SENTRON WL

Siemens AG, Siemensstr. 10 D-93055 Regensburg

Bedienungsanleitung / Operating Instructions **Bestell-Nr. / Order No.: 3ZX1812-0WL00-0AN4**

GEFAHR

Gefährliche elektrische Spannung!

Kann Tod, schwere Personenschäden sowie Schäden an Geräten und Ausrüstung bewirken.

Vor dem Arbeiten an diesem Gerät, Anlage unbedingt spannungsfrei schalten.
Gefahr bei gespanntem Federspeicher!
Federspeicher entspannen.

DANGER

Hazardous voltage!

Will cause death, serious personal injury, or equipment damage.

Disconnect power before working on this equipment.

Danger if spring is charged!
Discharge spring.

0.2 Safety instructions

Betriebsanleitung *Operating Instructions* *Instructions de service* *Instructivo* *Istruzioni operative*
Instruções de Serviço *İşletme kılavuzu* *Руководство по эксплуатации* *Instrukcja obsługi* 使用说明

DE		GEFAHR	**Gefährliche Spannung. Lebensgefahr oder schwere Verletzungsgefahr.** Vor Beginn der Arbeiten Anlage und Gerät spannungsfrei schalten. Die Installations- und Wartungsarbeiten an diesem Gerät dürfen nur von einer autorisierten Elektrofachkraft ausgeführt werden.
EN		DANGER	**Hazardous voltage. Will cause death or serious injury.** Turn off and lock out all power supplying this device before working on this device. Installation and maintenance work on this device may only be carried out by an authorized electrician.
FR		DANGER	**Tension électrique. Danger de mort ou risque de blessures graves.** Mettre hors tension avant d'intervenir sur l'appareil. Les travaux d'installation et d'entretien de cet appareil doivent uniquement être réalisés par une personne qualifiée en électricité.
ES		PELIGRO	**Tensión peligrosa. Puede causar la muerte o lesiones graves.** Desconectar la alimentación eléctrica antes de trabajar en el equipo. Las tareas de instalación y mantenimiento de este equipo solo puede llevarlas a cabo un un electricista autorizado.
IT		PERICOLO	**Tensione pericolosa. Può provocare morte o lesioni gravi.** Scollegare l'alimentazione prima di eseguire interventi sull'apparecchiatura. L'installazione e la manutenzione di questo apparecchio devono essere effettuati solo da un elettrotecnico autorizzato.
PT		PERIGO	**Tensão perigosa.Perigo de morte ou ferimentos graves.** Desligue a alimentação elétrica e proteja contra o religamento, antes de iniciar o trabalho no equipamento. Os trabalhos de instalação e manutenção neste equipamento somente podem ser realizados for eletricistas autorizados.
TR		TEHLİKE	**Tehlikeli gerilim. Ölüm tehlikesi veya ağır yaralanma tehlikesi.** Çalışmalara başlamadan önce, sistemin ve cihazın gerilim beslemesini kapatınız. Bu cihazın montajı ve bakımı yalnız yetkili bir elektrik teknisyeni tarafından yapılmalıdır.
РУ		ОПАСНО	**Опасное напряжение. Опасность для жизни или возможность тяжелых травм.** Перед началом работ отключить подачу питания к установке и к устройству. Работы по монтажу и техническому обслуживанию данного устройства должны производиться уполномоченным специалистом по электротехнике.
PL		ZAGROŻENIE	**Niebezpieczne napięcie. Niebezpieczeństwo poważnych obrażeń lub utraty życia.** Przed rozpoczęciem prac wyłączyć zasilanie instalacji i urządzenia energią elektryczną. Prace instalacyjne i konserwacyjne na tym urządzeniu może przeprowadzać wyłącznie posiadający odpowiednie kwalifikacje elektryk.
中文		危险	**危险电压。可能导致生命危险或重伤危险。** 操作设备时必须确保切断电源。该设备的安装和维护工作仅能由具备专业资格的 电工完成。
DA		FARE	**Farlig spænding. Livsfare eller risiko for slemme kvæstelser.** Inden arbejdet påbegyndes skal anlægget og enheden gøres spændingsfri. Installationer og vedligeholdelser på dette apparat må kun gennemføres af en autoriseret elektriker.
FI		VAARA	**Vaarallinen jännite. Vakava loukkaantumisvaara tai hengenvaara.** Laite ja laitteisto on kytkettävä jännitteettömiksi ennen töiden aloittamista. Tämän laitteen asennus-ja huoltotöitä saa suorittaa ainoastaan valtuutettu sähköteknikko.
ET		OHT	**Ohtlik pinge. Oht elule või raskete vigastuste oht.** Enne tööde algust tuleb süsteemi ja seadme pinge välja lülitada. Seadme paigaldus- ja hooldustöid võib teha ainult atesteeritud elektrik.
BG		ОПАСНОСТ	**Опасно напрежение. Опасност за живота или опасност от тежки телесни повреди.** Преди започване на работа изключете захранването на инсталацията или устройството. Монтажът и техническото обслужване на това устройство се извършват единствено от оторизиран електротехник.
HR		OPASNOST	**Opasni napon. Opasnost po život ili opasnost od teških ozljeda.** Prije početka radova postrojenje i uređaj spojiti bez napona. Radove instalacije i održavanja na uređaju smije izvoditi samo ovlašteno stručno elektrotehničko osoblje.

EL	   	ΚΙΝΔΥΝΟΣ	**Επικίνδυνη τάση. Κίνδυνος για τη ζωή ή σοβαρού τραυματισμού.** Πριν από την έναρξη των εργασιών απομονώνετε την εγκατάσταση και τη συσκευή από την παροχή τάσης. Οι εργασίες εγκατάστασης και συντήρησης αυτής της συσκευής πρέπει να πραγματοποιούνται μόνο από εξουσιοδοτημένο ηλεκτρολόγο.
GA		CONTÚIRT	**Voltas contúirteach. Baol go bhfaighfear bás nó tromghortú.** Múch agus dícheangail gach foinse cumhachta a sholáthraíonn an gaireas seo sula ndéanfar obair air. Is ag leictreoir údaraithe amháin atá cead an gléas a shuiteáil agus obair chothabhála a dhéanamh air.
LV		BĪSTAMI	**Bīstams spriegums. Letālu seku vai smagu traumu riski.** Pirms uzsākt darbu, atslēdziet iekārtu un ierīci no barošanas. Šīs ierīces uzstādīšanu un tehniskās apkopes darbus drīkst veikt vienīgi pilnvarots elektriķis.
LT		PAVOJUS	**Pavojinga įtampa. Pavojus gyvybei arba sunkaus susižalojimo pavojus.** Prieš darbų pradžią atjunkite sistemos ir prietaiso įtampą. Šio įrenginio įrengimo ir techninės priežiūros darbus leidžiama atlikti tik įgaliotam elektrikui.
MT		PERIKLU	**Vultaġġ perikoluż. Riskju ta' mewt jew korriment serju.** Itfi u sakkar il-provvista kollha tad-dawl li tkun qed tforni d-dawl lil dan it-tagħmir qabel ma taħdem fuq dan it-tagħmir. Ix-xogħlijiet ta' installazzjoni u manutenzjoni fuq dan it-tagħmir jistgħu jitwettqu biss minn elettriċista awtorizzat.
NL		GEVAAR	**Gevaarlijke spanning. Levensgevaar of gevaar voor ernstig letsel.** Schakel vóór aanvang van de werkzaamheden installatie en apparaat spanningsvrij. De installatie- en onderhoudswerken aan dit toestel mogen enkel door een geautorisseerde elektricien uitgevoerd worden.
RO		PERICOL	**Tensiune periculoasă. Pericol de moarte sau de accidentări grave.** Înaintea începerii lucrărilor, deconectați instalația și aparatul de la tensiune. Lucrările de instalare și întreținere pentru acest dispozitiv pot fi efectuate doar de către un electrician autorizat.
SV		FARA	**Farlig spänning. Livsfara eller risk för allvarliga personskador.** Koppla anläggningen och apparaten spänningsfri innan du påbörjar arbetena. Installation och underhåll av denna apparat får endast utföras av en behörig elektriker.
SK		NEBEZ-PEČENSTVO	**Nebezpečné napätie. Nebezpečenstvo ohrozenia života alebo vzniku ťažkých zranení.** Pred začatím prác zariadenie a prístroj odpojte od napätia. Inštalačné a údržbárske práce na tomto prístroji môže vykonávať výlučne autorizovaný elektrikár.
SL		NEVARN-OST	**Nevarna napetost. Nevarnost za življenje ali nevarnost hudih poškodb.** Pred začetkom dela je treba pri napravi in aparatu odklopiti napajanje. Inštalacijska in vzdrževalna dela na tej napravi sme izvesti samo pooblaščen električar.“
CS		NEBEZPEČÍ	**Nebezpečné napětí. Nebezpečí smrtelného nebo těžkého úrazu.** Před zahájením prací odpojte zařízení a modul od napětí. Instalační a údržbářské práce smí na tomto přístroji provádět pouze kvalifikovaný elektrikář.“
HU		VESZÉLY	**Veszélyes feszültség. Életveszély vagy súlyos sérülésveszély.** A munkák megkezdése előtt végezze el a berendezés vagy készülék feszültség-mentesítését. Ezen az eszközön a telepítéssel és a karbantartással kapcsolatos feladatokat kizárólag megfelelő felhatalmazással rendelkező villamossági szakember végezheti.

0.3 Securityhinweise

Siemens bietet Produkte und Lösungen mit Industrial Security-Funktionen an, die den sicheren Betrieb von Anlagen, Lösungen, Maschinen, Geräten und/oder Netzwerken unterstützen. Sie sind wichtige Komponenten in einem ganzheitlichen Industrial Security-Konzept. Die Produkte und Lösungen von Siemens werden unter diesem Gesichtspunkt ständig weiterentwickelt. Siemens empfiehlt, sich unbedingt regelmäßig über Produkt-Updates zu informieren.

Für den sicheren Betrieb von Produkten und Lösungen von Siemens ist es erforderlich, geeignete Schutzmaßnahmen (z. B. Zellenschutzkonzept) zu ergreifen und jede Komponente in ein ganzheitliches Industrial Security-Konzept zu integrieren, das dem aktuellen Stand der Technik entspricht. Dabei sind auch eingesetzte Produkte von anderen Herstellern zu berücksichtigen. Weitergehende Informationen über Industrial Security finden Sie unter:
http://www.siemens.com/industrialsecurity

Um stets über Produkt-Updates informiert zu sein, melden Sie sich für unseren produktspezifischen Newsletter an. Weitere Informationen hierzu finden Sie unter
https://support.industry.siemens.com

0.3 Security information

Siemens provides products and solutions with industrial security functions that support the secure operation of plants, solutions, machines, equipment and/or networks. They are important components in a holistic industrial security concept. With this in mind, Siemens' products and solutions undergo continuous development. Siemens recommends strongly that you regularly check for product updates.

For the secure operation of Siemens products and solutions, it is necessary to take suitable preventive action (e.g. cell protection concept) and integrate each component into a holistic, state-of-the-art industrial security concept. Third-party products that may be in use should also be considered. For more information about industrial security, visit:
http://www.siemens.com/industrialsecurity

To stay informed about product updates as they occur, sign up for a product-specific newsletter. For more information, visit
https://support.industry.siemens.com

0.4 Hinweis zum Umfang der Anleitung

Diese Bedienungsanleitung enthält aus Gründen der Übersichtlichkeit nicht sämtliche Detailinformationen zu allen Produktvarianten und kann auch nicht jeden denkbaren Fall der Aufstellung, des Betriebes oder der Instandhaltung berücksichtigen.

Sollten Sie weitere Informationen wünschen, oder sollten besondere Probleme auftreten, die in der Bedienungsanleitung nicht ausführlich genug behandelt werden, können Sie die erforderliche Auskunft über die örtliche Siemens-Niederlassung anfordern.

Außerdem weisen wir darauf hin, dass der Inhalt dieser Bedienungsanleitung nicht Teil einer früheren oder bestehenden Vereinbarung, Zusage oder eines Rechtsverhältnisses ist oder dieses abändern soll. Sämtliche Verpflichtungen von Siemens ergeben sich aus dem jeweiligen Kaufvertrag, der auch die vollständige und alleingültige Gewährleistungsregelung enthält. Diese vertraglichen Gewährleistungsbestimmungen werden durch die Ausführung dieser Bedienungsanleitung weder erweitert noch beschränkt.

SENTRON® ist eine eingetragene Marke der Siemens AG. Die übrigen Bezeichnungen in dieser Dokumentation können Marken sein, deren Benutzung durch Dritte für deren Zwecke die Rechte der Inhaber verletzt.

0.4 Note regarding the manuals scope

For reasons of clarity, these instructions do not cover all details or variations in equipment, nor do they provide for every possible contingency to be met in connection with installation, operation or maintenance.

Should further information be desired or should particular problems arise which are not covered sufficiently for the Purchaser's purposes, the matter should be referred to the local Siemens Sales Office.

The contents of this instruction manual shall not became part or modify any prior or existing agreement, commitment or relationship. The sales contract contains the entire obligations of Siemens. The warranty contained in the contract between the parties in the sole warranty of Siemens. Any statements contained herein do not create new warranties or modify the existing warranty.

SENTRON® is a trade-mark of Siemens AG. The other designations in this documentation can be trademarks. Use by third parties for their own purposes violates the owner's rights.

VORSICHT		**CAUTION**
Zum Schutz der elektrostatisch gefährdeten Bauelemente (EGB) ist der Schalter, anzuschließende Geräte und das Bedienpersonal auf das gleiche Potenzial zu bringen.		To protect the electrostatic sensitive devices (ESD) the circuit breaker, equipment to be connected, and also operating personnel, need to be at the same potential.

Ausstattungsschild aktualisieren 14- 3

15 Abschließvorrichtungen 15- 1
Sicherheitsschlösser 15- 1
Abschließvorrichtung in AUS-Stellung 15- 3
Steuerschieber einbauen 15- 4
Sicherheitsschloss einbauen 15- 5
Felder am Bedienpult ausbrechen 15- 6
Sicherheitsschloss Elektrisch EIN nachrüsten 15- 6
Schlüsselbetätigung für Mechanisch EIN nachrüsten 15- 6
Abschließvorrichtung gegen Verfahren aus der Trennstellung nachrüsten 15- 7
Nur für BG III: Schalter Einschubrahmen: 15- 7

Installing electrical ON 11- 4
Installing micro-switch 11- 4
Inserting push-button 11- 4
Mechanical function test 11- 5
Connecting wires 11- 6
Final work 11- 6
Electrical function test 11- 7
Closing coil 11- 7
Shunt trip 11- 8
Undervoltage release 11- 8
Updating the options label 11- 8
Order numbers / Z-options 11- 9
Capacitor Energy Storage Unit for shunt release 11- 11
Technical data 11- 11
Installation 11- 11
Order numbers 11- 12

12 Auxiliary and control switches 12- 1
Signaling switches 12- 1
Mounting signaling switches 12- 1
Contact position-driven switches 12- 2
Snap in mounting of signaling switch S20 “ready to close” 12- 2
Snap in mounting of signaling switch S21 “spring charged” 12- 2
Mounting signaling switches at trip unit 12- 3
Control switches 12- 4
Communication switches 12- 4
Connecting wires 12- 4
Updating the options label 12- 5
Order numbers / Z-options 12- 5

13 Motor-operated mechanism 13- 1
Retrofitting the motor-operated mechanism 13- 1
Mounting the motor on the operating shaft 13- 1
Fixing the motor-operated mechanism / connecting wires 13- 2
Motor disconnect switch at the front panel 13- 2
Installing motor disconnect switch 13- 3
Connecting motor disconnect switch 13- 3
Installing the selector knob 13- 3
Updating the options label 13- 4
Order numbers / Z-option 13- 4

14 Indicators and operating elements 14- 1
Locking set 14- 1
Mechanical make-break operations counter 14- 2
Knocking out the field on the front panel 14- 2
Motor cut-off switch 14- 2
Electrical ON push-button 14- 2
EMERGENCY OFF push-button 14- 3
Updating the options label 14- 3

15 Locking devices 15- 1
Safety locks 15- 1
Locking device in OFF position 15- 3
Fitting control gate 15- 4
Installing safety lock 15- 5
Knocking out the fields on the front panel 15- 6
Retrofitting safety lock for electrical ON 15- 6
Field installing key protected operation for mechanical ON 15- 6
Retrofitting locking device against moving from the disconnected position 15- 7
For frame size III only: Changing the query plate 15- 7

Baugruppe im Einschubrahmen montieren 15- 8
Schlossbaugruppe einbauen 15- 8
Bowdenzug anbauen 15- 9
Bowdenzug verlegen 15- 9
Bowdenzug justieren 15- 10
Feld aus Bedienpult ausbrechen 15- 10
Endkontrolle 15- 11
Abschließvorrichtung in AUS-Stellung (Schaltschranktür) nachrüsten 15- 12
Schlossbaugruppe einbauen 15- 13
Öffnung in Schaltschranktür bohren 15- 13
Sicherheitsschloss Handkurbel nachrüsten 15- 14
Schlossbaugruppe vormontieren 15- 15
Einbau 15- 15
Feld aus Bedienpult ausbrechen 15- 16
Sicherheitsschloss Mechanisch AUS nachrüsten 15- 16
Sicherheitsschloss Rücksetzknopf nachrüsten 15- 17
Abschließen 15- 18
Schilder aktualisieren 15- 18
Ausstattungsschild des Leistungsschalters 15- 18
Typschild Einschubrahmen 15- 18
Bestellnummern / Z-Zusätze 15- 19
Vorrichtungen für Bügelschlösser 15- 21
Verschlussbügel für „AUS“ 15- 22
Abschließvorrichtung Shutter 15- 24
Shutter komplett geschlossen 15- 24
Shutter unten geöffnet 15- 24
Abschließvorrichtung Verfahrschienen 15- 25
Abschließvorrichtung Handkurbel 15- 25
Abschließvorrichtung Antriebshandhebel 15- 26
Nachrüsten 15- 26
Abschließvorrichtung für Taster Mechanisch AUS 15- 27
Abschließvorrichtung für Taster Mechanisch EIN 15- 27
Plombierkappe nachrüsten 15- 27
Schilder aktualisieren 15- 28
Ausstattungsschild des Leistungsschalters 15- 28
Bestellnummern / Z-Zusätze 15- 28

16 Plombiervorrichtungen 16- 1
Plombierkappe Elektrisch EIN 16- 1
Plombierkappen Mechanisch EIN und AUS 16- 1
Plombiervorrichtung Überstromauslöser 16- 1

17 Sperrvorrichtungen 17- 1
Sperrvorrichtung gegen Verfahren bei offener Schaltschranktür 17- 2
Einbau der Verriegelung 17- 2
Funktion prüfen 17- 2
Verriegelung der Schaltschranktür 17- 3
Riegel montieren 17- 3
Festeinbauschalter 17- 3
Einschubschalter 17- 5
Schaltschranktür bohren 17- 5
Falle an Schaltschranktür montieren 17- 6
Funktionskontrolle 17- 6
Zugangssperre über Taster Mechanisch EIN und AUS nachrüsten 17- 7
Schilder aktualisieren 17- 8
Ausstattungsschild des Leistungsschalters 17- 8
Typschild Einschubrahmen 17- 8
Bestellnummern / Z-Zusätze 17- 8

Assemble unit into guide frame 15- 8
Installing lock unit 15- 8
Mounting the bowden wire 15- 9
Fix the bowden wire 15- 9
Adjusting the bowden wire 15- 10
Knocking out the field on the front panel 15- 10
Final inspection 15- 11
Retrofitting locking device in OFF position (cubicle door) 15- 12
Fitting locking unit 15- 13
Drill hole into cubicle door 15- 13
Retrofitting safety lock for racking handle 15- 14
Arranging lock assembly 15- 15
Installing 15- 15
Knocking out the field on the front panel 15- 16
Retrofitting safety lock for mechanical OFF 15- 16
Retrofitting safety lock for reset button 15- 17
Locking 15- 18
Updating the labels 15- 18
Circuit Breaker options label 15- 18
Type label guide frame 15- 18
Order numbers / Z-options 15- 19
Padlocking provisions 15- 21
Locking bracket for “OFF” 15- 22
Locking device for shutter 15- 24
Shutter totally closed 15- 24
Shutter below opened 15- 24
Locking device for guide rails 15- 25
Locking device for racking handle 15- 25
Locking device for spring charging lever 15- 26
Retrofitting 15- 26
Locking device for Mechanical OFF button 15- 27
Locking device for Mechanical ON button 15- 27
Retrofitting sealing cover 15- 27
Updating the labels 15- 28
Circuit Breaker options label 15- 28
Order numbers / Z-options 15- 28

16 Sealing facilities 16- 1
Sealing cap for Electrical ON 16- 1
Sealing cover for Mechanical ON and OFF 16- 1
Sealing facility for overcurrent release 16- 1

17 Interlocking devices 17- 1
Interlock to prevent racking with cubicle door open 17- 2
Fitting interlocking 17- 2
Function check 17- 2
Cubicle door interlock 17- 3
Fit bolt 17- 3
Fixed-mounted breaker 17- 3
Draw-out circuit breaker 17- 5
Cubicle door interlock drill pattern 17- 5
Installing catch on cubicle door 17- 6
Function check 17- 6
Retrofitting access block over mechanical ON and OFF button 17- 7
Updating the labels 17- 8
Circuit Breaker options label 17- 8
Type label guide frame 17- 8
Order numbers / Z-options 17- 8

18 Zubehör für Einschubrahmen 18- 1
Shutter 18- 1
Nachrüsten 18- 2
Betätiger zusammenbauen und mit Feder komplettieren 18- 2
Betätiger einsetzen 18- 3
Shutter anbauen 18- 3
Typschild aktualisieren 18- 5
Bestellnummer / Z-Zusatz 18- 6
Kodierung Schalter - Einschubrahmen 18- 6
Bemessungsstromkodierung 18- 6
Bemessungsstromkodierung nachrüsten 18- 7
Ausstattungsabhängige Kodierung 18- 8
Kodierung am Schalter anbringen 18- 8
Kodierung am Einschubrahmen anbringen 18- 9
Bestellnummer 18- 9
Kodiervarianten 18- 10
Positionsmeldeschalter für Einschubrahmen 18- 14
Anschlüsse 18- 14
Schalterposition und Kontakte 18- 15
Montage 18- 15
Typschild aktualisieren 18- 16
Bestellnummern / Z-Zusatz 18- 16

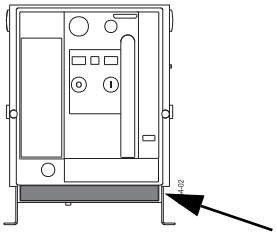
1.1 Circuit breaker

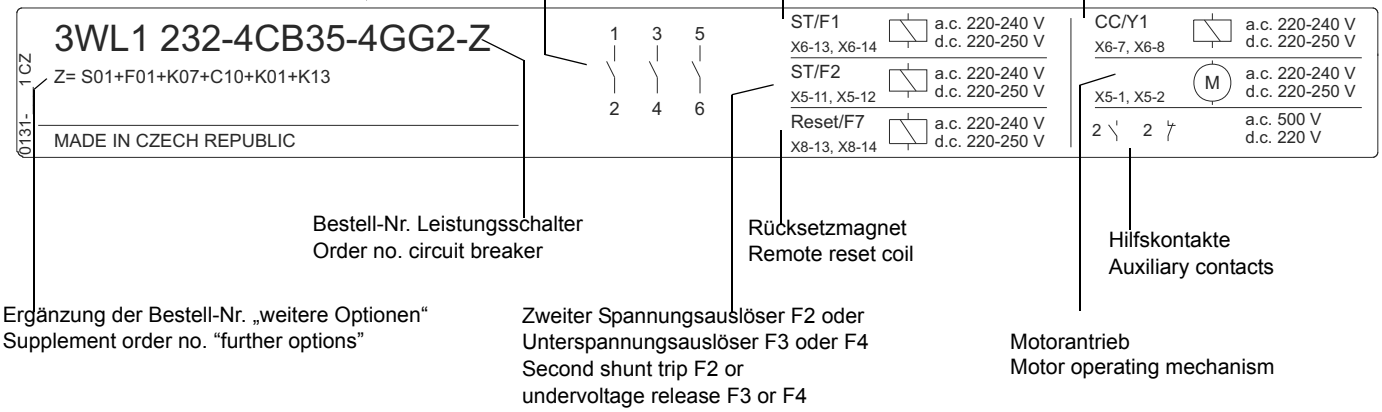
(1) Arc chute → (page 24-5)
(2) Carrying handle
(3) Identification tags
(4) Motor disconnect switch (option) → (page 13-3) **or** “Electrical ON” (option) → (page 11-4)
(5) Type label circuit breaker → (page 2-1)
(6) Stored-energy indicator → (page 6-6)
(7) “Mechanical ON” button
(8) Max. rating current value
(9) Racking pictogram
(10) Make-break operations counter (option)
(11) Spring charging lever → (page 6-4)
(12) Racking handle
(13) Racking shaft
(14) Option label → (page 2-1)
(15) Earthing terminal → (page 5-22)
(16) Position indicator → (page 6-2)
(17) Table for ground-fault protection → (page 9-28)
(18) Safety lock for racking handle (option)
(19) Mechanical release of racking handle (option)
(20) Overcurrent release → (page 9-1)
(21) Rating plug
(22) “Mechanical OFF” button **or** “EMERGENCY OFF” mushroom button (option)
(23) Ready-to-close indicator → (page 6-6)
(24) Breaker ON / OFF indicator → (page 6-6)
(25) Tripped indicator (Reset button) → (page 6-8)
(26) Locking device “OFF” (option)
(27) Front panel
(28) Receptacle for auxiliary contacts **(**according to equipment)

1.2 Einschubrahmen

1.2 Guide frame



(1) Lichtbogenkammerabdeckung (Option)
(2) Ausblasöffnungen
(3) Öffnung für Kranhaken → (Seite 4-2)
(4) Shutter (Option)
(5) Abschließvorrichtung Shutter (Option)
(6) Typschild Einschubrahmen → (Seite 2-2)
(7) Trennkontakte
(8) Erdungsanschluss ∅ 14 mm → (Seite 5-22)
(9) Abschließvorrichtung Verfahrschiene
(10) Sperrvorrichtung gegen Verfahren bei geöffneter Schaltschranktür (Option)
(11) Türverriegelung Einschubrahmen (Option)
(12) Verfahrschiene
(13) werkseitige Bemessungsnennstromkodierung
(14) Schleifkontakt Schaltererdung (Option)
(15) Ausstattungsabhängige Kodierung (Option)
(16) Shutterbetätiger (Option)
(17) Positionsmeldeschalter (Option)
(18) Schleifkontaktmodul Hilfsleiter (Anzahl ausstattungsabhängig)



(1) Arc chute cover (option)
(2) Arcing openings
(3) Hole for crane hook → (page 4-2)
(4) Shutter (option)
(5) Locking device shutter (option)
(6) Type label guide frame → (page 2-2)
(7) Disconnecting contacts
(8) Earthing terminal ∅ 14 mm → (page 5-22)
(9) Locking device guide rail
(10) Locking device to prevent racking with cubicle door open (option)
(11) Door interlocking guide frame (option)
(12) Guide rail
(13) Ampere rating coding by factory
(14) Sliding contact for circuit breaker earthing (option)
(15) Option-related coding (option)
(16) Shutter operating device (option)
(17) Position signalling switch (option)
(18) Auxiliary disconnects (quantity according to equipment)

GEFAHR		WARNING
Gefährliche Spannung! **Verursacht Tod, ernste Verletzungen oder Zerstörung von Material / Eigentum.** Nur qualifiziertes Personal darf an dem Gerät arbeiten, welches mit den Warn-, Sicherheitshinweisen und Wartungsvorschriften vertraut gemacht wurde. Die erfolgreiche und sichere Funktion dieses Gerätes hängt von ordentlicher Bedienung, Installation, Behandlung und Wartung ab.	  	**Hazardous voltage!** **Will cause death, serious personal injury, or equipment/ property damage.** Only qualified personnel should work on this equipment, after becoming thoroughly familiar with all warnings, safety notices, and maintenance procedures contained herein and on the devices. Successful and safe operation of this equipment is dependant on proper handling, installation, operation and maintenance.

Qualifiziertes Personal		Qualified Person
im Sinne dieser Bedienungsanleitung bzw. der Warnhinweise auf dem Produkt selbst sind Personen, die mit Aufstellung, Montage, Inbetriebsetzung und Betrieb des Produktes vertraut sind und über die ihrer Tätigkeit entsprechenden Qualifikationen verfügen, wie z. B.: **a) Ausbildung oder Unterweisung bzw. Berechtigung, Stromkreise und Geräte / Systeme gemäß den Standards der Sicherheitstechnik ein- und auszuschalten, zu erden und zu kennzeichnen.** **b) Ausbildung oder Unterweisung gemäß den Standards der Sicherheitstechnik in Pflege und Gebrauch angemessener Sicherheitsausrüstung.** **c) Schulung in Erster Hilfe.**		**For the purpose of this instruction manual and product labels, a "qualified person" is one who is familiar with the installation, construction and operation of the equipment and the hazards involved and who, in addition, has the following qualifications:** **a) Is trained and authorized to energize, de-energize, clear, earth and tag circuits and equipment in accordance with established safety practices.** **b) Is trained in the proper care and use of protective equipment in accordance with established safety practices.** **c) Is trained in rendering first aid.**

Umgebungsbedingungen

Die Leistungsschalter sind für den Betrieb in geschlossenen Räumen bestimmt, in denen keine durch Staubentwicklung und ätzende Dämpfe oder Gase erschwerten Betriebsbedingungen vorliegen. Für staubige oder feuchte Räume sind entsprechende Kapselungen vorzusehen.

Ambient Conditions

The circuit breakers are suited for operation in enclosed spaces not subject to operating conditions aggravated by dust, corrosive vapors or gases. Breakers to be installed in dusty or damp locations must be appropriately enclosed.

3.1 Normen

Der Leistungsschalter entspricht den Normen:

- IEC 60947-2 / EN 60947-2

3.1 Standards

The circuit breaker is in conformity with the standards:

- IEC 60947-2 / EN 60947-2

4 Transport

4.1 Überseeverpackung

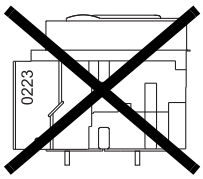
Feuchtigkeitsanzeigeschild überprüfen Check humidity indicator		Weitere Lagerung Further storage
Rosa Pink	Blau Blue	Trockenmittel erneuern oder trocknen Kunststofffolie dicht verschweißen Verpackung regelmäßig überprüfen Renew or dry desiccant Reseal the plastic sheeting Check packing from time to time
Dichteverpackung unwirksam Schalter auf Korrosionsschäden prüfen Schäden dem Transportunternehmen melden Sealed packing defective Inspect for corrosion Notify damages to forwarding agent	Gut Good	

4.2 Auspacken

Schalter auspacken und auf Transportschäden untersuchen.

Bei späterem Einbau von Schalter oder Einschubrahmen: Lagerung und Weiterversand nur in der Originalverpackung.

4 Transport



4.1 Overseas packing

Feuchtigkeitsanzeigeschild überprüfen Check humidity indicator		Weitere Lagerung Further storage
Rosa Pink	Blau Blue	Trockenmittel erneuern oder trocknen Kunststofffolie dicht verschweißen Verpackung regelmäßig überprüfen Renew or dry desiccant Reseal the plastic sheeting Check packing from time to time
Dichteverpackung unwirksam Schalter auf Korrosionsschäden prüfen Schäden dem Transportunternehmen melden Sealed packing defective Inspect for corrosion Notify damages to forwarding agent	Gut Good	

4.2 Unpacking

Unpack the circuit breaker and inspect it for damage.

In case of later installation of the circuit breaker or guide frame: they may only be stored and redispatched in the original packing.

VORSICHT	CAUTION
Schalter nicht auf die Rückseite legen!	Do not place circuit breaker on its rear side!

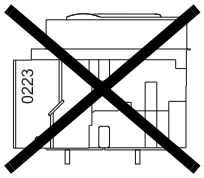
4.3 Transport mit Kran

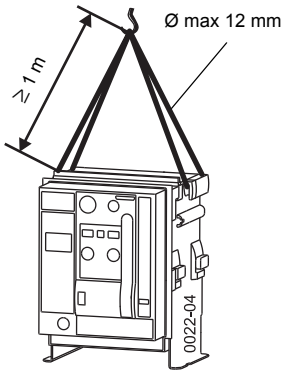
GEFAHR

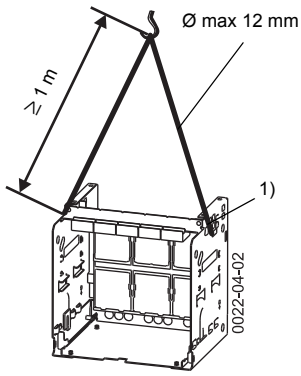
Schweres Gerät.

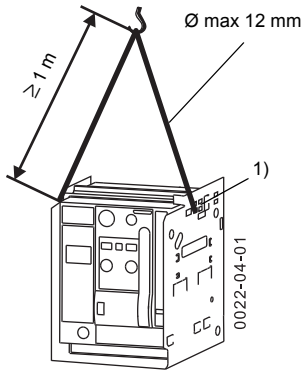
Falsches Kranen kann Tod, schwere Personenschäden sowie Schäden an Geräten und Ausrüstung bewirken.

Niemals einen Leistungsschalter, Kurzschließ-, Erdungs- und Überbrückungseinschub oder Einschubrahmen über Personen heben. Bedienungshinweise zum Kranen beachten. Nur OSHA/NIOSH geprüftes Krangeschirr verwenden. Benutze persönliche Schutzausrüstung beim Heben oder Bewegen von Leistungsschaltern und Einschubrahmen.





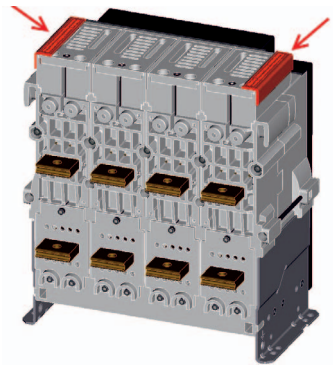




4.3 Lifting by crane

DANGER

Heavy Equipment.



Improper lifting will cause death, serious personal injury, or equipment/property damage.

Never lift a circuit breaker, short-circuit, earthing and jumpering device or guide frame above personnel. Follow instructions for use of lifting bar assembly.
Use OSHA/NIOSH approved rigging equipment and personal protection equipment for lifting/moving the circuit breakers and guide frames.

Vorsicht **Caution** Nicht auf die Rückseite legen! Do not place breaker on its rear side! 	**Schalter** **Breaker** 	**Einschubrahmen** **Guide frame** 	**Schalter + Einschubrahmen** **Breaker + Guide frame** 
Baugröße / Polzahl **Frame size / No. of poles**	**Gewicht** **Weight**		
I / 3	max. 47 kg	max. 27 kg	max. 76 kg
I / 4	max. 55 kg	max. 32 kg	max. 91 kg
II / 3	max. 85 kg	max. 54 kg	max. 123 kg
II / 4	max. 103 kg	max. 65 kg	max. 148 kg
III / 3	max. 90 kg	max. 70 kg	max. 166 kg
III / 4	max. 108 kg	max. 119 kg	max. 227 kg

[1] Seil oberhalb des Aufklebers einhängen

Schutz für Transportarbeiten.
Nur für Baugröße I mit hohen Lichtbogenkammern!

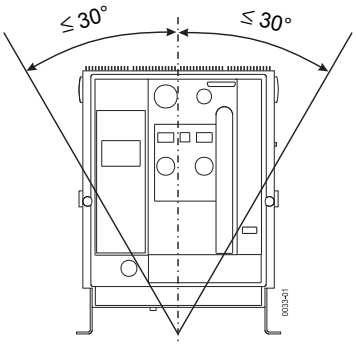
[1] Hook cable above the label

Protection for transport work.
For frame size I with high arc chutes only!

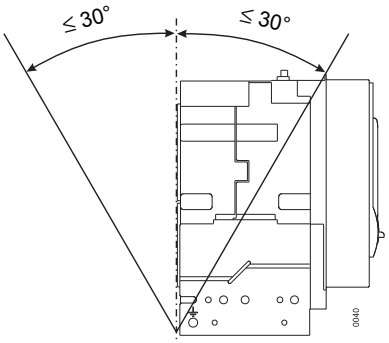
Achtung: Vor Inbetriebnahme entfernen
Nur für Anheben des Leistungsschalters / Bitte gut aufbewahren

Attention: Remove before commissioning
Use only for lifting the circuit breaker / Please keep it safe

5 Montage



WARNUNG
Sicherer Betrieb des Schalters setzt voraus, dass er von qualifiziertem Personal sachgemäß unter Beachtung der Warnhinweise dieser Bedienungsanleitung montiert und in Betrieb gesetzt wird. Insbesondere sind sowohl die allgemeinen Errichtungs- und Sicherheitsvorschriften zu Arbeiten an Starkstromanlagen (z.B. DIN VDE) als auch die den fachgerechten Einsatz von Hebeeinrichtungen und Werkzeugen und die Benutzung persönlicher Schutzausstattungen (Schutzbrillen u.ä.) betreffenden Vorschriften zu beachten. Bei Nichtbeachtung können Tod, schwere Körperverletzung oder erheblicher Sachschaden die Folge sein.



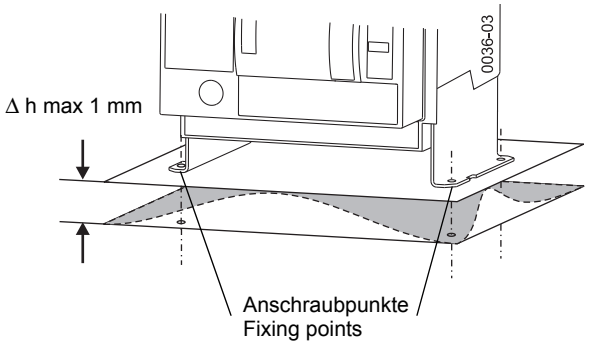
GEFAHR
Schweres Gerät. **Falsches Kranen kann Tod, schwere Personenschäden sowie Schäden an Geräten und Ausrüstung bewirken.** Niemals einen Leistungsschalter, Kurzschließ-, Erdungs- und Überbrückungseinschub oder Einschubrahmen über Personen heben. Bedienungshinweise zum Kranen beachten. Nur OSHA / NIOSH geprüftes Krangeschirr verwenden. Benutze persönliche Schutzausrüstung beim Heben oder Bewegen von Leistungsschaltern und Einschubrahmen.

5.1 Einbau

5.1.1 Einbaulage

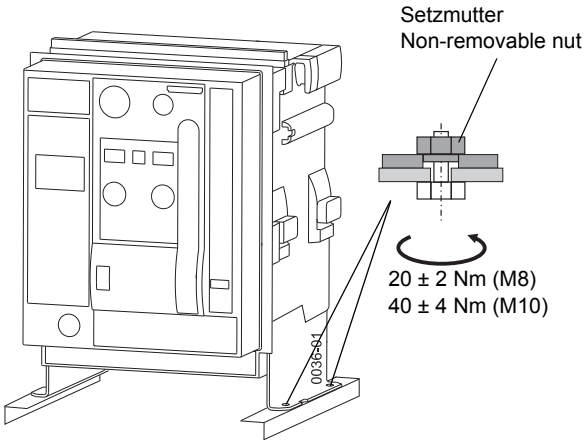
WARNUNG
Wenn ein Schalter geneigt montiert ist, kann er auf den Schienen herausrutschen, wenn er in der Trennposition ist.

5 Installation



WARNING
Safe operation is dependent upon proper handling and installation by qualified personnel under observance of all warnings contained in this instruction manual. In particular the general erection and safety regulations (e.g. DIN VDE, IEC) and regulations regarding the correct use of hoisting gear and tools and of personal protective gear (safety goggles and the like) shall be observed. Non-observance can result in death, severe personal injury or substantial property damage.

DANGER
Heavy Equipment. **Improper lifting will cause death, serious personal injury, or equipment / property damage.** Never lift a circuit breaker, short-circuit, earthing and jumpering device or guide frame above personnel. Follow instructions for use of lifting bar assembly. Use OSHA / NIOSH approved rigging equipment and personal protection equipment for lifting / moving the circuit breakers and guide frames.

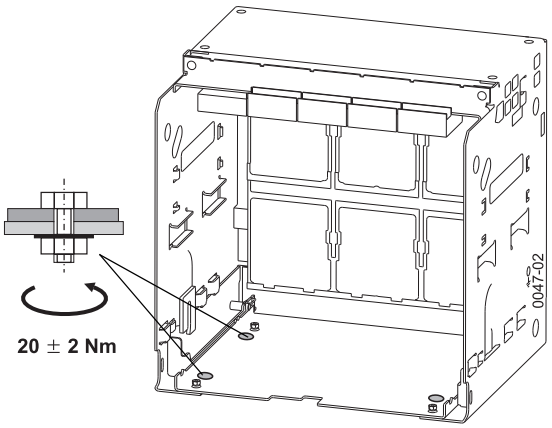


5.1 Mounting

5.1.1 Mounting position

WARNING
Breaker mounted tilted towards the frontside: Breaker may slide out on rails, when racked in disconnect position.

5.1.2 Einbau auf waagerechter Ebene



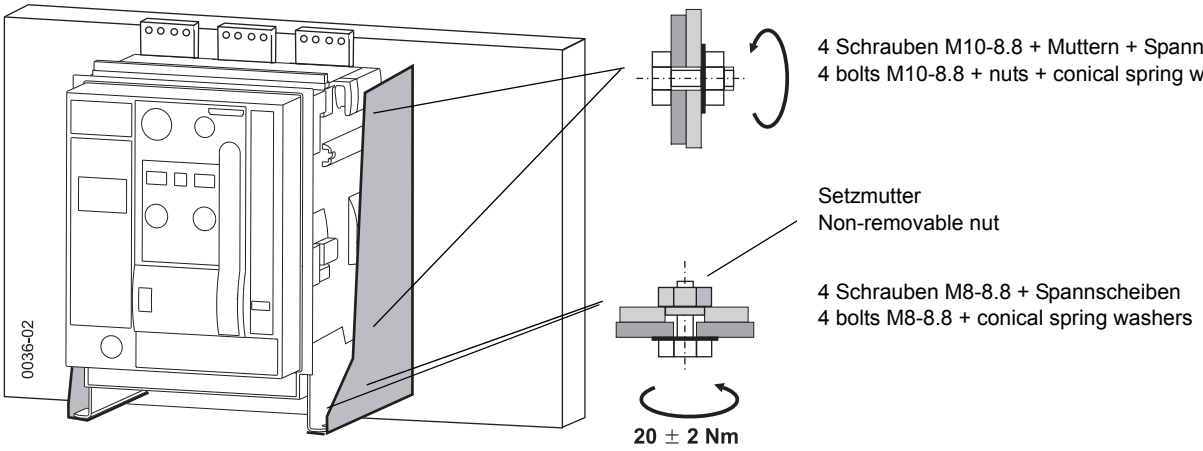
BG I + BG II / FS I + FS II
4 Schrauben M8-8.8
4 bolts M8-8.8

BG III / FS III
4 Schrauben M10-8.8
4 bolts M10-8.8

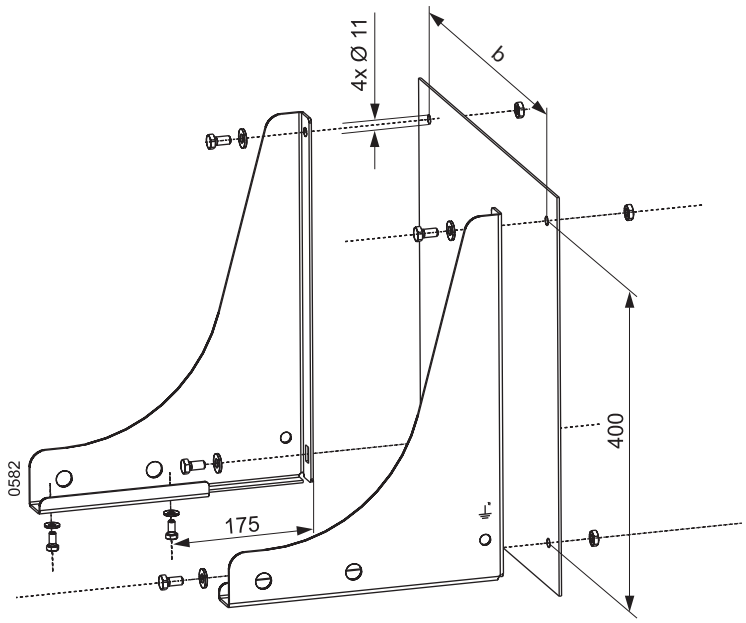
Werden in Schaltschränken **ohne** Fachböden mehrere Einschubschalter übereinander angeordnet, empfehlen wir Lichtbogenkammerabdeckungen zu verwenden.

5.1.2 Mounting on horizontal surface

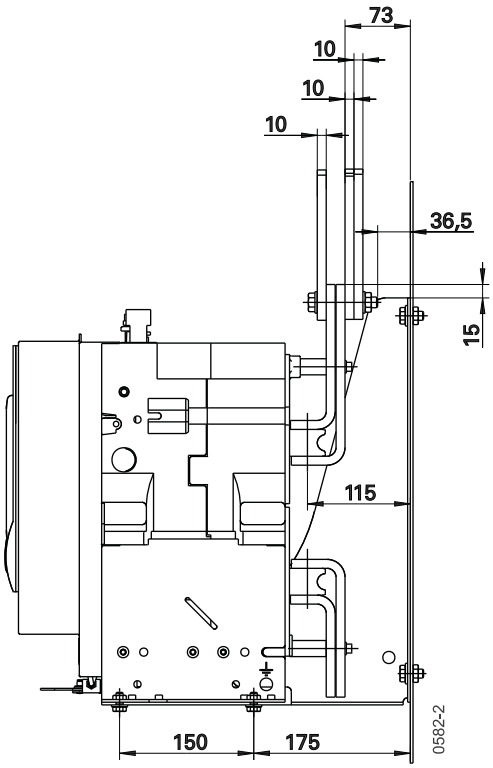
4 Schrauben M8-8.8 + Muttern + Spannscheiben
4 bolts M8-8.8 + nuts + conical spring washers



If several draw-out circuit breakers are arranged one above the other in cubicles **without** compartment bases we recommend to use arc chute covers.



5.1.3 Einbau an senkrechter Ebene mit Tragwinkel



Nur für Festeinbauschalter der Baugrößen I und II.

5.1.3 Mounting to vertical surface with mounting angles

For fixed-mounted breaker frame size I and II only

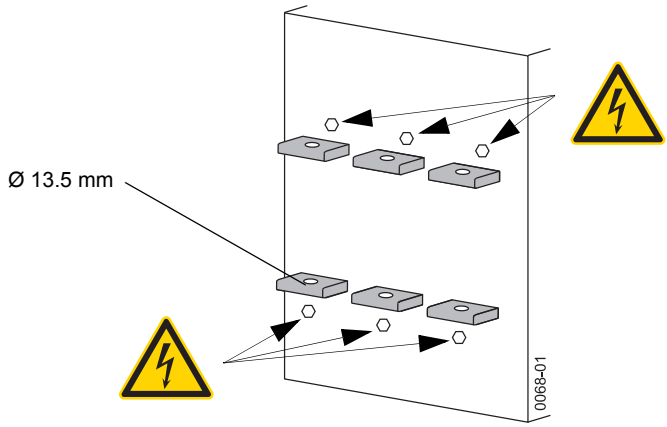
Darstellung für Baugröße II mit Frontanschluss
Representation for frame size II with front connection

Schalter / Breaker		**b** [mm]
BG I / FS I	3 pol 4 pol	300 390
BG II / FS II	3 pol 4 pol	440 570

	Bestellnummer **Order number**
Tragwinkel Bracket angle	3WL9111-0BB50-0AA0

5.2 Anschluss-Schienen

WARNUNG

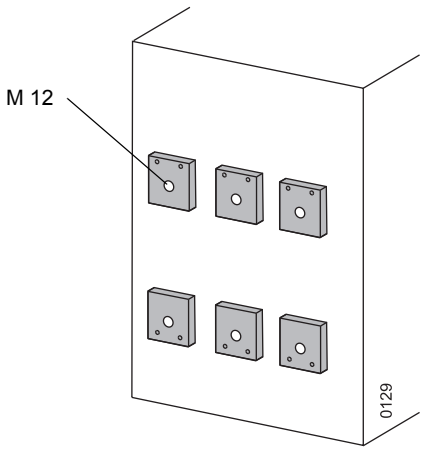


Achtung, die Befestigungsschrauben oberhalb und unterhalb der Anschlussschienen auf der Rückseite des Einschubrahmens sind spannungsführend!

Baugrößen / Maßbilder → (Seite 7-1)

Die Hauptleiter-Mindestquerschnitte der anlagenseitigen Anschluss-Schienen sind in IEC 60947 und Katalog LV 10 angegeben.

5.2.1 Horizontalanschluss



Der Horizontalanschluss ist Standardanschluss für Festeinbau-schalter und Einschubrahmen.

Nur für Einschubrahmen:

→ Einbau des Horizontalanschlusses beim Umrüsten (Seite 5-9)

5.2.2 Flanschanschluss (nur Einschubrahmen)

Der Einbau der Flanschanschlüsse erfolgt wie der Einbau der Vertikal- und Horizontalanschlüsse → (Seite 5-9).

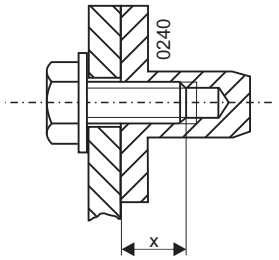
5.2 Connecting bars

WARNING

Attention, the fastening screws above and below the connection bars on the back of the guide frame are voltage-carrying!

Frame sizes / dimension drawings → (page 7-1)

The minimum dimensions for bus bar connections are given in IEC 60947 und Katalog LV 10.



5.2.1 Horizontal connection

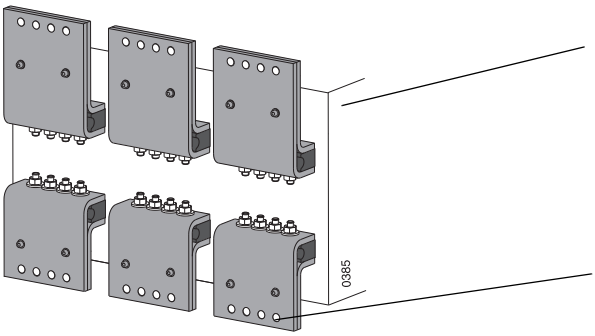
The horizontal connection is the standard connection for fixed-mounted circuit breakers and guide frames.

For guide frames only:

→ Installing horizontal connection for retrofitting (page 5-9)

5.2.2 Flange connection (guide frame only)

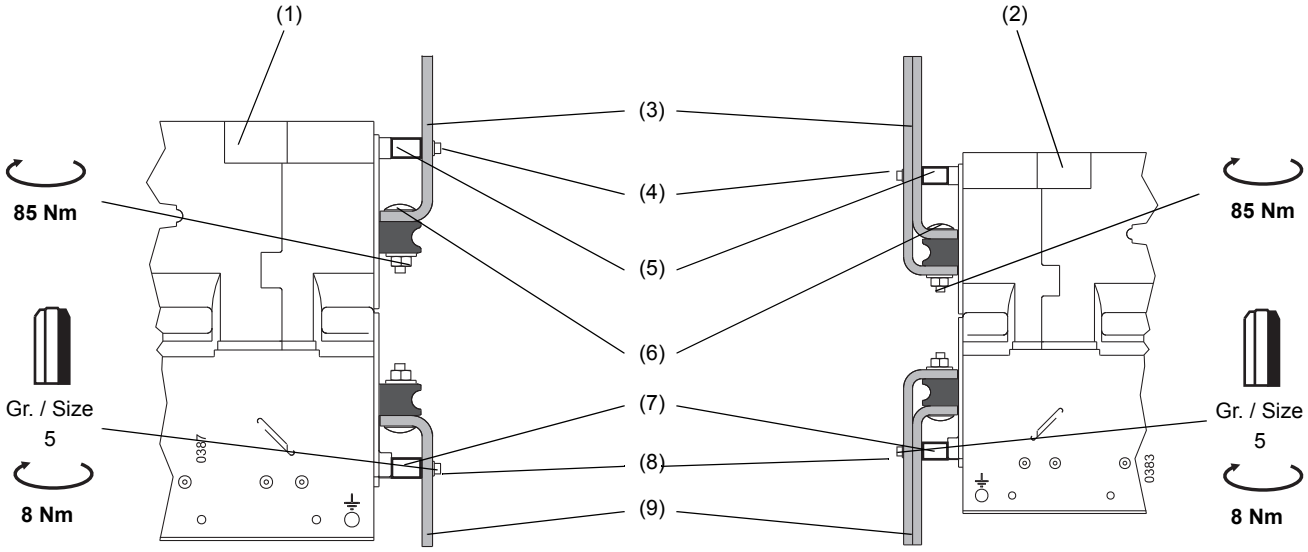
70 ± 4 Nm



Einschraubtiefe / Screw-in depth:
x = 18–24 mm
= 45/64“ - 15/32“

The flanged connections are installed in the same way as the vertical and horizontal connections → (page 5-9)

5.2.3 Frontanschluss

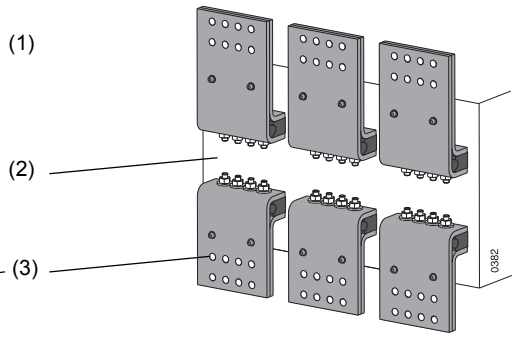


Festeinbauschalter

Ausführung der Anschluss-Schienen:

(1) Standardausführung
(2) Ausführung nach DIN 43673 (Doppellochreihe)
(3) Bohrungen Ø 13,5

Befestigung der Anschluss-Schienen:



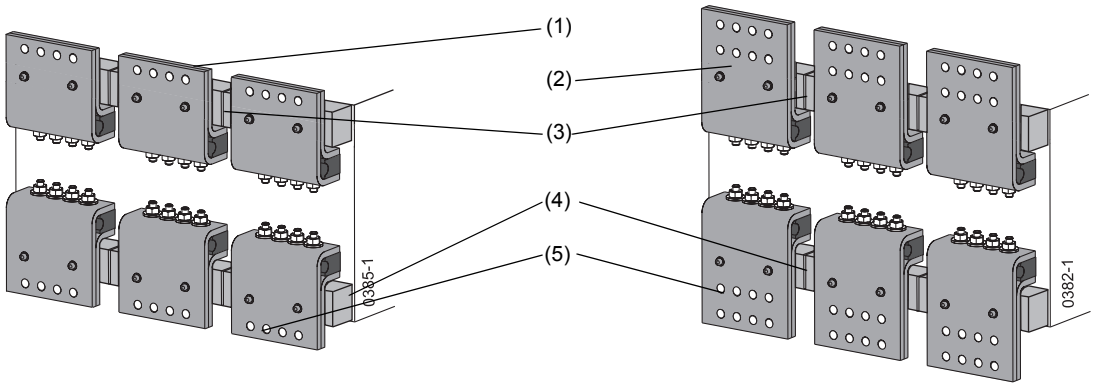
(1) Für Baugröße:
I ≤ 1000 A und
II ≤ 2000 A
(2) Für Baugröße:
I 1250 A - 2000 A, Schaltvermögen H
II 2500 A, 3200 A
III 4000 A
(3) Lange Anschluss-Schiene
(4) Kurze Innensechskantschraube ISO 4762 M6 mit Spannscheibe
(5) Kurze Distanzhülse
(6) Schlossschraube DIN 603 M12 mit Spannscheibe und Mutter
(7) Lange Distanzhülse
(8) Lange Innensechskantschraube ISO 4762 M6 mit Spannscheibe
(9) Kurze Anschluss-Schiene

5.2.3 Front connection

Fixed-mounted breaker

Two variations are offered:

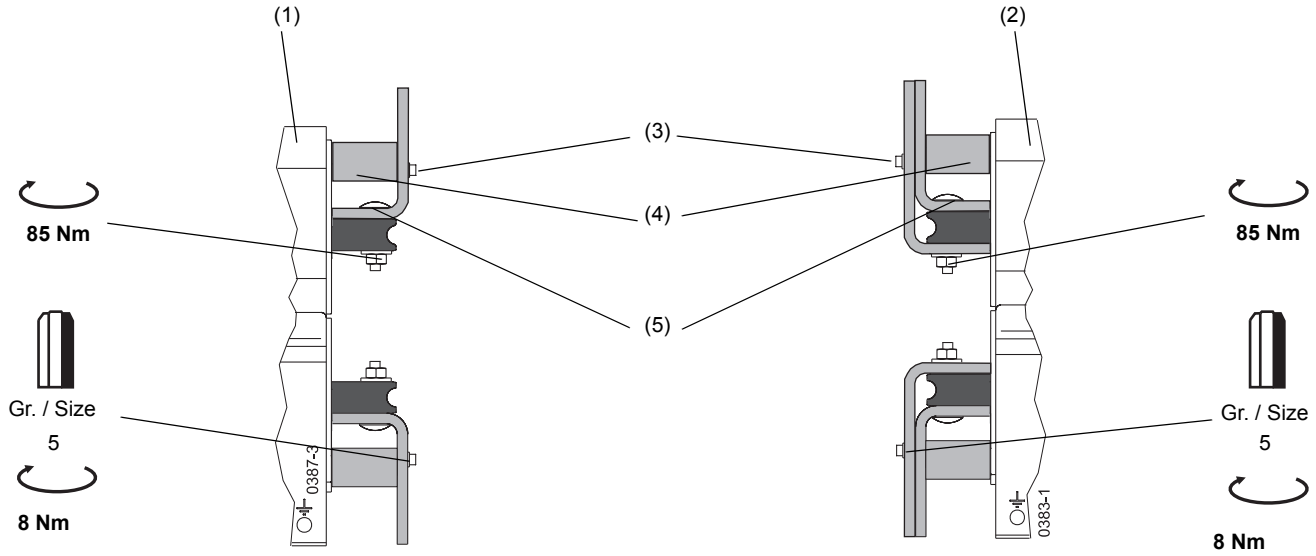
(1) Standard version
(2) Version according to DIN 43673 (double hole row)
(3) Holes Ø 13.5



Fastening connecting bars:

(1) For frame size:
I ≤ 1000 A and
II ≤ 2000 A
(2) For frame size:
I 1250 A - 2000 A, breaking capacity H
II 2500 A, 3200 A
III 4000 A
(3) Long connecting bar
(4) Short hexagon socket-head screw ISO 4762 M6 with conical spring washer
(5) Short distance sleeve
(6) Coach screw DIN 603 M12 with conical spring washer and nut
(7) Long distance sleeve
(8) Long hexagon socket-head screw ISO 4762 M6 with conical spring washer
(9) Short connecting bar

Hinweis	**Note**
Diese Anschlussart ist in der BG III Schaltvermögen C nicht zulässig.	This type of connection is not permitted in FS III breaking capacity C.



Einschubrahmen

Ausführung der Anschluss-Schienen:

(1) Standardausführung
(2) Ausführung nach DIN 43673 (Doppellochreihe)
(3) Nuten für Phasentrennwände; Einbaulage wie gezeigt!
(4) Stützer
(5) Bohrungen Ø 13,5

Befestigung der Anschluss-Schienen:

(1) Für Baugröße:
I ≤ 1000 A und
II ≤ 2000 A
(2) Für Baugröße:
I 1250 A - 2000 A, Schaltvermögen H
II 2500 A, 3000 A
III 4000 A
(3) Innensechskantschraube ISO 4762 M6 mit Spannscheibe
(4) Stützer; Einbaulage wie gezeigt!
(5) Schlossschraube DIN 603 M12 mit Spannscheibe und Mutter

Umrüsten von Vertikal- oder Flanschanschluss auf Frontanschluss erfordert vorher Einbau des Horizontalanschlusses!

→ (Seite 5-8)

Guide frame

Two variations are offered:

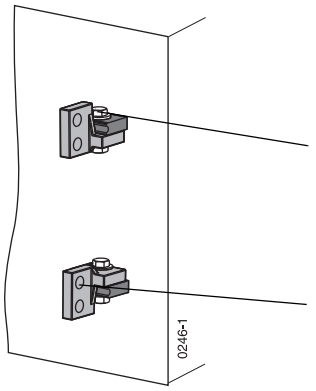
(1) Standard version
(2) Version according to DIN 43673 (double hole row)
(3) Slots for phase separation walls; mounting position as shown!
(4) Support
(5) Holes Ø 13.5

Fastening connecting bars:

(1) For frame size:
I ≤ 1000 A and
II ≤ 2000 A
(2) For frame size:
I 1250 A - 2000 A, breaking capacity H
II 2500 A, 3200 A
III 4000 A
(3) Hexagon socket-head screw ISO 4762 M6 with conical spring washer
(4) Support; mounting position as shown!
(5) Coach screw DIN 603 M12 with conical spring washer and nut

Conversion from vertical or flange connection to front connection requires installation of horizontal connection first!

→ (page 5-8)



5.2.4 Vertikalanschluss

5.2.4.1 Festeinbauschalter

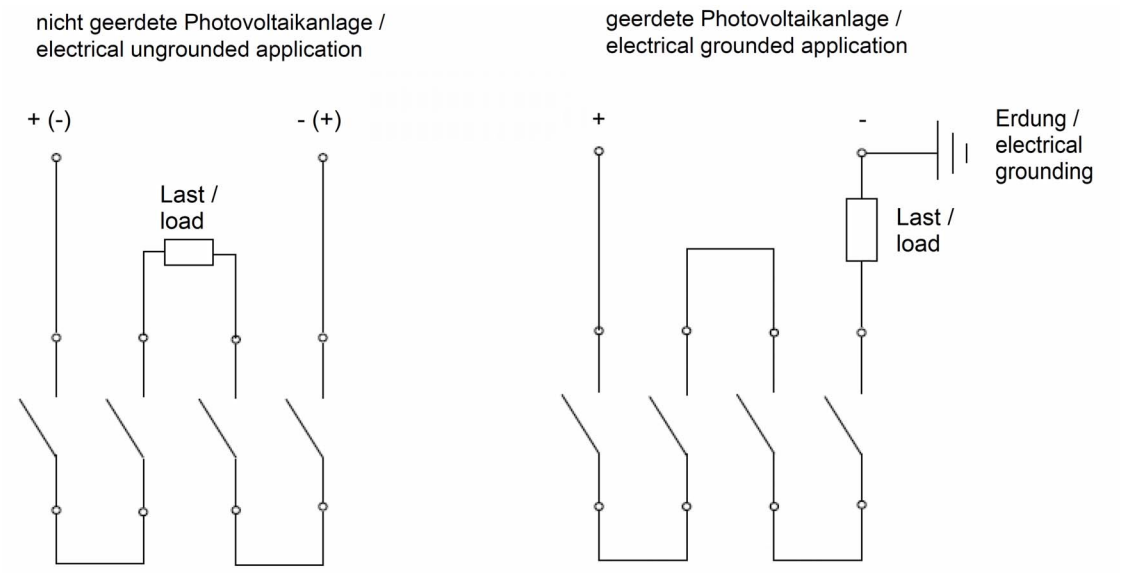
Hinweis		**Note**
Die Abbildung zeigt den oberen Vertikalanschluß, der untere Anschluß ist spiegelbildlich zu montieren		Picture shows upper vertical terminal, bottom must be assembled inversly

Hinweis	**Note**
Die Lamellenblöcke für Leistungsschalter der Baugröße III, 4000 A, sind nicht vollständig mit Lamellen bestückt. Achtung! Bei der Montage nur gleichartig ausgestattete Lamellenblöcke verwenden.	The finger cluster for circuit breaker frame size III, 4000 A, are not fully equiped with contact blades. Attention! Use only similarly equipped finger cluster.

5.2.5 Zulässige Anschluss-Schienenvarianten für Baugröße I 1000 V DC Leistungstrennschalter

Baugröße I 1000 V DC Leistungstrennschalter werden nur in vierpoliger Ausführung angeboten. Plus-/Minuspol des in Reihe zu verschaltenden Leistungstrennschalters bilden die außenliegenden jeweils oberen Anschlüsse der Phasen N und L3. Verfügbare Schienenvarianten für diese beiden Anschlüsse sind Horizontal- und Vertikalanschluss. Die sechs verbleibenden Horizontalanschlüsse sind nach folgenden Schemata zu verschalten.



5.2.5 Permissible connection bar versions for frame size I 1000 V DC non-automatic air circuit breaker

Frame size I 1000V DC non-automatic air circuit breakers are only available in the 4-pole version. The upper connections of phases N and L3 form the positive/negative poles in a non-automatic air circuit breaker that is switched in series. Horizontal and vertical connections are available. The six remaining horizontal connections must be connected according to the schematics below.

Hinweis	**Note**
Minimale Anforderung an die Kurzschlussbrücken (Anzahl x Breite x Dicke): 3 x 50 mm x 10 mm	Minimum requirement on the jumpers (quantity x width x thickness) 3 x 50 mm x 10 mm

5.2.6 Zulässige Verschaltungen, Schaltpläne für Baugröße I 1000 V DC Leistungstrennschalter

5.2.6 Permissible connections, connection schemes for frame size I 1000 V DC non-automatic air circuit breaker

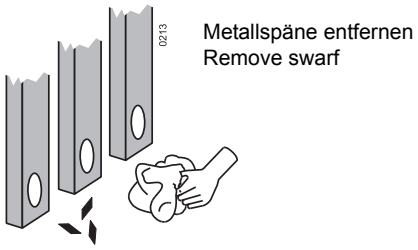
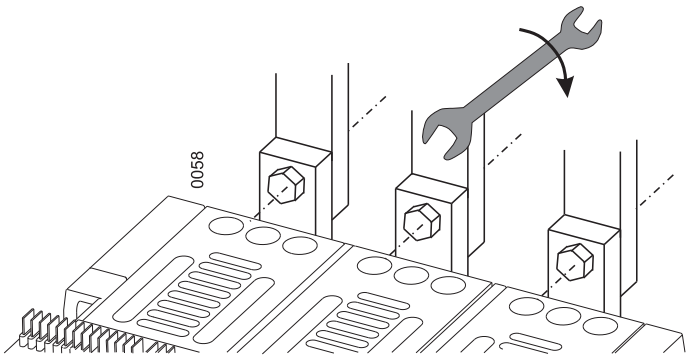
1) Anzahl Anschluss-Schienen pro Hauptanschluss
(z. B. 3-poliger Leistungsschalter = sechs Hauptanschlüsse)

1) Number of connecting bars per main contact
(e. g. circuit breaker with 3 poles = 6 main contacts)



5.3 Hauptleiter anschließen

WARNUNG
Bei 4-poligen Leistungsschaltern ist der N-Leiter immer ganz links anzuschließen. Anderenfalls kann es zu Fehlfunktionen des elektronischen Überstromauslösers kommen. Das Anschließen von Kabeln unmittelbar an die Leistungsschalteranschlüsse ist nicht zulässig.



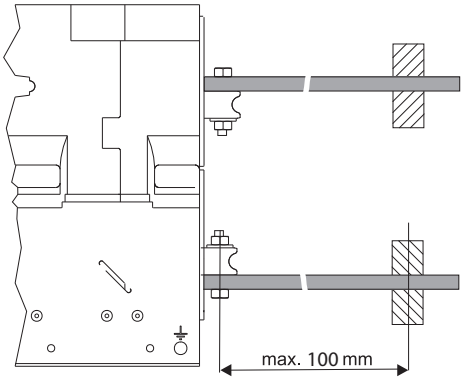
Hauptleiteranschluss säubern

Kupfer-Anlagenschienen säubern

Anlagenseitige Schienen festschrauben

5.3 Connecting the main conductors

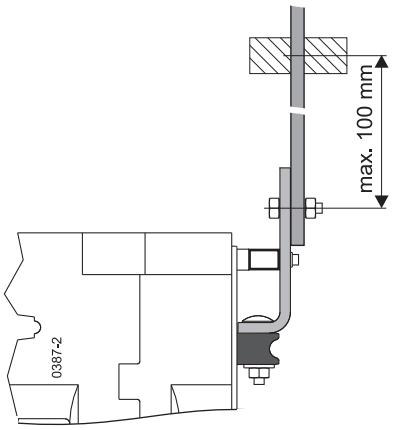
WARNING
On 4-pole circuit breakers, the neutral conductor must always be connected all on the left. Otherwise this can cause malfunctions of the electronic overcurrent release. The connection of cables directly to the circuit breaker terminals is not permitted.



Cleaning the main conductor connection

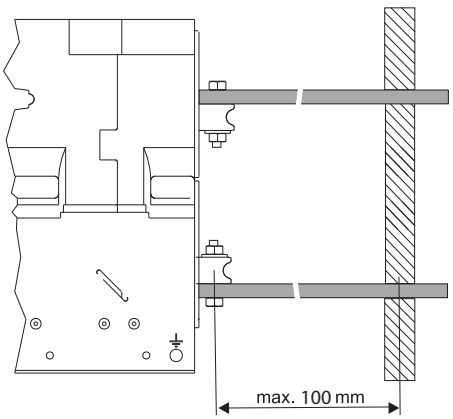
Cleaning the copper bars

Bolt tight line-side bars

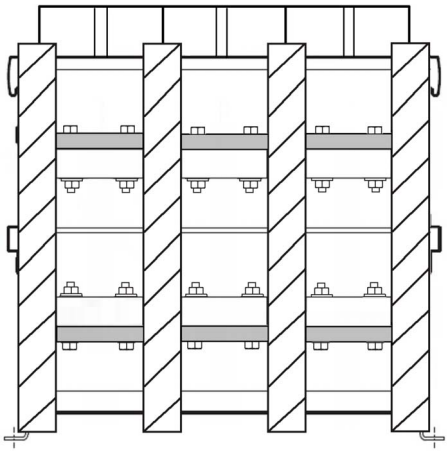


Hauptleiter abstützen

für Schaltvermögen N, S, H

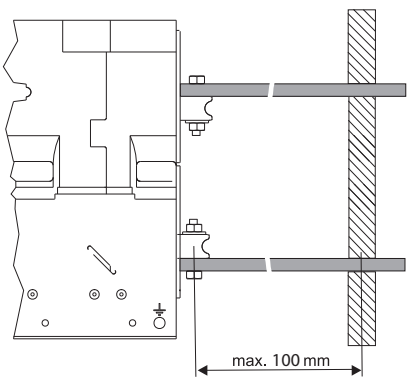


Bracing the main conductors



for breaking capacity N, S, H

BG II Schaltvermögen C ($I_{cs} = I_{cu} > 100$ kA)



FS II breaking capacity C ($I_{cs} = I_{cu} > 100$ kA)

Hinweis	**Note**
Die Hauptleiter für BG II Schaltvermögen C ($I_{cs} = I_{cu} > 100$ kA) sind in vertikaler und horizontaler Richtung abzustützen.	The main conductors for FS II breaking capacity C ($I_{cs} = I_{cu} > 100$ kA) must be braced in vertical and horizontal direction.

BG III Schaltvermögen C ($I_{cs} = I_{cu} > 100$ kA)

FS III breaking capacity C ($I_{cs} = I_{cu} > 100$ kA)

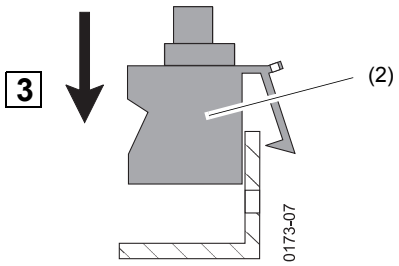
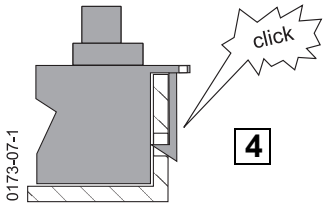
5.4.2 Messerleiste

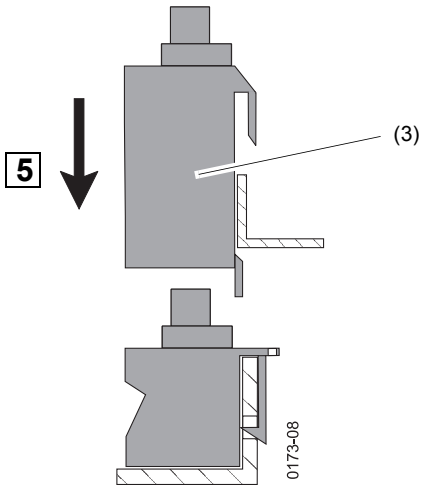


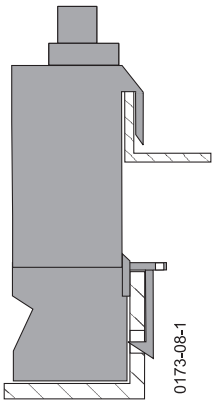
Anordnung

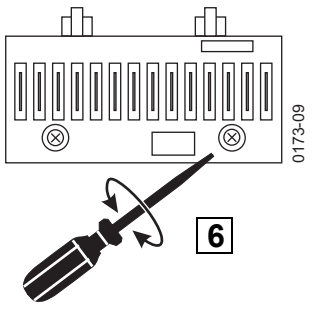


(1) Lichtbogenkammer
(2) Messerleiste

Nachrüsten

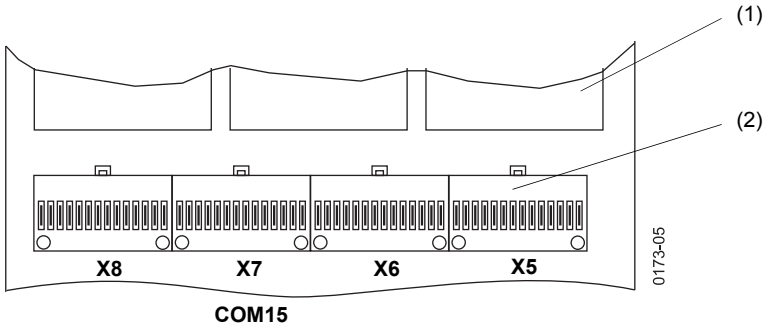






(1) Blindblock
(2) Messerleiste

Nur für Leistungsschalter, 1000 V Ausführung und BG II Schaltvermögen C



PH 1
0,7 Nm

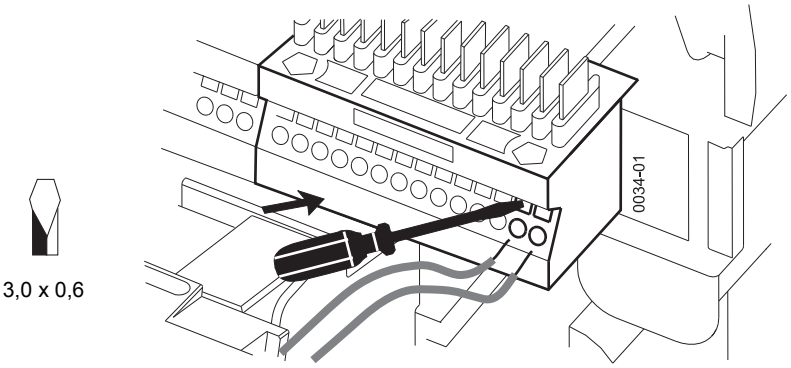
(3) Messerleistenadapter für hohe Lichtbogenkammer

5.4.2 Receptacle

Arrangement

(1) Arc chute
(2) Receptacle

Retrofitting

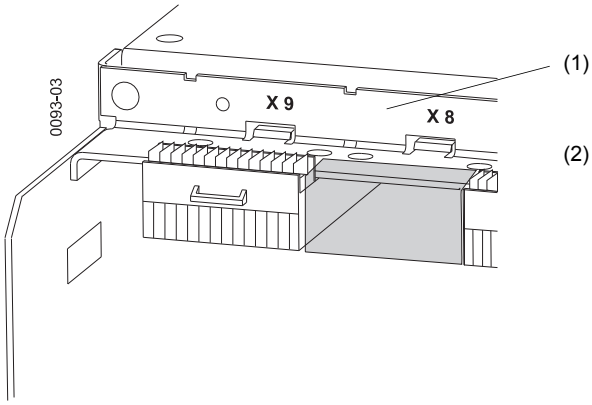


(1) Blanking cover
(2) Receptacle

Only for circuit breaker, 1000 V version and FS II breaking capacity C

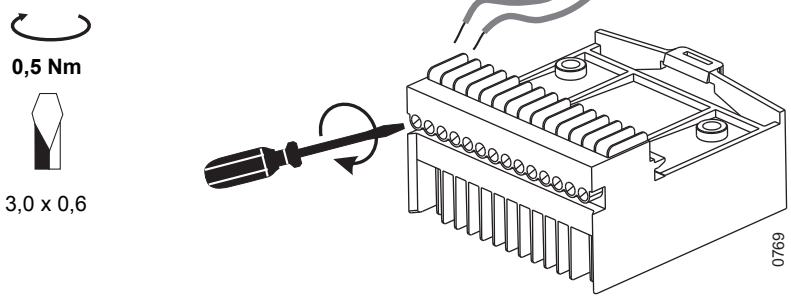
(3) Receptacle adapter for high arc chute

Leitungen anschließen



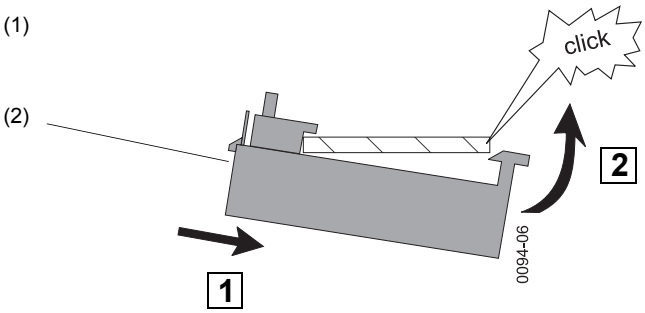
Schraublose Anschlusstechnik

Connecting secondary wiring



Screwless terminal system

5.4.3 Schleifkontaktmodul Nachrüsten

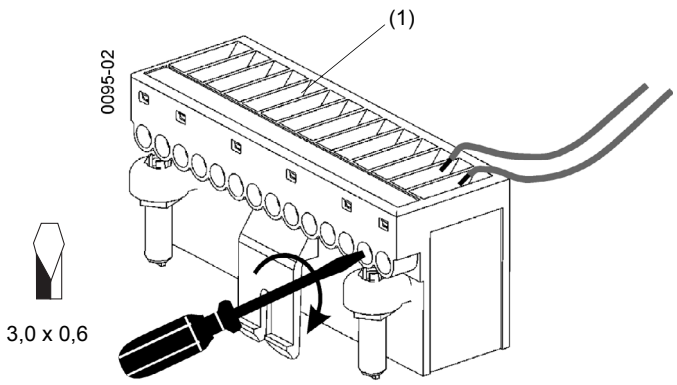


(1) Einschubrahmen mit Schleifkontaktmodulen
(2) Schleifkontaktmodul

Für die SIGUT-Anschlusstechnik steht auch ein einteiliges Schleifkontaktmodul zur Verfügung.

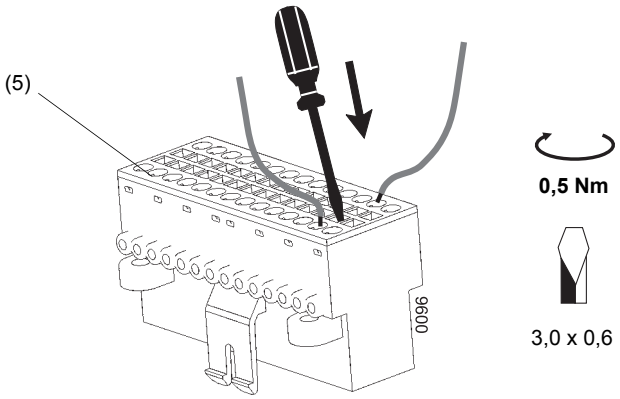
Einteilige Schleifkontaktmodule benötigen keinen Hilfsstromstecker. Die Leitungen werden direkt am Schleifkontaktmodul angeschlossen.

5.4.3 Sliding contact module Retrofitting



(1) Cradle with sliding contact modules
(2) Sliding contact module

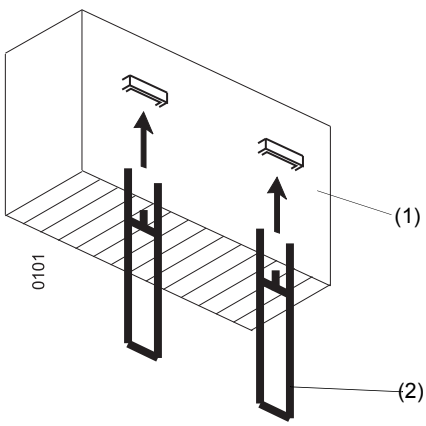
For the SIGUT terminal system, a one-piece sliding contact module is also available.



The one-piece sliding contact modules do not require auxiliary plugs. The wiring is directly to the sliding contact module.

5.4.4 Hilfsstromstecker

Ausführungen



(1) SIGUT-Technik
(2) Ringösen-Schraubtechnik
(3) Isolierte Ringöse
(4) Schrauben ANSI B 18.6.3 #4

(5) Schraublose Anschlusstechnik, 2 Klemmen pro Kontakt
(6) **Nur Festeinbauschalter:** Vormontierte Leitungen

COM15/COM16 → (Seite 9-86)

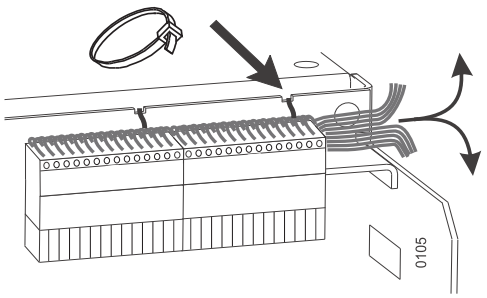
5.4.5 Unzulässige Bereiche für Leitungen

VORSICHT		CAUTION
Unzulässige Bereiche für Leitungen: **Leitungen können beschädigt werden.**		**Impermissible area for wires:** **Damage to wires in this area.**



(1) Ausblasraum*)
(2) Tragegriff
(3) Ausblasöffnungen
(4) Verriegelungen

*) Sind Lichtbogenkammerabdeckungen vorhanden, dürfen die Hilfsleiter nicht auf diesen Abdeckungen verlegt werden.

(1) Arcing space*)
(2) Carrying handle
(3) Arcing openings
(4) Interlocks

*) If there are arc chute covers installed, auxiliary wires must not lay directly on top of these covers.

5.4.6 Leitungsverlegung am Einschubrahmen

5.4.7 Bestückung mit Hilfsleiteranschlüssen

Klemmen X6 sind immer vorhanden. In Abhängigkeit von der Ausrüstung des Leistungsschalters mit optionalem Zubehör sind weitere Klemmen erforderlich.

Ggf. müssen die entsprechenden Messerleisten, Hilfsstromstecker und für Einschubrahmen auch Schleifkontaktmodule nachgerüstet werden.

5.4.7 Arrangement of secondary disconnects

The terminals X6 are standard. Depending on optional accessories, additional terminals may be necessary.

In case of necessity, additional receptacles, hand plugs and (for guide frames) sliding contact modules have to be fitted.

Klemme	Optionales Zubehör	Optional accessories
X5	- Motorantrieb mit Speicher mit mechanischem und elektrischem Abruf - 2. Hilfsauslöser = Spannungsauslöser F2 **oder** Unterspannungsauslöser F3 **oder**, verzögerbarer Unterspannungsauslöser F4 - Hilfsstromschalter S3 + S4 oder S7 + S8 oder S3 + S8 - Motorabstellschalter S12 (nur möglich, wenn Motorantrieb gewählt)	- Charging motor with mechanical and electrical closing command - 2nd auxiliary release = shunt trip F2 **or** undervoltage release F3 **or** delayed undervoltage release F4 - Auxiliary switches S3 + S4 or S7 + S8 or S3 + S8 - Motor disconnect switch S12 (only if charging motor exist)

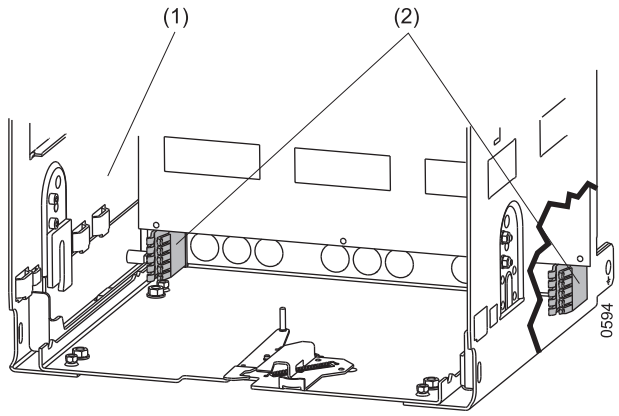
5.5 Schutzleiter anschließen

5.5.1 Festeinbauschalter

5.5.2 Einschubrahmen

Bei BG II 4000 A wird der Einschubrahmen nur durch die Schrauben zur Befestigung im Schaltschrank geerdet.

5.5 Connecting the grounding conductor



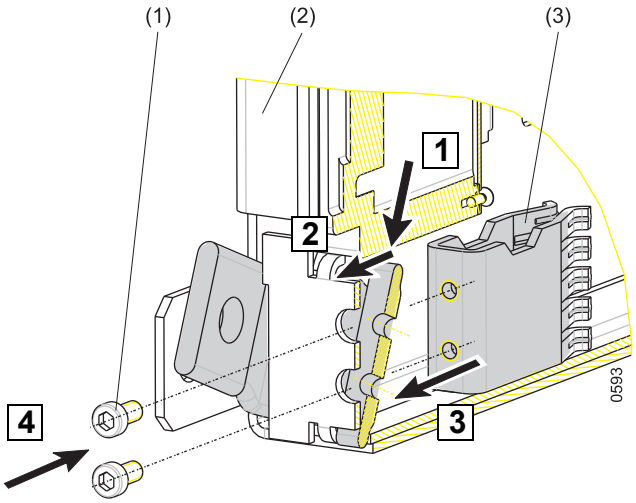
5.5.1 Fixed-mounted breaker

5.5.2 Guide frame

The guide frame of FS II 4000 A is grounded only by the screws fastening it in the cubicle.

5.6 Erdschutz zwischen Einschubrahmen und Einschubschalter

Nicht zulässig bei BG II Schaltvermögen C.

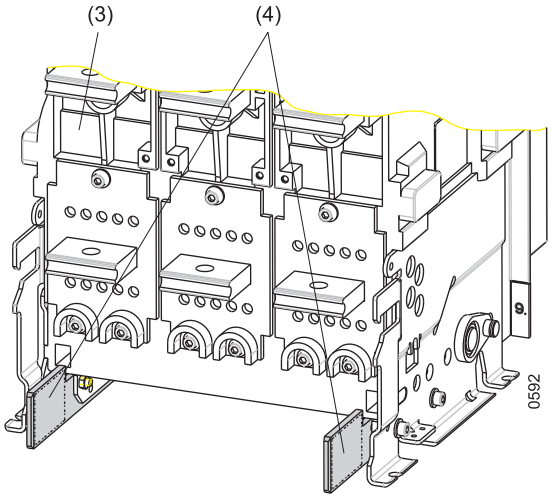


(1) Einschubrahmen
(2) Kontaktmodul für Einschubrahmen
(3) Rückseite des Einschubschalter
(4) Kontaktmodul für Einschubschalter

5.6.1 Nachrüsten

Anbau des Kontaktmoduls am Einschubrahmen

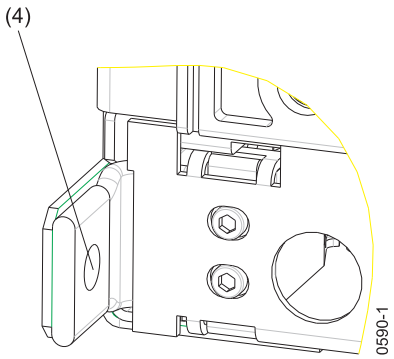
Vor Einbau des Einschubrahmens in die Schaltanlage anbauen.



(1) 2 x Innensechskantschraube M6 x 12 DIN 6912
(2) Rückseite des Einschubrahmens
(3) Kontaktmodul
(4) Erdungsanschluss

5.6 Ground protection between guide frame and draw-out circuit breaker

Not permitted in FS II breaking capacity C.

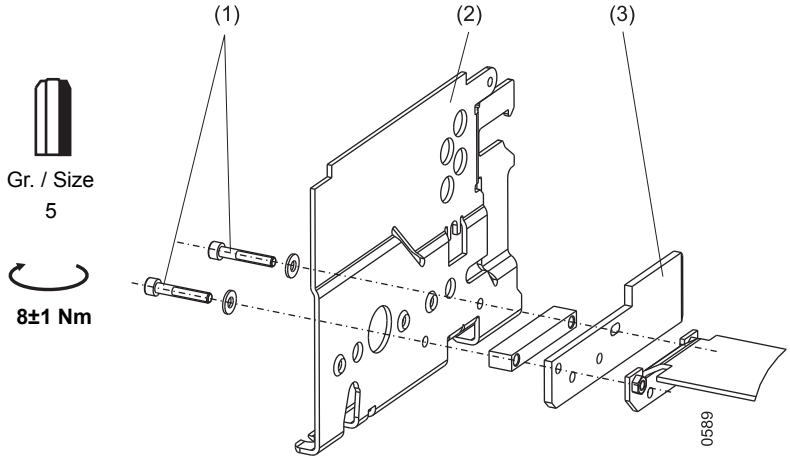


(1) Guide frame
(2) Contact module for the guide frame
(3) Back of the draw-out circuit breaker
(4) Contact module for the draw-out circuit breaker

5.6.1 Retrofitting

Fitting contact module on the guide frame

Mount it before fitting the guide frame in the panel.

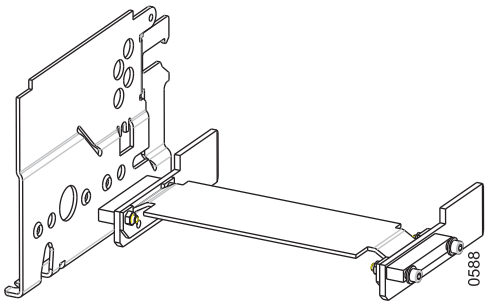


(1) 2 x hexagon socket thin head cap screw M6 x 12 DIN 6912
(2) Back of the guide frame
(3) Contact module
(4) Grounding connection

5.6.2 Kontakt fetten

Lamellenkontakt vor dem Zusammenbau fetten.
Fett: Isoflex Topas NB 52,
Fa. Klüber Lubrication München SE & Co. KG

Kontaktmodul am Einschubschalter anbauen



(1) 2 x Innensechskantschraube M6
(2) Innenseite Einschubschalterfuß
(3) Erdungsmesser

5.6.2 Lubrication of contact

Grease finger contact before assembly.
Grease: Isoflex Topas NB 52,
Co. Klüber Lubrication München SE & Co. KG

Fitting contact module to a draw-out circuit breaker

(1) 2 x hexagon socket thin head cap screw M6
(2) Inside of draw-out circuit breaker foot
(3) Grounding blade

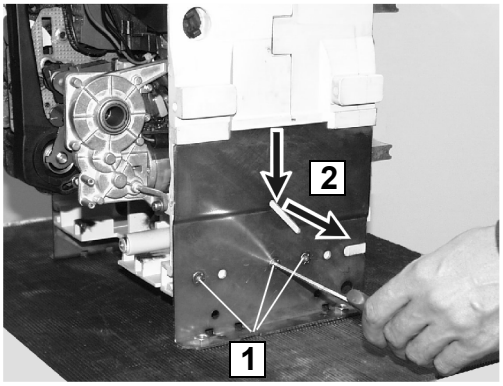
Einschubschalter BG III / 4-polig draw-out circuit breaker frame size III / 4-pole	3WL9111-0BA10-0AA0

Hinweis	**Note**
Dieses Zubehör ist für BG II Schaltvermögen C Leistungsschalter und Einschubrahmen nicht erhältlich.	This accessory is not available for FS II breaking capacity C circuit breakers and guide frames.

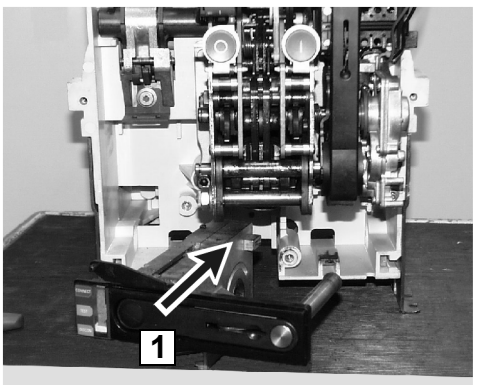


5.7 Umrüsten Festeinbauschalter in Einschubschalter

Nicht zulässig bei BG II und III Schaltvermögen C!

- Ausschalten und Federspeicher entspannen → (Seite 24-3)
- Festeinbauschalter ausbauen → (Seite 5-1)
- Anschlüsse bis auf den Horizontalanschluss abrüsten → (Seite 5-4)
- Bedienpult abnehmen → (Seite 24-11)
- Überstromauslöser ausbauen → (Seite 9-72)
- Nennstromkodierung an den neuen Schalterfüßen und am Einschubrahmen anbringen → (Seite 18-7)

5.7.1 Umrüsten

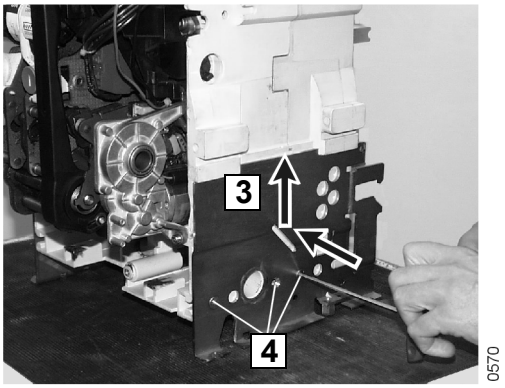


Schalterfüße wechseln

1 3 Senkschrauben M6x20 lösen und entfernen **(Baugröße I** ohne die mittlere Schraube.)
2 Schalterfuß des Festeinbauschalters abnehmen
3 Schalterfuß für Einschubschalter ansetzen
4 Schalterfuß mit 3 bzw.2 Senkschrauben M6x20 anschrauben

Einfahrantrieb einbauen

1 Einfahrantrieb einsetzen



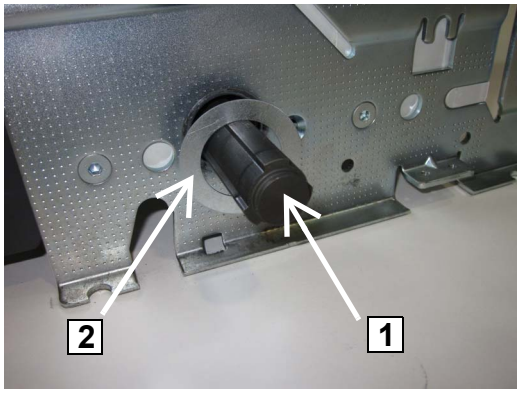
5.7 Converting fixed-mounted circuit breakers into draw-out circuit breakers

Not permitted in FS II and III breaking capacity C!

- Switch off and discharge the storage spring → (page 24-3)
- Remove fixed-mounted circuit breaker → (page 5-1)
- Remove terminals other than horizontal terminals → (page 5-4)
- Remove front panel → (page 24-11)
- Remove overcurrent release → (page 9-72)
- Install rated current coding at the new circuit breaker feet and at the guide frame → (page 18-7)

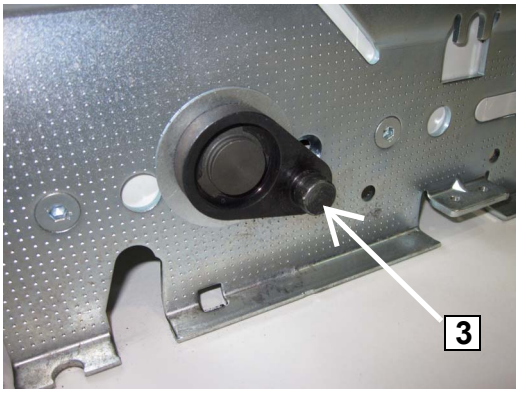
5.7.1 Conversion

Replacing circuit breaker feet



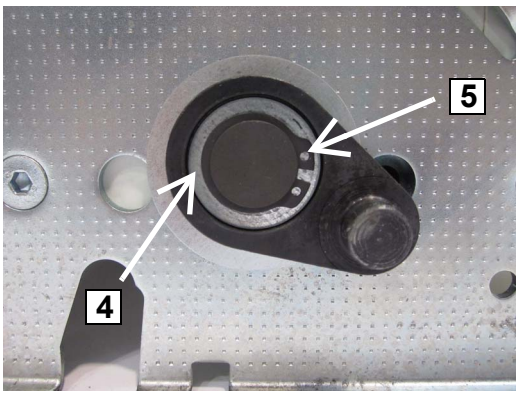
1 Loosen and remove countersunk 3 head screws M6x20 **(Frame size I** without the screw in the middle)
2 Remove circuit breaker foot of fixed-mounted breaker
3 Replace by foot for draw-out circuit breaker
4 Fit it finally using 3x (resp. 2) screws M6x20

Installing racking mechanism



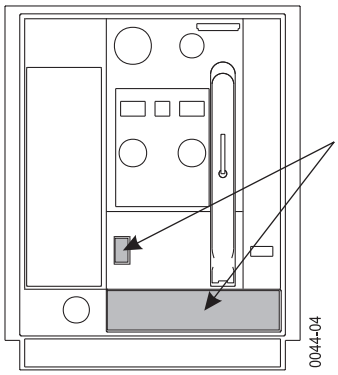
1 Install racking mechanism

Einfahrwelle einbauen

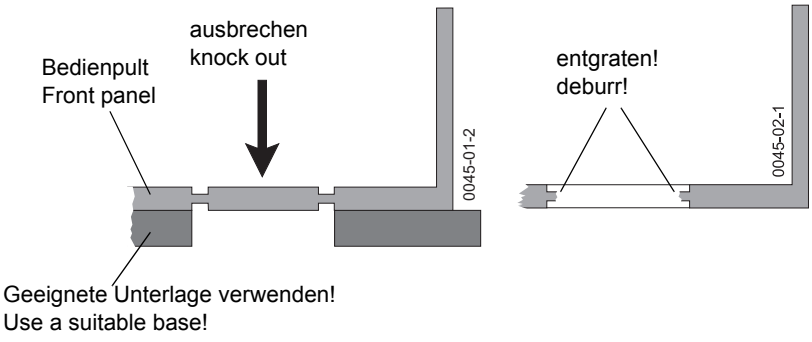


1 Einfahrwelle einsetzen
2 Ausgleichsscheibe Ø 30,1 x Ø 45 x 0,5 einsetzen, wenn Spiel der Einfahrwelle > 0,5 mm (BG I Schaltvermögen H)
Spielausgleich erfolgt beidseitig (links/rechts) !
3 Kurbel aufsetzen

Installing racking shaft



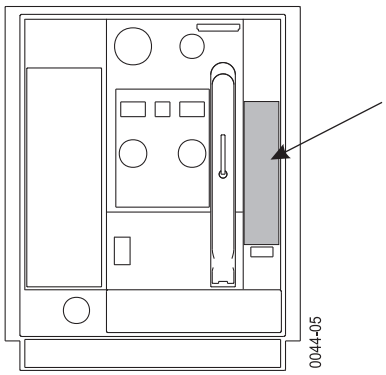
1 Insert racking shaft
2 Insert spacer washer Ø 30,1 x Ø 45 x 0,5, if clearance of racking shaft > 0,5 mm (FS I breaking capacity H)
Adjustment of clearance shall be on both sides (left/right)!
3 Fit crank



4 Wenn vorhanden, Stützscheiben Ø 17,2 x Ø 26 x ... einsetzen
5 Kurbel mit Sicherungsring DIN 471-17x1 sichern

4 If existing, insert supporting washer Ø 17,2 x Ø 26 x ...
5 Secure crank with retaining ring

Bedienpult ausbrechen



Providing cut-outs in the front panel

Klebeschild am Bedienpult anbringen

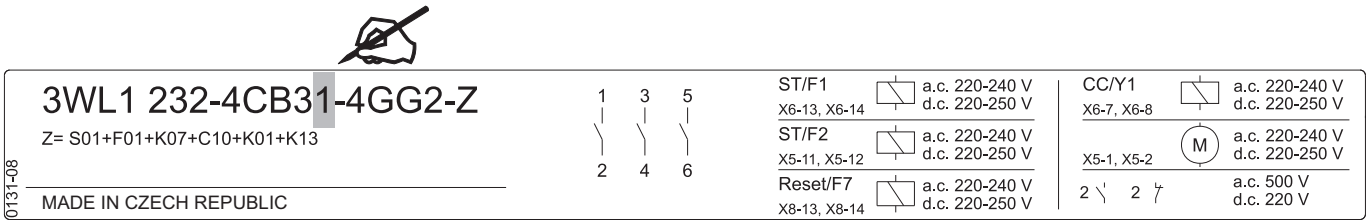
Fix adhesive label at the front panel

Anschließend

- Steuerschieber einbauen → (Seite 15-4)
- Überstromauslöser einbauen → (page 9-72)
- Bedienpult anbauen → (Seite 24-25)
- Einschubrahmen mit den für die jeweilige Anschlussart erforderlichen Anschlussschienen ausrüsten (müssen separat bestellt werden) → (Seite 5-4)
- Einschubrahmen einbauen → (Seite 5-1)
- Schalter in Einschubrahmen einsetzen und in Betriebsstellung verfahren → (Seite 6-1)

Then:

- Install control gate → (page 15-4)
- Install overcurrent release → (page 9-72)
- Install front panel → (page 24-25)
- Assemble the required terminals on the guide frame (need to be ordered separately) → (page 5-4)
- Install guide frame → (page 5-1)
- Insert circuit breaker in guide frame and rack into connected position → (page 6-1)



5.7.2 Schilder aktualisieren

Hinweis	Note
Nach dem Einbau zusätzlicher Komponenten sind folgende Angaben mit einem weißen Permanentstift bzw. mit Aufklebern aus dem beiliegenden Etikettenbogen zu aktualisieren! Davor ist es ggf. notwendig die zu korrigierenden Zeichen mit einem schwarzen Permanentstift zu füllen.	After installing additional components, add the following data using a white and indelible ink pen or the appropiate label from the set of labels supplied! If necessary the signs which need to be corrected have to be filled with a black permanent pen before.

5.7.2 Updating the labels

Ausstattungsschild des Leistungsschalters

Options label of the circuit breaker

5.7.3 Bestellnummern / Z-Zusatz

5.7.3 Order numbers / Z-option

Umbausatz für Festeinbau- in Einschubschalter ... Conversion kit for fixed-mounted into draw-out circuit breaker ...	Bestellnummer Order no.	12. Stelle ändern Modify 12th position

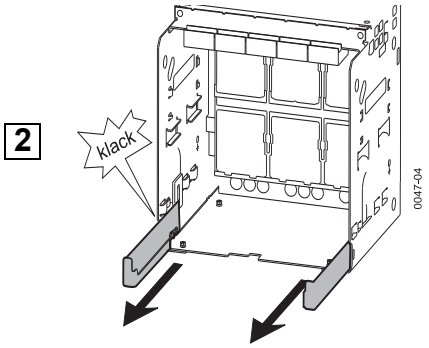
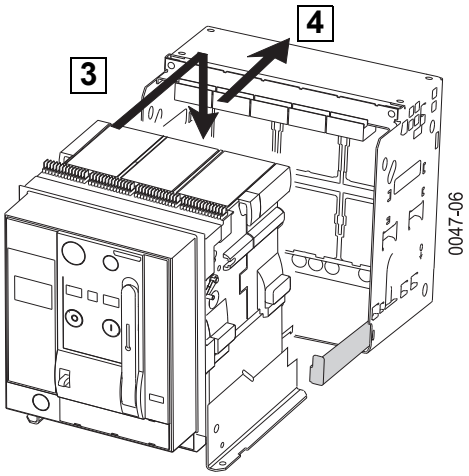
Hinweis	**Note**
Umbausätze können nur über die oben genannte Bestellnummer mit zusätzlicher Angabe der Identnummer des Schalters bestellt werden.	Conversion kits may only be ordered using the above mentioned order number and only together with the identity numbers of the circuit breakers the kits are intended for.

6 Inbetriebnahme

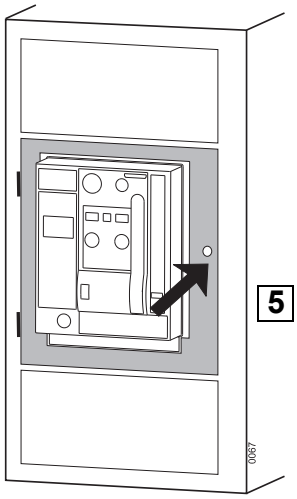


6.1 Vorbereitung des Einschubschalters



6.1.1 Schalter in Einschubrahmen einsetzen

VORSICHT	CAUTION
Bügelschlösser am Shutter entfernen!	Remove padlocks on the shutter!

