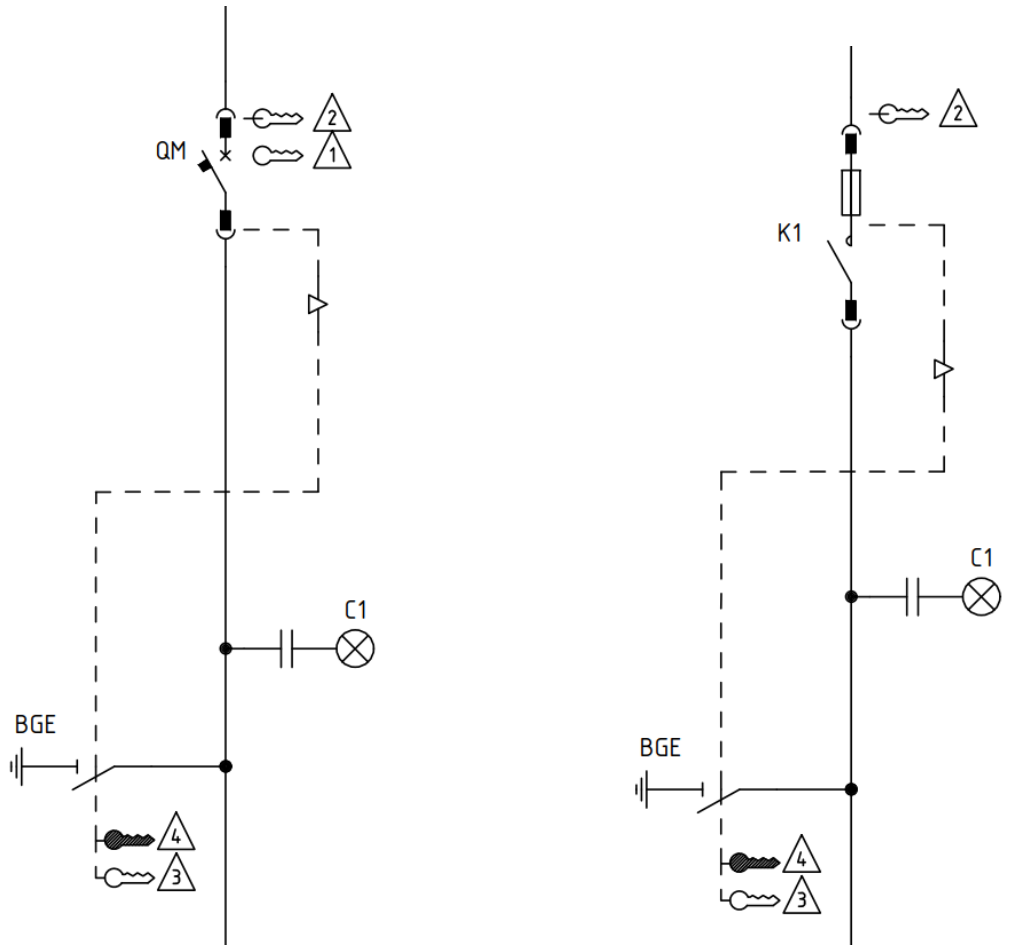
This communication is issued for the recipient's information and to facilitate the obligations of the Parties under the Contract. This communication has no authority to amend or vary the Contract nor relieve either Party of any duties, obligations or responsibilities.

Key 4 is free only when the earthing switch (BGE) is closed. Once the key is removed the earthing switch can not be open anymore, until the key is inserted again in the block.
This key cover exactly the function required in this technical query. i.e. the FS/Q switchgear interlock.

To comply with the requirement, it will be enough to ring the key 4 of SG-100D1 on BESS feeder with the key of the interlock to be installed on the PCS container door.

Once the earthing switch is closed the key 4 will be free, together with the door block key, which can be inserted in the block making possible unlocking and opening the door.

Contractor confirms that the design of the 6.6 kV switchgear is in line with the requirement and there is no need of any modification or additional device.