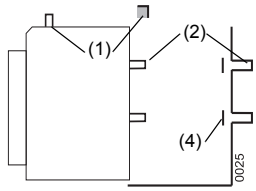


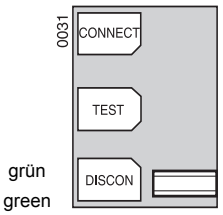
1 Positionsanzeige prüfen
Bei anderer Anzeige ist Einschieben des Schalters nicht möglich.
2 Verfahrschienen herausziehen

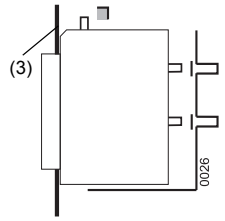
3 Schalter einsetzen
4 und in Trennstellung schieben
5 Schaltschranktür schließen

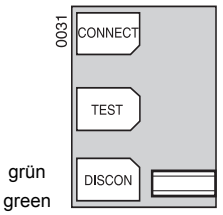
6 Commissioning

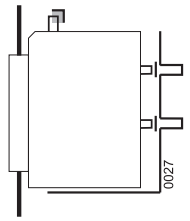
6.1 Preparation of draw-out circuit breaker

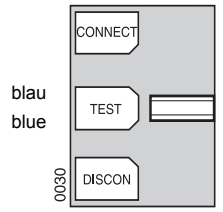


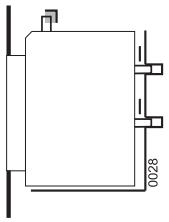


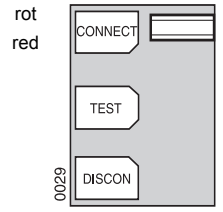










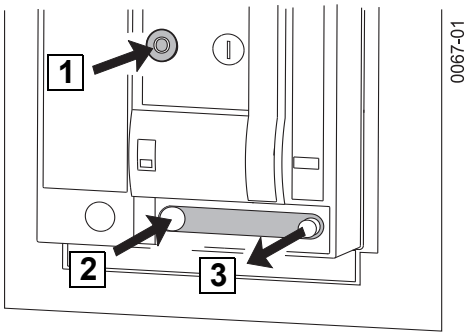


6.1.1 Inserting the circuit breaker in the guide frame

1 Check breaker position indicator
Ensure it shows DISCON. Otherwise the circuit breaker cannot be inserted.
2 Draw out guide rails

3 Place the circuit breaker in the guide frame
4 and push it into disconnected position
5 Close cubicle door

6.1.2 Positionen des Schalters im Einschubrahmen



6.1.2 Positions of the breaker in the guide frame

	Darstellung Diagram	Positionsanzeige Positon indicator	Hauptstrom-kreis Power circuit	Hilfstromkreis Auxiliary circuit	Schalt-schranktür Cubicle door	Shutter Shutter
Wartungsstellung **Maintenance position**			getrennt disconnected	getrennt disconnected	offen open	geschlossen closed
Trennstellung **Disconnected position**			getrennt disconnected	getrennt disconnected	geschlossen closed	geschlossen closed
Prüfstellung **Test position**			getrennt disconnected	verbunden connected	geschlossen closed	geschlossen closed
Betriebsstellung **Connected position**			verbunden connected	verbunden connected	geschlossen closed	offen open

(1) Hilfsstromkreis
(2) Hauptstromkreis
(3) Schaltschranktür
(4) Shutter

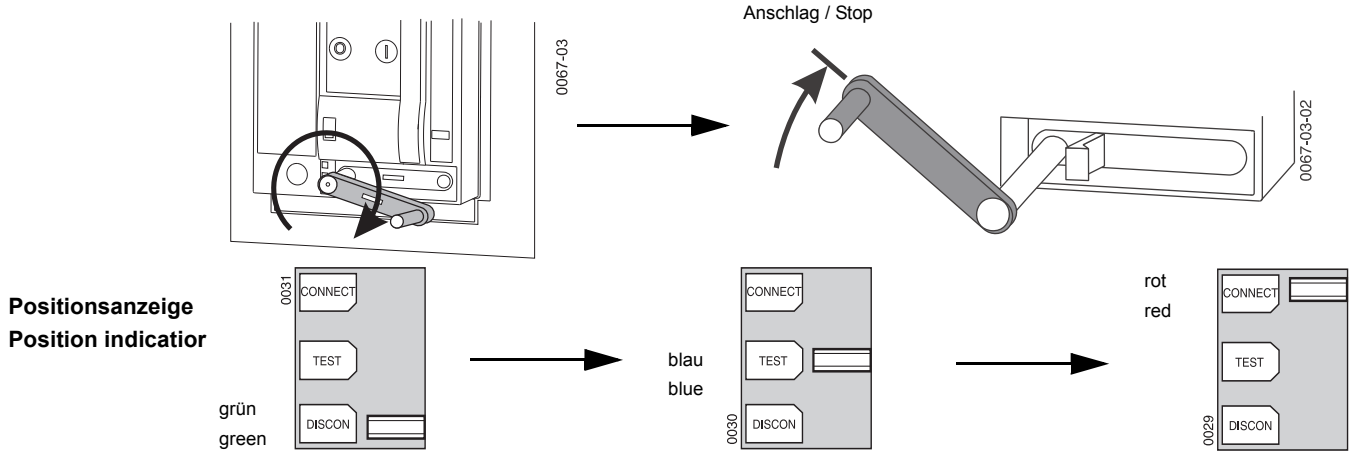
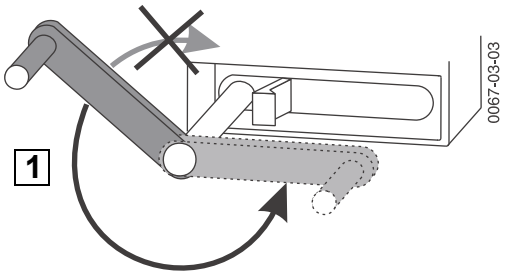
(2) Primary circuit
(3) Cubicle door
(4) Shutter

6.1.3 Handkurbelsperre lösen / Handkurbel herausziehen

1 Ausschalten
2 Kurbel reindrücken
3 Herausziehen des Handgriffs
4 Hebel hochdrücken und halten
5 Kubel herausziehen

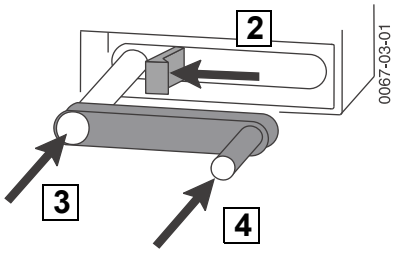


6.1.3 Unlocking the racking handle / Withdrawing racking handle



1 OPEN circuit breaker
2 Push crank
3 Pull out the handle
4 Lift and hold the control lever
5 Pull out the crank

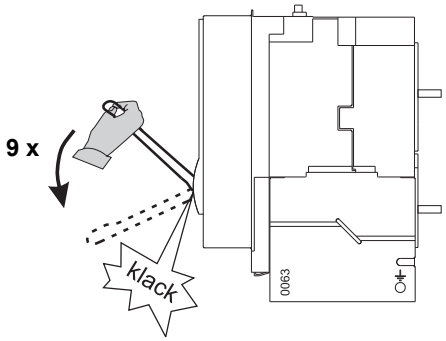
6.1.4 Schalter in Betriebsstellung verfahren

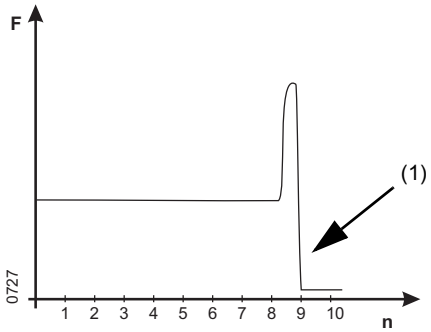


6.1.4 Racking circuit breaker into the connected position

6.1.5 Handkurbel einschieben

6.1.5 Push in the racking handle





Achtung	Notice
Mögliche Beschädigung durch Handkurbel	Possible damage using the racking handle
Überdrehen der Handkurbel über den Anschlag hinaus kann den Einfahrantrieb beschädigen.	Turn the racking handle beyond the stop may cause damage to the racking mechanism.
Wenn der Anschlag erreicht ist, ist die Handkurbel *entgegen dem Uhrzeigersinn* bis in die Position zu drehen, in der sie eingeschoben werden kann.	When the stop is engaged, rotate the handle *counterclockwise* into a position to allow it to be stowed.

6.2 Federspeicher spannen

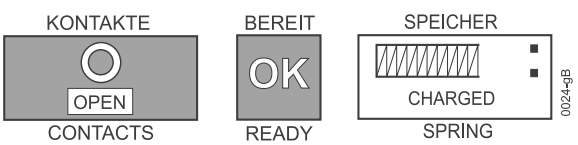
6.2.1 Spannen per Hand

WARNUNG		WARNING
Kann Personenschäden verursachen. Einen ausgebauten, freistehenden Leistungsschalter vor dem Spannen des Federspeichers unbedingt in geeigneter Weise abstützen (z. B. bei Wartungsarbeiten auf der Werkbank).		**May result in serious injury.** Secure a not mounted circuit breaker when charging it manually (e. g. during service on the work bench).

F Betätigungskraft
n Anzahl der Hübe
(1) Feder ist gespannt

F Handle force
n Number of strokes
(1) Spring charged

ACHTUNG	NOTICE
Zum Spannen des Federspeichers den Handhebel vollständig umfassen und jeden Hub gleichmäßig und vollständig bis zum Anschlag ausführen. Der 9. Hub ist genau so weit und gleichmäßig zu betätigen, wie die ersten acht Hübe, obwohl die Betätigungskraft deutlich zunimmt. Ist der Federspeicher vollständig gespannt, lässt sich der Handhebel ohne Widerstand bewegen.	To charge the storage spring, grip the handle firmly and carry out each stroke evenly, moving the lever down as far as it will go. Despite a significant increase in the actuating force required, the lever must be moved as far in the ninth stroke as in the first eight. When the storage spring is fully charged, the lever can be moved without resistance.



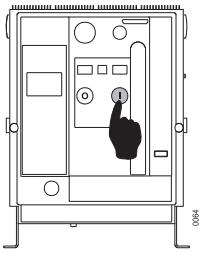
6.2.2 Spannen durch Motorantrieb

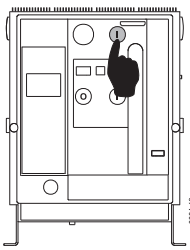
Der Motorantrieb startet automatisch nach Anlegen der Steuerspannung. Am Ende des Spannvorgangs schaltet der Motor automatisch ab. Unmittelbar nach einem Einschaltvorgang, bei dem der Federspeicher entspannt wird, wird er vom Motor wieder gespannt, wenn der Motor permanent mit Spannung versorgt wird. → Nachrüsten des Motorantriebs (Seite 13-1)		The motor operating mechanism starts automatically when the control voltage is applied. The motor switches off automatically when the charging process is completed. The motor will re-engage immediately following spring discharge during a closing operation if voltage is applied to recharge the spring again. → Retrofitting the motor operating mechanism (page 13-1)

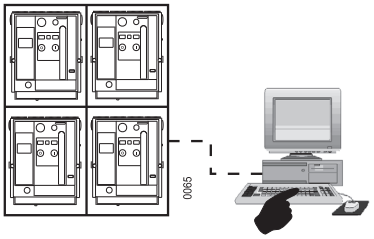
GEFAHR		DANGER
Gefährliche elektrische Spannung! **Kann Tod, schwere Personenschäden sowie Schäden an Geräten und Ausrüstung bewirken.** Vor dem Arbeiten an diesem Gerät, Anlage unbedingt spannungsfrei schalten.		**Hazardous voltage!** **Will cause death, serious personal injury, or equipment / property damage.** Disconnect power before working on this equipment.

6.3 Checkliste für Inbetriebnahme

6.3 Checklist for commissioning







Durchzuführende Arbeiten		**Action required**		✓
Bemessungsstrommodul stecken (bei Einschubschalter in Wartungs- oder Trennstellung) → Bemessungsstrommodul (Seite 9-66)		Insert rating plug (in maintenance or disconnected position of draw out circuit breaker) → Rating plug (page 9-66)		
Rücksetzknopf drücken Mechanische Wiedereinschaltsperre zurückgesetzt		Press red pin to reset Mechanical reclosing lockout		
Betriebswerte am Überstromauslöser einstellen → Überstromauslöser (Seite 9-1)		Set the overcurrent release to appropriate values → Overcurrent releases (page 9-1)		
Schalter ausschalten		Switch OFF circuit breaker		
Hilfs- und Steuerspannungen anschließen		Apply auxiliary and control voltages		
Schaltschranktür schließen		Close the cubicle door		
Einschubschalter in Betriebsstellung verfahren		Rack circuit breaker into connected position		
Handkurbel einschieben (bei Einschubschalter)		Push in the racking handle of the draw out circuit breaker		
Federspeicher spannen		Charge storage spring		
Bedingungen zur Einschaltbereitschaft (je nach Ausführung)		**Conditions for ready-to-close (if applicable)**		
Unterspannungsauslöser	erregt	Under-voltage release	energized	
Spannungsauslöser	nicht erregt	Shunt trip	not energized	
Elektrische Einschaltsperre → (Seite 8-5)	nicht erregt	Electrical closing lockout → (page 8-5)	not energized	
Elektrische Verriegelung des Einschaltmagneten in der Anlagensteuerung	aufgehoben	Electrical interlocking of closing coil in the switch board control wiring	disabled	
Gegenseitige mechanische Schalterverriegelungen	nicht wirksam	Mutual mechanical interlock	not effective	
Sperrvorrichtungen	nicht aktiviert	Locking devices	not activated	
Zustandsanzeigen beachten!		**Observe indications!**		
Achtung: Schalter ist einschaltbereit wenn OK im Fenster BEREIT angezeigt wird und lässt sich manuell oder per Steuerkommando einschalten!		Caution: circuit breaker is ready-to-close if window READY shows OK and may be switched on manually or by remote control

[2)] Nur zulässig, wenn der Hauptstromkreis unterbrochen werden darf!

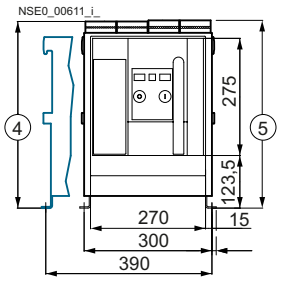
6.9 Störungsbeseitigung → (Seite 6-10)

6.9 Troubleshooting

Fixed-mounted circuit- breaker	Draw-out circuit breaker	Disturbance	Cause	Remedy
X	X	circuit breaker cannot be closed and circuit breaker **not** ready to close. Ready-to-close indicator shows: 	1. Spring not charged 	Charge spring 
X	X		2. Undervoltage release not energized	Energize undervoltage release
X	X		3. Mechanical reclosing lock-out effective	Rectify cause of overcurrent tripping and press reset button
X	X		4. Electrical closing interlock effective	Switch off control voltage for interlocking [1]
X	X		5. “OFF” locked off by cylinder lock (accessories)	Unlock[1]
X	X		6. “OFF” locked off by padlocks (accessories)	Remove padlocks [1]
X	X		7. “Mechanical OFF” button locked off (accessories)	Unlock the “Mechanical OFF” button [1]
X	X		8. “EMERGENCY OFF” button engaged in operating position (accessories)	Release “EMERGENCY OFF” button [1] by rotating it
X	X		9. Lockout against closing with cubicle door open effective (accessories)	Close cubicle door
X	X		10. Mutual mechanical circuit breaker interlocks effective (accessories)	Open second circuit breaker or rack into disconnected position [1]
X	X		11. Electronic overcurrent release (trip unit) missing or incorrectly installed	Fit electronic overcurrent release properly
X	X		12. Shunt trip energized	De-energize shunt trip
X	X		13. Closing coil energized	Closing coil has to be de-energized shortly for reclosing
	X		14. Racking handle withdrawn	Rack circuit breaker into disconnected, test or connected position, unlatch crank and push it fully in

[1] Safety feature!
This remedy action amounts to a reversal (disabling) of a safety precaution installed earlier. Please do ensure that such disabling is now permissible / authorized!

Fixed-mounted circuit- breaker	Draw-out circuit breaker	Disturbance	Cause	Remedy
X	X	circuit breaker cannot be closed and circuit breaker ready to close. Ready-to-close indicator:  	1. Closing coil not energized or incorrectly energized	Check or apply correct voltage
	X		2. circuit breaker in disconnected position in guide frame	Rack circuit breaker into test or connected position
X			3. Auxiliary connectors have been removed	Plug in the auxiliary connectors
	X	Circuit breaker cannot be moved from the maintenance position into the disconnected position	1. Racking mechanism of breaker not in disconnected position (note breaker position indicator)	Rack the mechanism into disconnected position (green position indication)
	X	Circuit breaker cannot be fitted in the guide rails	1. Factory mounted coding of breaker and guide frame doesn't match	Use breaker type according to guide frame label
	X	When racking from the disconnected into the test position, the circuit breaker does not move during the first 6 rotations (approximately)	1. Not a fault	Continue racking
	X	Racking handle cannot be drawn out	1. Circuit breaker is closed	Press "Mechanical OFF" button and pull racking handle block out [2]
	X		2. Cubicle door not completely closed (Locking device as accessory)	Close cubicle door
	X	Racking handle cannot be pushed in	1. Racking handle is interlocked	Rack circuit breaker into disconnected, test or connected position, unlatch crank and push it fully in
X		Cubicle door cannot be opened (door interlock as accessory)	1. Closed circuit breaker is preventing opening of cubicle door	Open the circuit breaker [2]
	X		2. Circuit breaker in connected position	Rack circuit breaker into test or disconnected position [2]



[2] Only permissible if the power circuit may be interrupted!

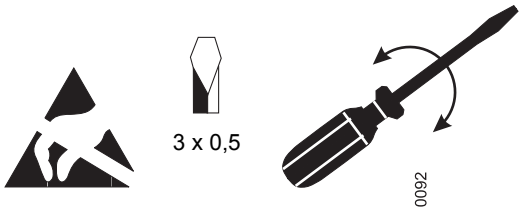
Design

VORSICHT		CAUTION
Zum Schutz der elektrostatisch gefährdeten Bauelemente (EGB) ist die beigefügte Schutzkappe auf die Prüfbuchse zu setzen. Vor Entfernen der Schutzkappe sind anzuschließende Geräte und das Bedienpersonal auf das gleiche Potenzial zu bringen.		To protect the electrostatic sensitive devices (ESD) the attached protective cover must be installed on the test connector. Before the protective cover is removed, ensure that equipment to be connected, and also operating personnel, are at the same potential.

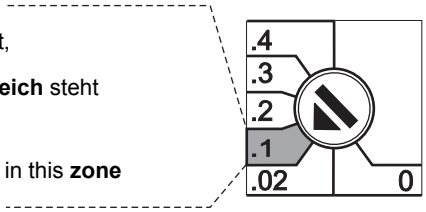
Einstellen des Überstromschutzes



Overcurrent protection settings

VORSICHT	CAUTION
Parametereinstellungen grundsätzlich nur vornehmen, wenn der Leistungsschalter ausgeschaltet ist. Eine Veränderung der Parameter bei eingeschaltetem Leistungsschalter kann zu ungewolltem Auslösen des Leistungsschalters führen.	Adjust parameters only when the circuit-breaker is switched off. If the parameters are modified with the circuit-breaker switched on, this can trip the circuit-breaker unintentionally.

VORSICHT	CAUTION
Bei der Anlagenprojektierung und Selektivitätsbetrachtung ist sicherzustellen, dass der Leistungsschalter nicht Ströme führen kann, die oberhalb der im Katalog angegebenen Schaltleistungswerte liegen. Übergeordnete Schutzgeräte sind so einzustellen, dass diese Fehlerfälle sicher abgeschaltet werden.	When planning a project and considering selectivity it has to be ensured loads carried by the circuit-breaker will not exceed the breaking capacity stated in the 3WL catalogue. Upstream protection equipment has to be set in a way, that these faults are interrupted safely.



Die Einstellung aller Parameter erfolgt mit Drehkodierschaltern.

All parameters are adjusted with rotary coding switches.

Der Wert 0,1 ist eingestellt,
wenn der Drehschalter
in diesem **Drehwinkelbereich** steht

The value 0.1 is set if the
rotary switch is positioned in this **zone**

9.1.6 Überstromauslöser ETU76B

Ansicht

9.1.6 Overcurrent release ETU76B

Design

1) Die Auslöseursache wird für mindestens zwei Tage gespeichert, sofern der Überstromauslöser vor der Auslösung mindestens 10 min lang aktiviert war. (mit Hilfsenergie beliebig lange)

1) The trip cause is stored internally for at least two days, if the overcurrent release has been activated for at least 10 min before tripping. (for unlimited time with auxiliary power).

VORSICHT		CAUTION
Zum Schutz der elektrostatisch gefährdeten Bauelemente (EGB) ist die beigefügte Schutzkappe auf die Prüfbuchse zu setzen. Vor Entfernen der Schutzkappe sind anzuschließende Geräte und das Bedienpersonal auf das gleiche Potenzial zu bringen.		To protect the electrostatic sensitive devices (ESD) the attached protective cover must be installed on the test connector. Before the protective cover is removed, ensure that equipment to be connected, and also operating personnel, are at the same potential.

VORSICHT	CAUTION
Parametereinstellungen grundsätzlich nur vornehmen, wenn der Leistungsschalter ausgeschaltet ist. Eine Veränderung der Parameter bei eingeschaltetem Leistungsschalter kann zu ungewolltem Auslösen des Leistungsschalters führen.	Adjust parameters only when the circuit-breaker is switched off. If the parameters are modified with the circuit-breaker switched on, this can trip the circuit-breaker unintentionally.

VORSICHT	CAUTION
Bei der Anlagenprojektierung und Selektivitätsbetrachtung ist sicherzustellen, dass der Leistungsschalter nicht Ströme führen kann, die oberhalb der im Katalog angegebenen Schaltleistungswerte liegen. Übergeordnete Schutzgeräte sind so einzustellen, dass diese Fehlerfälle sicher abgeschaltet werden.	When planning a project and considering selectivity it has to be ensured loads carried by the circuit-breaker will not exceed the breaking capacity stated in the 3WL catalogue. Upstream protection equipment has to be set in a way, that these faults are interrupted safely.

VORSICHT	CAUTION
Bei Abschaltung der Überlastschutzfunktion ist sicherzustellen, dass keine Überlastfälle eintreten können. Eine thermische Zerstörung des Schaltgerätes, der Anlage oder des Verbrauchers wären die Folge. Auftretende Überlastfälle können in diesem Fall nur bei Überschreiten der Ansprechwerte für die Kurzschlussschutzfunktion (verzögert oder unverzögert) durch Auslösung abgeschaltet werden. Diese Ansprechwerte sind entsprechend anzupassen.	When deactivating the overload protection, it has to be ensured overloads will not occur. Otherwise, thermal destruction of the circuit-breaker, the switchgear or the consumer load could result. In these cases occurring overloads can only be handled by the short time and instantaneous protection. The pick-up values need to be adjusted accordingly.

Die Einstellung aller Parameter für die Grund- und Zusatzfunktionen kann erfolgen über:

- das Grafikdisplay → (Seite 9-42)
- die Prüfbuchse mit dem BDA → (Seite 9-122)
- über den PROFIBUS-DP mit einem PC mit installierter Software „powerconfig“ → (Seite 27-3)
- über den Modbus mit einem PC und zusätzlicher Software

Dazu muss der Überstromauslöser aktiviert, d. h. eine externe 24 V DC-Spannungsversorgung angeschlossen sein.

All parameters for the basic and the additional functions can be adjusted through:

- the graphical display → (page 9-42)
- the test socket with the BDA → (page 9-122)
- the PROFIBUS-DP with a PC and the software "powerconfig" → (page 27-2)
- the Modbus with a PC and additional software

To do this, the overcurrent release must be activated, i.e. it must be connected to an external 24 V DC voltage supply.

9.1.8 Anzeigen

Die Ausstattung der Anzeigen ist abhängig vom Typ des Überstromauslösers.

9.1.8 Indications

Scope of indications depends on the type of overcurrent release.

Überlastauslöser ist aktiviert. **$I > I_{min}$** - oder wenn 24 V Hilfsspannung anliegt **I_{min}:** - 80 A für Baugröße I / II - 150 A für Baugröße III	 Blitzlicht / Flashing LED 	**Overcurrent release is activated** **$I > I_{min}$** - or when 24 V auxiliary power is applied **I_{min}:** - 80 A for frame size I / II - 150 A for frame size III
Überstromalarm - Dauerlicht, wenn **$I \geq I_R$**		**Overcurrent alarm** - Steady light, if **$I \geq I_R$**
Kommunikation aktiv - Ein anderer **Cubicle**BUS-Teilnehmer wurde erkannt und Kommunikation aufgenommen		**Communication active** - Another **Cubicle**BUS participant has been recognised and communication started.
Erweiterte Schutzfunktion hat ausgelöst - verursacht durch Messfunktion - Auslösegrund im Ereignisspeicher gespeichert - Auslösegrund auslesbar über: * BDA * PROFIBUS-DP und PC mit Software „powerconfig“ → (Seite 27-3) * Grafisches Display (ETU76B) * Externe digitale Ausgangsmodule		**Extended protective function has tripped** - due to metering function - trip cause saved in event memory - trip cause readable through: * BDA * PROFIBUS-DP and PC with software “powerconfig” → (page 27-2) * graphic display (ETU76B) * External digital output modules

Schutzfunktion hat ausgelöst (Überstrom) - Anzeige leuchtet, wenn Query-Taste gedrückt - Nur ein Auslösegrund wird angezeigt - Nur der letzte Auslösegrund wird angezeigt	 oder / or 	**Protective function has tripped (Overcurrent)** - Indicator lights up when the Query button is pressed - Only one trip cause is displayed - Only the last trip cause is displayed
LED T.U. ERROR **1. T.U. Error blinkt:** Schutzfunktion ist eingeschränkt, die Schutzparameter sind auf die Minimalwerte zurück gesetzt. Ursachen: - Bemessungsstrom des Bemessungsstrommoduls ist größer als der des Leistungsschalters - Drehkodierschalter in undefinierter Zwischenstellung - Überstromauslöser defekt **2. T.U. Error leuchtet dauernd:** Schutzfunktion ist nicht gewährleistet. Ursachen: - Bemessungsstrommodul und Leistungsschalter sind nicht kompatibel - Überstromauslöser defekt		**LED T.U. ERROR** **1. T.U. Error flashes** Limited protective function, the protective parameters are reset to minimum values. Causes: - Rated current of the rating plug is higher than that of the circuit breaker - Rotary coding switch in undefined intermediate position - Trip unit defective **2. T.U. Error lights up continuously:** Protective function not guaranteed. Causes: - Rating plug not compatible with circuit breaker type - Trip unit defective

9.1.9 Schutzfunktionen

9.1.9.1 Grundschutzfunktionen

Die Grundschutzfunktionen des Überstromauslösers sind ohne zusätzliche Hilfsspannung sichergestellt. Die erforderliche Energie wird von schalterinternen Energiewandlern bereitgestellt.

Für die Bewertung der Ströme wird durch die Elektronik des Überstromauslösers der Effektivwert (r.m.s.) berechnet.

Die Parametrierung der einzelnen Funktionen erfolgt typenabhängig mittels:

- Drehkodierschalter (ETU15B … 45B)
- elektronischer Datenübertragung (ETU55B ... 76B) über:
  - die Prüfbuchse mit dem BDA
  - den PROFIBUS-DP mit einem PC und der Software „powerconfig“ → (Seite 27-3)
- Bedientastenfeld (ETU76B).

9.1.9 Protective functions

9.1.9.1 Basic protective functions

The basic protective functions of the overcurrent release are ensured without additional auxiliary voltage. The required energy is supplied by the circuit breaker's internal energy transformers.

To evaluate the currents, the electronic system of the overcurrent release calculates the r.m.s value.

The individual functions are parameterised according to the types through:

- rotary coding switch (ETU15B … 45B)
- electronic data transfer (ETU55B ... 76B) through
  - the test socket with the BDA
  - the PROFIBUS-DP with a PC and the software "powerconfig" → (page 27-2)
- the control board (ETU76B)

Überlastschutz – L-Auslösung

Der Einstellwert I_R bestimmt den maximalen Dauerstrom, bei dem der Schalter ohne Auslösung betrieben werden kann. Der Trägheitsgrad t_R bestimmt, wie lange eine Überlast andauern kann, ohne dass es zu einer Auslösung kommt.

Overload protection – L-tripping

The current setting I_R defines the maximum continuous current the circuit breaker can carry without tripping. The time-lag class t_R determines the maximum duration of an overload without tripping.

	Einstellwerte für I_R	**Current setting values for I_R**
ETU15B	0,5 / 0,55 / 0,6 / 0,65 / 0,7 / 0,75 / 0,8 / 0,85 / 0,9 / 1	0.5 / 0.55 / 0.6 / 0.65 / 0.7 / 0.75 / 0.8 / 0.85 / 0.9 / 1
ETU25B, …27B, ..45B	0,4 / 0,45 / 0,5 / 0,55 / 0,6 / 0,65 / 0,7 / 0,8 / 0,9 / 1,0	0.4 / 0.45 / 0.5 / 0.55 / 0.6 / 0.65 / 0.7 / 0.8 / 0.9 / 1.0
ETU76B	0,4 ... 1,0 (I_R = … x I_n , Angabe in Ampere)	0.4 ... 1.0 (I_R = … x I_n , data in Amps)

	Einstellwerte für t_R (bei 6 x I_R)	**settings for t_R (at 6 x I_R)**
ETU15B	10 s	10 s
ETU25B, …27B, ..45B	2 / 3,5 / 5,5 / 8 / 10 / 14 / 17 / 21 / 25 / 30 s	2 / 3.5 / 5.5 / 8 / 10 / 14 / 17 / 21 / 25 / 30 s
ETU76B	2 … 30 s	2 … 30 s

Die Auslösekennlinie hat eine I^2t-Charakteristik. Für einige Überstromauslöser besteht die Möglichkeit, auf eine I^4t-Charakteristik umzuschalten. → (Seite 9-27)

The tripping characteristic is an I^2t-characteristic. Some overcurrent releases can be switched over to an I^4t-characteristic. → (page 9-27)

Kurzverzögerte Kurzschlussauslösung – S-Auslösung

Bei den Überstromauslösern ETU25B, ..27B, ..45B und ..76B kann die Auslösung infolge eines Kurzschlussstromes I_{sd} um die Zeit t_{sd} verzögert werden.

Damit kann eine Selektivität des Kurzschlussschutzes in Schaltanlagen mit mehreren Staffelebenen erreicht werden.

Short-time-delayed short-circuit tripping – S-tripping

On overcurrent releases ETU25B, ..27B, ..45B and .76B, tripping due to the short-circuit current I_{sd} can be delayed by the time t_{sd}.

This provides selectivity for the short-circuit protection in switchgear with several grading levels.

	Einstellwerte für I_{sd} (Angabe in Ampere)	**Current setting values for I_{sd}** (data in Amps)
ETU25B, …27B, ..45B	I_{sd} = (1,25 / 1,5 / 2 / 2,5 / 3 / 4 / 6 / 8 / 10 / 12) x I_n	I_{sd} = (1.25 / 1.5 / 2 / 2.5 / 3 / 4 / 6 / 8 / 10 / 12) x I_n
ETU76B	I_{sd} = 1,25 x I_n … 0,8 x I_{cw}	I_{sd} = 1.25 x I_n … 0.8 x I_{cw}

	Einstellwerte für t_{sd}	Setting values for t_{sd}
ETU25B, ETU27B	t_{sd} = 0 / 0,02(M)[1] / 0,1 / 0,2 / 0,3 / 0,4 s	t_{sd} = 0 / 0.02(M)[1] / 0.1 / 0.2 / 0.3 / 0.4 s
ETU45B	t_{sd} = 0,02(M)[1] / 0,1 / 0,2 / 0,3 / 0,4 s; OFF	t_{sd} = 0.02(M)[1] / 0.1 / 0.2 / 0.3 / 0.4 s; OFF
ETU76B	t_{sd} = 0,02(M)[1] / 0,08 … 4 s [2] ; OFF	t_{sd} = 0.02(M)[1] / 0.08 … 4 s [2] ; OFF

1) Die Verzögerungszeit 0,02 s ist keine Staffelzeit!
In dieser Stellung wird die Motorschutzfunktion eingeschaltet.

2) Für Einstellwerte t_{sd} > 0,4 s erfolgt automatisch eine Reduzierung des maximal möglichen Einstellwertes I_{sd} in Abhängigkeit von der Baugröße auf:
Baugröße I: 15 kA
Baugröße II: 20 kA
Baugröße III: 30 kA

1) The time delay 0.02 s isn't a grading time!
In this position, the motor protection function is activated.

2) For settings t_{sd} >0.4 s, the maximum possible setting I_{sd} is reduced automatically according to the frame size:
Frame size I : 15 kA
Frame size II: 20 kA
Frame size III: 30 kA

Die maximal zulässigen, einstellbaren Stromwerte sind vom Kurzschlussschaltvermögen und der Betriebsspannung abhängig. Die maximalen Werte können dem Typschild entnommen werden.

The maximum permissible, adjustable current values depend on the short-circuit breaking capacity and the operational voltage. The maximum values can be found on the type label.

Mit dem Einstellwert t_{sd} = 0 s können die Überstromauslöser ETU25B und ETU27B einen unverzögerten Kurzschlussschutz mit einstellbarem Ansprechwert realisieren, der kleiner ist, als der fest-eingestellte Ansprechwert I_i.
Die Einstellung „OFF“ für Überstromauslöser ETU45B und ETU76B dient dazu, den kurzverzögerten Kurzschlussschutz abzuschalten.

With the setting t_{sd} = 0 s, the overcurrent releases ETU25B and ETU27B can provide an instantaneous short-circuit protection with an adjustable operate value which is smaller than the fixed operate value I_i.
The setting “OFF” for the overcurrent releases ETU45B and ETU76B is provided to deactivate the short-time-delay short-circuit protection.

Für einige Überstromauslöser besteht die Möglichkeit, auf eine I^2t-Charakteristik umzuschalten. → (Seite 9-27)

Some overcurrent releases can be switched over to an I^2t-characteristic. → (page 9-27)

Bei Verwendung der zeitverkürzten Selektivitätssteuerung (ZSI) → (Seite 9-27) in Schalterstellung "S" oder "S+G" wird der Wert für die Verzögerungszeit t_{sd} auf 50 ms gesetzt, wenn der Leistungsschalter im Kurzschlussfall kein Blockiersignal von einem nachgeordneten Leistungsschalter erhält. Er schaltet dann unabhängig vom eingestellten Wert für t_{sd} bereits nach 50 ms ab.

If the zone selective interlocking (ZSI) link → (page 9-27) is used, and the ZSI module is set to "S" or "S+G" the delay time t_{sd} is automatically set to 50 ms provided that in the event of short-circuit the circuit breaker does not receive a blocking signal from a downstream circuit breaker. In this case regardless of the adjusted t_{sd} value the circuit breaker will trip after 50 ms

Mit Blockiersignal gilt weiter die eingestellte Zeit t_{sd}. Zur Sicherheit wird nach höchstens 3 s das Blockiersignal beendet.

If a blocking signal exists the adjusted delay time t_{sd} is valid. For safety reasons after 3 s maximum the blocking signal is terminated.

Motorschutzfunktion

In der Schalterstellung t_{sd} = Ⓜ (0,02 s) wird eine spezielle Schutzfunktion für elektromotorische Antriebe eingeschaltet. Sie verhindert das Ansprechen der kurzverzögerten Kurzschlussauslösung auf die Einschaltstromspitze von Elektromotoren. Gleichzeitig wird ein Phasenausfallschutz aktiviert → (Seite 9-26) und die Zeitkonstante für die interne rechnerische Nachbildung des Erwärmungs- und Abkühlungsprozesses von Anlagenschutz auf Motorschutz umgeschaltet.

Motor protection function

In the circuit breaker position t_{sd} = Ⓜ (0.02 s), a special protection function for electromotive drives is activated. It prevents the short-time-delay short-circuit tripping from being activated during the peak inrush current of electric motors. At the same time, a phase failure protection is activated → (page 9-26) and the time constant for the internally calculated reproduction of the temperature-rise and cooling process is switched over from switchgear protection to motor protection.

Unverzögerte Kurzschlussauslösung – I-Auslösung

Die Überschreitung des Einstellwert I_i führt zu einer unverzögerten Abschaltung des Leistungsschalters.

Einstellwerte für I_i	
ETU15B	I_i = (2 / 3 / 4 / 5 / 6 / 7 / 8) x I_n
ETU25B, ETU27B	$I_i \geq 20$ x I_n (fest eingestellt) MAX = 50 kA
ETU45B	OFF [1)] I_i = (1,5 / 2,2 / 3 / 4 / 6 / 8 / 10 / 12) × I_n MAX = 0,8 x I_{CS}
ETU76B	I_i = 1,5 x I_n … 0,8 x I_{cs} ; OFF [1)] (Angabe in Ampere) MAX = 100 kA

1) Bei abgeschalteter I-Auslösung reduziert sich das Ausschaltvermögen des Leistungsschalters auf $I_{CS} = I_{CW}$.
Für die Überstromauslöser ETU45B und ETU76B ist es nicht möglich, gleichzeitig den kurzverzögerten Kurzschlussschutz, Einstellung t_{sd} = OFF, und den unverzögerten Kurzschlussschutz, I_i = OFF, abzuschalten!
Wird bei t_{sd} = OFF die Einstellung I_i = OFF ausgewählt, erfolgt intern automatisch eine Korrektur auf I_i = 1,5 x I_n.

Erdschlussauslösung – G-Auslösung

Ist der Überstromauslöser mit einem Erdschlussschutzmodul ausgestattet, können Verbraucher vor unzulässig hohen Erdschlussströmen geschützt werden.

	Erdschlussschutz → (Seite 9-68)	**ground-fault protection** → (page 9-68)
ETU15B, ETU25B	nicht verfügbar	not available
ETU27B	Standard: Bei symmetrischer Belastung der Außenleiter durch vektorielle Summenbildung der Ströme	Standard: vectorial summation of currents, if loading is balanced to ground
ETU45B, ETU76B	Bei symmetrischer Belastung der Außenleiter durch vektorielle Summenbildung der Ströme. Optional erhältlich: separater Wandler 1200 A :1 A	Vectorial summation of currents, if loading is balanced to ground Optional available: external current transformer 1200 A : 1 A

Der Ansprechwert I_g legt zusammen mit der Einstellung der Verzögerungszeit t_g die Abschaltung von Erdschlussfehlern fest.

Einstellwerte für Ansprechwert I_g		
	Baugröße	
	I / II	**III**
A	100 A	400 A
B	300 A	600 A
C	600 A	800 A
D	900 A	1000 A
E	1200 A	1200 A
OFF		

Einstellwerte für t_g	
ETU27B, ETU45B	t_g = 0,1 / 0,2 / 0,3 / 0,4 / 0,5 s
ETU76B	t_g = 0,1 … 0,5 s

Bei Schalterstellung „G“ oder „S+G“ am ZSI-Modul (zeitverzögerte Selektivitäts-Steuerung) → (Seite 9-27) wird der Wert für die Verzö-

Instantaneous short-circuit tripping – I-tripping

If the current setting I_i is exceeded, the circuit breaker is tripped instantaneously.

Current setting values for I_i	
ETU15B	I_i = (2 / 3 / 4 / 5 / 6 / 7 / 8) x I_n
ETU25B, ETU27B	$I_i \geq 20$ x I_n (fixed setting) MAX = 50 kA
ETU45B	OFF [1)] I_i = (1.5 / 2.2 / 3 / 4 / 6 / 8 / 10 / 12) × I_n MAX = 0.8 x I_{CS}
ETU76B	I_i = 1.5 x I_n … 0.8 x I_{cs} ; OFF [1)] (data in Amps) MAX = 100 kA

1) If the I-tripping is deactivated, the breaking capacity of the circuit breaker is reduced to $I_{CS} = I_{CW}$.
For the overcurrent releases ETU45B and ETU76B it is not possible to deactivate the short-time-delay short-circuit protection, setting t_{sd} = OFF, and the instantaneous short-circuit protection I_i = OFF at the same time!
If the setting I_i = OFF is selected with t_{sd} = OFF, there is an automatic internal correction to I_i = 1.5 x I_n.

Ground-fault tripping – G-tripping

If the overcurrent release is equipped with an ground-fault protection module, loads can be protected against impermissibly high ground-fault currents.

The pickup I_g, together with the setting for the time-delay t_g, determines the shutdown of ground-fault currents.

Setting values for pickup current I_g		
	Frame size	
	I / II	**III**
A	100 A	400 A
B	300 A	600 A
C	600 A	800 A
D	900 A	1000 A
E	1200 A	1200 A
OFF		

Setting values for t_g	
ETU27B, ETU45B	t_g = 0.1 / 0.2 / 0.3 / 0.4 / 0.5 s
ETU76B	t_g = 0.1 … 0.5 s

If the ZSI module (zone selective interlocking) → (page 9-27) is set to "G" or "S+G" the delay time t_g is automatically set to 100 ms pro-

gerungszeit t_g auf 100 ms gesetzt, wenn der Leistungsschalter im Erdschlussfall kein Blockiersignal von einem nachgeordneten Leistungsschalter erhält. Er schaltet dann unabhängig vom eingestellten Wert für t_g bereits nach 100 ms ab. Mit Blockiersignal gilt weiter die eingestellte Zeit t_g. Zur Sicherheit wird nach längstens 3 s das Blockiersignal beendet.

Für einige Überstromauslöser besteht die Möglichkeit, auf eine I^2t-Charakteristik umzuschalten. → (Seite 9-28)

vided that in the event of ground-fault the circuit breaker does not receive a blocking signal from a downstream circuit breaker. In this case regardless of the adjusted t_g value the circuit breaker will trip after 100 ms. If a blocking signal exists the adjusted delay time t_g is valid. For safety reasons after 3 s the blocking signal is terminated.

Some overcurrent releases can be switched over to an I^2t-characteristic. → (page 9-28)

Neutralleiterschutz – N-Auslösung

Die Überstromauslöser ETU27B,..45B und ..76B bieten die Möglichkeit, auch den Neutralleiter vor Überlast zu schützen. Dazu ist ein Stromwandler für den Neutralleiter erforderlich, der ggf. nachgerüstet werden kann. → (Seite 9-115)

Für die Auslösung gilt der gleiche Trägheitsgrad t_R, wie für die Überlastauslösung.

Einstellwerte für I_N	
ETU27B	$I_N = I_n$; OFF
ETU45B	$I_N = (0{,}5 / 1{,}0) \times I_n$; OFF
ETU76B	$I_N = (0{,}2 \ldots 2{,}0^{1)}) \times I_n$; OFF

1) Einstellwerte über 1,0 x I_n stehen nur für 3polige Schalter zur Verfügung.

Neutral conductor protection – N-tripping

The overcurrent releases ETU27B, ..45B, and ..76B offer the possibility to protect the neutral conductor against overload, too. This requires a current transformer for the neutral conductor, which can be retrofitted if necessary. → (page 9-115)

As for tripping, the same time-lag class t_R applies as for overload tripping.

Setting values for I_N	
ETU27B	$I_N = I_n$; OFF
ETU45B	$I_N = (0.5 / 1.0) \times I_n$; OFF
ETU6B	$I_N = (0.2 \ldots 2.0^{1)}) \times I_n$; OFF

1) Current settings above 1.0 x I_N are only available for 3-pole circuit breakers.

VORSICHT		**CAUTION**
Einstellwerte $I_N > 1 \times I_n$ nur bei entsprechender Dimensionierung des N-Leiters verwenden!		Setting values $I_N > 1 \times I_n$ should only be used if the neutral conductor has been sufficiently dimensioned.

9.1.9.2 Weitere Funktionen

Lastüberwachung („Lastaufnahme / Lastabwurf“)

Die Überstromauslöser ETU45B und ETU76 B bieten die Möglichkeit, den Laststrom zusätzlich zu überwachen. Es lassen sich zwei Stromwerte, „Lastabwurf“ und „Lastaufnahme“, und eine Verzögerungszeit t_x einstellen.

Bei Unterschreiten des Einstellwertes „Lastaufnahme“ und gleichzeitigem Überschreiten des unteren Grenzwertes der Stromübertragung wird nach Ablauf der eingestellten Verzögerungszeit t_x über den **Cubicle**BUS eine Meldung ausgegeben. Bei Überschreiten des Einstellwertes „Lastabwurf“ wird nach Ablauf der eingestellten Verzögerungszeit t_x über den **Cubicle**BUS eine Meldung ausgegeben. Diese Meldungen können zum Zu- bzw. Abschalten von Verbrauchern genutzt werden. Damit lassen sich z. B. Überlastauslösungen von Einspeiseschaltern vorbeugend vermeiden.

Einstellwerte für Lastüberwachung	
„Lastabwurf“ und „Lastaufnahme“	40 A … 1,5 x I_R
Verzögerungszeit	t_x = 1 … 15 s

Die Einstellung der Lastüberwachung kann erfolgen über:

- das alphanumerisches Display (ETU45B)
- das Grafikdisplay (ETU76B)
- die Prüfbuchse mit dem BDA
- den PROFIBUS-DP mit einem PC und der Software „powerconfig“ → (Seite 27-3)
- den Modbus mit einem PC und dafür vorgesehener Software

9.1.9.2 Additional functions

Load monitoring (load restore / load shedding)

The overcurrent releases ETU45B and ETU76B offer the possibility of additional load monitoring. Two current values, “load shedding” and “load restore”, as well as a delay time t_x, can be set.

If the actual load falls below the setting “load restore” but simultaneously exceeds the “minimum of communicated currents” parameter a signal is generated through the **Cubicle**BUS after the set delay time t_x has elapsed. Also if the the actual load exceeds the setting “load shed” a signal is generated through the **Cubicle**BUS after the delay time t_x has elapsed. These signals can be used to connect or disconnect loads, thereby preventing an overload tripping of incoming circuit breakers.

Setting values for load monitoring	
“Load shedding” and “load restore”	40 A … 1.5 x I_R
Delay time	t_x = 1 … 15 s

Load monitoring can be adjusted through:

- the alphanumeric display (ETU45B)
- the graphical display (ETU76B)
- the test socket with the BDA
- the PROFIBUS-DP with a PC and the software „powerconfig” → (page 27-2)
- the Modbus with a PC and software

Voreilende Meldung „L-Auslösung“

Die Überstromauslöser ETU45B und ETU76B stellen eine voreilende Meldung „L-Auslösung“ bereit. Diese wird 100 ms vor der Überlastauslösung über den **Cubicle**BUS ausgegeben. Damit können z.B. Thyristor-Regelgeräte abgesteuert werden. Die Meldung erfolgt auch wenn der Schalter über den internen Selbsttest ausgelöst wird.

Phasenausfallschutz

Beim Überstromauslöser ETU76B kann der Phasenausfallschutz auch eingeschaltet werden, wenn der Motorschutz → (Seite 9-23) nicht aktiviert ist.

Ist bei aktiviertem Phasenausfallschutz der Betriebsstrom der am niedrigsten belasteten Phase um 50 % kleiner als der Betriebsstrom der am höchsten belasteten Phase, so wird der Einstellwert I_R automatisch auf 80 % reduziert. Unterscheiden sich die Werte der drei Phasenströme um weniger als 50 %, so gilt wieder der Einstellwert I_R.

Thermisches Gedächtnis ein- / ausschaltbar

Die Überstromauslöser ETU45B und ETU76B bieten die Möglichkeit, die interne rechnerische Nachbildung der thermischen Prozesse in nachgeordneten Anlagen und Verbrauchern auch dann fortzusetzen, wenn der Leistungsschalter ausgeschaltet und keine externe Spannungsversorgung der Elektronik gegeben ist. Damit kann auch bei häufigen Ein- und Ausschaltvorgängen und wechselnder Belastung ein wirksamer Schutz vor thermischer Überlastung gewährleistet werden.

Verhalten im Überlastbereich:

- oberhalb von 1,125 x I_R erfolgt eine streng monotone Erwärmung gemäss Kennlinie

Verhalten im Nennstrombereich:

- unterhalb von 1,125 x I_R erfolgt keine Erwärmung
- es erfolgt eine Abkühlung nach Exponentialfunktion mit einer Zeitkonstanten von 18 x t_R für Anlagenschutz bzw. 10 x t_R für Motorschutz

Verhalten bei _ParaSwitchTherm = EIN:

Bei eingeschaltetem Thermischen Gedächtnis wird die thermischen Vorgeschichte berücksichtigt:

- nach einer Auslösung werden die thermischen Speicher der Phasen mit dem auf 90 % reduzierten Wärmeequivalent der wärmsten Phase vorbesetzt (Ermöglichen des Wiedereinschaltens)
- Abkühlung nach Exponentialfunktion mit einer Zeitkonstanten von 18 x t_R für Anlagenschutz bzw. 10 x t_R für Motorschutz.

Bei eigenversorgten Auslösern wird in der Phase der Deaktivierung die Abkühlung bei Re-Aktivierung für eine Zeitspanne von max. 60 min. softwaremässig nachempfunden, so dass sich für fremd- und eigenversorgte Auslöser annähernd gleiche Auslösezeiten ergeben.

Verhalten bei _ParaSwitchTherm = AUS:

Bei abgeschaltetem Thermischen Gedächtnis wird die thermische Vorgeschichte nicht berücksichtigt:

- der Auslöser startet bei Aktivierung immer mit Wärmespeicher NULL

Leading signal “L-tripping”

The overcurrent releases ETU45B and ETU76B provide a leading signal "L-tripping", which is transmitted through the **Cubicle**BUS 100 ms before overload tripping. In this way it is possible e.g. to disconnect thyristor controllers. The signal is also provided even if the circuitbreaker is released about the internal self-test.

Phase failure protection

In overcurrent release ETU76B, the phase failure protection can also be activated if the motor protection → (page 9-23) is not activated.

If the phase failure protection is activated and the operating current of the lowest loaded phase is 50% smaller than the operating current of the highest loaded phase, the setting value I_R is automatically reduced to 80%. If the values of the three phase currents differ by less than 50%, the setting I_R applies again.

Thermal memory can be switched On/Off

Overcurrent releases ETU45B and ETU76B offer the possibility to continue with the internally calculated reproduction of the thermal processes in downstream switchgear and consumers even if the circuit breaker is open and the electronic system has no external supply. In this way, an effective protection against thermal overload can be guaranteed for frequent closing and opening processes, too.

Behaviour in the overload range:

- above 1.125 x I_R a strictly monotonic warming according to the overload characteristics takes place

Behaviour in the nominal current range:

- under 1.125 x I_R no warming takes place
- cooling down according to an exponential function with a time constant of 18 x t_R and 10 x t_R for switchgear protection and motor protection respectively

Behaviour with _ParaSwitchTherm = ON:

If the thermal memory is activated the thermal prehistory will be taken into account:

- after a trip the thermal memories of the phases will be set to 90% of the thermal equivalent of the warmest phase (enable re-closing)
- cooling down according to an exponential function with a time constant of 18 x t_R and 10 x t_R for switchgear protection and motor protection respectively

Trip units not connected to an external power supply will calculate the cooling down after re-closure of the circuit breaker for a maximum period of 60 minutes. Thus trip unit powered from CTs or an external source will show a similar behaviour as regards tripping times.

Behaviour with _ParaSwitchTherm = OFF:

If the thermal memory is deactivated the thermal prehistory will not be taken into account:

- on start-up the thermal memory is set to zero

- nach einer Auslösung werden die thermischen Speicher der Phasen auf NULL gesetzt

Aktivieren des thermischen Gedächtnisses kann erfolgen über:

- einen Schiebeschalter (ETU45B)

- das Grafikdisplay (ETU76B)
- die Prüfbuchse mit dem BDA (ETU76B)
- den PROFIBUS-DP mit einem PC und der Software „powerconfig“ → (Seite 27-3) (ETU76B).
- den Modbus mit einem PC und zusätzlicher Software

Zeitverzögerte Selektivitäts-Steuerung (ZSI)

Die Kombination des Leistungsschalters mit einem ZSI-Modul → (Seite 9-103) erlaubt es, in Schaltanlagen mit mehreren Staffelebenen einen auftretenden Kurzschluss genau zu lokalisieren.

Dazu werden alle Leistungsschalter über ihre ZSI-Module miteinander verbunden.

Im Kurz- und/oder Erdschlussfall fragt jeder vom Kurzschlussstrom durchflossene Leistungsschalter die ihm direkt nachgeordneten Leistungsschalter ab, ob der Kurz- und/oder Erdschluss auch in der nächsten untergeordneten Staffelebene auftritt. Es löst nur der, in Energieflussrichtung gesehen, nächstgelegene, dem Kurz- und/oder Erdschluss vorgeordnete Leistungsschalter aus.

Eine eingestellte Verzögerungszeit t_{sd} für die Kurzschlussauslösung wird auf 50 ms gesetzt bei Schalterstellung am ZSI-Modul „S“ oder „S+G“, wenn der Leistungsschalter im Kurzschlussfall kein Blockiersignal ZSI-IN von einem nachgeordneten Leistungsschalter erhält. Bei einem erkannten Kurzschluss wird ein Blockiersignal ZSI-OUT an die vorgeordneten Leistungsschalter ausgegeben.
Die Kurzschlussauslösung erfolgt jedoch frühestens nach 50 ms, typisch sind 80 … 90 ms.

Eine eingestellte Verzögerungszeit t_g für die Erdschlussauslösung wird auf 100 ms gesetzt bei Schalterstellung am ZSI-Modul „G“ oder „S+G“, wenn der Leistungsschalter im Erdschlussfall kein Blockiersignal ZSI-IN von einem nachgeordneten Leistungsschalter erhält. Bei einem erkannten Erdschluss wird ein Blockiersignal ZSI-OUT an die vorgeordneten Leistungsschalter ausgegeben. Die Erschlussauslösung erfolgt jedoch frühestens nach 100 ms, typisch sind 130 ... 140 ms.

Zur Sicherheit wird nach längstens 3 s ein ausgegebenes Blockiersignal ZSI-OUT beendet.

Überlastschutz umschaltbar auf I^4t

Die Überstromauslöser ETU45B und ETU76B bieten die Möglichkeit, für den Überlastschutz mittels Schiebeschalter von der I^2t- auf eine I^4t-abhängige Funktion umzuschalten. Damit wird die Selektivität des Überlastschutzes in Kombination mit Sicherungen verbessert.

In diesem Fall ändern sich die Einstellmöglichkeiten für den Trägheitsgrad t_R wie folgt:

Einstellwerte für t_R	
ETU45B	t_R = 1 / 2 / 3 / 4 / 5 s (bei 6 x I_n)

- after a trip the thermal memories of the phases will be set to zero

The thermal memory can be activated through:

- a slide switch (ETU45B)

- the graphical display (ETU76B)
- the test socket with the BDA (ETU76B)
- the PROFIBUS-DP with a PC and the software „powerconfig" → (page 27-2) (ETU76B).
- the Modbus with a PC and additional software

Zone selective interlocking (ZSI)

If the circuit breaker is combined with a ZSI-module → (page 9-103), a short-circuit occurring in systems with several grading levels can be localised precisely.

For this purpose, all circuit breakers are interconnected via their ZSI-modules.

When a short-circuit or ground-fault occurs, each circuit breaker affected by the short-circuit or ground-fault current queries its downstream circuit breaker to determine whether the short-circuit or ground-fault is present in the next downstream grading level. In the direction of the energy flow, only the circuit breaker nearest to the short-circuit or ground-fault in the upstream direction is tripped.

A possible delay time setting t_{sd} for the short-circuit tripping is set to 50 ms if "S" or "S+G" is selected on the ZSI module and if in the event of short-circuit the circuit breaker does not receive a blocking signal ZSI-IN sent from its downstream circuit breaker. In case of a detected short-circuit a blocking signal ZSI-OUT will be sent to the preceeding circuit breakers.
The trip does take place after at least 50 ms. It typically delays between 80 and 90 ms.

A possible delay time setting t_g for the ground-fault tripping is set to 100 ms if "G" or "S+G" is selected on the ZSI module and if in the event of ground-fault the circuit breaker does not receive a blocking signal ZSI-IN sent from its downstream circuit breaker.
In case of a detected ground-fault a blocking signal ZSI-OUT will be sent to the preceeding circuit breakers. The trip does take place after at least 100 ms. It typically delays between 130 and 140 ms.

For safety reason after a maximum delay time of 3 s a given blocking signal ZSI-OUT is terminated.

Overload protection switchable to I^4t

The overcurrent releases ETU 45B and ETU76B offer the possibility to switch over from the I^2t to an I^4t inverse-time function for the overload protection by means of a slide switch. This improves the selectivity of the overload protection in combination with fuses.

In this case, the setting possibilities for the time-lag class t_R change as follows:

Setting values for t_R	
ETU45B	t_R = 1 / 2 / 3 / 4 / 5 s (at 6 x I_n)

Überlastschutz abschaltbar

Beim Überstromauslöser ETU76B ist es möglich, den Überlastschutz abzuschalten. Das kann z. B. erforderlich sein, wenn die Einspeisung der Anlage durch einen Generator erfolgt.

Die Abschaltung kann erfolgen über:

- das Grafikdisplay
- die Prüfbuchse mit dem BDA
- den PROFIBUS-DP mit einem PC und der Software „powerconfig“ → (Seite 27-3)
- den Modbus mit einem PC und zusätzlicher Software

Switching off overload protection

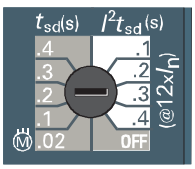
On overcurrent release ETU76B it is possible to switch off the overload protection. This might be necessary e.g. if the system is fed by a generator.

Switching off can be effected through:

- the graphical display
- the test socket with the BDA
- the PROFIBUS-DP with a PC and the software "powerconfig". → (page 27-2)
- the Modbus with a PC and additional software

VORSICHT	CAUTION
Bei Abschaltung der Überlastschutzfunktion ist sicherzustellen, dass keine Überlastfälle eintreten können. Eine thermische Zerstörung des Schaltgerätes, der Anlage oder des Verbrauchers wären die Folge. Auftretende Überlastfälle können in diesem Fall nur bei Überschreiten der Ansprechwerte für die Kurzschlussschutzfunktion (verzögert oder unverzögert) durch Auslösung abgeschaltet werden. Diese Ansprechwerte sind entsprechend anzupassen.	When deactivating the overload protection, it has to be ensured overloads will not occur. Otherwise, thermal destruction of the circuit-breaker, the switchgear or the consumer load could result. In these cases occurring overloads can only be handled by the short time and instantaneous protection. The pick-up values need to be adjusted accordingly.

Kurzverzögerter Kurzschlussschutz umschaltbar auf I^2t



Die Überstromauslöser ETU45B und ETU76B bieten die Möglichkeit, von einer konstanten Verzögerungszeit auf eine I^2t -Kennlinie umzuschalten. Dadurch wird die Verzögerungszeit bei konstantem I^2t_{sd}-Wert abhängig vom Kurzschlussstrom und es kann eine bessere Selektivität mit nachgeschalteten Sicherungen erreicht werden.

In diesem Fall ändern sich die Einstellmöglichkeiten für den Trägheitsgrad wie folgt:

Einstellwerte für t_{sd}	
ETU45B, ETU76B	t_{sd} = 0,1 / 0,2 / 0,3 / 0,4 s (bei 12 x I_n)

Die Umschaltung auf die I^2t_{sd}-abhängige Kennlinie kann erfolgen über:

- den t_{sd}-Drehkodierschalter (ETU45B); diesen auf einen Wert im weiß gekennzeichneten Bereich stellen.

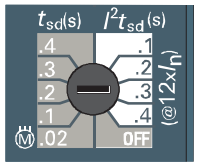
- das Grafikdisplay (ETU76B)
- die Prüfbuchse mit dem BDA (ETU76B)
- den PROFIBUS-DP mit einem PC und der Software „powerconfig“ → (Seite 27-3) (ETU76B).
- den Modbus mit einem PC und zusätzlicher Software

Erdschlussschutz umschaltbar auf I^2t-Kennlinie

Die Erdschlussschutzmodule für die Überstromauslöser ETU45B und ETU76B bieten die Möglichkeit, von einer konstanten Verzögerungszeit auf eine I^2t-Kennlinie umzuschalten.

Dadurch erhält man eine Auslösekennlinie mit stromabhängiger Verzögerungszeit bei konstantem I^2t_g-Wert und kann in Schaltan-

Short-time-delay short-circuit protection switchable to I^2t



The overcurrent releases ETU 45B and ETU76B offer the possibility to switch over from a constant time delay to an I^2t-characteristic. In this way, the time delay depends on the short-circuit current, but with a constant I^2t_{sd}-value, providing a better selectivity with downstream fuses.

In this case, the setting possibilities for the time-lag class change as follows:

Setting values for t_{sd}	
ETU45B, ETU78B	t_{sd} = 0.1 / 0.2 / 0.3 / 0.4 s (at 12 x I_n)

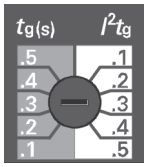
Switchover to the I^2t_{sd}-characteristic can be made through:

- the t_{sd} rotary coding switch (ETU45B); which must be set to a value in the white area.

- the graphical display (ETU76B)
- the test socket with the BDA (ETU76B)
- the PROFIBUS-DP with a PC and the software "powerconfig" → (page 27-2) (ETU76B).
- the Modbus with a PC and additional software

Ground-fault protection switchable to I^2t characteristic

The ground-fault protection modules for the overcurrent releases ETU45B and ETU76B offer the possibility to switch over from a constant delay time to an I^2t-characteristic.



This provides an inverse-time tripping characteristic with a constant I^2t_g-value, providing better selectivity of the ground-fault protection

lagen mit mehreren Staffelebenen eine bessere Selektivität des Erdschlussschutzes erzielen.

Die Einstellbereiche für die Verzögerungszeit bleiben unverändert.

Die Umschaltung auf die I^2t_g-abhängige Kennlinie kann erfolgen über:

- den t_g-Drehkodierschalter (ETU45B); diesen auf einen Wert im weiß gekennzeichneten Bereich stellen.

- das Grafikdisplay (ETU76B)
- die Prüfbuchse mit dem BDA (ETU76B)
- den PROFIBUS-DP mit einem PC und der Software „powerconfig“ → (Seite 27-3) (ETU76B).
- den Modbus mit einem PC und zusätzlicher Software

Erdschlussalarm

→ Erdschlussschutz (Seite 9-68)

Umschaltbare Parametersätze

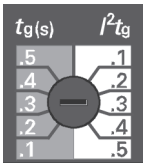
Der Überstromauslöser ETU76B gestattet die Speicherung von zwei unterschiedlichen Parametersätzen für die Schutzfunktionen.

Damit ist es möglich, beim Umschalten auf eine andere Einspeisung auch anderen Schutzbedürfnissen Rechnung zu tragen.

Die Umschaltung kann erfolgen manuell über:

- das Grafikdisplay
- die Prüfbuchse mit dem BDA
- den PROFIBUS-DP mit einem PC und der Software „powerconfig“ → (Seite 27-3)

oder automatisiert über:



- den PROFIBUS-DP
- den Modbus mit einem PC und zusätzlicher Software
- den **Cubicle**BUS mit einem Eingangssignal am digitalen Eingangsmodul.

in system with several grading levels.

The setting options for the delay time remain unchanged.

Switchover to the I^2t_g-characteristic can be made through:

- the t_g rotary coding switch (ETU45B); this must be set to a value in the white area

- the graphical display (ETU76B)
- the test socket with the BDA (ETU76B)
- the PROFIBUS-DP with a PC and the software "powerconfig" → (page 27-2) (ETU76B).
- the Modbus with a PC and additional software

Ground-fault alarm

→ Ground-fault protection (page 9-68)

Changeable parameter sets

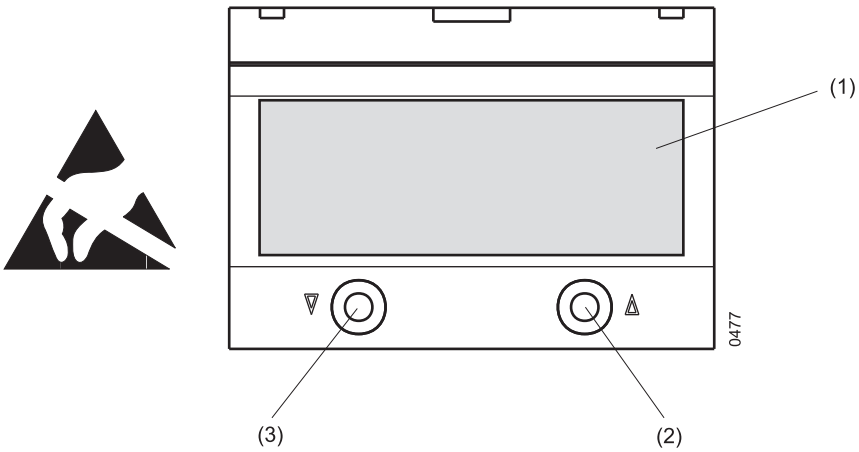
The overcurrent release ETU76B enables the storage of two different parameter sets for protective functions.

This enables changeover to new protection settings whenever there is a transfer to another supply source.

Switchover can be made manually through:

- the graphical display
- the test socket with the BDA
- the PROFIBUS-DP with a PC and the software "powerconfig" → (page 27-2)

or automatically via:



- the PROFIBUS-DP
- the Modbus with a PC and additional software
- the **Cubicle**BUS with an input signal at the digital input module.

9.1.10 Displays

Alphanumerisches Display bei ETU45B

Das alphanumerische Display steht optional für die Überstromauslöser vom Typ ETU45B zur Verfügung.

Aufbau

(1) Bildschirm (4 Zeilen à 20 Zeichen)
(2) Taste Nach-oben
(3) Taste Nach-unten

Nachrüsten

Der Überstromauslöser ETU45B kann nachträglich mit einem alphanumerischen Display ausgestattet werden.

GEFAHR

Gefährliche elektrische Spannung!

Kann Tod, schwere Personenschäden sowie Schäden an Geräten und Ausrüstung bewirken.

Vor dem Arbeiten an diesem Gerät, Anlage unbedingt spannungsfrei schalten.

- Ausschalten und Federspeicher entspannen → (Seite 24-3)
- Externe Spannungsversorgung 24 V DC ausschalten, sofern vorhanden
- Plombierhaube des Überstromauslösers entfernen, sofern vorhanden → (Seite 9-78)

9.1.10 Displays

Alphanumeric display of ETU45B

The alphanumeric display is available as an option for overcurrent releases of the types ETU45B.

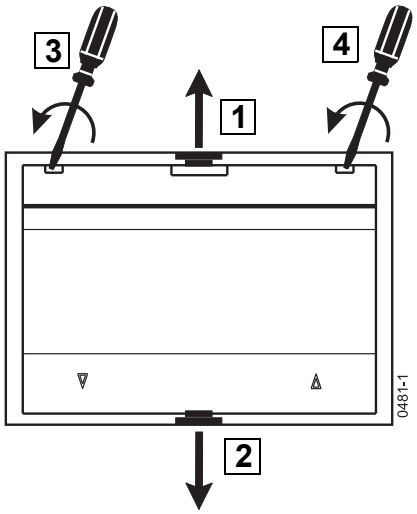
Design

(1) Screen (4 lines with 20 characters each)
(2) Up-key
(3) Down-key

Retrofitting

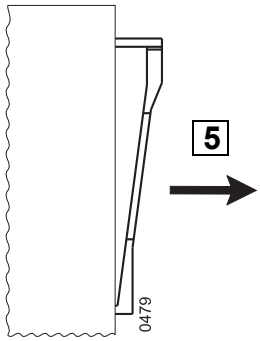
The overcurrent release ETU45B, can be retrofitted with an alphanumeric display.

DANGER



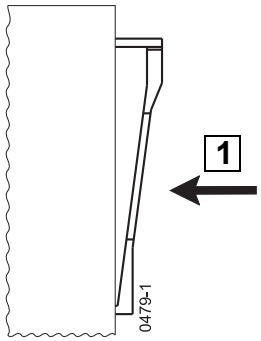
Hazardous voltage!

Will cause death, serious personal injury, or equipment / property damage.

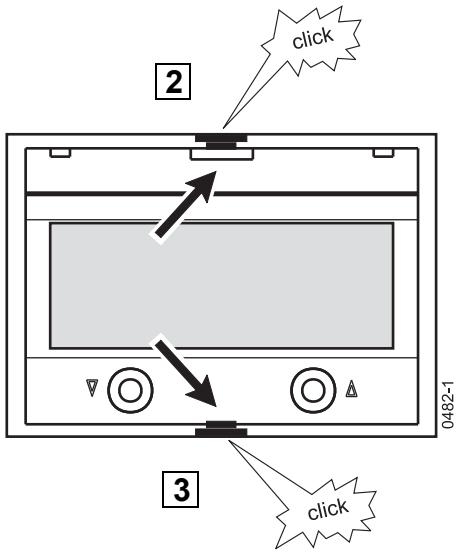


Disconnect power before working on this equipment.

- Switch off and discharge the storage spring → (page 24-3)
- Switch off external 24 V DC voltage supply, if applicable
- Remove sealing cap of overcurrent release, if applicable → (page 9-78)



Blindabdeckung ausbauen



Removing dummy flange

Display einsetzen und einrasten

Installing display and latching it tight

- Die Anzeige kann auch nach oben geneigt eingesetzt werden! Die Tasten sind dann über der Anzeige
- Plombierhaube des Überstromauslösers ggf. aufsetzen und plombieren → (Seite 9-78)
- Externe Spannungsversorgung 24-V-DC einschalten, sofern vorhanden

- The display may be inserted inclined upwards with buttons above the display!
- Fit and seal trip unit sealing cap, if applicable, → (page 9-78)
- Switch on external 24 V DC voltage supply, if applicable

Ändern der Einbaulage

Werksseitig wird das alphanumerische Display nach unten geneigt eingebaut. Es kann jedoch um 180° gedreht werden. Danach ist das Display nach oben geneigt.

Modifying the displays inclination

At the factory, the alphanumeric display is installed with a downward inclination. However, it can be turned by 180°; the display is then inclined upwards.

GEFAHR

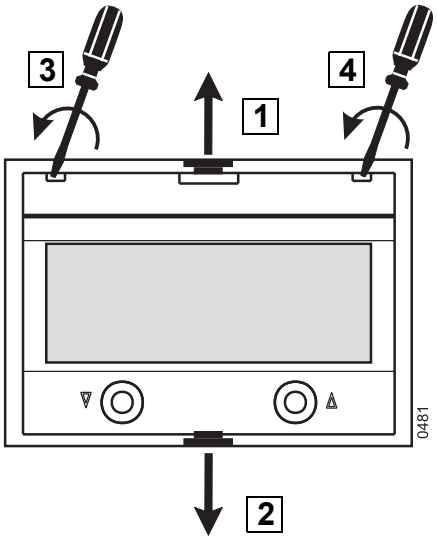
Gefährliche elektrische Spannung!

Kann Tod, schwere Personenschäden sowie Schäden an Geräten und Ausrüstung bewirken.

Vor dem Arbeiten an diesem Gerät, Anlage unbedingt spannungsfrei schalten.

DANGER

Hazardous voltage!



Will cause death, serious personal injury, or equipment / property damage.

Disconnect power before working on this equipment.

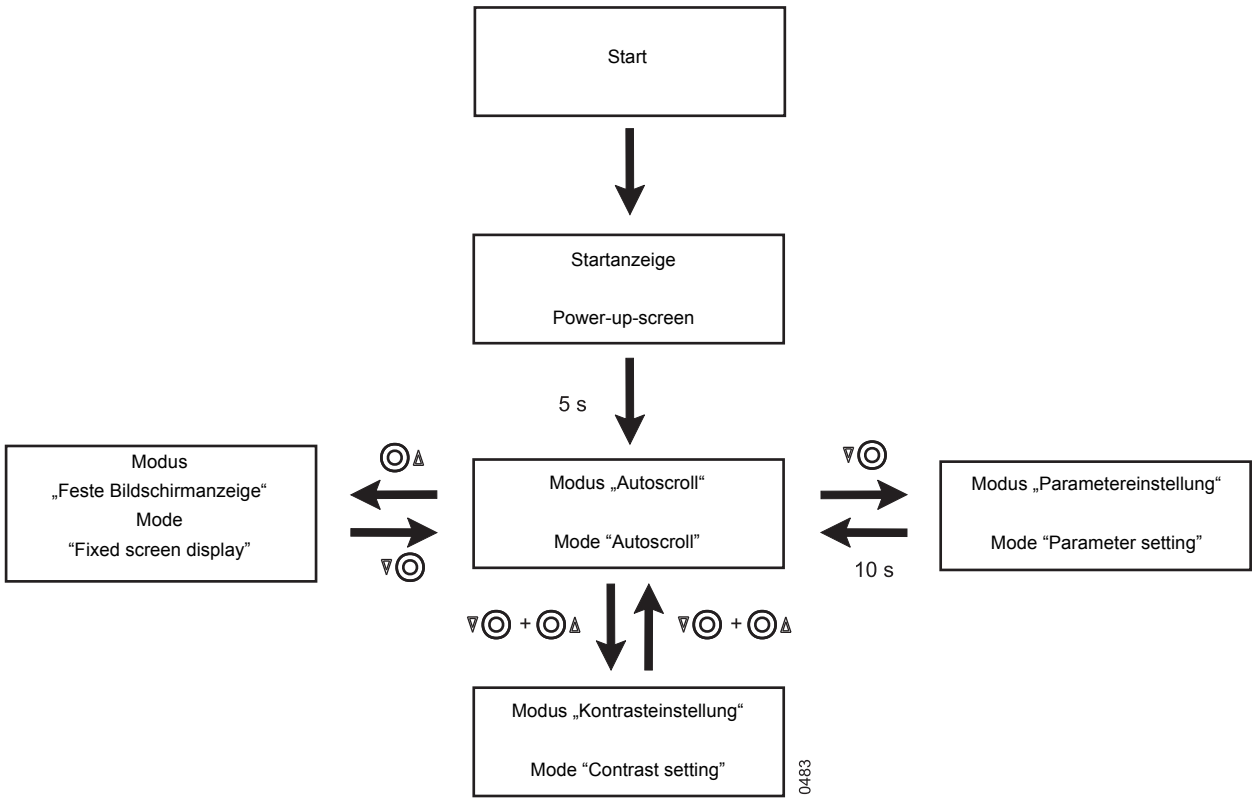
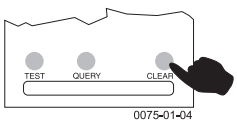
Alphanumerisches Display für ETU45B Alphanumeric display for ETU45B	3WL9111-0AT81-0AA0	F



Menüstruktur ETU45B

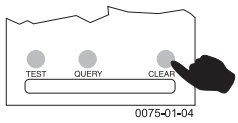
Nach dem Anlegen der Versorgungsspannung wechselt die Displaydarstellung nach ca. 5 s von der Startanzeige in den Autoscroll-Modus. Von dort aus kann mit Hilfe der beiden Tasten in weitere Modi verzweigt werden.

Menu structure ETU45B



After the supply voltage has been applied, the display changes from “Power-up screen” to “Autoscroll” mode after about 5 s. Thereafter, further modes can be accessed by means of the two buttons.

Übersicht / Overview

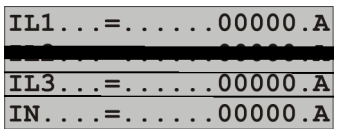


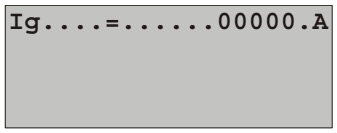
Modus „Autoscroll“

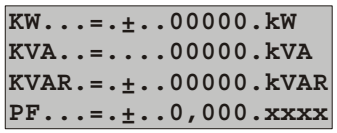
Im normalen Betrieb befindet sich das Display im Autoscroll-Modus.

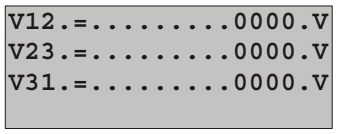
Um in den Modus „Autoscroll“ zu gelangen, folgende Taste(n) drücken:	
Im Modus „Feste Bildschirmanzeige“	▽◎
Im Modus „Zähler Auslösungen zurücksetzen“	▽◎ oder ◎△
Im Modus „Kontrasteinstellung“	▽◎ + ◎△
Im Modus „Parametereinstellung“	10 Sekunden keine Taste drücken
Im Modus „Info Auslösungen“	

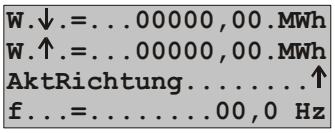
“Autoscroll” mode









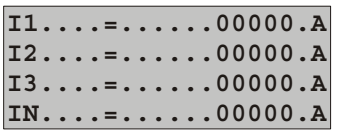


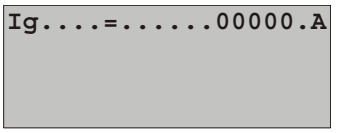
During normal operation, the display is in “Autoscroll” mode

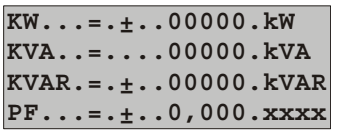
To access Autoscroll mode, press the following button(s)	
In mode “Fixed screen display”	▽◎
In mode “Tripping counter reset”	▽◎ or ◎△
In mode “Contrast setting”	▽◎ + ◎△
In mode “Parameter setting”	Do not press any button for 10 seconds
In mode “Tripping info”	

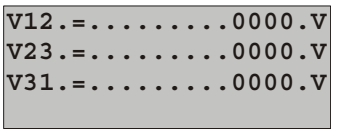
In diesem Modus wird automatisch alle 5 Sekunden zum nächsten Screen gewechselt.

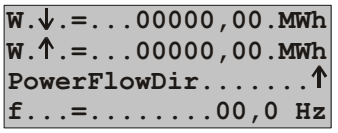
Ist kein Messmodul installiert, wechselt die Anzeige ständig zwischen den Screens 1 und 2.











Ist ein Messmodul installiert, werden im Autoscroll-Modus insgesamt fünf Screens angezeigt.

Angezeigte Screens im Modus „Autoscroll“	
ohne Messmodul	
Screen 1  	Strom I_{L1} Strom I_{L2} Strom I_{L3} Strom I_N
Screen 2  	Erdschlussstrom I_g (Es wird nur dann ein Wert angezeigt, wenn ein Erdschlussschutzmodul eingebaut ist.)
bei eingebautem Messmodul zusätzlich	
Screen 3  	Wirkleistung P Scheinleistung S Blindleistung Q Leistungsfaktor
Screen 4  	Spannung U_{12} Spannung U_{23} Spannung U_{31}
Screen 5  	Energie (positive Richtung) Energie (negative Richtung) Aktuelle Energieflussrichtung Frequenz

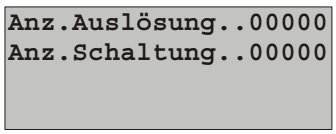
In this mode, the display automatically changes to the next screen every 5 seconds.

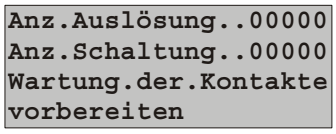
If there is no metering module available, the display changes continuously between the screens 1 and 2.

If there is a metering module available, a total of five screens are displayed in “Autoscroll” mode.

Screens displayed in the “Autoscroll” mode	
without metering module	
Screen 1  	Current I_1 Current I_2 Current I_3 Current I_N
Screen 2  	Ground-fault current I_g (A value is only displayed if an ground-fault protection module is fitted.)
with metering module installed, additionally	
Screen 3  	Active power P Apparent power S Reactive power Q Power factor
Screen 4  	Voltage U_{12} Voltage U_{23} Voltage U_{31}
Screen 5  	Energy (positive direction) Energy (negative direction) Present direction of energy flow Frequency

HINWEIS	**NOTICE**
Beim erneuten Aufbau einer Bildschirmseite werden die anzuzeigenden Daten stets aktualisiert. Während der Darstellung einer Bildschirmseite erfolgt keine Aktualisierung.	The data to be displayed are updated every time the screen page is set up again. No updates take place when a screen page is being displayed.





Tastenfunktionen im Modus „Autoscroll“	
	Anzeige wird eingefroren; Wechsel in den Modus „Feste Bildschirmanzeige“
	Wechsel in den Modus „Parametereinstellung“
	Wechsel in den Modus „Kontrasteinstellung“

Button functions in the “Autoscroll” mode	
	Display is frozen Switchover to mode “Fixed screen display”
	Change to mode “Parameter setting”
	Change to mode “Contrast setting”

Modus „Feste Bildschirmanzeige“

Um in den Modus „Feste Bildschirmanzeige“ zu gelangen, folgende Taste drücken:	
Im Modus „Autoscroll“	

In diesem Modus werden Wartungsinformationen mit der Anzahl der Auslösungen und Schaltungen des Leistungsschalters sowie mit Wartungshinweisen angezeigt. Die angezeigten Informationen hängen von der Anzahl der Auslösungen des Leistungsschalters ab.

	Anzahl der Auslösungen Anzahl der Schaltungen
	Anzahl der Auslösungen Anzahl der Schaltungen Wartungshinweise

	Wechsel in den nächsthöheren Screen
	Wechsel in den Modus „Autoscroll“
Wenn Screen 6 angezeigt wird 	Wechsel in den Modus „Zähler Auslösungen zurücksetzen“

Mode “Fixed screen display”

To access “Fixed screen display” mode, press the following button:	
In “Autoscroll” mode	

In this mode, maintenance information is provided with the number of circuit breaker trips and switching operations as well as with maintenance instructions. The information displayed depends on the number of circuit breaker trips operations.

	Number of tripping operations Number of switching operations
	Number of tripping operations Number of switching operations Maintenance instructions

Button functions in mode “Fixed screen display”	
	Change to next higher screen level
	Change to “Autoscroll” mode
If screen 6 is displayed 	Change to mode “Tripping counter reset”

Untermodus „Zähler Auslösungen zurücksetzen“

Dieser Modus bietet die Möglichkeit, den Zähler für die Auslösungen und Schaltungen auf den Wert Null zurückzusetzen.

Submode “Tripping counter reset”

This mode offers the possibility to reset the counter for the trips and the switching operations to zero.

VORSICHT	CAUTION
Das Zurücksetzen des Zählers sollte nur erfolgen, nachdem die Kontakte gewartet wurden. Wird der Zähler zurückgesetzt, ohne dass die Kontakte gewartet wurden, stimmen die angezeigten Wartungsinformationen nicht mehr mit dem tatsächlichen Zustand der Kontakte überein.	If the counter is reset without contact maintenance having been performed, the maintenance information displayed will not correspond to the actual condition of the contacts. This can destroy the contacts.

Um in den Modus „Zähler zurücksetzen“ zu gelangen, folgende Taste(n) drücken:	
Im Modus „Feste Bildschirmanzeige“, wenn Screen 6 angezeigt wird	▽ ◎ + ◎ △

To access “Tripping counter reset mode”, press the following button(s)	
In the mode “Fixed screen display”, when screen 6 is displayed	▽ ◎ + ◎ △

Angezeigte Screens im Modus „Zähler Auslösungen zurücksetzen“	

Screen 1
`Zähler.f.Auslösg.und`
`Schaltg.rücksetzen?`
`ja:.↑+↓`
`nein:.↑.oder.↓`
	Dieser Screen dient als Sicherheitsabfrage.
	Das Rücksetzen des Zählers nur nach Wartung der Kontakte durchführen!

Screen 2
`Zähler.f.Auslösg.und`
`Schaltg`
`zurückgesetzt`
`weiter:.↑.oder.↓`
	Das Rücksetzen der Zähler für die Auslösungen und Schaltungen wird bestätigt.

Modus „Parametereinstellung“

VORSICHT
Parametereinstellungen grundsätzlich nur vornehmen, wenn der Leistungsschalter ausgeschaltet ist. Eine Veränderung der Parameter bei eingeschaltetem Leistungsschalter kann zu ungewolltem Auslösen des Leistungsschalters führen.

Dieser Modus erlaubt die Einstellung folgender Parameter:

- Lastabwurf
- Lastaufnahme
- Verzögerungszeit Lastabwurf / Lastaufnahme
- Spracheinstellung für Display

Um in den Modus „Parametereinstellung“ zu gelangen, folgende Taste(n) drücken:	
Im Modus „Autoscroll“	

Angezeigte Screens im Modus „Parametereinstellung“	

Screen 1
`Parameter Ändern`

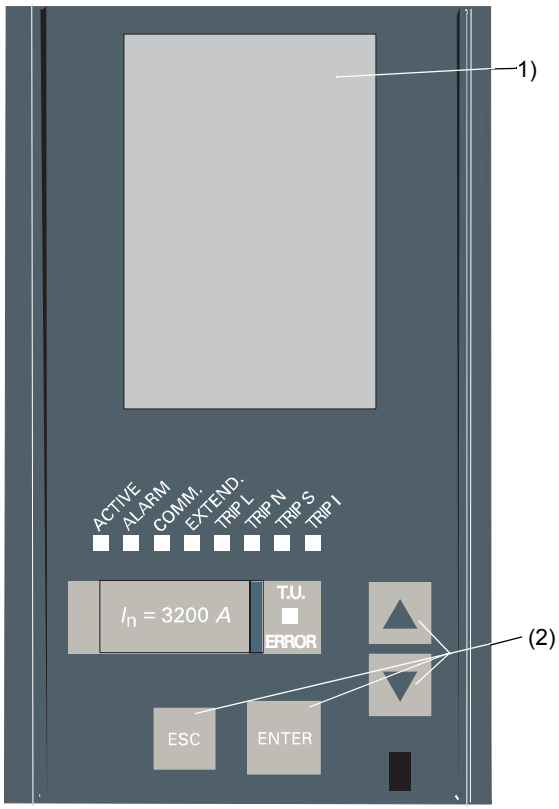
Grafikdisplay bei ETU76B



Der Überstromauslöser ETU76B ist standardmäßig mit einem fest eingebauten Grafikdisplay ausgestattet. Dieses Display ermöglicht eine maximal 8-zeilige Textausgabe oder die grafische Darstellung von Kurvenverläufen.

Es dient sowohl der Anzeige von Daten als auch zur Parametrierung des Überstromauslösers und der Messfunktion. Die Bedienung des Displays erfolgt über die Bedientasten am Überstromauslöser.

Graphical display of ETU76B

The overcurrent release ETU76B is equipped with a fixed-mounted graphical display as standard. This display enables a text output with a maximum of 8 lines or the graphical representation of characteristics.

It is used both to display data and to parameterise the overcurrent release as well as the metering function. The display is operated through the control provided on the overcurrent release.

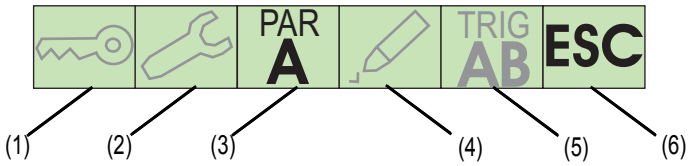
Aufbau des Displays

Display design



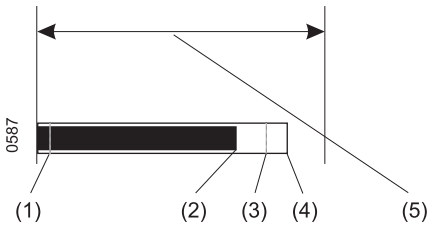
(1) Menüüberschrift
(2) 8-zeilige alphanumerische Anzeige oder grafische Darstellung von Kurvenverläufen
(3) Statuszeile

(1) Menu title
(2) 8-line alphanumeric display or graphical representation of characteristics
(3) Status line

Statuszeile

In der Statuszeile wird durch fett dargestellte Symbole angezeigt, welche Handlungen durch den Bediener zum gegenwärtigen Zeitpunkt möglich sind und welche Einstellungen gerade aktiv sind.

(1) Zugang nur mit Passwort
(2) Wartung erforderlich
(3) Eingestellter Parametersatz für die Schutzfunktionen
(4) Editiermöglichkeit
(5) Eingestellter Trigger
(6) oberes oder unteres Ende der Liste erreicht / Handlungsmöglichkeiten für den Bediener /



Status line

The status line shows, by means of bold symbols, which actions the operator can carry out and which settings are currently active at this moment.

(1) Access with password only
(2) Maintenance required
(3) Set parameter set for protective functions
(4) Editing option
(5) Set trigger
(6) upper or lower end of a list reached
Possible actions by the operator

Darstellung von Balkendiagrammen

Die Messwerte für einige Parameter werden sowohl als Zahlenwert als auch grafisch als Balkendiagramm dargestellt.

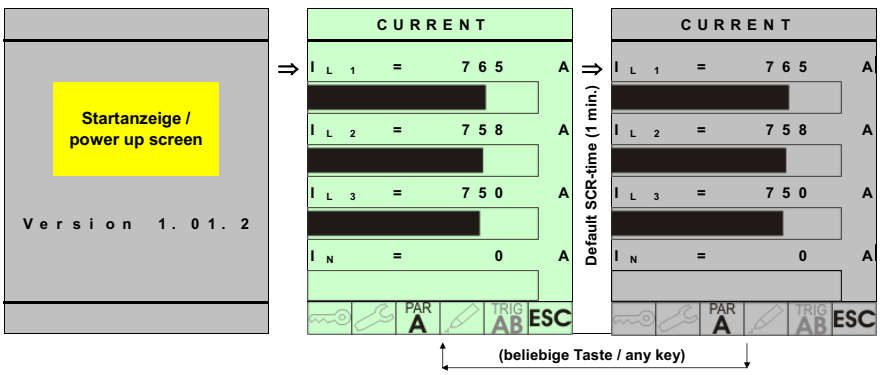
(1) Gemessenes Minimum
(2) Aktueller Messwert
(3) Gemessenes Maximum
(4) 100% des zu messenden Parameters
(5) Breite des Displays

Die Markierungen für gemessenes Minimum und Maximum werden während der Messung automatisch aktualisiert.

Representation of bar diagrams

The measured-values for some parameters are displayed both as numerical values and graphically in form of a bar diagram.

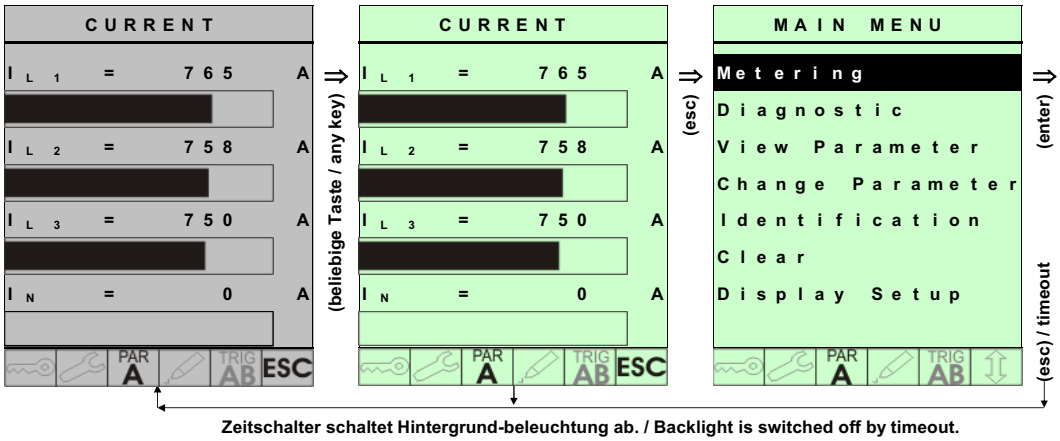
(1) Lowest measured-value
(2) Current measured value
(3) Highest measured-value
(4) 100% of the measured parameter
(5) Width of display



The markings for the lowest and highest measured-value are automatically updated during the measurement.

Anzeige während des Betriebes

Nach dem Anlegen der Versorgungsspannung wechselt die Displaydarstellung nach ca. 5 s von der Startanzeige in die Betriebsanzeige. Es werden die Ströme in den drei Phasen und im N-Leiter angezeigt und als Balkendiagramm dargestellt. Nach ca. 1 min schaltet sich die Hintergrundbeleuchtung des Displays ab. Sie kann durch Betätigen einer beliebigen Taste wieder eingeschaltet werden.



Display during operation

After the supply voltage is applied, the display switches from the "power up screen" to the operational screen after approximately 5 seconds. It shows the currents in the three phases and in the neutral conductor as values and in form of a bar diagram. The background illumination of the display is automatically switched off after approximately 1 minute. It can be switched on again by pressing any button.

Aufrufen des Hauptmenüs

Calling the main menu

Die Dauer, nach der die Hintergrundbeleuchtung abgeschaltet wird und der Bildschirm wieder die Ströme anzeigt kann unter „Einstellungen“ ⇒ „Default SCR“ zwischen 30 und 600 Sekunden eingestellt werden.

The time until the background illumination is switched off and the currents are displayed again may be set between 30 to 600 seconds at „Display Setup“ ⇒ „Default SCR“.

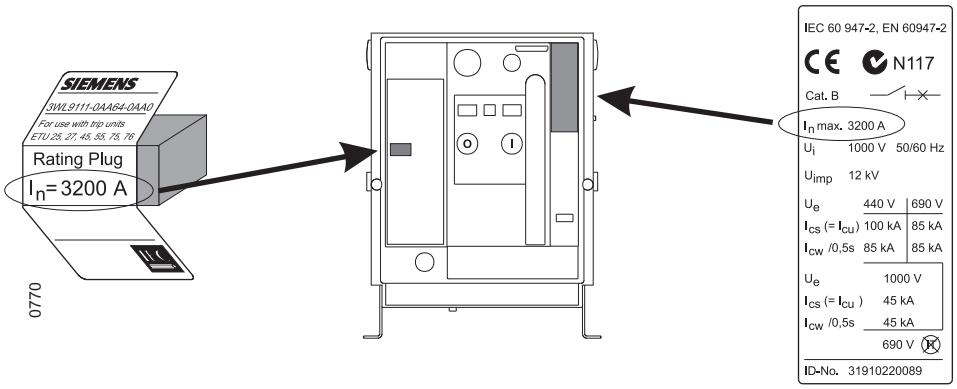
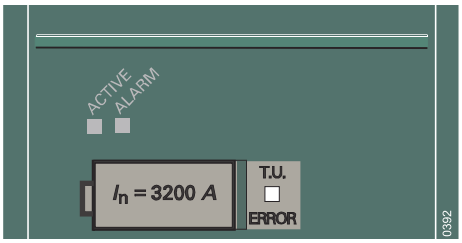
Example 12: Identification

Clear

Example 13: Deleting the measured minimum and maximum values





9.1.11 Bemessungsstrommodul

VORSICHT
Beim Austausch des Bemessungsstrommoduls ist sicherzustellen, dass dessen Bemessungsstrom I_n kleiner oder gleich dem zulässigen maximalen Bemessungsnennstrom $I_{n\,max}$ des Leistungsschalters ist. Anderenfalls kann es zur thermischen Überlastung des Schalters und ggf. auch der Anlage kommen. Der kleinste zulässige Bemessungsstrom für Schalter BG III ist 1250 A.

9.1.11 Rating plug

CAUTION
If the rating plug is to be replaced the rated current I_n of the rating plug has to be equal to or smaller than the maximum rated current $I_{n\,max}$ of the circuit breaker. Otherwise a thermal overload of the circuit breaker / installation can occur. Minimum permissible rating plug for a circuit breaker of frame size III is 1250 A.

Das Bemessungsstrommodul bestimmt den Bemessungsstrom innerhalb eines gewissen Bereiches für eine gegebene Baugröße des Leistungsschalters.

Wird ein Bemessungsstrommodul für einen Strom gesteckt, der größer ist, als der maximal zulässige Bemessungsstrom des Leistungsschalters, so wird dieser Fehler von der Elektronik des Überstromauslösers erkannt und mit einer blinkenden Anzeige T.U. ERROR signalisiert.

Der Überstromauslöser ignoriert den vom falschen Bemessungsstrommodul vorgegebenen Wert für den Bemessungsstrom und setzt diesen auf den Wert des für die Baugröße des betreffenden Leistungsschalters kleinsten Bemessungsstrommoduls.

Gleiches passiert, wenn für einen Schalter der Baugröße III ein Bemessungsstrommodul kleiner 1250 A verwendet wird oder gar kein Bemessungsstrommodul gesteckt ist. Alle eingestellten Schutzparameter werden entsprechend angepasst; die Anzeige T.U. ERROR blinkt.

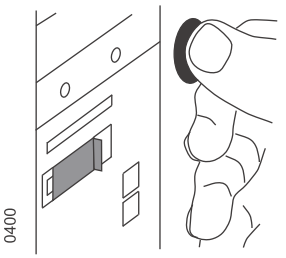
Wird ein Leistungsschalter ohne Bemessungsstrommodul in Betrieb genommen, blinkt die Anzeige T.U. ERROR und der Überstromauslöser setzt den Bemessungsstrom auf den Wert des für die Baugröße des betreffenden Leistungsschalters kleinsten Bemessungsstrommoduls.

The rating plug defines the rated current within a specific range for a given circuit breaker size.

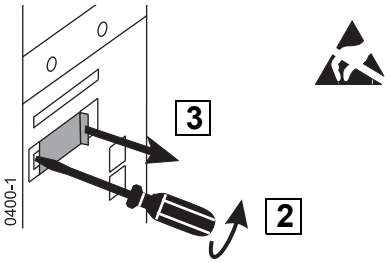
If a rating plug with a higher current than the maximum permissible circuit breaker rated current is plugged in, the electronic system of the overcurrent release recognizes this error and signals it with a flashing indication T.U. ERROR.

The overcurrent release ignores the default value for the rated current provided by the false rating plug and adjusts it to the value of the smallest rating plug provided for the frame size of the circuit breaker concerned.

The same happens if a circuit breaker with frame size III is equipped with a rating plug smaller than 1250 A. All set protection parameters are adjusted accordingly; the T.U. ERROR indicator will flash.



If a circuit breaker is started up without a rating plug, the T.U. ERROR indicator will flash and the overcurrent release sets the rated current to the value of the smallest rating plug for the frame size of the circuit breaker used.



Bestellnummern **Order numbers**

Bemessungsstrommodul tauschen **Exchange of rating plug**

VORSICHT	**CAUTION**
Das Bemessungsstrommodul darf nur unter folgenden Bedingungen gezogen werden:	The rating plug may be removed only if:
- Der Einschubschalter befindet sich in der Trennstellung oder - der Festeinbauschalter ist ausgeschaltet und der Überstromauslöser ist von der Hilfsspannungsversorgung getrennt oder - der Überstromauslöser ist ausgebaut.	- The draw-out circuit breaker is in the disconnect position or - the fixed-mounted breaker is switched off and the overcurrent release disconnected from control supply or - the overcurrent release has been removed from the breaker.
Ein Betrieb des Überstromauslösers ohne Bemessungsstrommodul ist nicht zulässig	**Operating the overcurrent release without rating plug is not permitted.**

9.1.12 Erdschlussschutzmodul

Die Überstromauslöser ETU45B und ETU76B können optional mit einem Erdschlussschutzmodul ausgestattet werden. Es dient dem Schutz nachgeordneter Verbraucher vor unzulässig hohen Erdschlussströmen.

Das Überschreiten des Einstellwertes führt je nach Ausführung des Erdschlussschutzmoduls nur zur Ausgabe einer Meldung oder gleichzeitig auch zum Auslösen des Überstromauslösers.→ (Seite 9-24)

Folgende Gerätekombinationen sind möglich:

Überstromauslöser	Erdschlussschutzmodul
ETU76B	GFM AT 55B-76B
ETU45B	GFM AT 45B

Die Erdschlusserfassung kann durch zwei Arten erfolgen:

- bei symmetrischer Belastung der Außenleiter durch vektorielle Summenbildung der Ströme
- Direkte Messung des Erdschlussstromes mit einem separaten Wandler 1200 A : 1 A.

9.1.12 Ground-fault protection module

The overcurrent releases ETU45B and ETU 76B can be optionally equipped with a ground-fault protection module. It is used to protect downstream loads against unpermissibly high ground-fault currents.

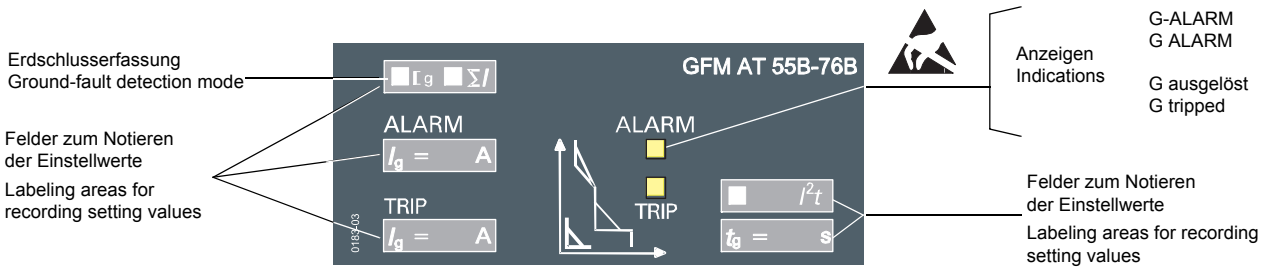
Depending on the ground-fault protection module version, the set value being exceeded will cause either an alarm only or an alarm and a trip at the same time. → (page 9-24)

The following device combinations are possible:

Overcurrent release	Ground-fault protection module
ETU76B	GFM AT 55B-76B
ETU45B	GFM AT 45B

There are two means of ground-fault detection:

- symmetrical load of the phase conductor by vectorial summation
- Direct measuring of the ground-fault current with a separate transform 1200 A : 1 A



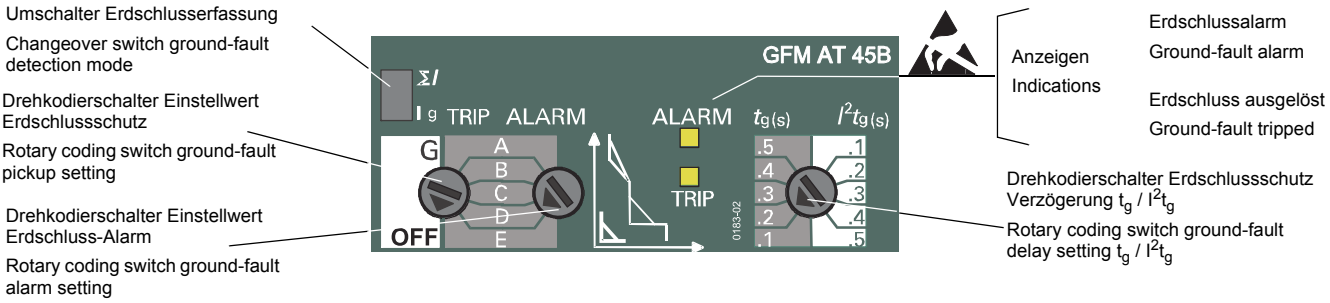
Hinweis	Note
Bei Erdschlusserfassung mittels vektorieller Summenbildung der Ströme in einem 4 poligem Netz wird dringend empfohlen, auch den Strom des N-Leiters einzubeziehen. Dazu ist ein N-Wandler erforderlich, der ggf. nachgerüstet werden muss. Anderenfalls führt auch ein entsprechender Strom im N-Leiter zum Ansprechen des Erdschlussschutzes. → (Seite 8-7)	If the ground fault is detected by vectorial summation of the currents in a 4 pole network, it is imperatively recommended to include the current of the neutral conductor, too. This requires a neutral conductor transformer, which may have to be retrofitted. Otherwise, a corresponding current in the neutral conductor will also activate the ground-fault protection. → (page 8-7)

Alarm- und Ausgelöstmeldungen können über den **Cubicle**BUS und PROFIBUS-DP / Modbus ausgegeben werden.

Alarm and trip signals can be transmitted through the **Cubicle**BUS and the PROFIBUS-DP/Modbus.

Modul GFM AT 55B-76B

Module GFM AT 55B-76B



- Erdschlussschutz durch Auslösung des Leistungsschalters und Alarmmeldung
- Auslösung kann abgeschaltet werden
- Modul parametrierbar über:
  - das Grafikdisplay (ETU76B)
  - die Prüfbuchse mit dem BDA (ETU76B)
  - den PROFIBUS-DP mit einem PC und der Software „powerconfig“ → (Seite 27-3) (ETU76B).
- Erdschlusserfassung wählbar:
  - vektorielle Summenbildung Σ I = L1+L2+L3+N
  - externer Erdschlusswandler SI = 1200 A : 1 A

- Ground-fault protection by way of alarm signal and tripping the circuit breaker
- Tripping function can be switched off
- Module programmable via:
  - the graphical display (ETU76B)
  - the test socket with the BDA (ETU76B)
  - the PROFIBUS-DP with a PC and the software "powerconfig"→ (page 27-2) (ETU76B).
- Ground-fault detection mode selectable:
  - vectorial summation Σ I = L1+L2+L3+N
  - external ground-fault transformer SI = 1200 A : 1 A

Modul GFM AT 45B

Module GFM AT 45B

- Erdschlussschutz durch Auslösung des Leistungsschalters und Alarmmeldung
- Auslösung kann abgeschaltet werden, Stellung OFF
- Umschalter Erdschlusserfassung nur bei ausgebautem Modul oder ausgebautem Überstromauslöser zugänglich

- Ground-fault protection by tripping the circuit breaker and alarm signaling
- Tripping function can be switched off, OFF position
- Changeover switch for ground-fault detection mode only accessible with removed module or removed overcurrent release.

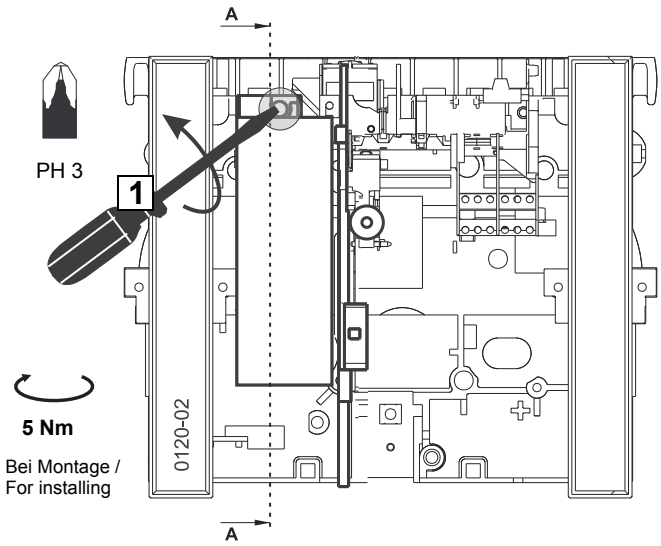
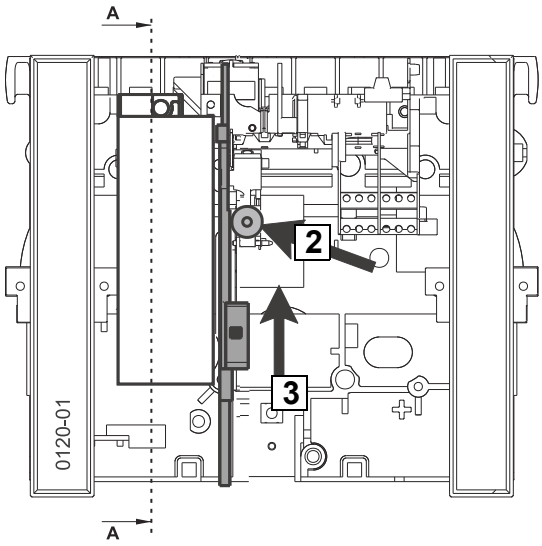
9.1.13 Replacing the overcurrent release



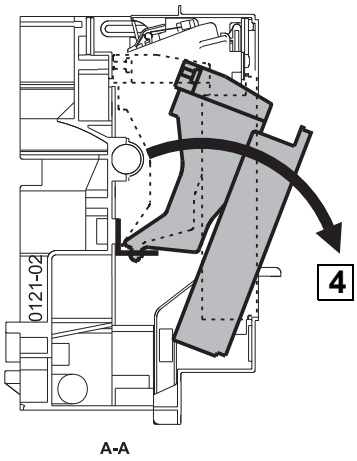
GEFAHR		**DANGER**
Gefährliche elektrische Spannung! **Kann Tod, schwere Personenschäden sowie Schäden an Geräten und Ausrüstung bewirken.** Vor dem Arbeiten an diesem Gerät, Anlage unbedingt spannungsfrei schalten.		**Hazardous voltage!** **Will cause death, serious personal injury, or equipment / property damage.** Disconnect power before working on this equipment.

ACHTUNG		**NOTICE**
Austausch nur durch Personal, welches das „Service- und Montageseminar - Niederspannungs Leistungsschalter 3WL“ bei SIEMENS besucht hat.		Replacement only by qualified personnel, who have participated in the “seminar for Service and assembly of low-voltage circuit breakers 3WL” at SIEMENS.

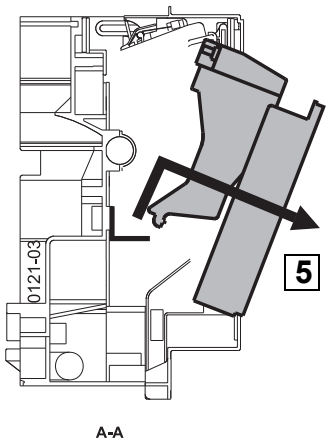
VORSICHT		**CAUTION**
Überstromauslöser nur auswechseln, wenn Schalter AUS und Federspeicher entspannt ist.		Exchange overcurrent release only if circuit breaker is OFF and storage spring is not charged.

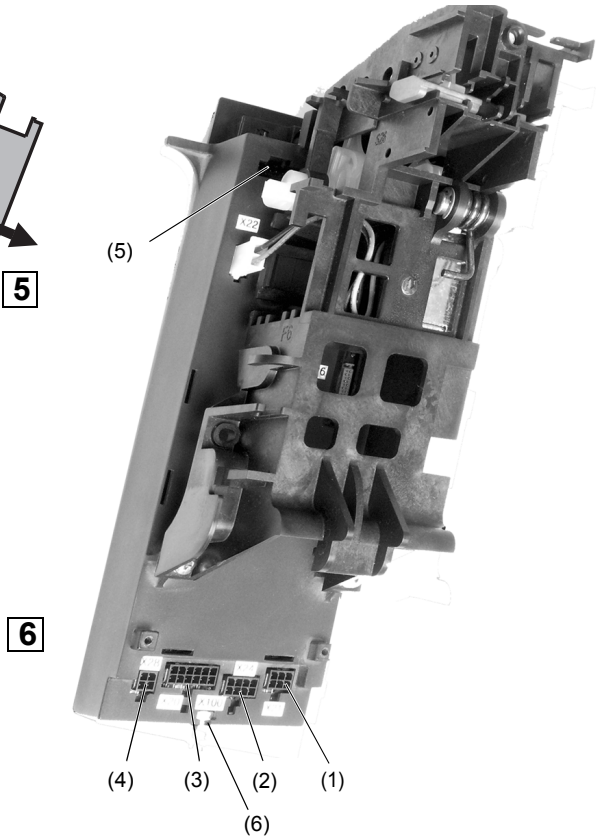


Ausbau



- Ausschalten und Federspeicher entspannen → (Seite 24-3)
- Bedienpult abnehmen → (Seite 24-11)





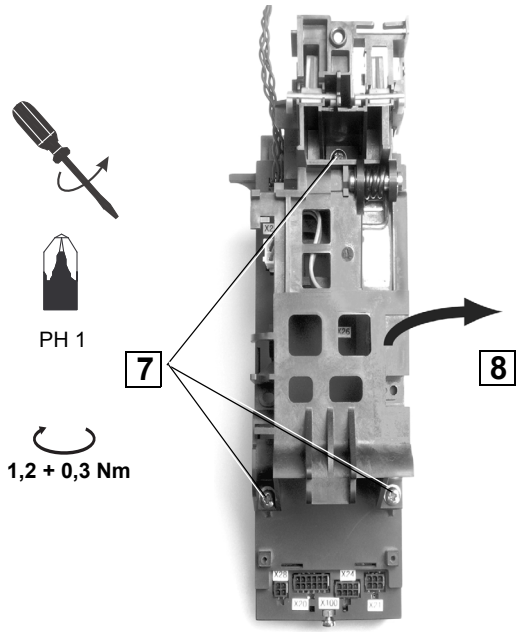
Removing

- Switch off and discharge the storage spring → (page 24-3)
- Remove front panel → (page 24-11)

(1) **Energiewandler** (X21)
(2) N-/g-Wandler (X24)
(3) Messwandler Teil 1 (X20)
(4) Messwandler Teil 2 (X28)
(5) 5poliger **Cubicle**BUS (X27)
(6) Anschluss Gehäusemasse (X100)

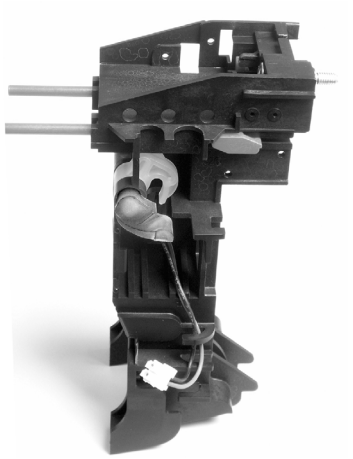
Stecker abziehen

Die Belegung der Anschlussbuchsen ist typenabhängig.



(1) **Energy transformer** (X21)
(2) N-/g-transformer (X24)
(3) Measuring transformer part 1 (X20)
(4) Measuring transformer part 2 (X28)
(5) 5-pole **Cubicle**BUS (X27)
(6) Connection GND (X100)

Remove connectors



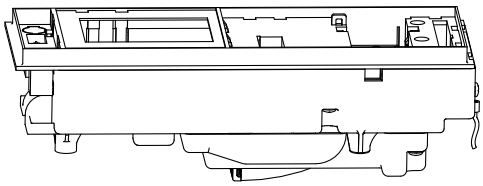
The pin assignment of the connecting socket depends on the type.

Hinweis	**Note**
Vor dem Abziehen der Stecker Leitungsverlegung merken. Sie muss beim Einbau in gleicher Art wieder hergestellt werden, um ein Einklemmen von Leitungen beim Zusammenbau zu verhindern.	Mark the position of the connector so that you can maintain the wire polarity to avoid a destruction of the wire.

VORSICHT		**CAUTION**
Wandler nur mit dem vorgesehenen Prüfgerät überprüfen. Direkte Messungen an den Wandlersteckern sind zu unterlassen. Diese können beschädigt werden, was den Ausfall des Überstromauslösers zur Folge haben kann.		Current transformers must only be tested using the test device provided. Do not take direct measurements at the current-transformer connectors, as they may sustain damage, which could cause the overcurrent release to fail.

ETU umrüsten

ETU retrofitting



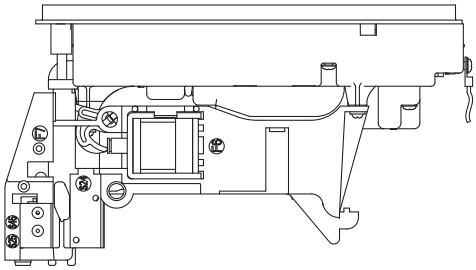
Ersatz „Release 2“ durch „Release 2“

Tausch der ETU-Box

Replacement of "Release 2" by "Release 2"

Interchange of ETU-Box

Ersatz „Release 2“ durch „Release 1“ ist nicht möglich



Ersatz „Release 1“ durch „Release 2“

Tausch der Baugruppe (ETU-Box und Träger mit Ausstattung, komplette Bestellnummer MLFB erforderlich)

Replacement of "Release 2" by "Release 1" is not possible

Replacement of "Release 1" by "Release 2"

Interchange of mounting group (ETU-Box and equipped carrier, complete order number MLFB necessary)

Einbau

Der Einbau erfolgt in umgekehrter Reihenfolge.

ACHTUNG	NOTICE
Verdrehung der Schwingmetalle vermeiden. Anziehdrehmoment beachten.	Avoid contorsion of anti-vibration rubber, pay attention to tightening torque.

Wird ein Überstromauslösersystem mit einer anderen Konfiguration als bisher verwendet eingebaut, so ist die Bestell-Nr. auf dem Ausstattungsschild des Leistungsschalters entsprechend den Katalogangaben zu korrigieren.

ACHTUNG	NOTICE
Nach Austausch des Überstromauslösers unbedingt Prüfung mit dem Handprüfgerät durchführen! → (Seite 9-126)	After replacing the overcurrent release, always test with the test unit! → (page 9-126)

Das Ergebnis der Prüfung ist schriftlich zu dokumentieren. Dazu ist das Formblatt „Meldung über Leistungsschalter-Umbau“ zu nutzen. Das Formblatt kann am Ende der Bedienungsanleitung kopiert werden. → (Seite 29-2) Um die Zurückverfolgbarkeit der Schalterausstattung beim Hersteller zu gewährleisten, ist der Umbau dem Technischen Service von SIEMENS mitzuteilen. Dazu ist das Formblatt vollständig ausgefüllt an die zuständige Adresse zu senden.

Zur Bestellung von Überstromauslösersystemen siehe Katalog SENTRON WL.

Für diesbezügliche Rückfragen steht die Hotline (Technical assistance) zur Verfügung.

Installation

Installation is done in reverse order.

If an overcurrent release with another configuration than the existing one is installed, the order no. on the type label of the circuit breaker must be changed according to the catalogue data.

The result of the test has to be documented. For that reason the form “Announcement of circuit breaker modification” should be used. The form can be copied from the end of this operating instructions. → (page 29-3) To ensure the retraceability of the circuit breaker equipment at the manufacturers site, the modification needs to be announced to the Technical Service of SIEMENS. To provide this information the form should be filled out completely and should be send to the responsible address.

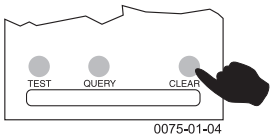
For ordering overcurrent releases, please refer to catalogue SENTRON WL.

Please contact the hotline for technical assistance if you have any questions.

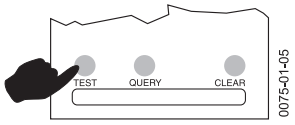
9.1.14 Interner Selbsttest der Überstromauslösefunktion

Für Inbetriebnahme und Funktionskontrolle.

Voraussetzungen



- Überstromauslöser ist aktiviert durch:
  Betriebsstrom
  externe Spannungsversorgung
- Strom nicht im Überlastbereich
  → Anzeigen (Seite 9-20)



9.1.14 Internal self-test of the overcurrent tripping function

For commissioning and function testing.

Conditions

- overcurrent release is activated by:
  normal current
  external voltage supply
- operating current not in overload range
  → Indications (page 9-20)

<table>
<tr><td></td><td colspan="3">Interner Selbsttest des Schalters ohne Auslösung
Internal self test of the breaker without tripping</td></tr>
<tr><td></td><td colspan="3">Der normale Betrieb des Leistungsschalters wird nicht beeinträchtigt
Normal operation of the circuit breaker is not impaired</td></tr>

9.2 CubicleBUS-Module

9.2.1 System-Architektur

9.2 CubicleBUS-modules

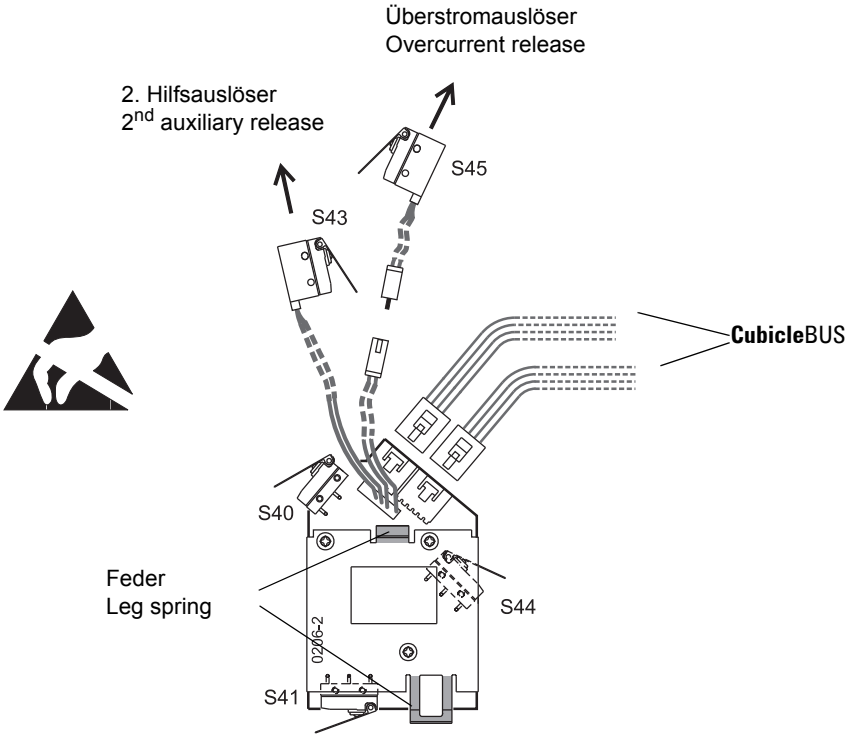
9.2.1 System architecture

- **AO:** Analoges Ausgangsmodul
- **BDA:** Breaker Data Adapter; Adapter zum Parametrieren, Bedienen und Beobachten des Leistungsschalters mit einem beliebigen browserfähigen Ein- / Ausgabegerät; Anschluss über Prüfbuchse des Überstromauslösers oder Westernbuchse (RJ45) des letzten externen **Cubicle**BUS-Moduls
- **BSS:** Breaker Status Sensor für die Erfassung der Meldungen über den Zustand des Leistungsschalters
- **Cubicle**BUS**:** Internes Bussystem für die Verbindung von Schalterkomponenten untereinander und für den Anschluss von externen **Cubicle**BUS-Modulen
- **COM15/16:** Kommunikationsmodul für die Verbindung zwischen **Cubicle**BUS und Modbus
- **DI:** Digitale Eingangsmodule für potentialfreie Eingangssignale „0/1“-Signale; maximal zwei Module mit unterschiedlicher Konfiguration anschließbar
- **DO:** Digitale Ausgangsmodule mit je 6 Ausgängen; maximal drei Module mit unterschiedlicher Konfiguration bzw. Ausführung anschließbar
- **ETU:** Elektronischer Überstromauslöser
- **Metering:** Messfunktion *PLUS*
- **PROFIBUS-DP:** Feldbus zur Verbindung von Automatisierungskomponenten
- **Protection:** Schutzmodul
- **VT:** Spannungswandler
- **ZSI:** Modul für zeitverkürzte Selektivitätssteuerung (ZSS) (engl. Zone Selective Interlocking), muss immer als erstes Modul angeschlossen werden

- **AO**: Analog output module
- **BDA**: Breaker Data Adapter; adapter for parameterizing, operating and monitoring the circuit breaker via any input/output unit with browser features; connection through test socket of overcurrent release or western socket (RJ45) of the last external **Cubicle**BUS-module
- **BSS**: Breaker Status Sensor for acquisition of signals about the circuit breaker status
- **Cubicle**BUS: Internal bus system for interconnection of circuit breaker components and for connection of external **Cubicle**BUS-modules
- **COM15/16**: Communications module for interconnection of **Cubicle**BUS and Modbus
- **DI**: Digital input modules for potential-free input signals - “0/1”-signals; two modules with different configurations connectable as a maximum
- **DO**: Digital output modules with 6 outputs each; a maximum of three modules with different configurations or versions connectable
- **ETU**: Electronic overcurrent release
- **Metering**: Metering function *PLUS*
- **PROFIBUS-DP**: Field bus for connection of automation components
- **Protection**: Protection module
- **VT**: Voltage transformer
- **ZSI**: Module for zone selective interlocking, must always be connected as the first module

Hinweis	**Note**
Die Grundschutzfunktionen der elektronischen Überstromauslöser benötigen keine Hilfsenergie. Sollen zusätzlichen Funktionen der Überstromauslöser genutzt werden, die einen Datenaustausch über den **Cubicle**BUS erfordern, muss eine externe 24 V DC-Spannungsversorgung angeschlossen werden. → (Seite 9-121)	The basic functions of the electronic overcurrent releases do not require auxiliary power supply. To use extended functions of the overcurrent releases requiring data exchange via the **Cubicle**BUS, an external 24 V DC voltage supply must be connected. → (page 9-121)

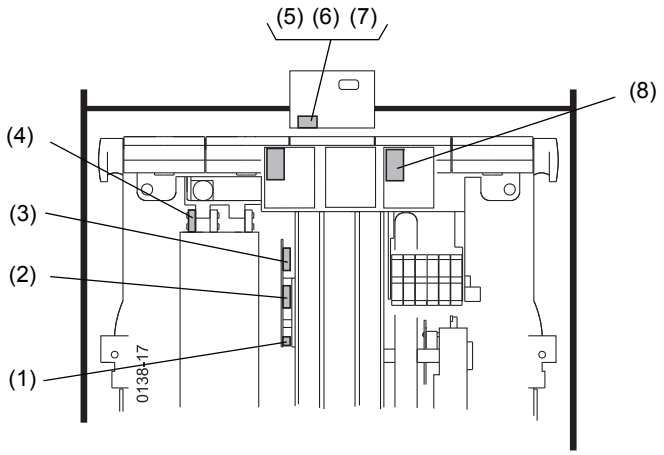
9.2.2 Interne Module



9.2.2.1 Breaker Status Sensor (BSS)

Für das Sammeln von Informationen über den Zustand des Leistungsschalters mittels Meldeschalter und deren Übertragung auf den **Cubicle**BUS.

9.2.2 Internal modules



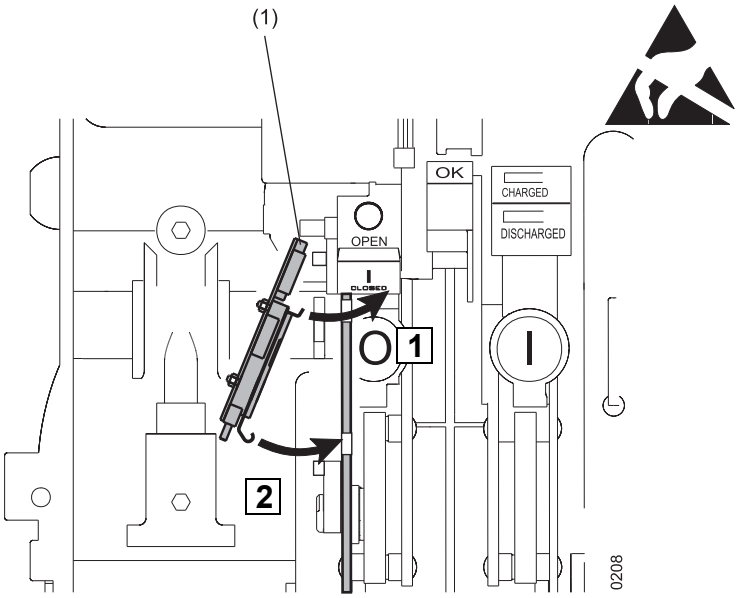
9.2.2.1 Breaker Status Sensor (BSS)

For collecting circuit breaker status information via signaling switches and transmitting these data to the **Cubicle**BUS.

Meldeschalter für den BSS

Signaling switches for BSS

(1) Meldeschalter Speicherzustand S41
(2) Meldeschalter S44 Hauptkontakte (EIN / AUS)
(3) Meldeschalter Einschaltbereitschaft S40
(4) Ausgelöst-Meldeschalter S45
(5) Meldeschalter Betriebsstellung S46
(6) Meldeschalter Prüfstellung S47
(7) Meldeschalter Trennstellung S48
(8) Meldeschalter S43 am zweiten Hilfsauslöser



(1) Signaling switch spring charged S41
(2) Signaling switch ON-OFF position S44
(3) Signaling switch ready-to-close S40
(4) Trip signaling switch S45
(5) Signaling switch connected position S46
(6) Signaling switch test position S47
(7) Signaling switch disconnected position S48
(8) Signaling switch S43 2nd auxiliary release

BSS-Modul montieren

WARNUNG

Vor dem Arbeiten an diesem Gerät, Anlage unbedingt spannungsfrei schalten sowie das Gerät erden.

- Ausschalten und Federspeicher entspannen → (Seite 24-3)
- Bedienpult abnehmen → (Seite 24-11)
- Überstromauslöser ausbauen → (Seite 9-72)

(1) BSS

Meldeschalter am Schutzmodul montieren

Attaching signaling switch on the protection module

VORSICHT	**CAUTION**
Selbstschneidende Schrauben vorsichtig anziehen. Die Meldeschalter dürfen sich bei der Montage nicht verformen.	Tighten self-tapping screws carefully. The signaling switches must not be deformed during installation.

Überstromauslöser Systemträger in Kunststoffausführung (schwarz):

Carrier of overcurrent system, plastic made (black):

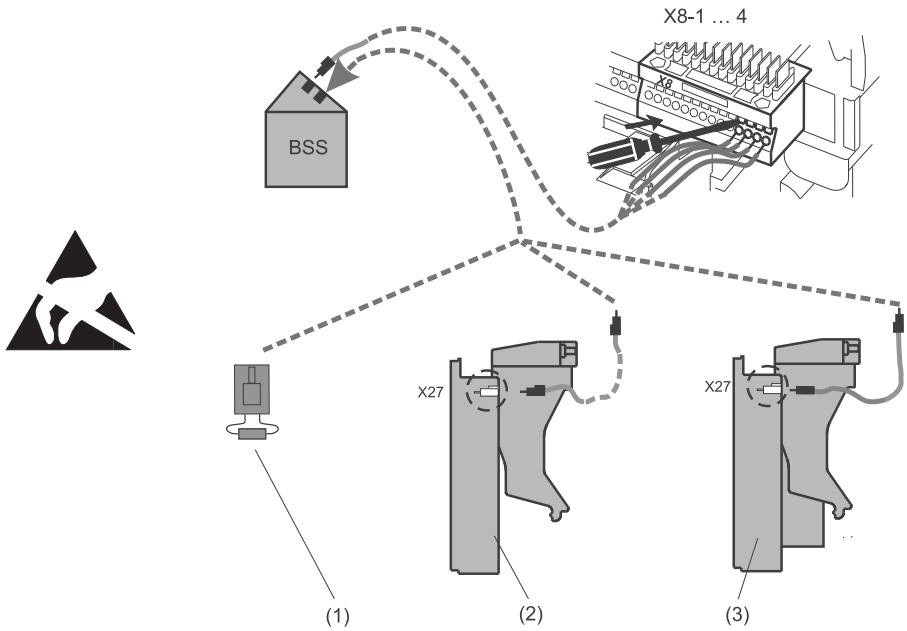
S24 Ausgelöstmeldeschalter (ohne Kommunikation)
S45 Ausgelöstmeldeschalter (mit COM15/16 - Modul)

S24 Trip signaling switch (without communication)
S45 Trip signaling switch (with COM15/16 - modul)

BSS-Modul anschließen

Connecting BSS-module

GEFAHR		DANGER
Gefährliche elektrische Spannung! **Kann Tod, schwere Personenschäden sowie Schäden an Geräten und Ausrüstung bewirken.** Vor dem Arbeiten an diesem Gerät, Anlage unbedingt spannungsfrei schalten.		**Hazardous voltage!** **Will cause death, serious personal injury, or equipment / property damage.** Disconnect power before working on this equipment.



Der erste **Cubicle**BUS-Anschluss führt an die Messerleiste X8. Der zweite **Cubicle**BUS-Anschluss erfolgt je nach Ausstattung des Leistungsschalters.

→ Schaltpläne (Seite 8-1)

The first **Cubicle**BUS connection leads to receptacle X8. The second **Cubicle**BUS connection is performed according to the circuit breaker equipment.

→ Circuit diagrams (page 8-1)

Hinweis	Note
Ggf. fehlende Hilfsstromanschlüsse nachrüsten (Messerleiste, Hilfsstromstecker, Schleifkontaktmodul für Einschubrahmen). → (Seite 5-15)	If necessary missing auxiliary terminals may be retrofitted (receptacle, auxiliary connectors and sliding contact module for guide frames). → (page 5-15)

(1) Abschlusswiderstand für ETU15B … 27B oder bei Leistungstrennschaltern
(2) ETU45B … 76B ohne Messfunktion
(3) ETU45B … 76B mit Messfunktion

(1) Terminating resistor for ETU15B ... 27B or at non-automatic circuit breakers
(2) ETU45B ... 76B without metering function
(3) ETU45B ... 76B with metering function

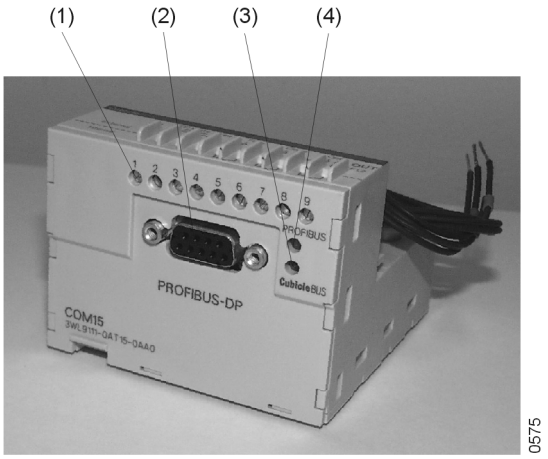
9.2.2.2 COM15-Modul

Schnittstellenadapter für:

- die Umsetzung der **Cubicle**BUS -Signale auf PROFIBUS-DP-Signale und umgekehrt
- bei Einschubschaltern:
  Erfassen der Position des Leistungsschalters im Einschubrahmen mit den Meldeschaltern S 46, S 47 und S 48 und Ausgabe entsprechender Meldungen auf den **Cubicle**BUS und den PROFIBUS-DP.
- Bereitstellung von speziellen Funktionen über zusätzliche Ein- und Ausgänge (z. B. zur Steuerung des Leistungsschalters und zur Parametrierung)

Weitere Informationen enthält das Handbuch „SENTRON 3WL/3VL Kommunikationsfähige Leistungsschalter - PROFIBUS-DP“

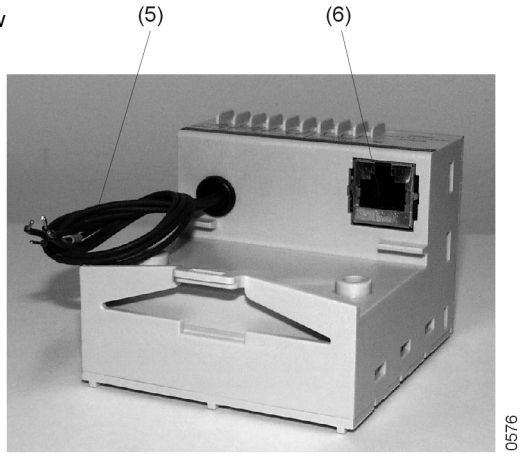
9.2.2.2 COM15 module



Interface adapter for:

- converting **Cubicle**BUS signals to PROFIBUS-DP signals and vice versa
- on draw-out circuit breakers:
  detecting the circuit breaker position in the guide frame with the signaling switches S46, S47 and S48, and emitting the corresponding signals on the **Cubicle**BUS and the PROFIBUS-DP.
- providing special functions by additional inputs and outputs (e.g. to control the circuit breaker and for parameterization)

Further Information is given in the manual “SENTRON 3WL/3VL Circuit Breakers with communication capability - PROFIBUS-DP”



Hinweis	**Note**
Dies ist ein Produkt für Umgebung A. In Haushaltsumgebung kann dieses Gerät unerwünschte Funkstörungen verursachen; in diesem Fall kann der Anwender verpflichtet sein, angemessene Maßnahmen durchzuführen	This is a product for environment A. In residential environment this device can cause unwanted radio interferences. In this case the user can be put in charge to perform special measures.

Ansicht

(1) Anschlussklemmen für zusätzliche Ein- bzw. Ausgänge zur Bereitstellung spezieller Funktionen
(2) Sub-D-Stecker, 9polig, für PROFIBUS-DP-Anschluss
(3) **Cubicle**BUS -LED
(4) PROFIBUS-DP-LED
(5) Anschlussleitungen zum Handstecker X8
(6) **Cubicle**BUS -Anschluss zum Anschließen externer **Cubicle**BUS -Module oder des Abschlusswiderstandes

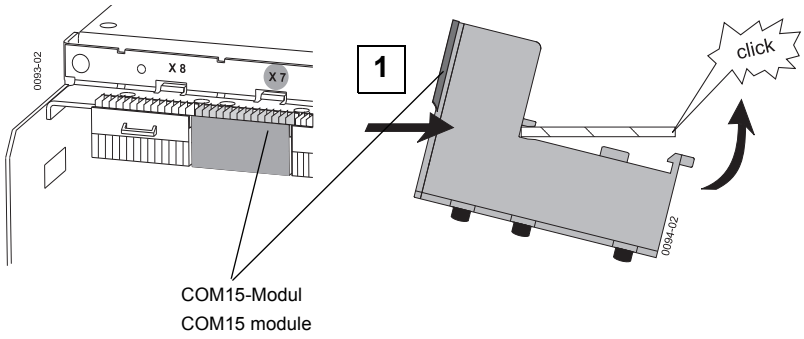
View

(1) Connection terminals for additional inputs and outputs to provide special functions
(2) SUB-D plug, 9-pole, for PROFIBUS-DP connection
(3) **Cubicle**BUS LED
(4) PROFIBUS-DP-LED
(5) Connecting cables to hand plug X8
(6) **Cubicle**BUS connection for connecting external **Cubicle**BUS -modules or for the terminating resistor

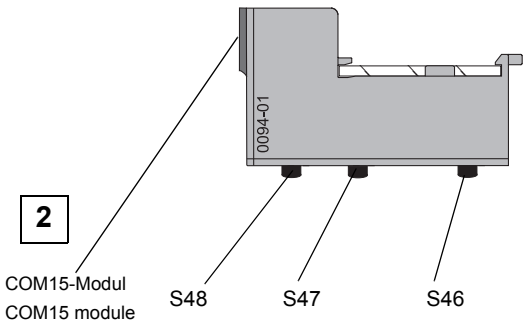
Anzeigen

LED	Anzeige	Bedeutung
PROFIBUS-DP	aus	Keine Spannung am COM15
	grün	PROFIBUS-DP-Kommunikation funktioniert
	rot	Busfehler oder Bus nicht ansprechbar
CubicleBUS	aus	Keine **Cubicle**BUS-Module gefunden
	grün	**Cubicle**BUS-Kommunikation funktioniert
	grün blinkend	**Cubicle**BUS-Teilnehmer gefunden, aber die **Cubicle**BUS-Verbindung innerhalb des Schalters ist gestört
	rot	**Cubicle**BUS-Fehler

Indications



LED	Indication	Significance
PROFIBUS-DP	off	No voltage at COM15
	green	PROFIBUS-DP communication operating
	red	Bus fault or bus not responding
CubicleBUS	off	No **Cubicle**BUS-modules found
	green	**Cubicle**BUS communication operating
	green flashing	**Cubicle**BUS participant found, but **Cubicle**BUS connection inside circuit breaker disturbed
	red	**Cubicle**BUS faulty



COM15-Modul am Einschubrahmen montieren

- Ausschalten und Federspeicher entspannen → (Seite 24-3)
- Schalter in Wartungsstellung ziehen → (Seite 24-4)

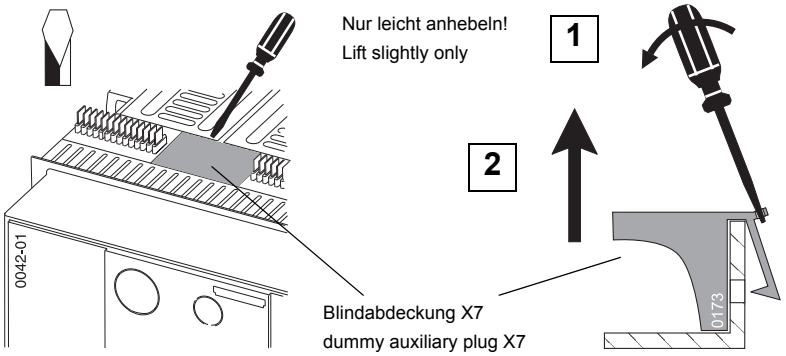
Fitting COM15 module on the guide frame

- Switch off and discharge the storage spring → (page 24-3)
- Pull the breaker into maintenance position → (page 24-4)

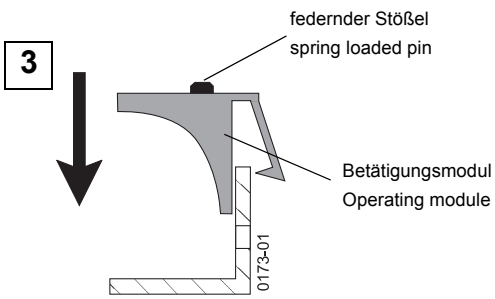
S46, S47 und S48:

Meldeschalter zur Erfassung der Position des Leistungsschalters im Einschubrahmen zur Weiterleitung auf den PROFIBUS-DP und den **Cubicle**BUS

S46, S47 and S48:

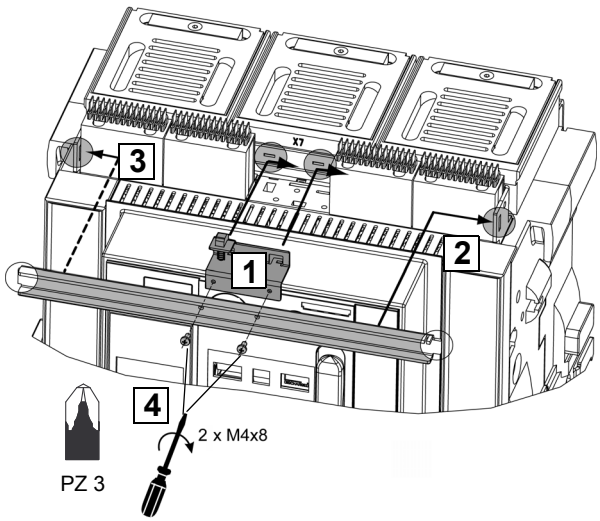


Signaling switches for detecting the circuit breaker position in the guide frame and transfer to PROFIBUS-DP and **Cubicle**BUS



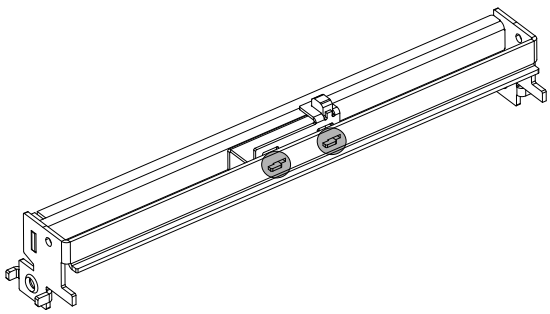
Betätigungsmodul mit Stößel am Einschubschalter montieren

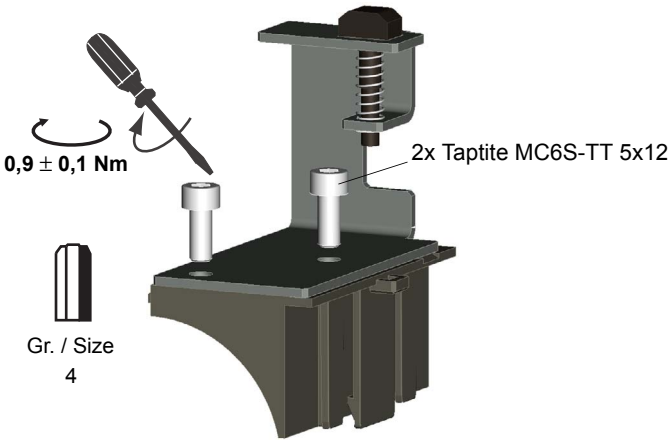
Für die Betätigung der Meldeschalter S46, S47 und S48.



Fitting operating module with pin on the draw-out circuit breaker

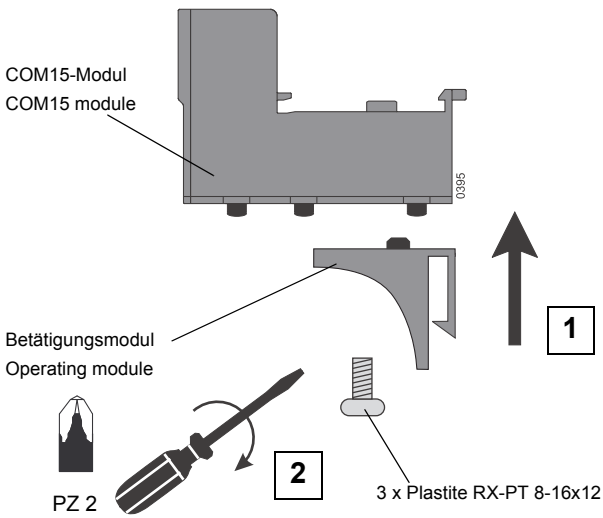
For actuating signaling switches S46, S47 and S48.



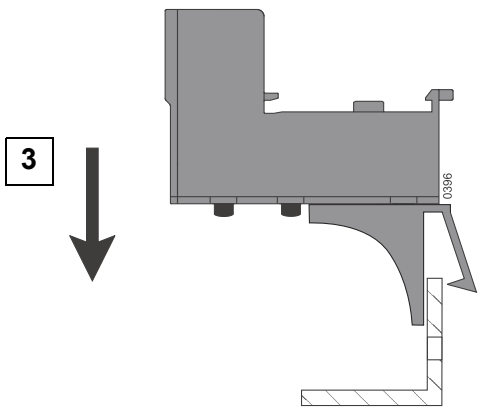


Nur für BG II und BG III mit U_e = 1000 V und
BG II Schaltvermögen C:

FS II and FS III with U_e = 1000 V only and
FS II breaking capacity C

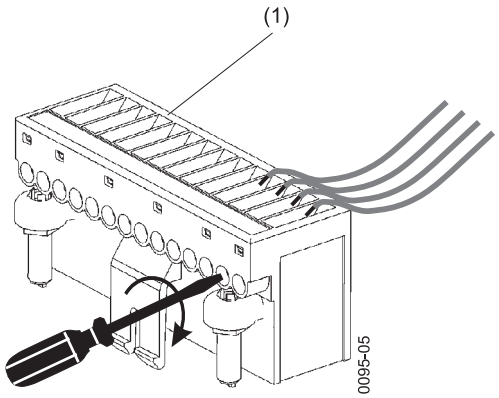


BG I 1000 V oder 690 V(+20%) Bemessungsbetriebsspannung



FS I 1000 V or 690 V(+20%) rated operational voltage

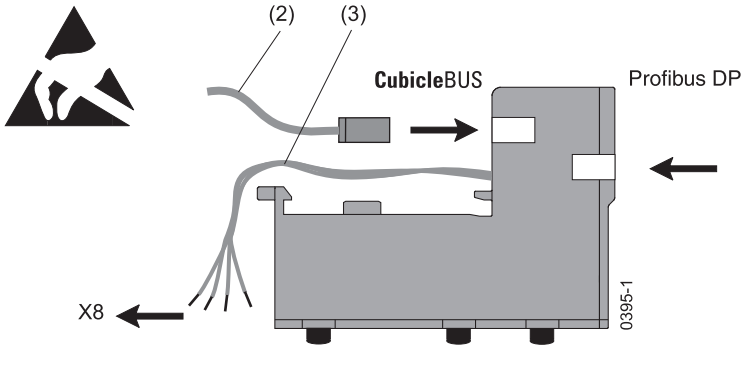
COM15-Modul am Festeinbauschalter montieren



Fitting COM15 module on the fixed-mounted breaker

Leitungen anschließen

→ Schaltpläne (Seite 8-1)

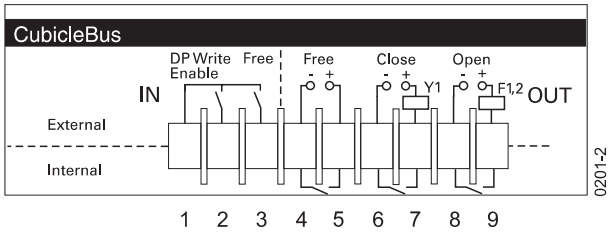


Hinweis	Note
Ggf. fehlende Hilfsstromanschlüsse nachrüsten (Messerleiste, Hilfsstromstecker, Schleifkontaktmodul für Einschubrahmen). → (Seite 5-15)	If necessary missing auxiliary terminals may be retrofitted (receptacle, auxiliary connectors and sliding contact module for guide frames). → (page 5-15)

(1) Handstecker X8
(2) Verbindungsleitung zum ersten externen **Cubicle**BUS-Modul oder Abschlusswiderstand
(3) Verbindungsleitung zum Handstecker X8

Connecting wires

→ Circuit diagrams (page 8-1)



(1) Hand plug X8
(2) Connecting cable to first external **Cubicle**BUS-module or terminating resistor
(3) Connecting cable to hand plug X8

Beschriftung	Belegung	Klemme
X8-1	**Cubicle**BUS -	X8.1
X8-2	**Cubicle**BUS +	X8.2
X8-3	24 V DC +	X8.3
X8-4	24 V DC Masse	X8.4

Designation	Assignment	Terminal
X8-1	**Cubicle**BUS -	X8.1
X8-2	**Cubicle**BUS +	X8.2
X8-3	24 V DC +	X8.3
X8-4	24 V DC GND	X8.4

ACHTUNG	NOTICE
Werden keine externen **Cubicle**BUS-Module am COM15-Modul angeschlossen, ist in den **Cubicle**BUS-Anschluss der Abschlusswiderstand zu stecken. Anderenfalls kann es zu Fehlfunktionen der Elektronik kommen.	If no external **Cubicle**BUS-modules are connected to the COM15-module, the terminating resistor has to be plugged into the **Cubicle**BUS-terminating. Otherwise there may be malfunctions in the electronic system.

Anschlüsse für zusätzliche Ein- und Ausgänge

Nähere Informationen über die Verwendung dieser Ein- und Ausgänge enthält das Handbuch „SENTRON 3WL / 3VL kommunikationsfähige Leistungsschalter – PROFIBUS-DP“.

Connections for additional inputs and outputs

Further information about the application of these inputs and outputs is given in the manual “SENTRON 3WL/3VL Circuit Breakers with communication capability – PROFIBUS-DP”.

9.2.2.3 COM16-Modul

Schnittstellenadapter für:

- die Umsetzung der **Cubicle**BUS-Signale auf Modbus-Signale und umgekehrt
- bei Einschubschaltern: Erfassen der Position des Leistungsschalters im Einschubrahmen mit den Meldeschaltern S46, S47 und S48 und Ausgabe entsprechender Meldungen auf den **Cubicle**BUS und den Modbus.
- Bereitstellung von speziellen Funktionen über zusätzliche Ein- und Ausgänge (z. B. zur Steuerung des Leistungsschalters und zur Parametrierung)

Hinweis
Das Modul ist in der Bestellergänzung F12 und dem Nachrüstkit 3WL9111-0AT18-0AA0 enthalten sowie als 3WL9111-0AT17-0AA0 erhältlich.

Installation und Betrieb

Der mechanische Einbau erfolgt wie beim COM15-Modul:
am Einschubrahmen → (Seite 9-86)
am Festeinbauschalter → (Seite 9-87).

Installation und Betrieb wird im Systemhandbuch mit der Dokumentbestellnummer 3ZX1012-0WL10-1AB1 beschrieben. Es kann kostenlos heruntergeladen werden unter:
http://support.automation.siemens.com/WW/view/de/39850157

9.2.2.3 COM16 module

Interface adapter for:

- converting **Cubicle**BUS signals to Modbus signals and vice versa
- on draw-out circuit breakers: detecting the circuit breaker position in the guide frame with the signaling switches S46, S47 and S48, and emitting the corresponding signals on the **Cubicle**BUS and the Modbus.
- providing special functions through additional inputs and outputs (e.g. to control the circuit breaker and for parameterization)

Note
This module is included in the ordering addendum F12 and the retrofit kit 3WL9111-0AT18-0AA0 and available as 3WL9111-0AT17-0AA0.

Installation and operation

Assembly is done as for the COM15 module:
for the guide frame → (page 9-86)
for fixed-mounted breakers → (page 9-87)

Installation and operating is described in the systemhandbook with document order number 3ZX1012-0WL10-1AC1. It can be downloaded free of charge from:
http://support.automation.siemens.com/WW/view/en/39850157

9.2.2.4 Messfunktion *PLUS*

Die Überstromauslöser ETU45B und ETU76B können mit einer Messfunktion ausgestattet werden. Diese erfordert jedoch das Vorhandensein von externen Spannungswandlern, die eine dreiphasige Messspannung bereitstellen. → (Seite 9-116)

Zusätzlich zu den Werten für die Ströme stellt die Messfunktion über den **Cubicle**BUS Angaben über Spannungen, Leistungen, Energiewerte, Leistungsfaktoren und über die Frequenz für die weitere Verarbeitung bereit.

Diese Daten können beispielsweise auf dem Display der Überstromauslöser angezeigt, mit Hilfe des COM15 / COM16-Moduls auf den PROFIBUS-DP übertragen und an die Ausgänge von externen **Cubicle**BUS-Modulen übergeben werden. Auf ihrer Grundlage lassen sich Aussagen über den Zustand des Energienetzes treffen. Bei Verwendung der Messfunktion ohne Kommunikation wird für die Funktionalität eine externe 24 V Hilfsspannungsversorgung benötigt.

9.2.2.4 Metering function *PLUS*

Trip unit ETU45B and ETU76B can be equipped with a metering function. This, however, requires external voltage transformers providing a three-phase metering voltage. → (page 9-116)

In addition to the values for the currents, the metering function provides data on voltages, powers, energy values, power factors and frequency through the **Cubicle**BUS, for further processing.

This data can be shown on the display of the trip unit, transmitted to the PROFIBUS-DP through the COM15/COM16-modules and transferred to the outputs of external **Cubicle**BUS-modules. Based on these data, conclusions can be drawn about the condition of the power system. To use the metering function without communication an external 24 V auxiliary voltage supply is required.

Messgröße	Measured parameter	Genauigkeit[1] / Accuracy[1]
Ströme I_{L1}, I_{L2}, I_{L3}, I_N	Currents I_{L1}, I_{L2}, I_{L3}, I_N	± 1 %
Erdschlussstrom I_g (Messung mit externem G-Wandler)	Ground-fault current I_g (Measurement with external ground-fault transformer)	± 5 %
Verkettete Spannungen U_{L12}, U_{L23}, U_{L31}	Line-to-line voltage U_{L12}, U_{L23}, U_{L31}	± 1%
Sternpunktspannungen U_{L1N}, U_{L2N}, U_{L3N}	Neutral point voltages U_{L1N}, U_{L2N}, U_{L3N}	±1 %
Momentaner Mittelwert der verketteten Spannungen U_{avgD}	Present average of line-to-line voltage U_{avgD}	± 1 %
Momentaner Mittelwert der Sternpunktspannungen U_{avgY}	Present average of neutral point voltages U_{avgY}	± 1 %
Scheinleistungen S_{L1}, S_{L2}, S_{L3}	Apparent power S_{L1}, S_{L2}, S_{L3}	± 2 %
Summe Scheinleistung	Total apparent power	± 2 %
Wirkleistungen P_{L1}, P_{L2}, P_{L3}	Active power P_{L1}, P_{L2}, P_{L3}	± 3 % @ cosφ > 0.6
Summe Wirkleistung	Total active power	± 3 % @ cosφ > 0.6
Blindleistungen Q_{L1}, Q_{L2}, Q_{L3}	Reactive power Q_{L1}, Q_{L2}, Q_{L3}	± 4 % @ cosφ > 0.6
Blindleistung Total	Total reactive power	± 4 % @ cosφ > 0.6
Leistungsfaktoren $\cos\varphi_{L1}$, $\cos\varphi_{L2}$, $\cos\varphi_{L3}$,	Power factors $\cos\varphi_{L1}$, $\cos\varphi_{L2}$, $\cos\varphi_{L3}$,	± 0.04

1) **Genauigkeit wir folgendermaßen angegeben:**
± (x % vom Messbereichendwert + 2 LSD (Least Significant Digit)
für ein Jahr nach der Kalibrierung

Referenzbedingung:
Eingangsstrom I: $I_{n\,max}$ ± 1 %
Eingangsspannung: U_n ± 1 %
Frequenz f: 50 Hz
Leistungsfaktor: cosφ = 1
Kurvenform: Sinus, Klirrfaktor < 5 % symmetrische Belastung
Umgebungstemperatur: 35 °C ± 5 °C
Hilfsspannung: DC 24 V nach DIN 19240 / EN 61131

Anwärmzeit: 2 Stunden
Fremdfelder: keine

Messbereich:
Strom 0,2 ... 1,2 $I_{n\,max}$
Spannung 0,8 ... 1.2 U_n

2) **IEC-Definition:**
Verhältnis des größten Unterschiedes der Phase zur höchstbelasteten Phase.

1) **Definition of accuracy:**
± (x % of measuring range + 2 LSD (Least Significant Digit) for one year after calibration

Reference condition:
Input current I: $I_{n\,max}$ ± 1%
Input voltage U: U_n ± 1%
Frequency f: 50 Hz
Powerfactor: cosφ = 1
Waveform: sine, harmonic distortion < 5% symmetrical load
Ambient temperature: 35 °C ± 5 °C
Auxiliary voltage: DC 24 V according DIN 19240 / EN 61131

Warm-up time: 2 hours
External fields: no

Metering range:
Current: 0.2 ... 1.2 $I_{n\,max}$
Voltage: 0.8 ... 1.2 U_n

2) **IEC-Definition:**
Ratio of the largest difference between the phases and the most heavily loaded phase.

Erweiterte Schutzfunktionen

Mit Hilfe der Messfunktion können erweiterte Schutzfunktionen realisiert werden, die über die Funktionalität der Überstromauslöser hinausgehen.

Extended protective functions

The metering function is used to implement extended protective functions beyond the functionality of the overcurrent releases.

Parameter		Einstellbereich Range	Verzögerung Delay
Unterspannung	Under voltage	100 … 1100 V	0 … 15 s
Überspannung	Over voltage	200 … 1200 V	0 … 15 s
Wirkleistung Bezug	Active power in normal direction	1 … 12000 kW	0 … 15 s
Wirkleistung Einspeisung	Active power in reverse direction	1 … 12000 kW	0 … 15 s
Überfrequenz	Over frequency	40 … 70 Hz	0 … 15 s
Unterfrequenz	Under frequency	40 … 70 Hz	0 … 15 s
Phasenunsymmetrie Strom[1)]	Phase current unbalance[1)]	5 … 50 %	0 … 15 s
Phasenunsymmetrie Spannung[1)]	Phase voltage unbalance[1)]	5 … 50 %	0 … 15 s
Drehfelderkennung	Phase rotation		
Klirrfaktor Strom	Current distortion factor	3 … 50 %	5 … 15 s
Klirrfaktor Spannung	Voltage distortion factor	3 … 50 %	5 … 15 s

1) **ANSI-Definition:**
Verhältnis des größten Unterschiedes der Phasen zum Mittelwert der Phasen.
IEC-Definition:
Verhältnis des größten Unterschiedes der Phase zur höchstbelasteten Phase.

1) **ANSI-Definition:**
Ratio of the largest difference between the phases and the average of all 3 phases.
IEC-Definition:
Ratio of the largest difference between the phases and the most heavily loaded phase.

Über- bzw. unterschreitet einer dieser Parameter den für ihn eingestellten Wert, erhält der Überstromauslöser nach der eingestellten Verzögerung über den **Cubicle**BUS die Aufforderung auszulösen.

Die Einstellung der Parameter kann erfolgen über:

- die Prüfbuchse mit dem BDA
- den PROFIBUS-DPmit einem PC und der PC-Software „powerconfig“ → (Seite 27-3)
- das Grafikdisplay (ETU76B).

If one of these parameters exceeds or falls below its default settings, the overcurrent release is tripped after the adjusted delay through the **Cubicle**BUS.

The parameters can be adjusted through:

- the test socket with the BDA
- the PROFIBUS-DP with a PC and the PC-software “powerconfig” → (page 27-2)
- the graphical display (ETU76B)

Setpoints

Durch die Setpoint-Funktion können spezielle Ereignisse im Energienetz signalisiert bzw. aufgezeichnet werden.

Setpoints

The setpoint function can be used to signal or record special events in the power system.

Parameter		Bereich Range	Verzögerung Delay
Überstrom Phase	Phase overcurrent	30 … 10000 A	0 … 255 s
Überstrom Erdstrom	Ground overcurrent	30 … 1200 A	0 … 255 s
Überstrom Neutralleiter	Neutral conductor overcurrent	30 … 10000 A	0 … 255 s
Phasenunsymmetrie Strom[1)]	Phase current unbalance[1)]	5 … 50 %	0 … 255 s
Langzeitmittelwert Strom	Long-time average current	30 … 10000 A	0 … 255 s
Unterspannung	Under voltage	100 … 1100 V	0 … 255 s
Phasenunsymmetrie Spannung[1)]	Phase voltage unbalance[1)]	5 … 50 %	0 … 255 s
Überspannung	Over voltage	100 … 1100 V	0 … 255 s
Wirkleistung überschritten Bezug	Over power in normal direction	1 … 12000 kW	0 … 255 s
Wirkleistung überschritten Rückspeisung	Over power in reverse direction	1 … 12000 kW	0 … 255 s
Langzeitmittelwert Wirkleistung überschritten	Long-time active power average exceeded	1 … 12000 kW	0 … 255 s
Langzeitmittelwert Scheinleistung überschritten	Long-time apparent power average exceeded	1 … 12000 kVA	0 … 255 s
Langzeitmittelwert Blindleistung überschritten	Long-time reactive power average exceeded	1 … 12000 kVar	0 … 255 s
Blindleistung überschritten Bezug	Reactive power exceeded in normal direction	1 … 12000 kVar	0 … 255 s
Blindleistung überschritten Rückspeisung	Reactive power exceeded in reverse direction	1 … 12000 kVar	0 … 255 s
Scheinleistung überschritten	Apparent power exceeded	1 … 12000 kVA	0 … 255 s

Formfaktor überschritten	Form factor exceeded	1 … 2.55	0 … 255 s

1) **ANSI-Definition:**
Verhältnis des größten Unterschiedes der Phasen zum Mittelwert der Phasen.

IEC-Definition:
Verhältnis des größten Unterschiedes der Phase zur höchstbelasteten Phase.

1) **ANSI-Definition:**
Ratio of the largest difference between the phases and the average of all 3 phases.

IEC-Definition:
Ratio of the largest difference between the phases and the most heavily loaded phase.

Über- bzw. unterschreitet einer dieser Parameter den für ihn eingestellten Wert, wird nach Ablauf der eingestellten Verzögerung über den **Cubicle**BUS eine Meldung ausgegeben.

Die Einstellung der Parameter kann erfolgen über:

- die Prüfbuchse mit dem BDA
- den PROFIBUS-DPmit einem PC und der PC-Software „powerconfig“ → (Seite 27-3)
- das Grafikdisplay (ETU76B).

If one of these parameters exceeds or falls below its default settings, the overcurrent release is tripped after the adjusted delay through the **Cubicle**BUS.

The parameters can be adjusted through:

- the test socket with the BDA
- the PROFIBUS-DP with a PC and the PC-software “powerconfig” → (page 27-2)
- the graphical display (ETU76B)

Messfunktion *PLUS*

Die Messfunktion *Plus* bietet neben den Grundfunktionen

- zwei unabhängige Kurvenformspeicher sowie
- eine harmonische Analyse

Die zwei unabhängigen Kurvenformspeicher können zur Analyse der Strom- und Spannungswerte zur Zeit eines Ereignisses genutzt werden.

Sind die Kurvenformspeicher auf „Aufzeichnung“ (Standardeinstellung) parametriert, so erfolgt eine fortwährende Aufzeichnung bis zum Eintreffen eines zuvor definierten Ereignisses. Dann wird die Aufzeichnung gestoppt und man kann über eine Visualisierung (Grafikdisplay, Laptop bzw. PC) die Kurvenverläufe des Stroms bzw. der Spannung zur Zeit des Ereignisses betrachten. Das Zeitfenster beträgt eine Sekunde. Die Auflösung beträgt 1649 Werte / Sekunde.

Werte, die jeweils für einen der Kurvenformspeicher ausgewählt werden können:

Einstellgrößen für Kurvenformspeicher	
Ströme	I_{L1}, I_{L2}, I_{L3}, I_{LN}, I_g
Spannungen	U_{L1}, U_{L2}, U_{L3}

Die Kurvenformspeicher können auch über Kommunikationskanäle (PROFIBUS-DP, **Cubicle**BUS) einzeln gestartet bzw. gestoppt werden.

Die Parametrierung der Kurvenformspeicher kann erfolgen über:

- die Prüfbuchse mit dem BDA
- den PROFIBUS-DP mit einem PC und der PC-Software „powerconfig“ → (Seite 27-3)
- das Grafikdisplay (ETU76B).

Metering function *PLUS*

In addition to the basic functions, the metering function *PLUS* offers:

- two independent waveform memories
- harmonic analysis

The two independent waveform memories can be used to analyse the current and voltage values at the time of the event.

If the waveform memories are programmed to “recording” (standard setting), continuous recording takes place until a previously defined event occurs. Then, the recording is stopped, and the current or voltage waveforms at the time of the event can be observed through a visual display (graphical LCD, laptop or PC).
The time window is one second; the resolution is 1649 values/ second.

The values that can be selected for one of the waveform memories are:

Settings for waveform buffers memory	
Currents	I_{L1}, I_{L2}, I_{L3}, I_{LN}, I_g
Voltages	U_{L1}, U_{L2}, U_{L3}

The waveform memories can also be started or stopped individually through the communication channels (PROFIBUS-DP, **Cubicle**BUS).

The waveform memories can be parameterized via:

- the test socket with the BDA
- the PROFIBUS-DPwith a PC and the PC-software “powerconfig” → (page 27-2)
- the graphical display (ETU76B)

Nachrüsten

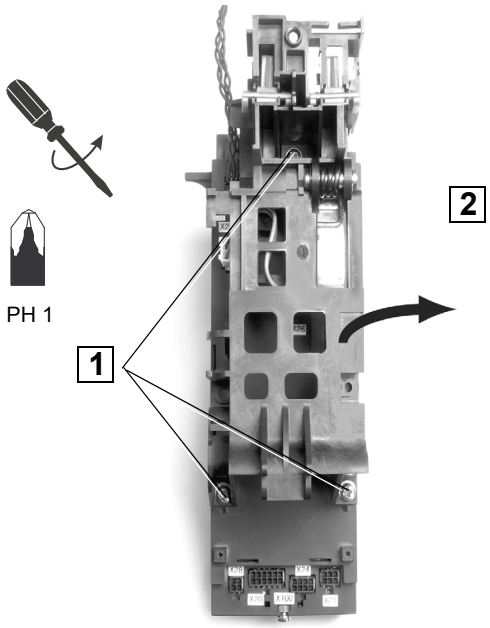
WARNUNG

Vor dem Arbeiten an diesem Gerät, Anlage unbedingt spannungsfrei schalten sowie das Gerät erden.

- Ausschalten und Federspeicher entspannen → (Seite 24-3)
- Einschubschalter in Wartungsstellung ziehen → (Seite 24-4)
- Bedienpult abnehmen → (Seite 24-11)
- Überstromauslöser ausbauen → (Seite 9-72)

Retrofitting

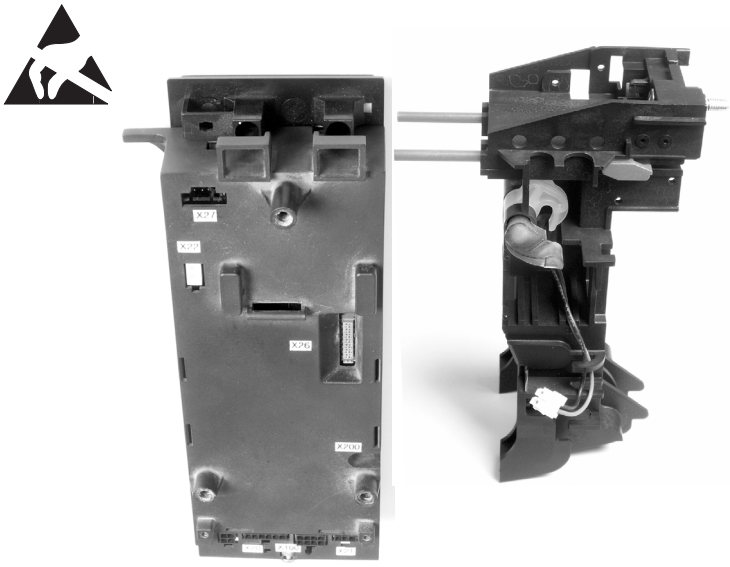
WARNING



Always de-energize and ground equipment before working on this equipment.

- Switch off and discharge the storage spring → (page 24-3)
- Move draw-out circuit breaker to maintenance position → (page 24-4)
- Remove front panel → (page 24-11)
- Remove overcurrent release → (page 9-72)

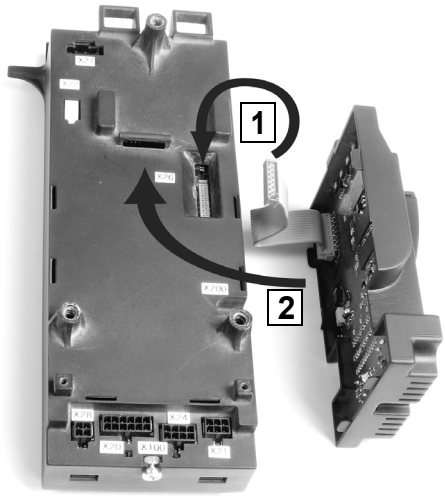
Hinweis	**Note**
Wird die Messfunktion *PLUS* nachgerüstet, beträgt die Messgenauigkeit für Strom- und Spannungswerte 3%. Entsprechend ändert sich die Genauigkeit der anderen Messgrößen. Ist eine Messgenauigkeit von 1% erforderlich, muss der Überstromauslöser zusammen mit der Messfunktion *PLUS* zum Kalibrieren an den Hersteller eingeschickt werden.	If the metering function PLUS is retrofitted, the current and voltage accuracy is 3% and the accuracy of the other measured values changes accordingly. If an accuracy of 1% is required, the overcurrent release must be submitted to the manufacturer for calibration, together with the metering function *PLUS*.



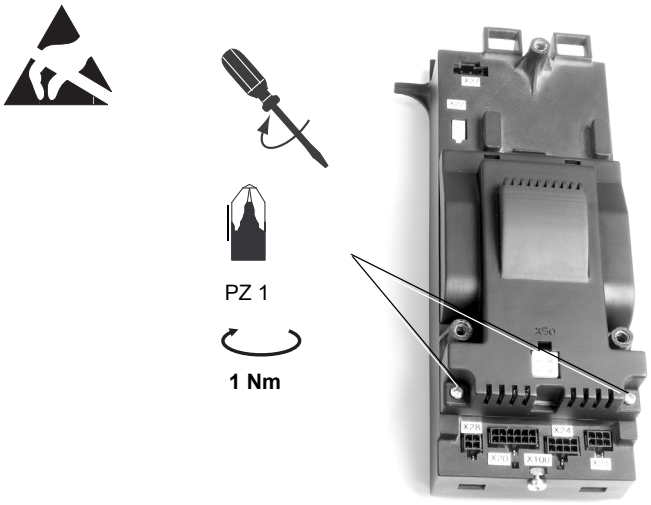
Auslösermechanik vom elektronischen Überstromauslöser abbauen

Ggf. bestehende Leitungsfixierungen lösen und Anschlussstecker des Auslösemagneten abziehen.

Removing tripping mechanism from electronic overcurrent release



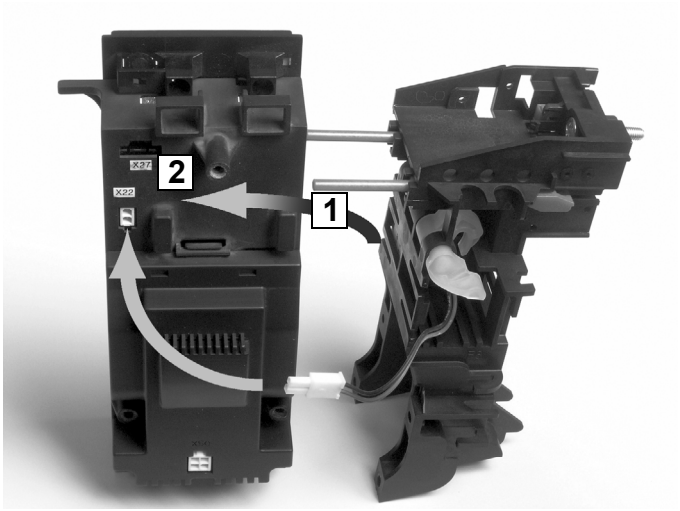
If applicable, undo existing cable fixings and unplug connector of tripping solenoid

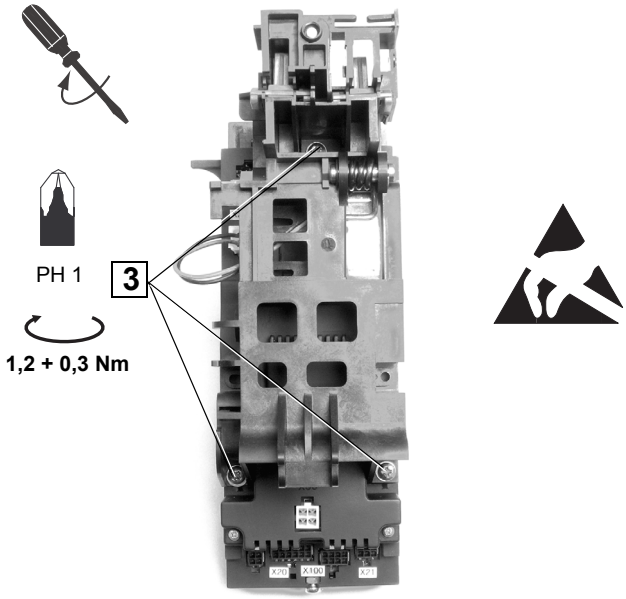


Messfunktion aufstecken und verschrauben

Installing metering function and screwing tight

VORSICHT	CAUTION
Selbstschneidende Schraube vorsichtig anziehen!	Tighten self-tapping screw carefully!

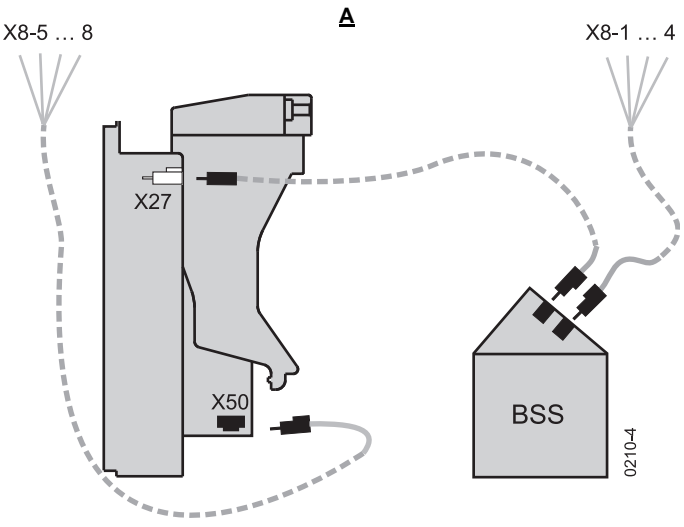




Mechanik anbauen und Anschlussstecker für Auslösemagneten stecken

Installing mechanism and plugging connector for tripping solenoid

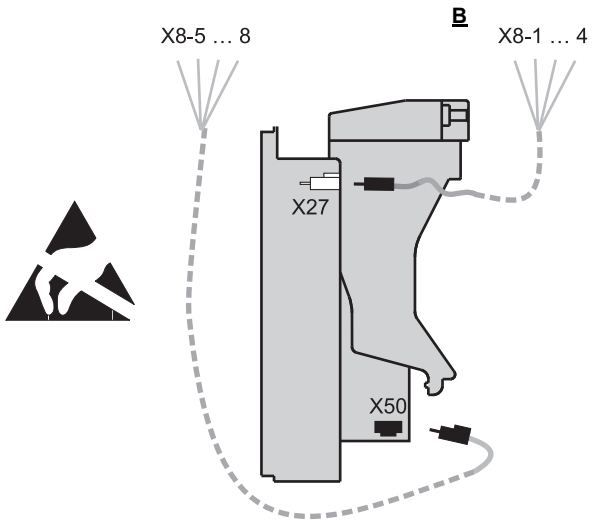
VORSICHT	CAUTION
Verdrehung der Schwingmetalle vermeiden! Anziehdrehmoment beachten!	Avoid distorsion of anti-vibration rubber, pay attention to tightening torque.



Vorkonfektionierte Leitungen anschließen

Connecting pre-assembled cables

Hinweis	Note
Ggf. fehlende Hilfsstromanschlüsse nachrüsten (Messerleiste, Hilfsstromstecker, Schleifkontaktmodul für Einschubrahmen). → (Seite 5-15)	If necessary missing auxiliary terminals may be retrofitted (receptacle, auxiliary connectors and sliding contact module for guide frames). → (page 5-15)

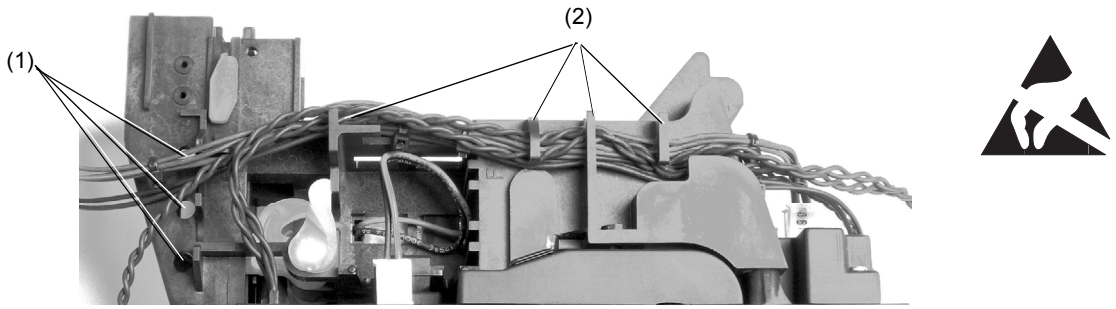


Anschlussvariante A: mit BSS

Variant A: with BSS

Anschlussvariante B: ohne BSS

Variant B: without BSS



Anschlussbelegung	
X50	externer Spannungswandler
X27	**Cubicle**BUS

Terminal assignment	
X50	External voltage transformer
X27	**Cubicle**BUS

Hinweis	Note
Werden keine externen **Cubicle**BUS-Module an X8-1 und X8-2 angeschlossen, ist an diese Klemmen der Abschlusswiderstand anzuschließen. Anderenfalls kann es zu Fehlfunktionen der Elektronik kommen.	If no external **Cubicle**BUS modules are connected to X8-1 and X8-2, this terminals must be equipped with the end resistor. Otherwise there may be malfunctions in the electronic system.

Leitungen verlegen und fixieren

Laying and fixing the cables

(1) 3 Bohrungen als Fixierpunkte
(2) Fixierhilfen

Alle Leitungen wie oben gezeigt sorgfältig verlegen und mit Kabelbindern an den Fixierpunkten befestigen. Leitungen um die Fixierhilfen führen und unmittelbar links und rechts daneben mit Kabelbindern fixieren.

Anschließend:

- Überstromauslöser einbauen → (Seite 9-72)
- Leitungen an X8 anschließen
- Bedienpult aufsetzen → (Seite 24-25)

(1) 3 holes as fixing points
(2) Fixing aids

Lay all cables carefully as shown above and fix them with cable straps at the fixing points. Lead the cables around the fixing aids and fix them directly on the left and right of the aids with cable straps.

Then:

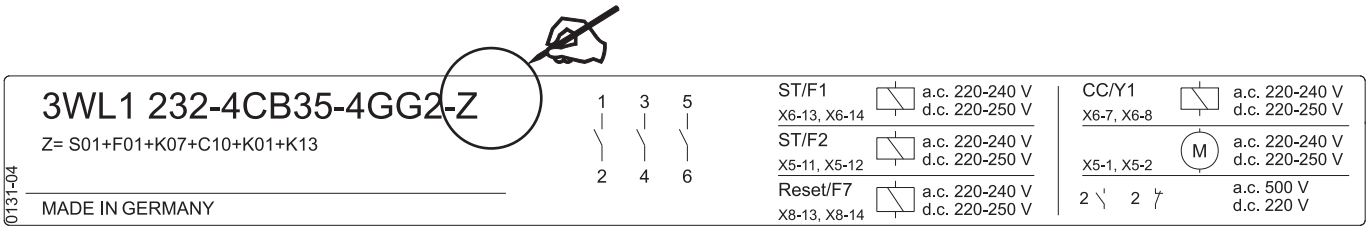
- Install overcurrent release → (page 9-72)
- Connect cables to X8
- Install front panel → (page 24-25)

9.2.2.5 Nachrüsten des PROFIBUS - Kommunikationsanschlusses

Der Leistungsschalter kann mit dem „PROFIBUS Nachrüstkit“ nachträglich befähigt werden, Daten über den PROFIBUS-DP auszutauschen.

- Einbau des Breaker Status Sensors (BSS) → (Seite 9-82)
- Einbau des COM15-Moduls → (page 9-86)
- Austausch des Überstromauslösers ETU15B, ETU25B oder ETU27B gegen ETU45B oder ETU76B → (Seite 9-72)

9.2.2.5 Retrofitting of the PROFIBUS - communication



Additional the circuit breaker can be qualified with the "PROFIBUS retrofitting kit", to exchange data via PROFIBUS-DP.

- Mounting breaker status sensor (BSS) → (page 9-82)
- Mounting COM15-module → (page 9-86)
- Exchanging overcurrent release ETU15B, ETU25B or ETU27B against ETU45B or ETU76B → (page 9-72)

9.2.2.6 Schilder aktualisieren

Hinweis
Nach dem Einbau zusätzlicher Komponenten sind folgende Angaben mit einem weißen Permanentstift bzw. mit Aufklebern aus dem beiliegenden Etikettenbogen zu aktualisieren! Davor ist es ggf. notwendig die zu korrigierenden Zeichen mit einem schwarzen Permanentstift zu füllen.

Ausstattungsschild des Leistungsschalters

9.2.2.6 Updating the options label

Note
After installing additional components, add the following data using a white and indelible ink pen or the appropiate label from the set of labels supplied! If necessary the signs which need to be corrected have to be filled with a black permanent pen before.

Options label of the circuit breaker

9.2.3 Externe CubicleBUS-Module

9.2.3.1 Allgemeines

Verwendung

Externe **Cubicle**BUS-Module dienen der Kommunikation des Leistungsschalters SENTRON WL mit Sekundärgeräten im Leistungsschalterfeld. Mit ihrer Hilfe lassen sich z. B. Analoganzeigen ansteuern, Auslösestatus und Auslösegrund des Leistungsschalters übertragen und zusätzliche Steuersignale einlesen. Mit Hilfe eines dieser Module kann des weiteren eine zeitverkürzte Selektivitätssteuerung für den Kurzschlussschutz realisiert werden.

(1) Anzeige-LED
(2) Drehkodierschalter
(3) Anschluss X3: **Cubicle**BUS
(4) Anschluss X5: Ein- bzw. Ausgänge
(5) Anschluss X4: Ein- bzw. Ausgänge
(6) Anschluss X2: **Cubicle**BUS
(7) Anschluss X1: **Cubicle**BUS
(8) Taste „TEST“

Montage

Die externen **Cubicle**BUS-Module werden im Schaltfeld auf eine standardmäßige 35 mm-Hutschiene aufgeschnappt. Dabei ist zu beachten, dass die Länge der Anschlussleitung des ersten Moduls zum Leistungsschalter maximal 2 m beträgt.

Verbindungsaufbau

Für die Verbindung der **Cubicle**BUS-Module untereinander und zum Leistungsschalter sind ausschließlich die mitgelieferten vorkonfektionierten Leitungen zu verwenden. Über diese Leitungen erfolgt auch die Spannungsversorgung der **Cubicle**BUS-Module mit 24 V DC. Werden mehr als 2 **Cubicle**BUS-Module angeschlossen, muss die Versorgung mir 24 V DC über eine separate Leitungsverbindung von Modul zu Modul erfolgen.

9.2.3 External CubicleBUS-modules

9.2.3.1 General

Application

External **Cubicle**BUS-modules are used for communication between the circuit breaker SENTRON WL and the secondary equipment in the circuit breaker panel. They are provided to control analog indications, transmit the circuit breaker tripping status and the tripping reason, and to read additional control signals. Furthermore, with one of these modules it is possible to implement a zone selective interlocking for short-circuit protection.

(1) Indication LED
(2) Rotary coding switch
(3) Connection X3: **Cubicle**BUS
(4) Connection X5: Inputs or outputs
(5) Connection X4: Inputs or outputs
(6) Connection X2: **Cubicle**BUS
(7) Connection X1: **Cubicle**BUS
(8) “TEST” button

Installation

The external **Cubicle**BUS-modules are snapped onto a standard 35-mm DIN-rail inside the switchgear panel. It must be ensured that the length of the connecting cable of the first module to the circuit breaker does not exceed 2 m.

Connection setup

The **Cubicle**BUS modules must only be connected to each other and to the circuit breaker using the pre-assembled cables supplied. These cables are also used for the 24 V DC voltage supply of the **Cubicle**BUS-modules. If more than two **Cubicle**BUS modules are connected, the 24 V DC voltage supply must be fed via a separate cable from module to module.

Hinweis	Note
Ggf. fehlende Hilfsstromanschlüsse nachrüsten (Messerleiste, Hilfsstromstecker, Schleifkontaktmodul für Einschubrahmen). → (Seite 5-15)	If necessary missing auxiliary terminals may be retrofitted (receptacle, auxiliary connectors and sliding contact module for guide frames). → (page 5-15)

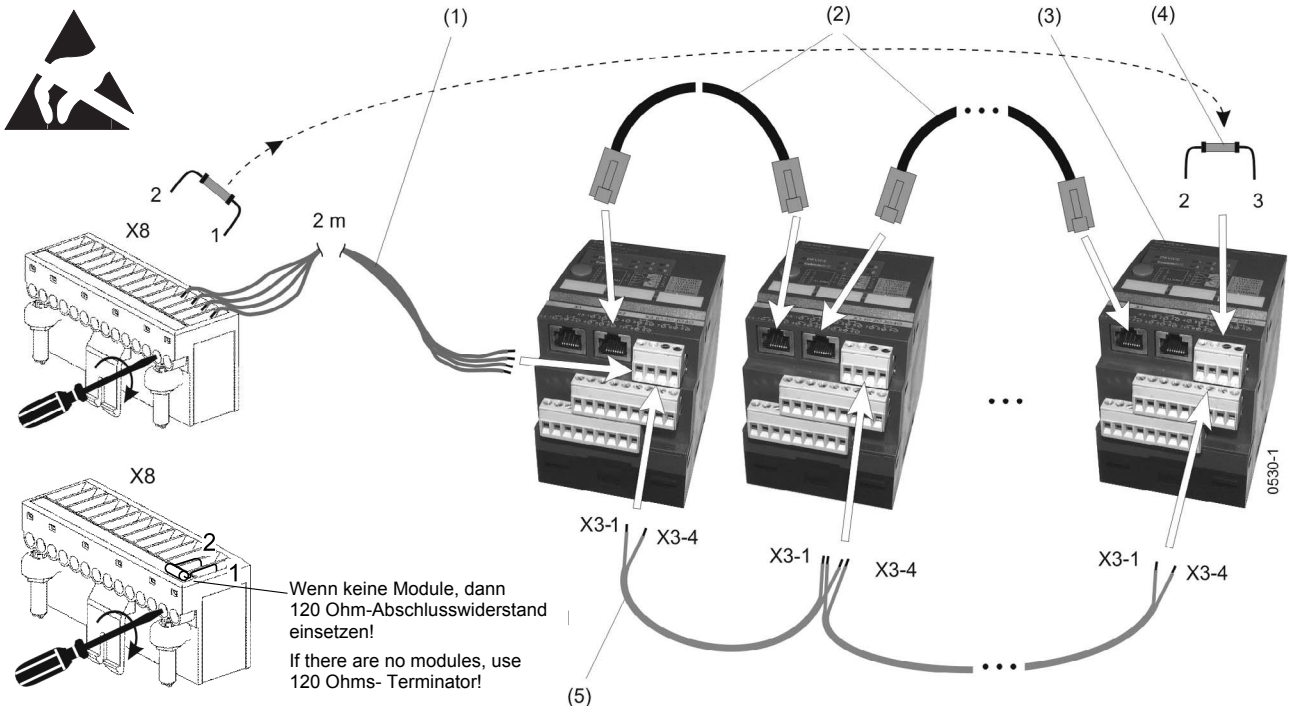
An einen Leistungsschalter ist immer nur ein **Cubicle**BUS -Modul direkt anzuschließen. Der Anschluss weiterer Module hat immer von Modul zu Modul zu erfolgen. Stichleitungen sind nicht zulässig!

Falls vorhanden, ist das ZSI-Modul immer das erste Modul und muß direkt an den Leistungsschalter angeschlossen werden.

Am letzten Modul ist die **Cubicle**BUS -Leitung am Anschluss X3 mit einem 120 Ω-Widerstand abzuschließen. Dieser liegt jedem Modul bei.

Die Gesamtlänge der **Cubicle**BUS -Leitungen darf vom Leistungsschalter, Hilfstromstecker X8, bis zum letzten **Cubicle**BUS -Modul 10 m nicht überschreiten.

Leistungsschalter ohne COM15-Modul



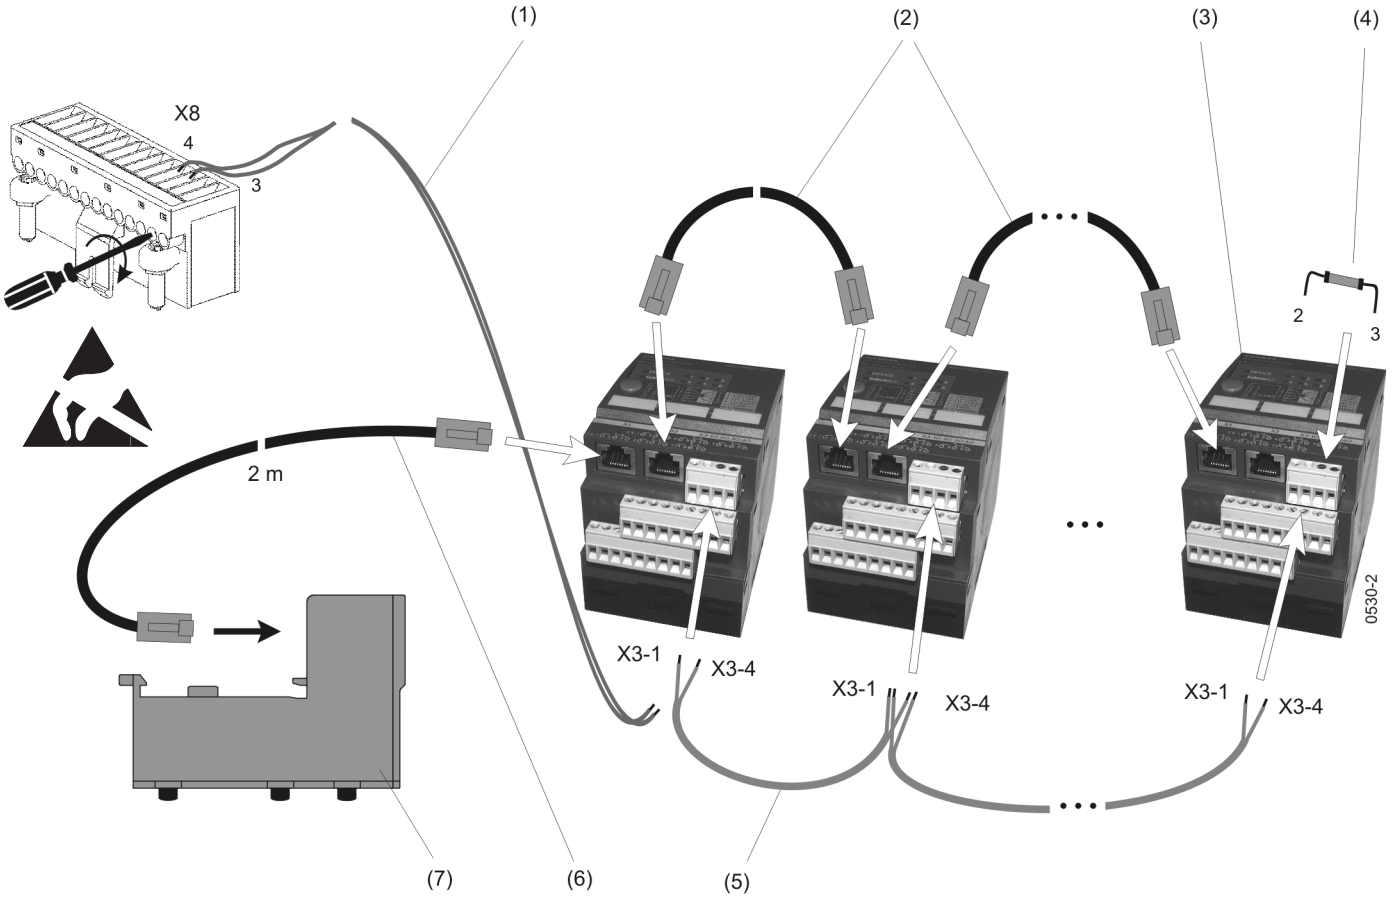
Only one **Cubicle**BUS -module can be connected directly to a circuit breaker. Further modules must be connected from module to module. Spur lines are not permissible!

If provided, the ZSI-module is always the first module, and must be connected directly to the circuit breaker.

The **Cubicle**BUS cable must be connected to the X3 connection of the last module with a 120 Ω resistor, which is integrated in a Western plug and is supplied with each module.

The total length of the **Cubicle**BUS cables must not exceed 10 m from the circuit breaker – auxiliary current plug X8 – up to the last **Cubicle**BUS -module.

Circuit Breaker without COM15-module



(1) Anschlussleitung zum 1. Modul (4 adrig, Adern X8-4 / X3-1 mit X8-3 / X3-4 und X8-1 / X3-2 mit X8-2 / X3-3 jeweils verdrillt)
(2) Verbindungsleitungen zwischen den Modulen
(3) **Cubicle**BUS -Module
(4) Abschlusswiderstand 120 Ω 0,5 W am letzten Modul

Modultest

VORSICHT	CAUTION
Bei der Anlagenprojektierung und Selektivitätsbetrachtung ist sicherzustellen, dass der Leistungsschalter nicht Ströme führen kann, die oberhalb der im Katalog angegebenen Schaltleistungswerte liegen. Übergeordnete Schutzgeräte sind so einzustellen, dass diese Fehlerfälle sicher abgeschaltet werden.	When planning a project and considering selectivity it has to be ensured loads carried by the circuit-breaker will not exceed the breaking capacity stated in the 3WL catalogue. Upstream protection equipment has to be set in a way, that these faults are interrupted safely.

Module test

Die korrekte Funktion der **Cubicle**BUS -Module kann im Test-Modus überprüft werden.

Einmaliges Betätigen der Taste „TEST“ startet den Test-Modus.

Alle Ausgänge und die dazu gehörenden LEDs werden ausgeschaltet. Die Farbe der DEVICE-LED wechselt von grün auf gelb.

The correct operation of the **Cubicle**BUS -modules can be verified in the test mode.

The test mode is started by pushing the “TEST” button once.

All outputs and the associated LED's are switched off. The colour of the DEVICE LED changes from green to yellow.

Prüfen der Ein- und Ausgänge

Betätigen der Taste „TEST“	Wirkung
2 x kurz hintereinander	- LED 1 und Ein- / Ausgang 1 ein
Nach Pause, 2 x kurz hintereinander	- LED 1 und Ein- / Ausgang 1 aus, - LED 2 und Ein- / Ausgang 2 ein
Nach Pause, 2 x kurz hintereinander	- LED 2 und Ein- / Ausgang 2 aus, - LED 3 und Ein- / Ausgang 3 ein
...	...
Nach Pause, 2 x kurz hintereinander	- LED 5 und Ein- / Ausgang 5 aus, - LED 6 und Ein- / Ausgang 6 ein
Nach Pause, 1x	Ein- / Ausgang 6 aus, alle LEDs ein
1x	Test-Modus beginnt von vorn, alle Ein- / Ausgänge und die dazu gehörenden LEDs sind aus

Testing inputs and outputs

Pressing the “TEST” Button	Reaction
Twice quickly	- LED 1 and Input/output 1 on
After a pause, twice quickly	- LED 1 and input/output 1 off, - LED 2 and Input/output 2 on
After a pause, twice quickly	- LED 2 and input/output 2 off, - LED 3 and Input/output 3 on
...	...
After a pause, twice quickly	- LED 5 and input/output 5 off, - LED 6 and Input/output 6 on
After a pause, once	Input/output 6 off, all LEDs on
Once	Test mode starts again, all inputs/ouputs and the associated LED‘s are off

Mehrmaliges Betätigen der Taste „TEST“ kurz hintereinander bewirkt bei eingeschalteter LED abwechselndes Ein- und Ausschalten des jeweiligen Ein- / Ausgangs.

Pushing the "TEST" button several times in quick succession when an LED is on switches the respective input/output on and off alternately.

Prüfen nur der LEDs

Bei mehrmaligem Betätigen der Taste „TEST“ mit einer Pause dazwischen werden nur die LEDs einzeln nach einander eingeschaltet. Nach der letzten LED werden alle LED eingeschaltet.

Abermaliges Betätigen der Taste „TEST“ startet den Test-Modus von vorn und alle LEDs sowie Ein- / Ausgänge werden ausgeschaltet.

Testing LED's only

Pushing the "Test" button several times with pauses in between switches the LEDs on successively. After the last LED, all LEDs are switched on.

Repeated pushing the “TEST” button starts the test mode again, and all LEDs, inputs and outputs are switched off.

Test-Modus verlassen

Taste „TEST“ ca. 30 s nicht betätigen.
Sind alle LEDs eingeschaltet, wird der Test-Modus bereits nach ca. 1 s verlassen.

9.2.3.2 ZSI-Modul

Funktion

Die Kombination des Leistungsschalters mit einem ZSI-Modul (**Z**eitverzögerte **S**elektivitäts-**S**teuerung) erlaubt es, in Schaltanlagen mit mehreren Staffelebenen einen auftretenden Kurzschluss genau zu lokalisieren.

Dazu werden alle Leistungsschalter über ihr ZSI-Modul miteinander verbunden.

Im Kurz- und/oder Erdschlussfall fragt jeder vom Kurzschlussstrom durchflossene Leistungsschalter die ihm direkt nachgeordneten Leistungsschalter ab, ob der Kurz- und/oder Erdschluss auch in der nächsten untergeordneten Staffelebene auftritt. Es löst nur der, in Energieflussrichtung gesehen, nächstgelegene, dem Kurz- und/oder Erdschluss vorgeordnete Leistungsschalter aus.

Eine eingestellte Verzögerungszeit t_{sd} für die Kurzschlussauslösung wird auf 50 ms gesetzt bei Schalterstellung am ZSI-Modul „S“ oder „S+G“, wenn der Leistungsschalter im Kurzschlussfall kein Blockiersignal ZSI-IN von einem nachgeordneten Leistungsschalter erhält. Bei einem erkannten Kurzschluss wird ein Blockiersignal ZSI-OUT an die vorgeordneten Leistungsschalter ausgegeben. Die Kurzschlussauslösung erfolgt jedoch frühestens nach 50 ms, typisch sind 80 … 90 ms.

Eine eingestellte Verzögerungszeit t_g für die Erdschlussauslösung wird auf 100 ms gesetzt bei Schalterstellung am ZSI-Modul „G“ oder „S+G“, wenn der Leistungsschalter im Erdschlussfall kein Blockiersignal ZSI-IN von einem nachgeordneten Leistungsschalter erhält. Bei einem erkannten Erdschluss wird ein Blockiersignal ZSI-OUT an die vorgeordneten Leistungsschalter ausgegeben. Die Erschlussauslösung erfolgt jedoch frühestens nach 100 ms, typisch sind 130 ... 140 ms.
Zur Sicherheit wird nach längstens 3 s ein ausgegebenes Blockiersignal ZSI-OUT beendet.

Das ZSI-Modul des Leistungsschalters SENTRON WL ist mit dem ZSI-Modul der Leistungsschalter 3WN und 3WS sowie SENTRON VL funktionskompatibel.

Montage

→ (Seite 9-99)

Anschluss

→ (Seite 9-99)

Es kann pro Leistungsschalter nur ein ZSI-Modul angeschlossen werden.

Wird das ZSI-Modul zusammen mit anderen **Cubicle**BUS -Modulen verwendet, muss das ZSI-Modul direkt an das COM15- oder COM16-Modul bzw. den Handstecker X8 angeschlossen werden.

Quitting the test mode

Do not press the “TEST” button for approximately 30 seconds.
If all LED's are on, the test mode is already quitted after about 1 s.

9.2.3.2 ZSI-module

Function

If the circuit breaker is combined with a ZSI-module, a short-circuit occurring in systems with several grading levels can be localised precisely.

For this purpose, all circuit breakers are interconnected via their ZSI-modules.

When a short-circuit or ground-fault occurs, each circuit breaker affected by the short-circuit or ground-fault current queries its downstream circuit breaker to determine whether the short-circuit or ground-fault is present in the next downstream grading level. In the direction of the energy flow, only the circuit breaker nearest to the short-circuit or ground-fault in the upstream direction is tripped.

A possible delay time setting t_{sd} for the short-circuit tripping is set to 50 ms if "S" or "S+G" is selected on the ZSI module and if in the event of short-circuit the circuit breaker does not receive a blocking signal ZSI-IN sent from its downstream circuit breaker. In case of a detected short-circuit a blocking signal ZSI-OUT will be sent to the preceeding circuit breakers. The trip does take place after 50 ms. It typically delays between 80 and 90 ms.

A possible delay time setting for the ground-fault tripping is set to 100 ms if "G" or "S+G" is selected on the ZSI module and if in the event of ground-fault the circuit breaker does not receive a blocking signal ZSI-IN sent from its downstream circuit breaker.
In case of a detected ground-fault a blocking signal ZSI-OUT will sent to the preceeding circuit breakers. The trip does take place after 100 ms. It typically delays between 130 and 140 ms.

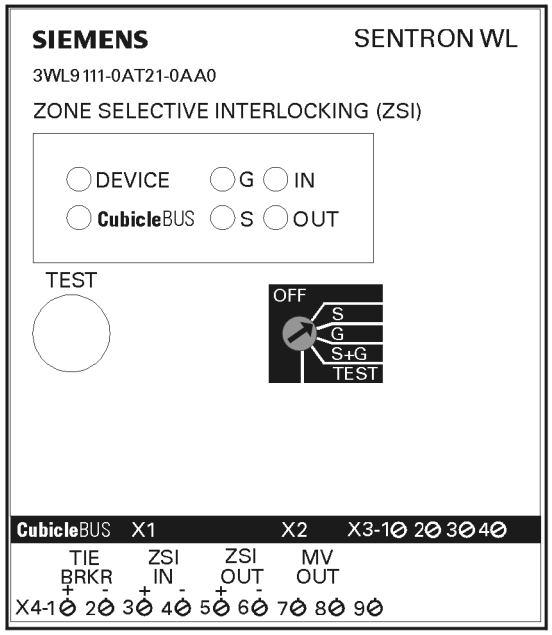
For safety reason after a maximum delay time of 3 s a given blocking signal ZSI-OUT is terminated.

The ZSI-module of the circuit breaker SENTRON WL is function-compatible with the ZSI-module of the circuit breakers 3WN and 3WS as well as the MCCB SENTRON VL.

Installation

→ (page 9-99)

Connection



→ (page 9-99)

Only one ZSI-module can be connected per circuit breaker.

If the ZSI-module is used together with other **Cubicle**BUS -modules, the ZSI-module must be connected directly to the COM15 or COM16 module or hand plug X8.

Anschlussbelegung

Terminal assignment

Klemme	Anschluss
TIE BRKR	Nur für spezielle Anwendungsfälle; Erlaubt die volle ZSI-Funktionalität in Schaltanlagen mit Koppel- bzw. Brückenschalter ohne Zusatzkomponenten
ZSI IN	ZSI-Module von Leistungsschaltern der untergeordneten Ebene
ZSI OUT	ZSI-Module von Leistungsschaltern der übergeordneten Ebene
MV OUT	Meldung an die Mittelspannungsebene

Beim Anschließen ist die angegebene Polarität zu beachten, Plus auf Plus und Minus auf Minus!

Die maximale Leitungslänge der ZSI-Verdrahtung beträgt bei einem Leitungsquerschnitt von 0.75 mm^2 (2-Draht-Leitung) max. 400 m. Bei ZSI-Verbindungen ausschließlich zwischen WL-Schaltern sind, bei Erhöhung des Leiterquerschnittes auf 2,5 mm^2, auch Leitungslängen bis zu 1000 m zulässig.

Die ZSI-Verbindungen sind paarweise verdrillt oder mit abgeschirmter Leitung auszuführen.

Das ZSI-Modul gestattet den Anschluss von bis zu:

- 8 Leistungsschaltern an den Eingang ZSI IN und
- 20 Leistungsschaltern an den Ausgang ZSI OUT.

Terminal	Connection
TIE BRKR	Only for special applications; Allows complete ZSI-functionality in systems with buscouplers without additional components
ZSI IN	ZSI-modules of lower-level circuit breakers
ZSI OUT	ZSI-modules of higher-level circuit breakers
MV OUT	Signal to the medium-voltage level

Observe the specified polarity when connecting: plus to plus and minus to minus!

The maximum wire length of the ZSI wiring is 400 m for a wire size of AWG 18 (2-wire conductor).
For ZSI connections between WL circuit breakers only, wire lengths of up to 1000 m are permissible if the conductor size is increased to AWG 13.

The ZSI connections must consist of twisted pair cables or shielded cables.

The ZSI-module allows connection of up to:

- 8 circuit breakers at the ZSI IN input and
- 20 circuit breakers at the ZSI OUT output

Einstellungen

9.2.3.3 Digitales Eingangsmodul

Funktion

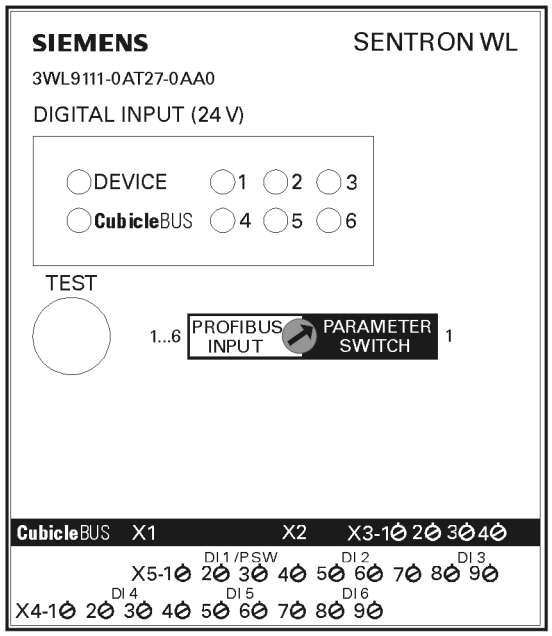
Mit dem digitalen Eingangsmodul können bis zu 6 zusätzliche binäre Signale (DC 24 V) an das System angeschlossen werden.

Diese Eingangssignale werden über den **Cubicle**BUS auf den PROFIBUS-DP übertragen und können entsprechend ausgewertet werden.

Für den Überstromauslöser ETU76B ist es alternativ möglich, ein solches Eingangssignal am Eingang 1 für die Umschaltung zwischen den ggf. vorgehaltenen, zwei unterschiedlichen Schutzparametersätzen zu nutzen.

Montage

→ (Seite 9-99)



Anschluss

→ Verbindungsaufbau (Seite 9-99)

Es können maximal zwei digitale Eingangsmodule gleichzeitig am **Cubicle**BUS betrieben werden

- 1 Modul mit der Einstellung „PROFIBUS-DP INPUT“
- 1 Modul mit der Einstellung „PARAMETER SWITCH“

Anschlussbelegung

Anschlussbelegung digitales Eingangsmodul	
X4	Eingänge 4-6
X5	Eingänge 1-3

Einstellungen

→ Einstellprinzip (Seite 9-102)

9.2.3.3 Digital input module

Function

With the digital input module, up to 6 additional binary signals (DC 24 V) can be connected to the system.

These input signals are transferred to the PROFIBUS-DP via the **Cubicle**BUS and can be evaluated accordingly.

For the overcurrent release ETU76B, it is possible as an alternative to use an input signal of this type as input 1 to switch between two different sets of protection parameters (if provided).

Installation

→ (page 9-99)

Connection

→ Connection setup (page 9-99)

A maximum of two digital input modules can be operated on the **Cubicle**BUS at the same time

- 1 module with the setting “PROFIBUS-DP INPUT”
- 1 module with the setting “PARAMETER SWITCH”

Terminal assignment

Terminal assignment of digital input module	
X4	Inputs 4-6
X5	Inputs 1-3

Settings

→ Setting principle (page 9-102)

Einstellungen digitales Eingangsmodul	
PROFIBUS-DP INPUT	Eingänge 1-6 sind aktiv. Bei Anliegen eines Eingangssignals wird über das COM15-Modul eine entsprechende Meldung auf den PROFIBUS-DP ausgegeben.
PARAMETER SWITCH	Eingang 1 wird zur Parametersatz-Umschaltung genutzt, alle anderen Eingänge sind funktionslos. Kein Eingangssignal (LED 1 leuchtet nicht): Anforderung Parametersatz A aktiviert Eingangssignal liegt an (LED 1 leuchtet): Anforderung Parametersatz B aktiviert

Settings of digital input module	
PROFIBUS-DP INPUT	Inputs 1-6 are active. If there is an input signal present, a corresponding message is transmitted to the PROFIBUS-DP.
PARAMETER SWITCH	Input 1 is used for parameter switchover. All other inputs have no function. No input signal (LED 1 not lights up): Parameter set A actived Input signal present (LED 1 lights up): Parameter set B actived

Hinweis	Note
Die Anforderungen zur Parameterumschaltung kann durch eine Anforderung über die PROFIBUS-Kommunikation, den BDA oder über das Grafikdisplay überstimmt werden. Weitere Einzelheiten siehe „SENTRON 3WL / 3VL kommunikationsfähige Leistungsschalter - PROFIBUS-DP“	The parameter switchover query can be overruled by a query via the PROFIBUS communication, the BDA or the graphical display. For further details please refer to the "SENTRON 3WL / 3VL Circuit Breakers with communication capability - PROFIBUS-DP”.