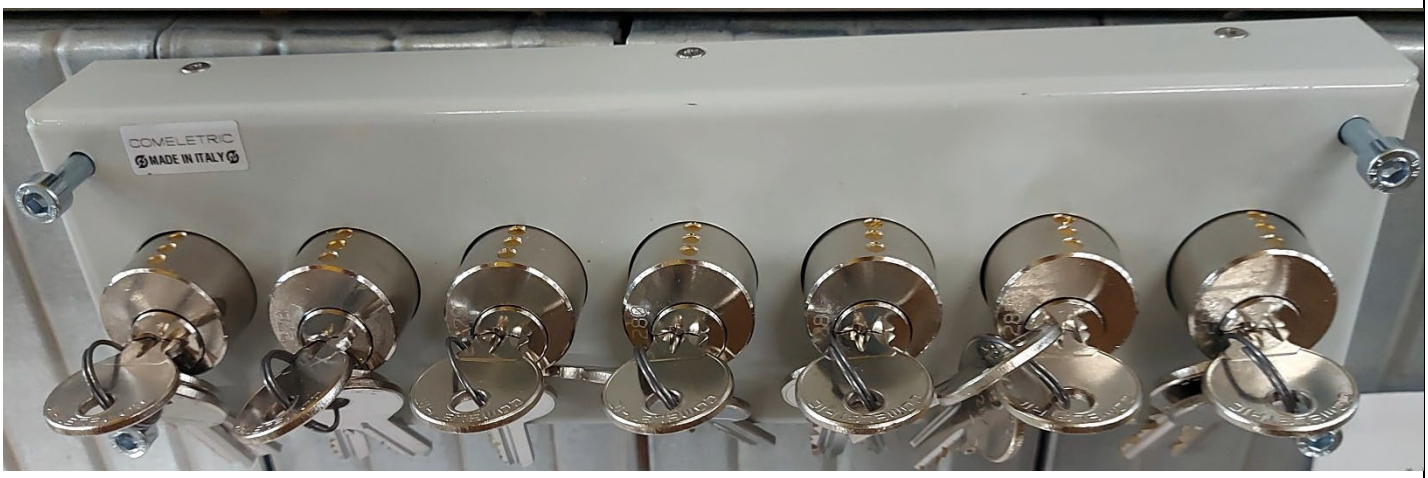


With respect to the PCS container, Contractor will not take care of supply and installation of any further key block, being these part of the BESS Supplier scope of work.

This communication is issued for the recipient's information and to facilitate the obligations of the Parties under the Contract. This communication has no authority to amend or vary the Contract nor relieve either Party of any duties, obligations or responsibilities.

3. Engineer's Response
Reference documents / Aconex unique numbers
Company acknowledges the use of the indicated key 4 as a proper way to ensure protection when operating on the BESS transformer. To maintain an easy setup, company advise contractor to free-issue a suitable lock assembly compatible with Key 4 that Freqcon/Suretank will then install on the BESS container in the reserved place on the transformer door.

4. Response
Reference documents / Aconex unique numbers **1723002197-EL-DG-00056 - SG-100D1 HV SWBD 6,6kV – OPERATION SEQUENCES AND KEY INTERLOCK**
As discussed and as per doc. N. **1723002197-EL-DG-00056 - SG-100D1 HV SWBD 6,6kV – OPERATION SEQUENCES AND KEY INTERLOCK** for the key interlocks, as well as on the other drawings relevant to the switchgear, each breaker/contactor trolley, as well each earthing switch is provided with keys interlocked with the corresponding mechanism. Here below some additional details: Imesa purchases the complete system of circuit breaker or contactor and earthing switch from ABB and the key system is coming from Italian supplier Giussani (https://www.giussanilocks.com/en/). These are the keys 1 to 4 for the breaker columns and 2 to 4 for the columns with fuses and contactor, as shown in the following sketches:



This communication is issued for the recipient's information and to facilitate the obligations of the Parties under the Contract. This communication has no authority to amend or vary the Contract nor relieve either Party of any duties, obligations or responsibilities.

The key distributor installed on the measure cubicle to manage the busbar earthing switch, as shown at page 6 of attached drawing, is purchased from Comelectric (https://www.comeletric.it/interlocking-devices/?lang=en&_gl=1*1fa0q1n*_up*MQ..*_ga*MjA5NjEzMjczOC4xNzE3NTQ0NTAx*_ga_EDJ8J0CRNL*MTcxNzU0NDQ5OS4xLjEuMTcxNzU0NDUxNS4wLjAuMA..).

Please find here a picture of a key distributor similar to the one will be used for our project:

This communication is issued for the recipient's information and to facilitate the obligations of the Parties under the Contract. This communication has no authority to amend or vary the Contract nor relieve either Party of any duties, obligations or responsibilities.

With respect to the interlock with the BESS transformer door, CTR's proposal is to ring together the key 4 of the drawing (i.e. the key free with the earthing switch closed) with the key necessary to open the BESS door, so that this key will be released and can be used only after closing the earthing switch.

Here below a picture of the ring normally used to ring together two or more keys (This ring is normally welded to avoid any possibility of separate the keys):

CTR kindly asks CPY to acknowledge the above already discussed solution rather than having a single key.

5. Engineer's Response

Reference documents / Aconex unique numbers

Company Acknowledges the proposed solution.

This communication is issued for the recipient's information and to facilitate the obligations of the Parties under the Contract. This communication has no authority to amend or vary the Contract nor relieve either Party of any duties, obligations or responsibilities.

The access key to the PCS container main door (hosting BESS transformer) as well as key of the Castell Lock locking the transformer access door (inside the container) will be provided to CTR to be ringed together upon commissioning.

This communication is issued for the recipient's information and to facilitate the obligations of the Parties under the Contract. This communication has no authority to amend or vary the Contract nor relieve either Party of any duties, obligations or responsibilities.