9.2.3.4 Digitale Ausgangsmodule

Funktion

Mit digitalen Ausgangsmodulen können bis zu 6 Meldungen ausgegeben werden.

Meldet der Überstromauslöser ein Ereignis, leuchtet nach Ablauf der eingestellten Verzögerungszeit die zum Ereignis gehörende LED auf und das Modul setzt ein Signal am entsprechenden Ausgang.

Digitale Ausgangsmodule stehen in folgenden Ausführungen zur Verfügung:

- mit Drehkodierschalter und Relaisausgängen
- konfigurierbar und mit Relaisausgängen.

Montage

→ (Seite 9-99)

Anschluss

→ Verbindungsaufbau (Seite 9-99)

Sollen digitale Ausgangsmodule mit Drehkodierschalter und konfigurierbare digitale Ausgangsmodule gemeinsam an einem Leistungsschalter angeschlossen werden, können pro Leistungsschalter angeschlossen werden:

- 1 digitales Ausgangsmodul mit Drehkodierschalter und Ausgangsbelegung 1
- 1 digitales Ausgangsmodul mit Drehkodierschalter und Ausgangsbelegung 2
- 1 konfigurierbares digitales Ausgangsmodul

Indications

→ (page 9-101)

Testing

→ (page 9-102)

9.2.3.4 Digital output modules

Function

With digital output modules, up to 6 signals can be transmitted.

If the overcurrent release signals an event, the corresponding LED lights up after the adjusted delay time has elapsed, and the module sets a signal at the corresponding output.

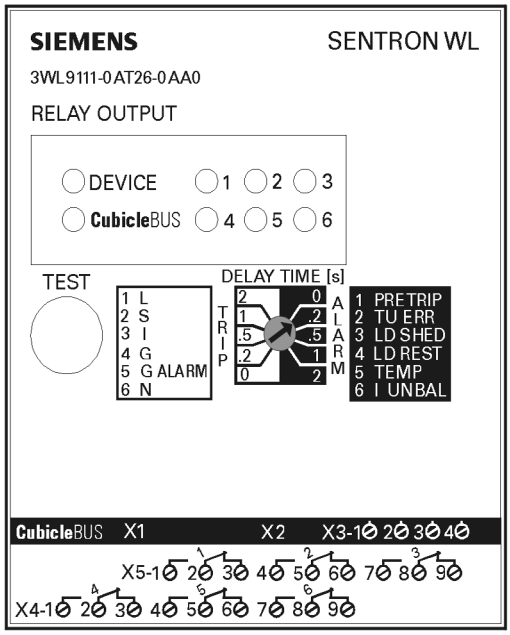
Digital output modules are available in the following versions:

- with rotary coding switch and relay outputs
- configurable and with relay outputs

Installation

→ (page 9-99)

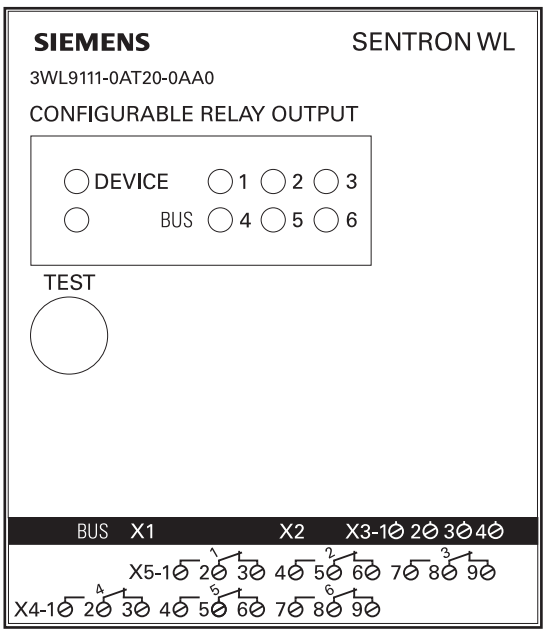
Connection



→ Connection setup (page 9-99)

If a combination of digital output modules with rotary coding switch and configurable digital outputs is to be connected to a circuit-breaker, the following can be connected per circuit breaker:

- 1 digital output module with rotary coding switch and output assignment 1
- 1 digital output module with rotary coding switch and output assignment 2
- 1 configurable digital output module



Anschlussbelegung

X5	Outputs 1-3

Digital output modules with relay output provide changeover contacts at their outputs.

Belastbarkeit der Ausgänge	
Relaisausgang	250 V AC, 6 A 24 V DC, 2 A 250 V DC, 0,2 A

Current carrying capacity of the outputs	
Relay output	250 V AC, 6 A 24 V DC, 2 A 250 V DC, 0.2 A

Einstellungen

Digitale Ausgangsmodule mit Drehkodierschalter

→ Einstellprinzip (Seite 9-102)

Ausgangsbelegung 1 (TRIP)	
L	Meldekontakt Überlastauslösung
S	Meldekontakt kurzverzögerte Kurzschlussauslösung
I	Meldekontakt unverzögerte Kurzschlussauslösung
G	Meldekontakt Erdschlussauslösung
G ALARM	Meldekontakt Erdschlussalarm
N	Meldekontakt Neutralleiterauslösung

Einstellung Verzögerungszeit	
TRIP	0 … 2 s
ALARM	0 … 2 s

Die Einstellung der Verzögerungszeit bestimmt, wie lange ein Signal vom Überstromauslöser anliegen muss, bevor die zur Meldung gehörende LED aufleuchtet und die Meldung an den entsprechenden Ausgang gesetzt wird.

Ausgangsbelegung 2 (ALARM)	
PRE TRIP	Meldekontakt voreilende Meldung Überlastauslösung (Verzögerungszeit 0 s)
TU ERR	Meldekontakt ETU-Fehler
LD SHED	Meldekontakt Lastabwurf (Verzögerungszeit 0 s)
LD REST	Meldekontakt Lastaufnahme (Verzögerungszeit 0 s)
TEMP	Meldekontakt Temperaturalarm
I UNBAL	Meldekontakt Phasenunsymmetrie Strom

Konfigurierbare digitale Ausgangsmodule

Die Einstellung der konfigurierbaren digitalen Ausgangsmodule kann erfolgen über:

- die Prüfbuchse des Überstromauslösers mit dem BDA
- den PROFIBUS-DP / Modbus mit einem PC und der PC-Software „powerconfig“ → (Seite 27-3)

Anzeigen

→ (Seite 9-101)

Testen

Settings

Digital output modules with rotary coding switch

→ Setting principle (page 9-102)

Terminal assignment 1 (TRIP)	
L	Signaling contact overload tripping
S	Signaling contact short-time delayed short-circuit tripping
I	Signaling contact instantaneous short-circuit tripping
G	Signaling contact ground-fault tripping
G ALARM	Signaling contact ground-fault alarm
N	Signaling contact neutral conductor tripping

Delay time setting	
TRIP	0 … 2 s
ALARM	0 … 2 s

The delay time setting determines how long a signal of the overcurrent release must be present until the corresponding LED lights up and the signal is set at the corresponding output.

Output assignment 2 (ALARM)	
PRE TRIP	Signaling contact leading signal overload tripping (delay time 0 s)
TU ERR	Signaling contact ETU error
LD SHED	Signaling contact load shedding (delay time 0 s)
LD REST	Signaling contact load restore (delay time 0 s)
TEMP	Signaling contact temperature alarm
I UNBAL	Signaling contact phase unbalance current

Configurable digital output modules

Configurable digital output modules can be adjusted through:

- the test socket of the overcurrent release with the BDA
- the PROFIBUS-DP/Modbus with a PC and the PC-software “powerconfig” → (page 27-2)

Indications

→ (page 9-101)

Testing

→ (page 9-102)

9.2.3.5 Analoges Ausgangsmodul

Funktion

Mit dem analogen Ausgangsmodul lassen sich analoge Messwerte ausgeben, die z. B. mit Hilfe von Drehspulinstrumenten an der Schaltschranktür angezeigt werden können. Es stehen insgesamt 4 Ausgänge zur Verfügung.

Für das Ausgangssignal sind zwei unterschiedliche Formate wählbar:

- 4 ... 20 mA, Ausgabe über Messerleiste X5
- 0 ... 10 V, Ausgabe über Messerleiste X4.

Montage

→ (Seite 9-99)

Anschluss

→ Verbindungsaufbau (Seite 9-99)

Es können maximal 2 analoge Ausgangsmodule angeschlossen werden, deren Drehkodierschalter jedoch unterschiedlich eingestellt sein müssen (Modul 1 bzw. Modul 2).

Anschlussbelegung

9.2.3.5 Analog output module

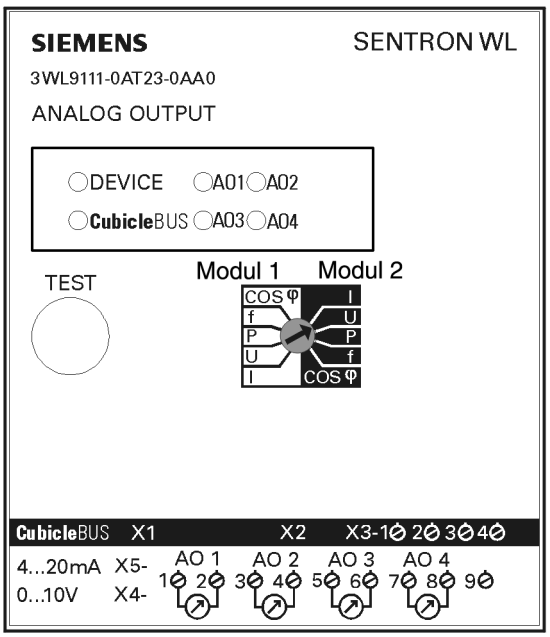
Function

With the analog output module, analog measured-values can be transmitted, which can be shown on the cubicle door by means of moving-coil instruments. A total of 4 outputs is available.

For the output signal, two different formats can be selected:

- 4 ... 20 mA, output via receptacle X5
- 0 ... 10 V, output via receptacle X4

Installation



→ (page 9-99)

Connection

→ Connection setup (page 9-99)

A maximum of 2 analog output modules can be connected; the rotary coding switches of these modules must, however, have different settings (module 1/module 2).

Terminal assignment

Einstellungen

→ Einstellprinzip (Seite 9-102)

Mit dem Drehkodierschalter werden die auszugebenden Messgrößen bestimmt. Diese liegen immer an beiden Klemmenleisten in dem entsprechenden Format an.

An den Ausgängen stehen folgende Messgrößen zur Verfügung:

Ausgangsbelegung				
Stellung	**AO 1**	**AO 2**	**AO 3**	**AO 4**
I	I_{L1}	I_{L2}	I_{L3}	I_N
U	U_{L12}	U_{L23}	U_{L31}	U_{L1N}
P	P_{L1}	P_{L2}	P_{L3}	S_{total}
f	f	U_{LLavg}	P_{total}	cos φ_{avg}
cos φ	cos φ_{L1}	cos φ_{L2}	cos φ_{L3}	Phasenunsymmetrie Strom in %

Anzeigen

→ (Seite 9-86)

Testen

→ (Seite 9-105)

9.2.3.6 Bestellnummern

Jedes **Cubicle**BUS-Modul wird mit einem Abschlusswiderstand 120 Ω, integriert in einen Westernstecker, und mit einem Verbindungskabel 0,2 m für den **Cubicle**BUS-Anschluss ausgeliefert.

Settings

→ Setting principle (page 9-102)

The measured-values to be signalled are adjusted using the rotary coding switch. They are always present on the two terminal strips in the corresponding format.

The following values are available at the outputs:

Output Assignment				
Position	**AO 1**	**AO 2**	**AO 3**	**AO 4**
I	I_{L1}	I_{L2}	I_{L3}	I_N
U	U_{L12}	U_{L23}	U_{L31}	U_{L1N}
P	P_{L1}	P_{L2}	P_{L3}	S_{total}
f	f	U_{LLavg}	P_{total}	cos φ_{avg}
cos φ	cos φ_{L1}	cos φ_{L2}	cos φ_{L3}	Phase unbalance current in %

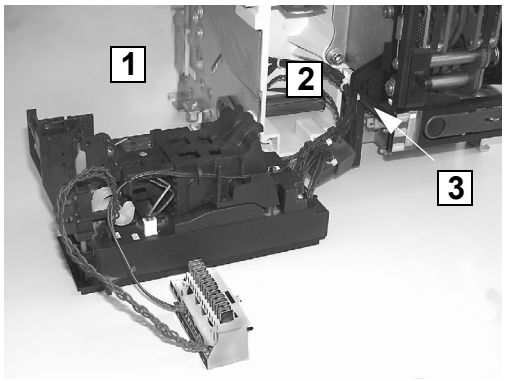
N-Wandler anschließen

Schalter auf die rechte Seite legen

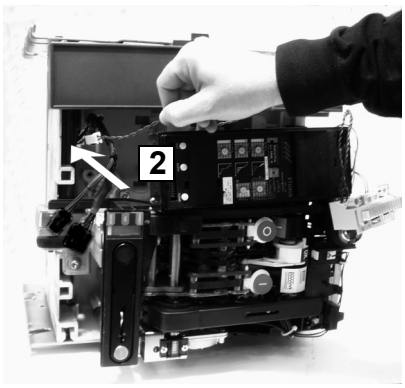


1 Kabelkanalabdeckung abnehmen
2 Überstromauslöser in geeigneter Weise ablegen und freien Stecker des neuen Kabelbaums in den Kabelkanal einführen

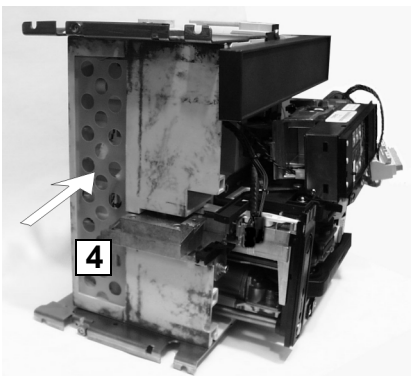
3 Stecker des Kabelbaums mit Stecker des N-Wandlers verbinden
4 Verbundene Stecker im Kabelkanal platzieren und Kabelkanalabdeckung aufsetzen

Anschlüsse am Überstromauslösser stecken

Überstromauslöser fixieren und Schalter auf die Füße stellen.



1 Überstromauslöser vor dem Schalter ablegen
2 Stecker an X20 und X21 stecken
3 Kabel mit Kabelbinder fixieren



Anschließend: (bitte wenden)

Connecting the neutral CT

Lay the breaker on its right hand side.

1 Take off the cable duct cover
2 Place the ETU suitably and push the free connector of the cable harness into the cable duct

3 Plug the connector of the cable harness into the connector of the neutral CT
4 Place the connectors so-joined in the cable duct and replace the cover on the cable duct

Connecting the ETU

Fix the ETU and place the breaker upright.

1 Place the ETU in front of the breaker as shown
2 Plug the connectors to X20 and X21
3 Fasten the cables with the binders

Then: (please turn over)

Anschließend:

- Überstromauslöser anbauen → (Seite 9-72)

Durch diese Zuordnung wird gleiche Stromflussrichtung im Schalter und im externen N-Wandler gewährleistet.

(1) Power circuit
(2) External sensor for neutral CT

This arrangement ensures the same direction of the current flow for the circuit breaker and the external neutral CT

9.3.3 Spannungswandler

Spannungswandler werden für die Messung der Spannungen durch die Messfunktion benötigt.

Die Spannungswandler ab Seriennummer 980102XXXXXX haben intern primär- und sekundärseitig einen Sternpunkt und sekundär eine elektronische Sicherung.

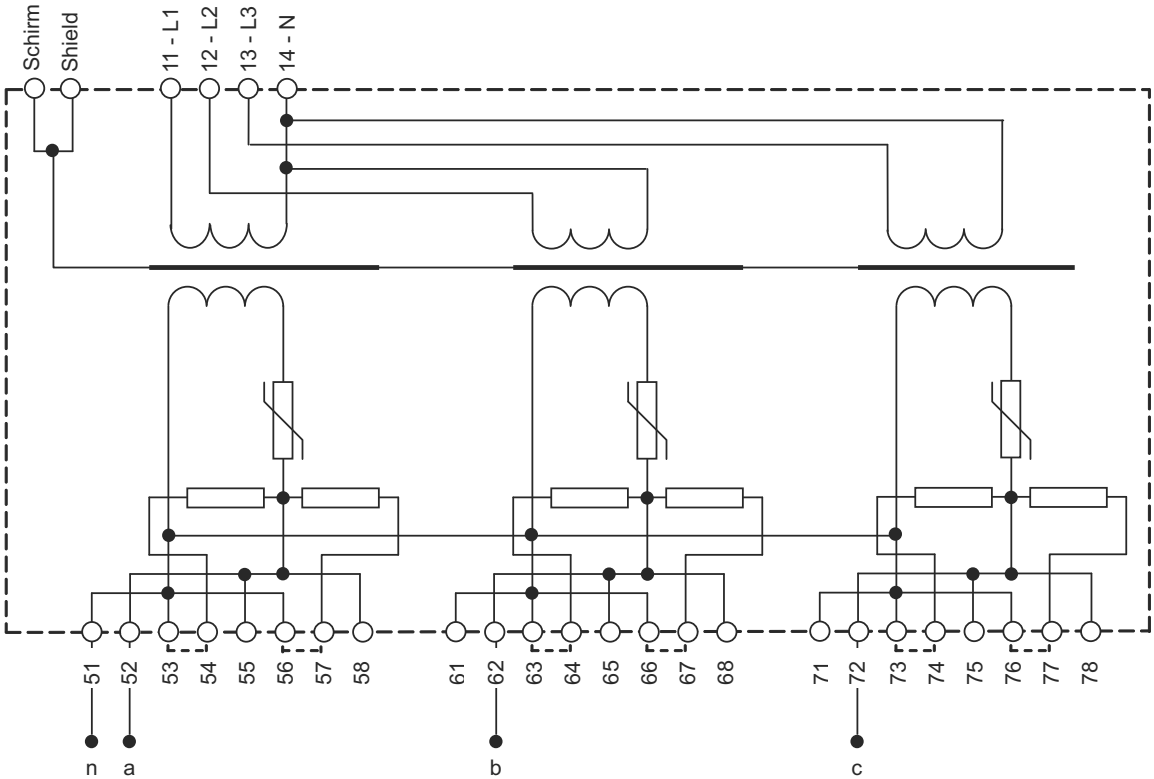
Der Spannungswandler kann auf eine standardmäßige 35-mm-Hutschiene im Schaltfeld aufgeschnappt werden. Dabei ist eine waagerechte oder senkrechte Gebrauchslage möglich.

Bei vertikaler Gebrauchslage wird durch die Montage eines Endhalters (z. B. SIEMENS 8WA1 805) ein Verrutschen des Spannungswandlers auf der Schiene verhindert.

9.3.3 Voltage transformers

Voltage transformers are required for voltage measuring by the metering function.

Voltage transformers from serial numbers 980102XXXXXX on upwards are connected internally in star on both primary and secondary side. They are equipped with a secondary current protection.



Voltage transformer can be snapped to a standard 35-mm DIN-rail in the switchgear panel. It is possible to assemble it either horizontally or vertically.

The use of an end retainer (e.g. SIEMENS 8WA1 805) will prevent the voltage transformer slipping in case of vertical assembly.

Verdrahtungsplan

Wiring plan

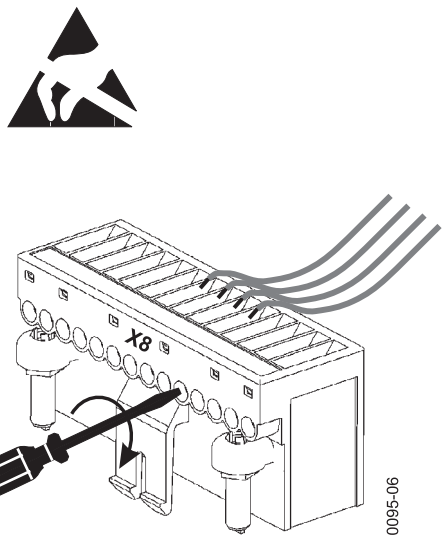
Hinweis	Note
Im Folgenden wird der Anschluß von Siemens-Spannungswandlern in Netzen mit Neutralleiter beschrieben. Ohne Neutralleiter können diese Spannungswandler nicht verwendet werden. Für diesen Fall sind geeignete Spannungswandler → (Seite 9-119) primär in Dreieckschaltung anzuschließen	Below the wiring of Siemens-voltage transformers using the neutral conductor is described. Without neutral conductor these voltage transformers can not be used. In this case suitable voltage transformers → (page 9-119) need to be used in delta connection.

Die Genauigkeit der Spannungswandler ist von der Anzahl der angeschlossenen Messfunktionen pro Spannungswandler abhängig:

- Klasse 0,5 für 1 - 3 Messfunktionen
- Klasse 3 für 4 - 6 Messfunktionen

Diese Angaben gelten für Umgebungstemperaturen von 30 - 50 °C und einer primärseitigen Spannung von 80 - 120% U_e für die Dauer von einem Jahr.

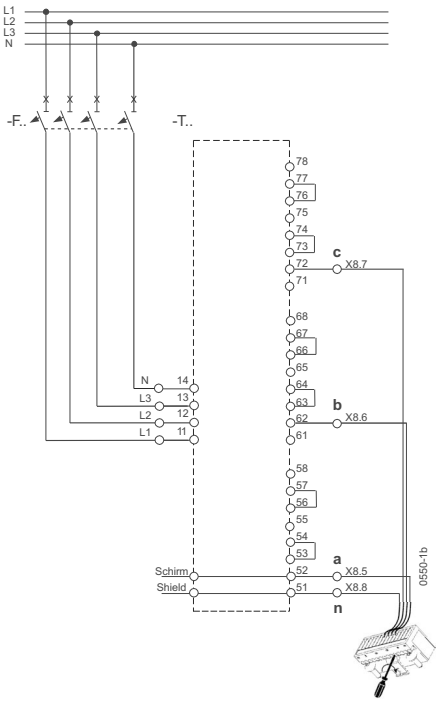
The accuracy of the voltage measurement depends on the number of metering functions connected per voltage transformer:



- class 0,5 for 1 - 3 metering functions
- class 3 for 4 - 6 metering functions

This data applies to ambient temperatures from 30 to 50 °C and a primary voltage of 80 to 120% U_e for one year.

VORSICHT	CAUTION
Vor der Durchführung von Isolationsprüfungen in der Schaltanlage sind die Spannungswandler primärseitig vom Netz zu trennen.	Before performing insulation tests in the panel, the voltage transformers must be disconnected from the power supply on the primary side.



Bezeichnung / designation Spannung (Leiter-Leiter) / Voltage (Phase-Phase) 380 … 690 V AC	**Primär / primary** Klemme / terminal	**Sekundär / secondary** Klemme / terminal
Phase L1 / a	11	52
Phase L2 / b	12	62
Phase L3 / c	13	72
N / n	14	51, 61, 71
Schirm / shield Schirm des Spannungswandlers an den Erdungspunkt (PE-Potential) der Anlage anschließen (Mindestquerschnitt = 2,5 mm^2) Shield of the voltage transformer must be connected to the earth point of the gear (PE potential), by a minimum cross section of 2,5 mm^2.	S	

Beschaltungsbeispiele

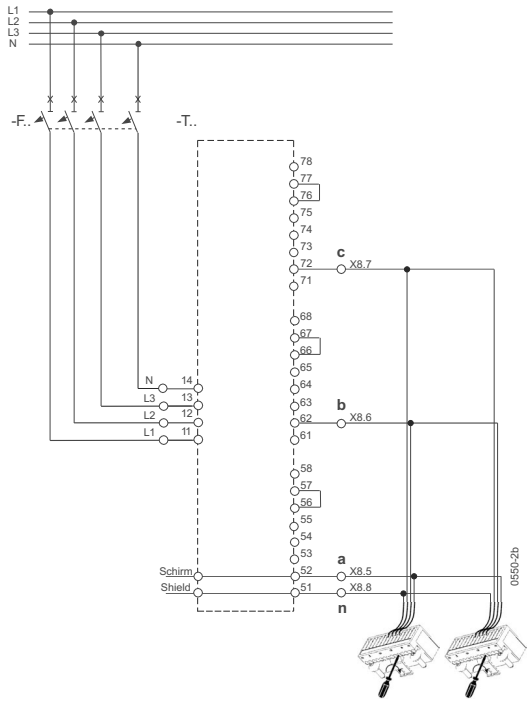
X8.6: Phase L2/b
X8.7: Phase L3/c
X8.8: N/n



Connection examples

	Phase L1 / a	**Phase L2 / b**	**Phase L3 / c**
Anzahl der Messfunktionen / number of metering functions	Brücken / connections	Brücken / connections	Brücken / connections
1 (Variante / variant 1)	53-54 56-57	63-64 66-67	73-74 76-77
2 (Variante / variant 2)	56-57	66-67	76-77
3-6 (Variante / variant 3)	-	-	-

Variante 1: primärseitig (L-L) 380 V ... 690 V AC sekundärseitig Anschaltung einer Messfunktion

Variant 1: primary (L-L) 380 ... 690 V AC one metering function connected on secondary side

Variante 2: primärseitig (L-L) 380 V ... 690 V AC
sekundärseitig Anschaltung zweier Messfunktionen

Variant 2: primary (L-L) 380 V ... 690 V AC
two metering functions connected on secondary side

Variante 3: primärseitig (L-L) 380 V ... 690 V AC
sekundärseitig Anschaltung von
drei bis zu sechs Messfunktionen

Variant 3: primary (L-L) 380 V ... 690 V AC
three to six metering functions connected on
secondary side

Parametrieren der Messfunktion PLUS

Die Messfunktion muss anschließend parametriert werden.

Die Parametrierung erfolgt über:

- das Grafikdisplay (ETU76B),
- die Prüfbuchse mit dem BDA oder
- den PROFIBUS-DP mit einem PC und der Software „powerconfig“ → (Seite 27-3)

Folgende Einstellungen sind vorzunehmen (am Beispiel mit ETU76B):

Über **PARAMETER ÄNDERN / System Konfig. / Spannungswandler** sind folgende Daten des Spannungswandlers einzugeben:

- Primär: 400 V (Werkseinstellung)
- Sekundär: 100 V (Werkseinstellung)
- Schaltg.: Stern Y (Werkseinstellung)

Über **PARAMETER ÄNDERN / System Konfig. / Leistungsfluss** ist einzugeben:

- Oben nach Unten (Werkseinstellung) oder
- Unten nach Oben

Über **PARAMETER ÄNDERN / System Konfig. / Phasendrehsinn** ist einzugeben:

- L1 - L2 - L3 (Werkseinstellung) oder
- L1 - L3 - L2

Parameterizing the metering function PLUS

The metering function must be parameterized subsequently to match the voltage transformer.

Parameterizing can be performed using:

- the graphical display (ETU76B),
- the test socket with the BDA or
- the PROFIBUS-DP with a PC and the software "powerconfig" → (page 27-2)

The following settings need to be done (e.g. with ETU76B):

By **CHANGE PARAMETERS / System Config. / PT Config** the following voltage transformer data must be fed:

- Primary: 400 V (factory adjustment)
- Secondary: 100 V (factory adjustment)
- Wiring: Ypsilon Y (factory adjustment)

By **CHANGE PARAMETERS / System Config. / Power Direction** must be fed:

- Downward (factory adjustment) or
- Upward

By **CHANGE PARAMETERS / System Config. / Phase Rotation** must be fed:

- L1 - L2 - L3 (factory adjustment) or
- L1 - L3 - L2

Übersetzungsverhältnis und Bestellnummer

Transmission ratio and order number

Übersetzungsverhältnis / Transmission ratio			Bestell-Nr. / Order no.
Primär	/ primary:	380 - 690 V	3WL9111-0BB68-0AA0
Sekundär	/ secondary:	95 - 172,5 V	
Verhältnis	/ ratio:	4 : 1	
Abmessungen	/ dimensions:	→ (7-13)	

Kundenseitige Beistellung der Spannungswandler

Die kundenseitige Beistellung des Spannungswandlers ist unter folgender Beachtung möglich:

- Bemessungsausgangsspannung 100 V ... 120 V
- Ausgangsbelastung mit 100 kΩ je angeschlossener Messfunktion
- Für eine Messgenauigkeit von 1% sind Wandler der Klasse 0,5 erforderlich.

Die Spannungswandler sind wie in den gezeigten Beschaltungsbeispielen zu verdrahten und sowohl primärseitig als auch sekundärseitig abzusichern.

Customers' own voltage transformers

Customers can use their own voltage transformers, if the following data are complied with:

- rated output voltage 100 V ... 120 V
- output load with 100 kΩ per metering function connected
- to achieve an accuracy of 1%, class 0.5 voltage transformers are required.

The voltage transformers have to be wired according to the circuit examples above and must be fuse-protected both on the primary and the secondary side.

Hinweis für Dreieckschaltung

Ohne Neutralleiter sind die Spannungswandler primär in Dreieckschaltung anzuschließen. Die oben genannten sind dazu nicht geeignet.

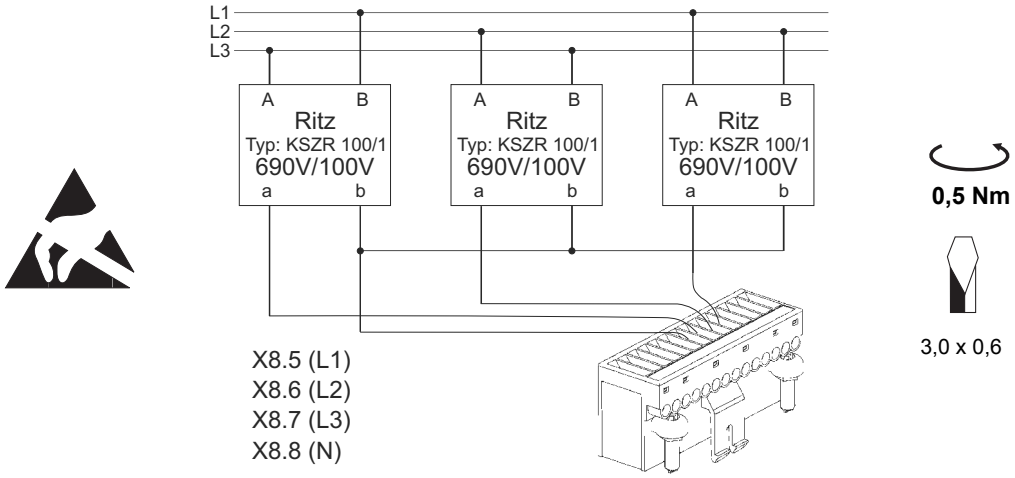
Geeignete Spannungswandler sind z.B.:
Fa. Ritz, Typ KSZR 100/1 oder
Fa. Ritz, Typ KSZR 70

Die Parametrierung erfolgt über:

- das Grafikdisplay (ETU76B),
- die Prüfbuchse mit dem BDA oder
- den PROFIBUS-DP mit einem PC und der Software „powerconfig“ → (Seite 27-3)

Note concerning delta connection

Without neutral conductor the voltage transformers need to be wired in delta connection on the primary side. The transformers listed above are not applicable.



Suitable voltage transformers are for instance:
Co. Ritz, Type KSZR 100/1 or
Co. Ritz, Type KSZR 70

Parameterizing can be performed using:

- the graphical display (ETU76B),
- the test socket with the BDA or
- the PROFIBUS-DP with a PC and the software "powerconfig" → (page 27-2)

Beispiel für Phasendrehsinn L1 - L2 - L3 mit U_e= 690 V

Example for phase rotation L1 - L2 - L3 with U_e= 690 V

Folgende Einstellungen sind vorzunehmen (Beispiel mit ETU76B):

Über **PARAMETER ÄNDERN / System Konfig. / Spannungswandler** sind folgende Daten des Spannungswandlers einzugeben:

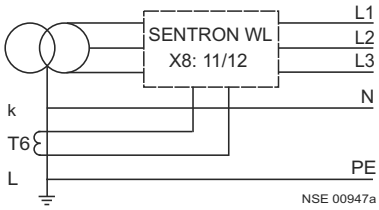
- Primär: 690 V (Beispiel, je nach Spannungswandler)
- Sekundär: 100 V (Werkseinstellung)
- Schaltg.: Dreieck Δ

Über **PARAMETER ÄNDERN / System Konfig. / Leistungsfluss** ist einzugeben:

- Oben nach Unten (Werkseinstellung) oder
- Unten nach Oben

Über **PARAMETER ÄNDERN / System Konfig. / Phasendrehsinn** ist einzugeben:

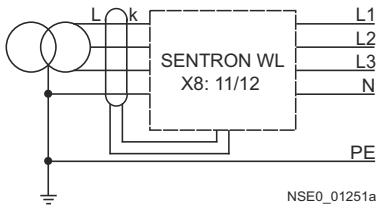
- L1 - L2 - L3 (wie im Beispiel, Werkseinstellung) oder
- L1 - L3 - L2



9.3.4 Externer G-Wandler

Für die Gewährleistung der Schutzfunktion vor unzulässigen Erdschlussströmen kann auch ein handelsüblicher externer Stromwandler mit folgenden Eigenschaften verwendet werden:

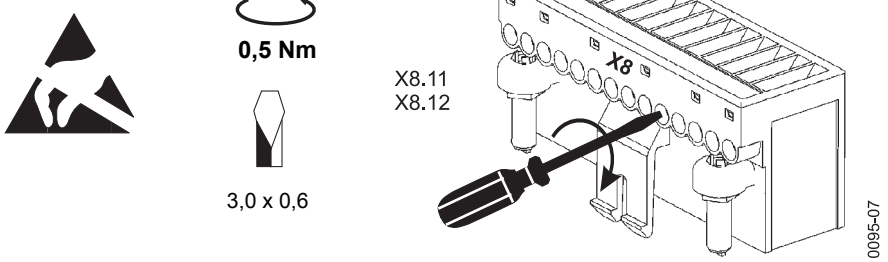
- Primär-Bemessungsstromstärke: 1200 A
- Sekundär-Bemessungsstromstärke: 1 A
- Klassengenauigkeit: Klasse 1
- Schalterinterne Bürde: 0,11 Ω



Beispiele

3-poliger Leistungsschalter mit Stromwandler im geerdeten Sternpunkt des Transformators

3-pole circuit breaker with current transformers “Y” connected with the star point of the transformer grounded



4-poliger Leistungsschalter mit Summenstromwandler

4-pole circuit breaker summation current transformer

Anschließen

Hinweis	Note
Ggf. fehlende Hilfsstromanschlüsse nachrüsten (Messerleiste, Hilfsstromstecker, Schleifkontaktmodul für Einschubrahmen). → (Seite 5-15)	If necessary missing auxiliary terminals may be retrofitted (receptacle, auxiliary connectors and sliding contact module for guide frames). → (page 5-15)

9.3.4 External ground-fault current transformer

The ground-fault protection can use an external current transformer with the following properties:

- primary current: 1200 A
- secondary current: 1 A
- ANSI: Class 1
- Breaker internal burden: 0.11 Ω

Examples

Connection

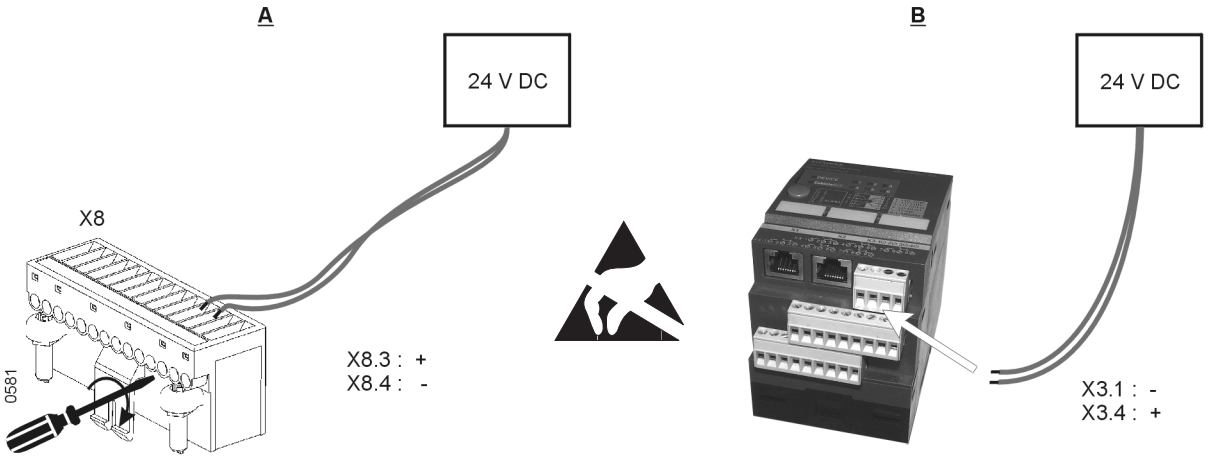
9.4 Externe Spannungsversorgung

Die Grundschutzfunktionen der elektronischen Überstromauslöser benötigen keine Hilfsenergie.

Sollen die zusätzlichen Funktionen der Überstromauslöser ETU45B … 76B genutzt werden, die einen Datenaustausch über den **Cubicle**BUS erfordern, muss eine externe 24 V DC-Spannungsversorgung angeschlossen werden.

9.4.1 Anschluss

Variante A: Anschluss an den Handstecker X8 (Vorzugsvariante)
Variante B: Anschluss an ein beliebiges **Cubicle**BUS-Modul



9.4 External voltage supply

The basic functions of the electronic overcurrent releases do not require auxiliary power supply.

To use the extended functions of the overcurrent releases ETU45B ... 76B requiring data exchange through the **Cubicle**BUS, an external 24 V DC voltage supply must be connected.

9.4.1 Connection

Version A: Connection to hand plug X8 (preferred version)
Version B: Connection to any **Cubicle**BUS-module X8

9.4.2 Anforderungen

Die externe Spannungsversorgung mit 24 V DC muss mindestens den Anforderungen der DIN 19240 / EN 61131 genügen.

Für die Versorgung eines Leistungsschalters mit der maximal möglichen Anzahl externer **Cubicle**BUS-Module kann das unten aufgeführte Siemens-Netzteil verwendet werden. Soll ein zweiter Leistungsschalter versorgt werden, ist auch ein zweites Netzteil erforderlich.

Bei Verwendung von Spannungsversorgungen eines anderen Herstellers sollten folgende Bedingungen erfüllt werden:

- Primär getaktetes Schaltnetzteil
- 24 V DC, ± 3 %
- Stromnennwert: 5 A pro Leistungsschalter mit der maximal möglichen Anzahl externer **Cubicle**BUS-Module

9.4.2 Requirements

The external voltage supply with 24 V DC must comply at least with the requirements of DIN 19240 / EN 61131.

To supply power to a circuit breaker equipped with the maximum number of external **Cubicle**BUS-modules possible, the Siemens power supply unit mentioned below can be used. If a second circuit breaker must be fed, a second power supply unit will be necessary, too.

When using voltage supply units from other manufacturers, the following conditions must be fulfilled:

- Primary-switched-mode power supply unit
- 24 V DC, ± 3 %
- Current rating: 5 A per circuit breaker with the maximum number of external **Cubicle**BUS-modules possible

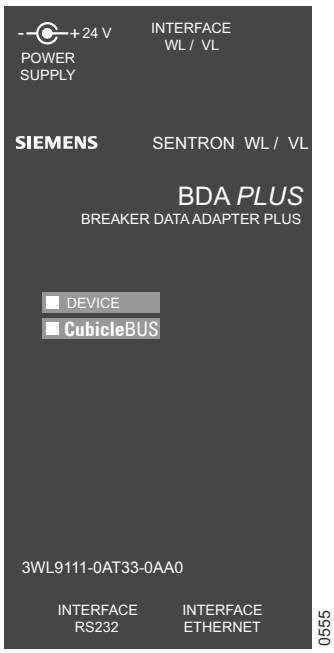
9.4.3 Bestellnummer

9.4.3 Order number

Stromversorgung / Power supply	Bestell-Nr. / Order no.
SITOP PSU100S Eingang: AC 120/230 V, Ausgang 24 V DC / 5 A input: AC 120/230 V, output 24 V DC / 5A	6EP1333-2BA20

VORSICHT	CAUTION
Die externe Spannungsversorgung für die elektronischen Komponenten darf nicht zur Stromversorgung des Motorantriebes verwendet werden!	The external power supply, used for electronic components, shall not be used to supply the motor operating mechanism!

9.5 Breaker Data Adapter



9.5.1 Verwendung

Der Breaker Data Adapter (BDA) ermöglicht es, den Leistungsschalter ohne Zusatzsoftware mit einem browserfähigen Ein- / Ausgabegerät (z. B. Laptop) zu parametrieren, zu bedienen und zu beobachten. Diese Möglichkeit besteht für Leistungsschalter mit einem elektronischen Überstromauslöser der Typen ETU45B ... 76B. Für den Überstromauslöser ETU45B ist es jedoch nicht möglich, die Grundschutzfunktionen zu parametrieren. Diese werden ausschließlich mit den Drehkodierschaltern eingestellt.

Die Kommunikation mit der Elektronik des Leistungsschalters erfolgt über den **Cubicle**BUS . Dazu kann der BDA wahlweise an die Prüfbuchse des Überstromauslösers oder für einen längerfristigen stationären Betrieb an das letzte **Cubicle**BUS -Modul angeschlossen und auf eine 35 mm-Hutschiene aufgeschnappt werden. Die erforderlichen Verbindungskabel werden mitgeliefert.

Der BDA *PLUS* besitzt sowohl einen RS232 und einen Ethernetanschluss.

9.5.2 Ansicht

9.5.3 Anzeigen

LED	Anzeige	Bedeutung
DEVICE	grün	BDA in Betrieb
	gelb	BDA im Testmodus
	rot	BDA gestört
CubicleBUS	grün	Verbindung zum **Cubicle**BUS besteht
	rot	Schwerer Fehler auf dem **Cubicle**BUS ; Verbindungen und **Cubicle**BUS -Module überprüfen
	aus	keine Verbindung zum **Cubicle**BUS

9.5 Breaker Data Adapter

9.5.1 Application

The Breaker Data Adapter (BDA) makes it possible to parameterize, operate and observe the circuit breaker without additional software by means of an input/output unit with browser features (e.g. a laptop). This is possible for circuit breakers equipped with trip unit of the types ETU45B ... 76B. On the trip unit ETU45B, however, the basic protective functions cannot be parameterized. These are exclusively adjusted with the rotary coding switches.

Communications with the electronic system of the circuit breaker takes place through the **Cubicle**BUS . For this purpose, the BDA can be optionally connected to the test socket of the trip unit, or – in case of longer stationary operation – to the last **Cubicle**BUS -module, and snapped on a 35 mm DIN-rail. The required connection cables are supplied with the unit.

The BDA *PLUS* is equipped with a RS232 as well as an Ethernetconnection

9.5.2 View

9.5.3 Indications

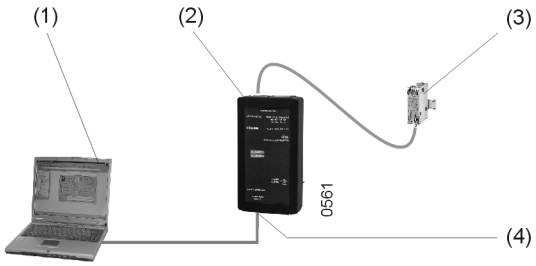
LED	Indication	Significance
DEVICE	green	BDA in operation
	yellow	BDA in test mode
	red	BDA faulty
CubicleBUS	green	Connection to **Cubicle**BUS available
	red	Heavy fault on the **Cubicle**BUS ; check connections and **Cubicle**BUS -modules
	off	No connection to **Cubicle**BUS

9.5.4 Anschlussvarianten

Der Anschluss des BDA erfolgt abhängig vom jeweiligen Verwendungszweck in unterschiedlicher Art und Weise.

Hinweis	Note
Um Fehlfunktionen zu vermeiden, die Spannungsversorgung immer zuletzt anschließen.	To avoid malfunctions, connect the voltage supply at last.

Offlinemodus



Alle Parameter des Leistungsschalters können eingegeben und z. B. auf einem Notebook gespeichert werden, ohne dass mit dem Leistungsschalter kommuniziert werden muss. Nachdem eine Verbindung zum Leistungsschalter hergestellt wurde, können diese Daten übertragen und der Leistungsschalter somit automatisch parametriert werden.

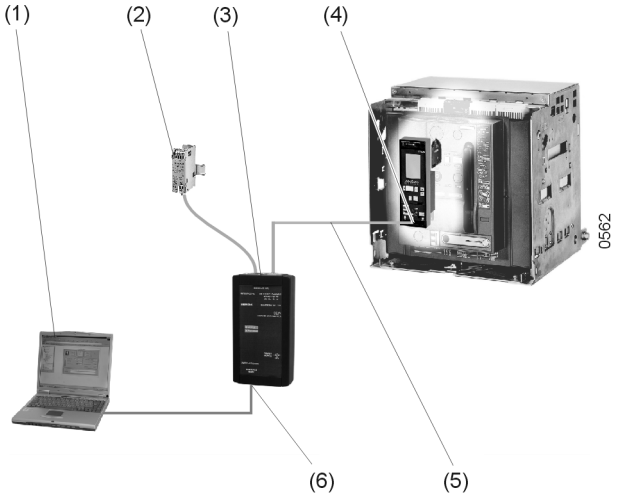
9.5.4 Connection versions

The BDA is connected in different ways according to the corresponding application.

Offline mode

All circuit breaker parameters can be entered and saved e.g. on a notebook, without the need to communicate with the circuit breaker. When the connection to the circuit breaker is established, this data can be transmitted and the circuit breaker can be parameterized automatically.

(1) Browserfähiges Ein- / Ausgabegerät (z. B. Notebook)
(2) BDA *PLUS*
(3) Spannungsversorgung 24 V DC
(4) RS232- bzw. Ethernet-Schnittstelle



(1) Input/output unit with browser feature (e.g. notebook)
(2) BDA *PLUS*
(3) Voltage supply 24 V DC
(4) RS232 resp. Ethernet-interface

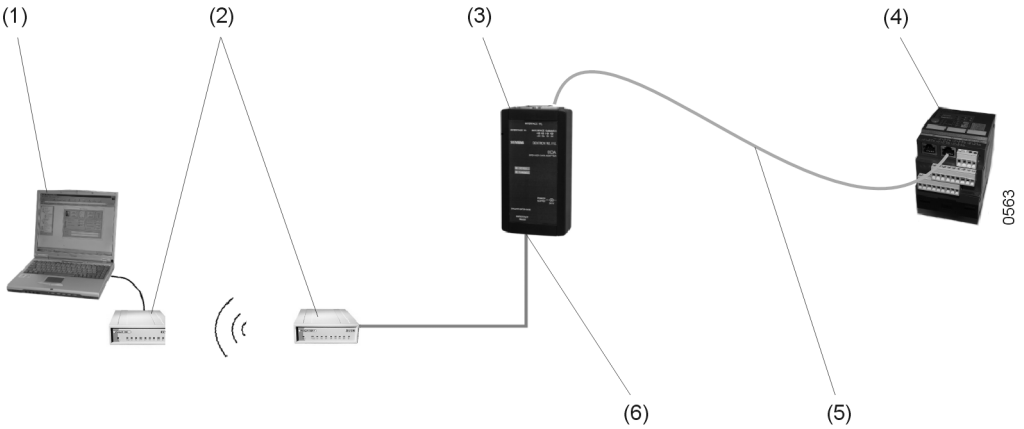
Vorortbedienung

Der Leistungsschalter wird direkt vor Ort manuell parametriert. Weiterhin können die Parametereinstellungen auf dem Notebook gespeichert und Diagnosedaten des Leistungsschalters ausgelesen werden.

Local operation

The circuit breaker is parameterised directly at site. Furthermore, the parameter settings can be saved on the notebook, and the circuit breaker diagnosis data can be read.

(1) Browserfähiges Ein- / Ausgabegerät (z. B. Notebook)
(2) Spannungsversorgung 24 V DC, sofern keine Spannungsversorgung über den **Cubicle**BUS
(3) BDA oder BDA *PLUS*
(4) Prüfbuchse des Überstromauslösers (40polig)
(5) Verbindungskabel SUB-D 15polig (BDA) auf Buchsenleiste 40-polig
(6) RS232-Schnittstelle SUB-D 9-polig



(1) Input/output unit with browser feature (e.g. notebook)
(2) Voltage supply 24 V DC, if there is no voltage supply via the **Cubicle**BUS
(3) BDA or BDA *PLUS*
(4) Test socket of the overcurrent release (40-pole)
(5) Connection cable SUB-D, 15-pole (BDA) to socket connector, 40-pole
(6) RS232 interface SUB-D, 9-pole

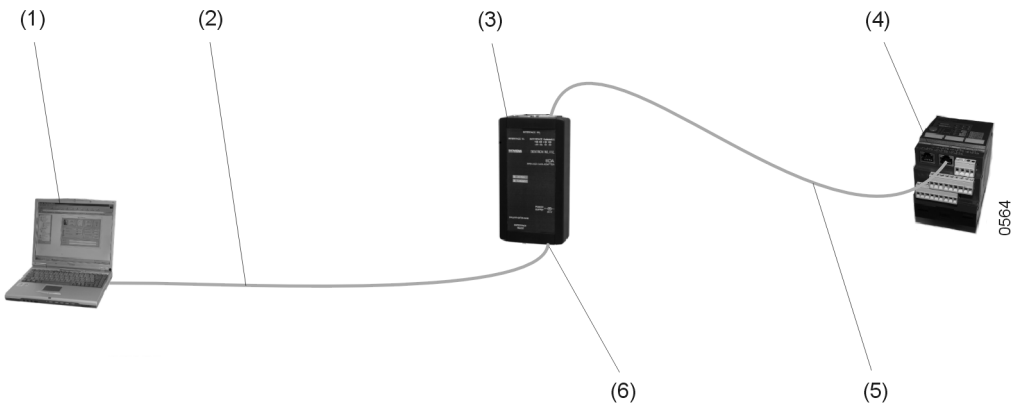
Fernzugriff über Modem

Der Zugriff auf die Daten des Leistungsschalters einschl. Parametrierung erfolgt von einem beliebig weit entfernten Ort.

Remote access via modem

The circuit breaker data incl. parameterization can be accessed from any remote location.

(1) Browserfähiges Ein- / Ausgabegerät (z. B. Notebook)
(2) Modem
(3) BDA oder BDA *PLUS*
(4) Externes **Cubicle**BUS-Modul
(5) Verbindungskabel SUB-D 15-polig (BDA) auf RJ45 Westernstecker (**Cubicle**BUS-Anschluss)
(6) RS232-Schnittstelle SUB-D 9-polig



(1) Input/output unit with browser feature (e.g. notebook)
(2) Modem
(3) BDA or BDA *PLUS*
(4) External **Cubicle**BUS-module
(5) Connection cable SUB-D, 15-pole (BDA) to RJ45 western plug (**Cubicle**BUS-connection)
(6) RS232 interface SUB-D, 9-pole

Fernzugriff über Ethernet

Der Zugriff auf die Daten des Leistungsschalters einschl. Parametrierung erfolgt über das kundenseitige Ethernet. Diese Anschlussvariante steht nur für den BDA *PLUS* zur Verfügung.

Remote access via Ethernet

The circuit breaker data incl. parameterization is accessed via the customer-side Ethernet. This connection is only possible in the BDA *PLUS* version.

(1) Browserfähiges Ein- / Ausgabegerät (z. B. Notebook)
(2) Ethernet-Kabel
(3) BDA *PLUS*
(4) Externes **Cubicle**BUS-Modul
(5) Verbindungskabel SUB-D 15polig (BDA) auf RJ45 Westernstecker (**Cubicle**BUS-Anschluss)
(6) Ethernet-Anschluss

(1) Input/output unit with browser feature (e.g. notebook)
(2) Ethernet cable
(3) BDA PLUS
(4) External **Cubicle**BUS-module
(5) Connection cable SUB-D, 15-pole (BDA) to RJ45 western plug (**Cubicle**BUS-connection)
(6) Ethernet connection

9.5.5 Spannungsversorgung

Der BDA benötigt eine Spannungsversorgung von 24 V DC. Diese kann erfolgen über:

- ein separates handelsübliches Steckernetzteil oder
- den **Cubicle**BUS mit der externen Spannungsversorgung der Leistungsschalterelektronik.

9.5.5 Voltage supply

The BDA requires a voltage supply of 24 V DC. This can be applied through:

- a separate customary plug-type power supply unit or
- the **Cubicle**BUS with the external voltage supply of the circuit breaker electronics.

9.5.6 Bestellnummern

9.5.6 Order numbers

	Bestell-Nummer / Order no.
BDA *PLUS*	3WL9111-0AT33-0AA0

9.6 Handprüfgerät

Das Handprüfgerät dient der Überprüfung der korrekten Funktion des Überstromauslösers, der Energie- und Stromwandler, des Auslösemagneten F5 sowie der Messwertanzeige.

9.6 Test device

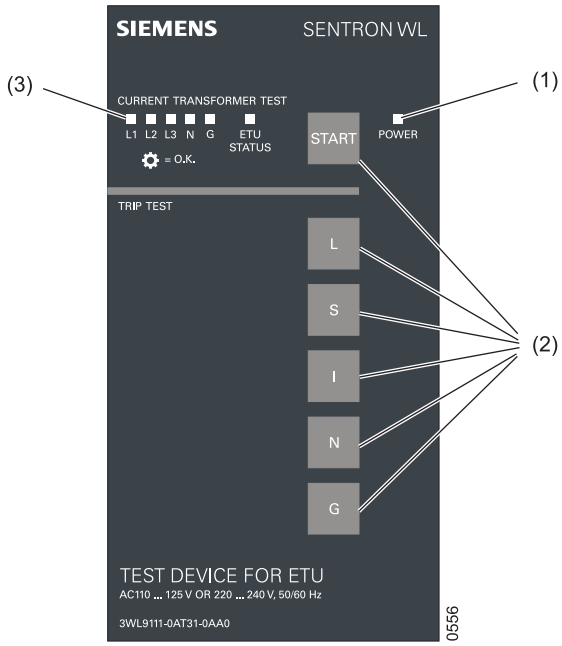
The handheld test device is used to verify the proper operation of the trip unit, the energy transformers and current transformers as well as the tripping solenoid F5 and the data display

GEFAHR

Gefährliche elektrische Spannung!

Kann Tod, schwere Personenschäden sowie Schäden an Geräten und Ausrüstung bewirken.

Vor dem Arbeiten an diesem Gerät, Anlage unbedingt spannungsfrei schalten.



DANGER

Hazardous voltage!

Will cause death, serious personal injury, or equipment / property damage.

Disconnect power before working on this equipment.

9.6.1 Ansicht

(1) LED für die Betriebsspannungsanzeige
(2) Bedientasten
(3) 6 LED für die Anzeige der Testergebnisse

9.6.2 Vorbereitende Arbeiten

- Leistungsschalter aus- und freischalten
- Federspeicher entspannen
- Einstellwerte des Überstromauslösers dokumentieren
- Erdschlussschutz, wenn vorhanden, am Überstromauslöser ausschalten (I_g = OFF)
- Einstellwert I_R = 1,0 I_n
- Externe Spannungsversorgung für die Elektronik, wenn vorhanden, unterbrechen
- Abdeckkappe von der Prüfbuchse X25 der ETU entfernen

9.6.1 View

(1) LED for operating voltage indication
(2) Control buttons
(3) 6 LED's to show test results

9.6.2 Preparations

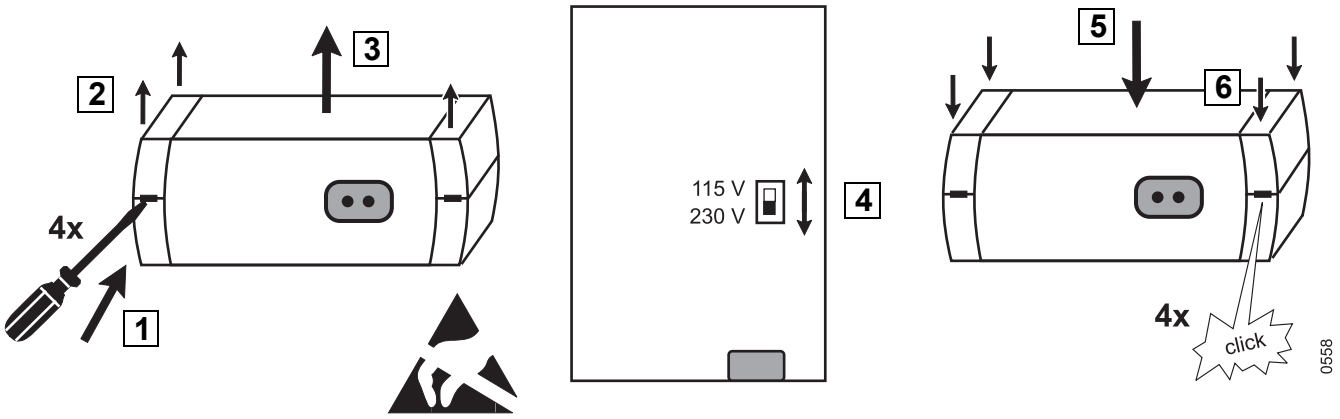
- Push open button and isolate the circuit breaker
- discharge the storage spring
- Note the setting values of the overload release
- Switch off the ground-fault protection at the trip unit, if available (I_g = OFF)
- Setting value I_R = 1.0 I_n
- Interrupt external voltage supply for the electronic system, if available
- Remove the cap from the test connector X25 of the trip unit

VORSICHT		CAUTION
Die Verwendung des Handprüfgerätes bei eingeschaltetem Leistungsschalter kann zu Fehlauslösungen und Zerstörung des Handprüfgerätes führen. Den Leistungsschalter vor dem Testen in die Trennposition verfahren, oder in der Stellung „AUS“ testen.		Using the Hand-Held test unit with circuit breaker closed can cause nuisance tripping of the circuit breaker and will destroy the test unit. Rack the circuit breaker to the DISCONNECT position (draw-out style) or switch the circuit breaker OFF before testing.

9.6.3 Spannungsversorgung

Das Handprüfgerät wird aus einem Wechselspannungsnetz 220 … 240 V oder 110 … 125 V, 50/60 Hz versorgt. Werksseitig sind 220 … 240 V eingestellt.

Der Umschalter befindet sich auf der Leiterplatte im Inneren des Handprüfgerätes.

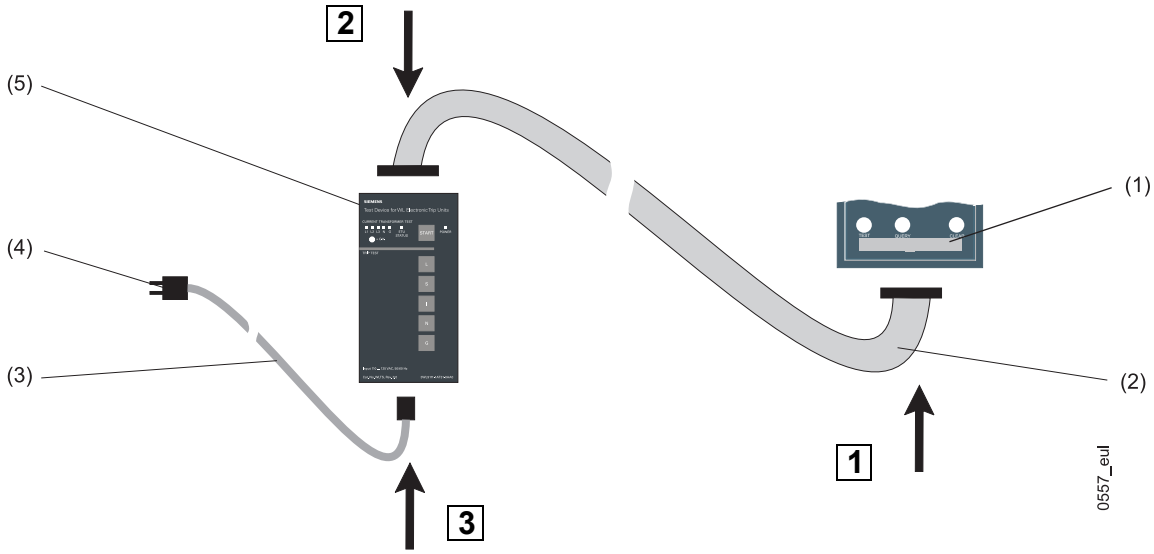


9.6.3 Voltage supply

The test device is supplied by an AC power system 220 ... 240 V or 110 ... 125 V, 50/60 Hz. The factory setting is 220 ... 240 V.

The changeover switch is located on the printed circuit board inside the test device.

Netzspannung umschalten



Mains voltage reconnection

9.6.4 Anschließen

9.6.4 Connection

Hinweis	Note
Reihenfolge beim Anschließen beachten! Anderenfalls kommt es zu Fehlfunktionen und falschen Prüfergebnissen.	Please observe the connecting sequence! Otherwise there may be false tripping and false results.

(1) Prüfbuchse am Überstromauslöser
(2) SUB-D 40polig (Handprüfgerät) auf Buchsenleiste 40polig bzw. ab ETU-Release 2: SUB-D 40polig (Handprüfgerät) auf Stiftleiste 40polig
(3) Spannungsversorgung
(4) Stecker
(5) Handprüfgerät

(1) Test socket at the overcurrent release
(2) SUB-D, 40-pole (test device) to socket connector, 40-pole or, with ETU release 2 and higher, SUB-D, 40-pole (test device) to plug connector, 40-pole
(3) Voltage supply
(4) plug
(5) Test device

9.6.5 Bedienung

Nach dem Anschluss der Spannungsversorgung startet automatisch die Statusprüfung. Dabei werden verschiedene Komponenten und Parameter des Überstromauslösers abgefragt. Verlief die Statusprüfung erfolgreich, leuchtet die LED „ETU STATUS“ mit Dauerlicht. Anderenfalls ist der Überstromauslöser oder eine seiner Komponenten (z. B. das Bemessungstrommodul) defekt oder nicht vorhanden.

Anzeige	Bedeutung
1 x kurz, Pause	Prüfgerät defekt
2 x kurz, Pause	Überstromauslösers defekt
4 x kurz, Pause	- Parameter nicht korrekt eingestellt
	- Stromwandler nicht korrekt angeschlossen
	- falsches Bemessungsstrommodul
	- Bemessungsstrommodul fehlt
5 x kurz, Pause	- Auslösemagnet F5 nicht korrekt angeschlossen
	- Auslöser defekt

Der Statustest kann jederzeit durch längeres (mehr als 3 s) Betätigen der Taste „START“ wiederholt werden. Prinzipiell ist auch die Prüfung eines bereits aktivierten, z. B. eines von einer externen Spannungsquelle versorgten Überstromauslösers möglich. Dabei ist zu beachten, dass im Ergebnis der Statusprüfung die LED „ETU STATUS“ durchaus 2 x kurz blinken kann, ohne dass ein Fehler vorliegt. Sicherheitshalber sollte der Statustest bei abgeschalteter externer Spannungsversorgung des Überstromauslösers wiederholt werden.

Der Statustest wird von den Überstromauslöser des Typs ETU25B mit einer Ident-Nr. kleiner als 253030xxxxxx / 273030xxxxxx / 150704xxxxxx nicht unterstützt. Durch Drücken der Taste „L“ für ca. 3 Sekunden beim Anlegen der Versorgungsspannung an das Prüfgerät kann der Statustest für diese Typen übersprungen werden. In diesem Fall muss die korrekte Funktion des Überstromauslösers vor dem Start weiterer Tests mit dem Prüfgerät sichergestellt werden, z. B. durch die Funktion „Aktivierung des Überstromauslösers“ und Prüfung der LED-Anzeigen am Überstromauslöser.

Prüfen der Stromwandler

Zum Prüfen der Strom- und Energiewandler kurz (weniger als 2 s) die Taste „START“ betätigen.

Eine leuchtende LED bestätigt die korrekte Funktion des entsprechenden Wandlers. Blinkt eine LED, ist der entsprechende Wandler nicht vorhanden, nicht korrekt angeschlossen oder defekt.

Ergebnis N-Wandler-Prüfung (bei ETU Release 2)

Ein Blinken (1 s an, 1 s aus) signalisiert einen Fehler im Bereich des Messwandlers des Neutralleiters. Ursache dafür ist entweder ein fehlender Messwandler (z. B. kein externer Neutralleiter-Wandler angeschlossen), eine fehlerhafte Verbindung zum Messwandler oder ein defekter Messwandler.

9.6.5 Operation

The status test starts immediately after connecting the voltage supply and queries the various components and parameters of the trip unit. If the status test is successful, the “ETU STATUS” LED will light up. Otherwise, the “ETU STATUS” LED will flash. It is possible to draw conclusions about the fault cause from the way in which it flashes.

Indication	Meaning
1 x briefly, pause	Test device defective
2 x briefly, pause	Trip unit defective
4 x briefly, pause	- Parameters not set correctly
	- Current sensor not properly connected
	- wrong rating plug
	- Missing rating plug
5 x briefly, pause	- Tripping solenoid F5 not properly connected
	- Solenoid defective

The status test can be repeated any time by pressing the “START” button for at least three seconds. It is basically also possible to test a trip unit that is already activated, e.g. supplied by an external voltage source. However, it must be taken into account that the “ETU STATUS” LED may briefly flash twice when the status test result is displayed even if there have not been any faults. As a precaution, the status test should be repeated without external voltage supply of the trip unit.

The status test is not supported by the trip unit type ETU25B with an identification number less than 253030xxxxxx / 273030xxxxxx / 150704xxxxxx. By pressing the “L” button for approximately 3 seconds while switching on the test device power supply, the status test can be skipped for these types. In that case the accurate function of the trip unit has to be ensured before further tests will be done with the test device, e.g. by function “Activation of trip unit” and checking the LED on the trip unit.

Testing the current transformers

To test the current sensors and energy transformers, press the “START” button less than two seconds.

A lit-up LED confirms the proper operation of the corresponding transformer. If an LED flashes, the corresponding transformer/transducer is not available, not properly connected or defective.

Result of neutral CT check (for ETU release 2)

A flashing light (1 second on, 1 second off) indicates an error in the area of the transducer of the neutral conductor. The cause of this will either be a missing transducer (e.g. no external neutral CT connected), a missing connection to the transducer or a faulty transducer.

Ein schnelles Blinken (0,5 s an, 0,5 s aus) signalisiert einen Fehler im Bereich des Energiewandlers für den Neutralleiter. Ursache dafür ist entweder ein fehlender Energiewandler (z. B. bei Anschluss eines externen Neutralleiter-Wandlers), eine fehlerhafte Verbindung zum Energiewandler oder ein defekter Energiewandler.

A rapid flashing light (0.5 seconds on, 0.5 seconds off) indicates an error in the area of the energy transformer of the neutral conductor. The cause of this will either be a missing energy transformer (e.g. if an external neutral CT is connected), a missing connection to the energy transformer or a faulty energy transformer.

Prüfen der Auslösefunktion

Testing the tripping function

HINWEIS	NOTICE
Überstromauslöser der Typen ETU25B bzw. ETU27B mit einer Ident-Nr. kleiner als 250205 xxxxxx bzw. 270206xxxxxx reagieren nur auf die Prüfung der L-Auslösung.	Overcurrent releases type ETU25B resp. ETU27B with an identification number smaller than 250205 xxxxxx resp. 270206xxxxxx do only react to a test of the L-tripping function.

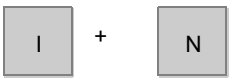
- Federspeicher per Hand spannen
- Einschalten

Zum Prüfen der Auslösefunktion eine der Tasten „L“, „S“, „I“, „N“ oder „G“ betätigen.

Der Leistungsschalter löst nach der eingestellten Verzögerungszeit zuzüglich 2 Sekunden aus. Der Auslösegrund kann über die Taste „QUERY“ am Überstromauslöser abgefragt werden. Dazu muss der Überstromauslöser mindestens 10 Minuten lang aktiviert gewesen sein. Anderenfalls verfügt der Überstromauslöser nicht über die entsprechende Schutzfunktion oder ist defekt.

- Charge the storage spring by hand
- Close

To test the tripping function, press one of the buttons “L”, “S”, “I”, “N” or “G”.



The circuit breaker trips after the time delay plus 2 seconds. The tripping reason can be inquired through the “QUERY” button at the trip unit. The trip cause storage function is available only, if the trip unit had been activated for least 10 min before tripping. Otherwise, the trip unit doesn't have the corresponding protective function or is defective.

Prüfen der Messwertanzeige

Nach einem durchgeführten Auslösetest ist bei nicht aktivierter ETU die Funktion der Speicherfähigkeit der Auslösegründe über die Query Taste zu prüfen.

Verfügbar ab Seriennummer des Handprüfgerätes E10403xxxxxx und E30403xxxxxx.

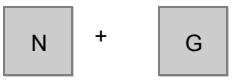
Zum Prüfen der Messwertanzeige im Display oder per Fernübertragung gleichzeitig die Tasten „I“ und „N“ betätigen.

Für die Dauer von 30 s wird über die Messwandler nacheinander ein Strom in L1, L2, L3, N und G simuliert. Dabei blinkt die LED des jeweiligen Wandlers. Der Test gilt als erfolgreich, wenn an entsprechender Stelle ein Strom angezeigt wird.

Testing the display of the measured values

Once a tripping test has been carried out, if the ETU is not activated, the storage capability of the tripping reasons must be checked using the Query button.

Available at test devices with serial number E10403xxxxxx and E30403xxxxxx or higher.



To check the correctness of the measured values in the display or via remote transmission press the “I” and “N” keys simultaneously

A current is successively simulated via the measuring transformers in L1, L2, L3, N and G for 30 sec. The LED of the respective transformer will flash. The test can be considered successful if current is indicated in the corresponding position.

Aktivieren des Überstromauslösers

Zum Aktivieren des Überstromauslösers gleichzeitig die Tasten „N“ und „G“ betätigen.

Der Überstromauslöser bleibt bis zum Drücken einer anderen Taste aktiviert.

Mit dieser Funktion kann z. B. die Anzeige der „T.U.-Error“-LED überprüft werden, wenn der Statustest mit dem Fehler „Überstromauslöser defekt“ beendet wurde.

9.6.6 Nachbereitende Arbeiten

- Notierte Einstellwerte wieder herstellen
- Abdecklappe auf X25 setzen

9.6.7 Bestellnummer

Activation of trip unit

To activate the trip unit press the “N” and “G” keys simultaneously

The trip unit is activated up to pressing another key.

With this function the “T.U.-Error”-LED can be checked, if the status test had finished with the error “Trip unit defective”.

9.6.6 Finishing

- Restore the noticed settings
- Mount the Cover on X25

9.6.7 Order number

	Bestell-Nr. **Order no.**

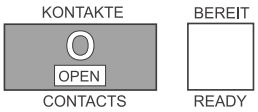
10 Wiedereinschaltsperre zurücksetzen

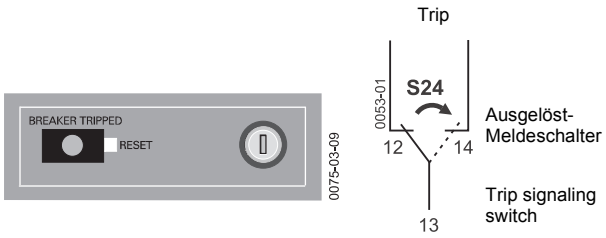
10.1 Manuelle Rücksetzung

10 Reset reclosing lockout



10.1 Manual reset reclosing lockout

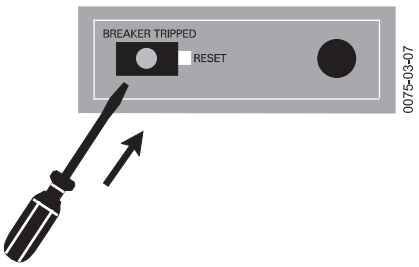
1



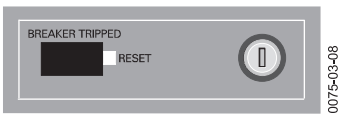
Schalter schaltet **aus** durch Überstromauslösung
Circuit Breaker is **tripped** by overcurrent

2

Zustandsanzeigen / Indications

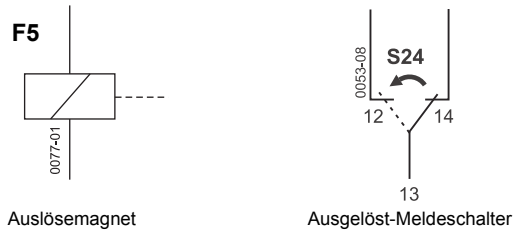


Meldungen / Signals



3

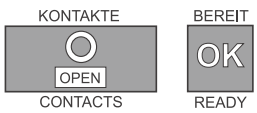
Manuelle Rücksetzung / Manual reset



Ausgelöst-Anzeige (roter Stößel) drücken, bis sie einrastet
Press tripped indicator (red pin), till it latches

4

Ausgelöst-Anzeige zurückgesetzt
Tripped indicator reset



Auslösemagnet

Ausgelöst-Meldeschalter

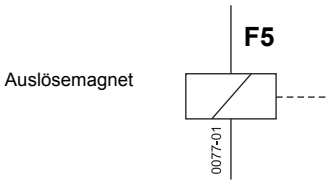
Auslösemagnet und Ausgelöst-Meldung werden zurückgesetzt.
Tripping solenoid and tripped signal are reset.

5

Zustandsanzeigen / Indications

Schalter ist wieder einschaltbereit, sofern Federspeicher gespannt und keine Verriegelung aktiv
Circuit Breaker is ready to close again, if spring is charged and no interlock is active

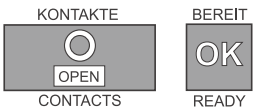
10.2 Automatische Rücksetzung



10.2 Automatic reset

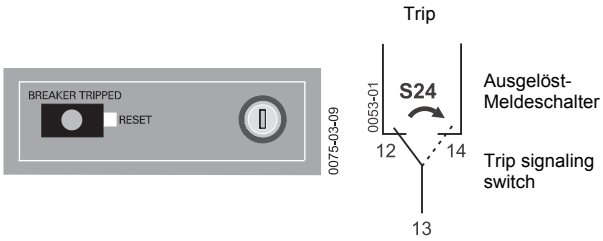
1

Schalter schaltet **aus** durch Überstromauslösung
Circuit Breaker is **tripped** by overcurrent



2

Automatische Rücksetzung / Automatic reset

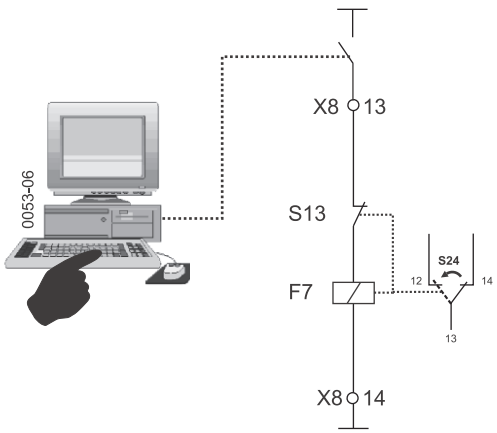


3

Zustandsanzeigen / Indications

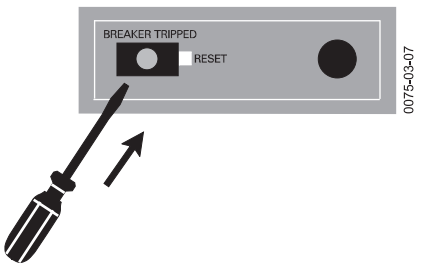
Schalter ist **sofort** wieder einschaltbereit, sofern Federspeicher gespannt
Circuit Breaker is **immediately** ready to close again, if spring storage is charged

Meldungen / Signals



4

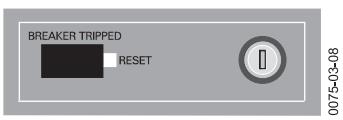
Rücksetzen von Ausgelöst-Anzeige und Ausgelöst-Meldung
Reset tripped indicator and tripped signal



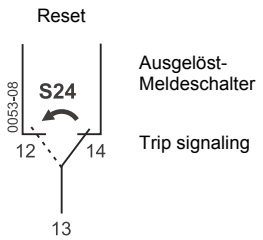
Fernrücksetzung / Remote reset

Option: Fernrücksetzen der Ausgelöst-Anzeige und der Ausgelöst-Meldung durch einen Fern-Rücksetzmagneten → (Seite 10-5)

Option: Remote reset of the tripped indicator and the tripped signal by means of a remote reset magnet → (page 10-5)



Manuelle Rücksetzung / Manual reset



Ausgelöst-Anzeige (roter Stößel) drücken, bis sie einrastet
Press tripped indicator (red pin), till it latches

5

Ausgelöst-Anzeige zurückgesetzt
Tripped indicator reset

Ausgelöst-Meldung zurückgesetzt
Tripped signal reset

10.3 Automatische Rücksetzung nachrüsten

Mit der automatischen Rücksetzung der Wiedereinschaltsperre wird nach einer Kurzschluß- oder Überlastauslösung des elektronischen Überstromauslösers der Leistungsschalter sofort wieder einschaltbereit. Gegebenenfalls ist die elektrische Schalteransteuerung anzupassen. Die Ausgelöst-Anzeige und die Ausgelöst-Meldung müssen separat entweder manuell vor Ort oder mit dem Fernrücksetzmagneten zurückgesetzt werden.

⚠ WARNUNG

Verletzungsgefahr!

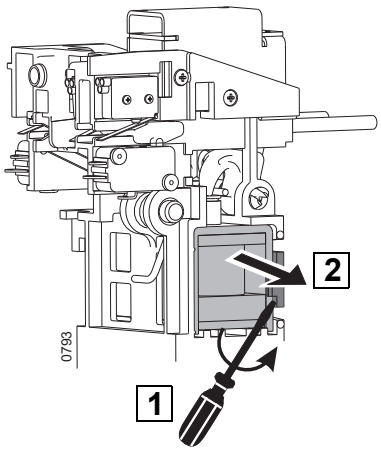
Die Schaltmechanik kann Personenschäden verursachen, wenn das Bedienpult abgenommen ist.
Vor dem Abbauen des Bedienpultes Ausschalten und Federspeicher entspannen → (Seite 24-3):

- Entfernen des Handsteckers X5
- AUS-Taste betätigen
- EIN-Taste betätigen
- AUS-Taste nochmals betätigen.

⚠ WARNUNG

Kann Tod oder Personenschäden verursachen.

Vor dem Entfernen jeglicher Abdeckungen oder des Bedienpults unbedingt die Speicherfeder des Leistungsschalters entspannen → (Seite 24-3)



- Bedienpult abnehmen → (Seite 24-11)
- Überstromauslöser ausbauen → (Seite 9-72)

10.3.1 Rücksetzmechanik einbauen

Auslösemagnet F5 ausbauen

Überstromauslöser auf Systemträger

1 Schnapphaken zurückdrücken
2 Auslösemagnet herausnehmen

10.3 Retrofitting automatic reset

With the automatic reset of the closing lock-out the circuit breaker is ready to close again immediatly after tripping because of a short-circuit or overcurrent fault. Therefore it may be necessary to change the electrical control settings. The tripped indication and the tripped signal must be reset either manually on the overcurrent release or by means of the remote reset magnet.

⚠ WARNING

Mechanical hazard!

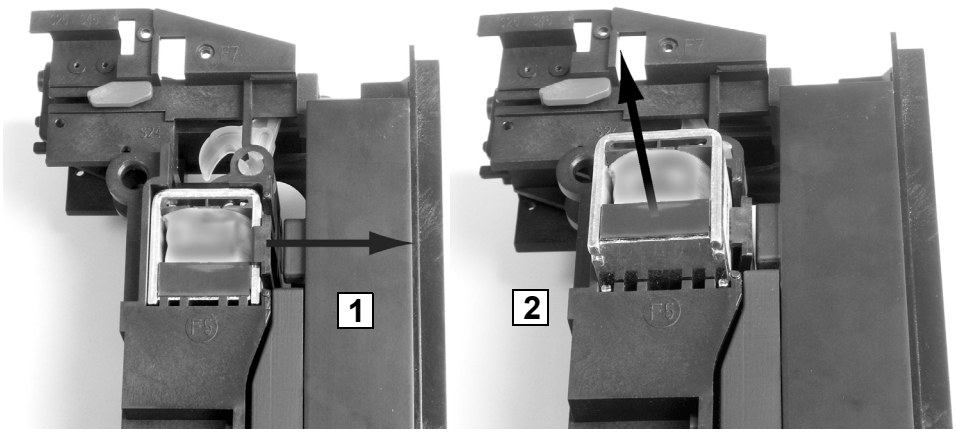
Mechanism can cause severe injury when cover is removed.

Switch off and discharge the storage spring before removing cover → (page 24-3):

- Remove hand plug X5
- Push OPEN button
- Push CLOSE button
- Push OPEN button again.

⚠ WARNING

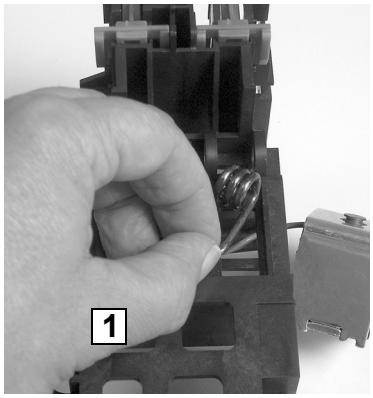
May result in death or serious injury.



Discharge storage spring before removing barriers / covers → (page 24-3).

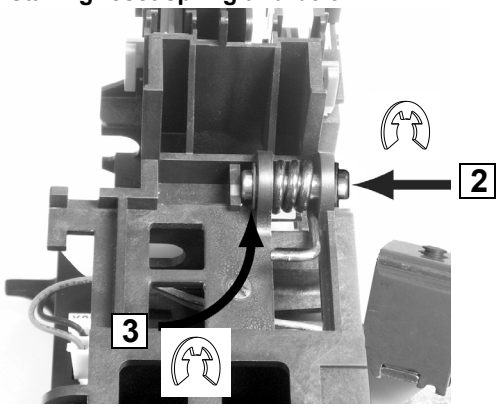
- Remove front panel → (page 24-11)
- Remove overcurrent release → (page 9-72)

10.3.1 Installing reset mechanism



Removing tripping solenoid F5

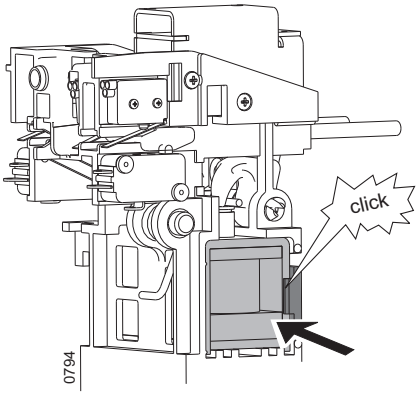
Trip unit on system carrier



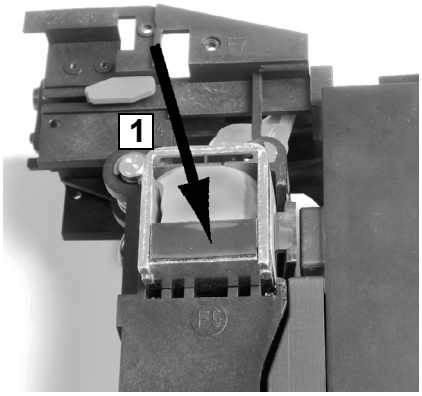
1 Push snap-action hook back
2 Remove tripping solenoid

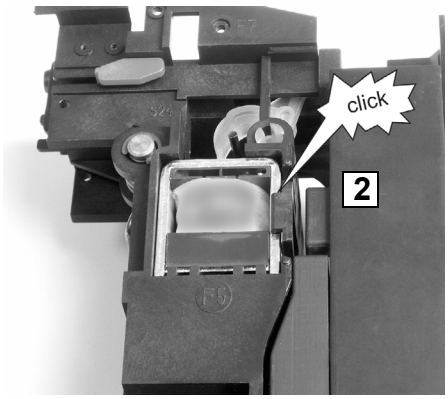
Rücksetzfeder und Bolzen einbauen

1 Rücksetzfeder einsetzen
2 Bolzen mit Sicherungsscheibe einsetzen
3 Bolzen mit zweiter Sicherungsscheibe sichern



Installing reset spring and bolt





1 Fit reset spring
2 Fit bolt with lock washer
3 Secure the bolt with second lock washer

Auslösemagnet F5 einbauen

VORSICHT		CAUTION
Während der Installation nicht die Adern des Auslösemagneten einklemmen.		Do not pinch the wires of the tripping solenoid during installation

1 Auslösemagnet einsetzen

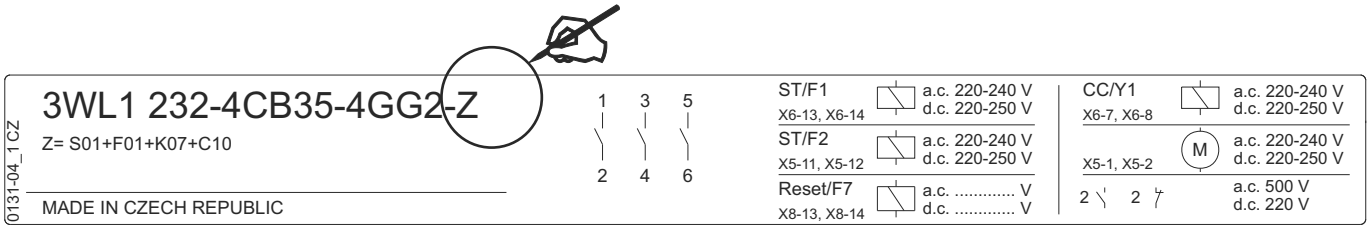
Anschließend

- Überstromauslöser einbauen → (Seite 9-72)
- Bedienpult anbauen → (Seite 24-25)

10.3.2 Schilder aktualisieren

Hinweis	Note
Nach dem Einbau zusätzlicher Komponenten sind folgende Angaben mit einem weißen Permanentstift bzw. mit Aufklebern aus dem beiliegenden Etikettenbogen zu aktualisieren! Davor ist es ggf. notwendig die zu korrigierenden Zeichen mit einem schwarzen Permanentstift zu füllen.	After installing additional components, add the following data using a white and indelible ink pen or the appropiate label from the set of labels supplied! If necessary the signs which need to be corrected have to be filled with a black permanent pen before.

1 Fit tripping solenoid



Then

- Install overcurrent release → (page 9-72)
- Install front panel → (page 24-25)

10.3.2 Updating the options label

10.3.2.1 Ausstattungsschild des Leistungsschalters

10.3.2.1 Options-label of the circuit breaker

10.3.2.2 Bestellnummern / Z-Zusätze

10.3.2.2 Order numbers / Z-options

	Bestell-Nr. / Order no.	Z ergänzen / Add. Z
Automatische Rücksetzung der Wiedereinschaltsperre für ETU-Träger in Kunststoffausführung Automatic reset of the reclosing lock-out for trip unit system carrier, made of plastics	3WL9111-0AK21-0AA0	K01
Automatische Rücksetzung der Wiedereinschaltsperre für ETU-Träger in Metallausführung (bis etwa Baujahr 2006) Automatic reset of the reclosing lock-out for trip unit system carrier made of metal (up to approx. year 2006)	3WL9111-0AK01-0AA0	K01

10.4 Fern-Rücksetzoption nachrüsten

Nur für Fernrücksetzen der Ausgelöst-Anzeige und Ausgelöst-Meldung.

10.4 Installing the remote reset option

Only for remote reseting of tripped indicator and trip signaling switch.

VORSICHT	CAUTION
Nur bei automatischer Rücksetzung der Wiedereinschaltsperre verwendbar! Anderenfalls wird Fernrücksetzmagnet überlastet und zerstört.	Can only be used with automatic reclosing lockout reset! The remote reset solenoid will otherwise be overloaded and destroyed.

10.4.1 Einbau

10.4.1 Mounting

WARNUNG		WARNING
Verletzungsgefahr! Die Schaltmechanik kann Personenschäden verursachen, wenn das Bedienpult abgenommen ist. Vor dem Abbauen des Bedienpultes Ausschalten und Federspeicher entspannen → (Seite 24-3): - Entfernen des Handsteckers X5 - AUS-Taste betätigen - EIN-Taste betätigen - AUS-Taste nochmals betätigen.		**Mechanical hazard!** Mechanism can cause severe injury when cover is removed. 11 Hilfsauslöser

WARNUNG

Kann Tod oder Personenschäden verursachen.

Vor dem Entfernen jeglicher Abdeckungen oder des Bedienpults unbedingt die Speicherfeder des Leistungsschalters entspannen → (Seite 24-3)

11.1 Übersicht

Einbauplätze

(1) Erster Spannungsauslöser F1
(2) Meldeschalter S22
(3) Einschaltmagnet Y1
(4) Zweiter Spannungsauslöser F2
oder Unterspannungsauslöser (unverzögert) F3
oder Unterspannungsauslöser (verzögert) F4
(5) Meldeschalter S23 **oder** S43
(6) Abstellschalter S14 für Spannungsauslöser 5 % ED (übererregt)
(7) Abstellschalter S15 für Einschaltmagnet Y1 5 % ED (übererregt)

Spannungsauslöser mit 100 % ED können als elektrische Einschaltsperre genutzt werden.

VORSICHT

Sicherstellen, dass der Einschaltmagnet mit 5% ED nur angesteuert werden kann, wenn sich der Leistungsschalter in einschaltbereitem Zustand befindet.
Anderenfalls wird der Einschaltmagnet zerstört.

11 Auxiliary releases

WARNING

May result in death or serious injury.

Discharge storage spring before removing barriers / covers → (page 24-3).

11.1 Overview

Mounting locations

(1) 1st shunt trip F1
(2) Signaling switch S22
(3) Closing coil Y1
(4) 2nd shunt trip F2
or undervoltage release (instantaneous) F3
or undervoltage release (time-delayed) F4
(5) Signaling switch S23 **or** S43
(6) Cut-off switch S14 for shunt trip 5% D (overexcited)
(7) Cut-off switch S15 for closing coil Y1 5% D (overexcited)

Shunt trips with 100% D may be used as an electrical closing lockout.

CAUTION

Make sure that the closing coil with 5% operating time is only activated when the circuit breaker is ready for closing.

Otherwise the closing coil will be destroyed.

11.2 Hilfsauslöser nachrüsten

WARNUNG

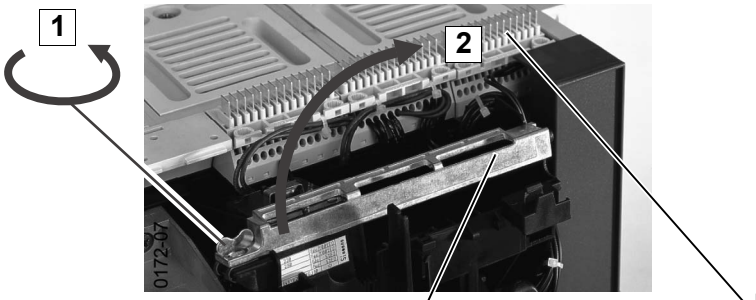
Verletzungsgefahr!

Die Schaltmechanik kann Personenschäden verursachen, wenn das Bedienpult abgenommen ist.
Vor dem Abbauen des Bedienpultes Ausschalten und Federspeicher entspannen → (Seite 24-3):

- Entfernen des Handsteckers X5
- AUS-Taste betätigen
- EIN-Taste betätigen
- AUS-Taste nochmals betätigen.

11.2 Installing auxiliary releases

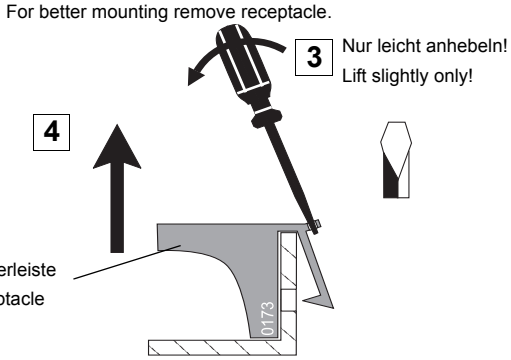
WARNING



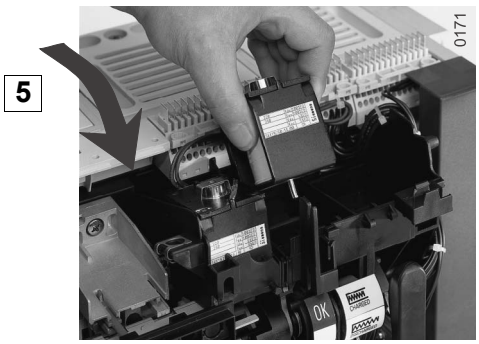
Mechanical hazard!

Mechanism can cause severe injury when cover is removed.

Switch off and discharge the storage spring before removing cover → (page 24-3):



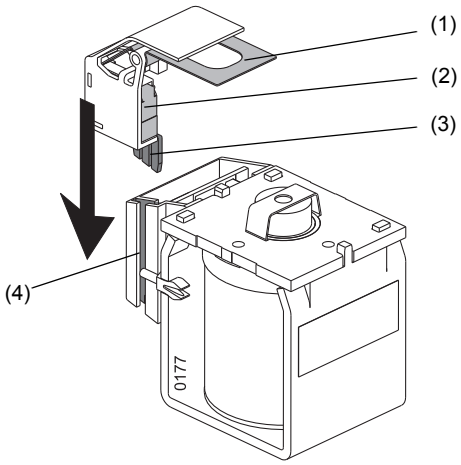
- Remove hand plug X5
- Push OPEN button
- Push CLOSE button
- Push OPEN button again.



- Bedienpult abnehmen → (Seite 24-11)

- Remove front panel → (page 24-11)

Für besseres Montieren Messerleiste abnehmen
For better mounting remove receptacle.

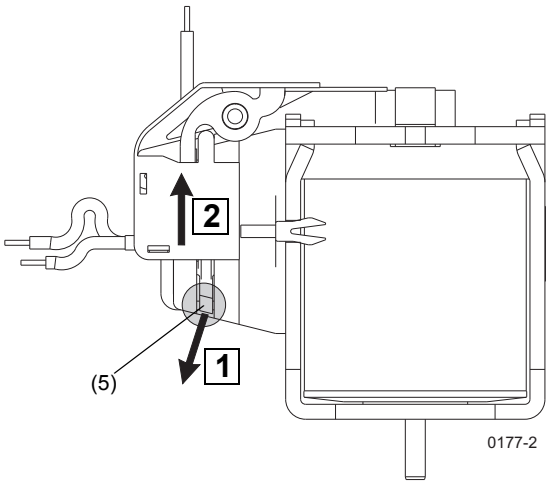


6 Haltebügel wieder aufsetzen und arretieren
Replace retaining bracket and fix.

11.3 Optionale Meldeschalter am Hilfsauslöser anbringen

Meldet den Betriebszustand des Hilfsauslösers
als S43 an den BSS **oder**
als S22/S23 → (Seite 8-1) und folgende.

Einrasten **Snap-In**



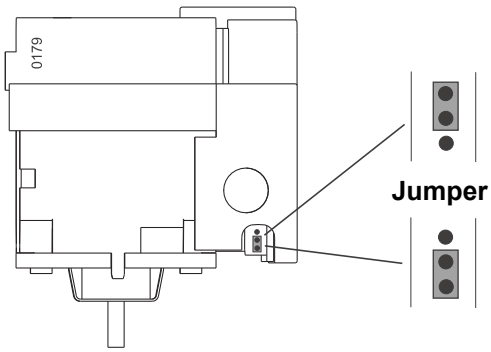
(1) Wippe
(2) Meldeschalter
(3) Führung
(4) Nut
(5) Rasthaken

1 Rasthaken ziehen
2 Meldeschalter herausziehen

11.3 Installing optional signaling switches on auxiliary releases

Signals the operating status of the auxiliary release
as S43 to the BSS **or**
as S22/S23 → (page 8-1) and following.

Abbauen **Disassembly**

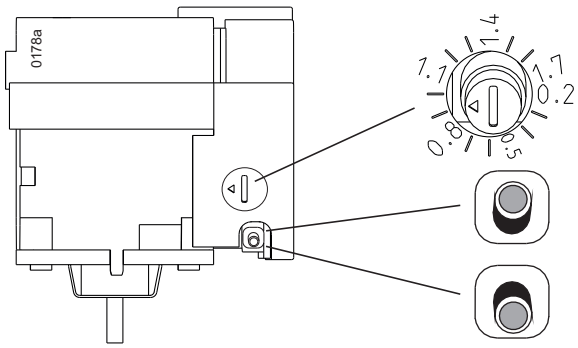


(1) See-saw
(2) Signaling switch
(3) Guide
(4) Groove
(5) Snap-fit

1 Disengage the snap-fit
2 Pull-out the signaling switch assembly

11.4 Verzögerungszeiten am Unterspannungsauslöser einstellen

Unverzögerter Auslöser F3



kurzzeitverzögert:
short-time delayed: t_d < 200 ms

unverzögert:
instantaneous: t_d < 80 ms
(Auslieferzustand)
(delivery condition)

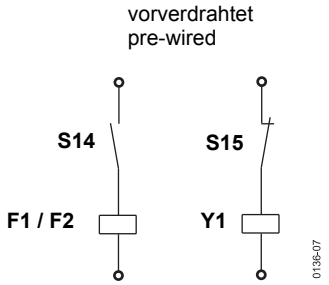
Verzögerter Auslöser F4

3 x 0,5

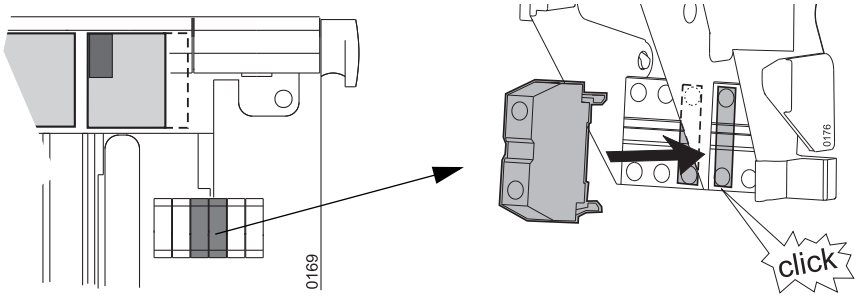
Verzögerungszeit t_d / Delay time t_d

t_d = (0.2 / 0.3 / 0.4 ... 1.7 s) + 1.6 s

t_d = 0.2 / 0.3 / 0.4 ... 1.7 s



11.4 Setting delay times at Under-voltage release



Instantaneous release F3

Time-delayed release F4

11.5 Abstellschalter für übererregte Hilfsauslöser und Einschaltmagneten einbauen

11.12 Kondensator-Speichergerät für Spannungsauslöser

11.12 Capacitor Energy Storage Unit for shunt release

Das Kondensator-Speichergerät 3WL9111-0BA... ist ein Vorschaltgerät für die Spannungsauslöser. Es kann ein Auslöser mit einem dauernd anliegenden AUS-Kommando angesteuert werden. Es ermöglicht mit seinem Energiespeicher, nach einem Ausfall der Betriebsspannung innerhalb der Speicherzeit, ein einmaliges Ausschalten des Leistungsschalters mit dem Spannungsauslöser.

Technische Daten

Betriebsspannung/Operating voltage (+10/-15%):

Speicherzeit: bei Nennspannung = 5 min.

(Max. zulässige Wartezeit zwischen Spannungsausfall und Auslösung des Leistungsschalters mit dem Spannungsauslöser)

Wiederaufladezeit: bei Nennspannung = 15 s

(Ladezeit des Energiespeichers nach einer Auslösung)

Leistungsaufnahme: max. ca. 3 VA, 3 W

(ohne angeschlossenen Spannungsauslöser)

Arbeitstemperaturbereich: -20 bis +70 °C

Gewicht: ca. 0,5 kg

Montage

Das Kondensator-Speichergerät ist getrennt vom Schalter zu befestigen:

- auf einer Hutschiene DIN EN 50022-35
- oder auf ebener Fläche mit beiliegenden Schiebern und 3 Schrauben M4

Zulässige Betriebslage:

- beliebig

The capacitor energy storage unit 3WL9111-0BA... is connected in series with the shunt release. For shunt releases a continuous OFF-command is permissible. If the operating voltage fails within the storage time, it is possible by means of the energy store to initiate one tripping operation of the circuit breaker via the shunt release.

Technical data

Operating voltage (+10/-15%):

Storage time: at rated voltage = 5 min.

(Maximum permissible waiting time between voltage failure and tripping of circuit breaker with the shunt release)

Restored energy time: at rated voltage = 15 s

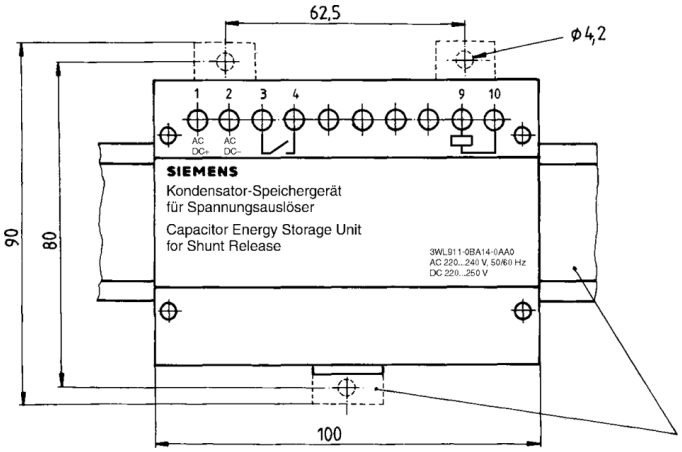
(Charging time of energy store after tripping)

Power consumption: max. 3 VA, 3 W

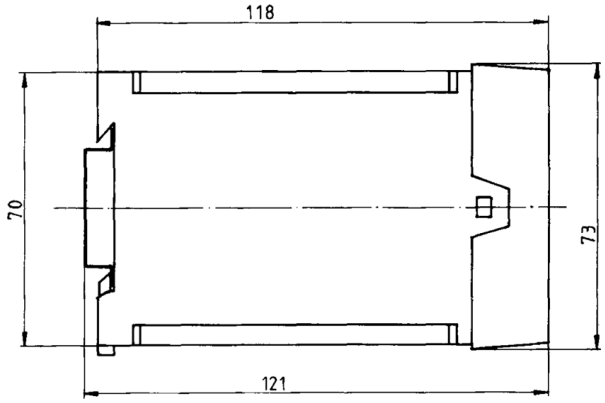
(without connected shunt release)

Working temperature range: -20 to +70 °C

Weight: approx. 0.5 kg



Installation



The capacitor energy storage unit must be mounted separately from the circuit breaker:

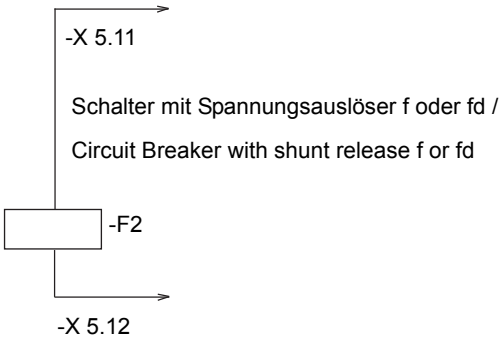
- on a DIN EN 50022-35 rail
- or on a level surface by means of the clips supplied and three 4 mm diameter bolts

Permissible operating position:

- any

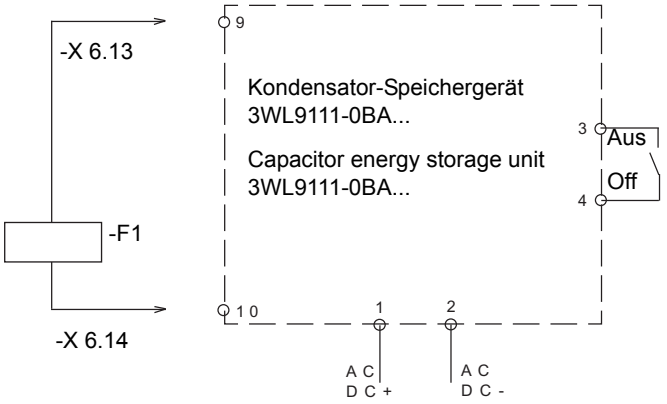
Schraubbefestigung oder
Schnappbefestigung auf Hutschiene DIN EN 50022-35

Anschluss:



- gemäß Anschlussplan
- Schraubanschlüsse für max. 2 Leitungen 2,5 mm^2 (flexibel mit Aderendhülsen)

screw fixing or
Snap-on mounting on DIN EN 50022-35 rail



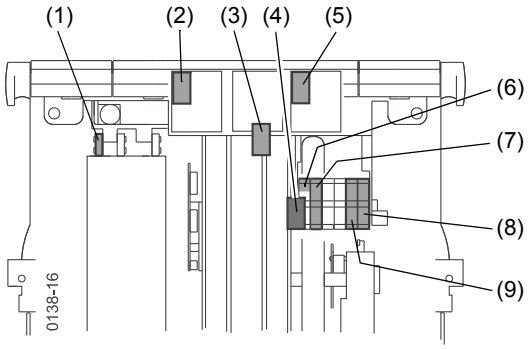
Connections:

- according to connection diagram
- screw terminal for maximum 2 cables 2.5 mm^2 (flexible with wire ferrules)

2. Spannungsauslöser **2nd shunt release**

1. Spannungsauslöser **1st shunt release**

Die Betriebsspannung des Spannungsauslösers muss in Art und Höhe der des Kondensator-Speichergerätes entsprechen.



The level and the type of the operating voltage for the shunt release must be equal to the operating voltage of the capacitor-energy storage unit.

Bestellnummern **Order numbers**

Kondensator-Speichergerät / Capacitor Energy Storage Unit	Bestell-Nr. / Order no.
220-240 V AC, 50/60 Hz 220-250 V DC	3WL9111-0BA14-0AA0

12 Hilfsstromschalter

12.1 Schaltergruppe Meldung

(1) Ausgelöst-Meldeschalter S24
(2) Meldeschalter S22 am 1. Hilfsauslöser → (Seite 11-3)
(3) Meldeschalter Einschaltbereitschaft S20
(4) Meldeschalter Speicherzustand S21
(5) Meldeschalter S23 am 2. Hilfsauslöser oder am Unterspannungsauslöser → (Seite 11-3)
(6) Meldeschalter Schaltstellung S1 (Standard)
(7) Meldeschalter Schaltstellung S2 (Standard)
(8) Meldeschalter Schaltstellung S4 **oder** S8
(9) Meldeschalter Schaltstellung S3 **oder** S7

12.1.1 Meldeschalter nachrüsten

WARNUNG

Verletzungsgefahr!

Die Schaltmechanik kann Personenschäden verursachen, wenn das Bedienpult abgenommen ist.
Vor dem Abbauen des Bedienpultes Ausschalten und Federspeicher entspannen → (Seite 24-3):
- Entfernen des Handsteckers X5
- AUS-Taste betätigen
- EIN-Taste betätigen
- AUS-Taste nochmals betätigen.

- Leistungsschalter ausschalten und Federspeicher entspannen → (Seite 24-3)
- Leistungsschalter im Einschubrahmen in Wartungsposition bewegen → (Seite 24-4)
- Bedienpult abnehmen → (Seite 24-11)
- Information über Anschlussklemmenverdrahtung → (Seite 8-1)

12 Auxiliary and control switches

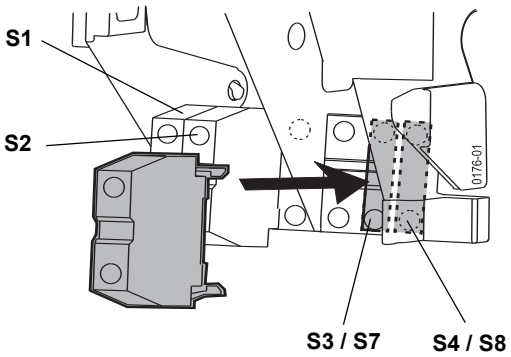
12.1 Signaling switches

(1) Trip signaling switch S24
(2) Signaling switch S22 for 1st shunt trip → (page 11-3)
(3) Signaling switch for ready-to-close S20
(4) Signaling switch for storage spring charged S21
(5) Signaling switch S23 for 2nd shunt trip or under-voltage release → (page 11-3)
(6) Contact position-driven auxiliary switch S1 (standard)
(7) Contact position-driven auxiliary switch S2 (standard)
(8) Contact position-driven auxiliary switch S4 **or** S8
(9) Contact position-driven auxiliary switch S3 **or** S7

12.1.1 Mounting signaling switches

WARNING

Mechanical hazard!



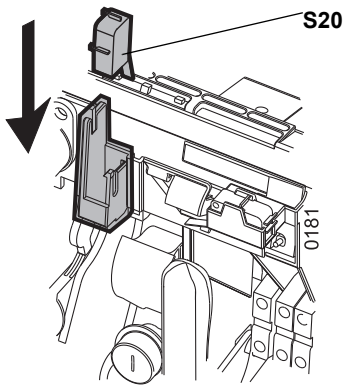
Mechanism can cause severe injury when cover is removed.

Switch off and discharge the storage spring before removing cover → (page 24-3):
- Remove hand plug X5
- Push OPEN button
- Push CLOSE button
- Push OPEN button again.

- OPEN the circuit breaker and discharge the storage spring → (page 24-3)
- Move circuit breaker into maintenance position → (page 24-4)
- Remove front panel → (page 24-11)
- For Terminal wiring information → (page 8-1)

Meldeschalter Schalterstellung

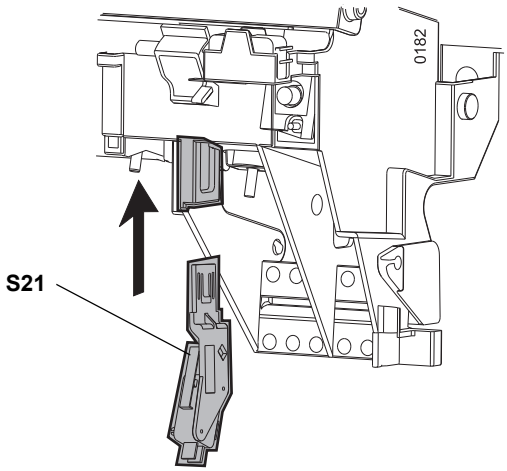
Contact position-driven switches



Die Anschlussleitungen der Meldeschalter sind an die Hilfsleiterklemmblöcke X5 und X6 entsprechend dem Verdrahtungsplan → (Seite 8-3) anzuklemmen.

The connecting wires from the signaling switches must be connected to terminals X5 and X6 according to the wiring plan → (page 8-3).

Schnappmontage von Meldeschalter S20 „Einschaltbereitmeldeschalter“

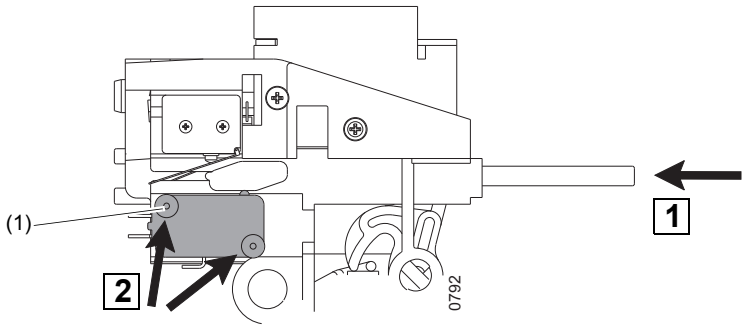


Snap in mounting of signaling switch S20 “ready to close”

Die Anschlussleitungen der Meldeschalter sind an den Klemmblock X6 entsprechend Verdrahtungsplan → (Seite 8-4) anzuschließen.

Schnappmontage von Meldeschalter S21 „Federspeicherzustand“

Snap in mounting of signaling switch S21 “spring charged”



The connecting wires of the signaling switch must be connected to terminal X6 according to the wiring plan → (page 8-4).

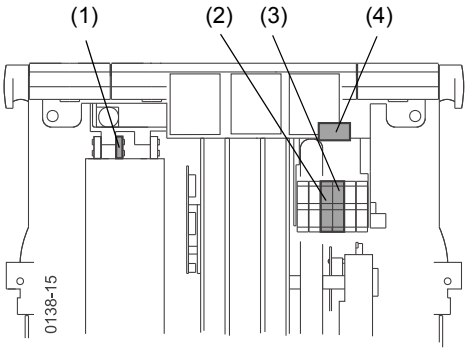
12.1.2 Meldeschalter am Überstromauslöser montieren

- Überstromauslöser ausbauen → (Seite 9-72)

Überstromauslöser Systemträger in Kunststoffausführung (schwarz):

(1) 2 Schnappstifte

VORSICHT	CAUTION
Selbstschneidende Schrauben vorsichtig anziehen. Die Meldeschalter dürfen sich bei der Montage nicht verformen.	Tighten self-tapping screws carefully. The signaling switches must not be deformed during installation.



12.1.2 Mounting signaling switches at trip unit

- Remove overcurrent release → (page 9-72)

Trip unit system carrier, made of plastics (black color):

(1) 2 snap pins

12.2 Schaltergruppe Steuerung

(1) Abstellschalter S13 für Fern-Rücksetzung → (Seite 10-6)
(2) Abstellschalter S14 für Spannungsauslöser F1 (übererregt) → (Seite 11-4)
(3) Abstellschalter S15 für Einschaltmagnet Y1 (übererregt) → (Seite 11-4)
(4) Schalter S10 „Elektrisch EIN“ → (Seite 11-4)
oder Motorabstellschalter S12 → (Seite 13-2)

12.3 Schaltergruppe Kommunikation

→ Meldeschalter für den BSS (Seite 9-81)

12.4 Leitungen anschließen

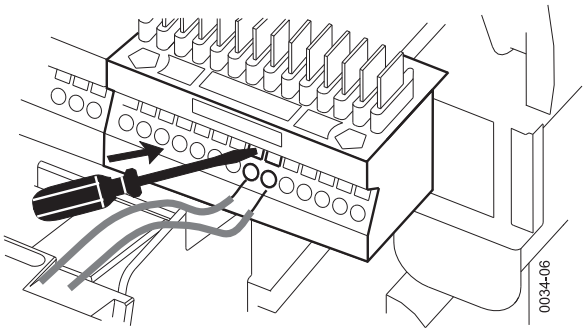
→ Schaltpläne (Seite 8-1)

12.2 Control switches

(1) Cut-off switch S13 for remote-reset → (page 10-6)
(2) Cut-off switch S14 for shunt trip F1 (overexcited) → (page 11-4)
(3) Cut-off switch S15 for closing coil Y1 (overexcited) → (page 11-4)
(4) Switch S10 “Electrical ON“ → (page 11-4)
or motor disconnect switch S12 → (page 13-2)

12.3 Communication switches

→Signaling switches for BSS (page 9-81)

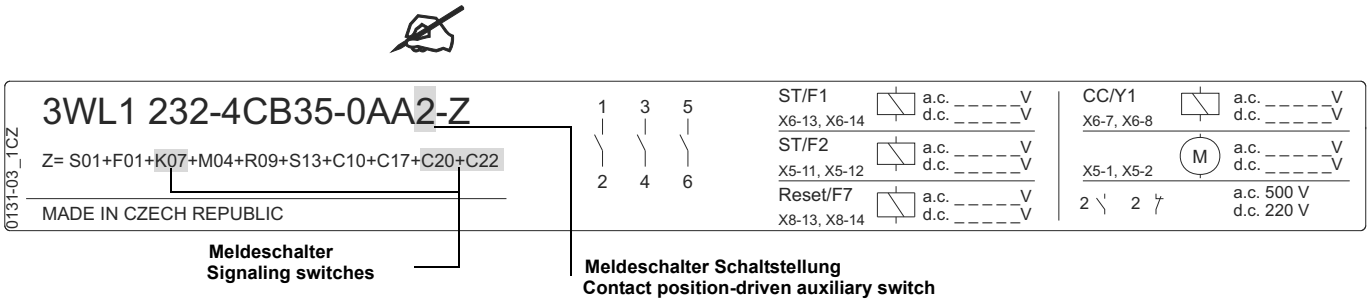


12.4 Connecting wires

→ Circuit diagrams (page 8-1)

Hinweis	Note
Ggf. fehlende Hilfsstromanschlüsse nachrüsten (Messerleiste, Hilfsstromstecker, Schleifkontaktmodul für Einschubrahmen). → (Seite 5-15)	If necessary missing auxiliary terminals may be retrofitted (receptacle, auxiliary connectors and sliding contact module for guide frames). → (page 5-15)

3,0 x 0,6



12.5 Ausstattungsschild aktualisieren

Hinweis
Nach dem Einbau zusätzlicher Komponenten sind folgende Angaben mit einem weißen Permanentstift bzw. mit Aufklebern aus dem beiliegenden Etikettenbogen zu aktualisieren! Davor ist es ggf. notwendig die zu korrigierenden Zeichen mit einem schwarzen Permanentstift zu füllen.

12.5 Updating the options label

Note
After installing additional components, add the following data using a white and indelible ink pen or the appropiate label from the set of labels supplied! If necessary the signs which need to be corrected have to be filled with a black permanent pen before.

12.6 Bestellnummern / Z-Zusätze

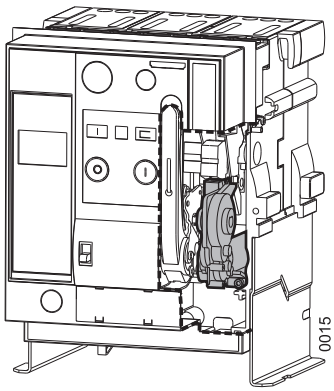
13 Motorantrieb

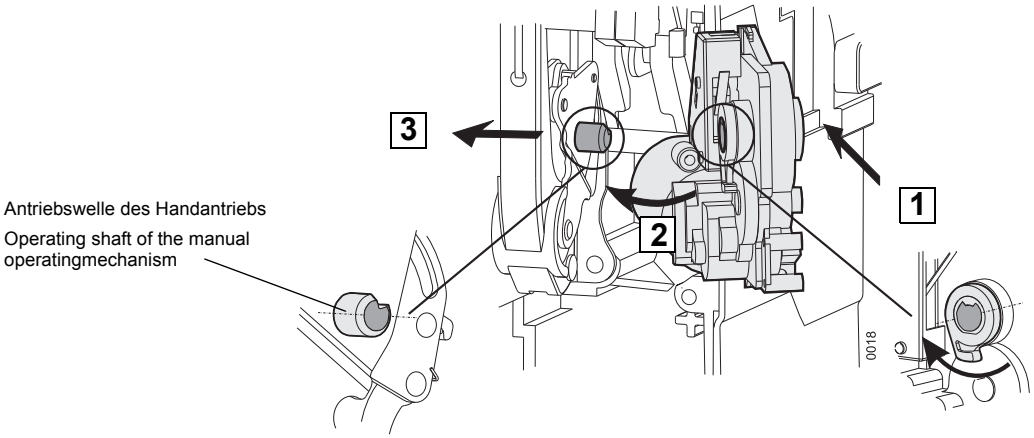
Für automatisches Spannen des Federspeichers. Wird eingeschaltet, wenn Federspeicher entspannt und Steuerspannung vorhanden. Schaltet nach dem Spannen automatisch ab.

13.1 Nachrüsten des Motorantriebs



WARNUNG

Verletzungsgefahr!



Die Schaltmechanik kann Personenschäden verursachen, wenn das Bedienpult abgenommen ist.
Vor dem Abbauen des Bedienpultes Ausschalten und Federspeicher entspannen → (Seite 24-3):

- Entfernen des Handsteckers X5
- AUS-Taste betätigen
- EIN-Taste betätigen
- AUS-Taste nochmals betätigen.

- Bedienpult abnehmen → (Seite 24-11)

Motor auf Antriebswelle setzen

13 Motor-operated mechanism

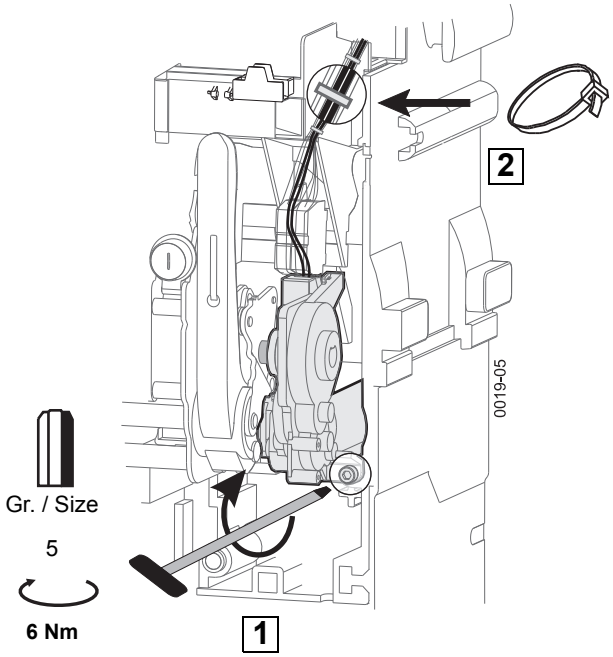
For charging the spring storage automatically. It is switched on if the spring storage is discharged and control voltage is applied. The motor-operated mechanism is automatically switched off after the spring storage has been fully charged.

13.1 Retrofitting the motor-operated mechanism

WARNING

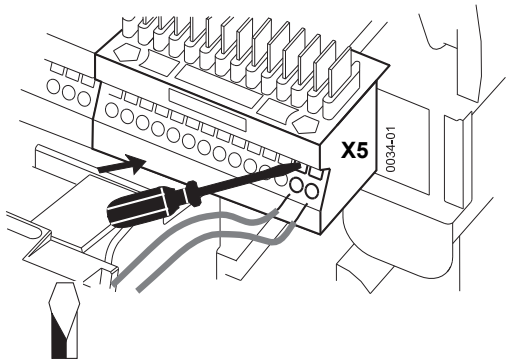
Mechanical hazard!

Mechanism can cause severe injury when cover is removed.



Switch off and discharge the storage spring before removing cover → (page 24-3):

- Remove hand plug X5
- Push OPEN button
- Push CLOSE button
- Push OPEN button again.



- Remove front panel → (page 24-11)

Mounting the motor on the operating shaft

Motorantrieb befestigen / Leitungen anschließen

Fixing the motor-operated mechanism / connecting wires

3,0 x 0,6

Klemmen / Terminals:
X5.1 (L-) BK / schwarz / black
X5.2 (L+) BN / braun / brown

→ Schaltpläne (Seite 8-6)

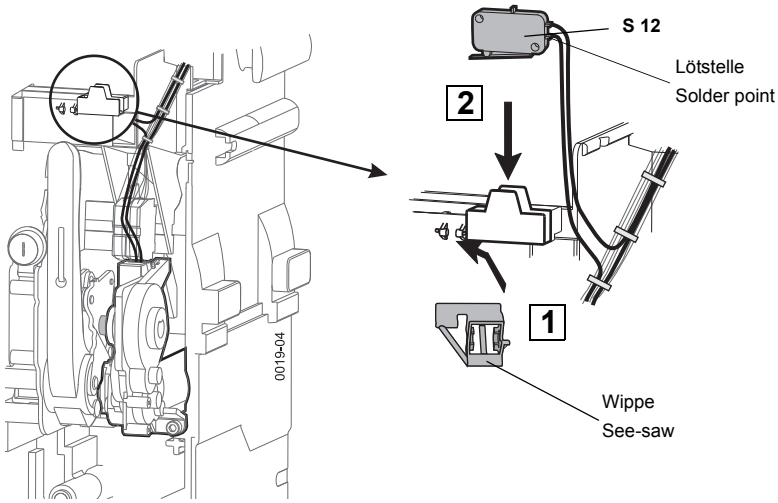
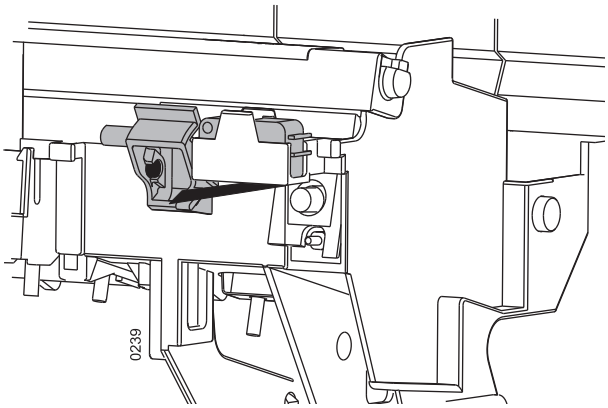
Hinweis	Note
Ggf. fehlende Hilfsstromanschlüsse nachrüsten (Messerleiste, Hilfsstromstecker, Schleifkontaktmodul für Einschubrahmen). → (Seite 5-15)	If necessary missing auxiliary terminals may be retrofitted (receptacle, auxiliary connectors and sliding contact module for guide frames). → (page 5-15)

13.2 Motorabstellschalter am Bedienpult

Option.
Zum Abschalten der Steuerspannung des Motorantriebs.
Lieferung vorkonfektioniert mit einer angelöteten Leitung.



Nicht möglich bei vorhandenem „Elektrisch Ein“
Not possible if “electrical ON” available

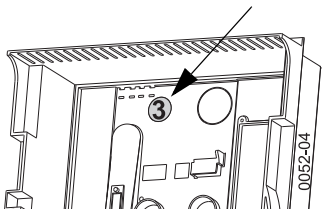


13.2 Motor disconnect switch at the front panel

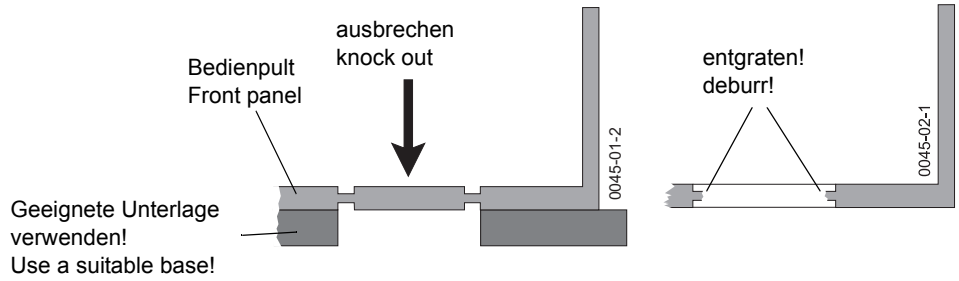
Option.
For de-energizing the motor-operated mechanism.
Supplied pre-assembled with a soldered wire.

Motorabstellschalter einsetzen

Installing motor disconnect switch

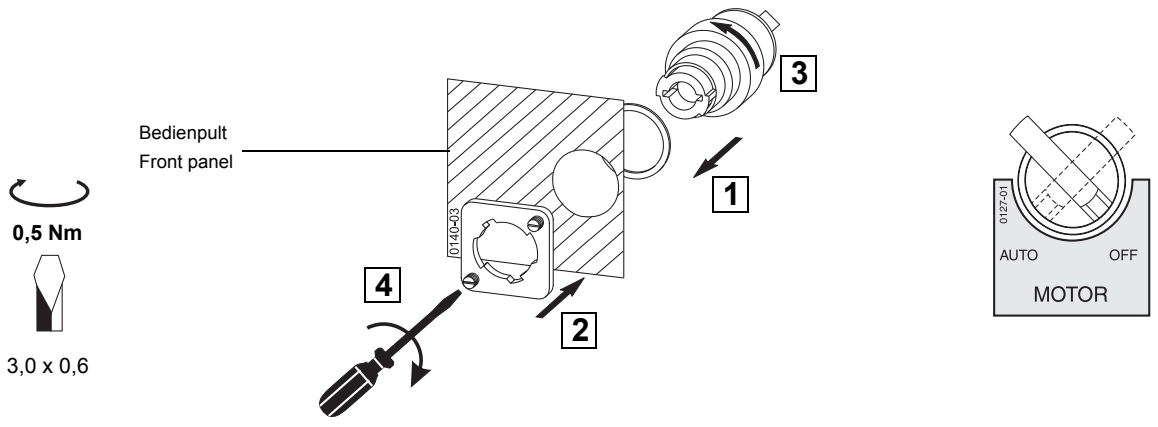


Motorabstellschalter anschließen



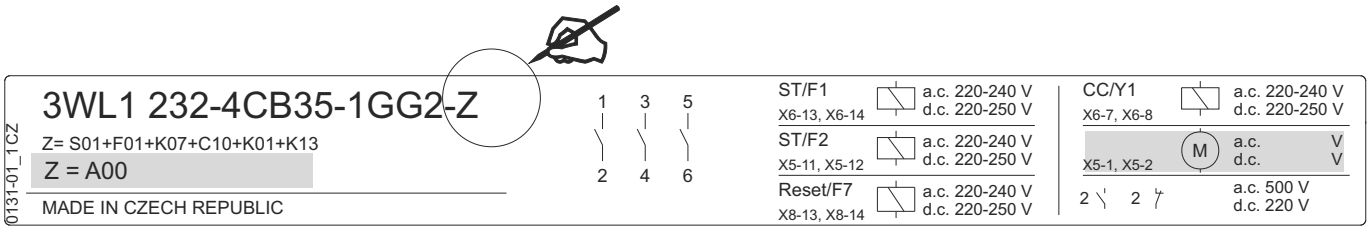
- Schaltplan → (Seite 8-6)
- Klemme X5.1 lösen und Leitung X5-1 (vom Motorantrieb kommend) herausziehen
- Leitung X5-1 vom Abstellschalter S12 an Klemme X5.1 anschließen
- Leitung X5-1 vom Motorantrieb an Anschluss 4 des Abstellschalters anlöten

Connecting motor disconnect switch



- wiring scheme → (page 8-6)
- Open terminal X5.1 and disconnenct wire X5-1 (wire from motor-operated mechanism)
- Connect wire X5.1 of the disconnect switch S12 to terminal X5.1.
- Solder wire X5-1 of the motor-operated mechanism to connection 4 of the disconnect switch

Knebelschalter einsetzen



Installing the selector knob

Hinweis	Note
Ggf. fehlende Hilfsstromanschlüsse nachrüsten (Messerleiste, Hilfsstromstecker, Schleifkontaktmodul für Einschubrahmen). → (Seite 5-15)	If necessary missing auxiliary terminals may be retrofitted (receptacle, auxiliary connectors and sliding contact module for guide frames). → (page 5-15)

13.3 Ausstattungsschild aktualisieren

Hinweis	Note
Nach dem Einbau zusätzlicher Komponenten sind folgende Angaben mit einem weißen Permanentstift bzw. mit Aufklebern aus dem beiliegenden Etikettenbogen zu aktualisieren! Davor ist es ggf. notwendig die zu korrigierenden Zeichen mit einem schwarzen Permanentstift zu füllen.	After installing additional components, add the following data using a white and indelible ink pen or the appropiate label from the set of labels supplied! If necessary the signs which need to be corrected have to be filled with a black permanent pen before.

13.3.1 Bestellnummern / Z-Zusatz

13.3.1 Order numbers / Z-option

	Spannung / Voltage	Leistungsaufnahme / Power consumption	Bestell-Nr. / Order no.	Z ergänzen / Add. Z
Motorantrieb / Motor-operated mechanism	24 V DC / 30 V DC	110 W	3WL9111-0AF01-0AA0	M01

14 Anzeige- und Bedienelemente

Zum Nachrüsten stehen zusätzliche Anzeige- und Bedienelemente zur Verfügung.

WARNUNG

Vor dem Arbeiten an diesem Gerät, Anlage unbedingt spannungsfrei schalten sowie das Gerät erden.

WARNING

Always de-energize and ground equipment before working on this equipment.

Bei Nachrüstung:

- Ausschalten und Federspeicher entspannen → (Seite 24-3)
- Bedienpult abnehmen → (Seite 24-11)

14.1 Verriegelungsset

Das Verriegelungsset ist erforderlich, wenn die Bedienbarkeit der Taster Mechanisch EIN und AUS durch Nachrüsten verschiedener Zubehörteile an spezielle Erfordernisse des Schaltanlagenbetriebes angepasst werden soll. (z. B. Pilzdrucktaster NOT-AUS, Sicherheitsschlösser, Zugangssperren für Werkzeugbetätigung, Plombierungen)

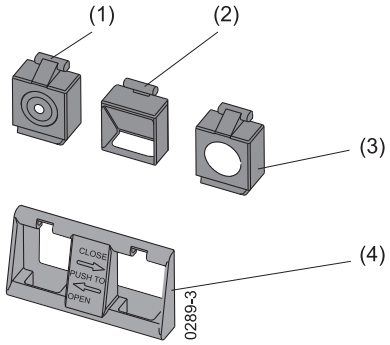
Lieferumfang:

(1) 2 Stück Zugangssperren → (Seite 17-7)
(2) 2 Stück Plombierkappen zum Verplomben oder Einhängen eines Vorhängeschlosses → (Seite 15-27)
(3) 2 Stück Schlossträger für Sicherheitsschloss zur Schlüsselbetätigung → (Seite 15-1)
(4) 1 Grundplatte

14 Indicators and operating elements

There are additional indicators and operating elements available for retrofitting.

For retrofitting:



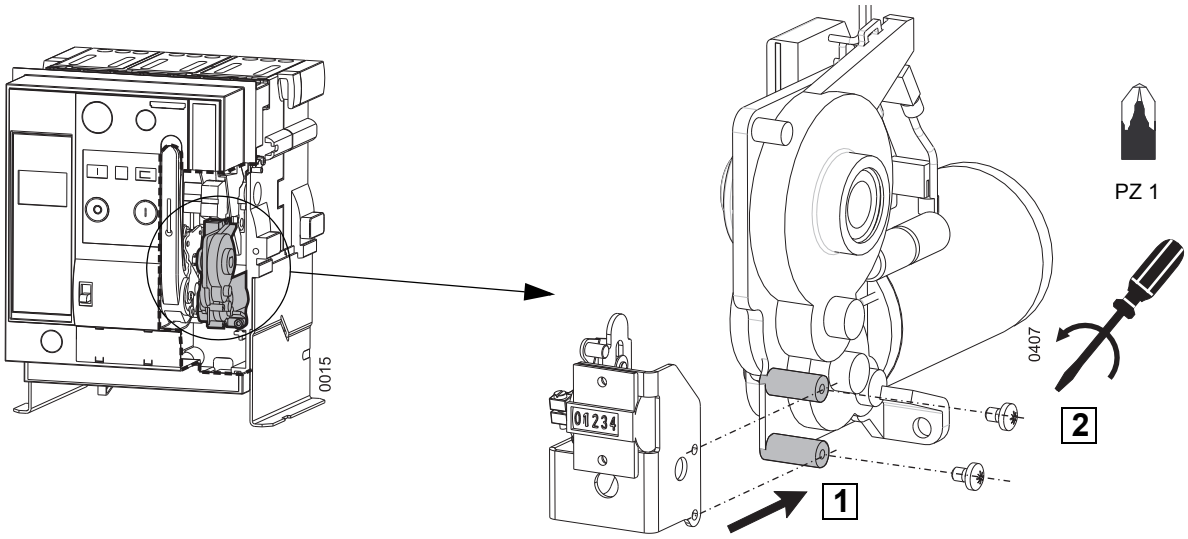
- Switch off and discharge the storage spring → (page 24-3)
- Remove front panel → (page 24-11)

14.1 Locking set

The locking set is required, if the operation of the mechanical ON and OFF buttons has to be adapted to special operational requirements of the switchgear by retrofitting several accessories. (e.g. mushroom button for EMERGENCY OFF, safety locks, access blocks for tool operation, seals)

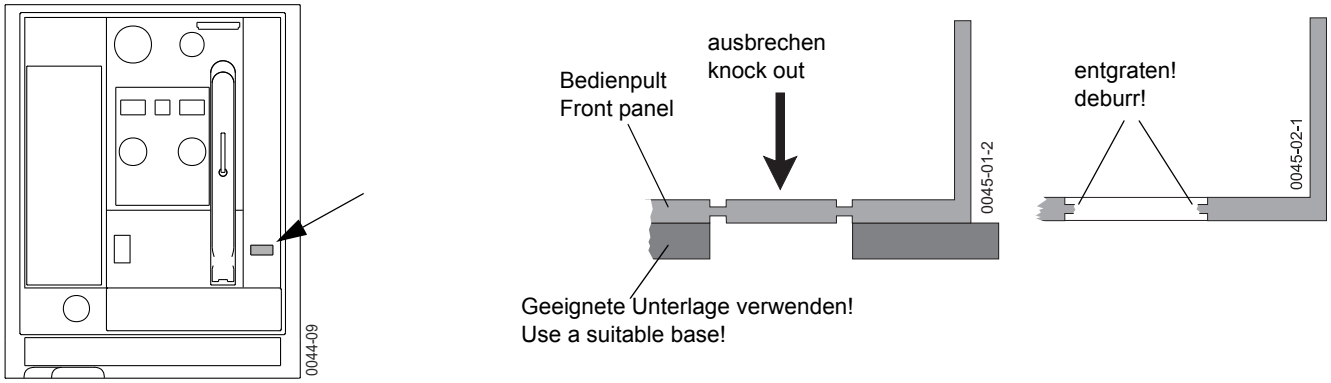
Contents of supply:

(1) 2 access blocks → (page 17-7)
(2) 2 sealing caps for leads or padlocks → (page 15-27)
(3) 2 safety lock holders → (page 15-1)
(4) 1 base plate



14.2 Mechanischer Schaltspielzähler

Der mechanische Schaltspielzähler kann nachgerüstet werden, wenn der Leistungsschalter mit einem Motorantrieb ausgestattet ist.



14.2 Mechanical make-break operations counter

The mechanical make-break operations counter can be retrofitted if the circuit breaker is equipped with a motor operating mechanism.

Feld am Bedienpult ausbrechen

Knocking out the field on the front panel

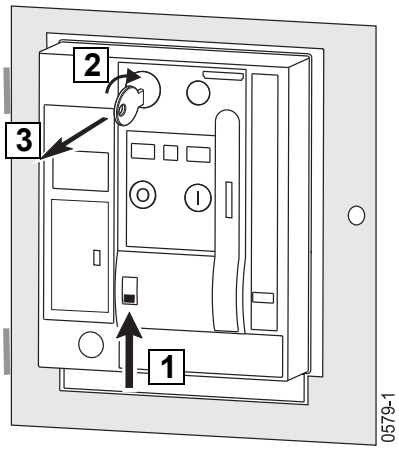
	Sicherheitsschloss **Safety lock**	**Fabrikate** **Manufacturer**	**Wirkung** **Effects**
1	Abschließvorrichtung in AUS-Stellung (Bedienpult) Locking device in OFF position (front panel)	PROFALUX RONIS CES IKON CASTELL KIRK FORTRESS	Mit dieser Funktion wird ein Einschalten des Leistungsschalters verhindert und die Trennerbedingung nach IEC 60 947-2 in AUS-Stellung erfüllt. Diese Abschließung wirkt nur auf diesen Schalter. Nach einem Auswechseln des Leistungsschalters ist das Einschalten nicht mehr verhindert, sofern nicht der neue Leistungsschalter auch gegen unbefugtes Einschalten gesichert ist. Zum Aktivieren der Abschließung muss der Leistungsschalter ausgeschaltet sein. Bei eingeschaltetem Leistungsschalter ist die Abschließvorrichtung blockiert. Die Sperre ist nur bei abgezogenem Schlüssel wirksam. Der Sicherheitsschlüssel ist nur in „AUS“ abziehbar. → (Seite 15-3) This function prevents closing of the circuit breaker and fulfils the disconnecting condition in OFF position according to IEC 60 947-2. This lock only actuates on this circuit breaker. After replacing the circuit breaker, closing is not prevented anymore unless the new circuit breaker is secured against unauthorised closing, too. To activate the locking device, the circuit breaker must be opened. If the circuit breaker is closed, the locking device is blocked. The block is only effective when the key is removed. The safety key can only be removed in “OFF” position. → (page 15-3)
2	Abschließvorrichtung für Elektrisch EIN Locking device for Electrical ON	CES IKON	Verhindert unautorisiertes elektrisches Einschalten am Bedienpult. Mechanisches Einschalten und Ferneinschaltung bleiben möglich. Die Sperre ist nur bei abgezogenem Schlüssel wirksam. → (Seite 15-6) Prevents electrical closing on the front panel. Mechanical closing and remote closing are still possible. The block is only effective if the key is withdrawn. → (page 15-6)

	Sicherheitsschloss Safety lock	Fabrikate Manufacturer	Wirkung Effects
3	Schlüsselbetätigung für Mechanisch EIN Key protected operation for Mechanical ON	CES IKON	Verhindert unautorisiertes mechanisches Einschalten. Der Mechanisch-EIN-Taster kann nur bei gestecktem Schlüssel betätigt werden (Schlüsselbetätigung). Einschalten durch Taster „Elektrisch EIN“ oder Fernschaltung bleiben möglich. Die Sperre ist nur bei abgezogenem Schlüssel wirksam. → (Seite 15-6) Prevents unauthorised mechanical closing. The mechanical ON button can only be pressed if the key is inserted (key operation). Closing via “electrical ON” button and remote closing are still possible. The block is only effective when the key is removed. → (page 15-6)
4	Abschließvorrichtung gegen Verfahren aus der Trennstellung Locking device against moving from the disconnected position	PROFALUX RONIS CES IKON	Verhindert bei Einschubschaltern das Herausziehen der Kurbel in der Trennstellung. Übertragung des Sperrsignals vom Schloss zur Abschließvorrichtung durch Bowdenzug. Ein Schalteraustausch ist nicht möglich. Die Sperre ist nur bei abgezogenem Schlüssel wirksam. → (Seite 15-7) On draw-out circuit breakers, it prevents drawing out of the racking handle in the disconnected position. Transmission of the blocking signal from the lock to the circuit breaker through bowden wire. Circuit breaker replacement is not possible. The block is only effective when the key is removed. → (page 15-7)
5	Abschließvorrichtung in AUS-Stellung (Schaltschranktür) Locking device in OFF position (cubicle door)	PROFALUX RONIS CES IKON KIRK	Mit dieser speziellen Funktion für Einschubschalter wird schalterunabhängig ein Einschalten verhindert und die Trennerbedingung in AUS-Stellung erfüllt. Ein unbefugtes Einschalten ist auch nach dem Auswechseln des Leistungsschalters nicht möglich. Zum Aktivieren der Abschließung muss der Leistungsschalter ausgeschaltet sein. Bei eingeschaltetem Leistungsschalter ist die Abschließvorrichtung blockiert. Die Sperre ist nur bei abgezogenem Schlüssel wirksam. Der Sicherheitsschlüssel ist nur in „AUS“ abziehbar. → (Seite 15-12) This special function for draw-out circuit breakers prevents closing and fulfills the disconnecting condition in OFF position regardless of the circuit breaker. Unauthorised closing is not possible either after circuit breaker replacement. To activate the lock, the circuit breaker must be open. If the circuit breaker is closed, the locking device is blocked. The block is only effective when the key is removed. The safety key can only be removed in “OFF” position. → (page 15-12)
6	Abschließvorrichtung für Handkurbel Locking device for racking handle	PROFALUX RONIS CES IKON KIRK	Verhindert das Herausziehen der Kurbel. Der Schalter ist gegen Verfahren gesichert. Die Sperre ist nur bei abgezogenem Schlüssel wirksam. → (Seite 15-14) Prevents drawing out of the racking handle. The circuit breaker is locked against moving. The block is only effective when the key is removed. → (page 15-14)
7	Schlüsselbetätigung für Mechanisch AUS Key protected operation for Mechanical OFF	CES IKON	Verhindert unautorisiertes mechanisches Ausschalten am Bedienpult. Der Mechanisch-AUS-Taster kann nur bei gestecktem Schlüssel betätigt werden (Schlüsselbetätigung). Fernausschaltung bleibt möglich. Die Sperre ist nur bei abgezogenem Schlüssel wirksam. → (Seite 15-16) Prevents unauthorised mechanical tripping. The mechanical OFF button can only be pressed if the key is inserted (key operation). Remote tripping is still possible. The block is only effective when the key is removed. → (page 15-16)
8	Abschließvorrichtung gegen Rücksetzen der Ausgelöst-Anzeige Locking device against reset trip indicator		Eine abschließbare Abdeckung verhindert das manuelle Rücksetzen der Ausgelöst-Anzeige nach Überstromauslösung. → (Seite 15-17) A lockable cover prevents pressing the reset button after overcurrent tripping. → (page 15-17)

15.1.1 Abschließvorrichtung in AUS-Stellung

Bei abgezogenem Schlüssel ist der Schalter gegen Einschalten gesichert.

Abschließen



Zum Aktivieren der Abschließung muss der Schalter ausgeschaltet sein.

15.1.1 Locking device in OFF position

If the key is removed, closing the circuit breaker is not possible.

Locking

To activate the lock, the circuit breaker must be open.

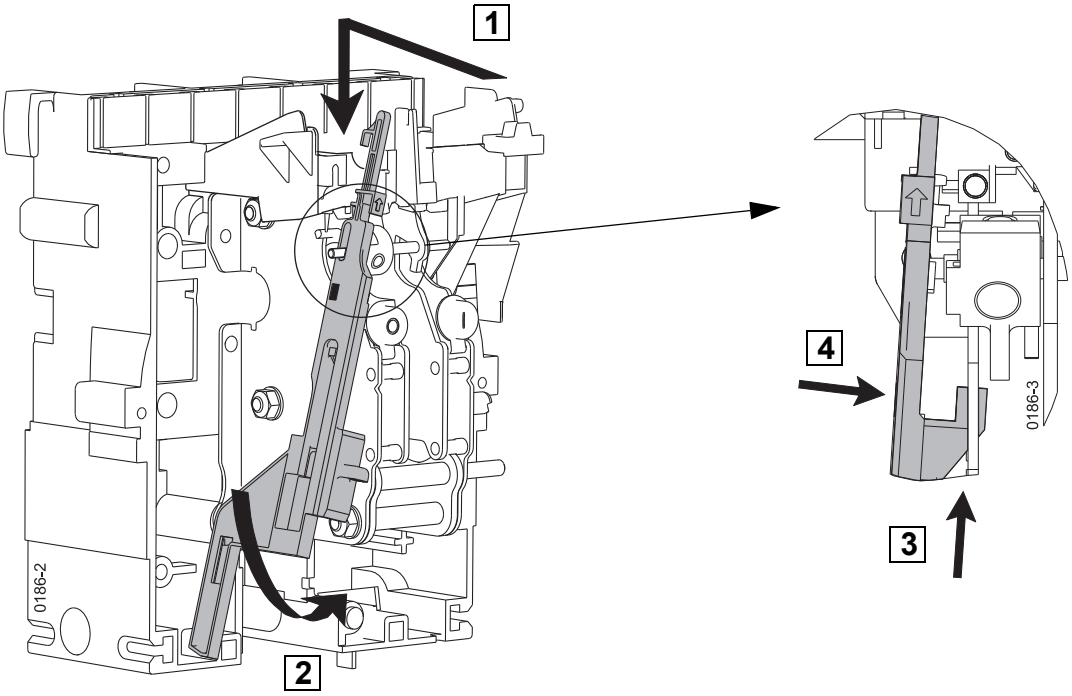
Nachrüsten

- Ausschalten und Federspeicher entspannen → (Seite 24-3)
- Bedienpult abnehmen → (Seite 24-11)

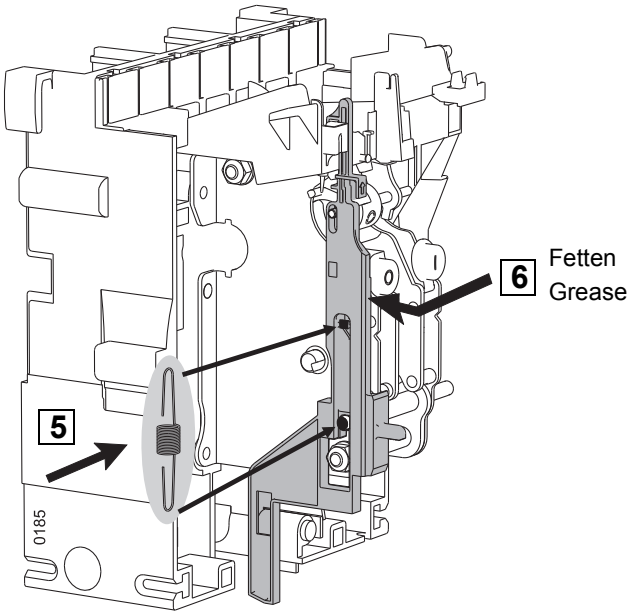
Retrofitting

- Switch off and discharge the storage spring → (page 24-3)
- Remove front panel → (page 24-11)

Steuerschieber einbauen



(bei Einschubschaltern immer vorhanden)

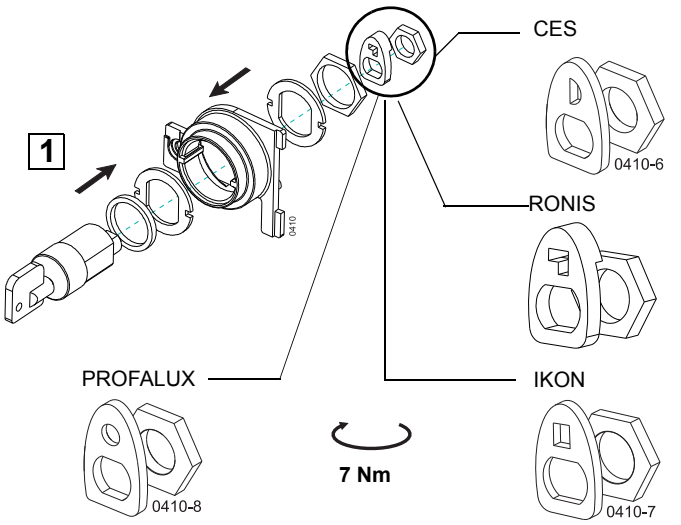


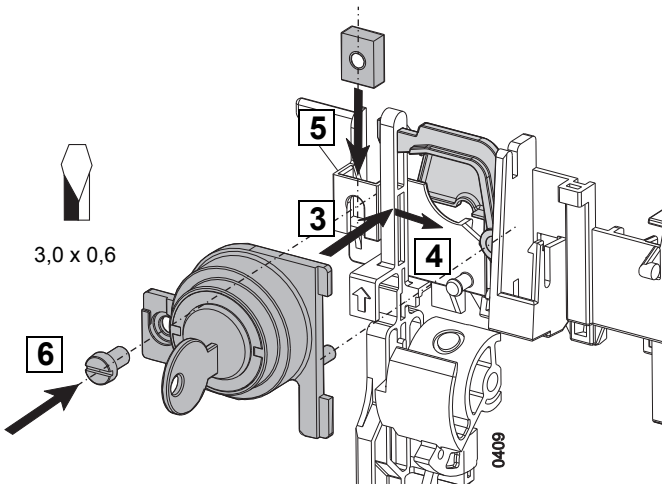
- Überstromauslöser ausbauen → (Seite 9-72)

Fitting control gate

(always available on draw-out circuit breakers)

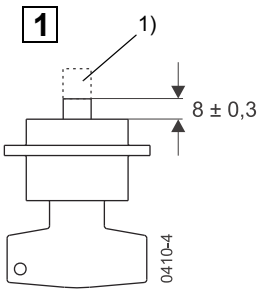
- Remove overcurrent release → (page 9-72)



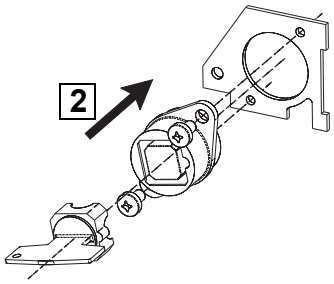


Sicherheitsschloss einbauen

Für Sicherheitsschlösser der Typen:

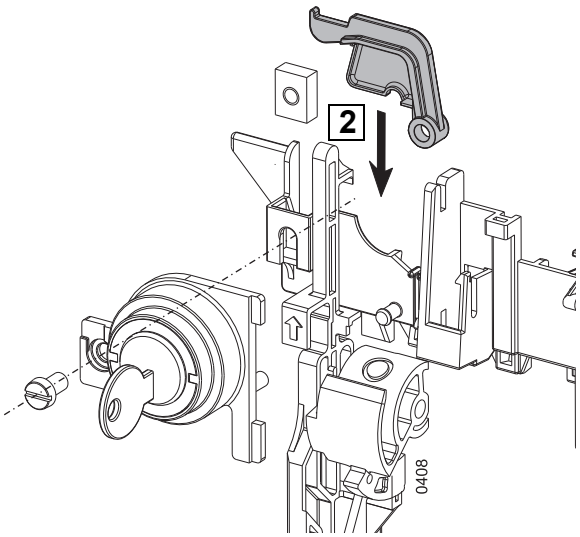


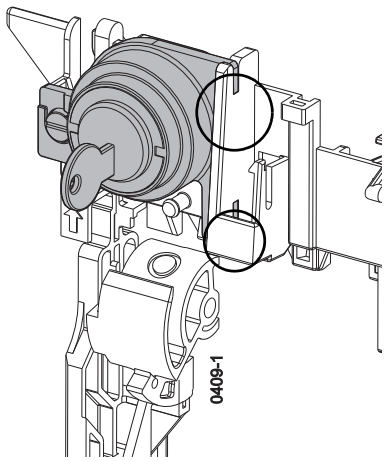
PROFALUX, RONIS, CES, IKON, KIRK



Für Sicherheitsschlösser der Typen:

CASTELL, FORTRESS

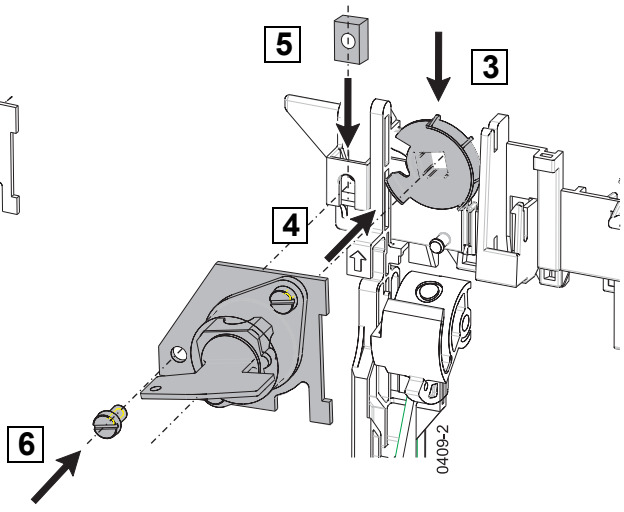




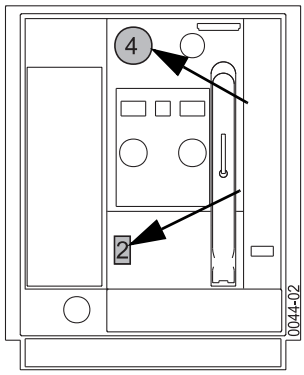
1) Auf 8 ± 0,3 mm kürzen
Shorten to 8 ± 0.3 mm

Installing safety lock

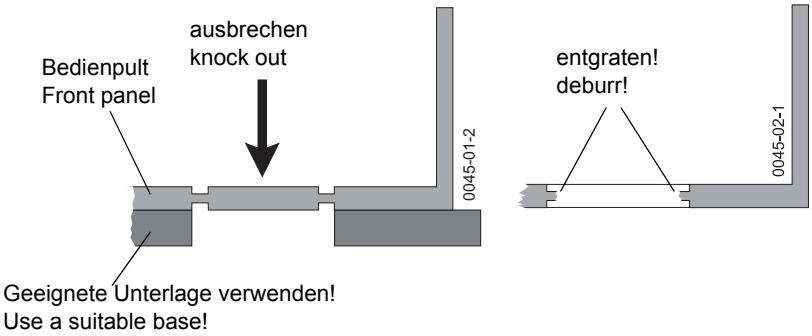
For safety lock types:



PROFALUX, RONIS, CES, IKON, KIRK



For safety lock types:



CASTELL, FORTRESS

Felder am Bedienpult ausbrechen

Knocking out the fields on the front panel

Anschließend:

- Überstromauslöser einbauen → (Seite 9-72)
- Bedienpult anbauen → (Seite 24-25)

Then

- Install overcurrent release → (page 9-72)
- Install front panel → (page 24-25)

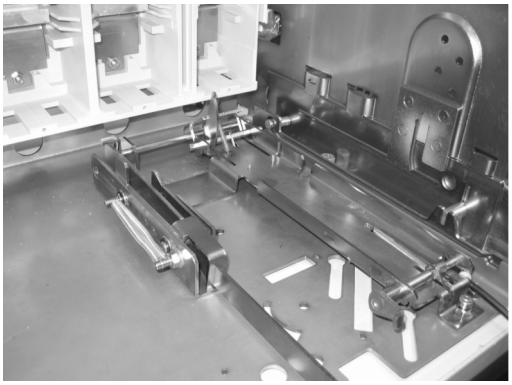
- Remove front panel → (page 24-11)

VORSICHT	CAUTION
Selbstschneidende Schrauben vorsichtig anziehen!	Tighten self-tapping screws carefully!

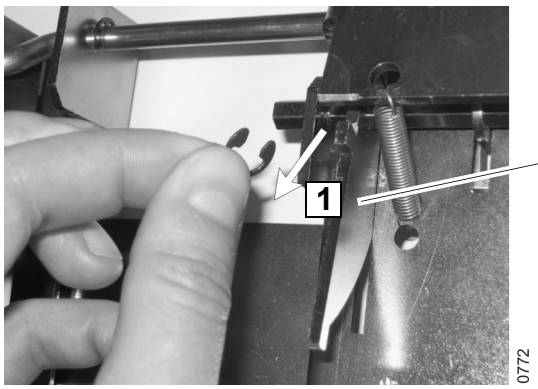


Anschließend:

- Bedienpult anbauen → (Seite 24-25)

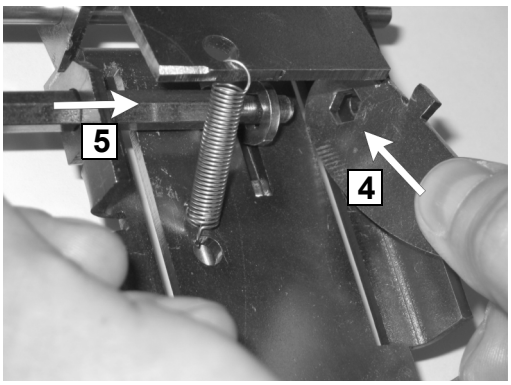
Then:

- Install front panel → (page 24-25)



15.1.4 Abschließvorrichtung gegen Verfahren aus der Trennstellung nachrüsten

- →Ausschalten und Federspeicher entspannen → (Seite 24-3)
- Schalter aus dem Einschubrahmen entnehmen → (Seite 24-4)

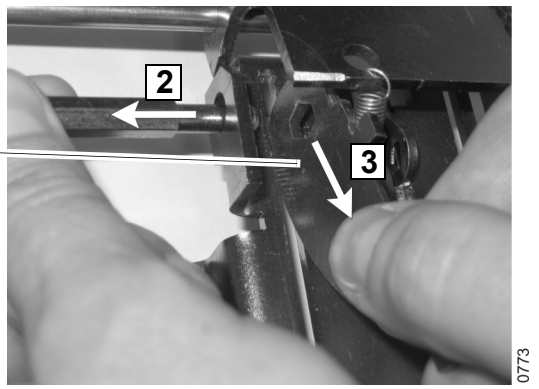


Nur für BG III: Schalter Einschubrahmen:

Umbau der Verriegelungsbaugruppe

(1) Abfrageblech

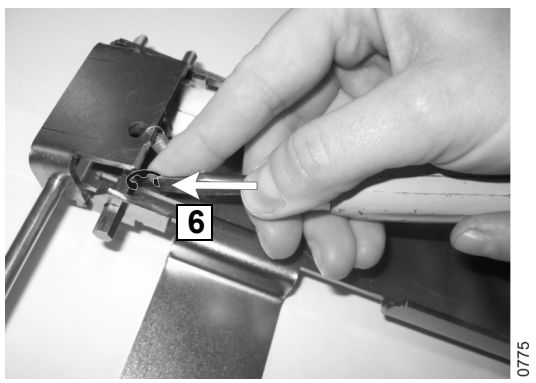
1 Sicherungsscheibe entfernen
2 Achse herausziehen
3 Abfrageblech entnehmen



4 Abfrageblech auf der anderen Seite einsetzen
5 Achse einschieben
6 Sicherungsscheibe montieren

15.1.4 Retrofitting locking device against moving from the disconnected position

- Switch off and discharge the storage spring → (page 24-3)
- Remove the breaker from the guide frame → (page 24-4)

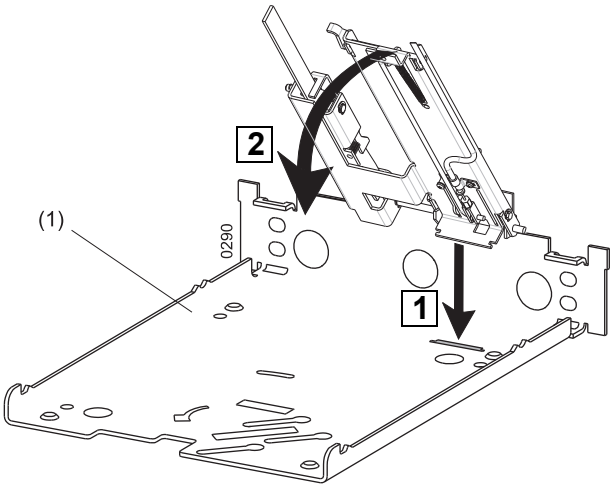


For frame size III only: Changing the query plate

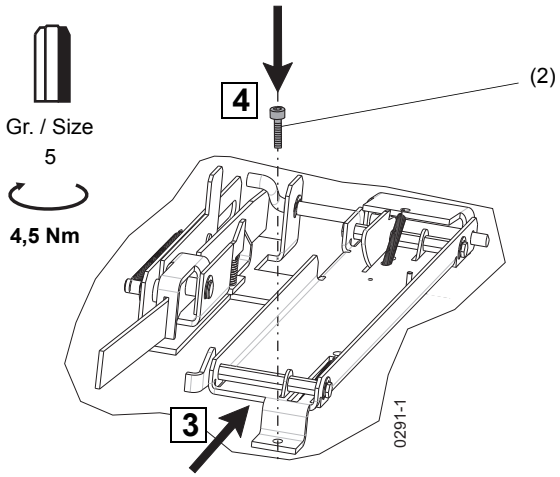
Retrofit of the locking assembly

(1) Query plate

1 Remove the lock washer
2 Pull out the shaft
3 Remove the query plate on the other side



4 Insert the query plate on the other side
5 Pull in the shaft
6 Assemble the lock washer

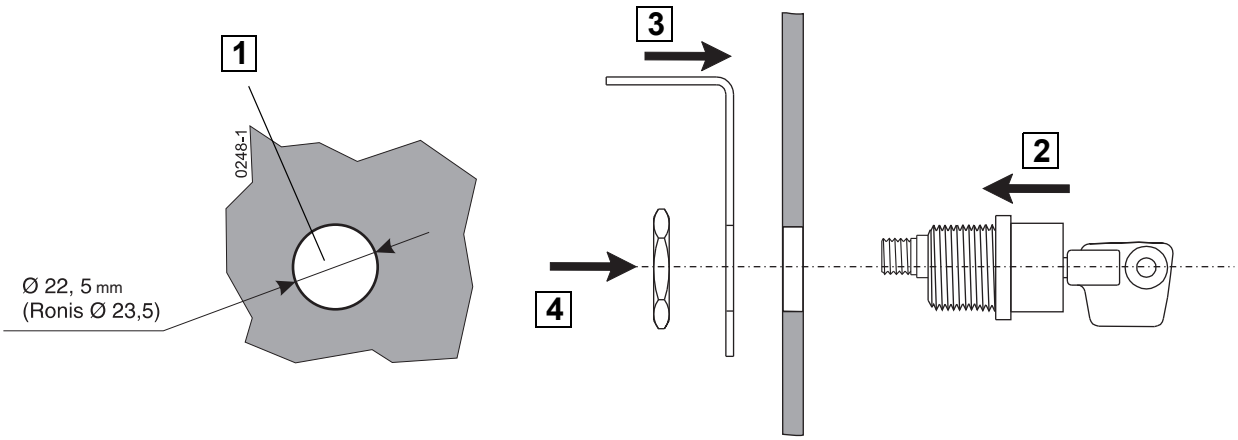


Baugruppe im Einschubrahmen montieren

Assemble unit into guide frame

VORSICHT	CAUTION
Selbstschneidende Schraube vorsichtig anziehen!	Tighten self-tapping screw carefully!

(1) Bodenplatte Einschubrahmen
(2) Selbstschneidende Schraube M6

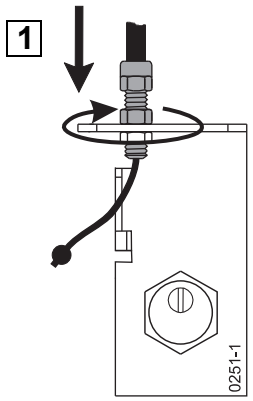


(1) Base of guide frame
(2) Self-tapping screw M6

Schlossbaugruppe einbauen

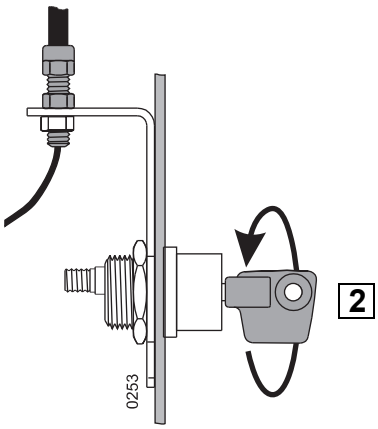
Unter Beachtung der Länge des Bowdenzuges und der Abmessungen eine geeignete Stelle für die Montage der Schlossbaugruppe am Schaltschrank auswählen.

Installing lock unit



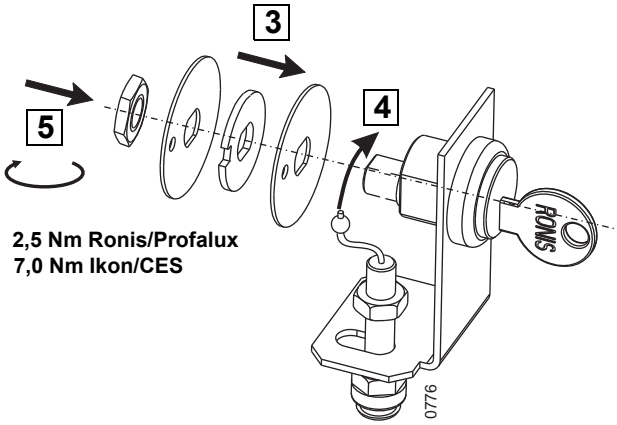
Select a suitable place for installing the lock unit taking the length of the bowden wire at the switchgear cubicle into account.

1 Loch in Schaltschranktür bohren
2 **… 4** Schlossbaugruppe anbauen

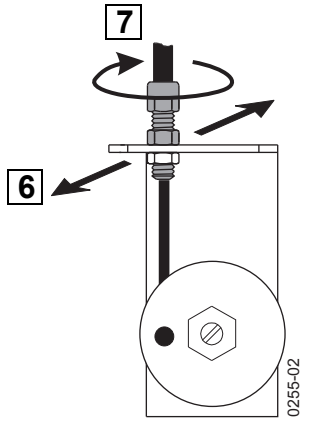


1 Drill hole
2 **… 4** Mount lock unit

Bowdenzug anbauen



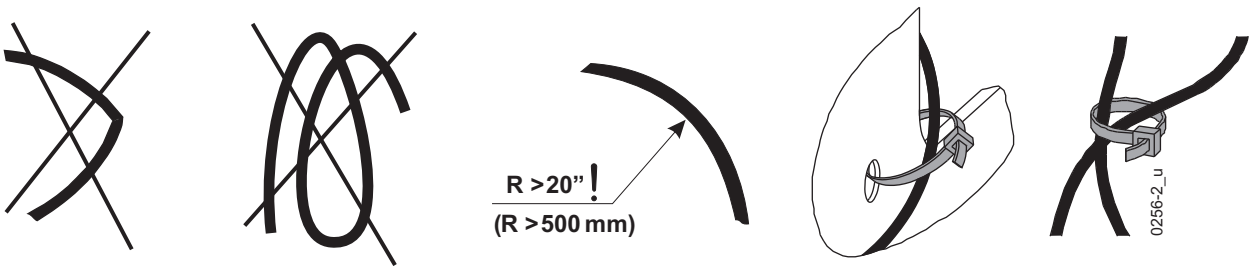
1 Bowdenzug locker am Blech befestigen
2 Schlüssel nach links bis zum Anschlag drehen



Mounting the bowden wire

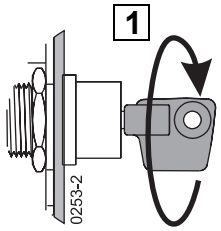
1 Mount bowden wire at plate
2 Turn key to the left to the stop position

3 Scheiben auf das Schloss stecken
4 Kugel des Bowdenzuges zwischen die Scheiben in die Aussparungen legen
5 Scheiben mit Mutter befestigen
6 Bowdenzug ausrichten, so dass die Seele ohne Winkelversatz zwischen den Scheiben läuft
7 Bowdenzug festziehen

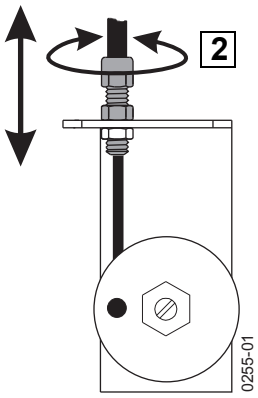


3 Insert washer on the lock
4 Place the ball of the bowden wire in between the washers, using the cut-outs
5 Fix washers by nut
6 Align bowden wire with middle washer

7 Fix nuts of bowden wire



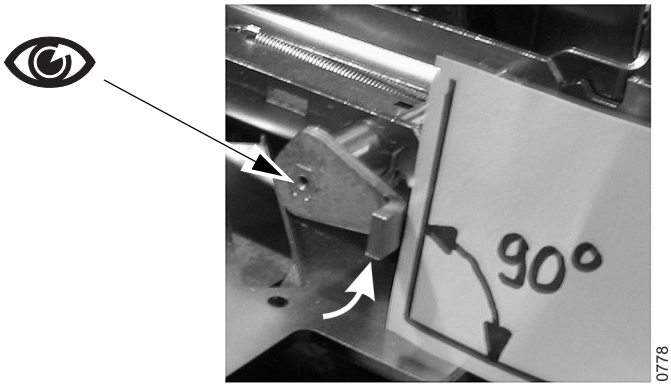
Bowdenzug verlegen



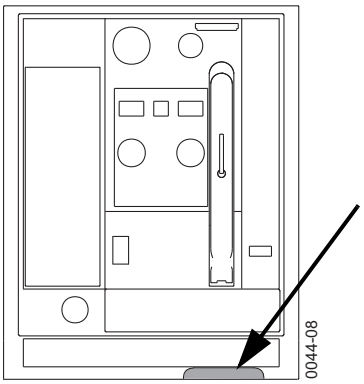
Fix the bowden wire

Bowdenzug justieren

Zum Justieren Schaltschranktür schließen, da sich sonst andere Betätigungswege für den Bowdenzug ergeben!

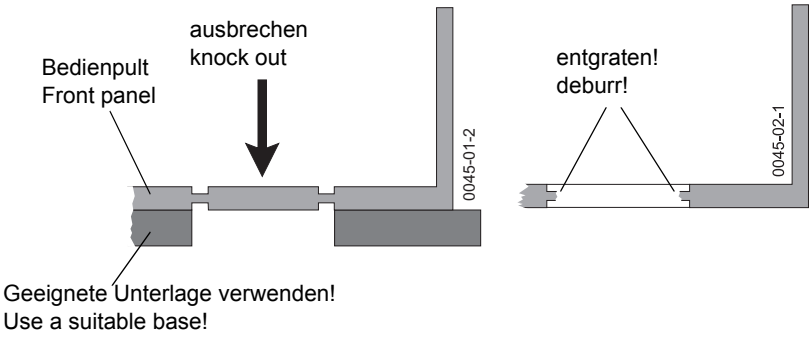


1 Schlüssel nach rechts drehen (abschließen)
2 Bowdenzug so weit verstellen, bis Verriegelung in gezeigter Stellung senkrecht steht



Adjusting the bowden wire

Close the cubicle door for adjustment, because the length of the bowden wire can change by opening the cubicle door!



1 Turn key to the right to the close position
2 Adjust the bowden wire, until the interlock surface is in an upright position

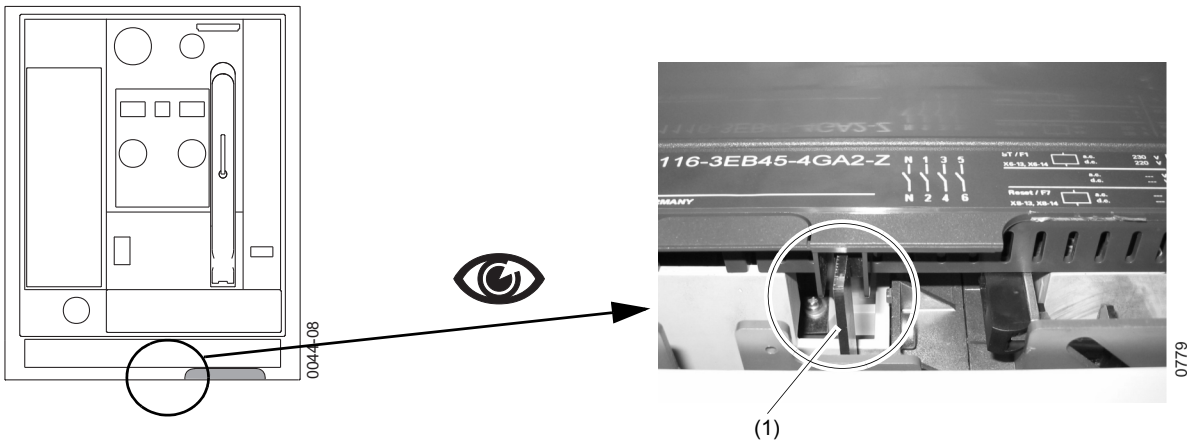
Feld aus Bedienpult ausbrechen

Knocking out the field on the front panel

Anschließend:

- Bedienpult anbauen → (Seite 24-25)

Then:



- Install front panel → (page 24-25)

Endkontrolle

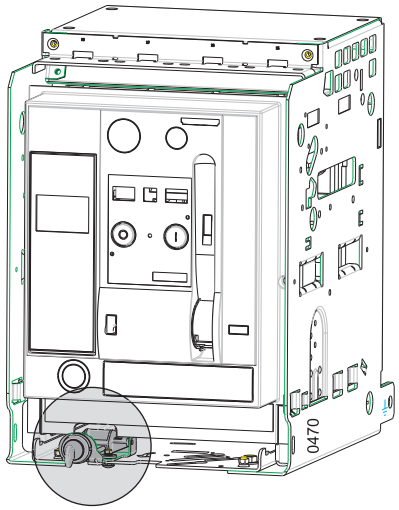
- Verriegelung aufschließen
- Leistungsschalter in den Einschubrahmen einsetzen, Leistungsschalter in Trennstellung schieben → (Seite 6-1)

Final inspection

- Unlock the locking device
- Insert the circuit breaker, move the circuit-breake into disconnect position → (page 6-1)

(1) Hebel

- Prüfen, ob sich der Hebel (1) etwa in der Mitte der Aussparung am Bedienpult befindet und sich frei bewegen kann, ggf. Leistungsschalter nochmals entnehmen und Hebel richten
- Schaltschranktür schließen
- Leistungsschalter in Betriebsstellung verfahren



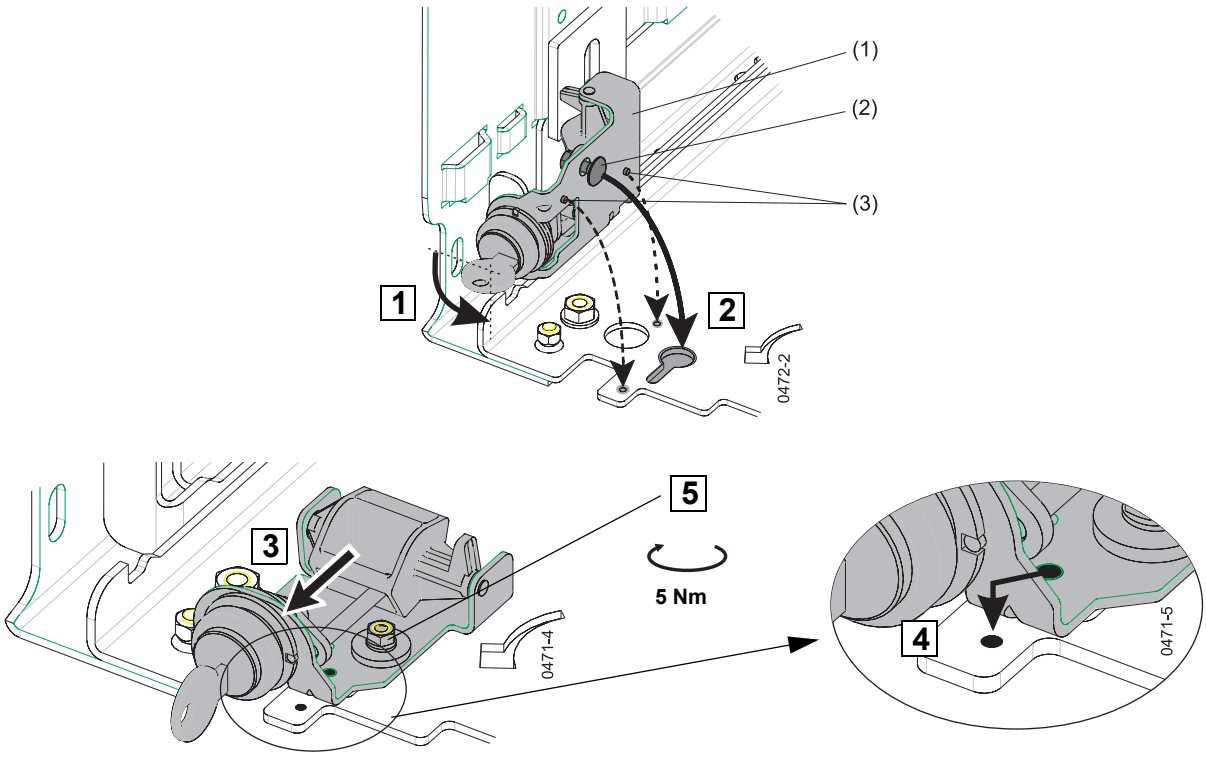
(1) Lever

- Check whether the lever (1) is free to move and nearly in the middle of the front panel cut out. If not, take the breaker out and adjust the lever.
- Close the cubicle door
- Move the circuit breaker into the connect position

HINWEIS	NOTICE
Die Abschließvorrichtung gegen Verfahren aus der Trennstellung kann nur in der Trennstellung oder bei leerem Einschubrahmen aktiviert werden.	The locking device against moving from the disconnected position can only be activated in disconnected position, or when the guide frame is empty
Die Aktivierung erfolgt durch Drehen des Schlüssels im Uhrzeigersinn und anschließendes Abziehen.	Activation is effected by turning the key clockwise and removing the key.
In Test- bzw. Betriebsstellung kann der Schlüssel nicht gedreht und abgezogen werden.	The key cannot be turned and removed in test or connected position.
Bei aktivierter Abschließvorrichtung kann der Leistungsschalter nicht verfahren und nicht aus dem Einschubrahmen entnommen werden. Es ist auch nicht möglich, einen Leistungsschalter in den Einschubrahmen einzusetzen.	When locking device is locked, the breaker can not be moved within nor can it be taken out of the guide frame. It is also not possible to insert a breaker into a locked guide frame.
Zum Aufheben der Verfahrsperre den Schlüssel erst etwas im Schloß bewegen, damit sich die Blockierung im Schloss selbst löst. Dann gegen den Uhrzeigersinn entriegeln.	To open the locking device, first turn the key a little in the lock, so that the block in the lock is released all by itself. Then turn counterclockwise to unlock.

15.1.5 Abschließvorrichtung in AUS-Stellung (Schaltschranktür) nachrüsten

15.1.5 Retrofitting locking device in OFF position (cubicle door)



WARNUNG		WARNING
Vor dem Arbeiten an diesem Gerät, Anlage unbedingt spannungsfrei schalten sowie das Gerät erden.		**Always de-energize and ground equipment before working on this equipment.**

- Ausschalten und Federspeicher entspannen → (Seite 24-3)
- Leistungsschalter im Einschubrahmen in Wartungsposition bewegen → (Seite 24-4)
- Bedienpult abnehmen → (Seite 24-11)

- Switch off and discharge the storage spring → (page 24-3)
- Move the circuit breaker into maintenance position in the cradle → (page 24-4)
- Remove front panel → (page 24-11)

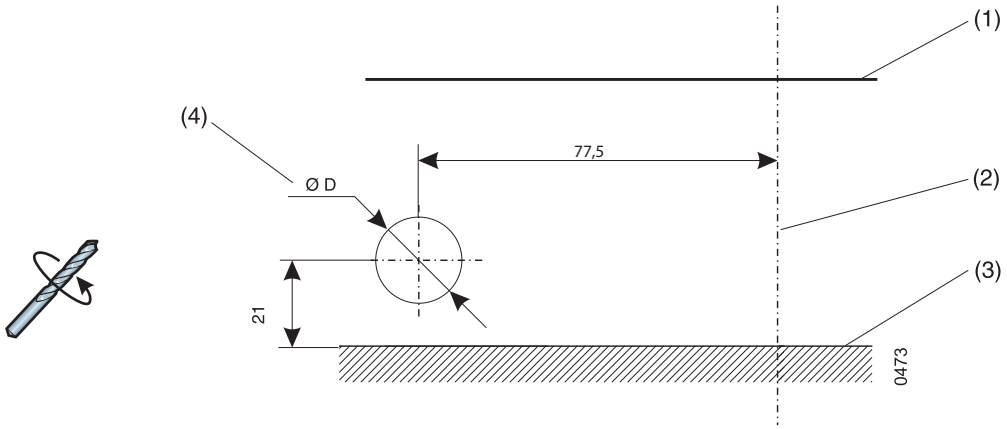
Schlossbaugruppe einbauen

Fitting locking unit

(1) Schlossbaugruppe
(2) Schlossschraube M5 mit Scheibe und Mutter
(3) 2 Butzen

Anschließend:

- Bedienpult anbauen → (Seite 24-25)



(1) Locking unit
(2) Coach screw M5 with washer and nut
(3) 2 alignment protrusions

Then:

- Install front panel → (page 24-25)

Öffnung in Schaltschranktür bohren

Drill hole into cubicle door

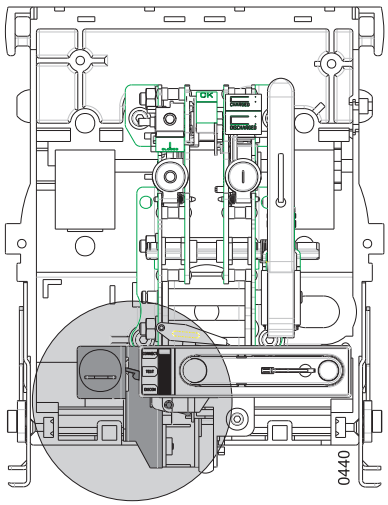
(1) Unterkante Türausschnitt
(2) Mitte Bedienpult
(3) Montageebene des Schalters oder Einschubrahmens
(4) Lochdurchmesser D entsprechend Schlosstyp +1 mm

(1) Lower edge of door cutout
(2) Centre of front panel
(3) Breaker or guide frame mounting surface
(4) Hole diameter D according safety lock type +1 mm

15.1.6 Sicherheitsschloss Handkurbel nachrüsten

WARNUNG

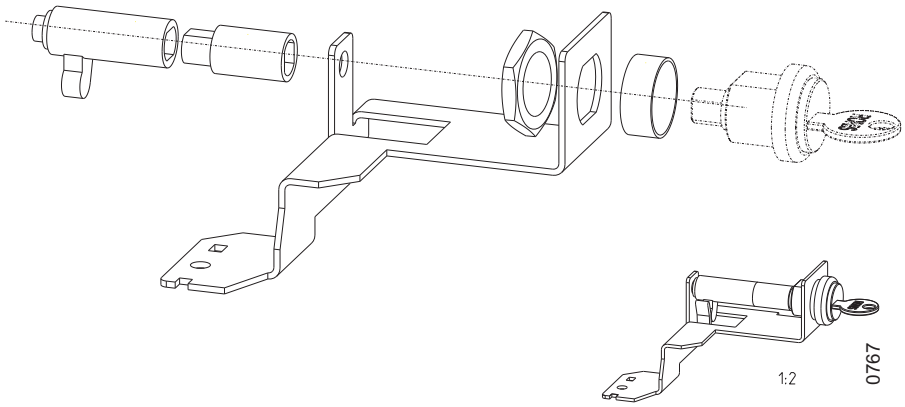
Vor dem Arbeiten an diesem Gerät, Anlage unbedingt spannungsfrei schalten sowie das Gerät erden.



- Ausschalten und Federspeicher entspannen → (Seite 24-3)
- Leistungsschalter im Einschubrahmen in Wartungsposition bewegen → (Seite 24-4)
- Bedienpult abnehmen → (Seite 24-11)

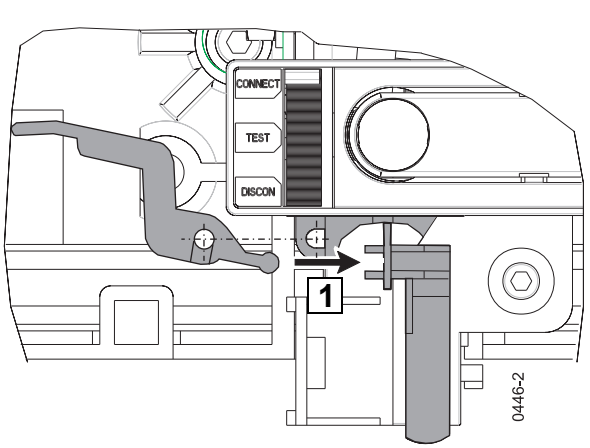
15.1.6 Retrofitting safety lock for racking handle

WARNING

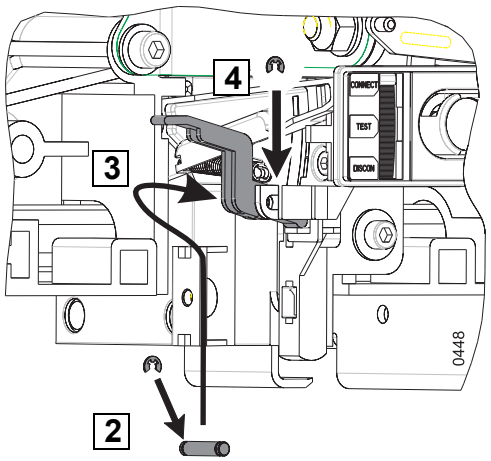


Always de-energize and ground equipment before working on this equipment.

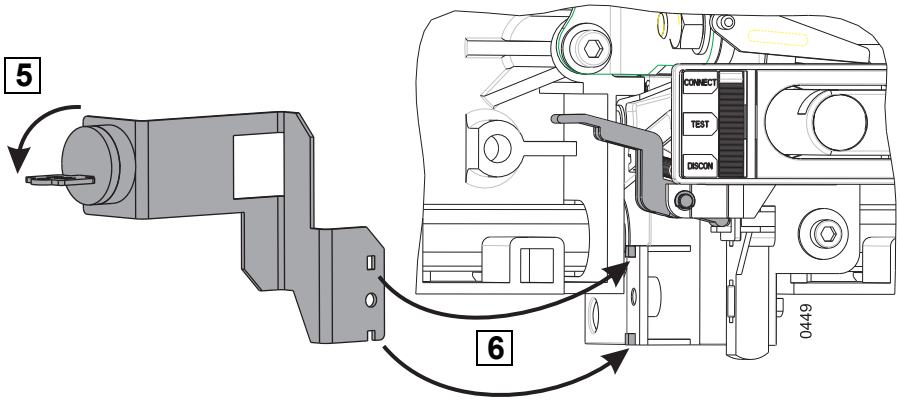
- Switch off and discharge the storage spring → (page 24-3)
- Move the circuit breaker into maintenance position in the cradle → (page 24-4)
- Remove front panel → (page 24-11)

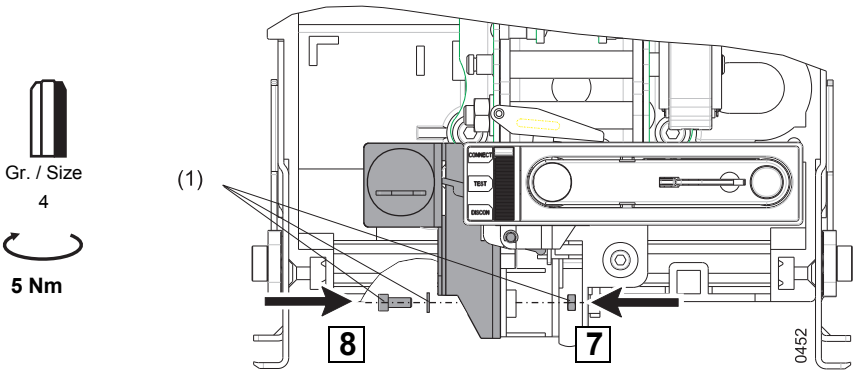


Schlossbaugruppe vormontieren



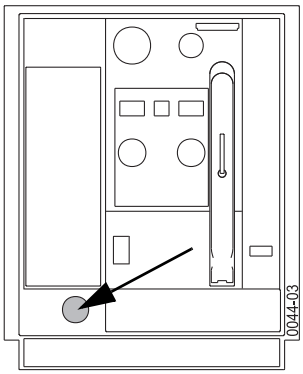
Arranging lock assembly





Einbau

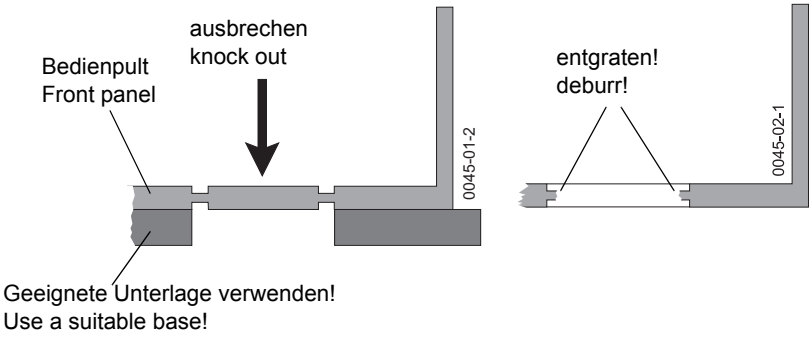
Installing



(1) Innensechskantschraube M6 mit Scheibe und Mutter

Feld aus Bedienpult ausbrechen

Anschließend:



- Bedienpult anbauen → (Seite 24-25)

15.1.7 Sicherheitsschloss Mechanisch AUS nachrüsten

→ Sicherheitsschloss einbauen (Seite 15-5)

(1) Hexagon socket-head screw M6 with washer and nut

Knocking out the field on the front panel

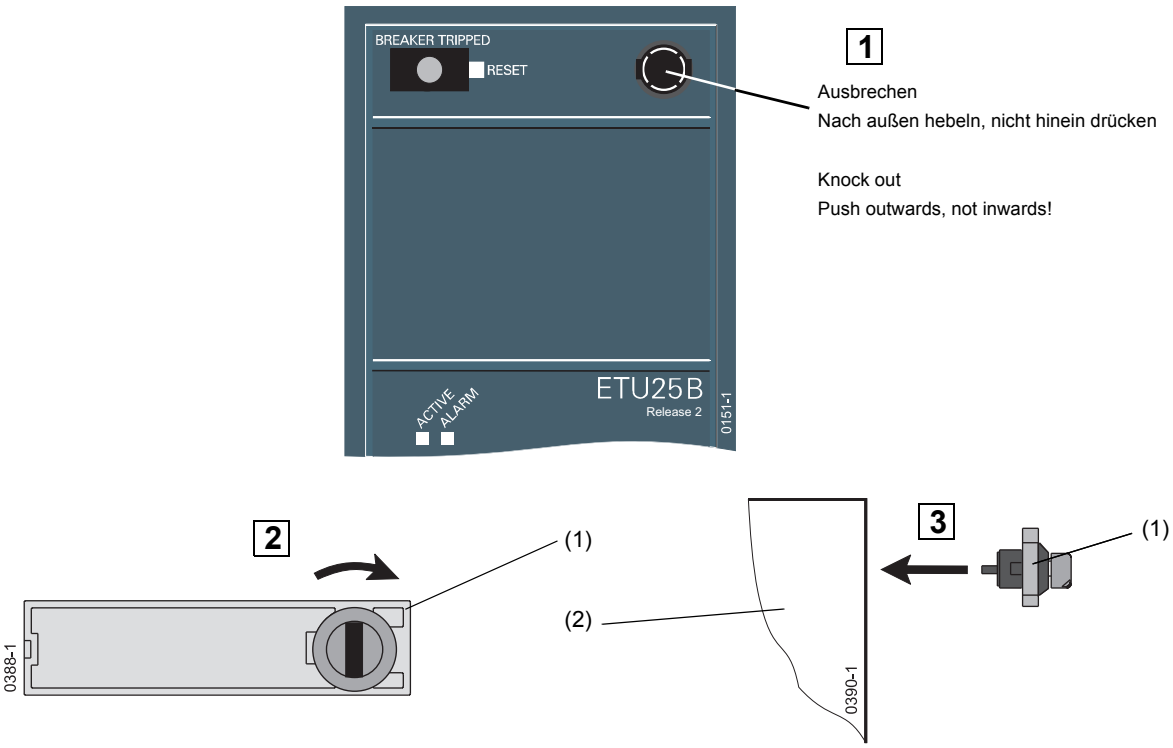
Then:

- Install front panel → (page 24-25)

15.1.7 Retrofitting safety lock for mechanical OFF

→ Installing safety lock (page 15-5)

15.1.8 Sicherheitsschloss Rücksetzknopf nachrüsten

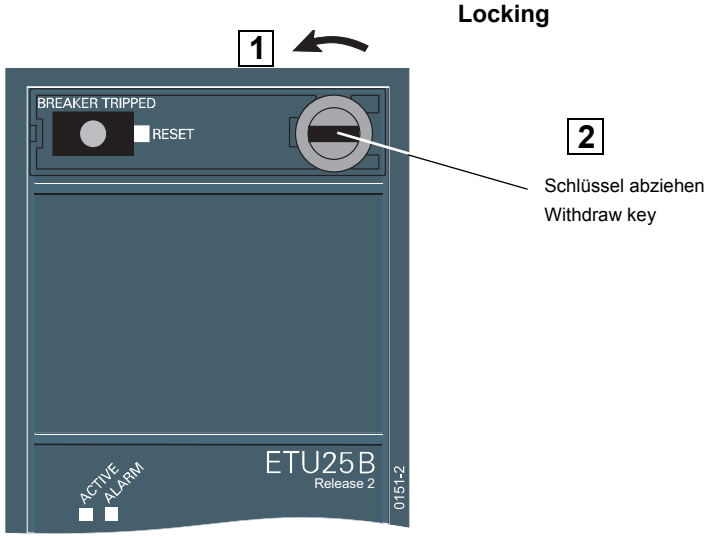


WARNUNG		
Vor dem Arbeiten an diesem Gerät, Anlage unbedingt spannungsfrei schalten sowie das Gerät erden.		

- Ausschalten und Federspeicher entspannen
→ (Seite 24-3)

15.1.8 Retrofitting safety lock for reset button

WARNING
Always de-energize and ground equipment before working on this equipment.



- Switch off and discharge the storage spring
→ (page 24-3)

(1) Abdeckung mit Sicherheitsschloss
(2) Überstromauslöser

15.2 Vorrichtungen für Bügelschlösser

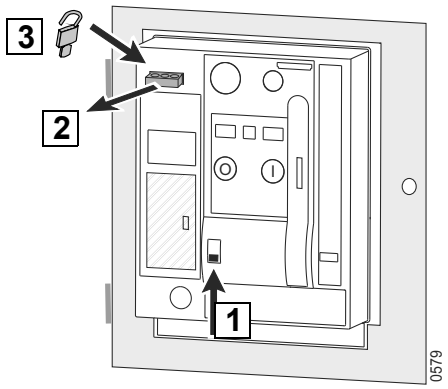
→ Sicherheitsschlösser (Seite 15-1)

15.2 Padlocking provisions

→ Safety locks (page 15-1)

	Abschließvorrichtung Locking device	Wirkung Effects
1	Verschlussbügel für „AUS“ Locking bracket for “OFF”	Der Verschlussbügel für „AUS“ kann mit bis zu 4 Bügelschlössern Ø 6 mm abgeschlossen werden. Das Einschalten des Leistungsschalters ist nicht möglich und die Trennerbedingung in AUS-Stellung wird erfüllt. → (Seite 15-22) The locking bracket for “OFF” can be locked with up to 4 padlocks Ø 0.25". The circuit breaker cannot be closed and the disconnecting condition in OFF position is fulfilled. → (page 15-22)
2	Shutter	Bei entnommenem Schalter können mit Bügelschlössern verschiedene Shutterpositionen abgeschlossen werden. → (Seite 15-24) If the circuit breaker has been taken out, the shutter can be padlocked in various positions. → (page 15-24)
3	Verfahrschienen Guide rails	Die Verfahrschienen können mit 2 Bügelschlössern abgeschlossen werden, so dass sie nicht mehr herausgezogen werden können. Das Einsetzen eines Schalters in den Einschubrahmen ist nicht möglich. → (Seite 15-25) The guide rails can be locked with 2 padlocks so that they cannot be drawn out anymore. It is not possible to insert a circuit breaker in the guide frame. → (page 15-25)
4	Handkurbel Racking handle	Das Herausziehen der Kurbel kann mit bis zu 3 Bügelschlössern verhindert werden. Der Schalter ist gegen Verfahren gesichert. → (Seite 15-25) Drawing out of the racking handle can be prevented by fitting a maximum of 3 padlocks. The circuit breaker is then locked against moving. → (page 15-25)
5	Antriebshandhebel Spring charging lever	Der Antriebshandhebel kann mit einem Bügelschloss abgeschlossen werden. Ein Spannen des Federspeichers per Hand ist nicht möglich. → (Seite 15-26) The spring charging lever can be padlocked. The storage spring then cannot be charged manually. → (page 15-26)
6	Mechanisch EIN Mechanical ON	Das Betätigen des Tasters Mechanisch EIN kann durch Abschließen der Plombierkappe mit bis zu 3 Bügelschlössern verhindert werden. Einschalten durch Taster „Elektrisch EIN“ oder Ferneinschaltung bleiben möglich. → (Seite 15-27) Operation of the mechanical ON button can be prevented by locking the sealing cap with a maximum of 3 padlocks. Closing via “electrical ON” button and remote closing are still possible. → (page 15-27)
7	Mechanisch AUS Mechanical OFF	Das Betätigen des Tasters Mechanisch AUS kann durch Abschließen der Plombierkappe mit bis zu 3 Bügelschlössern verhindert werden. Fernausschaltung bleibt möglich. → (Seite 15-27) Operation of the mechanical OFF button can be prevented by locking the sealing cap with a maximum of 3 padlocks. Remote tripping is still possible. → (page 15-27)

15.2.1 Verschlussbügel für „AUS“



Wenn der Steuerschieber angehoben wird (Schritt 1), kann der Schlossbügel herausgezogen werden und Schlösser eingehangen werden. Mit angebrachten Schlössern kann der Schalter nicht eingeschaltet werden. Die Vorrichtung kann mit bis zu vier Schlössern mit max. 6,0 mm / 0,25" Bügeldurchmesser gleichzeitig bestückt werden.

15.2.1 Locking bracket for “OFF”

When the Control Gate is lifted (Step 1), the padlock provision can be extended, and padlocks installed. With padlocks installed, this circuit breaker cannot be closed. This provision will support up to four padlocks at a time of max. 6.0 mm / 0.25" diameter .

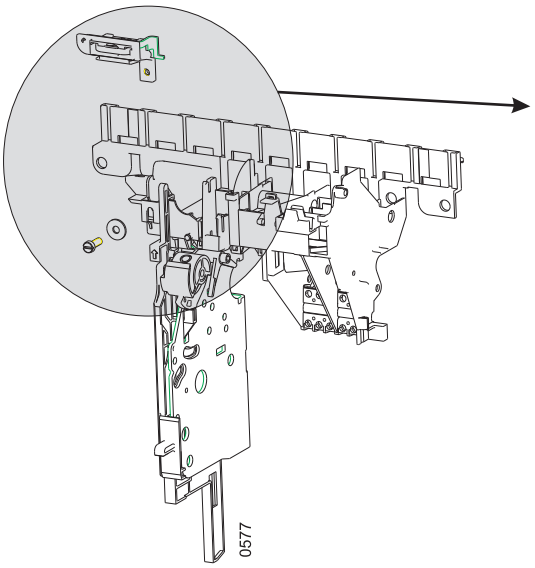
Locking

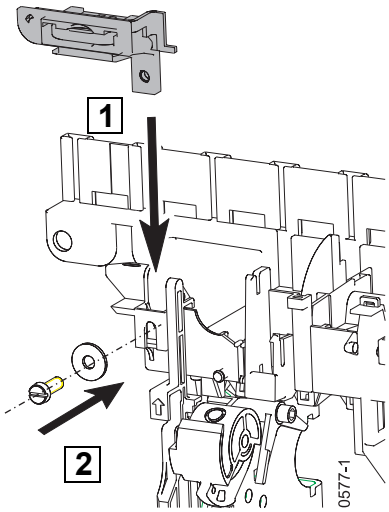
Nachrüsten

Retrofitting



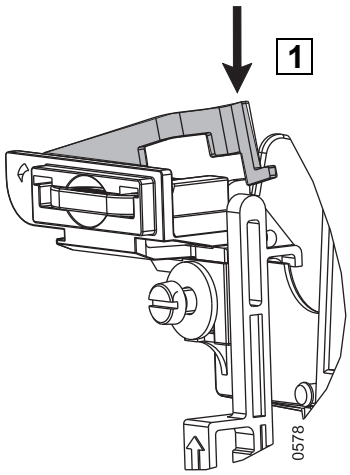
WARNUNG		WARNING
Vor dem Arbeiten an diesem Gerät, Anlage unbedingt spannungsfrei schalten sowie das Gerät erden.		**Always de-energize and ground equipment before working on this equipment.**

- Ausschalten und Federspeicher entspannen → (Seite 24-3)
- Leistungsschalter im Einschubrahmen in Wartungsposition bewegen
- Bedienpult abnehmen → (Seite 24-11)
- Steuerschieber einbauen, sofern nicht vorhanden → (Seite 15-4)

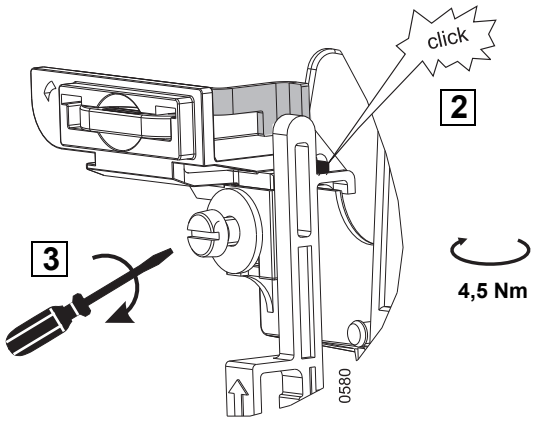


- Switch off and discharge the storage spring → (page 24-3)
- Move the circuit breaker into the maintenance position in the cradle
- Remove front panel → (page 24-11)
- Install control gate if not available → (page 15-4)

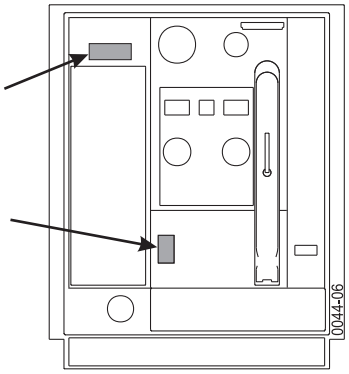
WARNUNG		WARNING
Schnell bewegte Teile **Können schwere Personenschäden verursachen.** Vor der Ausführung von Wartungs- und anderen Arbeiten am Leistungsschalter unbedingt den Federspeicher entspannen.		**High speed moving parts.** **Can cause serious personal injury.** Discharge springs before inspection or any work within the circuit breaker.



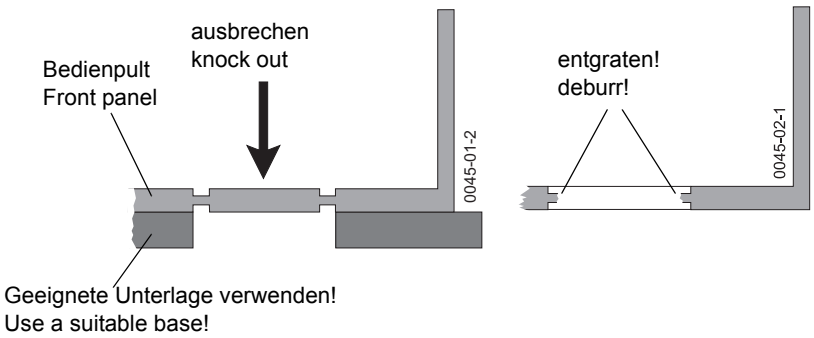
Verschlussbügel anbauen



Fitting locking bracket



Blech in Steuerschieber einrasten



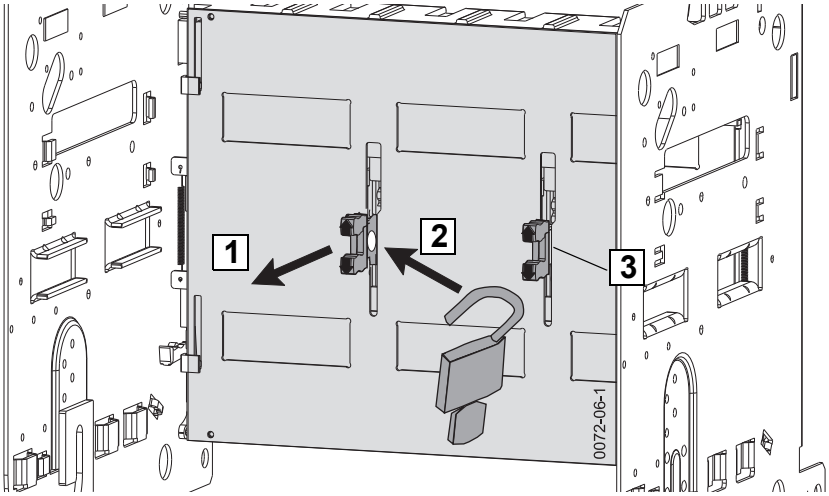
Latching plate in control gate

Feld aus Bedienpult ausbrechen

Knocking out the field on the front panel

Anschließend:

- Bedienpult anbauen → (Seite 24-25)



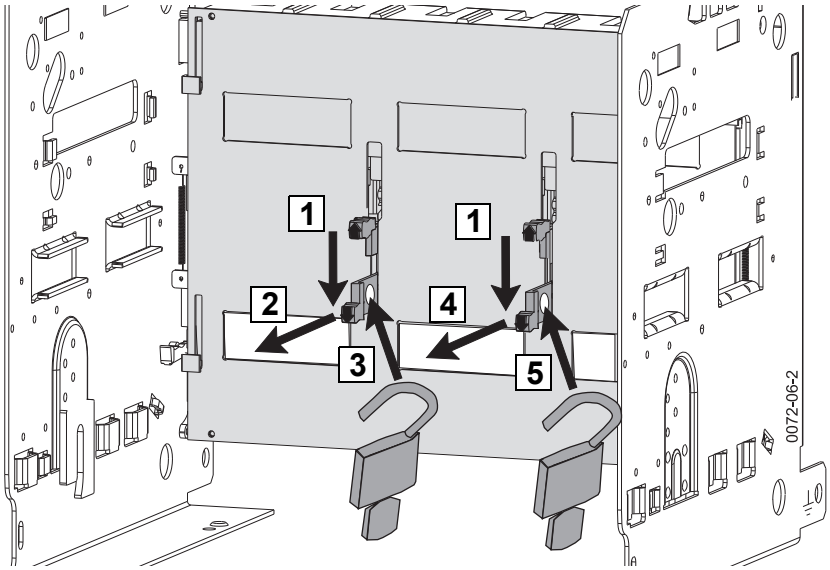
Then:

- Install front panel → (page 24-25)

15.2.2 Abschließvorrichtung Shutter

Mit Bügelschlössern lassen sich verschiedene Positionen des Shutters sichern, wie z. B.:

Shutter komplett geschlossen



1 Streifenheberpaar vorziehen bis Langloch sichtbar

2 Schloss einhängen und abschließen

3 Mit dem zweiten Streifenheberpaar ebenso verfahren

Shutter unten geöffnet

VORSICHT	CAUTION
Vor dem Einfahren des Schalters in die Betriebsstellung die Bügelschlösser am Shutter entfernen!	Remove the padlocks at the shutter before moving the circuit breaker to the connected position!

→ Shutter nachrüsten (Seite 18-2)

15.2.2 Locking device for shutter

The shutter can be padlocked in various positions, such as e.g.:

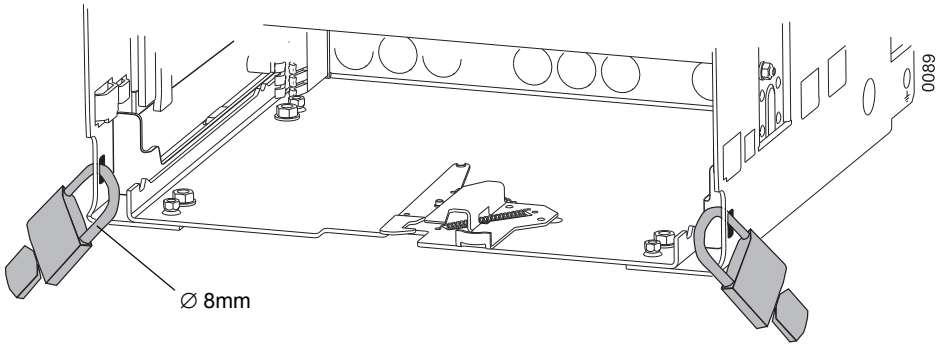
Shutter totally closed

1 Pull both strip raisers to the front until the elongated hole is visible

2 Fit padlock and lock

3 Proceed in the same way with the other two strip raisers

Shutter below opened



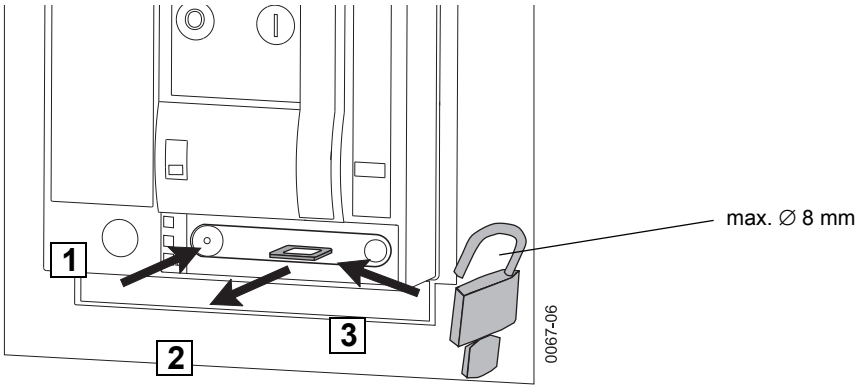
→ Retrofitting shutter (page 18-2)

15.2.3 Abschließvorrichtung Verfahrschienen

Standardmäßig vorhanden.

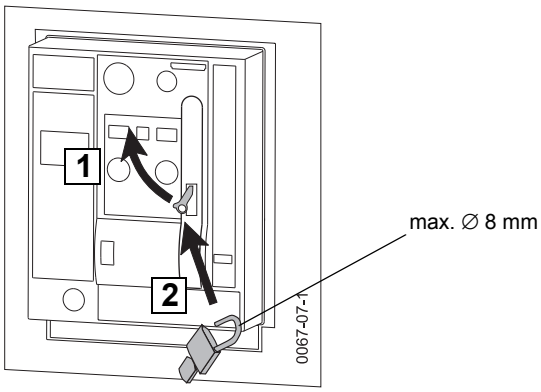
15.2.3 Locking device for guide rails

Available as standard.



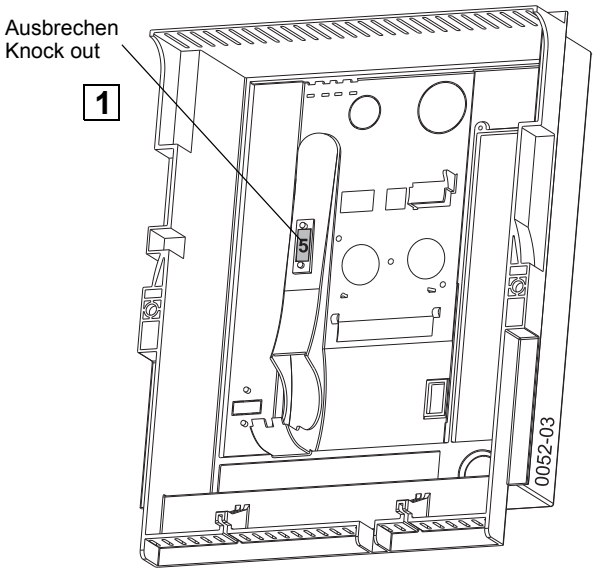
15.2.4 Abschließvorrichtung Handkurbel

Standardmäßig vorhanden.
Bis zu 3 Bügelschlösser möglich.



15.2.4 Locking device for racking handle

Available as standard.
Up to 3 padlocks possible.

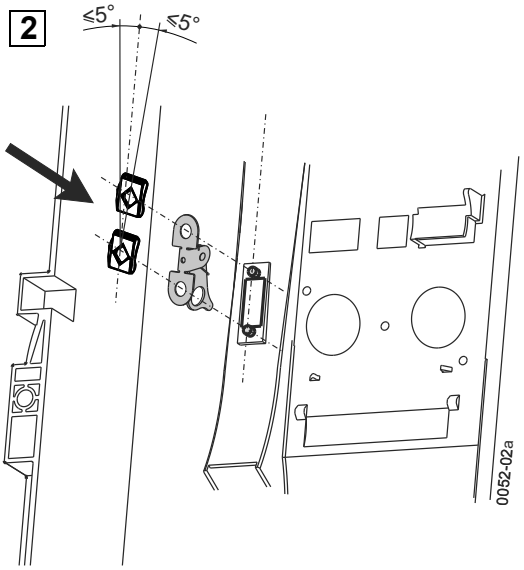


15.2.5 Abschließvorrichtung Antriebshandhebel

15.2.5 Locking device for spring charging lever

Nachrüsten

- Ausschalten und Federspeicher entspannen → (Seite 24-3)
- Leistungsschalter im Einschubrahmen in Wartungsposition bewegen → (Seite 24-4)
- Bedienpult abnehmen → (Seite 24-11)



Anschließend:

- Bedienpult anbauen → (Seite 24-25)

Retrofitting

- Switch OFF and discharge the storage spring → (page 24-3)
- Move the circuit breaker into the maintenance position in the cradle → (page 24-4)
- Remove front panel → (page 24-11)

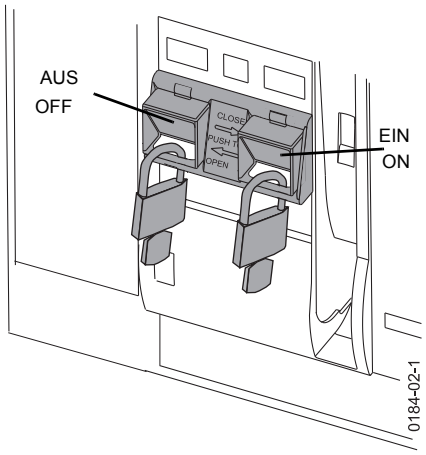
Then:

- Install front panel → (page 24-25)

15.2.6 Abschließvorrichtung für Taster Mechanisch AUS

→ folgender Absatz

15.2.7 Abschließvorrichtung für Taster Mechanisch EIN



Dieses optionale Zubehör verhindert das EIN- und / oder AUS-Schalten des Leistungsschalters von Hand. Die Klappen vor den Tasten können mit bis zu drei Vorhängeschlössern versehen werden. **Mit angebrachten Vorhängeschlössern kann der Leistungsschalter immer noch elektrisch fernbetätigt EIN- und AUS-Schalten.**

15.2.6 Locking device for Mechanical OFF button

→ following passage

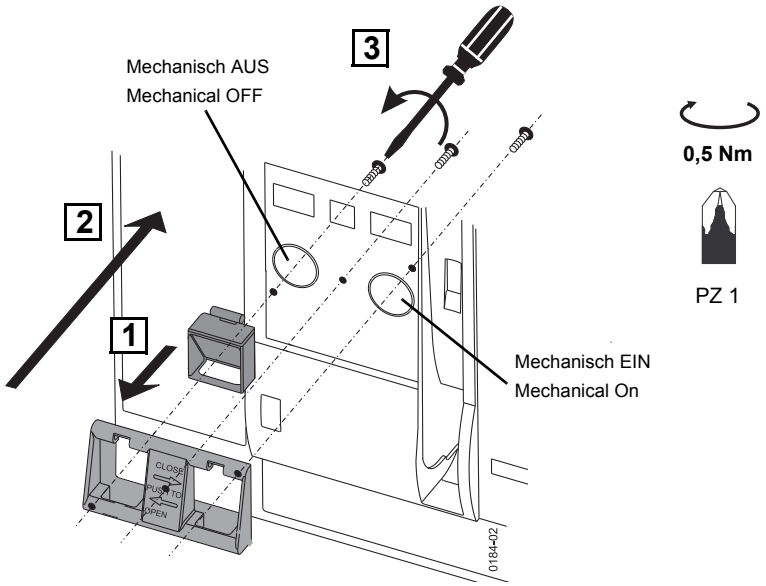
15.2.7 Locking device for Mechanical ON button

The manual closing and / or opening of this circuit breaker can be prevented, when this optional accessory is installed. The covers for the CLOSE button and the OPEN button will accept up to three padlocks each. **With padlocks applied, it is still possible to electrically open and close this circuit breaker.**

Plombierkappe nachrüsten

Retrofitting sealing cover

WARNUNG		**WARNING**
Vor dem Arbeiten an diesem Gerät, Anlage unbedingt spannungsfrei schalten sowie das Gerät erden.		**Always de-energize and ground equipment before working on this equipment.**



- Ausschalten und Federspeicher entspannen → (Seite 24-3)
- Leistungsschalter im Einschubrahmen in Wartungsposition bewegen

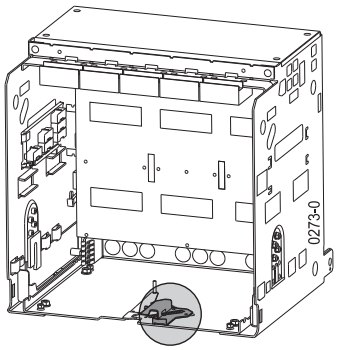
17 Sperrvorrichtungen

17 Interlocking devices



siehe Bestellhinweis, → (Seite 15-19)

refer to order instruction, → (page 15-19)

	Sperrvorrichtung **Interlock**	**Wirkung** **Effects**
1	Sperrvorrichtung gegen Verfahren bei offener Schaltschranktür für Einschubschalter Locking device to prevent racking with cubicle door open	Die Handkurbel wird bei offener Schaltschranktür blockiert und kann nicht herausgezogen werden. Ein Verfahren des Einschubschalters ist nicht möglich. Die Sperre wirkt nur auf die eingeschobene Handkurbel. → (Seite 17-2) The racking handle is blocked if the cubicle door is open and it cannot be drawn out. Racking the draw-out circuit breaker is not possible. The block only actuates on the inserted racking handle. → (page 17-2)
2	Verriegelung der Schaltschranktür Cubicle door locking mechanism	Schaltschranktür kann nicht geöffnet werden, wenn der Festeinbauschalter eingeschaltet ist (Übertragung des Sperrsignals mittels Bowdenzug) bzw. sich der Einschubschalter in der Betriebsstellung befindet. → (Seite 17-3) The cubicle door cannot be opened if the fixed-mounted circuit breaker is closed (signal transmission through bowden wire) or if the draw-out circuit breaker is in connected position. → (page 17-3)
3	Zugangssperre über Taster Mechanisch EIN und AUS (Verriegelungsset) Access block over mechanical ON and OFF button (locking set)	Taster Mechanisch EIN und AUS sind jeweils mit einer Kappe abgedeckt, die eine Betätigung nur mit einem Werkzeug zulässt. → (Seite 17-7) The mechanical ON and OFF buttons are each covered in such a way that operation is possible with a tool only. → (page 17-7)

17.1 Sperrvorrichtung gegen Verfahren bei offener Schaltschranktür

- Ausschalten und Federspeicher entspannen → (Seite 24-3)
- Schalter aus dem Einschubrahmen entnehmen → (Seite 24-4)

Einbau der Verriegelung

Funktion prüfen

- Schalter in Einschubrahmen einsetzen und in Trennstellung schieben → (Seite 6-1)
- Herausziehen der Handkurbel darf nicht möglich sein

17.1 Interlock to prevent racking with cubicle door open

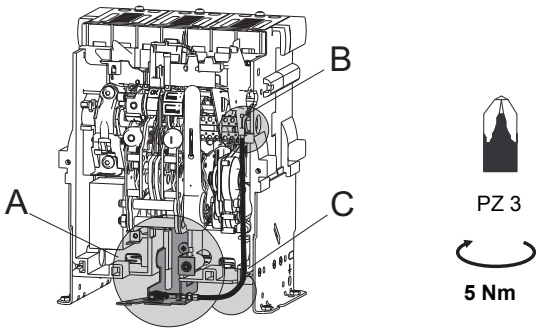
- Switch off and discharge the storage spring → (page 24-3)
- Remove the breaker from the guide frame → (page 24-4)

Fitting interlocking

Function check

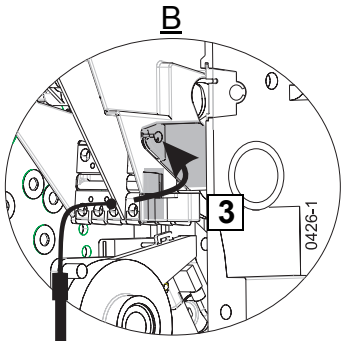
- Insert the circuit breaker in the guide frame and push into disconnected position → (page 6-1)
- It must not be possible to draw out the racking handle

17.2 Verriegelung der Schaltschranktür



GEFAHR	
Gefährliche elektrische Spannung! **Kann Tod, schwere Personenschäden sowie Schäden an Geräten und Ausrüstung bewirken.** Vor dem Arbeiten an diesem Gerät, Anlage unbedingt spannungsfrei schalten sowie das Gerät erden. Leistungsschalter ausschalten und aus dem Einschubrahmen herausnehmen.	 

17.2.1 Riegel montieren



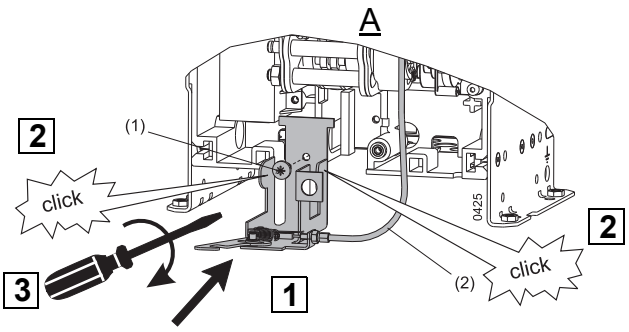
17.2.1.1 Festeinbauschalter

- Ausschalten und Federspeicher entspannen → (Seite 24-3)
- Bedienpult abnehmen → (Seite 24-11)

VORSICHT	
Selbstschneidende Schraube vorsichtig anziehen!	

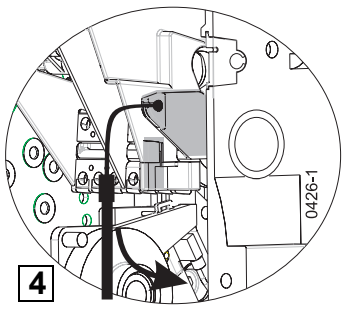
(1) Selbstschneidende Schraube
(2) Bowdenzug

17.2 Cubicle door interlock

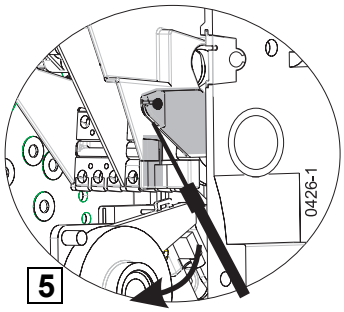


DANGER	
Hazardous voltage! **Will cause death, serious personal injury, or equipment / property damage.** Always de-energize and ground equipment before working on this equipment. Open circuit breaker, and remove from guide frame.	

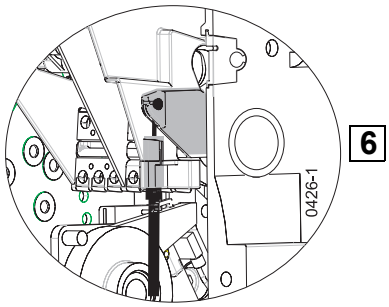
17.2.1 Fit bolt



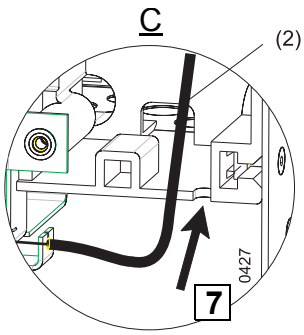
17.2.1.1 Fixed-mounted breaker

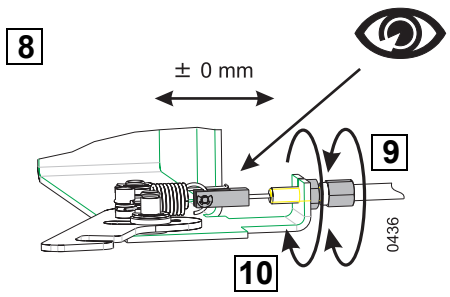


- Switch OFF and discharge the storage spring → (page 24-3)
- Remove front panel → (page 24-11)



CAUTION
Tighten self-tapping screws carefully!





(1) Self-tapping screw
(2) Bowden wire

Einstellung des Bowdenzuges:

8 Schalter einschalten
9 Den Riegel mittels Bowdenzug-Stellschraube in die gerade Position einstellen.
10 Kontermutter am Bowdenzug anziehen.
11 Schalter ausschalten

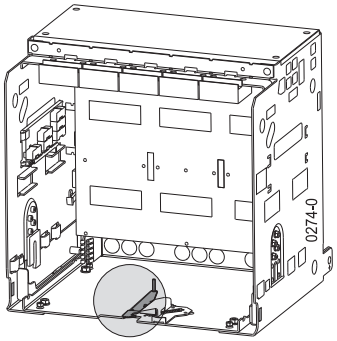
Anschließend:

- Bedienpult anbauen → (Seite 24-25)

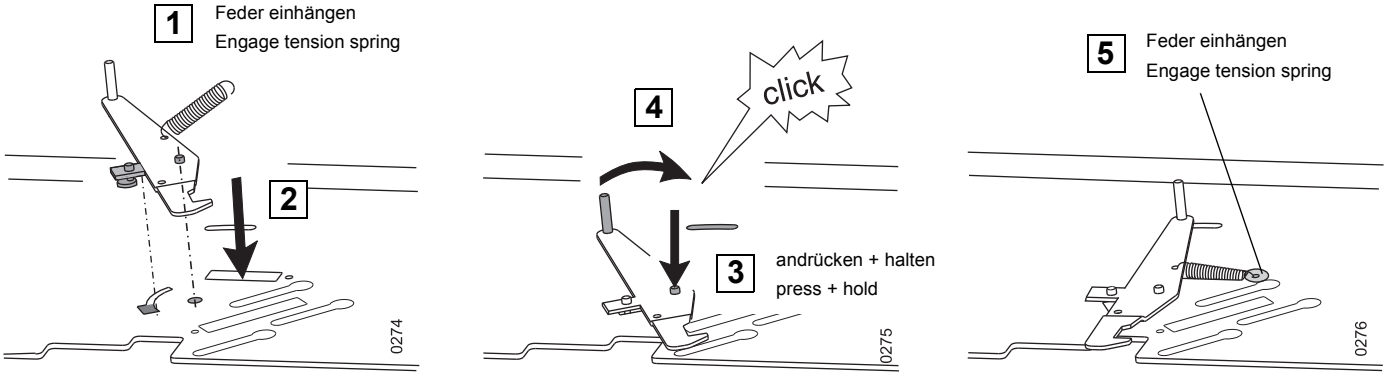
Adjustment of bowden wire:

8 CLOSE the breaker.
9 Adjust latching lever to straight position by adjusting the bowden wire screw.
10 Secure counter nut on bowden wire.
11 OPEN breaker

Then:



- Attach front panel → (page 24-25)



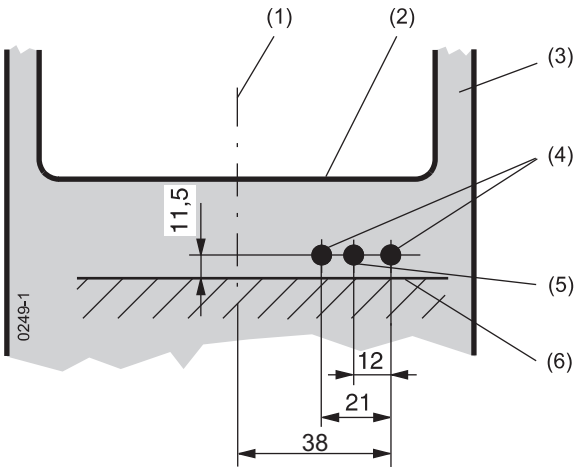
17.2.1.2 Einschubschalter

- Leistungsschalter ausschalten und Federspeicher entspannen → (Seite 24-3)
- Einschubschalter aus Einschubrahmen entnehmen → (Seite 24-4)

17.2.1.2 Draw-out circuit breaker

- OPEN the circuit breaker and discharge the storage spring → (page 24-3)
- Remove the breaker from the guide frame → (page 24-4)

Anschließend:

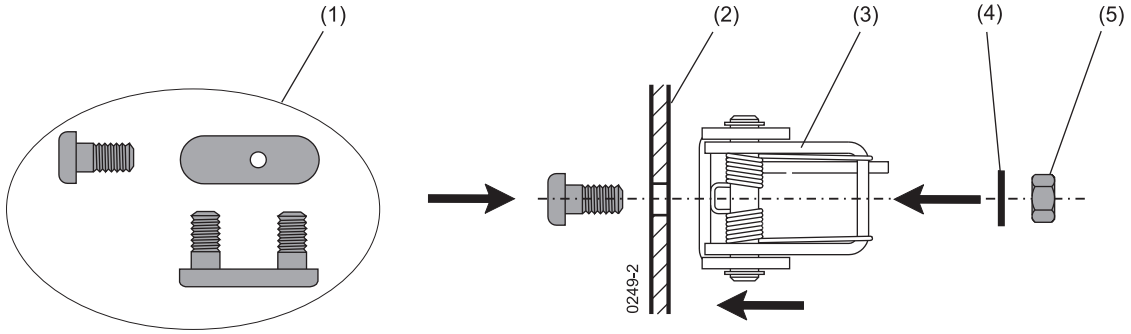


- Einschubschalter in Einschubrahmen einsetzen, in Trennstellung schieben → (Seite 6-1)

Then:

- Insert the draw-out circuit breaker into the guide frame, push into disconnected position → (page 6-1)

17.2.2 Schaltschranktür bohren



17.2.2 Cubicle door interlock drill pattern

(1) Mitte Bedienpult
(2) Türausschnitt für Bedienpult
(3) Innenseite Schaltschranktür
(4) 2 Befestigungsbohrungen Ø 5,5 mm
(5) Öffnung zum Überlisten Ø 5,5 mm
(6) Montagefläche

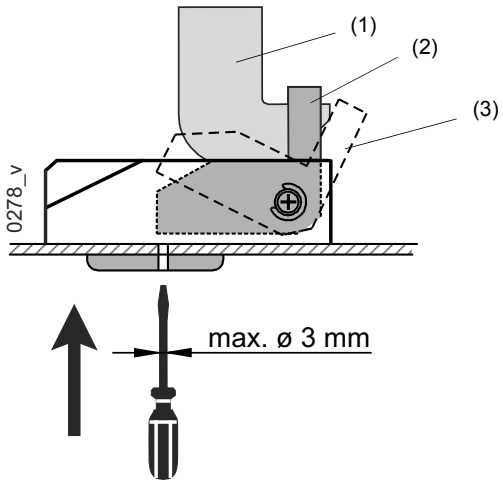
(1) Centre of front panel
(2) Door cutout for front panel
(3) Inner side of cubicle door
(4) 2 mounting holes Ø 5.5 mm
(5) Hole for outwitting Ø 5.5 mm
(6) Mounting surface

17.2.3 Falle an Schaltschranktür montieren

(1) Klammer mit Öffnung zum Überlisten
(2) Innenseite Schaltschranktür
(3) Falle
(4) 2 Scheiben ISO7089 - 5
(5) 2 Sechskantmuttern M5 (DIN EN ISO 4032)

17.2.4 Funktionskontrolle

Festeinbauschalter:



- Schaltschranktür schließen
- Federspeicher spannen
- Einschalten

Einschubschalter:

- Schalter in Betriebsstellung verfahren
- Schaltschranktür schließen

Tür muss jetzt verriegelt sein.

Prüfen der „Überlistungsmöglichkeit“:

(1) Riegelstellung bei eingeschaltetem Schalter
(2) Falle in Normallage
(3) Falle im überlisteten Zustand

Anschließend:

- Festeinbauschalter:
  Federspeicher entspannen → (Seite 24-3)

17.2.3 Installing catch on cubicle door

(1) Clip with hole for outwitting
(2) Inner side of cubicle door
(3) Catch
(4) 2 washers ISO7089 - 5
(5) 2 Hexagonal nuts M5 (DIN EN ISO 4032)

17.2.4 Function check

Fixed-mounted circuit breaker:

- Close cubicle door
- Charge the spring storage
- Close

Draw-out circuit breaker

- Rack the circuit breaker into connected position
- Close the cubicle door

The door must be locked now.

Checking the outwitting function:

(1) Lock position with circuit breaker closed
(2) Trap in normal position
(3) Trap in bypassed position

Then:

- Fixed-mounted circuit breaker:
  discharge the spring storage → (page 24-3)

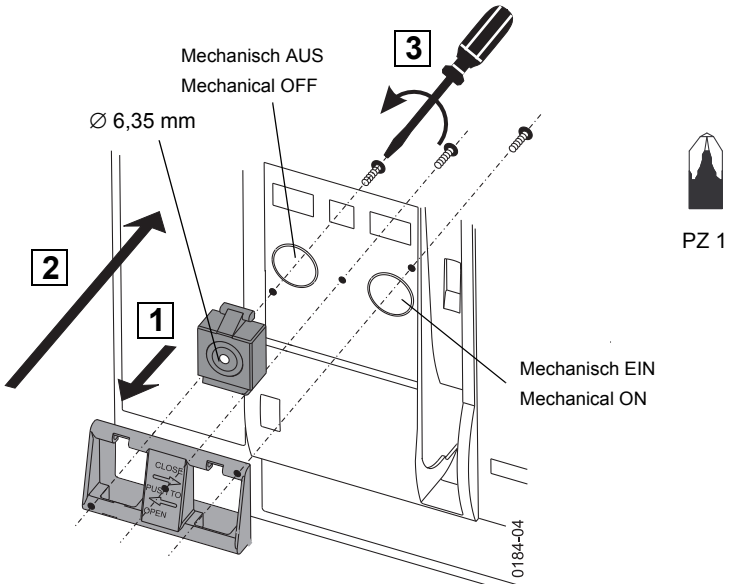
17.3 Zugangssperre über Taster Mechanisch EIN und AUS nachrüsten

(Werkzeugbetätigung)

Diese Sperre begrenzt den Zugang zu den manuellen EIN und / oder AUS-Tasten des Leistungsschalters. Die Sperre erlaubt nur Zugang zu den Tasten mittels eines Dornes (3 mm bzw. 1/8" Durchmesser).

17.3 Retrofitting access block over mechanical ON and OFF button

(Tool operation)



This interlock limits the access to the manual CLOSE and / or OPEN buttons on the circuit breaker. The blocking device only allows access to the manual CLOSE and / or OPEN buttons via a small tool (1/8" resp. 3 mm diameter rod).

WARNUNG		**WARNING**
Vor dem Arbeiten an diesem Gerät, Anlage unbedingt spannungsfrei schalten sowie das Gerät erden.		**Always de-energize and ground equipment before working on this equipment.**

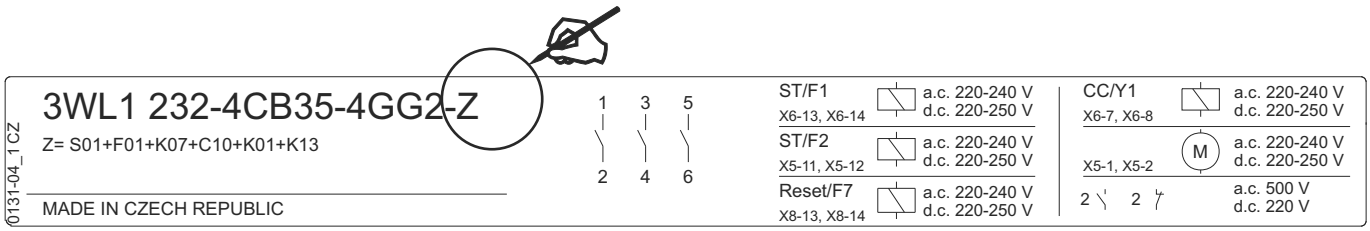
- Ausschalten und Federspeicher entspannen → (Seite 24-3)
- Bedienpult abnehmen → (Seite 24-11)

- Switch OFF and discharge the spring storage → (page 24-3)
- Remove front panel → (page 24-11)

VORSICHT	**CAUTION**
Selbstschneidende Schrauben vorsichtig anziehen!	Tighten self-tapping screws carefully!

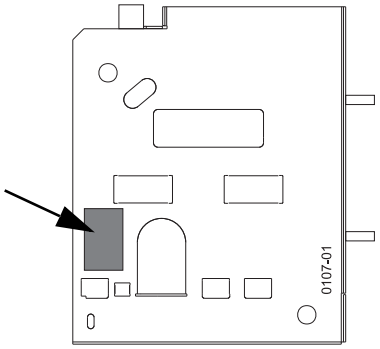
Anschließend:

- Bedienpult anbauen → (Seite 24-25)



Then:

- Fit front panel → (page 24-25)



17.4 Schilder aktualisieren

Hinweis
Nach dem Einbau zusätzlicher Komponenten sind folgende Angaben mit einem weißen Permanentstift bzw. mit Aufklebern aus dem beiliegenden Etikettenbogen zu aktualisieren! Davor ist es ggf. notwendig die zu korrigierenden Zeichen mit einem schwarzen Permanentstift zu füllen.

17.4.1 Ausstattungsschild des Leistungsschalters

17.4.2 Typschild Einschubrahmen

Kennzeichen „weitere Optionen“
Supplement „further options“

17.4.3 Bestellnummern / Z-Zusätze

	Sperrvorrichtung / Interlock	Bestellnummern / Order numbers	Z ergänzen / Add. Z	
			Schalter / Breaker	Einschubrahmen / Guide frame

17.4 Updating the labels

Note
After installing additional components, add the following data using a white and indelible ink pen or the appropiate label from the set of labels supplied! If necessary the signs which need to be corrected have to be filled with a black permanent pen before.

17.4.1 Circuit Breaker options label

17.4.2 Type label guide frame

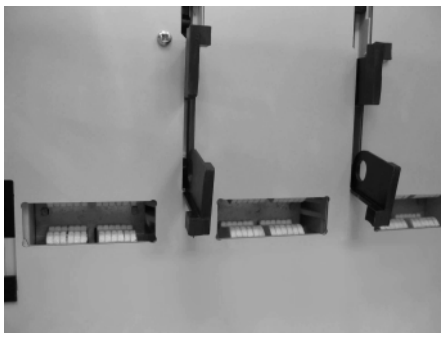
17.4.3 Order numbers / Z-options

18 Zubehör für Einschubrahmen

GEFAHR

Gefährliche elektrische Spannung!

Kann Tod, schwere Personenschäden sowie Schäden an Geräten und Ausrüstung bewirken.



Vor dem Arbeiten an diesem Gerät, Anlage unbedingt spannungsfrei schalten.

Hinweis

Vor dem Einsetzen des Leistungsschalters in den Einschubrahmen müssen die Fenster des Shutters geschlossen sein und die schwarzen Plastik-Streifenheber sich in der Mittelposition befinden, um eine Beschädigung des Shutters zu verhindern und eine sichere Funktion zu gewährleisten

1

1 Für Servicezwecke können die Fenster des Shutters durch die schwarzen Streifenheber geöffnet und fixiert werden.
2 Durch leichtes Betätigen (Drücken) der Streifenheber springen diese in die Grundstellung zurück und schließen die Fenster des Shutters.

18.1 Shutter

Die Verschlussstreifen des Shutters verschließen die Lamellenkontakte des Einschubrahmens, sobald der Einschubschalter in die Position „TEST“ verfahren wurde. Damit wird die Trennerbedingung bereits in der Position „TEST“ erfüllt.

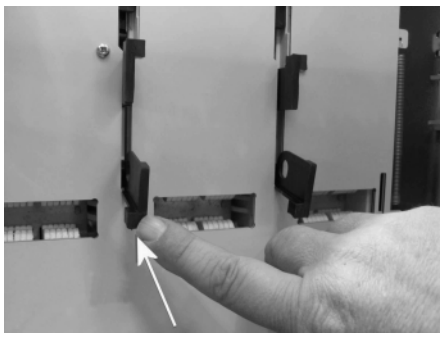
Mit den Streifenhebern können die Verschlussstreifen manuell geöffnet werden.

Die Lage der Streifenheber lässt sich mit Bügelschlössern in verschiedenen Positionen fest fixieren und gegen unbefugtes Verändern sichern. → (Seite 15-24)

18 Options for guide frame

DANGER

Hazardous voltage!



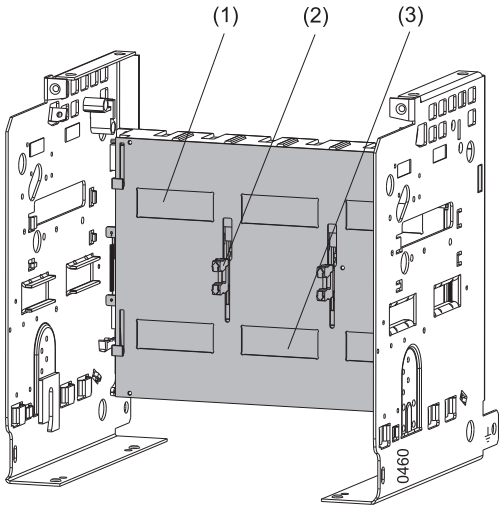
Will cause death, serious personal injury, or equipment / property damage.

Disconnect power before working on this equipment.

Note

Before the breaker will be inserted in the guide frame, the shutter windows must be closed and the black plastic stripe lifters must be in the middle position as shown, to prevent shutter damage and to ensure proper shutter operation.

2



1 The shutter windows can be opened and fixed by the black plastic stripe lifters.
2 The black plastic stripe lifters will move back into the initial position and will close the shutter window by slight pushing on the black plastic stripe lifters as shown.

18.1 Shutter

The shutter locking straps lock the finger contacts of the guide frame as soon as the draw-out circuit breaker is taken in the “TEST” position. So the isolating condition is fulfilled in the “TEST” position.

The locking straps can be lifted manually with the strap lifters.

The strap lifters can be fixed in several positions by means of padlocks and secured against unauthorised changes.
→ (page 15-24)

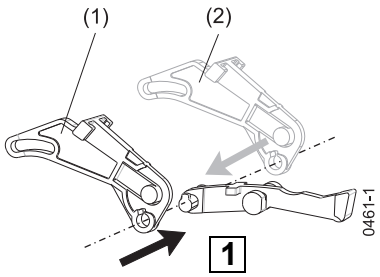
(1) Verschlussstreifen oben
(2) 4 Streifenheber
(3) Verschlussstreifen unten

(1) Upper locking strap
(2) 4 strap lifters
(3) Lower locking strap

18.1.1 Nachrüsten

WARNUNG

Vor dem Arbeiten an diesem Gerät, Anlage unbedingt spannungsfrei schalten sowie das Gerät erden.

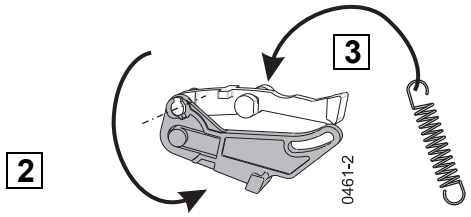


WARNING

Always de-energize and ground equipment before working on this equipment.

- Ausschalten und Federspeicher entspannen → (Seite 24-3)
- Einschubschalter aus Einschubrahmen entnehmen → (Seite 24-4)

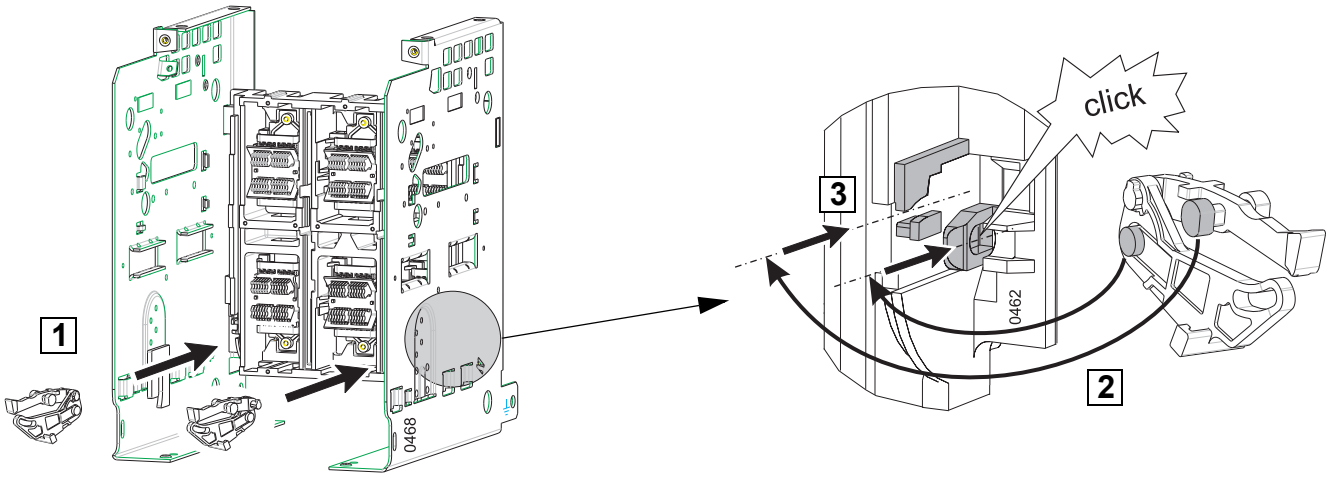
Betätiger zusammenbauen und mit Feder komplettieren



(1) Zusammenbau für rechte Seite
(2) Zusammenbau für linke Seite

18.1.1 Retrofitting

- Switch off and discharge the storage spring → (page 24-3)
- Remove the breaker from the guide frame → (page 24-4)

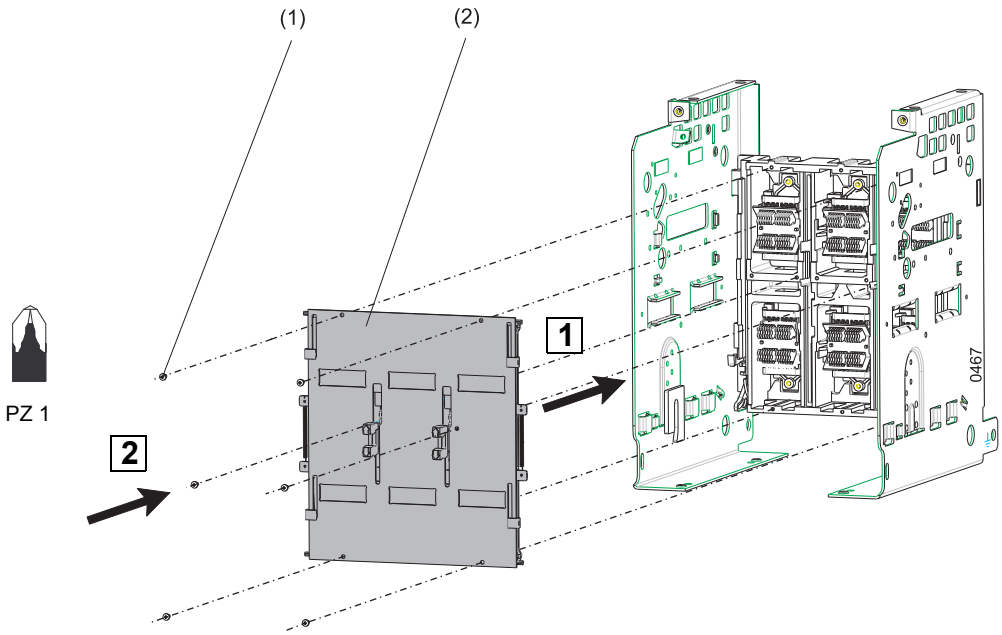


Assembling actuator and completing with spring

(1) Assembly for right-hand side
(2) Assembly for left-hand side

Betätiger einsetzen

Inserting actuator



Shutter anbauen

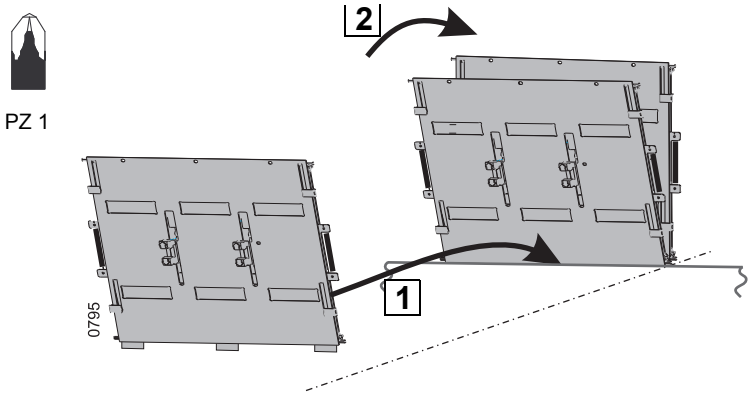
Fitting shutter

Nur für Baugröße I und II

Frame size I and II only

VORSICHT	CAUTION
Selbstschneidende Schrauben vorsichtig anziehen!	Tighten self-tapping screws carefully!

(1) Selbstschneidende Schrauben (Anzahl abhängig von Schalterausführung)



(2) Shutter mit Streifenhebern und Verschlussstreifen

(1) Tighten self-tapping screws (number according to circuit breaker version)

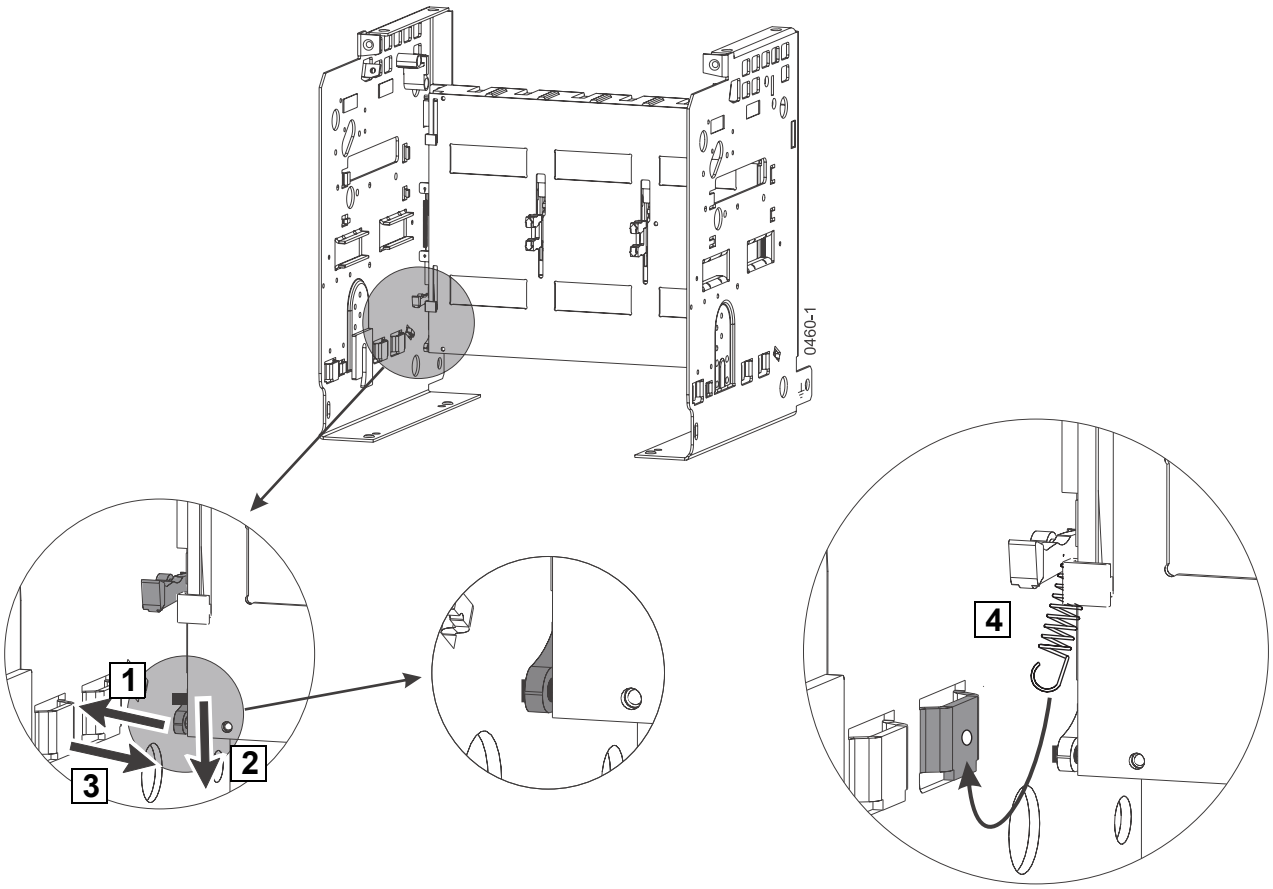
(2) Shutter with strap lifters and locking straps

Nur für Baugröße III:

Frame size III only:

1 Shutter schräg in die Schlitze der unteren Traverse einsetzen

2 Shutter an die Rückwand klappen und mit 5 oder 7 Plastite - Schrauben entsprechend 3- oder 4-poliger Ausführung befestigen



1 Insert shutter plate in the lower slot of sheet metal traverse

2 Turn up shutter plate against rear wall and fasten with self-tapping srews, 5 screws for 3-pol version and 7 screws for 4-pol. version

Hinweis	**Note**
Für den nächsten Arbeitsschritt, Shutter in Betätiger einrasten, kann es vorteilhaft sein, die unteren Schrauben erst nach dem Einrasten einzuschrauben.	For the next step - latching the shutter in the actuator - it may be advantageous to fit the lower screws after latching.

Shutter in Betätiger einrasten und Feder einhängen

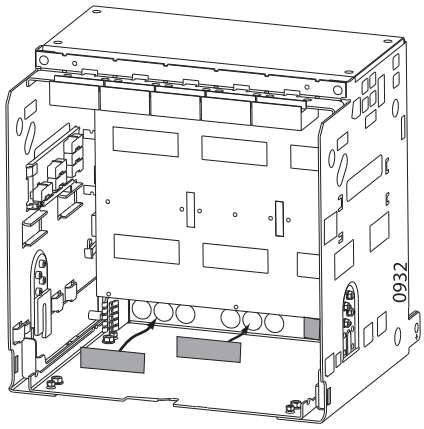
Latching shutter in actuator and fitting spring

Wenn nötig verbleibende untere Schrauben einschrauben.

If applicable fit the remaining screws in the lower row.

Hinweis	Note
Sicher stellen, dass Verschlussstreifen nicht klemmen! Dazu nach dem Einbau Verschlussstreifen oben und unten einmal öffnen.	Assure proper operation by moving each locking strap independently.

Anschließend:

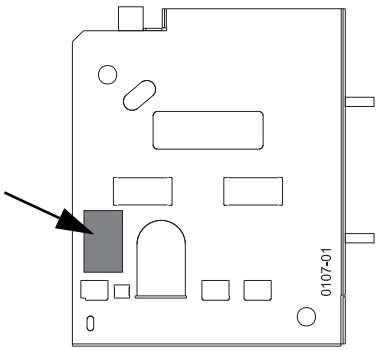


- Schalter in Einschubrahmen einsetzen und in Betriebsstellung verfahren → (Seite 6-1)
- Zugangslöcher verschließen

Zugangslöcher zum Anschließen der frontseitigen Hauptstrombahnen können mit beiliegenden Klebepads verschlossen werden.

Then:

- Insert the circuit breaker in the guide frame and rack into connected position → (page 6-1)
- Closing the access holes



Access holes can be closed after bolting the line side bars by using the enclosed adhesive tapes.

18.1.2 Typschild aktualisieren

18.1.2 Updating the type label

Hinweis	Note
Nach dem Einbau zusätzlicher Komponenten sind folgende Angaben mit einem weißen Permanentstift bzw. mit Aufklebern aus dem beiliegenden Etikettenbogen zu aktualisieren! Davor ist es ggf. notwendig die zu korrigierenden Zeichen mit einem schwarzen Permanentstift zu füllen.	After installing additional components, add the following data using a white and indelible ink pen or the appropiate label from the set of labels supplied! If necessary the signs which need to be corrected have to be filled with a black permanent pen before.

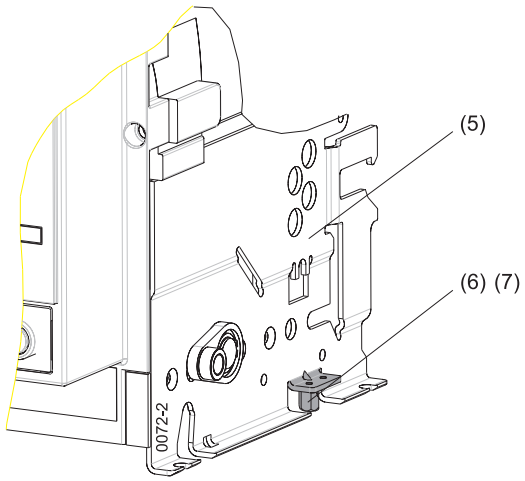
18.2 Kodierung Schalter - Einschubrahmen

18.2.1 Bemessungsstromkodierung

Einschubschalter und Einschubrahmen sind standardmäßig mit einer Bemessungsstromkodierung ausgestattet.

Diese stellt sicher, dass in einen Einschubrahmen nur solche Schalter eingesetzt werden können, deren Kontaktmesser zu den Lamellenkontakten des Einschubrahmens passen.

(1) Einschubrahmen, linke Innenseite; rechte Innenseite analog
(2) Kodierbolzen an der Verfahrschiene im Einschubrahmen
(3) Selbstschneidende Schraube M5 x 12
(4) Verfahrschiene
(5) Einschubschalter, rechte Seite; linke Seite analog;
(6) Kodierbolzen am Einschubschalter
(7) Selbstschneidende Schraube M4 x 16



Bei Bestellung eines Einschubschalters mit Einschubrahmen ist die Bemessungsstromkodierung bereits werksseitig eingerichtet. Soll die Umrüstung eines Festeinbauschalters in einen Einschubschalter erfolgen, muss die Bemessungsstromkodierung nachgerüstet werden.

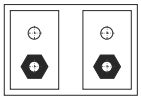
18.2 Coding between circuit breaker and guide frame

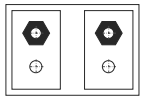
18.2.1 Rating current coding

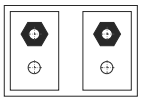
Draw-out circuit breakers and guide frames are equipped with a current coding as standard.

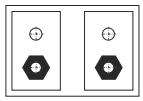
This coding ensures that only those circuit breakers can be inserted in the guide frame whose contact blades fit into the finger contacts of the guide frame.

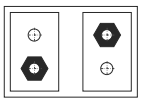
(1) Guide frame, left inner side, right inner side analogous
(2) Coding bolt on the guide rail in the guide frame
(3) Self-tapping screw M5 x 12
(4) Guide rail
(5) Draw-out circuit breaker, right side; left side analogous;
(6) Coding bolt at the draw-out circuit breaker
(7) Self-tapping screw M4 x 16

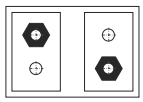


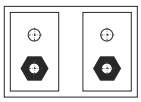


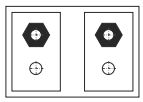


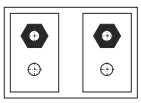


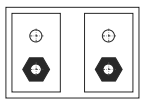


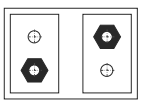


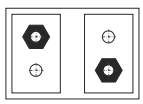


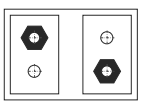


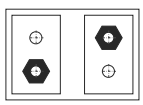


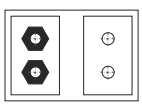


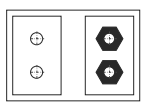


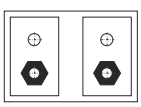


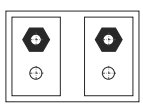


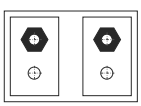


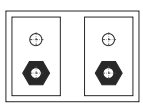


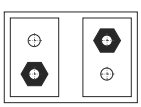


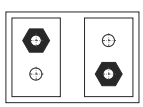


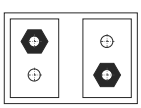


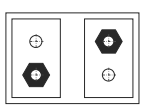












When a draw-out circuit breaker is ordered with the guide frame, the rating current coding is already provided at the factory. If a fixed-mounted circuit breaker has to be converted into a draw-out circuit breaker, the rating current coding must be retrofitted.

Bemessungsstromkodierung nachrüsten

Die Kodierbolzen sind an den Schalterfüßen und an den Verfahrschienen nach folgendem Schema anzubringen:

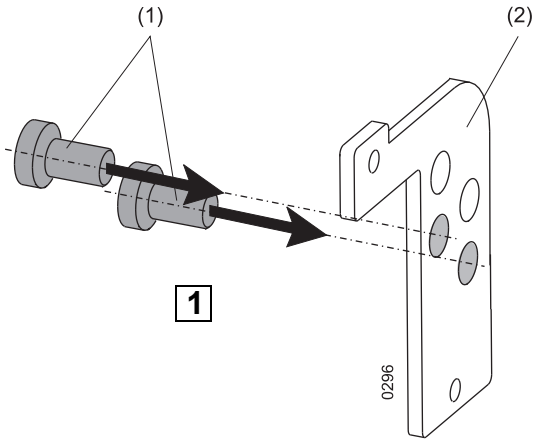
Retrofitting the rating current coding

Mount the coding bolts at the circuit breaker feet and at the guide rails according to the following scheme:

Baugröße Frame size	Bemessungsstrom Rating current	Kodierung / Coding			
		Schalter Breaker		Einschubrahmen Frame guide	
		links left	rechts right	links left	rechts right
I	1000 A				
	1600 A				
	2000 A Schaltvermögen H / breaking capacity H				
II	2000 A				
	2500 A				
	3200 A				
	4000 A				
	Schaltvermögen C / breaking capacity C				
III	4000 A				
	5000 A				
	6300 A				
	Schaltvermögen C / breaking capacity C				

18.2.2 Ausstattungsabhängige Kodierung

Einschubschalter und Einschubrahmen können nachträglich mit einer ausstattungsabhängigen Kodierung ausgerüstet werden.



Damit lassen sich Schalter und Einschubrahmen unter Berücksichtigung unterschiedlicher Ausstattungen unverwechselbar zuordnen. Sind Schalter und Einschubrahmen unterschiedlich kodiert, ist das Einfahren des Schalters nicht möglich.

Es gibt 36 wählbare Kodiermöglichkeiten.

Vor dem Einbau:

- Ausschalten und Federspeicher entspannen → (Seite 24-3)
- Einschubschalter aus Einschubrahmen entnehmen → (Seite 24-4)

18.2.2.1 Kodierung am Schalter anbringen

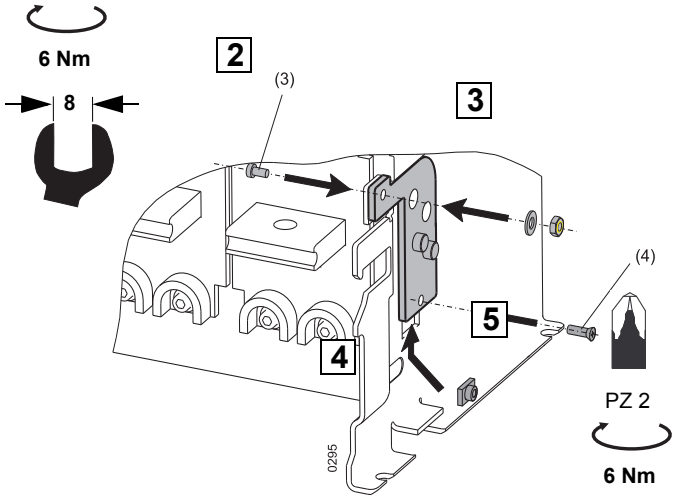
(1) Kodierstift
(2) Kodierplatte
(3) Innensechskantschraube M5 mit Spannscheibe und Mutter
(4) Senkkopfschraube M5 mit Vierkantmutter

Für Baugröße III:

- Kodierplatte horizontal gespiegelt montieren
- Zum Befestigen werden nur die beiden Schrauben ohne Muttern und Scheibe benötigt

18.2.2 Option-related coding

Draw-out circuit breakers and guide frames can be retrofitted with a version-related coding.



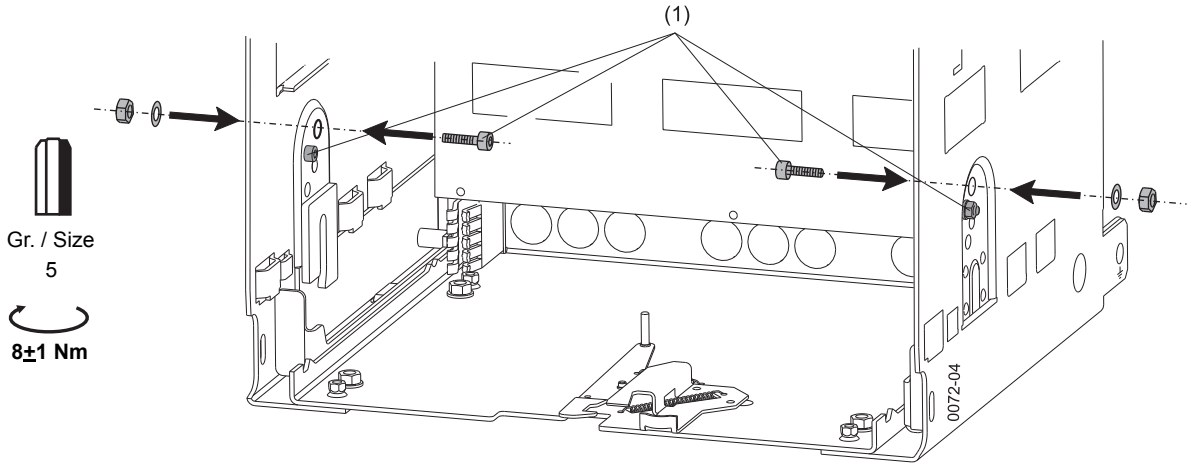
In this way, the circuit breaker and the guide frame can be assigned to each other unmistakably considering different equipment. If the circuit breaker and the guide frame have a different coding, it will not be possible to rack in the circuit breaker.

There are 36 selectable coding possibilities.

Before installation:

- Switch off and discharge the storage spring → (page 24-3)
- Remove the breaker from the guide frame → (page 24-4)

18.2.2.1 Fitting coding on circuit breaker



(1) Coding pin
(2) Coding plate
(3) Hexagon socket-head screw M5 with conical spring washer and nut
(4) Countersunk-head bolt M5 with square nut

For frame size III:

- Mount coding plate in horizontally mirrored position
- For fixing, only the two bolts are required without nuts and washer

18.2.2.2 Kodierung am Einschubrahmen anbringen

(1) Max. 4 x Innensechskantschraube M6 mit Spannscheibe und Mutter als Kodierelement

Anschließend:

- Schalter in Einschubrahmen einsetzen und in Betriebsstellung verfahren → (Seite 6-1)

18.2.3 Bestellnummer

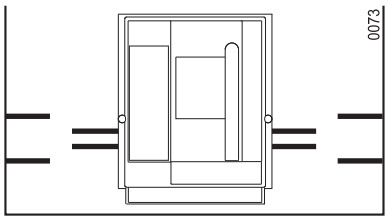
Ausstattungsabhängige Kodierung für Option-related coding for	Bestellnummer Order number
BG I / BG II FS I / FS II	3WL9111-0AR12-0AA0
BG III FS III	3WL9111-0AR13-0AA0

Auf den folgenden Seiten kann die Zuordnung von Kodierung und Verwendungszweck festgehalten werden.

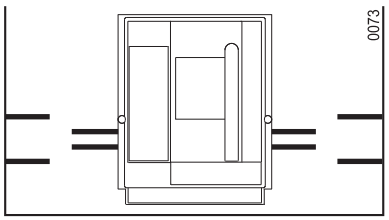
18.2.2.2 Fitting coding on guide frame

(1) Max. 4 x Hexagon socket-head screw M6 with conical spring washer and nut as coding element

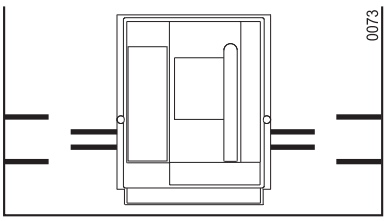
Then:



- Insert the circuit breaker in the guide frame and rack into connected position → (page 6-1)



18.2.3 Order number



On the following pages the assignment of coding variant and usage may be documented.

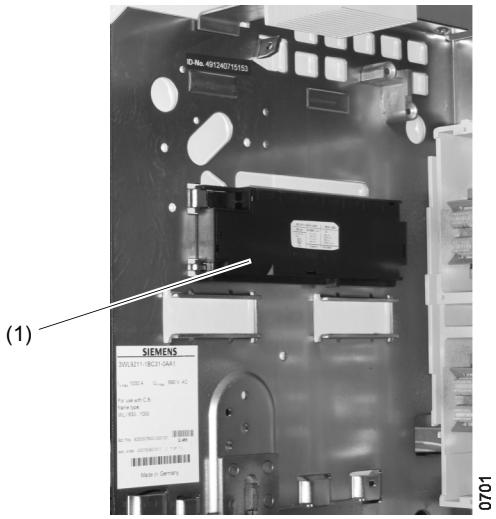
18.3 Positionsmeldeschalter für Einschubrahmen

Am Einschubrahmen können Positionsmeldeschalter nachgerüstet werden. Mit deren Hilfe lassen sich die drei Schalterpositionen im Einschubrahmen (Trenn-, Prüf- und Betriebsstellung) kundenseitig auswerten.



→ Tabelle "Schalterposition und Kontakte" (Seite 18-15)

18.3 Position signaling switches for guide frame

The guide frame can be retrofitted with position signaling switches.

The signal of these switches can be used to identify the circuit breaker position (disconnected / test / connected) in the guide frame.

→ Table "Circuit Breaker position and contact state" (page 18-15)

(1) Positionsmeldeschaltermodul

(1) Position signaling switch module

Es stehen zwei Ausführungen zur Verfügung.

Ausführung 1:

- S30 Meldeschalter für Trennstellung
- S31 Meldeschalter für Prüfstellung
- S34 Meldeschalter für Betriebsstellung

Ausführung 2:

- S30 Meldeschalter für Trennstellung
- S31 / S32 Meldeschalter für Prüfstellung
- S33 / S34 / S35 Meldeschalter für Betriebsstellung

18.3.1 Anschlüsse

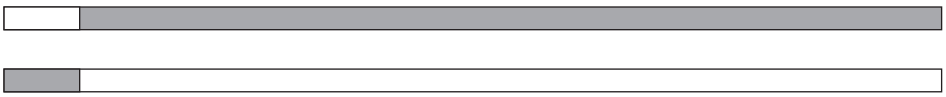
Eine Reihe von Zugbügelklemmen für Nennquerschnitte 1 x 0,5 mm^2 bis 1 x 2,5 mm^2.

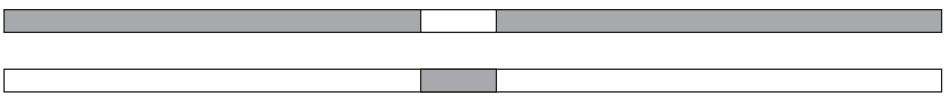
Two versions are available.

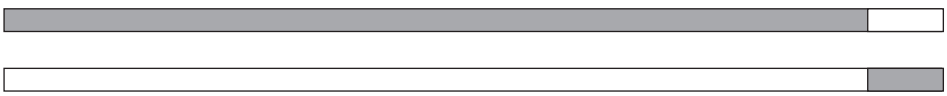
Version 1:

- S30 Signaling switch for disconnected position
- S31 Signaling switch for test position
- S34 Signaling switch for connected position

Version 2:







- S30 Signaling switch for disconnected position
- S31 / S32 Signaling switch for test position
- S33 / S34 / S35 Signaling switch for connected position

18.3.1 Terminals

One row of tension spring terminals for cross section 1 x AWG 20 … 1 x AWG 14.

18.3.2 Schalterposition und Kontakte

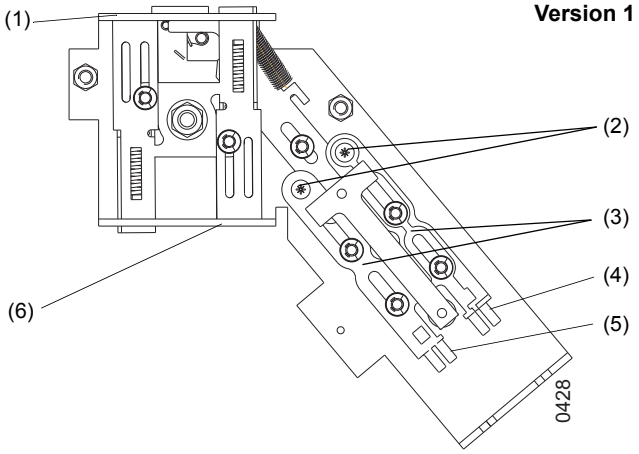
19 Gegenseitige mechanische Verriegelung

19 Mutual mechanical circuit breaker interlocking



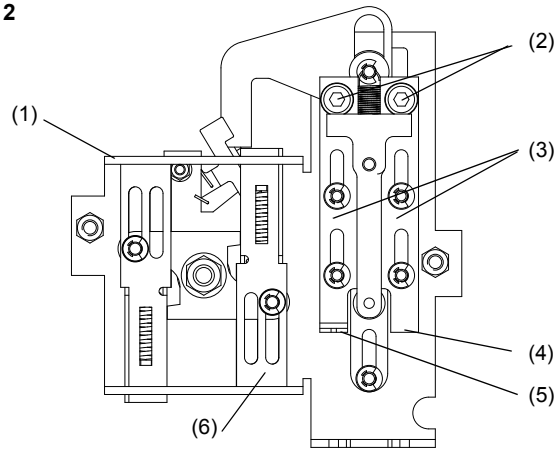
HINWEIS	NOTICE
Für die Funktion der Verriegelung sind in der Schaltanlage Mindestvoraussetzungen zu schaffen: **1** Bowdenzüge sind möglichst gerade, wenig gekrümmt zu verlegen. **2** Biegeradien des Bowdenzuges müssen > 500 mm ausgeführt sein. **3** Im Bowdenzugverlauf darf die Summe aller Krümmungswinkel 540° nicht überschreiten. **4** Bei vertikaler Anordnung zu verriegelnder Leistungsschalter sollen die Verriegelungsmechaniken fluchten. **5** Zu verriegelnde Leistungsschalter müssen so angeordnet sein, dass 2 m, 3 m oder 4,5 m lange Bowdenzüge unter Einhaltung der in den Punkten 1. - 4. genannten Bedingungen optimal verlegt werden können. **6** Die Bowdenzugverlegung muss vor der Justage der Verriegelung fixiert werden (Kabelbinder o.ä.) **7** Durch die Wahl der Schaltanlagenfachbreite muss die Justagefreiheit für die Verriegelung gewährleistet sein. **8** Öffnungen und Durchbrüche in Anlagenelementen sind so zu gestalten, dass durchgeführte Bowdenzüge im Verlauf nicht richtungsorientiert oder behindert werden.	For a proper function of the interlocking device, the following minimum prerequisites have to be met in the switchgear: **1** Bowden wires are to laid out as straight and as unbowed as possible. **2** Bending radii of the bowden wires must exceed > 500 mm. **3** The total curving of the bowden wire must not exceed 540 degrees. **4** When stacking interlocked circuit breakers vertically, the interlocking devices shall be in line with each other. **5** Circuit Breakers intended to be interlocked must be positioned, so that bowden wires of 2 m, 3 m or 4.5 m length can be laid out optimally, while complying with the conditions of paragraphs 1. to 4. **6** Before adjusting the interlocking device, the laying of bowden wires must be fixed, e.g. using cable ties. **7** The width of the switchgear section must be selected as wide as necessary to ensure space for an adjustment of the interlocking device. **8** Openings have to be created in the switchgear components, so that bowden wires are not forced in their orientation or direction and that they are not hindered in their run.

Ermöglicht in der Standardausführung verschiedene Varianten der gegenseitigen Verriegelung von maximal drei Leistungsschaltern.

In the standard design there are various versions for the mutual interlocking system available, comprising a maximum of three circuit breakers.

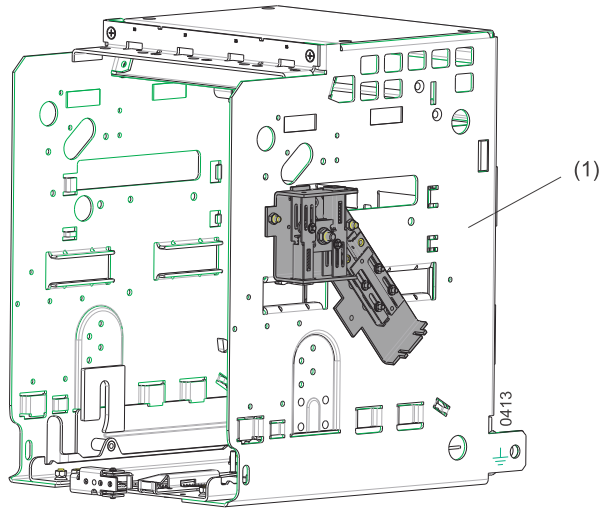
19.1 Verriegelungsbaustein

Version 1



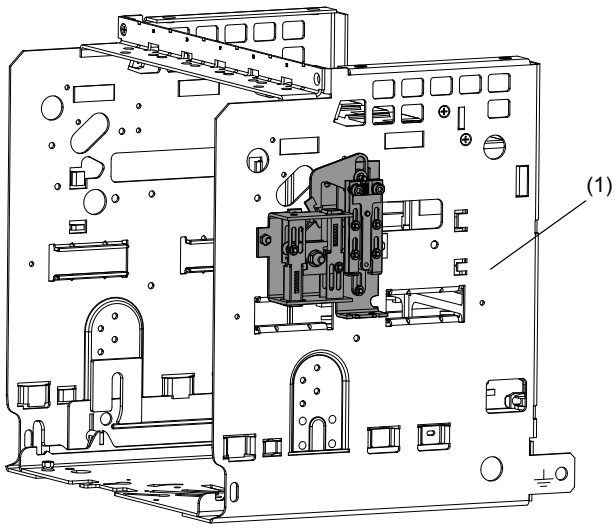
(1) Ausgang 1
(2) Version 1: Bohrung für Plastite Schraube mit Zahnscheibe für die Konfigurierung der gegenseitigen Verriegelung

Version 2: Bohrung mit Setzmutter für Zylinderkopfschraube M6 mit Scheibe für die Konfigurierung der gegenseitigen Verriegelung
(3) Indexbügel
(4) Eingang 1
(5) Eingang 2
(6) Ausgang 2



19.1 Mutual mechanical interlocking module

Version 2



(1) Output 1
(2) Version 1: Holes for plastite screw with toothed lock washer for the configuration of the mutual mechanical circuit breaker interlocking
Version 2: Holes with press nut for cheese-head M6 with washer for the configuration of the mutual mechanical circuit breaker interlocking
(3) Non-interchangeable brackets
(4) Input 1
(5) Input 2
(6) Output 2

19.2 Konfigurationen

19.2.1 Allgemeine Hinweise

In den nachstehenden Konfigurationsanleitungen gelten folgende Bezeichnungen:

A_1 : Ausgangsinformation 1

E_1 : Eingangsinformation 1

S_1 : Leistungsschalter 1

Um z.B. die Ausgangsinformation 1 des Leistungsschalters 1 mit der Eingangsinformation 2 des Schalters 2 zu koppeln, wird im folgenden die Abkürzung $S_1\,A_1$ - $S_2\,E_2$ verwendet.

Die Zustände der Schalter werden im Bedienpult wie folgt angezeigt:

19.2 Configurations

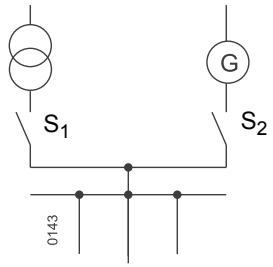
19.2.1 General notes

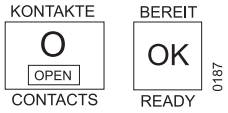
In the following configuration instructions, the following designations apply:

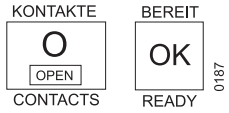
A_1 : Output information 1

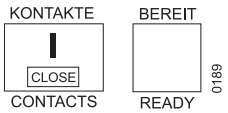
E_1 : Input information 1

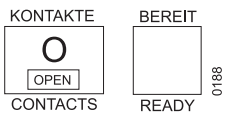
S_1 : Circuit breaker 1

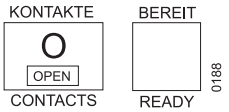


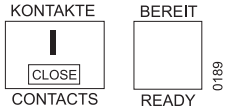












For example, in order to couple the output information 1 of circuit breaker 1 with the input information 2 of circuit breaker 2, the abbreviation $S_1\,A_1$ - $S_2\,E_2$ is used.

The states of the circuit breaker are shown at the front panel:

KONTAKTE I CLOSE CONTACTS BEREIT READY 0189	Schalter eingeschaltet	Circuit breaker closed
KONTAKTE O OPEN CONTACTS BEREIT READY 0188	Schalter ausgeschaltet und nicht einschaltbereit (verriegelt)	Circuit breaker open and not ready to close (interlocked)
KONTAKTE O OPEN CONTACTS BEREIT OK READY 0187	Schalter ausgeschaltet und einschaltbereit (nicht verriegelt)	Circuit breaker open and ready to close (not interlocked)

19.2.2 Zwei Schalter gegeneinander

19.2.2 Two circuit breakers against each other

Beispiel Example	Mögliche Schalterzustände Possible circuit breaker states	
	S_1	S_2
		
		
		

Beschreibung:

Ein Schalter kann jeweils nur dann eingeschaltet werden, wenn der andere ausgeschaltet ist.

Benötigtes Material:

Jeder Schalter hat einen Verriegelungsbaustein sowie einen Bowdenzug.

Bestellnummer → (Seite 19-17)

Anschlüsse der Bowdenzüge:

1. Bowdenzug:	$S_1 A_1$	-	$S_2 E_1$
2. Bowdenzug:	$S_2 A_1$	-	$S_1 E_1$

Bemerkung:

$S_x E_x$

An diesen Anschlüssen sind die Zylinderschrauben mit Spannscheiben in die Indexbügel einzuschrauben.

Description:

A circuit breaker can be closed only if the other is open.

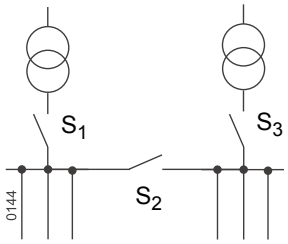
Materials required:

Each circuit breaker has an interlocking module and a bowden wire.

Order no. → (page 19-17)

Connections of bowden wires:

1st bowden wire:	$S_1 A_1$	-	$S_2 E_1$
2nd bowden wire:	$S_2 A_1$	-	$S_1 E_1$



Note:

$S_x E_x$

At these connections the cheese-head screws with conical spring washers must be screwed into the non-interchangeable bracket.

19.2.3 Drei Schalter untereinander

19.2.3 Three circuit breakers among each other

Beschreibung:

Es können immer zwei beliebige Schalter eingeschaltet werden, wobei der Dritte jeweils verriegelt wird.

Benötigtes Material:

Jeder Schalter hat einen Verriegelungsbaustein sowie einen Bowdenzug. Drei weitere Bowdenzüge sind getrennt zu bestellen.

Bestell-Nr. → (Seite 19-17)

Anschlüsse der Bowdenzüge: (vgl. (19-3))

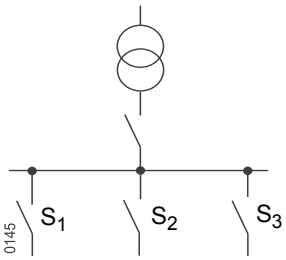
1. Bowdenzug: $S_1\ A_1$ - $S_2\ E_1$
2. Bowdenzug: $S_1\ A_2$ - $S_3\ E_1$
3. Bowdenzug: $S_2\ A_1$ - $S_1\ E_1$
4. Bowdenzug: $S_2\ A_2$ - $S_3\ E_2$
5. Bowdenzug: $S_3\ A_1$ - $S_1\ E_2$
6. Bowdenzug: $S_3\ A_2$ - $S_2\ E_2$

Description:

Any two circuit breakers can be closed, with the third being interlocked.

Materials required:

Each circuit breaker has an interlocking module and a bowden wire. Three additional bowden wires must be ordered separately.



Order no. → (page 19-17)

Connections of bowden wires: (compare (19-3))

1st bowden wire: $S_1\ A_1$ - $S_2\ E_1$
2nd bowden wire: $S_1\ A_2$ - $S_3\ E_1$
3rd bowden wire: $S_2\ A_1$ - $S_1\ E_1$
4th bowden wire: $S_2\ A_2$ - $S_3\ E_2$
5th bowden wire: $S_3\ A_1$ - $S_1\ E_2$
6th bowden wire: $S_3\ A_2$ - $S_2\ E_2$

19.2.4 Drei Schalter untereinander (Einer von Dreien)

19.2.4 Three circuit breakers among each other (1 out of 3)

Beispiel Example	Mögliche Schalterzustände Possible circuit breaker states		
	**S_1**	**S_2**	**S_3**

5. Bowdenzug:	$S_3 A_1$	-	$S_1 E_2$
6. Bowdenzug:	$S_3 A_2$	-	$S_2 E_2$

Bemerkung:

$S_x E_x$

An diesen Anschlüssen sind die Zylinderschrauben mit Spannscheiben in die Indexbügel einzuschrauben.

Description:

When one circuit breaker is closed, the other two cannot be closed.

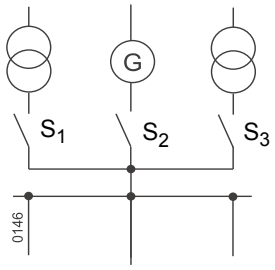
Materials required:

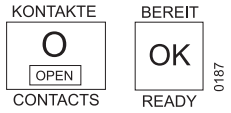
Each circuit breaker has an interlocking module and a bowden wire. Three additional bowden wires must be ordered separately.

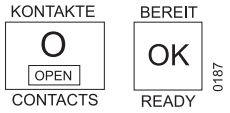
Order no. → (page 19-17)

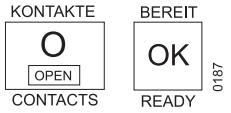
Connections of bowden wires: (compare (19-3)**)**

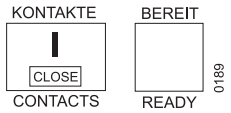
1st bowden wire:	$S_1 A_1$	-	$S_2 E_1$
2nd bowden wire:	$S_1 A_2$	-	$S_3 E_1$
3rd bowden wire:	$S_2 A_1$	-	$S_1 E_1$
4th bowden wire:	$S_2 A_2$	-	$S_3 E_2$
5th bowden wire:	$S_3 A_1$	-	$S_1 E_2$
6th bowden wire:	$S_3 A_2$	-	$S_2 E_2$

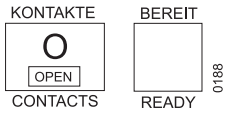


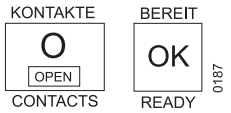


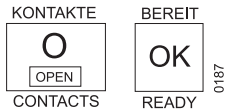


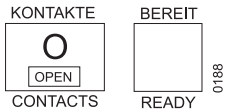


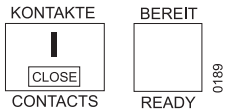


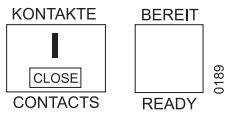


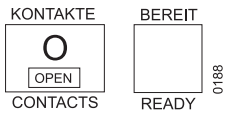


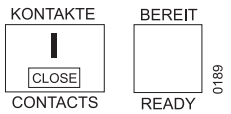


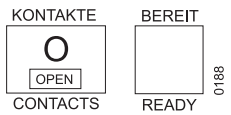


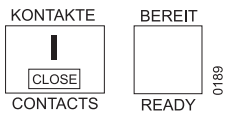


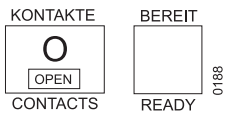












Note:

$S_x E_x$

At these connections, the cheese-head screws must be screwed into the non-interchangeable brackets with conical spring washers.

19.2.5 Drei Schalter gegeneinander

19.2.5 Three circuit breakers against each other

Beispiel Example	Mögliche Schalterzustände Possible circuit breaker states		
	S_1	S_2	S_3
			
			
			
			
			

Beschreibung:

Es können zwei Schalter (S_1, S_3) unabhängig voneinander ein- und ausgeschaltet werden, wobei der Dritte (S_2) nur einschaltbereit ist, wenn die beiden Anderen ausgeschaltet sind. Ist der Dritte eingeschaltet, so können die beiden anderen Schalter nicht eingeschaltet werden.

Benötigtes Material:

Jeder Schalter hat einen Verriegelungsbaustein sowie einen Bowdenzug. Ein Bowdenzug ist getrennt zu bestellen.

Bestellnummer → (Seite 19-17)

Anschlüsse der Bowdenzüge (vgl. (19-3)**)**

1. Bowdenzug:	$S_1\ A_1$ -	$S_2\ E_1$
2. Bowdenzug:	$S_2\ A_1$ -	$S_1\ E_1$
3. Bowdenzug:	$S_2\ A_2$ -	$S_3\ E_1$
4. Bowdenzug:	$S_3\ A_1$ -	$S_2\ E_2$

Bemerkung:

$S_x\ E_x$

An diesen Anschlüssen sind die Zylinderschrauben mit Spannscheiben in die Indexbügel einzuschrauben.

Description:

Two circuit breakers (S_1, S_3) can be independently opened and closed, the third (S_2) being ready to close only if the other two are open. If the third is closed, the other two cannot be closed.

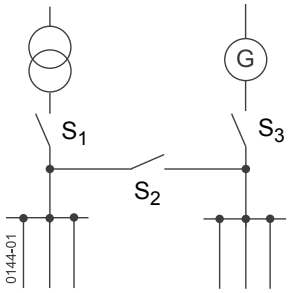
Materials required:

Each circuit breaker has an interlocking module and a bowden wire. A bowden wire must be ordered separately.

Order no. → (page 19-17)

Connections of bowden wires: (compare (19-3)**)**

1st bowden wire:	$S_1\ A_1$ -	$S_2\ E_1$
2nd bowden wire:	$S_2\ A_1$ -	$S_1\ E_1$
3rd bowden wire:	$S_2\ A_2$ -	$S_3\ E_1$
4th bowden wire:	$S_3\ A_1$ -	$S_2\ E_2$



Note:

$S_x\ E_x$

At these connections, the cheese-head screws must be screwed into the non-interchangeable brackets with conical spring washers.

19.2.6 Drei Schalter, zwei davon gegeneinander

19.2.6 Three circuit breakers, two of them against each other

Beispiel Example	Mögliche Schalterzustände Possible circuit breaker states		
	**S_1**	**S_2**	**S_3**
	KONTAKTE O OPEN CONTACTS / BEREIT OK READY 0187	KONTAKTE O OPEN CONTACTS / BEREIT OK READY 0187	KONTAKTE O OPEN CONTACTS / BEREIT OK READY 0187

	KONTAKTE I CLOSE CONTACTS / BEREIT READY 0189	KONTAKTE O OPEN CONTACTS / BEREIT READY 0188	KONTAKTE I CLOSE CONTACTS / BEREIT READY 0189

Beschreibung:

Ein Schalter (S_1) kann unabhängig von den beiden Anderen ein- und ausgeschaltet werden. Die beiden anderen Schalter schließen sich gegenseitig aus, d. h. einer kann nur eingeschaltet werden, wenn der Andere ausgeschaltet ist.

Benötigtes Material:

Zwei von drei Schaltern (S_2, S_3) haben je einen Verriegelungsbaustein sowie je einen Bowdenzug.

Bestellnummer → (Seite 19-17)

Anschlüsse der Bowdenzüge: (vgl. (19-3))

1. Bowdenzug:	$S_2\ A_1$ -	$S_3\ E_1$
2. Bowdenzug:	$S_3\ A_1$ -	$S_2\ E_1$

Bemerkung:

$S_x\ E_x$

An diesen Anschlüssen sind die Zylinderschrauben mit Spannscheiben in die Indexbügel einzuschrauben.

Description:

One circuit breaker (S_1) can be opened and closed independently of the two others. The two others cancel each other out, i.e. one can only be closed if the other is open.

Materials required:

Two of the three circuit breakers (S_2, S_3) each have an interlocking module and a bowden wire.

Order no. → (page 19-17)

Connections of bowden wires: (compare (19-3))

1st bowden wire:	$S_2\ A_1$ -	$S_3\ E_1$
2nd bowden wire:	$S_3\ A_1$ -	$S_2\ E_1$

Note:

$S_x\ E_x$

At these connections the cheese-head screws must be screwed into the non-interchangeable brackets with conical spring washers.

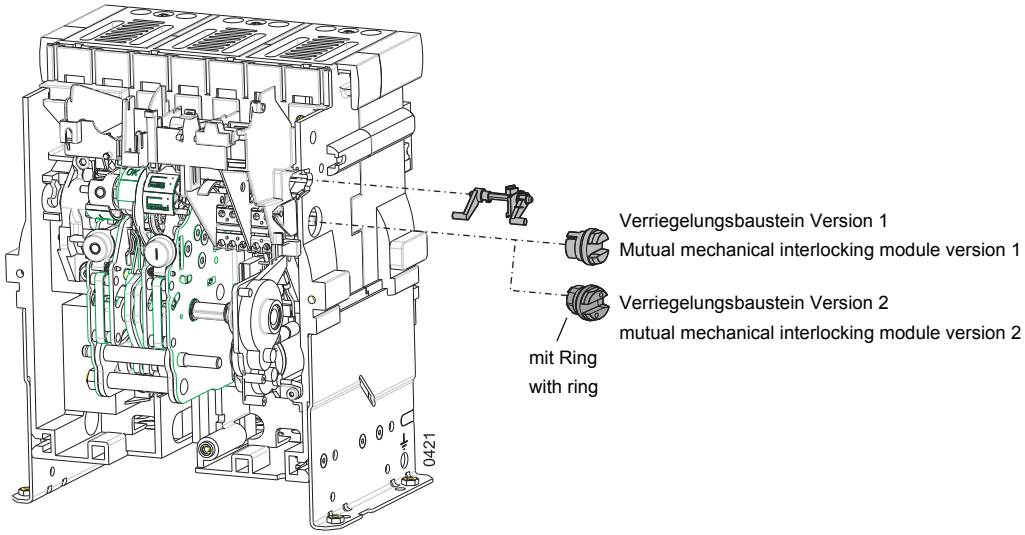
19.3 Verriegelung nachrüsten

WARNUNG

Vor dem Arbeiten an diesem Gerät, Anlage unbedingt spannungsfrei schalten sowie das Gerät erden.

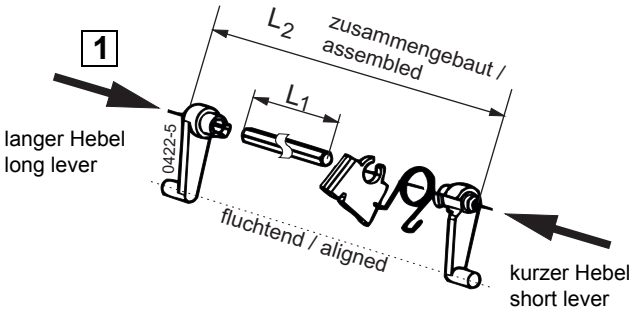
- Ausschalten und Federspeicher entspannen → (Seite 24-3)
- Einschubschalter aus Einschubrahmen entnehmen → (Seite 24-4)
  bzw. Festeinbauschalter ggf. ausbauen → (Seite 5-1)
- Bedienpult und ggf. rechte seitliche Abdeckung abnehmen → (Seite 24-25)

19.3.1 Zwischenwelle und Kupplung einbauen



19.3 Retrofitting interlocking module

WARNING

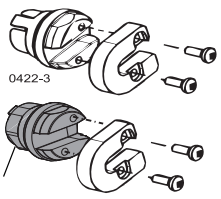


Always de-energize and ground equipment before working on this equipment.

- Switch off and discharge the storage spring → (page 24-3)
- Remove the breaker from the guide frame → (page 24-4)
  or remove the fixed-mounted breaker if necessary → (page 5-1)
- Remove front panel and side cover on the right, if required → (page 24-25)

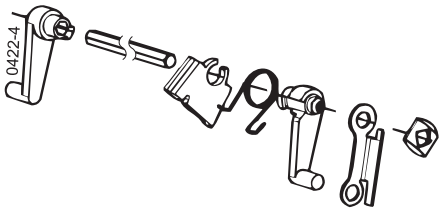
19.3.1 Installing intermediate shaft and coupling

Einbau

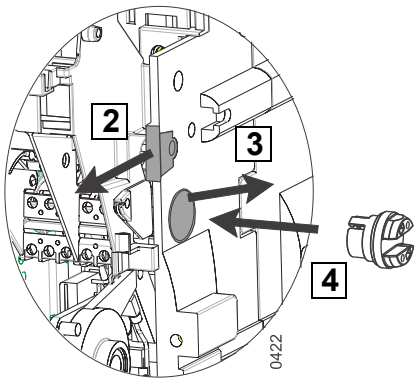


Fitting

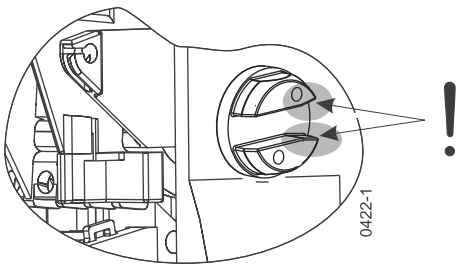
Baugröße Frame size	Sechskant Länge L_1 Hexagon shaft length L_1 (mm)	Länge der Baugruppe L_2 Length of assembly L_2 (mm)
I	48	59
II	118	129
III nur Festeinbau fixed-mounted only	232	243



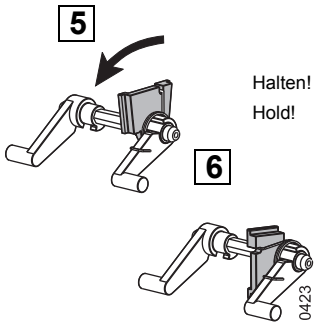
Für Baugröße III, Einschubausführung

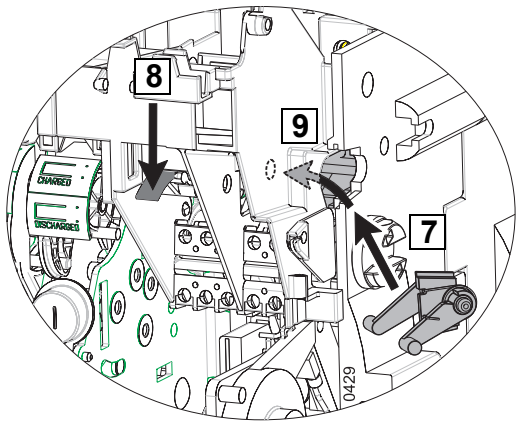


Verriegelungsbaustein Version 1
mutual mechanical interlocking module version 1

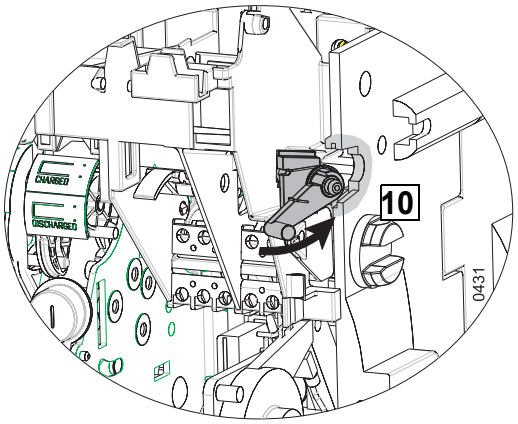


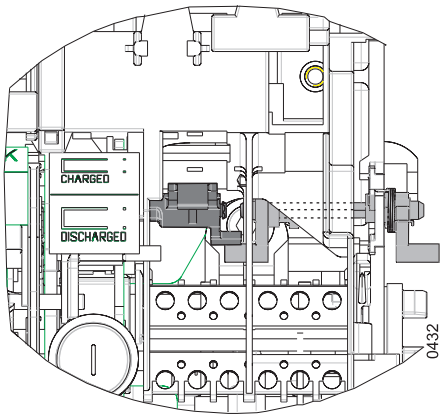
Verriegelungsbaustein Version 2
mutual mechanical interlocking module version 2
mit Ring
with ring



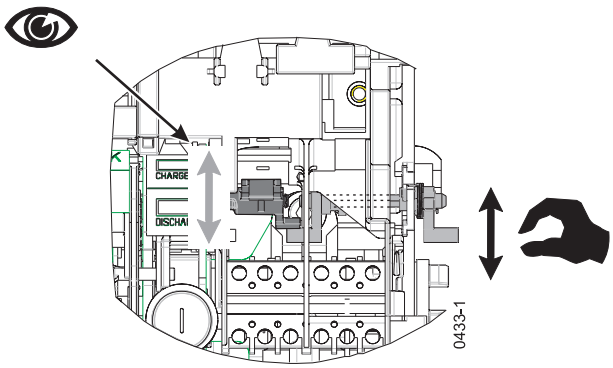


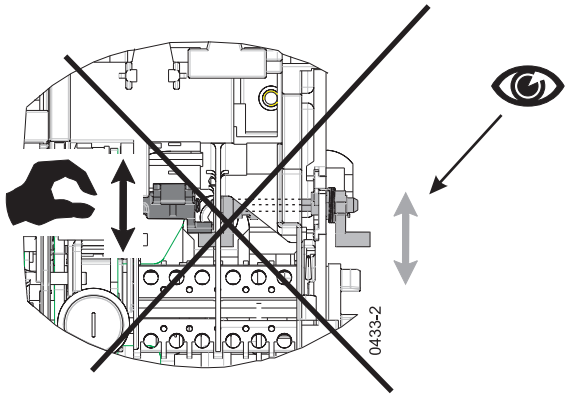
For frame size III, draw out version





HINWEIS	NOTICE
Im Arbeitsschritt **9** muss die Zwischenwelle in eine Bohrung im Schalterinneren einrasten. Erst dann lässt sich im Arbeitsschritt **10** die Halterung der Zwischenwelle in die Führung der Seitenwand einsetzen.	In working step **9**, the intermediate shaft must engage in a hole inside the circuit breaker. Only then it will be possible - in working step **10** - to fit the support for the intermediate shaft in the guide of the side wall.





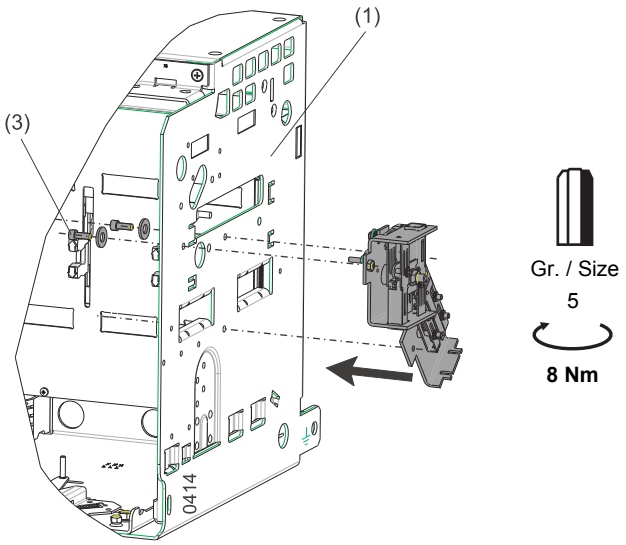
kurzer Hebel aussen
short lever outside

Funktionsprobe

Function check

Anschließend:

- Bedienpult und ggf. rechte seitliche Abdeckung wieder anbauen → (Seite 24-25)



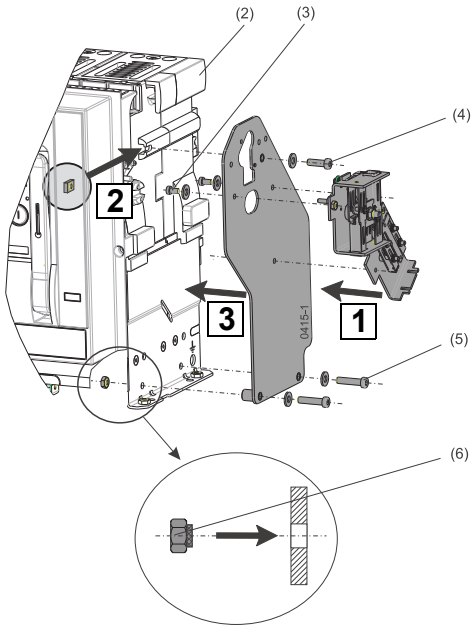
Then:

- Fit back front panel and side cover on the right, if it was removed → (page 24-25)

19.3.2 Verriegelungsbaustein anbauen

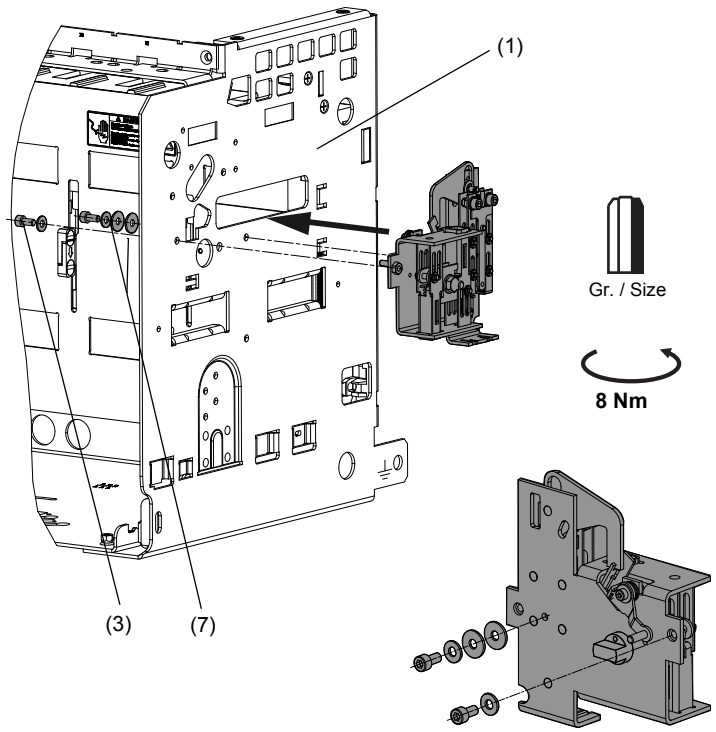
HINWEIS
Bei nicht ausreichender Montagefreiheit im Schaltschrank an der rechten Schalterseite kann es vorteilhaft sein, vor dem Anbau des Verriegelungsbausteins die ausgangsseitigen Bowdenzüge vorzumontieren. → (Seite 19-14)

Verriegelungsbaustein Version 1



(1) Einschubrahmen
(2) Festeinbauschalter
(3) 2 x Innensechskantschraube M6 x 12 mit Spannscheibe
(4) 1 x Innensechskantschraube M6 x 25 mit Spannscheibe und Vierkantmutter
(5) 2 x Innensechskantschraube M6 x 35 mit Spannscheibe
(6) 2 x Setzmutter; zieht sich beim Festschrauben in den Schalterfuß; ggf. Mutter festhalten

19.3.2 Fitting interlocking module

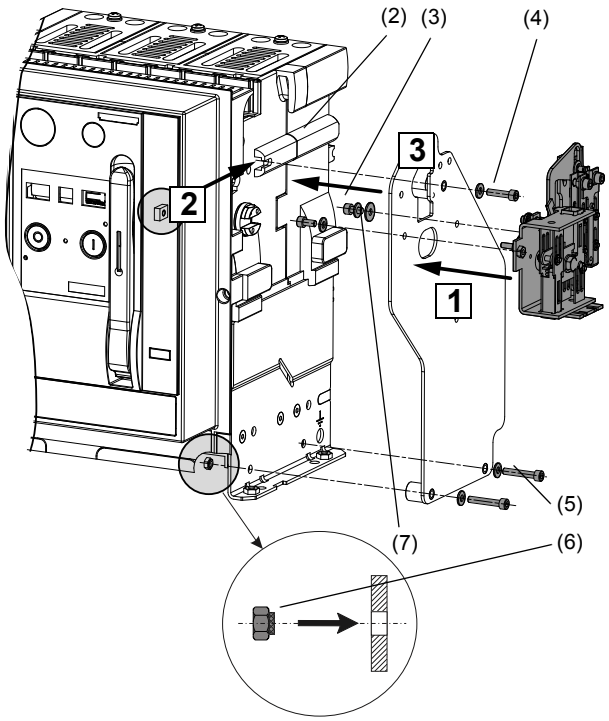


NOTICE
If there isn't enough free space for installation on the right side of the circuit breaker inside the cubicle, it may be advantageous to pre-assemble the bowden wires on the outgoing side before fitting the interlocking module. → (page 19-14)

Mutual mechanical interlocking module version 1

(1) Guide frame
(2) Fixed-mounted breaker
(3) 2 x Hexagon socket-head screw M6 x 12 with conical spring washer
(4) 1 x Hexagon socket-head screw M6 x 25 with conical spring washer and square nut
(5) 2 x Hexagon socket-head screw M6 x 35 with conical spring washer
(6) 2 x press nut; penetrates into mounting foot by tightening; if necessary, prevent press nut from rotating

Verriegelungsbaustein Version 2

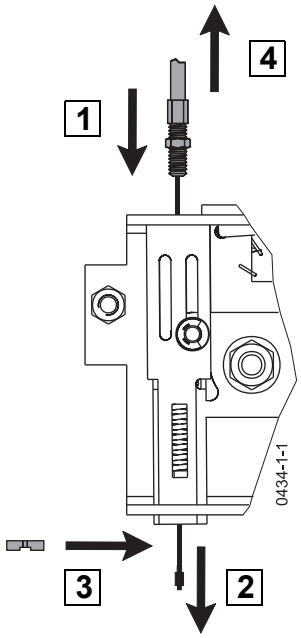


(1) Einschubrahmen
(2) Festeinbauschalter
(3) 2 x Innensechskantschraube M6 x 12 mit Spannscheibe
(4) 1 x Innensechskantschraube M6 x 25 mit Spannscheibe und Vierkantmutter
(5) 2 x Innensechskantschraube M6 x 35 mit Spannscheibe
(6) 2 x Setzmutter; zieht sich beim Festschrauben in den Schalterfuß; ggf. Mutter festhalten
(7) 1 x Unterlegscheibe mit großem Außendurchmesser

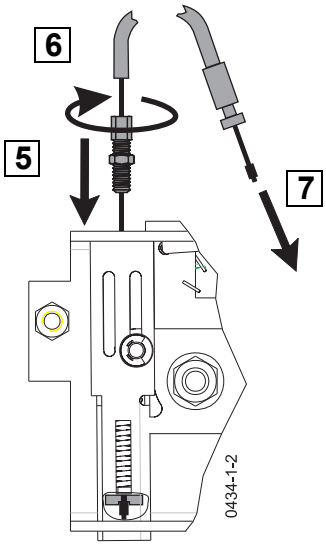
Anschließend:

- Festeinbauschalter wieder einbauen → (Seite 5-1)

Mutual mechanical interlocking module version 2

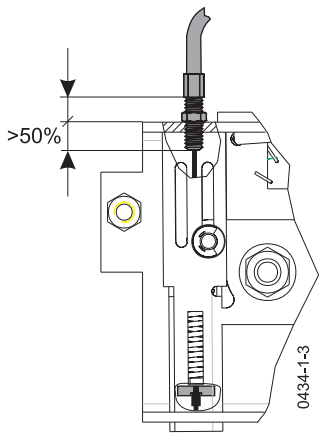


(1) Guide frame
(2) Fixed-mounted breaker
(3) 2 x Hexagon socket-head screw M6 x 12 with conical spring washer
(4) 1 x Hexagon socket-head screw M6 x 25 with conical spring washer and square nut
(5) 2 x Hexagon socket-head screw M6 x 35 with conical spring washer
(6) 2 x press nut; penetrates into mounting foot by tightening; if necessary, prevent press nut from rotating
(7) 1 x washer with large outside diameter



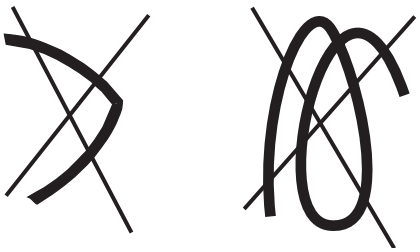
Then:

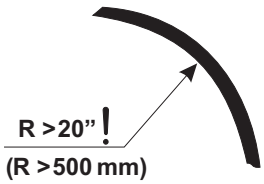
- Install the breaker again→ (page 5-1)



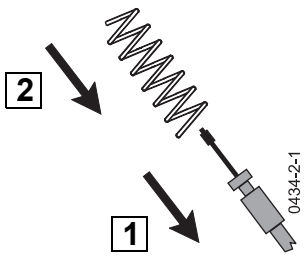
19.3.3 Bowdenzüge montieren

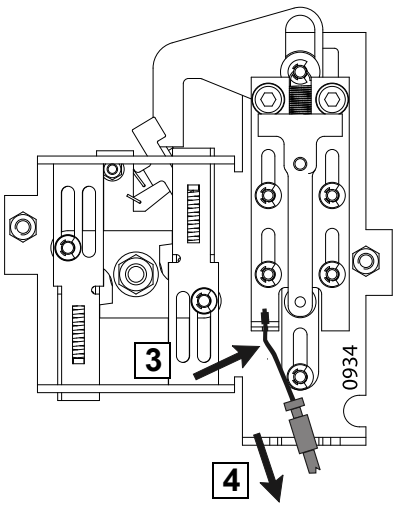
Bowdenzug am Ausgang einbauen





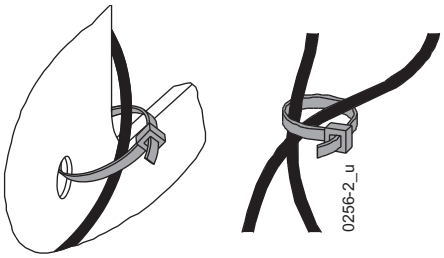
Voll eingeschraubt
fully screwed in

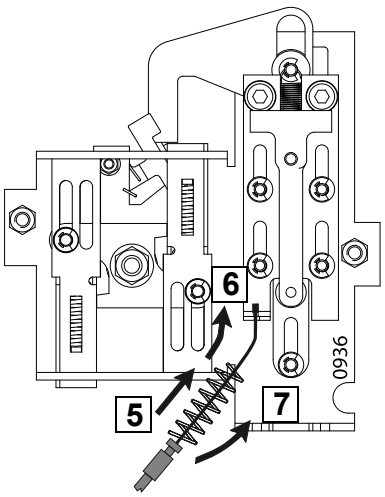




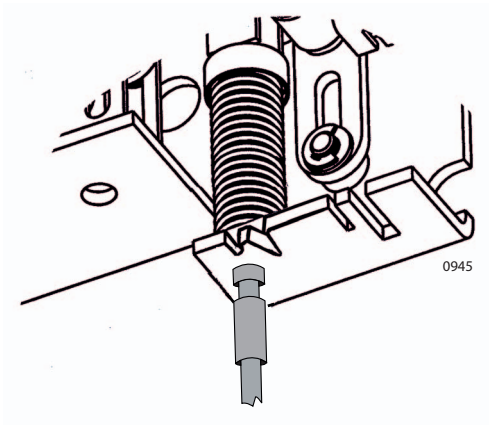
Bowdenzug verlegen

Bowdenzug am Eingang des zu verriegelnden Schalters einbauen

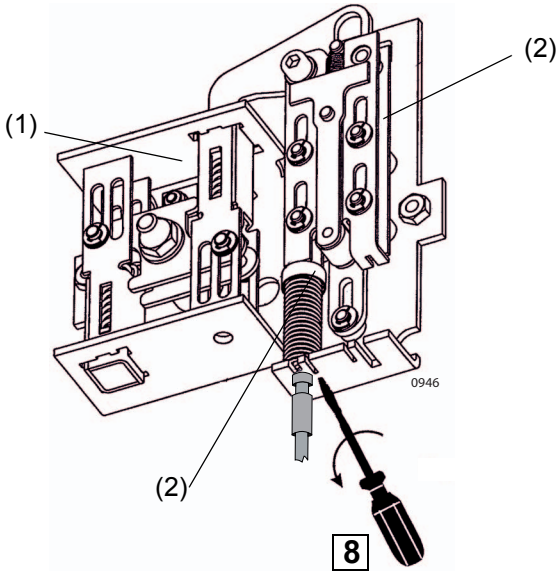




19.3.3 Mounting the bowden wires

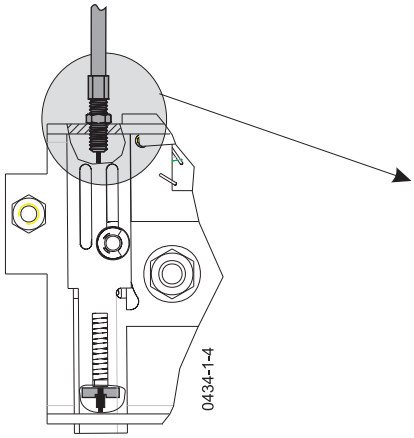


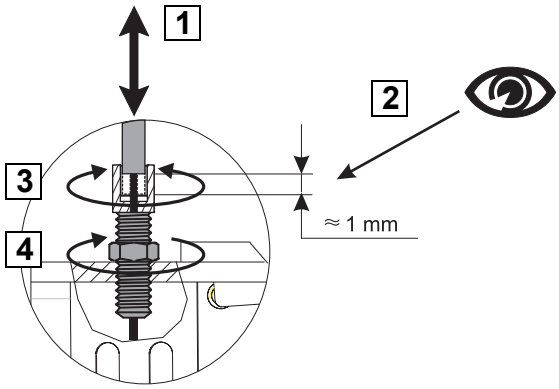
Fitting bowden wire on output site



Fixing the bowden wire

Installing the bowden wire at the input of the circuit breaker to be interlocked





(1) Ausführung mit Indexbügel aus Stahl
(2) Indexbügel

(1) Version with steel index clip
(2) Index clip

Bowdenzug justieren

Adjusting the bowden wire

Anschließend:

- Entsprechend der vorgesehenen Konfiguration der gegenseitigen Schalterverriegelung ggf. Zylinderschrauben mit Scheiben, bzw. Plastite-Schrauben mit Zahnscheiben in die entsprechenden Indexbügel einschrauben → Konfigurationen (Seite 19-3)
- Einschubschalter in Einschubrahmen einsetzen, in Trennstellung schieben, ggf. Schaltschranktür schließen und in Betriebsstellung verfahren → (Seite 6-1)

Funktionstest

- Schaltschranktüren schließen
- Federspeicher der zu verriegelnden Schalter spannen → (Seite 6-4)
- Nacheinander die verschiedenen Möglichkeiten der vorgesehenen Verriegelungskonfiguration testen
- Ggf. Bowdenzüge nachjustieren

Then:

- According to the planned configuration of the mutual circuit breaker interlocking, screw cheese-head bolts with toothed lock washers, respectively plastite-screws with lock washers into the associated index clips if applicable → Configurations (page 19-3)
- Insert the draw-out circuit breaker into the guide frame, push into disconnected position, close the cubicle door if required and rack it into connected position → (page 6-1)

Function check

- Close the cubicle doors
- Charge storage spring of circuit breakers to be interlocked → (page 6-4)
- Test the various possibilities of the planned interlocking configuration one after the other
- Re-adjust bowden wires if necessary

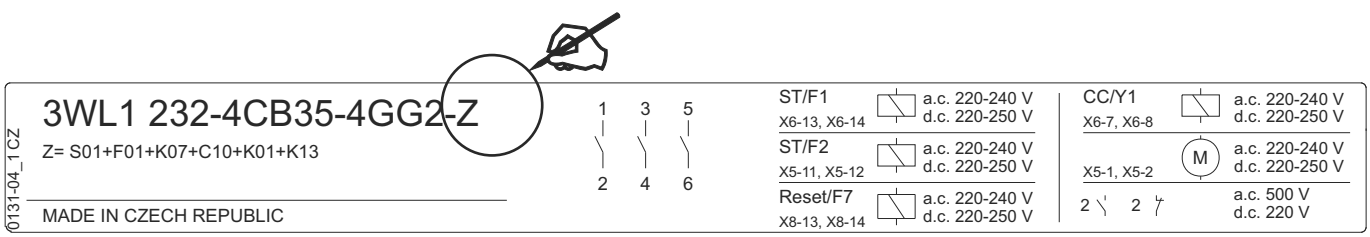
Anschließend:

- Leistungsschalter ausschalten und Federspeicher entspannen → (Seite 24-3)
- Leistungsschalter im Einschubrahmen in Wartungsposition bewegen → (Seite 24-4)
- Bedienpult abnehmen → (Seite 24-25)
- Information über Anschlussklemmenverdrahtung → (Seite 8-1)

Then:

- OPEN the circuit breaker and discharge the storage spring → (page 24-3)
- Move circuit breaker into maintenance position → (page 24-4)
- Remove front panel → (page 24-25)
- For Terminal wiring information → (page 8-1)

HINWEIS	NOTICE
Folgende Wartungshinweise beachten: **1** Die Einstellung der Bowdenzüge muss nach den ersten 100 Schaltoperationen kontrolliert und gegebenenfalls nachjustiert werden! **2** Nach je weiteren 1000 Schaltoperationen oder mindestens nach jedem Jahr muss die Einstellung der Verriegelung kontrolliert und gegebenenfalls nachjustiert werden! **3** Bei der Kontrolle sind die Bowdenzüge auf Knick- und Scheuerstellen, aufgespleißte Drähte der Stahlseele, Beschädigungen der Schlauchfassungen und der Justageeinheit (Schlauchfassung mit Einstellgewinde und Mutter) zu überprüfen und gegebenenfalls auszuwechseln. Außerdem ist die Leichtgängigkeit beweglicher Teile der Verriegelungsmechanik in ihren Lagern zu prüfen. **4** Bei erschwerten Umgebungsbedingungen, z. B. erhöhte Umgebungstemperatur oder starkes Verschmutzungspotential, müssen diese Wartungszyklen angepasst verringert werden! **5** Bei Strombahnwartung der Leistungsschalter, spätestens nach Erreichung der maximal zulässigen elektrischen Lastwechsel der jeweiligen Baugröße, sind die Verschleißteile der Verriegelung zu wechseln. → Tabelle (Seite 19-17).	The following maintenance advises have to be taken into account: **1** The adjustment of the bowden cables needs to be checked after the first 100 switching operations and has to be readjusted if necessary! **2** The adjustment of the mutual interlocking device needs to be checked and if necessary readjusted every 1000 operations or at least once every year! **3** During the inspection, the bowden cables have to be checked against kinks and grinding points, split wires of the steel soul, damages of the tube settings and the adjustment unit (tube setting with thread and nut) and have to be readjusted if necessary! In addition, the movability of movable parts of the interlocking device in their bearings needs to be examined. **4** At aggravated environmental conditions e.g. increased environmental temperature or strong pollution potential the cycles of maintenance have to be reduced! **5** When maintaining the pole assembly of the circuit breaker, but not later than at the maximum number of electrical operations, the wearing parts of the interlocking device have to be replaced. → table (page 19-17).



19.3.4 Schilder aktualisieren

19.3.4 Updating labels

Hinweis	Note
Nach dem Einbau zusätzlicher Komponenten sind folgende Angaben mit einem weißen Permanentstift bzw. mit Aufklebern aus dem beiliegenden Etikettenbogen zu aktualisieren! Davor ist es ggf. notwendig die zu korrigierenden Zeichen mit einem schwarzen Permanentstift zu füllen.	After installing additional components, add the following data using a white and indelible ink pen or the appropiate label from the set of labels supplied! If necessary the signs which need to be corrected have to be filled with a black permanent pen before.

If version 1 and version 2 of locking devices should be used in combination, the corresponding bowden cables (see ordering MLFB) have to be used.				

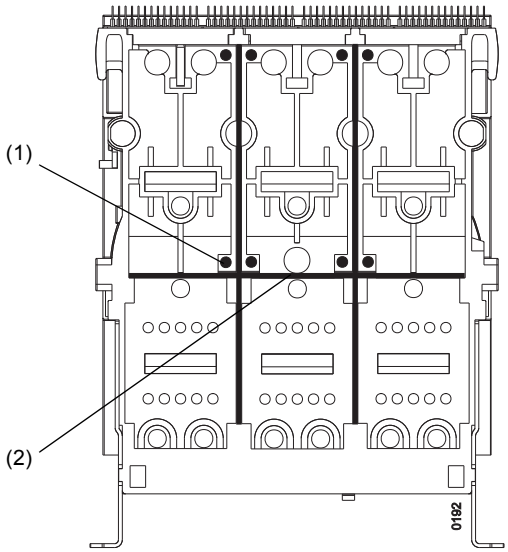
[1] Mit Bowdenzug 2000 mm.

[1] With bowden wire 2000 mm.

20 Phasentrennwände

Als Störlichtbogenbarrieren können vom Anlagenbauer Phasentrennwände aus Isoliermaterial hergestellt werden. An der Rückwand der Festeinbauschalter bzw. der Einschubrahmen sind Führungsnuten und Befestigungslöcher vorhanden.

Verwendbares Material



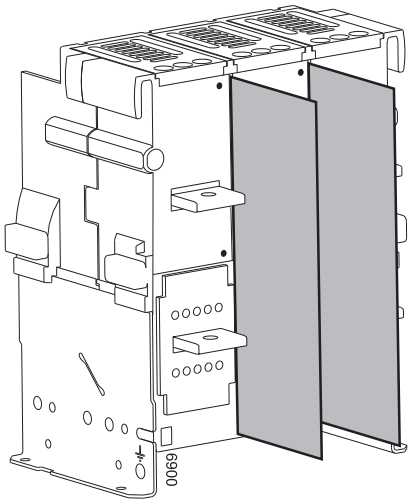
- NEMA GPO-3-Material, mind. 2,3 mm / 0,091",
  max. 4,0 mm / 0,157" dick:
  z.B. G-Etronax PM GPO-3 der Firma Isola AG
- oder vergleichbares Material:
- z.B. Durapol FR-HA2 der Firma Isola AG

20 Phase barriers

The panel manufacturer can provide phase barriers made of insulating material as a short-circuit barrier. The necessary guide slots and fixing points are provided on the rear wall of the fixed-mounted circuit breakers and the guide frames.

Suitable material

- NEMA GPO-3, min. thickness 2.3 mm / 0.091",
  max. thickness 4.0 mm / 0.157"
  e.g. G-Etronax PM GPO-3 manufactured by Isola AG
- or comparable material:
- e.g. Durapol FR-HA2 manufactured by Isola AG



(1) 8 Befestigungslöcher für selbstschneidende Schrauben ∅ 4,2 mm, Einschraubtiefe max. 16 mm
(2) Führungsnut 4 mm breit

(1) 8 mounting holes for self-tapping screw ∅ 4.2 mm, / 0.165“ screw-in depth max. 16 mm / 0.63“
(2) Guide slot 4 mm / 0.157“ wide

21 Lichtbogenkammerabdeckungen

Die Lichtbogenkammerabdeckung steht als optionale Zusatzausrüstung für Einschubrahmen zur Verfügung.

Sie dient dem Schutz von Schaltanlagenteilen, die sich unmittelbar über dem Leistungsschalter befinden.

21.1 Nachrüsten

GEFAHR

Gefährliche Spannung.

Kann Tod, schwere Personenschäden sowie Schäden an Geräten und Ausrüstung bewirken.

Vor dem Arbeiten an diesem Gerät, Anlage unbedingt spannungsfrei schalten sowie das Gerät erden.

Leistungsschalter ausschalten und aus dem Einschubrahmen herausnehmen.

- Ausschalten und Federspeicher entspannen → (Seite 24-3)
- Schalter aus dem Einschubrahmen entnehmen → (Seite 24-4)

21 Arc chute covers

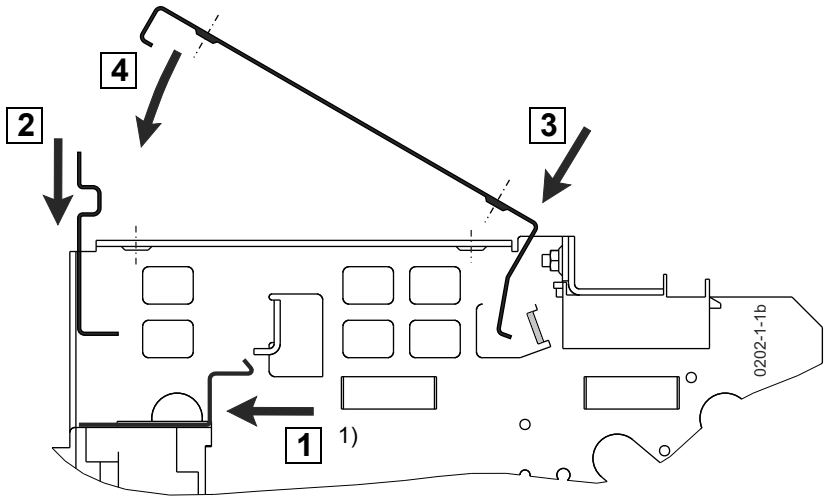
The arc chute cover is an accessory for guide frames.

The cover is provided to protect switchgear components which are located directly above the circuit breaker.

21.1 Retrofitting

DANGER

Hazardous voltages.



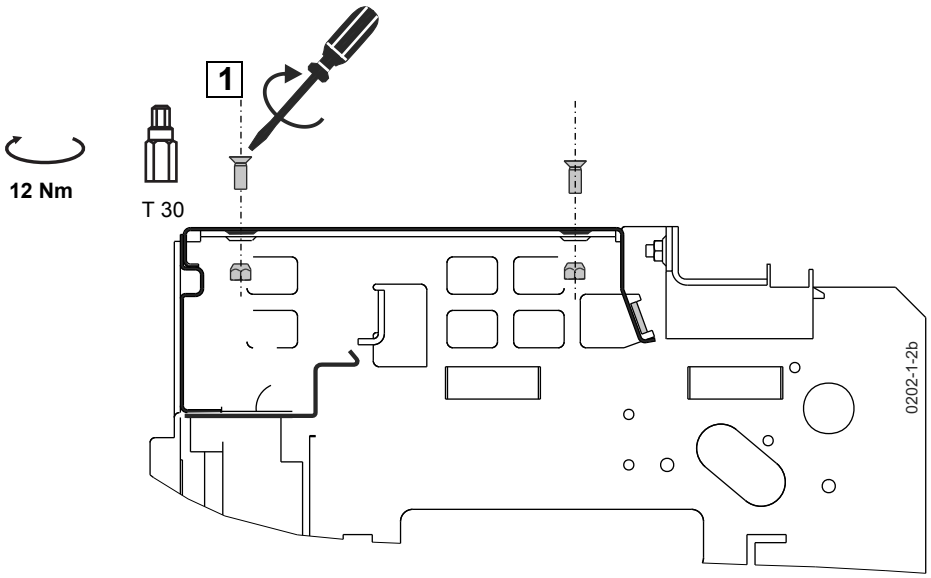
Will cause death, serious personal injury, or equipment/property damage.

Always de-energize and ground equipment before working on this equipment.

Open circuit-breaker, and remove from guide frame.

- Switch off and discharge the spring storage → (page 24-3)
- Remove the breaker from the guide frame → (page 24-4)

21.1.1 Baugröße I und II



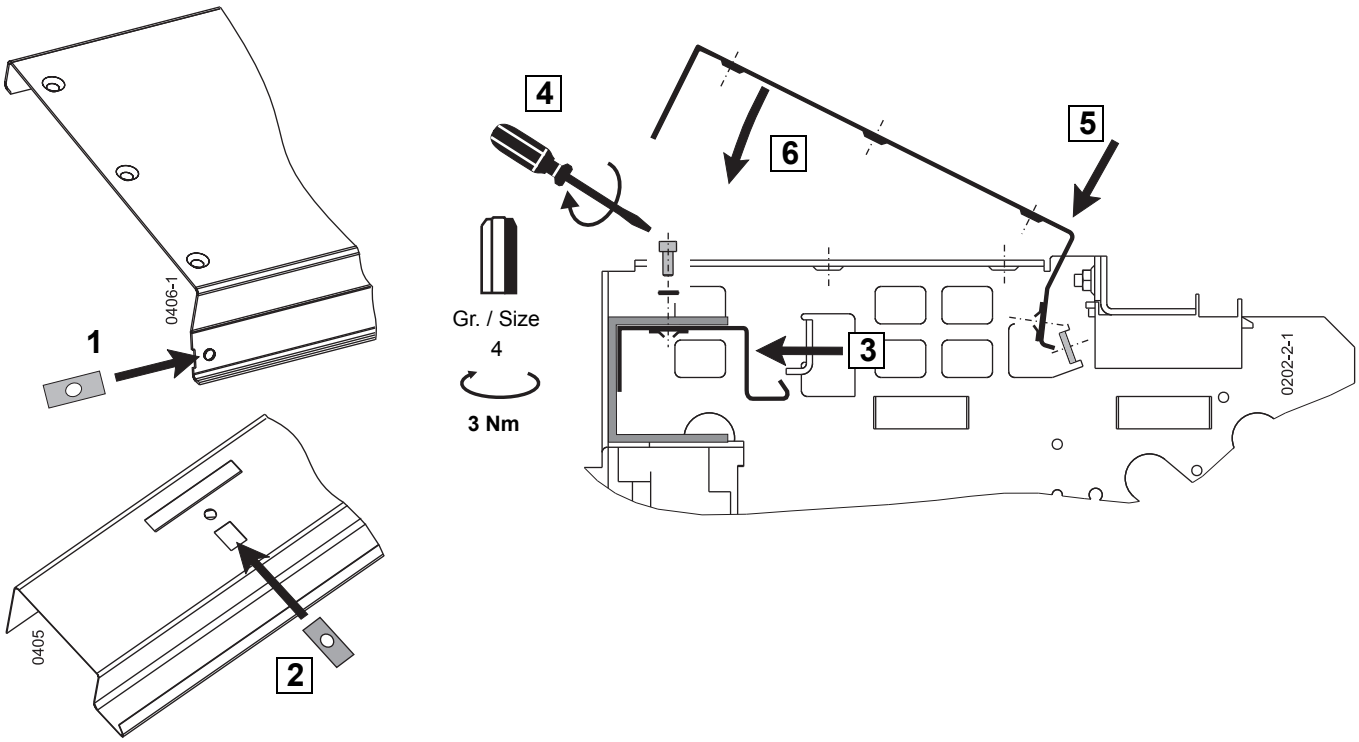
1 Abschottblech auf Kunststoffrückwand auflegen und Konturen ineinander ausrichten.
2 „Haube hinten“ einsetzen
3 „Haube oben“ hinter Befestigungslappen der Seitenwände einführen und
4 auf den Einschubrahmen auflegen

1) Abbildung kann vom Original abweichen

21.1.1 Frame size I and II

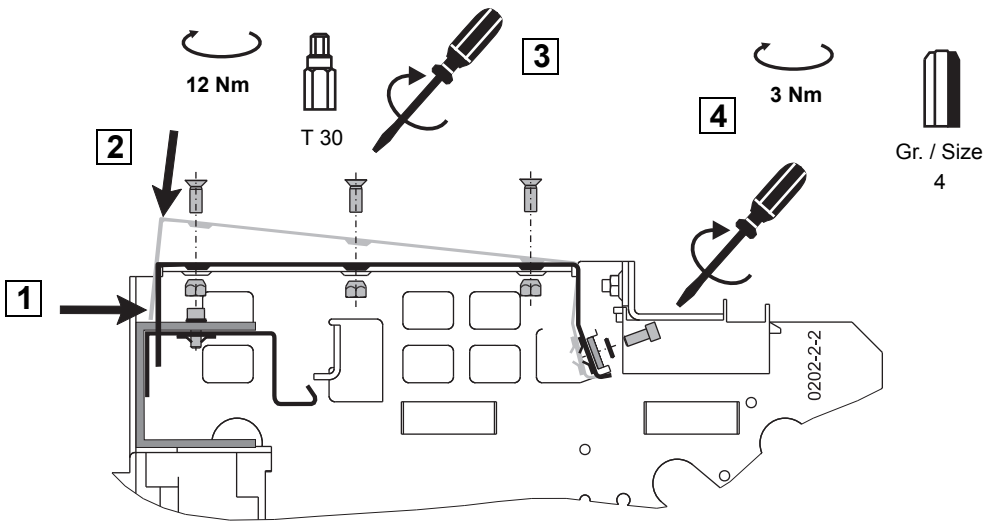
1 Insert partition on plastic back and adjust the contours to each other.
2 Insert "rear cover"
3 Insert "upper cover" behind fixing strap of side walls and
4 lay on guide frame

1) Image may differ from original



1 „Haube oben“ befestigen:4 x M6 x 16 mit Kegelmutter

1 Fixing „upper cover":4 x M6 x 16 with cone nut

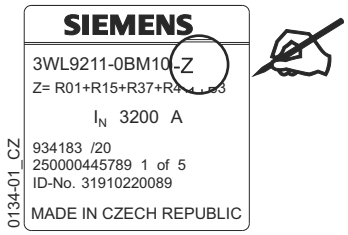


21.1.2 Baugröße III

21.1.2 Frame size III

1 Je ein Befestigungsblech über rechte und linke Befestigungsbohrungen der Haube schieben
2 Befestigungsbleche in Abschottblech einsetzen
3 Abschottblech in den Querträger einlegen
4 und befestigen: 2 x M5 x 12 mit Spannscheibe
5 Haube hinter Befestigungslappen der Seitenwände einführen und
6 absenken

1 Slip one quick nut each over the right-side and left-side fixing holes of the cover
2 Insert quick nuts in partition
3 Lay partition into cross member
4 and fix: 2 x M5 x 12 with conical spring washer
5 Insert cover behind fixing strap of side walls and
6 set down



1 Hintere Arretierungszungen der Haube in die Schlitze des Querträgers drücken
2 Haube herunter drücken
3 Haube befestigen:6 x M6 x 16 mit Kegelmutter
4 2 x M5 x 12 mit Spannscheibe

1 Press rear cover retainers into the slots of the cross member
2 Press cover down
3 Fix cover: 6 x M6 x 16 with cone nut
4 2 x M5 x 12 with conical spring washer

21.2 Typschild Einschubrahmen aktualisieren

21.2 Updating the guide frame type label

Hinweis	Note
Nach dem Einbau zusätzlicher Komponenten sind folgende Angaben mit einem weißen Permanentstift bzw. mit Aufklebern aus dem beiliegenden Etikettenbogen zu aktualisieren! Davor ist es ggf. notwendig die zu korrigierenden Zeichen mit einem schwarzen Permanentstift zu füllen.	After installing additional components, add the following data using a white and indelible ink pen or the appropiate label from the set of labels supplied! If necessary the signs which need to be corrected have to be filled with a black permanent pen before.

21.2.1 Bestellnummern / Z-Zusatz

24 Wartung

GEFAHR

Beim Betrieb elektrischer Geräte stehen zwangsläufig bestimmte Teile dieser Geräte unter gefährlicher Spannung.
Unsachgemäßer Umgang mit diesen Geräten kann deshalb zu Tod oder schweren Körperverletzungen sowie erheblichen Sachschäden führen.

Beachten Sie daher bei Instandhaltungsmaßnahmen an diesem Gerät alle in diesem Kapitel und auf dem Produkt selbst aufgeführten Hinweise.
Die Instandhaltung darf nur durch entsprechend qualifiziertes Personal erfolgen.
Vor Beginn der Arbeiten muss der spannungsfreie Zustand der Schaltanlage hergestellt und während der Arbeiten sichergestellt werden (gemäß EN 50 110-1, DIN VDE 0105-100 und BGV A2).
Die fünf Sicherheitsregeln sind einzuhalten:

- Freischalten
- Gegen Wiedereinschalten sichern
- Spannungsfreiheit feststellen
- Erden und Kurzschließen
- Benachbarte, unter Spannung stehende Teile abdecken oder abschranken

Das Gerät ist vom Netz zu trennen.
Es dürfen nur vom Hersteller zugelassene Ersatzteile verwendet werden.
Die vorgeschriebenen Wartungsintervalle sowie die Anweisungen für Reparatur und Austausch sind unbedingt einzuhalten, um Schäden an Personen und Anlagen zu vermeiden.

24 Maintenance

DANGER

Hazardous voltages are present in this electrical equipment during operation.

Failure to properly maintain the equipment can result in death, severe personal injury or substantial property damage.

The instructions contained in this chapter and on product labels have to be followed.

Maintenance shall be performed only by qualified personnel.

Before beginning to work, de-energize the panel and secure the de-energized state during work (according to EN 50 110-1, DIN VDE 0105-100 and BGV A2).

Observe the Five Safety Rules.

- Disconnecting
- Securing against reclosing
- Checking safe insolation from supply
- Earthing and short-circuiting
- Covering or providing barriers to adjacent live parts

Disconnect the equipment from the supply.
Use only authorized spare parts in the repair of the equipment.

The inspection intervals as well as the instructions for repair and replacement shall be duly observed, to avert damages from persons and gear.

Qualifiziertes Personal

Qualified Person

im Sinne dieser Bedienungsanleitung bzw. der Warnhinweise auf dem Produkt selbst sind Personen, die mit Aufstellung, Montage, Inbetriebsetzung und Betrieb des Produktes vertraut sind und über die ihrer Tätigkeit entsprechenden Qualifikationen verfügen, wie z. B.:

d) Ausbildung oder Unterweisung bzw. Berechtigung, Stromkreise und Geräte / Systeme gemäß den Standards der Sicherheitstechnik ein- und auszuschalten, zu erden und zu kennzeichnen.
e) Ausbildung oder Unterweisung gemäß den Standards der Sicherheitstechnik in Pflege und Gebrauch angemessener Sicherheitsausrüstung.
f) Schulung in Erster Hilfe.

For the purpose of this instruction manual and product labels, a “qualified person” is one who is familiar with the installation, construction and operation of the equipment and the hazards involved and who, in addition, has the following qualifications:

a) Is trained and authorized to energize, de-energize, clear, earth and tag circuits and equipment in accordance with established safety practices.

b) Is trained in the proper care and use of protective equipment in accordance with established safety practices.

c) Is trained in rendering first aid.

In Abhängigkeit von den jeweiligen Betriebsbedingungen sind die Lichtbogenkammern und das Kontaktsystem zu inspizieren. Insbesondere nach erfolgter Kurzschlussabschaltung ist deren Zustand noch vor dem erneuten Einschalten zu kontrollieren.

Strombahnen sind je nach Zustand zu wechseln, jedoch spätestens nach Anzahl Nennstromabschaltungen gemäß folgender Tabelle.

The arc chutes and contact system must be inspected according to these operation instructions. If a fault condition opens the circuit breaker, the circuit breaker should be inspected before it is put back into service.

Contact assemblies need to be changed according to their condition, but at least after the number of switching operations given in the table.

Maximale Anzahl Nennstromabschaltungen / maximum number of switching operations					
Baugröße Frame size	**Bemessungsbetriebsspannung U_e Rated operational voltage U_e**			**Bemessungsbetriebsspannung U_e Rated operational voltage U_e**	
	bis / up to 690 V AC	**bis / up to 1000 V AC**	**bis / up to 1150 V AC**	**600 V DC**	**1000 V DC**
I	10000 / 7500[a)]	1000	--	--	1000
II	7500 / 4000[b) c)]/ 2000[d)]	1000	500	6000	1000
III	2000 / 1000[e)]	1000	500	--	--

a) Baugröße I, 2000 A, Schaltvermögen H

b) Baugröße II, 3200 A

c) Baugröße II, Schaltvermögen C

d) Baugröße II, 4000 A

e) Baugröße III, Schaltvermögen C

a) Frame Size I, 2000 A, breaking capacity H

b) Frame Size II, 3200 A

c) Frame Size II, breaking capacity C

d) Frame Size II, 4000 A

e) Frame Size III, breaking capacity C

Der Betreiber hat in Abhängigkeit von den Einsatzbedingungen des Schalters Inspektionsintervalle festzulegen:

- mindestes 1 x pro Jahr
- nach schweren Abschaltungen
- nach Auslösen des elektronischen Überstromauslösers
- nachgeschaltete Leistungstrennschalter sind ebenfalls zu prüfen

The switchgear operator has to determine inspection intervals depending on the breaker application conditions:

- min. 1 x per annum
- after interruption of heavy loads
- after trips by the overcurrent release (trip unit)
- down stream connected non-automatic circuit breakers have to be inspected as well

Im Rahmen der Inspektionen und/oder nach 1000 (500 bei 1150 V-Einsatz) Nennstromabschaltungen sind zu kontrollieren:
(max. Schaltspiele entsprechend Katalogangaben)

- Lichtbogenkammern und Kontaktsystem
- elektrische u. mechanische Funktionen des Schalters
- Funktion der mechanischen Ein- und Ausschaltung
- Haupt- und Steuerstromkreise, Funktion und Anschlüsse auf festen Sitz prüfen
- Einstellungen des elektronischen Überstromauslösers sind auf Plausibilität und entsprechend den Anlagenverhältnissen zu überprüfen, ggf. zu korrigieren

During the inspection and/or after 1000 (500 for 1150 V application) switching operations, the following items must be examined:
(max. operations see catalog)

- arc chutes and contact systems
- electrical and mechanical functionality of the breaker
- mechanical on- / off-functionality
- main and auxiliary circuits, function and connecting quality
- plausibility control of trip unit settings and correction, if necessary

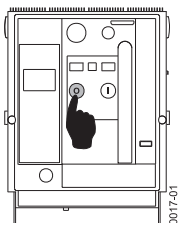
Lichtbogenkammerabdeckung am Einschubrahmen sind spätestens nach drei Kurzschlussabschaltungen des Leistungsschalters auszutauschen. Nach Erreichen der Lebensdauer ist die Entsorgung des Schaltgerätes/ ausgetauschter Teile gemäß den geltenden rechtlichen Bestimmungen durch den Betreiber zu veranlassen.

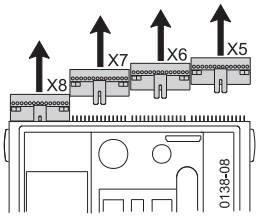
Draw-Out guide frames with arc-chute covers installed, have to be replaced after no more than three short-circuit interruptions of the circuit breaker. If the breaker endurance is exhausted, then the breaker and old spare parts need to be disposed off, according to the effective legal regulations.

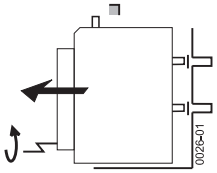
Je nach Zustand, spätestens jedoch nach 10 000 Schaltungen sind die Lichtbogenkammern und das Kontaktsystem zu erneuern.

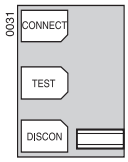
Ebenso kann es abhängig von der Beanspruchung des Leistungsschalters erforderlich sein, das Antriebssystem nach 10 000 Schaltungen auszutauschen.

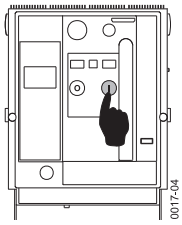
The arc chutes and the contact system must be replaced depending upon their condition, but latest after 10,000 switching operations.

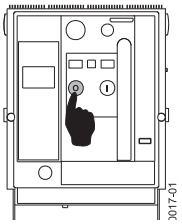


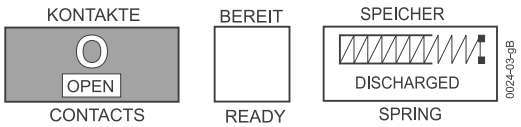












Depending on the circuit breaker stress it may also be necessary to replace the operating system after 10,000 switching operations.

24.1 Vorbereitung von Wartungsarbeiten

24.1.1 Schalter ausschalten und Federspeicher entspannen

24.1 Preparation for maintenance

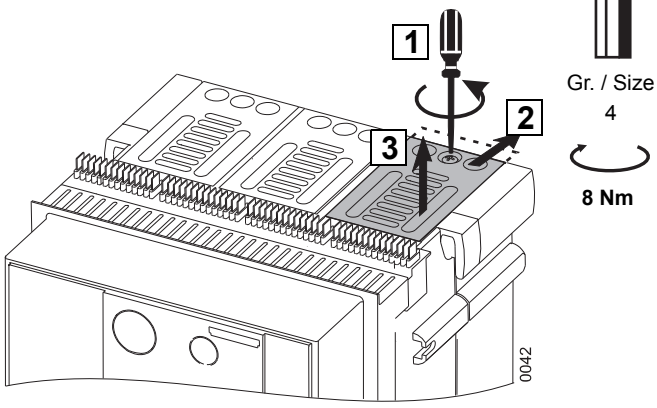
Opening cubicle door

Schalter in Wartungsstellung ziehen und entnehmen

Pull circuit breaker to maintenance position and remove

24.2 Lichtbogenkammern prüfen

24.2.1 Lichtbogenkammer ausbauen



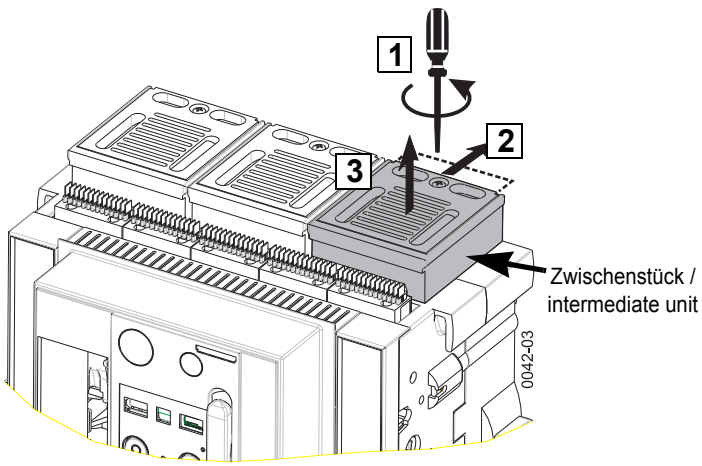
WARNUNG		WARNING
Vor Beginn der Arbeiten muss der spannungsfreie Zustand der Schaltanlage hergestellt und während der Arbeiten sichergestellt werden (gemäß EN 50 110-1, DIN VDE 0105-100 und BGV A2). Die fünf Sicherheitsregeln sind einzuhalten: - Freischalten - Gegen Wiedereinschalten sichern - Spannungsfreiheit feststellen - Erden und Kurzschließen - Benachbarte, unter Spannung stehende Teile abdecken oder abschranken Das Gerät ist vom Netz zu trennen.		Before beginning to work, de-energize the panel and secure the de-energized state during work (according to EN 50 110-1, DIN VDE 0105-100 and BGV A2). Observe the Five Safety Rules: - Disconnecting - Securing against reclosing - Checking safe insulation from supply - Earthing and short-circuiting - Covering or providing barriers to adjacent live parts Disconnect the equipment from the supply.

- Ausschalten und Federspeicher entspannen → (Seite 24-3)
- Einschubschalter in Wartungsstellung ziehen → (Seite 24-4)

- Switch off and discharge the storage spring → (page 24-3)
- Pull draw-out circuit breaker to maintenance position → (page 24-4)

VORSICHT		CAUTION
Bruchgefahr! Lichtbogenkammer nicht senkrecht auf die Isolierwände abstellen, sondern auf die Seite legen.		Risk of breaking! Do not place the arc chute vertically on the insulating walls, but lay it on the side.

U_e bis 690 V

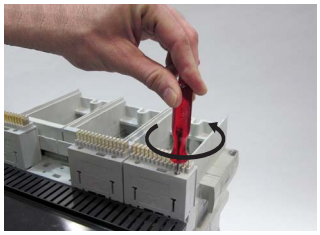


1 Schraube ca. 15 mm herausdrehen, nicht herausnehmen
2 Deckel zurückschieben
3 Lichtbogenkammer herausnehmen
(bei hoher Lichtbogenkammer mit Zwischenstück)

Baugröße I Einschubschalter mit hoher Lichtbogenkammer:

Vor der Entnahme der Zwischenstücke sind die Messerleistenadapter abzuschrauben und abzuziehen (siehe Bild).

U_e up to 690 V

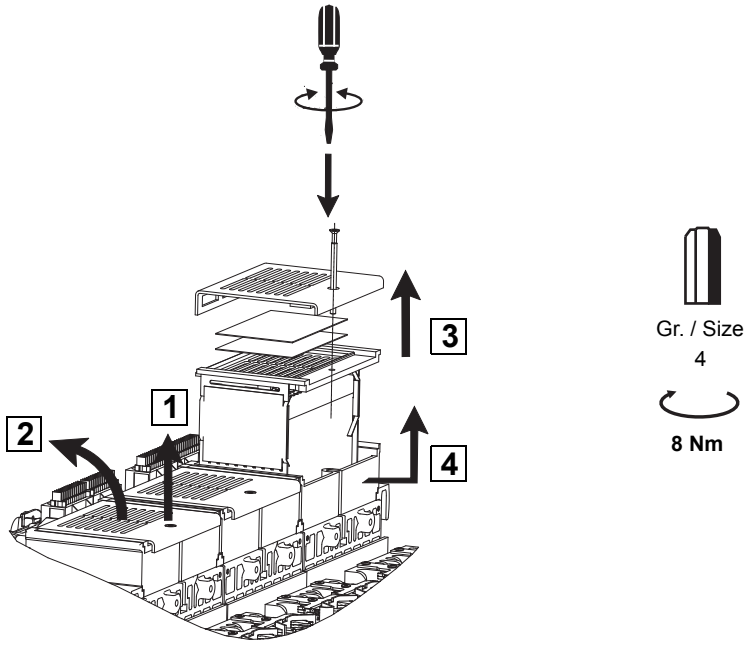


BG II Schaltvermögen C
BG I + II, U_e > 690 V

1 Loosen screw by approx. 15 mm, do not remove it
2 Push the cover back
3 Take out the arc chute
(for high arc chutes with intermediate unit)

Frame size I draw-out circuit breaker with high arc chute:

Before removing the intermediate unit, the receptacle adapters have to be unscrewed and pulled out (see picture).



PH 1

FS II breaking capacity C
FS I + II U_e > 690 V

BG III U_e = 1000 V oder Schaltvermögen C

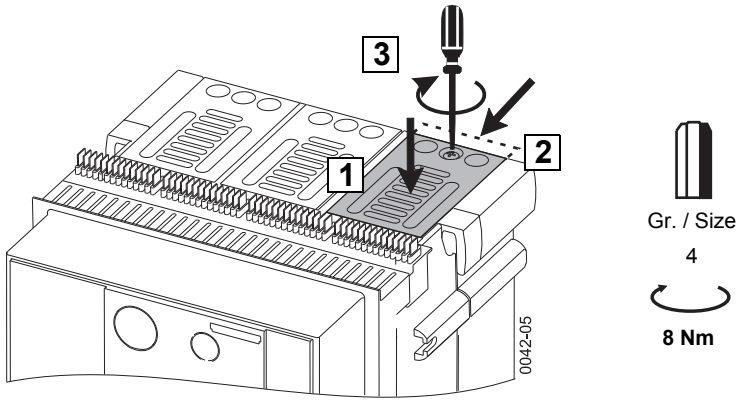
FS III U_e = 1000 V or breaking capacity C

WARNUNG		**WARNING**
Vor Beginn der Arbeiten muss der spannungsfreie Zustand der Schaltanlage hergestellt und während der Arbeiten sichergestellt werden (gemäß EN 50 110-1, DIN VDE 0105-100 und BGV A2). Die fünf Sicherheitsregeln sind einzuhalten: - Freischalten - Gegen Wiedereinschalten sichern - Spannungsfreiheit feststellen - Erden und Kurzschließen - Benachbarte, unter Spannung stehende Teile abdecken oder abschranken Das Gerät ist vom Netz zu trennen.		Before beginning to work, de-energize the panel and secure the de-energized state during work (according to EN 50 110-1, DIN VDE 0105-100 and BGV A2). Observe the Five Safety Rules: - Disconnecting - Securing against reclosing - Checking safe insulation from supply - Earthing and short-circuiting - Covering or providing barriers to adjacent live parts Disconnect the equipment from the supply.

1 Schraube herausdrehen
2 Blechdeckel anheben und abnehmen;
3 Lichtbogenkammer herausnehmen
4 Zwischenstück nach hinten schieben und herausnehmen

1 Unscrew the screw
2 Lift and remove the sheet metal cover
3 Remove the arc chute
4 Push back and remove the intermediate unit

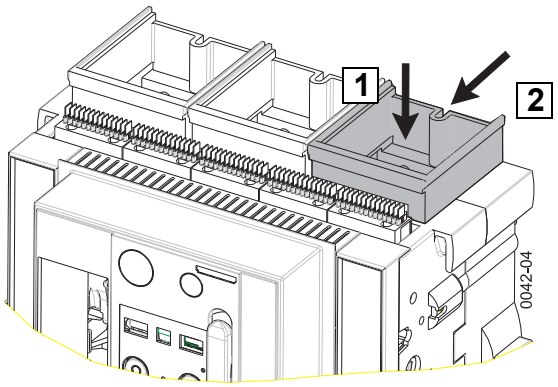
24.2.2 Sichtprüfung vornehmen



Bei starkem Verschleiß (Ausbrennungen an den Löschblechen) Lichtbogenkammern erneuern.

24.2.2 Visual inspection

In the case of heavy wear (burnout on arc splitter plates), replace the arc chutes.

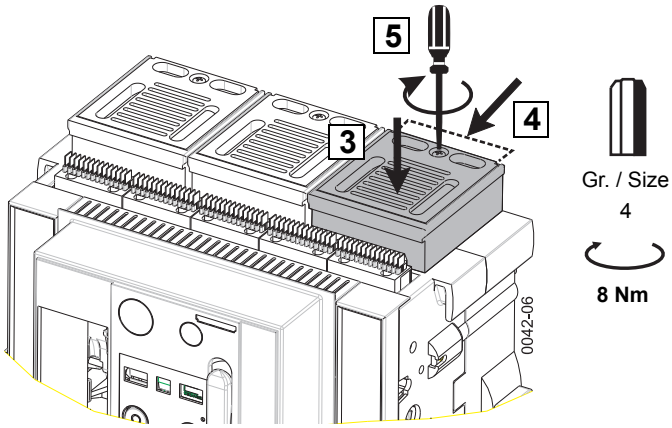


24.2.3 Lichtbogenkammer einbauen

U_e bis 690 V

1 Lichtbogenkammer einsetzen
2 Deckel vorschieben
3 Schraube festziehen

BG I + II mit U_e > 690 V
BG II Schaltvermögen C

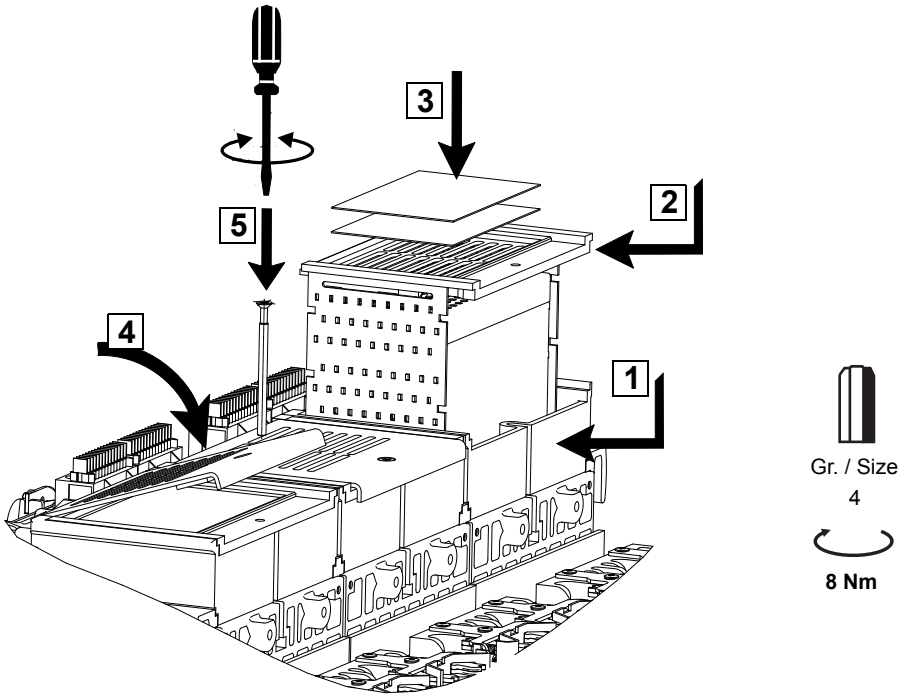


1 Zwischenstück einsetzen
2 Zwischenstück vorschieben
3 Deckel zurückschieben und Lichtbogenkammer einsetzen
4 Deckel vorschieben
5 Schraube festziehen
6 Wenn vorhanden, Messerleistenadapter aufsetzen und festschrauben → (Seite 24-5)

24.2.3 Installing arc chutes

U_e up to 690 V

1 Insert arc chute
2 Slide the cover into place
3 Tighten the screw



FS I and II with U_e > 690 V
FS II breaking capacity C

1 Install intermediate unit
2 Shift intermediate unit forward
3 Push cover back and insert arc chute
4 Slide the cover into place
5 Tighten the screw
6 If existent, put on the receptacle adapter and screw tight → (page 24-5)

BG III mit U_e = 1000 V oder Schaltvermögen C

FS III with U_e = 1000 V or breaking capacity C

1 Zwischenstück einsetzen und nach vorn schieben
2 Lichtbogenkammer einsetzen und Abdeckung nach vorn schieben
3 Siebe (2x) in Lichtbogenkammerabdeckung einlegen
4 Blechdeckel aufsetzen
5 Schraube einsetzen und festziehen

1 Install intermediate unit and push forward
2 Insert arc chute and push its cover towards the front
3 Insert sieve (2x) into arc chute cover
4 Apply sheet metal to cover
5 Tighten the screw

24.2.4 Bestellnummern

24.2.4 Order numbers

Spannung Voltage	Lichtbogenkammern für Baugröße ... Arc chutes for Frame size ...		Bestell-Nummer Order number
≤ 690 V	I		3WL9111-0AS01-0AA0
		Schaltvermögen H oder 2000 A / breaking capacity H or 2000 A	3WL9111-0AS07-0AA0
	II	Schaltvermögen N/S/H / breaking capacity N/S/H	3WL9111-0AS02-0AA0

1000 V 1150 V	II	Z=A05 / A15	3WL9111-0AS05-0AA0
	III	Z=A05	3WL9111-0AS06-0AA0

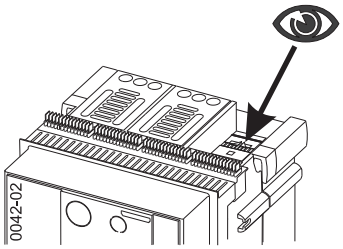
24.3 Kontaktabbrand prüfen

GEFAHR

Gefährliche elektrische Spannung!

Kann Tod, schwere Personenschäden sowie Schäden an Geräten und Ausrüstung bewirken.

Vor dem Arbeiten an diesem Gerät, Anlage unbedingt spannungsfrei schalten.



WARNUNG

Kann Tod oder Personenschäden verursachen.

Vor dem Entfernen jeglicher Abdeckungen oder des Bedienpults unbedingt die Speicherfeder des Leistungsschalters entspannen → (Seite 24-3)

- Ausschalten und Federspeicher entspannen → (Seite 24-3)
- Einschubschalter in Wartungsstellung ziehen → (Seite 24-4)
- Federspeicher per Hand spannen → (Seite 6-4)
- Einschalten → (Seite 6-6)
- Lichtbogenkammer ausbauen → (Seite 24-5))

(1) Anzeigestift
(2) Anzeigestift sichtbar
(3) Anzeigestift nicht mehr sichtbar

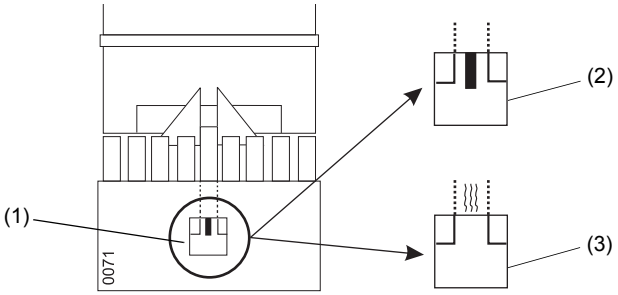
Ist der Anzeigestift nicht mehr sichtbar, muss das Kontaktsystem ausgetauscht werden. Für die Sichtprüfung bei Festeinbauschaltern ggf. einen Spiegel zu Hilfe nehmen.

24.3 Checking contact erosion

DANGER

Hazardous voltage!

Will cause death, serious personal injury, or equipment / property damage.



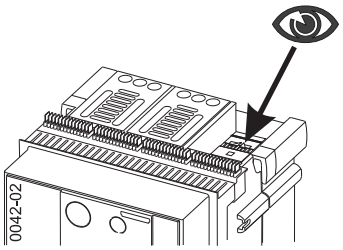
Disconnect power before working on this equipment.

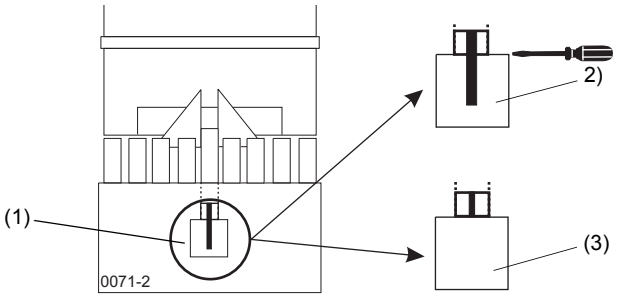
WARNING

May result in death or serious injury.

Discharge storage spring before removing barriers / covers → (page 24-3).

- Switch off and discharge the spring storage → (page 24-3)
- Move the circuit breaker into the maintenance position in the cradle → (page 24-4)
- Charge the storage spring manually → (page 6-4)
- Close → (page 6-6))
- Remove arc chutes → (page 24-5)





(1) Indicator pin
(2) Indicator pin is visible
(3) Indicator pin is no longer visible

If the indicator pin is no longer visible, the contact system must be replaced. For the visual inspection of fixed-mounted circuit breakers, use a mirror if required.

24.3.1 Verschleißanzeige justieren

- Federspeicher per Hand spannen → (Seite 6-4)
- Einschalten → (Seite 6-6)

(1) Anzeigestift
(2) Anzeigestift ungekürzt
(3) Anzeigestift justiert

Den Anzeigestift (Kunststoff) entlang der oberen Kante der großen Aussparung kürzen. Einen Schraubendreher zum abscheren benutzen.

Ist der Anzeigestift nicht mehr sichtbar, muss das Kontaktsystem ausgetauscht werden.

24.3.1 Adjusting the contact wear indicator

- Charge the storage spring manually → (page 6-4)
- Close → (page 6-6))

(1) Indicator pin
(2) Indicator pin before adjusting
(3) Indicator pin adjusted

Cut the plastic indicator pin along the upper edge of the big recess, using a screwdriver as cutter.

If the indicator pin is no longer visible, the contact system must be replaced.

24.4 Strombahnen wechseln

Bei folgenden Leistungsschaltern dürfen die Strombahnen nur durch den Hersteller ausgetauscht werden:
BG I Schaltvermögen H,
BG I 2000 A,
BG I 690 V(+20%),
BG I 1000 V,
BG II Schaltvermögen C,
BG III Schaltvermögen C!

GEFAHR

Beim Betrieb elektrischer Geräte stehen zwangsläufig bestimmte Teile dieser Geräte unter gefährlicher Spannung.
Unsachgemäßer Umgang mit diesen Geräten kann deshalb zu Tod oder schweren Körperverletzungen sowie erheblichen Sachschäden führen.

Beachten Sie daher bei Instandhaltungsmaßnahmen an diesem Gerät alle in diesem Kapitel und auf dem Produkt selbst aufgeführten Hinweise.
Die Instandhaltung darf nur durch entsprechend qualifiziertes Personal erfolgen.
Vor Beginn der Arbeiten muss der spannungsfreie Zustand der Schaltanlage hergestellt und während der Arbeiten sichergestellt werden (gemäß EN 50 110-1, DIN VDE 0105-100 und BGV A2).
Die fünf Sicherheitsregeln sind einzuhalten:
- Freischalten
- Gegen Wiedereinschalten sichern
- Spannungsfreiheit feststellen
- Erden und Kurzschließen
- Benachbarte, unter Spannung stehende Teile abdecken oder abschranken

Das Gerät ist vom Netz zu trennen.
Es dürfen nur vom Hersteller zugelassene Ersatzteile verwendet werden.
Die vorgeschriebenen Wartungsintervalle sowie die Anweisungen für Reparatur und Austausch sind unbedingt einzuhalten, um Schäden an Personen und Anlagen zu vermeiden.

- Ausschalten und Federspeicher entspannen → (Seite 24-3)
- Schalter aus dem Einschubrahmen entnehmen → (Seite 24-4)
- Festeinbauschalter ausbauen

24.4.1 Bedienpult abnehmen

24.4 Replacing internal contact assemblies

For the circuit breakers listed below the internal contact assemblies may be replaced by the manufacturer only:
FS I breaking capacity H,
FS I 2000 A,
FS I 690 V(+20%),
FS I 1000 V,
FS II breaking capacity C,
FS III breaking capacity C!

DANGER

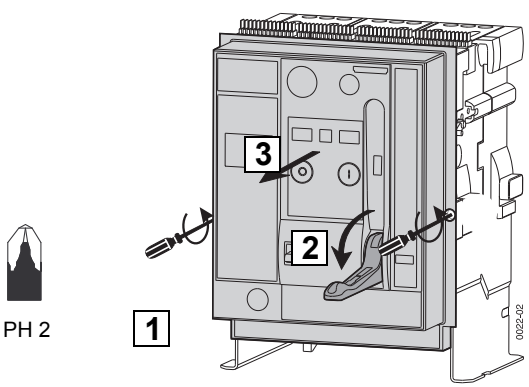
Hazardous voltages are present in this electrical equipment during operation.

Failure to properly maintain the equipment can result in death, severe personal injury or substantial property damage.

The instructions contained in this chapter and on product labels have to be followed.

Maintenance shall be performed only by qualified personnel.

Before beginning to work, de-energize the panel and secure the de-energized state during work (according to EN 50 110-1, DIN VDE 0105-100 and BGV A2).



Observe the Five Safety Rules.
- Disconnecting
- Securing against reclosing

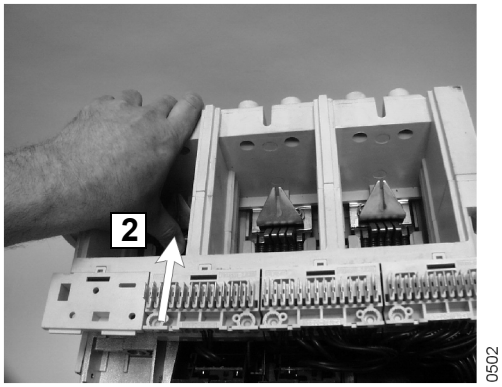
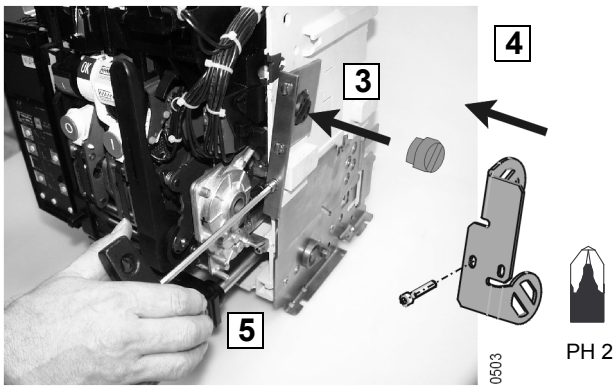
→ (Seite 24-5)



24.4.3 Strombahnen ausbauen

Schaltwellenhalter anbauen bei BG I und II



VORSICHT	CAUTION
Schaltwelle mit Schaltwellenhalter arretieren! Sonst wird das Antriebssystem dejustiert und Reparatur in Siemens-Fachwerkstatt erforderlich.	Block main shaft with main shaft retainer! Otherwise the operating system will be de-adjusted and it will be necessary to have it repaired in a Siemens workshop.

1 Abdeckkappe entfernen
2 Kontakte zusammendrücken und halten

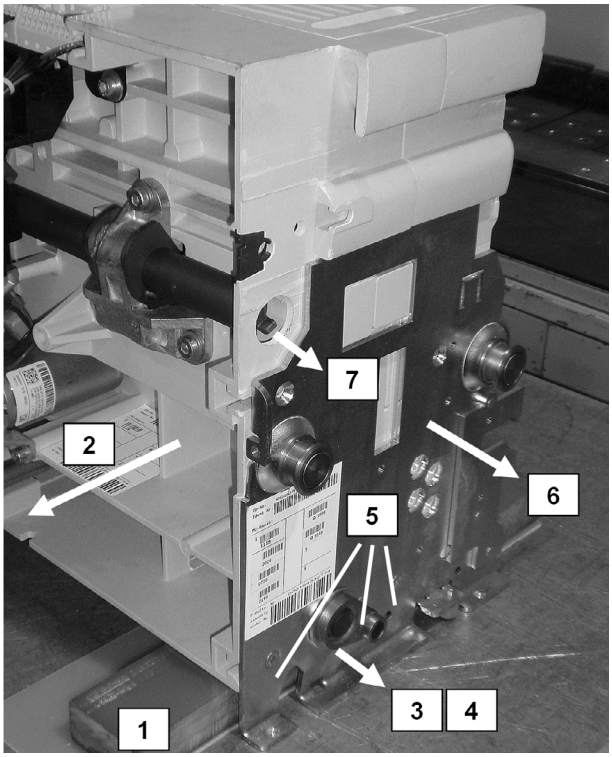
1 Remove cover
2 Press contacts together and hold them

PH 2

3 4 5 Schaltwellenhalter ansetzen und befestigen

3 4 5 Mount and fix main shaft support

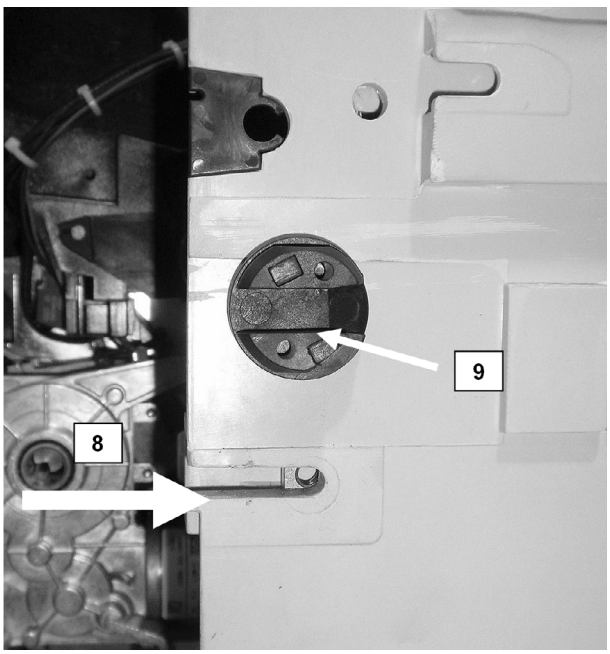
24.4.2 Remove arc chutes



→ (page 24-5)

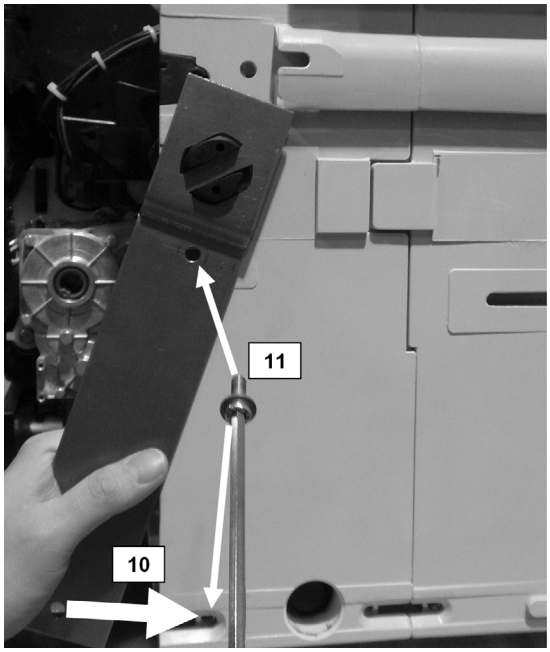
24.4.3 Removing pole assemblies

Mounting main shaft retainer for FS I and II

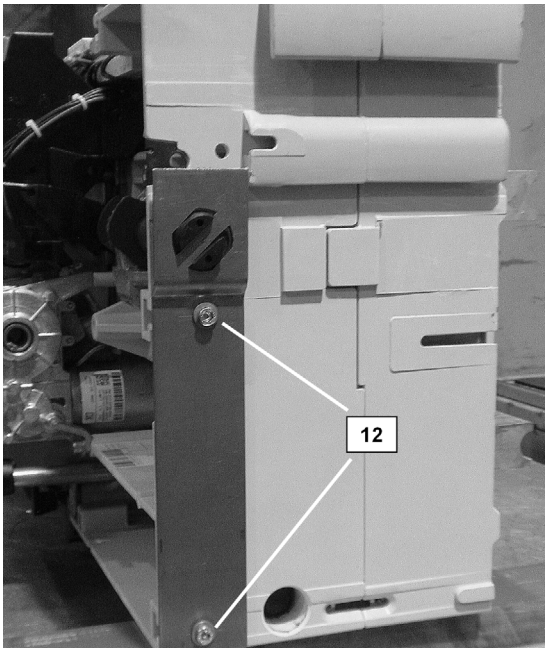


Schaltwellenhalter anbauen bei BG III

Mounting main shaft retainer for FS III



1 Schalter mit geeigneter Unterlage gegen Umfallen sichern
2 Bedienpult demontieren
3 Sicherungsring entfernen
4 Kurbel abnehmen
5 Schrauben herausdrehen
6 Schalterfuß abnehmen
7 Abdeckkappe entfernen



1 Secure circuit breaker with suitable support against tipping over
2 Dismount front panel
3 Remove retaining ring
4 Remove crank
5 Loose and remove screws
6 Remove circuit breaker foot
7 Remove cover

8 Einlegemutter in das Gehäuse schieben
9 Kupplung auf die Schaltwelle drücken

8 Put the insert nut into the front housing
9 Push the clutch onto the main shaft

10 Hilfswerkzeug auf Kupplung stecken und in vertikale Position drehen
11 Hilfswerkzeug mit Schrauben M6x20 an den gezeigten Positionen fixieren
12 Beide Befestigungspunkte zur Fixierung des Hilfswerkzeuges

10 Put the auxiliary tool on the clutch and rotate it into a vertical position
11 Fix the auxiliary tool with screws M6x20 at the shown positions
12 Both fastening points to fix the auxiliary tool

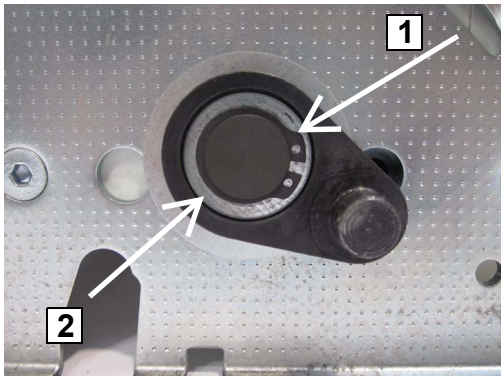
HINWEIS

Zum Lösen der Schaltwelle die Schritte 1 bis 12 in umgekehrter Reihenfolge ausführen.

Anziehdrehmoment:

Schalterfuß = 10 Nm
Bedienpult = 2,5 Nm

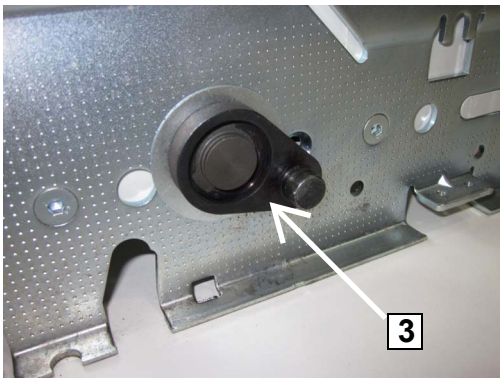
NOTICE



To release the main shaft, please perform steps 1 to 12 in reverse order.

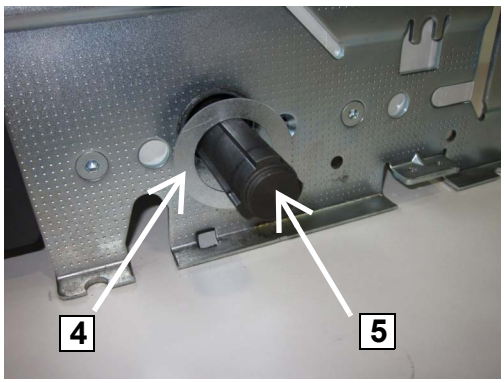
Tightening torque:

Circuit Breaker foot = 10 Nm
Front panel = 2.5 Nm



Nur für Einschubschalter:
Einfahrwelle ausbauen

For draw-out circuit breaker only:
Removing racking shaft

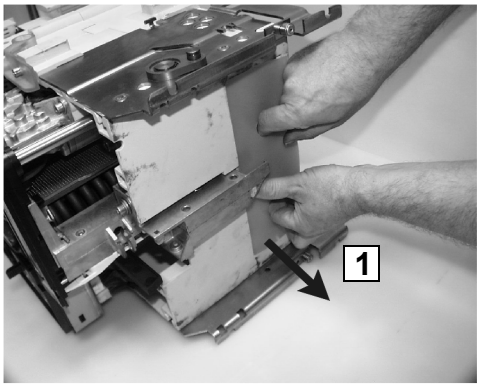


1 Sicherungsring entfernen
2 Wenn vorhanden, Ausgleichsscheibe Ø 30,1 x Ø 45 x 0,5 entnehmen

1 Remove retaining ring
2 If existent, remove spacer washer Ø 30,1 x Ø 45 x 0,5

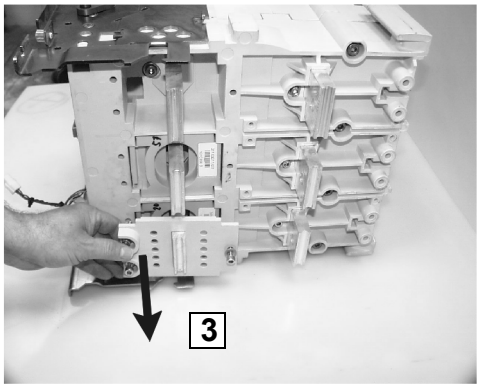
3 Kurbel abnehmen

3 Remove crank



4 Wenn vorhanden, Stützscheiben Ø 17,2 x Ø 26 x entnehmen
5 Einfahrwelle herausziehen

4 If existent, remove supporting washer Ø 17,2 x Ø 26 x ...

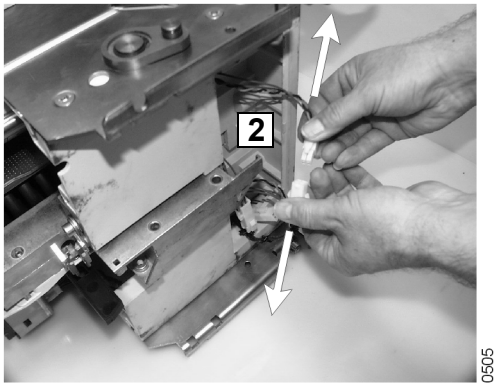


5 Pull out racking shaft

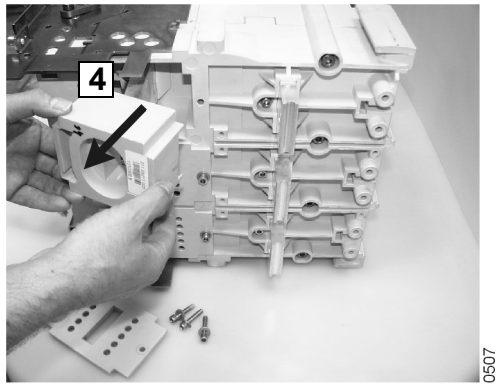
Wandler ausbauen

Schalter auf die Seite legen

1 Kabelkanalabdeckung abnehmen
2 Steckverbindungen trennen



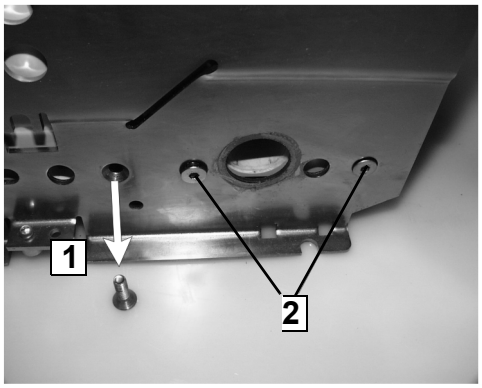
Gr. / Size
5



3 Wandlerabdeckungen abschrauben
4 Wandler entnehmen

Removing current transformers

Lay circuit breaker on the side



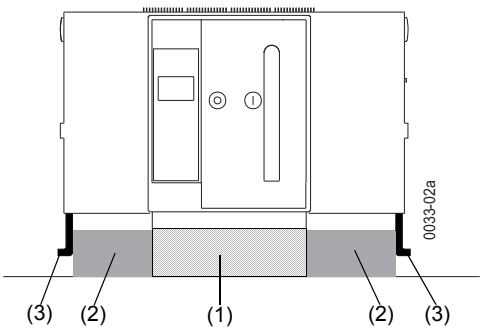
1 Remove cover of cable duct
2 Detach connectors

3 Remove current transformer covers
4 Remove current transformers

Baugröße I und II: Schalterfüße lösen

Frame size I and II: unfix the circuit breaker feet

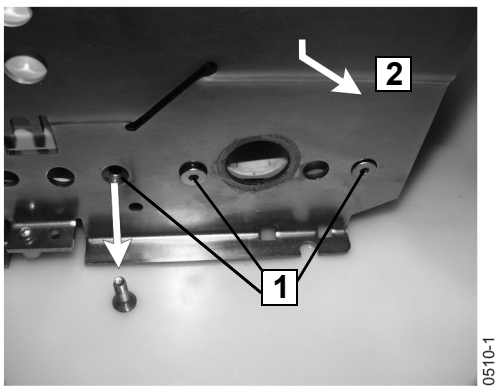
Gr. / Size
4



1 Schalter aufrichten, Schraube entfernen
2 Diese Schrauben nur lösen!
Baugröße I: nur 1 Schraube vorhanden

1 Place circuit breaker in upright position, remove screw
2 Loosen these screws only!
Frame size I: there is only one screw

Baugröße III: Schalterfüße abbauen

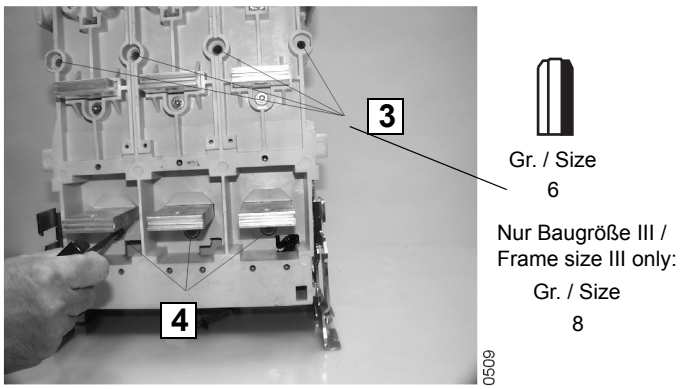


Frame size III: Remove circuit breaker feet

VORSICHT	CAUTION
Vor dem Entfernen der Schrauben Schalter auf geeignete Auflage stellen, sodaß die Füße entlastet sind.	Before removing the screws put the breaker on a suitable support plate to make shure that circuit breaker feet are free.

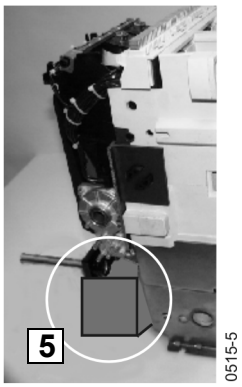
(1) Frei zu lassender Bereich
(2) Geeignete Unterlage
(3) Schalterfüße

1 Schrauben entfernen
2 Schalterfüße abnehmen

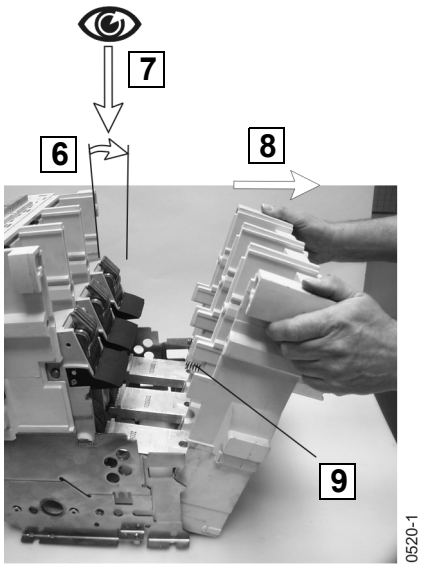


(1) Space to be left free
(2) Suitable support
(3) Circuit breaker feet

1 Remove screws
2 Remove circuit breaker feet



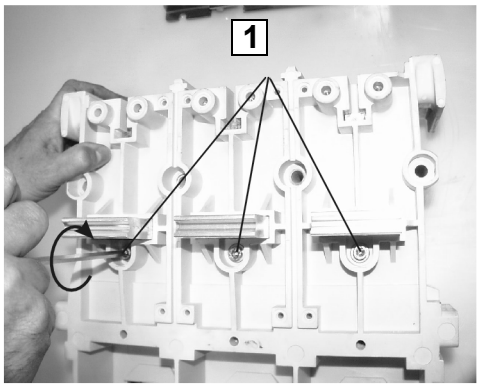
Rückwand abbauen



Removing rear wall

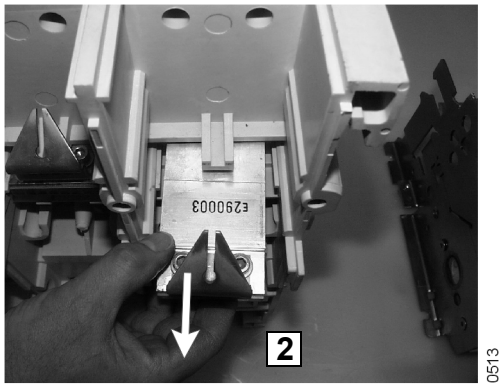
3 Schrauben oben entfernen
4 Schrauben unten entfernen

3 Remove upper screws
4 Remove lower screws



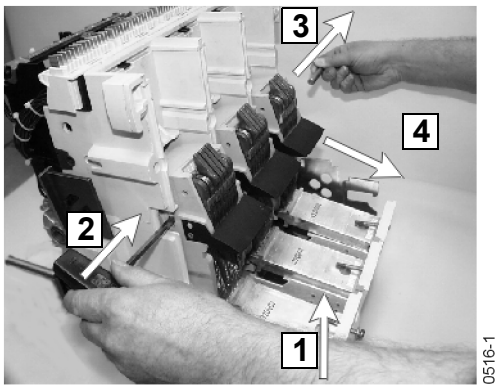
5 Schalter abstützen
6 Rückwand vorsichtig etwas abziehen, bis Endlagenhaltefedern sichtbar
7 Position der Endlagenhaltefedern merken
8 Rückwand abnehmen
9 Endlagenhaltefedern entnehmen

5 Support circuit breaker
6 Draw off rearwall carefully until the endposition retaining springs appear
7 Note the position of the end position retaining springs
8 Draw off rearwall
9 Remove end position retaining springs



Obere Festkontakte ausbauen

1 Schrauben und Muttern entfernen
2 Festkontakt herausziehen

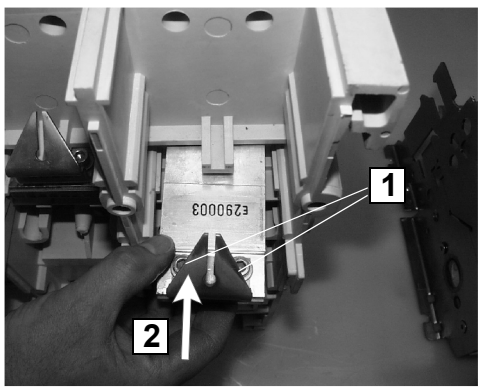


Removing upper fixed contacts

1 Remove bolts and nuts
2 Remove fixed contact

Untere bewegliche Kontakte ausbauen

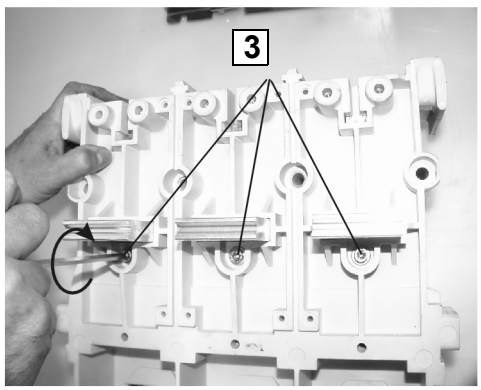
1 Anschluss-Schienen abstützen
2 Koppelbolzen herausdrücken
3 Koppelbolzen entnehmen
4 Strombahnen abnehmen



Removing lower moving contacts

1 Support connecting bars
2 Push out coupling bolt
3 Take coupling bolt out
4 Remove pole assemblies

24.4.4 Strombahnen einbauen



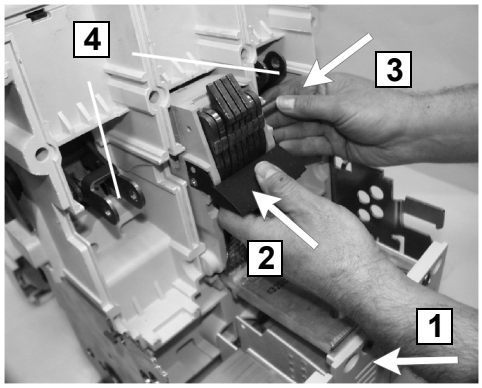
Obere Festkontakte in Rückwand einbauen

1 **Nur Baugröße I**: Schrauben der Leithörner lösen
2 Kontakt einsetzen und Vierkantmutter in Ausnehmung einlegen
3 Kontakte befestigen;
Schrauben der Leithörner mit 10 Nm nachziehen;
Nur Baugröße I: Leithorn andrücken und mit 15 Nm festziehen

24.4.4 Installing pole assemblies

Installing upper fixed contacts in rear wall

1 **Only frame size I**: Undo screws of guide horns
2 Mount contact and insert square nut in recess
3 Fix contacts
Re-tighten screws of guide horns with 10 Nm;
Only frame size I: press guide horn tight and tighten with 15 Nm



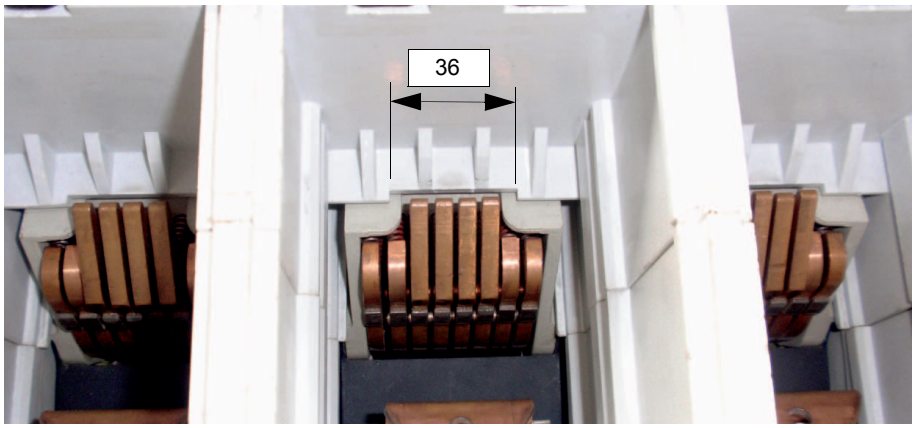
Untere bewegliche Kontakte einbauen

Lagerstellen und Koppelbolzen vor dem Zusammenbau reinigen und fetten. (Fett: Isoflex Topas NB 52, Fa. Klüber Lubrication München SE & Co. KG)

Installing lower moving contacts

Clean and grease bearings and coupling bolts before assembly. (Grease: Isoflex Topas NB 52, Co. Klüber Lubrication München SE & Co. KG)

1 Anschluss-Schienen abstützen
2 Mittlere Strombahn ansetzen
3 Koppelbolzen einschieben
4 Äußere Strombahnen anbauen



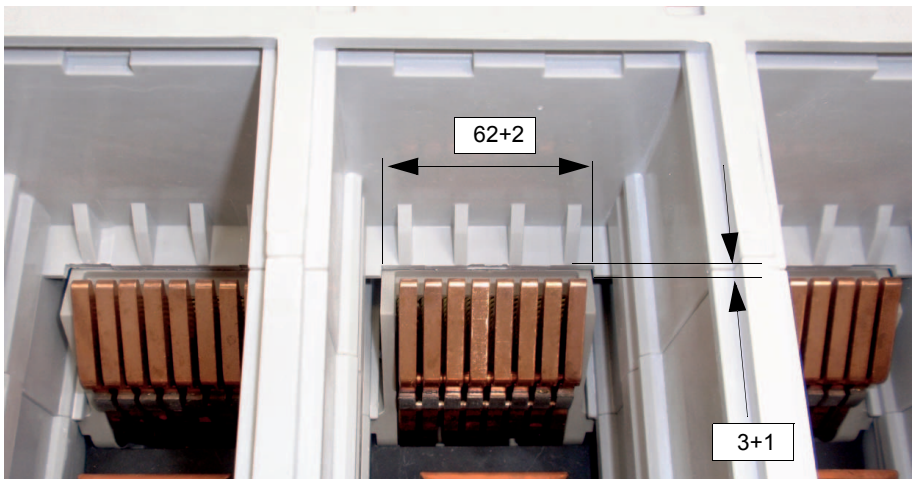
1 Mount supports for connecting bars
2 Mount central pole assembly
3 Insert coupling bolt
4 Mount external pole assemblies

Beim Wechseln von Strombahnen der BG I (3 / 4-pol) vor dem Fertigungszeitpunkt Aug.2003 ist an der Gehäusevorderwand die Ausnehmung entsprechend der Abbildung zu vergrössern

Gehäuse **alter Bauart** mit kurzen Kontakthebeln

In order to replace the current path of the FS I (3 / 4-pole) before production date Aug. 2003 the cutout on the front housing needs rework according to the image.

Old stile housing with short contact levers

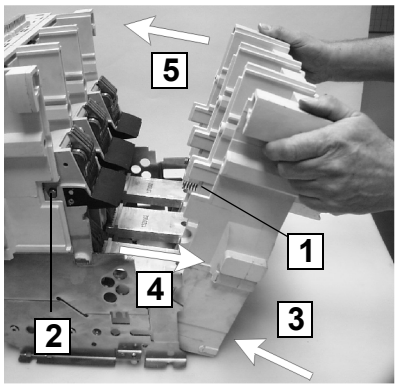


Aussparung von 36 mm auf 62+2 mm nacharbeiten.

Gehäuse **neuer Bauart** mit langen Kontakthebeln

Rework the cutout from 36 mm to 62+2 mm.

Housing in **new stile** with long contact levers



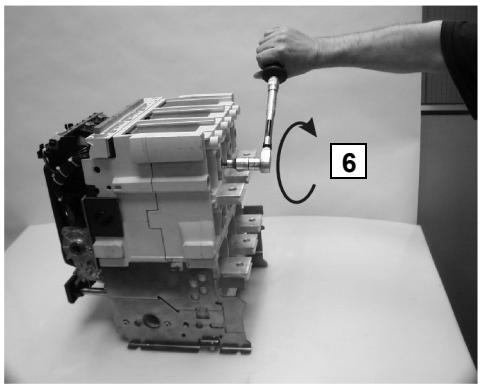
Rückwand anbauen

(Vorher Abstützungen der Strombahnen entfernen.)

ACHTUNG	NOTICE
Leitungen des Wandlerkabelbaumes nicht einklemmen!	Do not pinch the cables of the transformer cable harness!

1 Endlagenhaltefedern einsetzen
2 Auf mittigen Sitz der Koppelbolzen achten
3 Rückwand ansetzen
4 Anschluss-Schienen einführen
5 Rückwand mit Schaltergehäuse zusammenführen

Installing rear wall



(First, remove supports for pole assemblies)

1 Insert end position retaining springs
2 Inspect to ensure that the coupling bolts are centered
3 Attach rear wall
4 Insert connecting bars
5 Place rear wall and circuit breaker housing together

Baugröße I / II
Frame size I / II:

Oben / Upper
18 Nm
Gr. / Size 6

Unten / Lower
12 Nm
Gr. / Size 6

Baugröße III /
Frame size III:

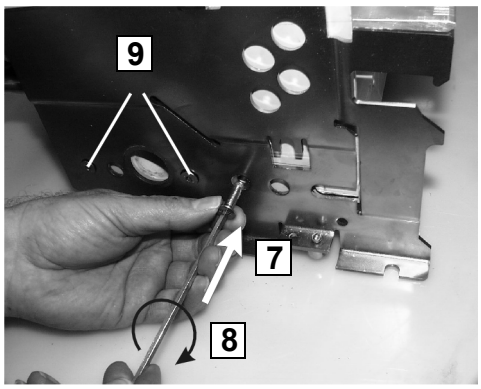
Oben / Upper
25 Nm
Gr. / Size 8

Unten / Lower
18 Nm
Gr. / Size 6

6 Erst unten verschrauben, beginnend in der Mitte; kurze Schrauben unten, lange Schrauben oben

6 Screw tight at the bottom first, starting in the middle; short screws lower, long screws upper

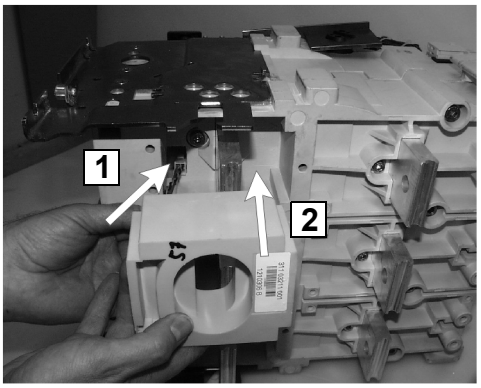
Funktionsprobe:



Die Kontakte müssen sich vollständig zusammendrücken lassen und selbsttätig in ihre Ausgangslage zurückkehren. Anderenfalls Rückwand lösen und korrekten Sitz der Endlagenfedern überprüfen.

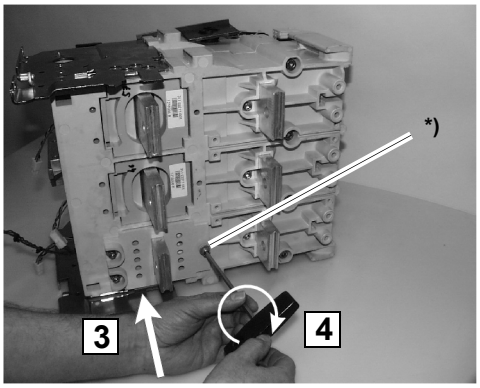
Function test:

It must be possible to press the contacts completely together, and they must return independently to their original position. If this is not the case, loosen the rear wall and check that the end position retaining springs are properly in place.



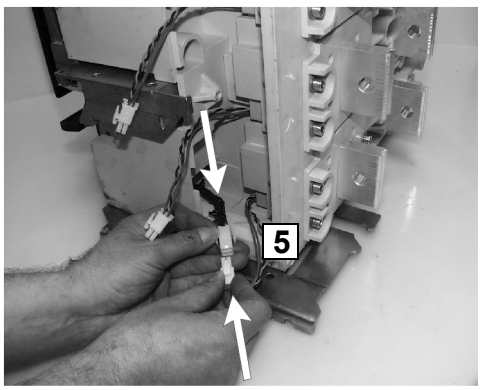
Schalterfüße anbringen

Attaching the circuit breaker feet



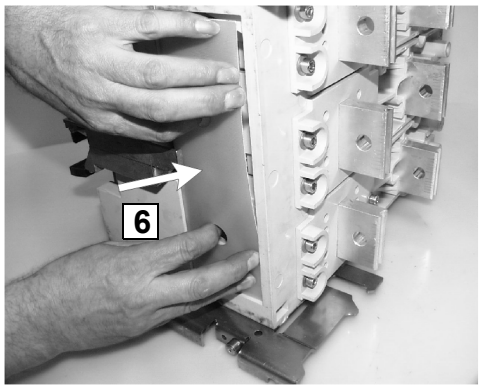
Gr. / Size 4
10 Nm

Wandler einbauen



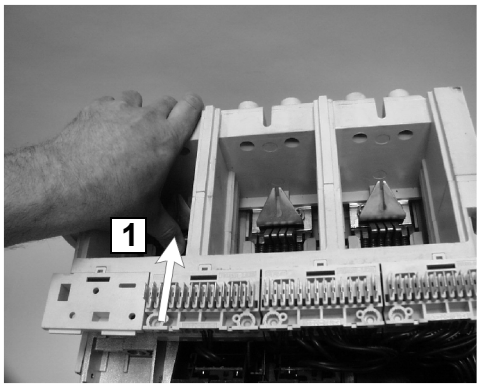
1 Schalter auf die Seite legen, Anschlussleitung einführen
2 Wandler einsetzen
3 Wandlerabdeckungen aufsetzen
4 Mit Schrauben befestigen
***) Selbstschneidende Schraube nur 5 Nm**

Installing current transformers



1 Lay circuit breaker on its side, insert connecting wire
2 Insert current transformer
3 Fit transformer covers
4 Fasten the screws
***) self tapping screw 5 Nm only**

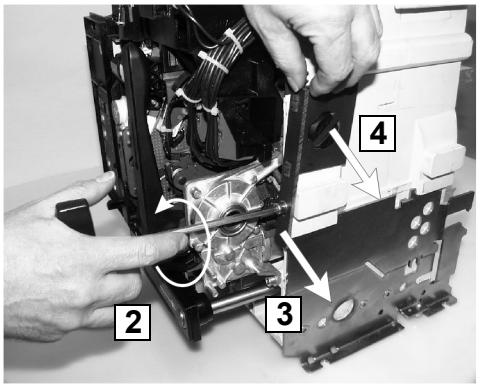
VORSICHT	**CAUTION**
Beim Verwenden selbstschneidender Schrauben Gewindegänge nicht zerstören! Schraube wie folgt eindrehen: - Schraube ansetzen - von Hand entgegen dem Uhrzeigersinn drehen, bis sich Gewindegänge treffen - eindrehen - mit Drehmomentenschlüssel auf 5 Nm festziehen	**When using self-tapping screws, do not damage existing threads!** Tightening of the screw: - insert screw - rotate the screw counter-clockwise by hand until the thread fits - tighten by hand till snug - tighten to a torque of 5 Nm



5 Steckverbindungen herstellen
6 Kabelkanalabdeckung anbringen

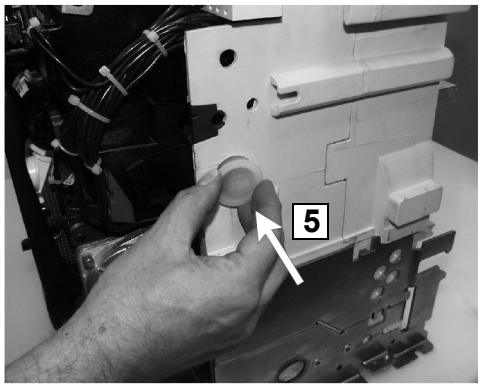
5 Establish plug connections
6 Mount cable duct covers

VORSICHT	**CAUTION**
Die Vollständigkeit und der feste Sitz der Steckverbindungen ist zu gewährleisten! Dies ist nur bei richtigem Kontakt der Steckverbindungen gegeben.	**The completeness and reliable seat of plug and socket connection has to be ensured!** The protective function of the circuit breaker depends on a good contact of the plug and socket connection.



Schaltwellenhalter abbauen

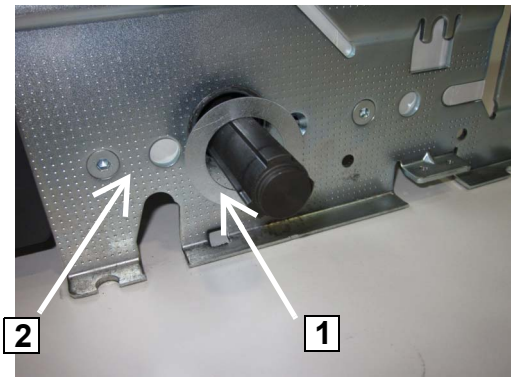
1 Schalter aufrichten, Kontakte zusammendrücken und halten



2 Schaltwellenhalter abschrauben
3 Schaltwellenhalter abnehmen
4 Kupplung abnehmen

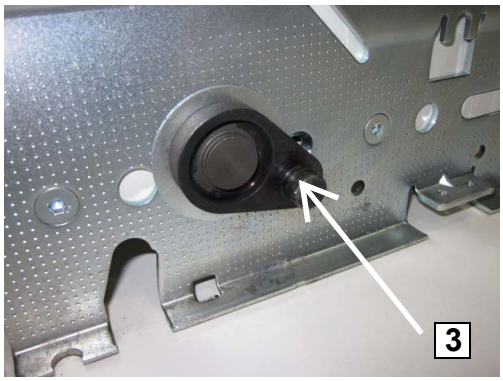
Removing main shaft retainer

PH 2



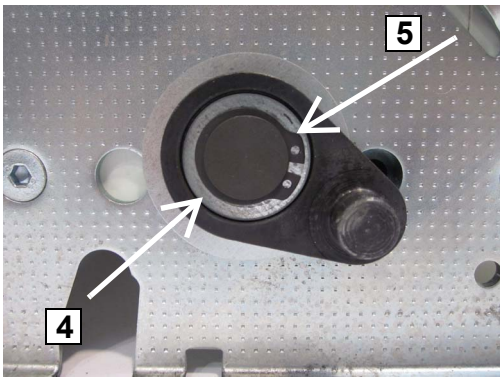
1 Place circuit breaker in an upright position, press and hold the contacts together
2 Unscrew the main shaft retainer
3 Remove the main shaft retainer
4 Remove the coupling

5 Abdeckkappe aufstecken



5 Attach the cover

Nur für Einschubschalter:
Einfahrwelle einbauen



1 Einfahrwelle einschieben
2 Wenn vorhanden, Ausgleichsscheibe Ø 30,1 x Ø 45 x 0,5 einsetzen
3 Kurbel aufsetzen

For draw-out circuit breaker only:
Installing racking shaft

1 Insert racking shaft
2 If existing, insert spacer washer Ø 30,1 x Ø 45 x 0,5

3 Fit crank

4 Wenn vorhanden, Stützscheiben Ø 17,2 x Ø 26 x ... einsetzen

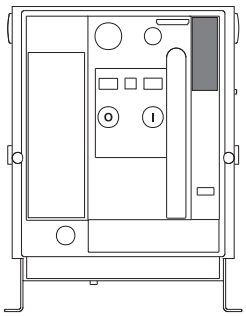
5 Kurbel mit Sicherungsring DIN 471-17x1 sichern

4 If existing, insert supporting washer Ø 17,2 x Ø 26 x ...

5 Secure crank with retaining ring DIN 471-17x1.

24.4.5 Bestellnummern

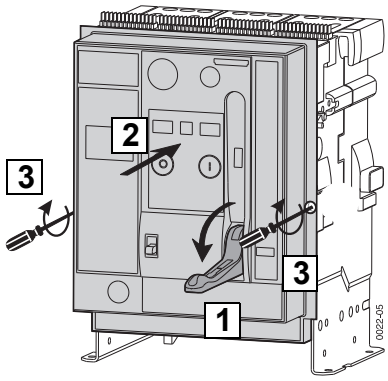
Strombahn für einen Hauptkontakt:



24.4.5 Order numbers

Pole assembly for a single main contact

Baugröße **Frame size**	**Max. Bemessungsnennstrom** **Max. circuit breaker rated current** **$I_{n\ max}$ (A)**	**Ausschaltvermögen bei 440 V** **Rated breaking capacity at 440 V** **I_{cu} (kA)**	**Bestell-Nummer** **Order number**	**PKG** **PS**
I	1000 / 1250 / 1600	50 / 65	3WL9111-0AM9**0** L1Y [1)]	1 st 1 pc
II	2000	55 / 80 / 100	3WL9111-0AM9**1** L1Y [1)]	1 st 1 pc
	2500 / 3200 / 4000	55 / 80 / 100	3WL9111-0AM9**2** L1Y [1)]	1 st 1 pc
III	4000 / 5000 / 6300	100	3WL9111-0AM9**3** L1Y [1)]	1 st 1 pc



1) Bitte bei Bestellung Ident.-Nr. des Leistungsschalters in Klartext angeben.

1) Please give also Ident-no. of the circuit breaker when ordering.

Hinweis		**Note**
Ersatzstrombahnen können nur über die oben genannte Bestellnummern mit zusätzlicher Angabe der Identnummer des zu wartenden Leistungsschalters bestellt werden! Die Identnummer befindet sich auf dem Typschild oben rechts am Bedienpult. Die Anzahl der benötigten Ersatzstrombahnen entspricht der Polzahl des zu wartenden Leistungsschalters.		Spare parts of pole assemblies will be ordered by means of the order numbers given in the table above in conjuction with the ID-No. of the circuit breaker which needs a maintenance of pole assemblies! The ID-No. is stated on the type label located on the right side of the front cover. The number of spare parts required is equivalent to the number of poles.

24.4.6 Bedienpult aufsetzen

24.4.7 Mechanische Funktionsprüfung

- Federspeicher per Hand spannen → (Seite 6-4)
- Einschalten → (Seite 6-6)
- Ausschalten → (Seite 6-6)

24.4.8 Lichtbogenkammern einbauen

→ (Seite 24-7)

24.5 Antriebssystem austauschen

Der Austausch des Antriebssystem des Leistungsschalters ist von Siemens-Fachpersonal durchzuführen.

24.4.6 Attaching the front panel

24.4.7 Mechanical function test

- Charge the storage spring manually → (page 6-4)
- Close → (page 6-6)
- Switch off → (page 6-6)

24.4.8 Installing the arc chutes

→ (page 24-7)

24.5 Replacing operating system

The circuit breaker system must be replaced by Siemens after sales service specialists.

25 Entsorgung

25.1 Entsorgung von Niederspannungs-Leistungsschaltern

Siemens Niederspannungs-Leistungsschalter sind umweltverträgliche Erzeugnisse, die überweigend aus recycle-fähigen Materialien bestehen.

Zur Entsorgung empfehlen wir die Demontage/Trennung in folgende Werkstoff-Fraktionen:

- **Metalle:**
  zur Weitergabe als Misch-Schrott an den Verwerter
- **Kunststoffe:**
  Entsorgung als Gewerbeabfall zur thermischen Verwertung
- **Elektronik, isolierte Kabel, Motore:**
  Recycling über Elektroschrott-Entsorger

Aufgrund der langen Lebensdauer der Siemens Niederspannungs-Leistungsschalter sind die Entsorgungshinweise bei Außerbetriebnahme möglicherweise nicht mehr aktuell oder nationale Regelungen sehen andere Entsorgungswege vor.

Die örtlichen Kundendienststellen stehen für die Beantwortung von Entsorgungsfragen jederzeit zur Verfügung.

25 Disposal

25.1 Low-voltage circuit breakers disposal

Siemens low-voltage circuit breakers are environmentally friendly products, which predominantly consist of recyclable materials.

For disposal, we recommend disassembly and separation into the following material components:

- **Metals:**
  to be transferred as mixed scrap metal to the recycling company
- **Plastics:**
  disposal as commercial waste for thermal recycling
- **Electronics, insulated cables, motors:**
  recycling via electronics scrap disposal company

Caused by the long lifetime of Siemens low-voltage circuit breakers, the disposal guidelines may be inaccurate or replaced by other national regulations when taking the breakers out of service.

The local customer service is available at any time to answer disposal-related questions.

26 Abkürzungen

A	Einstellwert Erdschlussschutz
A 1/2	Ausgangsinformation 1/2 (Gegenseitige mechanische Schalterverriegelung)
AC	Alternating current = Wechselstrom
AMP	AMP Incorporated, Harrisburg
ANSI	Standardisierungs Organisation in den USA
AWG	Amerikanische Leiterquerschnittsgrößen
B	Einstellwert Erdschlussschutz
BDA	Breaker Data Adapter
BG	Baugröße
BSS	Breaker Status Sensor
C	Einstellwert Erdschlussschutz
CC	Closing coil, Einschaltmagnet
COM15	Kommunikationsmodul
COMM.	Kommunikation
CONNECT	Betriebsstellung
CSA	Canadian Standards Association (Prüforganisation)
CT	Stromwandler
CUB -	**Cubicle**BUS - Anschluss, **-**
CUB +	**Cubicle**BUS - Anschluss, **+**
D	Einstellwert Erdschlussschutz
(D)	Duty cycle → ED (Einschaltdauer)
DC	Direct current = Gleichstrom
DIN	Deutsches Institut für Normung e.V.
DISCON	Trennstellung
E	Einstellwert Erdschluss-Schutz
E 1/2	Eingangsinformation 1/2 (Gegenseitige mechanische Schalterverriegelung)
ED	Einschaltdauer
EGB	Elektrostatisch gefährdetes Bauelement englisch: → ESD
EN	Europäische Norm
(ESD)	(Electrostatic-sensitive device) → EGB (Elektrostatisch gefährdetes Bauelement)
ETU	Electronic trip unit = Elektron. Überstromauslöser
EXTEND.	Erweiterte Schutzfunktion
F1	Erster Spannungsauslöser
F2	Zweiter Spannungsauslöser
F3	Unterspannungauslöser → (11-3)
F4	Unterspannungauslöser mit Verzögerung → (11-3)
F5	Auslösemagnet
F7	Fern-Rücksetzmagnet

26 Abbreviations

A	Set current for ground-fault protection
A 1/2	Output information 1/2 (Mutual mechanical interlocking)
AC / a.c.	Alternating current
AMP	AMP Incorporated, Harrisburg
ANSI	American National Standard Institute
AWG	American Wire Gauge
B	Set current for ground-fault protection
BDA	Breaker Data Adapter
(BG)	Baugröße → FS (Frame size)
BSS	Breaker Status Sensor

27 Begriffe

Antriebshandhebel

Durch mehrere Pumpbewegungen wird der Federspeicherantrieb gespannt.

Ausgelöst-Meldeschalter

Sammelmeldung von Überlast-, Kurzschluss- und Erdschlussauslösung durch Mikroschalter

Ausstattungsabhängige Kodierung

Um zu vermeiden, daß innerhalb einer Schaltanlage Schalter gleicher Baugröße aber mit unterschiedlicher Ausstattung beim Einsetzen in den Einschubrahmen vertauscht werden, können Leistungsschalter und Einschubrahmen mit einer Kodiervorrichtung ausgerüstet werden.

Automatische Rücksetzung

Für die sofortige Herstellung der Einschaltbereitschaft nach einer Überstromauslösung wird als Option eine automatische mechanische Rücksetzeinrichtung angeboten.

Bemessungsstromkodierung → (Seite 18-6)

Eine Bemessungsstromkodierung erfolgt werkseitig, d.h. jeder Leistungsschalter läßt sich nur in einen Einschubrahmen mit gleichem Bemessungsstrom einsetzen.

Bemessungsstrommodul / „Rating Plug“

Dieses Modul legt z.B. den Einstellbereich des Überlastschutz fest.

BSS - Modul

Breaker Status Sensor - für das Sammeln von Informationen über den Zustand des Leistungsschalters mittels Meldeschalter und deren Übertragung auf den **Cubicle**BUS .

COM15 - Modul

Kommunikationsmodul

Schnittstellenadapter für:

- Umsetzung der **Cubicle**BUS -Signale auf PROFIBUS-DP-Signale und umgekehrt
- Bereitstellung von drei potentialfreien Ausgängen für Steuerungsfunktionen (EIN, AUS, 1x frei verfügbar)
- einen Eingang, frei verwendbar für Informationen aus der Schaltanlage.

Zusatzfunktion bei Verwendung für Einschubschalter:

- Erfassen der Position des Leistungsschalters im Einschubrahmen mit den Meldeschaltern S 46, S 47 und S 48.

CubicleBUS → (Seite 9-79)

Datenbussystem im Schalternahbereich und zum Feldbus (PROFIBUS-DP)

Einschaltmagnet

Elektrischer Abruf der Federspeicherenergie

Elektrisch EIN

Elektrischer Abruf der Speicherenergie über den Einschaltmagneten

27 Glossary

Automatic reset

To re-establish the ready-to-close state immediately after an overcurrent tripping, an automatic mechanical reset is offered as an option.

Auxiliary releases

There are undervoltage releases and shunt trips available.

Breaking capacity (IEC 60947-2)

N	= Circuit breaker with ECO-breaking capacity	= 2
S	= Circuit breaker with standard-breaking capacity	= 3
H	= Circuit breaker with high breaking capacity	= 4
C	= Circuit breaker with very high breaking capacity	= 5
DC	= Circuit breaker with DC-breaking capacity	= 8

Position 8 in MLFB 3WL1???-#

BSS module

Breaker Status Sensor - for collecting circuit breaker status information via signalling switches and transmitting these data to the **Cubicle**BUS .

Closing coil

Electrical activation of stored energy

Coding of auxiliary connectors

To prevent interchanging the auxiliary wiring connections by mistake, the auxiliary connectors are coded.

COM15 Module

Communications module

Interface adapter for:

- converting **Cubicle**BUS signals to PROFIBUS-DP signals and vice versa
- providing three potential-free outputs for control functions (ON, OFF, 1 freely available)
- one input, freely usable for control informations from the switchgear.

Additional function for draw-out circuit breakers:

- detecting the circuit breaker position in the guide frame by means of signalling switches S 46, S 47 and S 48.

CubicleBUS → (page 9-79)

Bus system in the vicinity of the circuit breaker and to the FieldBus (PROFIBUS-DP)

Electrical closing lockout...

For electrical interlocking of two or more circuit breakers (closing interlock). The electrical closing lockout can block closing the circuit breaker with a sustained signal.

Electrical ON

Electrical activation of the stored energy through the closing coil

Energy transformer

Power supply for the overcurrent release.

Elektrische Einschaltsperre

Zur elektrischen Verriegelung von zwei oder mehreren Schaltern (Einschaltverriegelung). Die elektrische Einschaltsperre dient zum Sperren gegen Einschalten des Leistungsschalters mit einem Dauersignal.

Energiewandler

Energiequelle für Eigenversorgung des Überstromauslösers

Federspeicherantrieb

Baueinheit mit Feder als Energiespeicher. Die Feder wird mittels Antriebshandhebel oder Motorantrieb gespannt und durch Verklinkungen in gespanntem Zustand gehalten. Durch Freigeben dieser Verklinkungen wird die Speicherenergie auf den Schaltpol geleitet, der Schalter schaltet ein.

Fern-Rücksetzung

Mittels des optionalen Fern-Rücksetzmagneten werden die elektrische Meldung des Ausgelöst-Meldeschalters und der rote Resetknopf zurückgesetzt.

Gegenseitige mechanische Verriegelung

Ermöglicht verschiedene Varianten der gegenseitigen Verriegelung von Leistungsschaltern.

Hilfsauslöser

Es stehen Unterspannungsauslöser und Spannungsauslöser (= Arbeitsstromauslöser) zur Verfügung.

Kodierung Handstecker

Um ein Vertauschen der Hilfsleiteranschlüsse zu verhindern wurden die Handstecker kodierbar gestaltet.

Lamellenkontakte

Verbinden die Hauptanschlüsse des Leistungsschalters mit den Hauptanschlüssen des Einschubrahmens.

Mechanische Wiedereinschaltsperre

Nach einer Überstromauslösung ist der Schalter gegen Wiedereinschalten gesperrt, bis die mechanische Wiedereinschaltsperre von Hand zurückgesetzt wird.

Meldeschalter Schaltstellung

Die Betätigung dieser Hilfsstromschalter erfolgt in Abhängigkeit vom Schaltzustand des Leistungsschalters.

Motorantrieb

Durch den Motorantrieb wird der Federspeicher automatisch gespannt, sobald Spannung an den Hilfsstromanschlüssen anliegt. Nach einer Einschaltung wird der Federspeicherantrieb automatisch für die nächste Einschaltung gespannt.

Nennstromkodierung → Bemessungsstromkodierung

Positionsanzeige

Zur Anzeige der Schalterposition im Einschubrahmen

Positionsmeldeschalter

Zur Fernanzeige der Schalterposition im Einschubrahmen

Finger contacts

Connects the main terminals of the circuit breaker with the main terminals of the guide frame.

Guide rail

Used for placing the circuit breaker in the guide frame.

Motor-operated mechanism

The motor charges the spring storage automatically as soon as voltage is applied to the auxiliary connections. After closing, the spring storage is automatically charged for the next closing operation.

Mechanical reclosing lockout

After tripping, the circuit breaker cannot be reclosed until the mechanical reclosing lockout has been reset by hand.

Mutual mechanical interlocking

There are various versions for the mutual interlocking system available, comprising a maximum of three circuit breakers.

Option-related coding

To prevent circuit breakers of the same size but different equipment from being inserted in incorrect guide frames, the circuit breakers and the guide frames can be equipped with a coding facility.

Position indicator

To show the circuit breaker position in the guide frame.

Position signaling switch

For remote signaling of the circuit breaker position in the guide frame.

Powerconfig

Software for commissioning and service, free of charge available at:
www.siemens.com/powerconfig-download
powerconfig (from Version 2.2) is used as a shared commissioning and maintenance tool for the SENTRON VL and SENTRON WL circuit breakers with communication capability. It offers a standardized interface and a uniform operator control concept for the activities to be carried out, such as

- Parameterizing
- Operating
- Monitoring, and
- Diagnosing.

powerconfig currently supports German and English.
“SENTRON communication handbook”
→ http://support.automation.siemens.com

Rated current coding → (Seite 18-6)

The rated current is coded at the factory, i.e. each and every circuit breaker can only be inserted in a guide frame with the same rated current.

Rating plug

This module defines e.g. the setting range of the overload protection.

Remote reset

The electrical signal of the triped signaling switch and the red reset button are reset by the optional remote reset magnet.

Powerconfig

Inbetriebnahme- und Service Software, kostenlos verfügbar unter:
www.siemens.com/powerconfig-download
powerconfig (ab Version 2.2) dient als gemeinsames Inbetriebnahme- und Wartungs-Werkzeug für die kommunikationsfähigen SENTRON VL- und SENTRON WL-Leistungsschalter. Es bietet eine einheitliche Oberfläche und ein einheitliches Bedienkonzept bei den durchzuführenden Aktivitäten wie

- parametrieren
- bedienen
- beobachten sowie
- diagnostizieren.

Aktuell unterstützt *powerconfig* die Sprachen Deutsch und Englisch.
s. „SENTRON Kommunikationshandbuch“
→ http://support.automation.siemens.com

Schaltvermögen (IEC 60947-2)

N	= Leistungsschalter mit ECO-Schaltvermögen	= 2
S	= Leistungsschalter mit Standardschaltvermögen	= 3
H	= Leistungsschalter mit hohem Schaltvermögen	= 4
C	= Leistungsschalter mit sehr hohem Schaltvermögen	= 5
DC	= Leistungsschalter mit DC-Schaltvermögen	= 8

Position 8 in MLFB 3WL1???-#

Shutter

Shutter sind Isolierstoffplatten zum Abdecken spannungsführender Hauptstrombahnen im Einschubrahmen (Berührungsschutz).

Sicheres AUS

Mit dieser zusätzlichen Funktion wird ein Einschalten des Leistungsschalters verhindert und die Trennerbedingung in AUS-Stellung nach IEC 60947-2 erfüllt:

- „Mechanisch AUS“-Taster wurde gedrückt
- die Hauptkontakte sind geöffnet
- bei Einschubschaltern ist die Kurbel eingezogen
- die verschiedenen Verriegelungsbedingungen sind erfüllt

Spannungsauslöser

Zum Fernausschalten des Leistungsschalters und Sperren gegen Einschalten

Unterspannungsauslöser

Zum Fernausschalten und Verriegeln des Leistungsschalters. Einsatz des Leistungsschalters in NOT-AUS Kreisen (nach EN 60 204 Teil 1 / DIN VDE 0113 Teil 1) zusammen mit einer getrennt angeordneten NOT-AUS-Einrichtung, kurzzeitige Spannungseinbrüche sollen nicht zum Ausschalten des Leistungsschalters führen.

Unterspannungsauslöser (verzögert)

Zum Fernausschalten und Verriegeln des Leistungsschalters. Spannungseinbrüche sollen nicht zum Ausschalten des Leistungsschalters führen.

Verfahrschiene

Dient zum Aufnehmen des Leistungsschalters im Einschubrahmen.

Werkzeugbetätigung

Durch eine Abdeckung mit Loch (∅ 6,35 mm) können Taster nur mit einem Dorn betätigt werden.

Safe OFF

This additional function prevents closing the circuit breaker and fulfils the disconnecting condition in OFF position as per IEC 60947-2:

- "Mechanical Off" button pressed
- main contacts open
- crank handle of draw-out circuit breakers removed
- the various interlocking conditions are fulfilled.

Shunt trip

For remote circuit breaker tripping and locking against closing

Shutter

Shutters are insulation plates for covering live main circuits in the guide frame (shock protection).

Signaling switch for switch position

These auxiliary switches operate according to the circuit breaker switch position.

Spring charging lever

The spring storage is charged manually by several pumping operations.

Spring storage

Module containing a spring as an energy store. The spring is charged by means of a hand-operated lever or a motor, and is latched in its charged state. When the latches are released, the stored energy is transmitted to the pole, the circuit breaker closes.

Tool operation

A cover with a hole (∅ 6,35) means that buttons can only be pressed using a rod.

Trip signaling switch

Group signal for overload, short-circuit and ground-fault tripping by microswitches.

Undervoltage release

For remote tripping and interlocking of the circuit breaker. Circuit breaker application in emergency OFF circuits (as per EN 60 204 Part 1 / DIN VDE 0113 Part 1) together with an emergency OFF facility to be arranged separately. The circuit breaker shall not be tripped by short-time voltage drops (e.g. motor start-up).

Undervoltage release (time delayed)

For remote tripping and interlocking of the circuit breaker. The circuit breaker shall not be tripped by voltage drops (e.g. system transfers).

3 General Arrangement

4 Container Inspection

4.1 Prerequisites

The following documents must be available in electronic form or as a printout for the FAT:

1. CAD of containers

Remarks:

4.3 Container Visual Inspection

Check all system parts, including external parts, to ensure that they are in perfect condition. Document the qualification results in the following table.

Examination		Result
Accessibility	The clearances in the container correspond to the CAD. All enclosure doors are in the correct position and accessible	☒ OK ☐ Defects ☐ N/A
Light/sockets	Sufficient lighting is available. There are service sockets (230 V) in the container interior. The sockets and lighting are usable and easily accessible.	☒ OK ☐ Defects ☐ N/A
Air conditioning	The air conditioning units are in the correct position and at least one control unit for the air conditioning units is present. The air conditioning units are functional and can cool the room to a satisfactory level.	☒ ☐ OK ☐ Defects ☐ N/A
Personal security	All steps in the container (if present) are marked in signal colours (yellow/black). There are no sharp edges in the container.	☐ OK ☒ Defects ☐ N/A
Installation of components and cables in the container	All components such as switch cabinets, cable trays, air conditioning units, etc. are properly installed and cannot fall or tip over.	☐ OK ☒ Defects ☐ N/A
Cable bushings	All cable ducts are present (possibly not fitted) and comply with the client's specification. Covers, cable bushings or similar are available for all openings in the container	☒ OK ☐ Defects ☐ N/A

Remarks and description in case of defects:
- Missing yellow/black marking on step entry door - Missing cable ladders on back door in transformer area for HV. AC side cables

6 Examination and authorisation

The test report becomes the factory acceptance report as soon as the individual test reports have been completed and labelled with a test date. The factory acceptance report is sent to the customer for confirmation and the results must be documented in the TR8 test report.

TR8	Examination and authorisation of execution
Checking the test results and original data. Final assessment for factory acceptance	
☒ PASSED	☐ NOT PASSED
If there are any deviations, please complete the following section.	
Evaluate whether or not the existing deviation has an influence on the final factory acceptance test.	
☐ YES	☒ NO

Original document

This document is an original document of FREQCON GmbH.

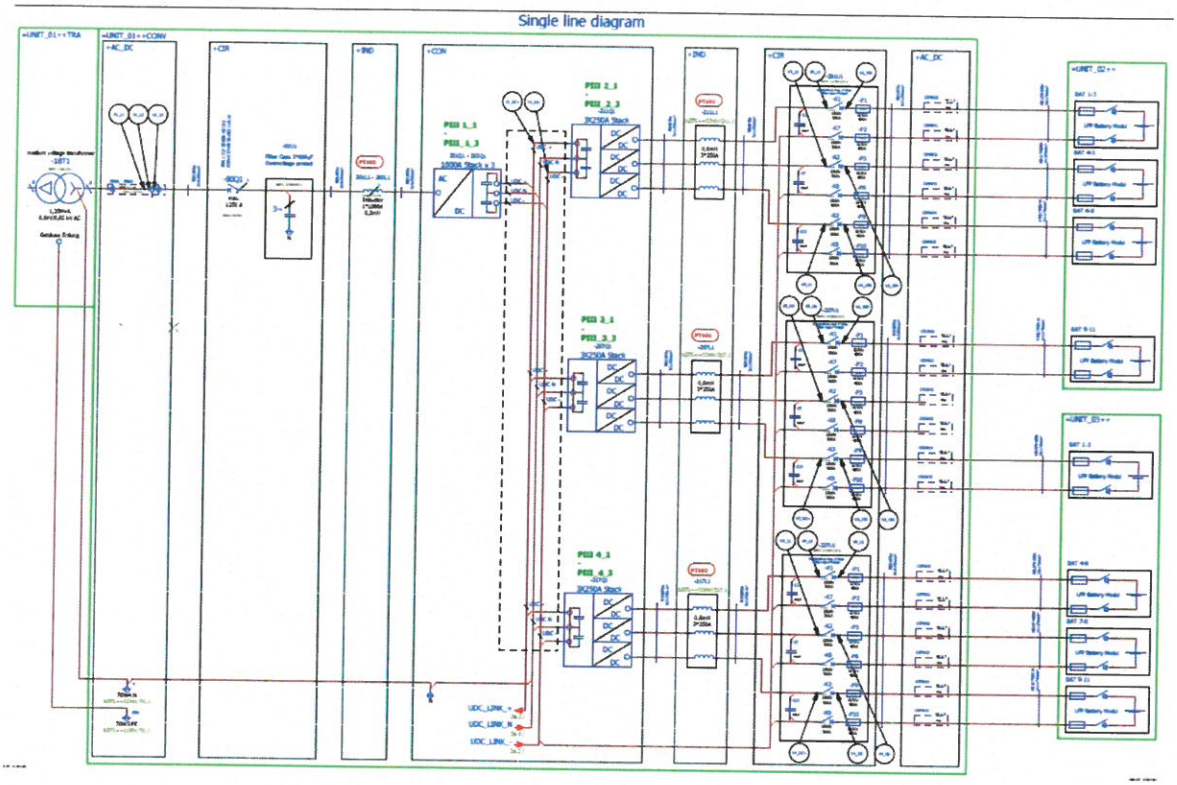
1 About this document

This acceptance report is used to assess compliance with all design and customer requirements of the tested system.

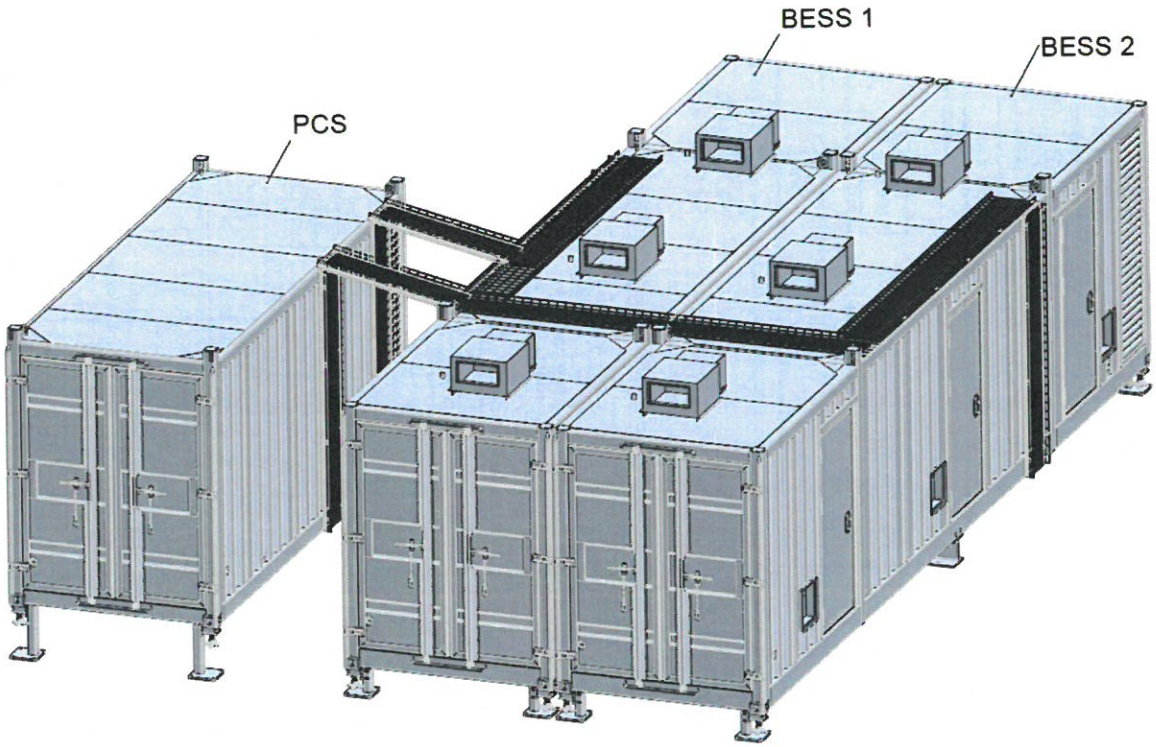
The factory acceptance test (FAT) is carried out by specialised personnel before delivery of the system and the result is checked by the customer.

2 Responsibilities



2.1 Responsibilities of FREQCON GmbH

- Preparation and review of the acceptance report
- Carrying out the acceptance test (FAT), documentation of the results
- Elimination of identified deviations
- Preparation and review of the acceptance report



2.2 Responsibilities of the customer

- Dispatch of specialised personnel to FREQCON GmbH, inspection of the acceptance results and documented data by the specialised personnel
- Confirmation of the factory acceptance report by specialised personnel

3.2 PCS Tests

3.2.1 Prerequisites

The following documents must be available in electronic form or as a printout for the FAT:

1. Circuit diagram of the system
2. Manual in the current version
3. General arrangement overview
4. Interface documentation (if available)

Remarks:

3.2.2 Visual Inspection of Control Cabinet 1

Check all system components, including external ones, to ensure that they are in perfect condition. Document the qualification results in the following table.

TR01	Test		Result
1.1	**Cleanliness**	**Test Layout:** Check covers and cabinet interior for cleanliness and rust.	☒ OK ☐ Defects ☐ N/A
		Pass Fail Criteria: Covers and interior are clean, without dirt or rust.	
1.2	**Metal sheets**	**Test Layout:** Check metal sheets for sharp edges and damages.	☒ OK ☐ Defects ☐ N/A
		Pass Fail Criteria: No sharp edges or recognisable damage present.	
1.3	**Wires and cables** lids cover & tidy cables	**Test Layout:** Visually inspect cable connections and wires inside the control cabinet for perfect condition and loose parts.	☐ OK ☒ Defects ☐ N/A
		Pass Fail Criteria: Cable connections in perfect condition, no loose parts present.	
1.4	**Compliance with circuit diagram** I/O check report	**Test Layout:** • Check if main components of the control cabinet are installed in accordance with the circuit diagram. • Check if labelling of the components in the control cabinet corresponds to the circuit diagram (exemplary test of some components).	☐ OK ☒ Defects ☐ N/A
		Pass Fail Criteria: • Essential parts of the control cabinet are available in accordance with the circuit diagram. • Labelling of the components in the control cabinet corresponds to the circuit diagram. **Reference document:** 10354_23A2007_CAE_Statron_Shell Crosswind BESS FQ 1MW 5MWh Offshore_20240703_V0.62	
1.5	**Control elements labelling**	**Test Layout:** Check if the operating elements on the control cabinet door are labelled according to the circuit diagram.	☒ OK ☐ Defects ☐ N/A
		Pass Fail Criteria: The operating elements are labelled according to the circuit diagram. **Reference document:** 10354_23A2007_CAE_Statron_Shell Crosswind BESS FQ 1MW 5MWh Offshore_20240703_V0.62	

1.6	**Control elements description** Missing manual	**Test Layout:** Check if the operating elements are explained in the operating manual. **Pass Fail Criteria:** The operating elements are explained in the operating manual. **Reference document:** 10354_23A2007_YYMMDD_Operating_Manual_Statron_Shell Crosswind BESS FQ 1MW 5MWh Offshore_EN_vx.x	☐ OK ☒ Defects ☐ N/A
1.7	**Data interface** Not clear	**Test Layout:** Check if data interface complies with the schematic. **Pass Fail Criteria:** The data interface corresponds to the circuit diagram. **Reference document:** 10354_23A2007_CAE_Statron_Shell Crosswind BESS FQ 1MW 5MWh Offshore_20240703_V0.62	☐ OK ☐ Defects ☒ N/A
1.8	**Earthing**	**Test Layout:** Check if the control cabinet is properly earthed in accordance with the circuit diagram. **Pass Fail Criteria:** The control cabinet is properly earthed.	☒ OK ☐ Defects ☐ N/A
1.9	**Power supply**	**Test Layout:** Check the AC connection terminals of the control cabinet. Check if all three phases provide 230 V AC by using a Multimeter. **Pass Fail Criteria:** All three phases of the AC supply provide 230 V AC.	☒ OK ☐ Defects ☐ N/A
1.10	**UPS**	**Test Layout:** Check if the control cabinet is properly earthed in accordance with the circuit diagram. **Pass Fail Criteria:** The UPS complies with the specification. **Reference document:** 10354_23A2007_CAE_Statron_Shell Crosswind BESS FQ 1MW 5MWh Offshore_20240703_V0.62	☒ OK ☐ Defects ☐ N/A

1.11	**Warnings**	**Test Layout:** Check if the required warning signs are located on the cabinet doors. **Pass Fail Criteria:** The required warning signs are located on the cabinet doors. **Reference document:** FORM_QS002_Warnhinweise_20231013_Rev3-0	☒ OK ☐ Defects ☐ N/A

Remarks:
Change table on control cabinet to CTRL 1 & 2

3.2.3 Visual Inspection of Control Cabinet 2

Check all system components, including external ones, to ensure that they are in perfect condition.
Document the qualification results in the following table.

TR01	Test		Result
1.1	**Cleanliness**	**Test Layout:** Check covers and cabinet interior for cleanliness and rust.	☑ OK ☐ Defects ☐ N/A
		Pass Fail Criteria: Covers and interior are clean, without dirt or rust.	
1.2	**Metal sheets**	**Test Layout:** Check metal sheets for sharp edges and damages.	☑ OK ☐ Defects ☐ N/A
		Pass Fail Criteria: No sharp edges or recognisable damage present.	
1.3	**Wires and cables**	**Test Layout:** Visually inspect cable connections and wires inside the control cabinet for perfect condition and loose parts.	☒ OK ☐ Defects ☐ N/A
		Pass Fail Criteria: Cable connections in perfect condition, no loose parts present.	
1.4	**Compliance with circuit diagram** • Add lable on 24V U1 • Lable on cables	**Test Layout:** • Check if main components of the control cabinet are installed in accordance with the circuit diagram. • Check if labelling of the components in the control cabinet corresponds to the circuit diagram (exemplary test of some components).	☐ OK ☒ Defects ☐ N/A
		Pass Fail Criteria: • Essential parts of the control cabinet are available in accordance with the circuit diagram. • Labelling of the components in the control cabinet corresponds to the circuit diagram. **Reference document:** 10354_23A2007_CAE_Statron_Shell Crosswind BESS FQ 1MW 5MWh Offshore_20240703_V0.62	
1.5	**Earthing**	**Test Layout:** Check if the control cabinet is properly earthed in accordance with the circuit diagram.	☒ OK ☐ Defects ☐ N/A
		Pass Fail Criteria: The control cabinet is properly earthed. **Reference document:** 10354_23A2007_CAE_Statron_Shell Crosswind BESS FQ 1MW 5MWh Offshore_20240703_V0.62	
1.6	**Power supply**	**Test Layout:** Check the AC connection terminals of the control cabinet. Check if all three phases provide 230 V AC by using a Multimeter.	☒ OK ☐ Defects ☐ N/A

Is this works on 24V DC

		Pass Fail Criteria: All three phases of the AC supply provide 230 V AC.	
1.8	**Warnings**	**Test Layout:** Check if the required warning signs are located on the cabinet doors.	☒ OK ☐ Defects ☐ N/A
		Pass Fail Criteria: The required warning signs are located on the cabinet doors. **Reference document:** FORM_QS002_Warnhinweise_20231013_Rev3-0	

Remarks and description of defects:

3.2.4 Visual inspection of Converter Cabinets

Check all system components, including external ones, to ensure that they are in perfect condition.
Document the qualification results in the following table.

TR02	Test		Result
2.1	**Cleanliness**	**Test Layout:** Check covers and cabinet interior for cleanliness and rust.	☒ OK ☐ Defects ☐ N/A
		Pass Fail Criteria: Covers and interior are clean, without dirt or rust.	
2.2	**Metal sheets**	**Test Layout:** Check metal sheets for sharp edges and damages	☒ OK ☐ Defects ☐ N/A
		Pass Fail Criteria: No sharp edges or recognisable damage present.	
2.3	**Wires and cables** lables on cables	**Test Layout:** Visually inspect cable connections and wires inside the converter cabinets for perfect condition and loose parts.	☐ OK ☒ Defects ☐ N/A
		Pass Fail Criteria: Cable connections are in perfect condition, no loose parts present.	
2.4	**Compliance with circuit diagram**	**Test Layout:** Visually inspect the following power components for compliance with the circuit diagram: • AC IGBTs • DC IGBTs • AC inductors • DC inductors • AC Filter	☒ OK ☐ Defects ☐ N/A
		Pass Fail Criteria: The power components (IGBT, choke, filter) correspond to the circuit diagram. **Reference document:** 10354_23A2007_CAE_Statron_Shell Crosswind BESS FQ 1MW 5MWh Offshore_20240703_V0.62	
2.5	**Protective elements** Closure covers are mounted before transport	**Test Layout:** Check correct installation of protective elements according to the circuit diagram.	☒ OK ☒ Defects ✓ ☐ N/A
		Pass Fail Criteria: The protective elements are installed according to the circuit diagram. **Reference document:** 10354_23A2007_CAE_Statron_Shell Crosswind BESS FQ 1MW 5MWh Offshore_20240703_V0.62	

2.6	**Connection busbars**	Check if connection busbars are installed according to the circuit diagram. **Pass Fail Criteria:** The connection busbars are installed according to the circuit diagram. **Reference document:** 10354_23A2007_CAE_Statron_Shell Crosswind BESS FQ 1MW 5MWh Offshore_20240703_V0.62	☒ OK ☐ Defects ☐ N/A
2.7	**Earthing**	**Test Layout:** Check control cabinet for proper earthing. Refer to circuit diagram. **Pass Fail Criteria:** The control cabinet is properly earthed according to the circuit diagram. **Reference document:** 10354_23A2007_CAE_Statron_Shell Crosswind BESS FQ 1MW 5MWh Offshore_20240703_V0.62	☒ OK ☐ Defects ☐ N/A
2.8	**Smoke detectors**	**Test Layout:** Check if smoke detectors are installed in the IGBT cabinet according to the circuit diagram. **Pass Fail Criteria:** Smoke detectors are installed in the IGBT cabinet according to the circuit diagram. **Reference document:** 10354_23A2007_CAE_Statron_Shell Crosswind BESS FQ 1MW 5MWh Offshore_20240703_V0.62	☒ OK ☐ Defects ☐ N/A
2.9	**Smoke detector test**	**Test Layout:** Use test spray to trigger the sensor. **Pass Fail Criteria:** Alarm signal triggers "301024: Supply: Smoke detector feedback tripped" alarm and is displayed on HMI/WebVisu. Hardware Trigger: Smoke FG1	☒ OK ☐ Defects ☐ N/A

Remarks and description of defects:
Smoke → 178k2 + XT1 3,4 80 Q1 ☒ OK

3.3 Visual inspection of Converter Cooling System

Check the correct installation and connection of the cooling system. Document the qualification results in the following table.

TR03	Test		Result
3.1	**Leakage and connections check**	**Test Layout:** Check the converter water cooling system for proper connection and leaks. Run cooling system and perform visual check of connections and check for leaks	☒ OK ☐ Defects ☐ N/A
		Pass Fail Criteria: All connections are properly connected and no leakage present.	
3.2	**Pressure check** 4,2 bar	**Test Layout:** Check whether the pressure of the cooling system is above 3 bar. Check on the manometer of the converter cooling system cabinet (COSY) and verify value on HMI/WebVisu.	☒ OK ☐ Defects ☐ N/A
		Pass Fail Criteria: Manometer and HMI/WebVisu indicate a pressure of 3 bar.	
3.3	**Water drop check**	**Test Layout:** Check that no drops of water can be seen at the connection points of the coolant hoses.	☒ OK ☐ Defects ☐ N/A
		Pass Fail Criteria: No water on the connection points of coolant hoses.	

Remarks:

- Drain over pressure bottle collection
- Change coolant check coolant at yard

3.4 Function test

Check whether the electrical power and signal transmission meets the agreed requirements. Document the qualification results in the following table.

TR04	Test		Result
4.1	**Supply voltage control cabinet**	**Test Layout:** Switch on the control cabinet by applying the supply voltage or turning on the main switch. The control unit starts up properly.	☒ OK ☐ Defects ☐ N/A
		Pass Fail Criteria: Pass: - Simotion turns on - HMI turns on properly and WebVisualization (WebVisu) access is active - Access to Simotion WebVisu is established and "Run" state of Simotion can be confirmed	
4.2	**Feedback signals**	**Test Layout:** Exemplary control of system feedback and error evaluation, for example by manually triggering fuses. Errors are output correctly.	☒ OK ☐ Defects ☐ N/A
		Pass Fail Criteria: Random sampling: The status is correctly indicated by the red Error LED on the control cabinet 1 door. The error message can be reset by pressing the reset button on the control cabinet.	
4.3	**Smoke detectors**	**Test Layout:** Test the smoke detector in PCS CON-cabinet with test spray.	☒ OK ☐ Defects ☐ N/A
		Pass Fail Criteria: The smoke detectors trigger accordingly and an error (Error level 4) is generated.	

4.4	**Cabinet Fans**	**Test Layout:** Testing the cabinet fans by simulating increased temperature values of the cabinets or direct control of the fans by the control system. **Pass Fail Criteria:** Cabinet fans activate according to temperature threshold set in the control system.	☒ OK ☐ Defects ☐ N/A
4.5	**Converter liquid cooling system** check cooling water level	**Test Layout:** Converter liquid cooling system test: Switch on the cooling system. The cooling system heats the cooling water as required. Check the heat exchangers by simulating the cooling water temperature. **Pass Fail Criteria:** - Heat exchanger switches on and off correctly (Visual check) - **"Preheating"** status is correctly indicated by the **yellow "Preheating** LED" on the control cabinet. - Pump is running (visual check) - Heater is heating up the coolant (check coolant temperature on HMI/WebVisu)	☐ OK ☐ Defects ☐ N/A
4.6	**AC connection**	**Test Layout:** Apply the operating voltage (if not already applied). Check the measured voltages for plausibility with Multimeter at AC connection point. The HMI/WebVisu displays the mains voltage correctly. The measured Multimeter values correspond to the values displayed on the HMI/WebVisu.	☒ OK ☐ Defects ☐ N/A
4.7	**Converter pre-charging**	**Test Layout:** Pre-charging of converter. **Pass Fail Criteria:** - Converter is pre-charged from the mains and the 3WL main circuit breaker (80Q1) switches-on. - **"Ready for Operation"** status is indicated by the **green "Ready for Operation"** LED on the control cabinet door.	☐ OK ☐ Defects ☐ N/A
4.8	**IGBTs**	**Test Layout:** IGBT activation **Pass Fail Criteria:** - IGBTs can be switched on without any problems. - DC link is regulated to the set voltage. - **"Operating"** status is indicated by the green **"Operating"** LED on the control cabinet door.	☐ OK ☐ Defects ☐ N/A
4.9	**Emergency stop**	**Test Layout:** Test of the emergency stop. Switching on the emergency stop or switching off the main switch when the inverter is in operation (DC-link control).	☐ OK ☐ Defects ☐ N/A

		Pass Fail Criteria: - Inverter immediately switches to OFF mode. - Red "Fault" LED starts glowing on control cabinet door. - AC main switch (80Q1) opens.	
4.10	**Back-to-Back Test**	**Duration: After reaching 1000 A duration test of 10 min.** **Test Layout:** Back-to-Back Test: At 400 V AC connection Increase the AC current setpoint value slowly to 1000 A output and keep this value for 10 minutes. - 10 A - 100 A - 200 A - ... - 1000 A ✓ Heat run: Check if temperatures of - IGBTs - Inductors - Coolant of converter cooling system are within the permissible ranges by verifying the temperature values displayed on the HMI/WebVisu.	☒ OK ☐ Defects ☐ N/A
		Pass Fail Criteria: Back-to-Back Test: AC current output of 1000 A is displayed correctly on the HMI/WebVisu according to setpoint. Heat run: IGBT, inductor and converter cooling system coolant temperatures are below the temperature thresholds set in the control system. ✓	
4.10	**DC ports** only 160 A due to connection configuration	**Duration: After reaching 250 A test duration is 10 min.** **Test Layout:** DC-ports connection Increase the DC current setpoint slowly to 250 A and keep this value for 10 minutes. Heat run: Check if temperatures of - IGBTs - Inductors - Coolant of converter cooling system are within the permissible ranges by verifying the temperature values displayed on the HMI/WebVisu.	

Different mode of operation when in the yard
Test will be finally performed after battery modules are installed → SAT

		Pass Fail Criteria: Back-to-Back Test: DC current output of 250 A is displayed on the HMI/WebVisu according to setpoint. Heat run: IGBT, inductor and converter cooling system coolant temperatures are below the temperature thresholds set in the control system.	☒ ok
4.11	**Measurements**	**Test Layout:** Check if the measured values (temperatures, voltages and currents) are properly collected by the Simotion (PCS main controller) and verify by using a multimeter or current clamp at DC and AC side. **Pass Fail Criteria:** Values measured with multimeter are +/- 5% correspond to the values displayed on the HMI/WebVisu.	☐ OK ☐ Defects ☐ N/A
4.12	**Switching-off**	**Test Layout:** Switching off the inverter. The inverter is properly switched off by removing the control bits. **Pass Fail Criteria:** "OFF" state is indicated by the HMI/WebVisu.	☐ OK ☐ Defects ☐ N/A
4.13	**UPS** not perform.	**Test Layout:** Checking the UPS functionality. If the auxiliary supply fails (e.g. by activating the fuse of the AC power supply unit), the control cabinet continues to be supplied by the UPS. **Pass Fail Criteria:** After the defined time, the control cabinet is switched off completely. When the voltage returns, the control unit starts up again and the UPS battery is charged.	☐ OK ☐ Defects ☐ N/A
4.14	**WebVisu/HMI**	**Test Layout:** Check the Web Visualisation (WebVisu) running on the control cabinet HMI for proper functionality **Pass Fail Criteria:** Select each individual HMI (WebVisu) pages and check behaviour (lag during selection or scrolling, correct display of values and system components). The visualisation is functional.	☒ OK ☐ Defects ☐ N/A

Remarks:
Couldn't enter PCS = 0 no light check or physical measurement Test: 4,5; 4,7; 4,8; 4.9; 4.11; 4,12; 4,13

4 BESS 1

4.1 Reference Documents BESS 1

Document Title	Document name
Schematic	10354_23A2007_CAE_Statron_Shell Crosswind BESS FQ 1MW 5MWh Offshore_20240703_V0.62

4.2 Battery Cabinets Tests

4.2.1 Prerequisites

The following documents must be available in electronic form or as a printout for the FAT:

1. Circuit diagram of battery cabinets
2. General arrangement overview
3. Interface documentation (if available)

Remarks:

4.2.2 Visual inspection of Battery Cabinets

Check system components of 3 battery cabinets (one cabinet in each container section) inside BESS 1 container, including external ones, to ensure that they are in perfect condition. Document the qualification results in the following table.

TR05	Test		Result
5.1	**Cleanliness**	**Test Layout:** Check covers and cabinet interior for cleanliness and rust. **Pass Fail Criteria:** Covers and interior are clean, without dirt or rust.	☒ OK ☐ Defects ☐ N/A
5.2	**Metal sheets**	**Test Layout:** Check metal sheets for sharp edges and damages **Pass Fail Criteria:** No sharp edges or recognisable damage present.	☒ OK ☐ Defects ☐ N/A
5.3	**Wires and cables**	**Test Layout:** Visually inspect cable connections and wires inside the battery cabinets for perfect condition and no loose parts. **Pass Fail Criteria:** Cable connections are in perfect condition, no loose parts present.	☒ OK ☐ Defects ☐ N/A
5.4	**Protective elements**	**Test Layout:** Check correct installation of protective elements according to circuit diagram. **Pass Fail Criteria:** Protective elements are installed according to the circuit diagram. **Reference document:** 10354_23A2007_CAE_Statron_Shell Crosswind BESS FQ 1MW 5MWh Offshore_20240703_V0.62	☒ OK ☐ Defects ☐ N/A
5.5	**Earthing** need to connect ⏚ to screens mΩ limit protocols & reading	**Test Layout:** Check battery cabinet for proper earthing. Refer to circuit diagram. **Pass Fail Criteria:** Battery cabinet is properly earthed according to circuit diagram. **Reference document:** 10354_23A2007_CAE_Statron_Shell Crosswind BESS FQ 1MW 5MWh Offshore_20240703_V0.62	☐ OK ☒ Defects ☐ N/A
5.6	**Smoke detectors**	**Test Layout:** Check if smoke detectors are installed in battery cabinet according to circuit diagram.	

		Pass Fail Criteria: Smoke detectors are installed in battery cabinet according to circuit diagram. **Reference document:** 10354_23A2007_CAE_Statron_Shell Crosswind BESS FQ 1MW 5MWh Offshore_20240703_V0.62	☒ OK ☐ Defects ☐ N/A
5.7	**Fire extinguishing system (Stat-X)** loose cable	**Test Layout:** Check if Stat-X aerosol cartridges are installed in battery cabinet according to circuit diagram. **Pass Fail Criteria:** Stat-X aerosol cartridges are installed in battery cabinet according to circuit diagram. **Reference document:** 10354_23A2007_CAE_Statron_Shell Crosswind BESS FQ 1MW 5MWh Offshore_20240703_V0.62	☒ OK ☐ Defects ☐ N/A
5.8	**Control plate** I/O check & QAQC doc	**Test Layout:** Check if control plate in the bottom section of the battery cabinet is installed according to circuit diagram. **Pass Fail Criteria:** Control plate is installed according to circuit diagram. **Reference document:** 10354_23A2007_CAE_Statron_Shell Crosswind BESS FQ 1MW 5MWh Offshore_20240703_V0.62	☐ OK ☒ Defects ☐ N/A
5.9	**CO Sensor and Alarm Unit**	**Test Layout:** Check if CO Sensor and Alarm Unit are installed according to circuit diagram. **Pass Fail Criteria:** CO Sensor and Alarm Unit are installed according to circuit diagram. **Reference document:** 10354_23A2007_CAE_Statron_Shell Crosswind BESS FQ 1MW 5MWh Offshore_20240703_V0.62	☒ OK ☐ Defects ☐ N/A
5.10	**Smoke detector test**	**Test Layout:** Use test spray to trigger the sensor. **Pass Fail Criteria:** Alarm signal will trigger "Thermal runaway" procedure and displayed on HMI.	☒ OK ☐ Defects ☐ N/A
5.11	**CO sensor test**	**Test Layout:** Use test spray to trigger the sensor. **Pass Fail Criteria:** Alarm signal will trigger "Thermal runaway" procedure and displayed on HMI.	☒ OK ☐ Defects ☐ N/A

5.12	**H2 Sensor Test**	**Test Layout:** H2 Gas Alarm Test: Simulate trigger value in software from gas sensor and check if exhaust units and fire dampers operate properly. Check if gas alarm feedback is properly transmitted via hardwired signals.	☐ OK ☐ Defects ☒ N/A
		Pass Fail Criteria: After gas alarm the fire dampers open and the exhaust units start venting out the containers. Gas alarm feedback relay has opened. An error message is displayed on the HMI/WebVisu.	

Remarks:
Stat - x - loose cable also extra cable on cabinet control plate - ask from VO certificate we can't certify Cables are only MARKED not labled

6.8	**Control plate**	**Test Layout:** Check if control plate in the bottom section of the battery cabinet is installed according to circuit diagram. **Pass Fail Criteria:** Control plate is installed according to circuit diagram. **Reference document:** 10354_23A2007_CAE_Statron_Shell Crosswind BESS FQ 1MW 5MWh Offshore_20240703_V0.62	☐ OK ☒ Defects ☐ N/A
6.9	**CO Sensor and Alarm Unit**	**Test Layout:** Check if CO Sensor and Alarm Unit are installed according to circuit diagram. **Pass Fail Criteria:** CO Sensor and Alarm Unit are installed according to circuit diagram. **Reference document:** 10354_23A2007_CAE_Statron_Shell Crosswind BESS FQ 1MW 5MWh Offshore_20240703_V0.62	☒ OK ☐ Defects ☐ N/A
6.10	**Smoke detector test**	**Test Layout:** Use test spray to trigger the sensor. **Pass Fail Criteria:** Alarm signal will trigger "Thermal runaway" procedure and displayed on HMI/WebVisu.	☒ OK ☐ Defects ☐ N/A
6.11	**CO sensor test**	**Test Layout:** Use test spray to trigger the sensor. **Pass Fail Criteria:** Alarm signal will trigger "Thermal runaway" procedure and displayed on HMI/WebVisu.	☒ OK ☐ Defects ☐ N/A

6.12	**H2 Sensor Test**	**Test Layout:** H2 Gas Alarm Test: Simulate trigger value in software from gas sensor and check if exhaust units and fire dampers operate properly. Check if gas alarm feedback is properly transmitted via hardwired signals.	☒ N/A
		Pass Fail Criteria: After gas alarm the fire dampers open and the exhaust units start venting out the containers. Gas alarm feedback relay has opened. An error message is displayed in the WebVisu.	

Remarks:

6 Employees Present

Identify each employee involved in the execution of this protocol. Document the person's name, signature, name abbreviation and date in the following table:

Company Name	Employee Name	Employee Signature	Abbreviation	Date
SHELL CLOSS WIND	ALESSANDRO SUTTO			18/7/24
MARTIN TAYLOR	CROSSWIND			18/07/24
ABL	Dominik Mähl			18.07.2024
FREQCON	C. PALENZUELA			18.07.2024

	Yes/No
All persons involved in the factory acceptance test were documented.	☐ Y ☐ N

Remarks:

7 Examination and authorisation

The test report becomes the factory acceptance report as soon as the individual test reports have been completed and labelled with a test date. The factory acceptance report is sent to the customer for confirmation and the results must be documented in the TR8 test report.

TR05	Examination and authorisation of execution
Check the test results and original data. Final assessment for factory acceptance.	
☒ PASSED	☐ NOT PASSED
If there are any deviations, please complete the following section.	
Evaluate whether or not the existing deviation has an influence on the final factory acceptance test.	
☐ YES	☒ NO

Remarks:

Appendix A - Measurement data for the performance test (if performed)

Insert prepared tables for performance values/times/temperatures/etc.

Smoke FG1 – Smoke PCS → ESD1D
Gas FG2 – H2 Sensor BESS 1&2 → ESD1D
Therm. rise TR – Triggered HH temp (760°C) or CO det or Smoke → ESD1

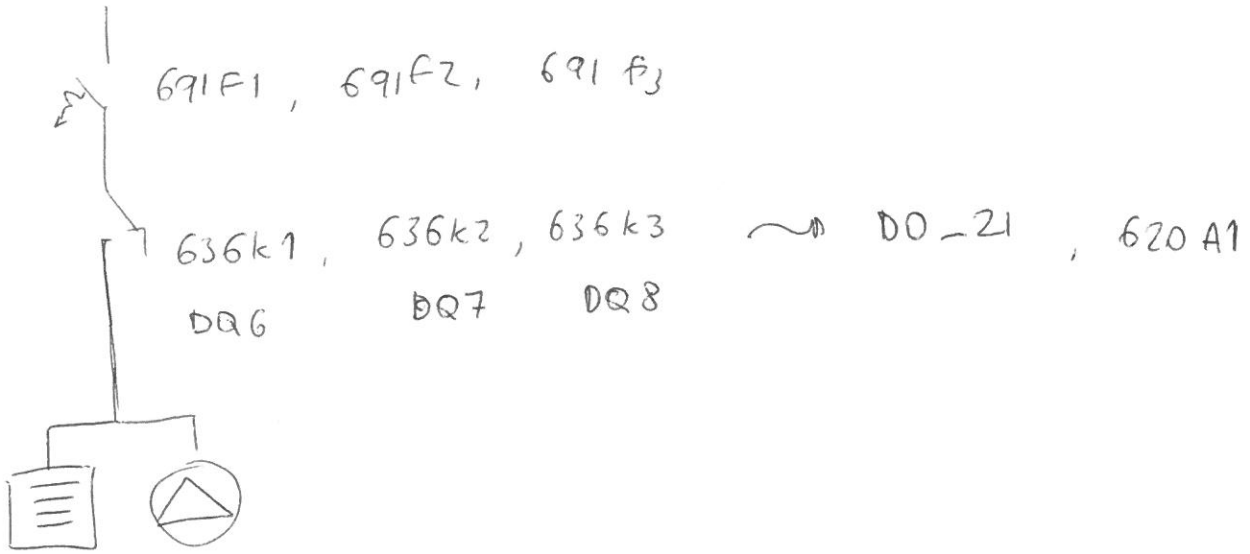
BMS - Confirmed new Process Fire Safety operations

*Aux still on
**Full platform shut down with H2 blowout

Automatic reset – no operator action needed
Once the temperature is back in the correct range, operation can continue normally. Point 2 will generate a warning log.

Remote reset – operator action needed

*These triggers will also send a message to the EMCS as "**fire alarm**" – Reset To be discussed with EMCS and BLPH*



No reset

1 Introduction

1.1 About this Document

This document is part of project phase “Detailed Design Engineering” for the Base Load Power Hub (BLPH) Project (K559-2254). In case of any contradiction resulting by the information or specification given in this document, phase 2 or later documents supersede the information provided in this document.

4 Environmental Conditions

	Stationary Operation	Storage packaging with protected layers	Transportation packaging with protected layers
Relative Humidity	Max. 95% No condensation; Relative Humidity <60% under corrosive atmosphere	Max. 95%	Max. 95%
Pollution level IEC60721-3-3 IEC60721-3-2 IEC60721-3-1	No conductive dust		
	3S2 coated PCB: Chemical Air: 3C2 Solid Particulate: 3S2	1S3 coated PCB: Chemical Air: 1C2 Solid Particulate: 1S3	2S2 coated PCB: Chemical Air: 2C2 Solid Particulate: 2S2
Atmospheric pressure	70 … 106 kPa	70 … 106 kPa	70 … 106 kPa
Vibration amplitude	Max 1 mm (5 … 13.2 Hz)	Max 1 mm (5 … 13.2 Hz)	Max. 3.5 mm (5 … 13.2 Hz)
IEC60068-2	Max. 7 m/s^2 (13.2 … 100 Hz) sinusoidal	Max. 7m/s^2 (13.2 … 100 Hz) sinusoidal	Max. 15 m/s^2 (9 … 200 Hz) sinusoidal
Impact IEC60068-2-29	Impermissible	Max. 100 m/s^2, 11 ms	Max. 100 m/s2, 11 ms
Free-fall	Impermissible	Impermissible	Impermissible

Table 7: Environmental conditions

5 Transport, Storage and Commissioning

Please observe the instructions for transport in section 5.2.

5.1 Unpacking

⚠ CAUTION

Hazard by sharp edges on packaging

Improper handling during unpacking can cause injuries.

➜ Use appropriate safety gloves to protect your hands from possible cuts.

The packaging of the system consists of cardboard, plastic and corrugated board. After usage the packaging must be disposed according to the local regulations for the disposal of paper products (e.g. recycling). After delivery, the delivered units and components must be checked for completeness and damage. If any damage on the delivered units and components have been found, contact the delivery service or FREQCON GmbH immediately.

5.2 Transport

NOTICE

Inadequate transportation of the device and all of its components may cause damage to the installed components.

- ➜ Vibrations and jolts must be avoided during transportation.
- ➜ The container must be transported in a horizontal position (lying down).
- ➜ Make sure to observe the specific national safety precautions for transport by truck, train or ship´.

NOTICE

Do not transport the containers with installed batteries

- ➜ Lifting or moving of BESS containers is not allowed if battery modules are inside the container
- ➜ Remove every battery module from the container before lifting or mowing the container

The containers must be transported to the installation site by instructed personnel.

Make sure that the components can be placed on a level surface.

For information regarding the dimensions and center of gravity of the containers, see section 5.2.2. The container weights are specified in section 2.

Vibrations and jolts must be avoided during transportation. If the system was damaged during transport, you must immediately inform the responsible transport company.

The containers must be transported in a horizontal position (lying down). It is not permitted to tip over the container during transportation or in any other scenario.

5.2.1 Container Lifting

⚠ DANGER	
	**Heavy load** **Improper lifting can result in death, serious injury or property damage.** Never lift the container above people. Use only lifting and personal protective equipment approved by OSHA or other national institutions.

NOTICE
Only use an appropriate crane to lift the container, capable to withstand the loads specified as follows: Weight of containers *see section 2*

NOTICE
Observe the container´s center of gravity during lifting: Observe the container´s center of gravity during lifting with crane, shown in section 5.2.2.

To lift the container with a crane, use the four transport lugs on the top corners of the container (*see following illustration*).

⚠ DANGER	
	**Heavy load** **Improper lifting can result in death, serious injury or property damage.** Never lift the container above people. Use only lifting and personal protective equipment approved by OSHA or other national institutions.

NOTICE
Only use an appropriate crane to lift the container, capable to withstand the loads specified as follows: Weight of containers *see section 2*

NOTICE
Observe the container´s center of gravity during lifting: Observe the container´s center of gravity during lifting with crane, shown in section 5.2.2.

To lift the containers with a crane, use the four transport lugs on the top corners of the container (*see following illustration*).

6 Installation

6.1 Required Tools

Installation personnel must at least have the following tools in reach before starting the installation:

Pos.	Installation Tools	Amount
	Basic Tools	
1.	Flash light	1
2.	Pliers set	1
3.	Ratchet set	1
4.	Torque wrench (1 - 100 Nm)	1
5.	Socket wrench set (with sockets 7 – 19 mm)	1
6.	Wrench set	1
7.	Cross-section screw drivers set	1
8.	Flat-section screw drivers set	1
9.	Allen key / Hex socket key set	1
10.	Cutter	1
11.	First-aid kit	1

Table 8: Installation tools

⚠ DANGER	
	**Electric shock due to low voltage and arcing on loose wires.** Severe irreparable damage to the nervous system, burns and death. ➜ Access to control cabinets and string cabinets only by FREQCON service personnel or by FREQCON instructed and authorized maintenance personnel. ➜ Plant control units may also be opened by instructed persons with the qualification of a qualified electrician. ➜ Work on electrical and electronic components as well as cables of the battery system may only be carried out by FREQCON service personnel or by FREQCON instructed and authorized maintenance personnel.

⚠ DANGER
Make sure that the energy source is locked and tagged and ensure that the isolation is effective before conducting work on the system. After switching-off the voltage supply, some components might still carry a charge. Check all poles using a suitable device.

⚠ WARNING
The electrical connection must be carried out in accordance with the local regulations of the utility company and /or VDE (in Germany).

Do not operate!	Lock and tag power switches and controller devices
	Observe national laws regarding Occupational Safety and Health, as well as Industrial Standards. ➢ DIN VDE 0105-100; VDE 0105-100:2009-10 Operation of electrical installations - General requirements.

6.2 Installation location

⚠ GEFAHR	
	**Danger from and for unauthorized persons** Unauthorized persons are not aware of the dangers in the work area and may endanger themselves and third parties danger. ➜ Keep unauthorized persons away from the work area. ➜ If in doubt, speak to persons and direct them away from the work area. ➜ Interrupt the work as long as unauthorized persons are in the work area. ➜ Always keep the entrance door(s) locked when not performing work on the system to prevent unauthorized persons from entering the container.

⚠ CAUTION	
	**Danger to life due to unsuitable lifting material** While lifting the container and/or battery modules use only suitable lifting equipment and lifting tackle ➜ Make sure that all the material and equipment is designed for the weight and all required inspections have been done. ➜ Make sure that no person is under the container or battery module during lifting.

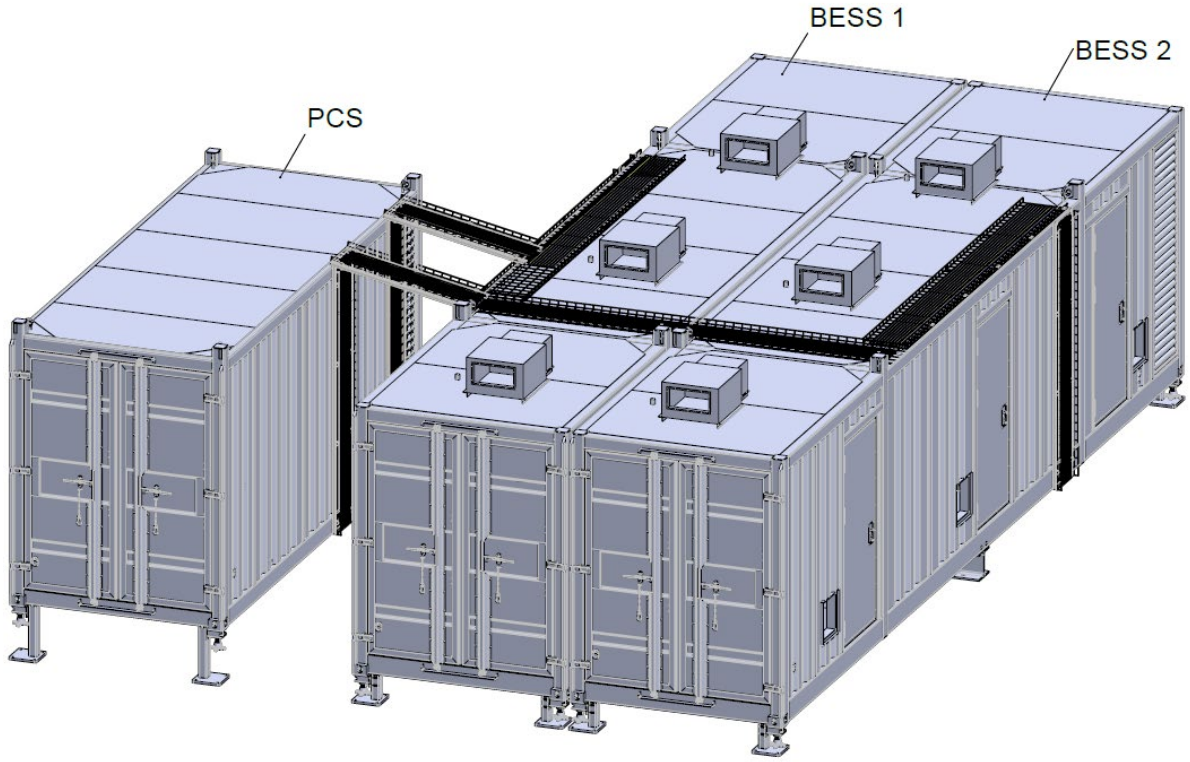
NOTICE
Equipment damage due to intruding animals Prevent animals from entering the interior of the container from below through the cable glands or recesses. ➜ Secure the container from the outside with suitable protection against the entry of animals.

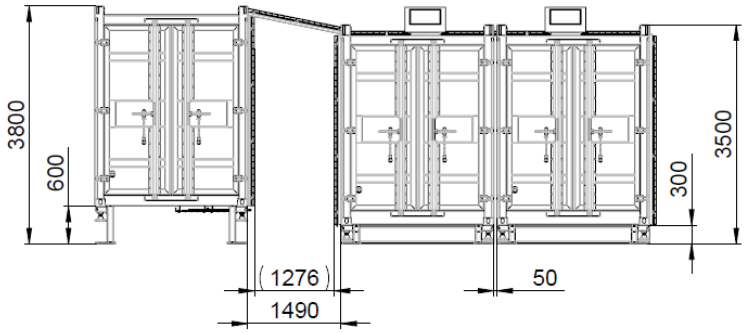
The PCS & BESS Containers are designed for outdoor installation, on a flat and ground level surface. Make sure that the environmental conditions meet the values of section 4 “Environmental Conditions”.

The entrances to the containers must be accessible from every side to allow for visual inspections or maintenance and repair work, if necessary.

Air inlets and outlets of the container, as well as on the cabinets inside the container, must always be kept free and cleaned of dirt in order to ensure the required air flow of the installed fans.

6.3 General Arrangement





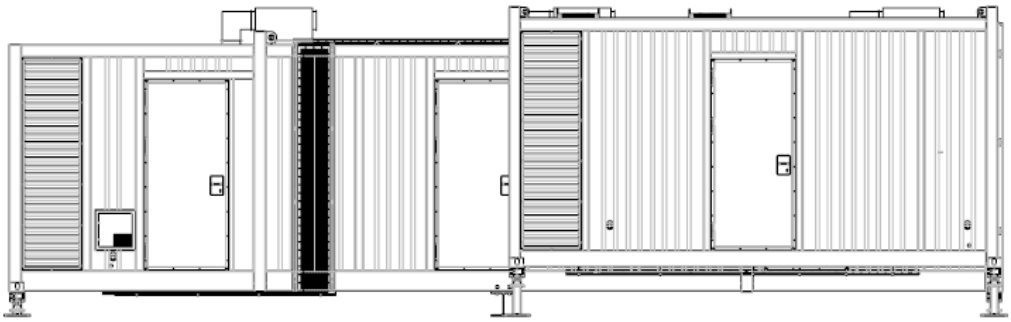


Figure 8: General arrangement

Front view

Side view

Top view

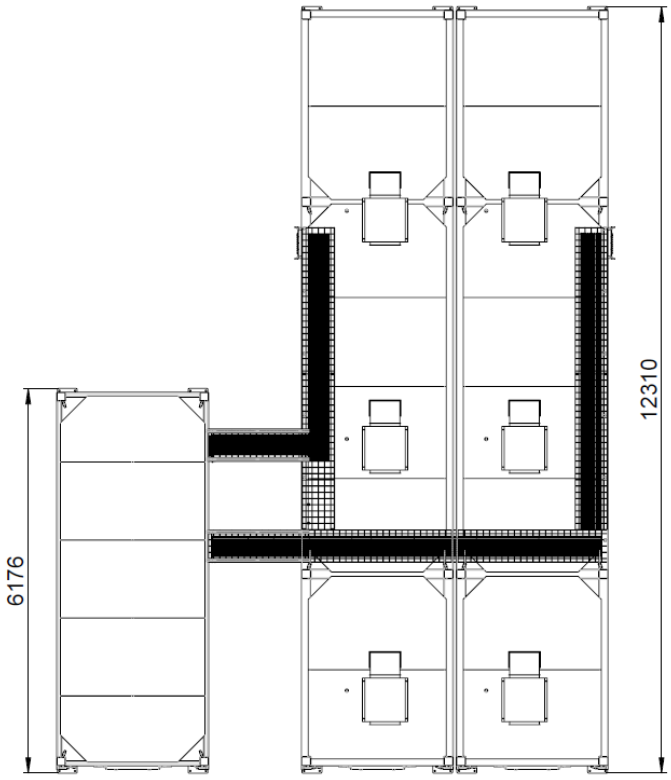

Figure 9: General arrangement with dimensions

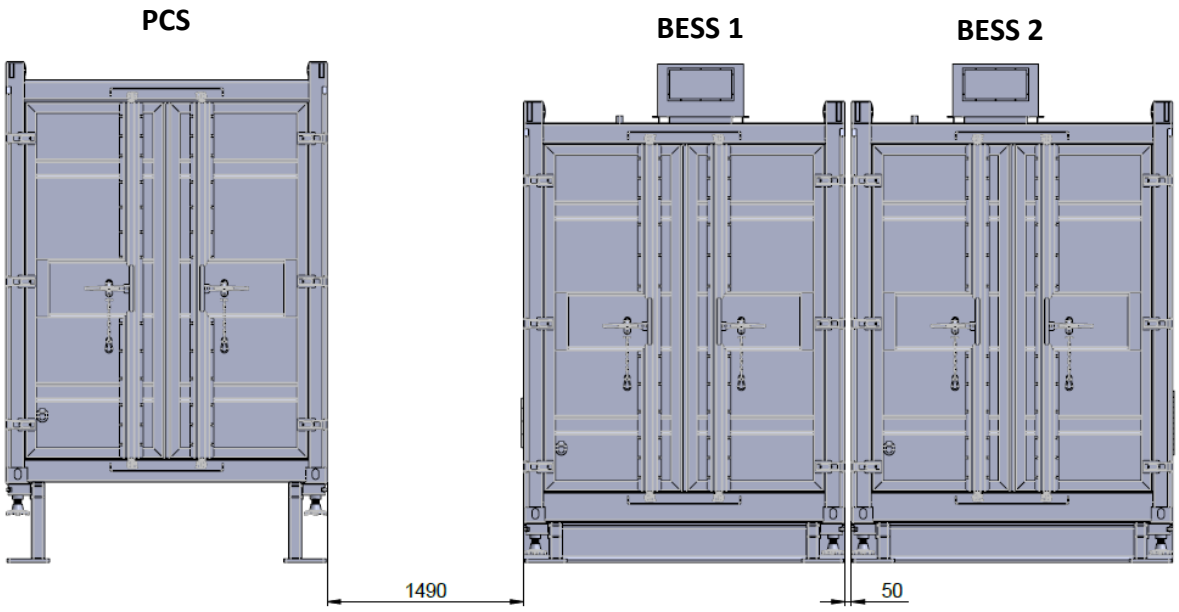
6.4 Distances between Containers



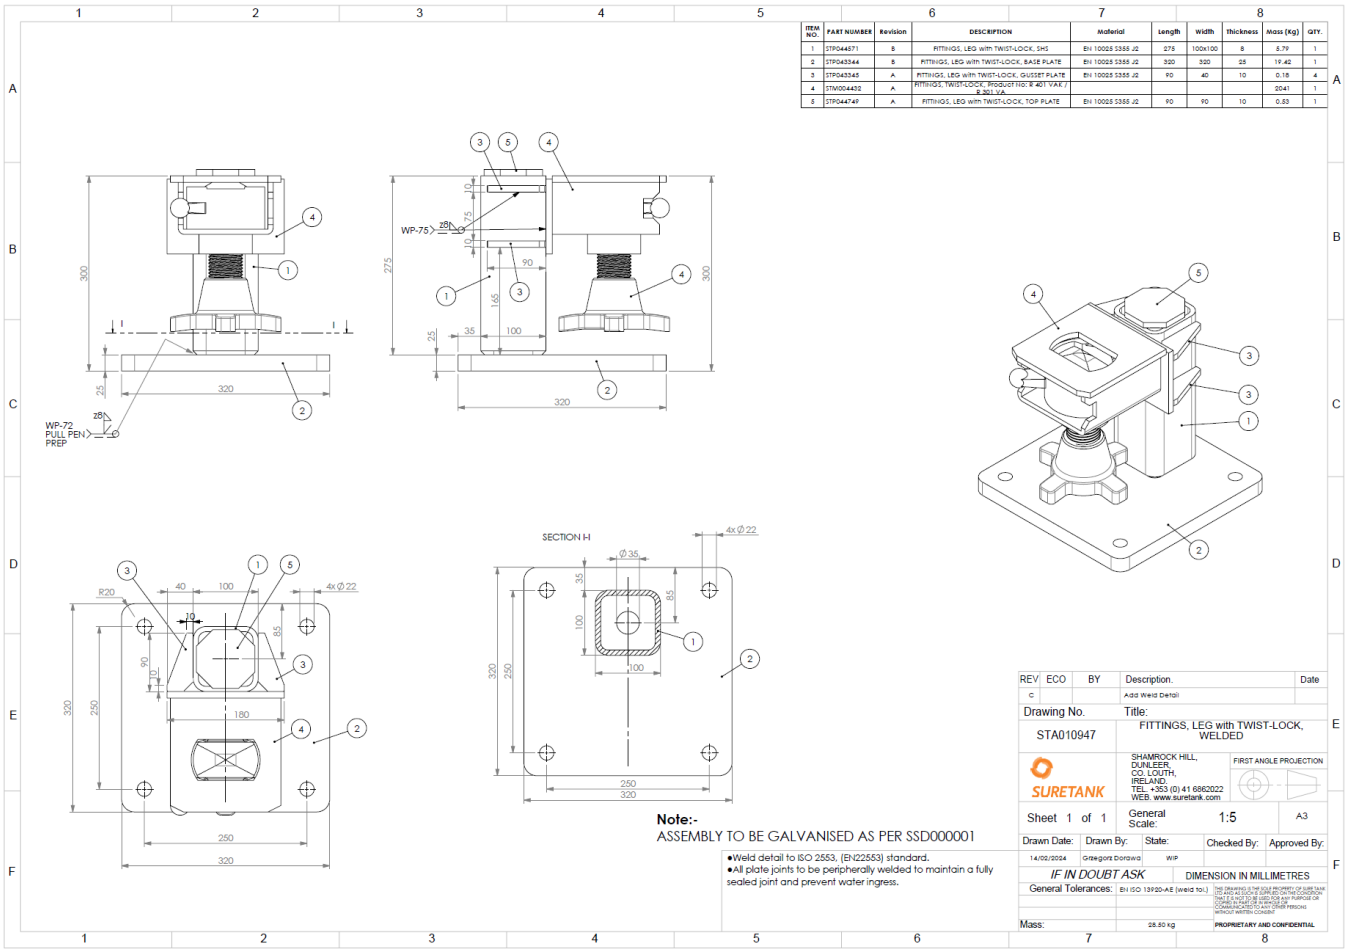


Figure 10: Distances between containers

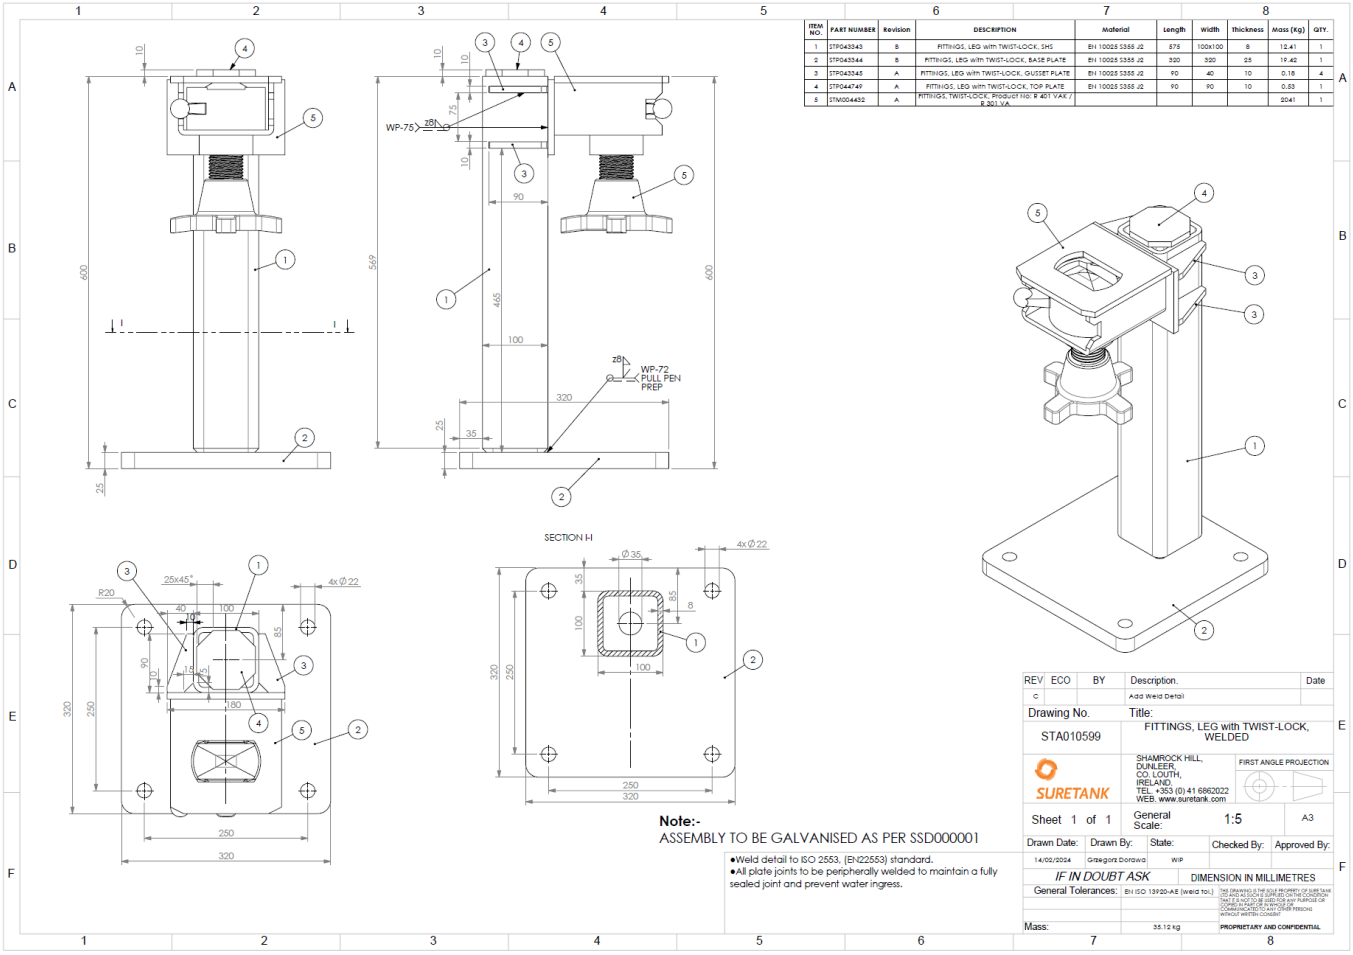
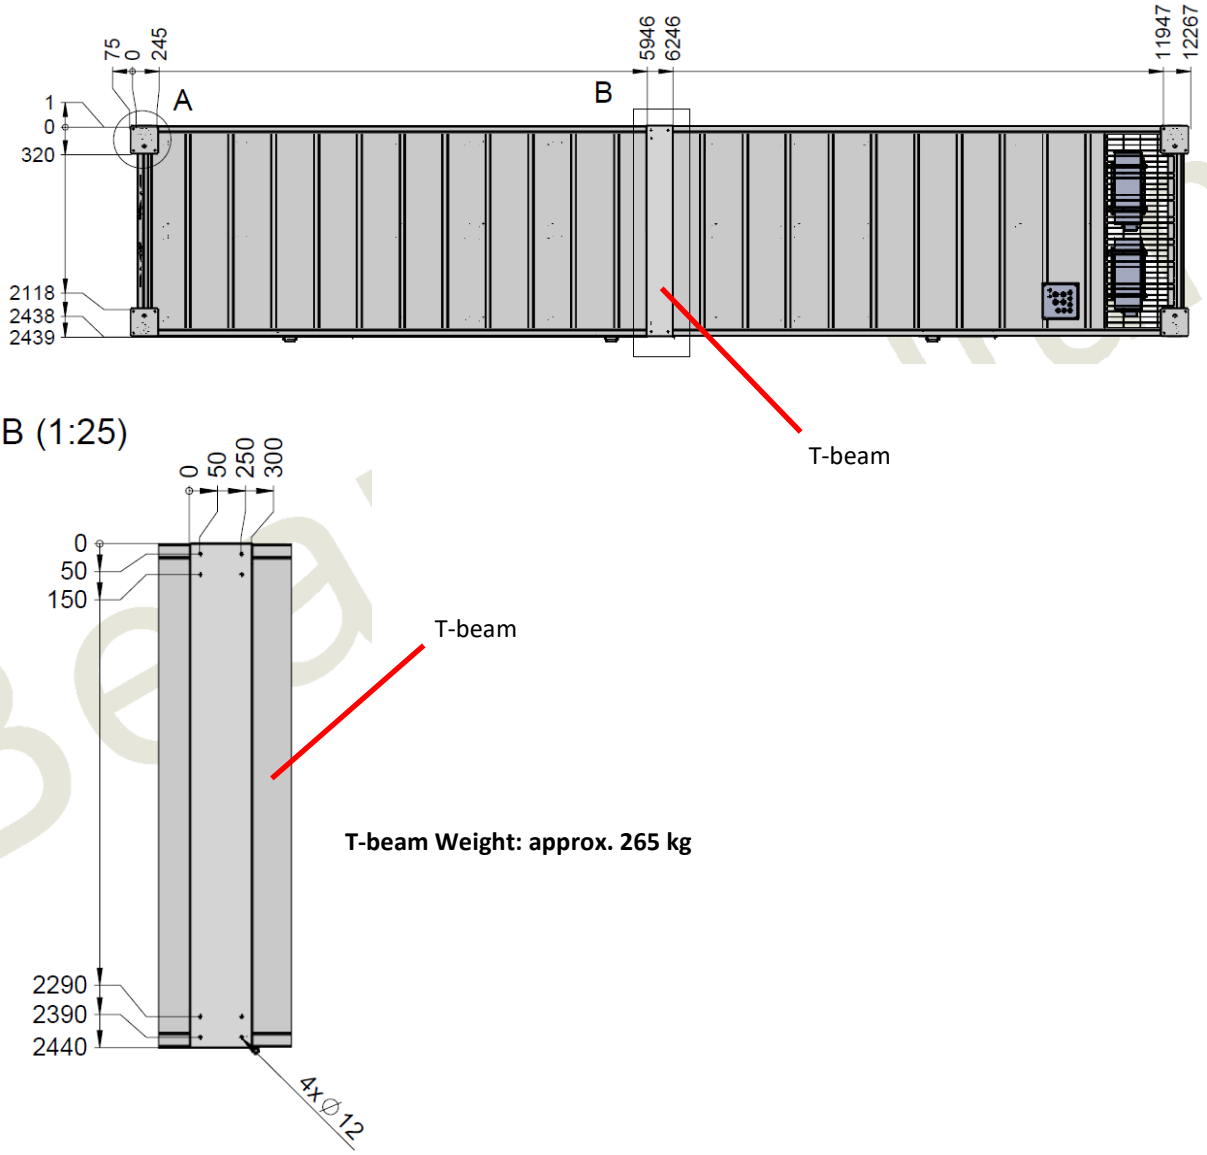
6.5 Container Feet and T-Beams



6.5.1 PCS Container Feet

4 container feet must be installed to the bottom corners of the 20FT PCS containers, before placing the container to the final installation location (*see drawing below and 1.3 "Other Applicable Documents"*.



Weight: approx. 28.5 kg

6.5.2 BESS Container Feet

Weight: approx. 35 kg

6.5.3 BESS T-Beams

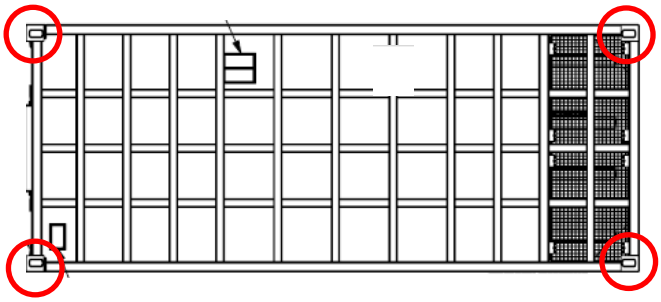
T-beam Weight: approx. 265 kg

6.6 Mechanical Installation of Containers

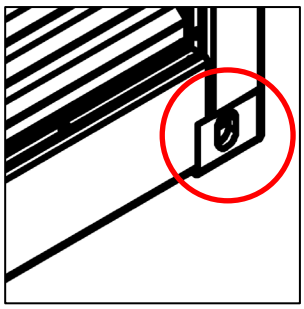
6.6.1 PCS

Task 1 **Lift PCS container and place on pedestal.**

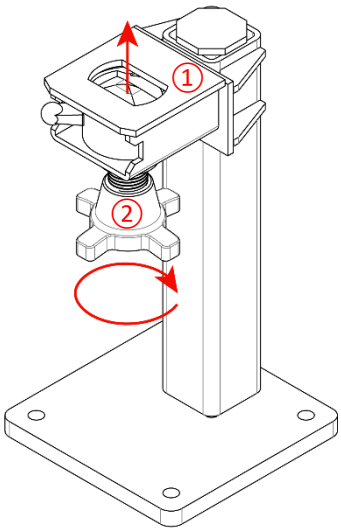
Step 1 : Lift the container (*see section 5.2.1*).



Step 2 : Place the container to several stools suitable to withstand the container load indicated in section 2. Please refer to Figure 13: Suggested stool positions for information on the stool positions.

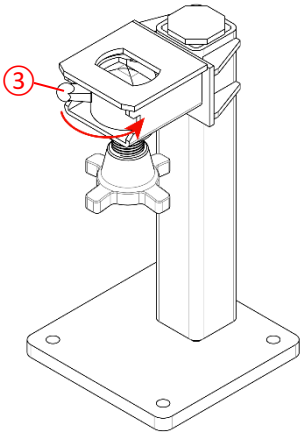


Task 2 **Install the 4 container feet to PCS container.**

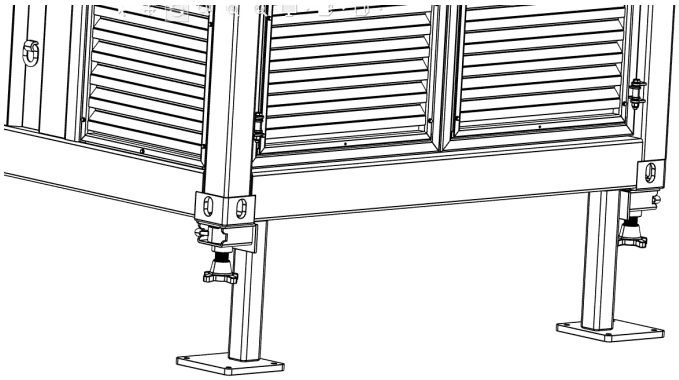


Attach first of the 4 container feet (*see section 6.5.1*).to one of the 4 bottom corner of the container.

Step 1 : Place the top plate (①) from the bottom to the corner of the container.



Step 2 : Screw the twist lock head mechanism of the foot (②) by twisting it as indicated in the illustration below. Screw until it has completely penetrated the bottom recess of the foot.



Step 3 : Secure the feet by twisting the twist lock locking mechanism (③) to the position like indicated in the illustration below.

Step 4 : Repeat the steps for the other 3 container feet.

✓ **The container feet have been successfully installed to the PCS container.**

Task 3 **Install cable trays on container bottom**

Step 1 : While the container is still lifted on the stools, drill the bore holes for cable tray installation according to the attached drawing " Mounting cable tray".

Step 2 : Insert blind rivet nuts to the prepared bore holes according to the drawing " Mounting cable Tray".

Step 3 : Fix the cable trays (① - ④) according to drawing " Mounting cable Tray".

Step 4 : Apply a torque to the connections according to drawing " Mounting cable Tray"

Cable trays:

GKX 520x60x2507

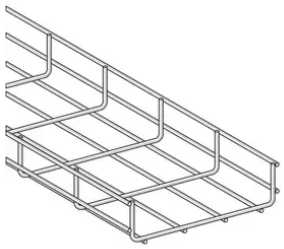


Figure 11: Cable tray V2A_ Gitterrinne GKX

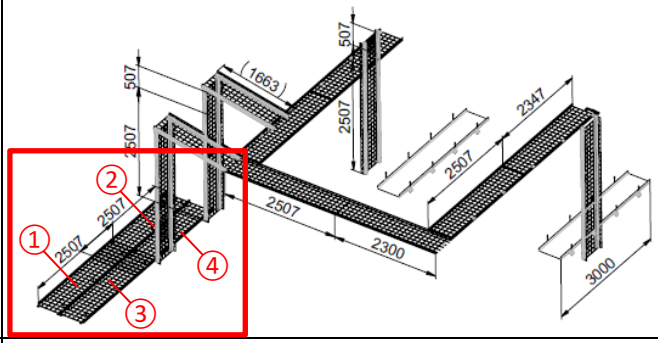

Figure 12: Cable trays for PCS container installation

Specification per cable tray:

Original part no.	Cable tray V2A_ Gitterrinne GKX 520x60x2507
Type	GKX 520x60x2507
Length	2507 mm
Width	520 mm
Height	60 mm

Task 4 **Lift container to installation location and fix to installation location.**

Step 1 : Lift the container (*see section 5.2.1*) and place it to the desired installation location.

Step 2 : Fix the 4 feet to the ground using suitable connection material (welding or bolting).

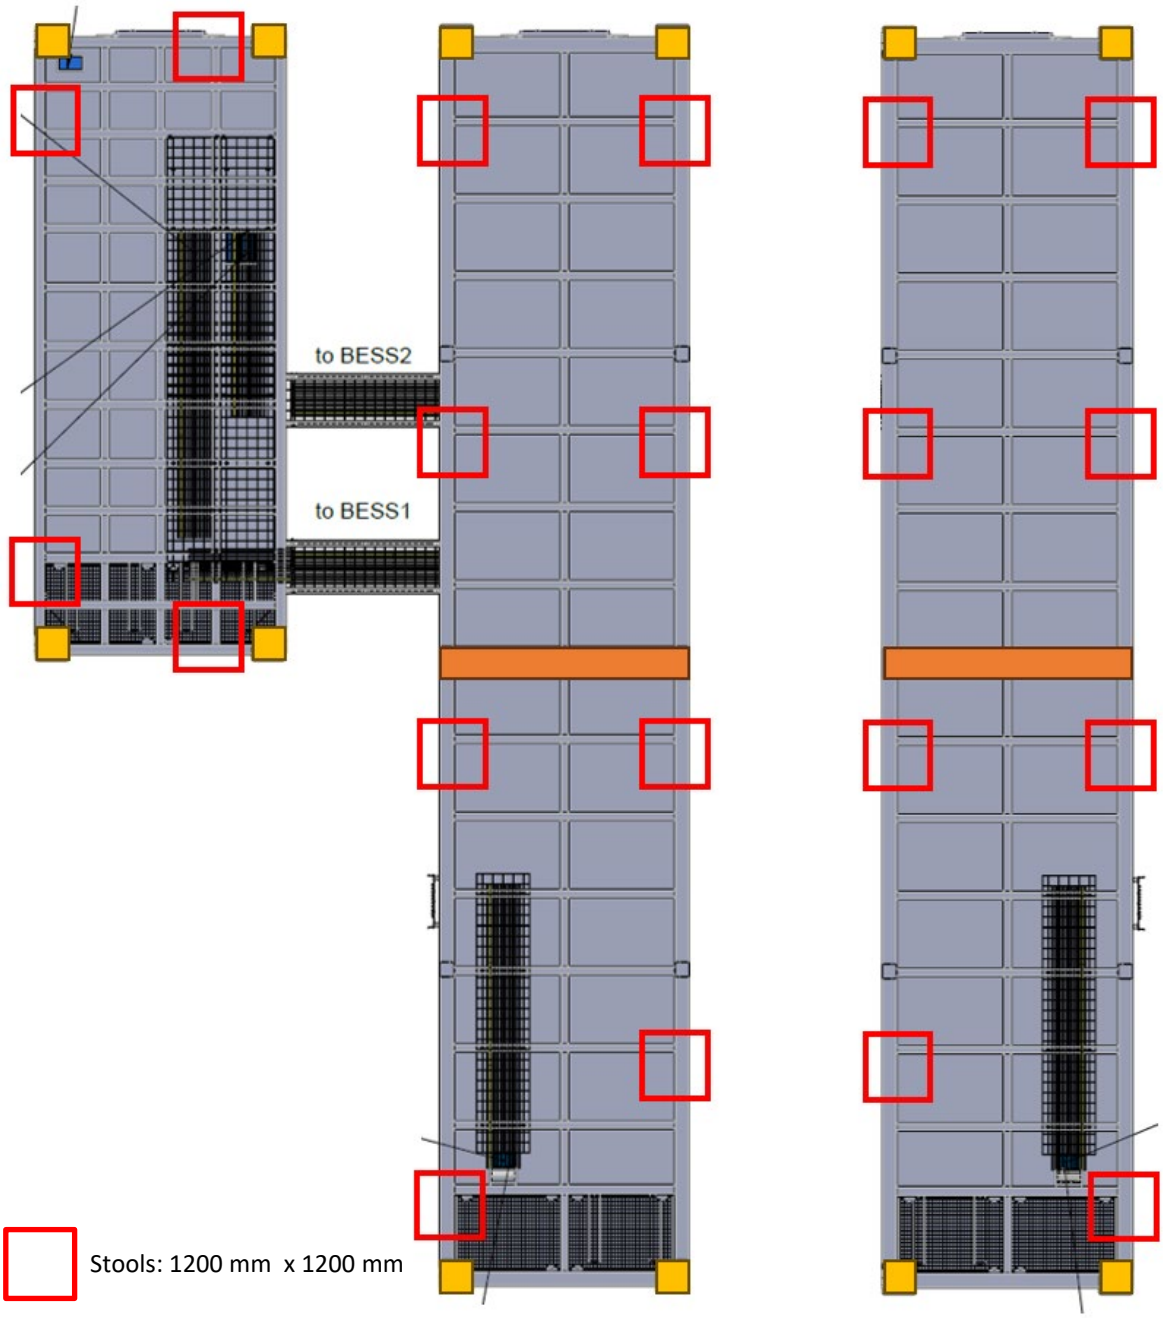
✓ **The PCS container has been successfully fixed to the installation location.**

6.6.2 BESS 1

Task 1 **Lift BESS container and place on pedestal.**

Step 1 : Lift the container (*see section 5.2.1*).

Step 2 : Place the container to stools suitable to withstand the container load indicated in section 2.



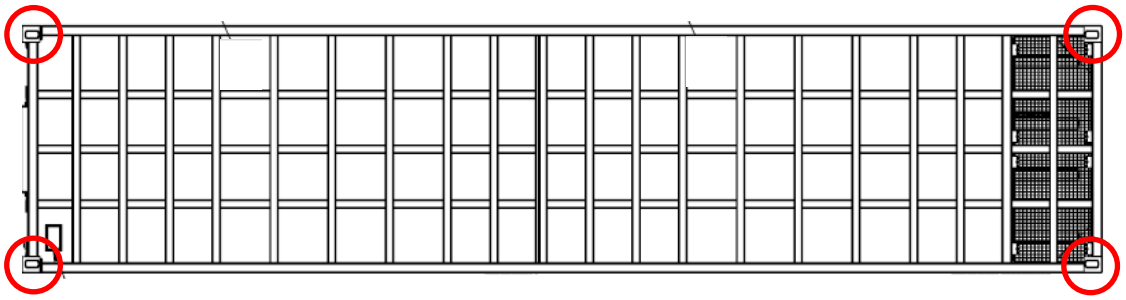


Figure 13: Suggested stool positions

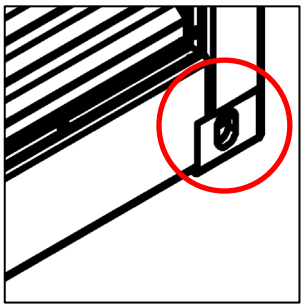
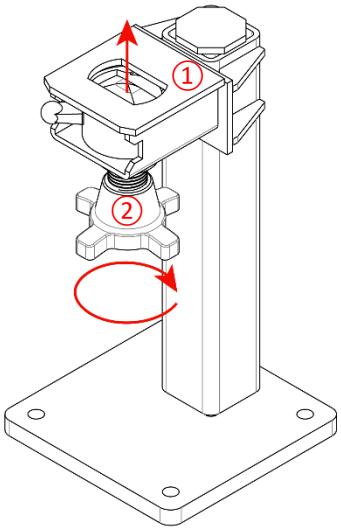
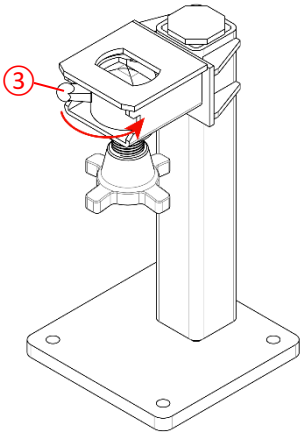


Task 2 **Install the 4 container feet to BESS container.**

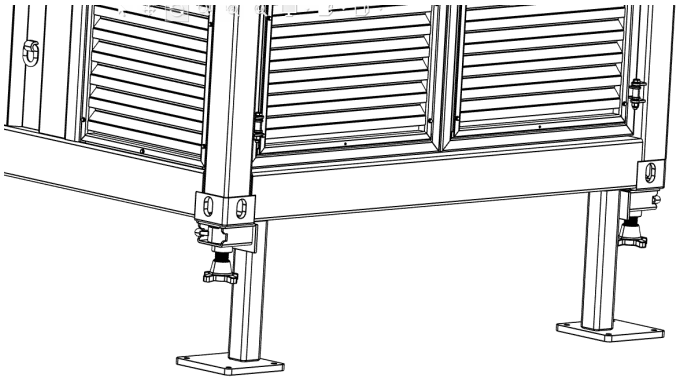


Attach container foot (*see section 6.5.1*) to one of the 4 bottom corner of the container.

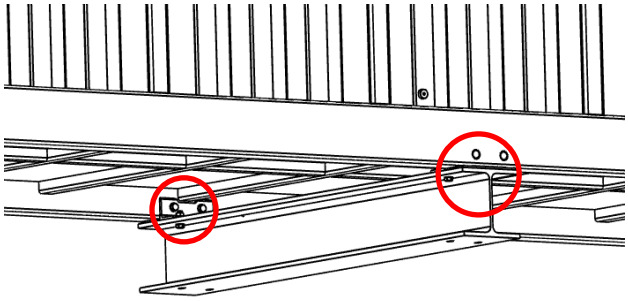
Step 1 : Place the top plate (①) from the bottom to the corner of the container.



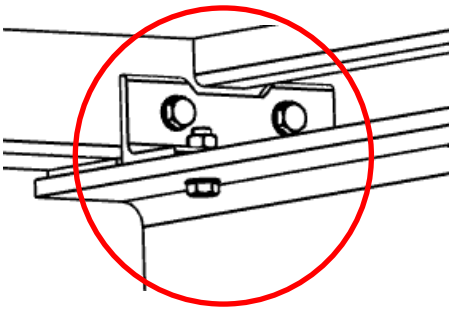
Step 2 : Screw the twist lock head mechanism of the foot (②) by twisting it as indicated in the illustration below. Screw until it has completely penetrated the bottom recess of the foot.



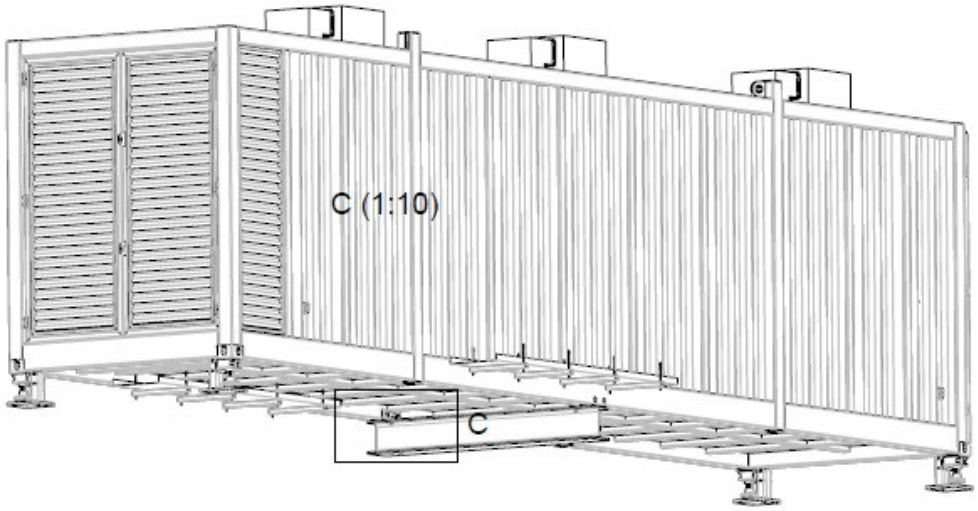
Step 3 : Secure the foot by twisting the twist lock locking mechanism (③) to the position like indicated in the illustration below.



Step 4 : Repeat all the steps of task 2 for the 3 remaining container feet.

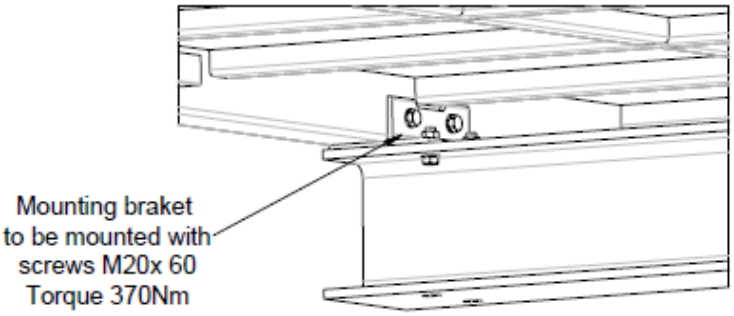


✓ **The container feet have been successfully installed to the BESS container.**



Task 3 **Install the t-beam to BESS container.**

Step 1 : While the container is still lifted on the stools, lift the provided t-beam (④) using a suitable lifting device under the container.
Beam weight approx. 260 kg.
Refer to below drawing for exact positioning of the beam.



Step 2 : Fix the t-beam to the container using the bore holes underneath the container and provided mounting brackets, nuts and bolts. Apply a torque of 370 Nm to the connections.

Height	60 mm

Task 5 **Lift container to installation location and fix to installation location.**

Step 1 : Lift the container (*see section 5.2.1*) and place it to the desired installation location.

Step 2 : Fix the 4 feet to the ground using suitable connection material (welding or bolting).

✓ **The PCS container has been successfully fixed to the installation location.**

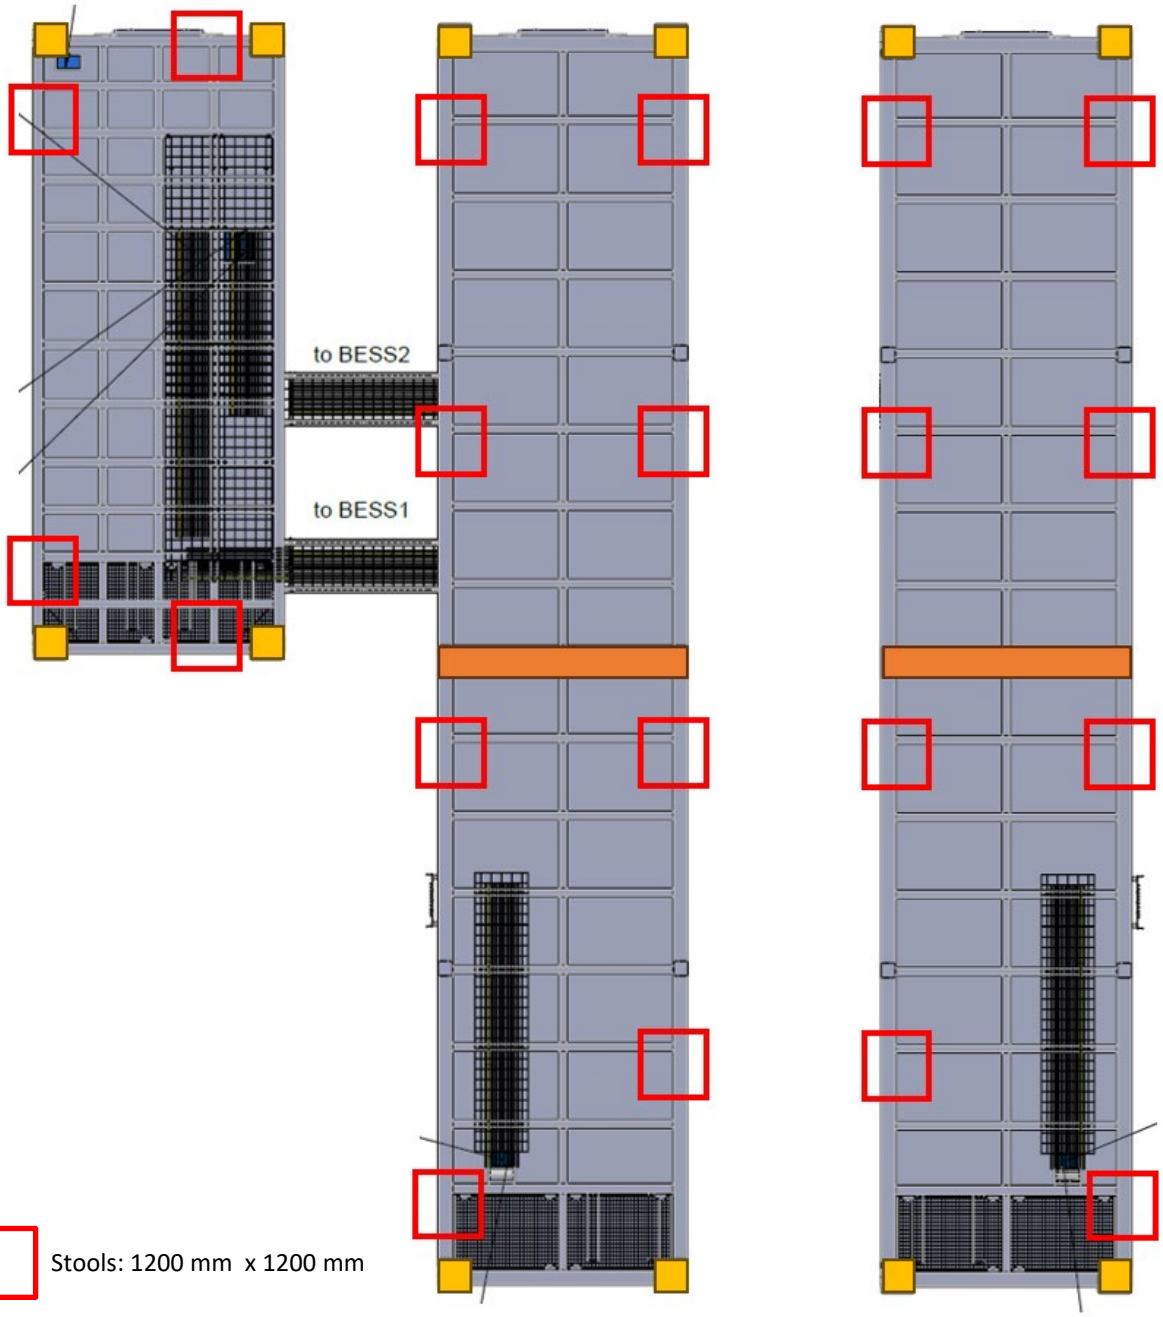
Task 6 **Lift BESS container with installed feet and T-beam to installation location.**

Step 1 : Lift the container (*see section 5.2.1*) and place it to the desired installation location. If bolting of the container feet is foreseen, make sure the boreholes of the installed container feet and t-beam are aligned with the connection provisions at the ground of the installation site.

Step 2 : Fix the T-beam to the ground using suitable connection material (welding or bolting).

Step 3 : Fix the container feet to the ground using suitable connection material (welding or bolting).

Step 4 : Check connections for tightness.



✓ **BESS container has been successfully fixed to the installation location.**

6.6.3 BESS 2

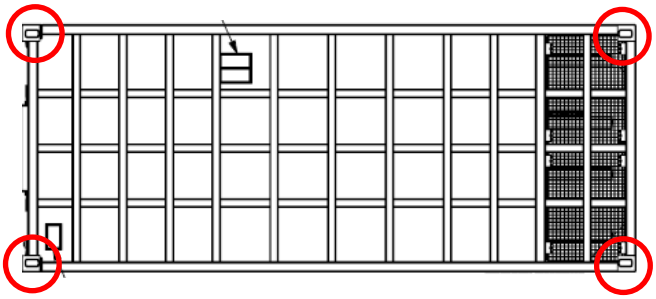
Task 1 **Lift BESS container and place on pedestal.**

Step 1 : Lift the container (*see section 5.2.1*).

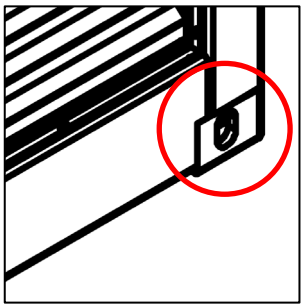
Step 2 : Place the container to stools suitable to withstand the container load indicated in section 2. Please refer to below figure for information on the stool positions.

Stools: 1200 mm x 1200 mm

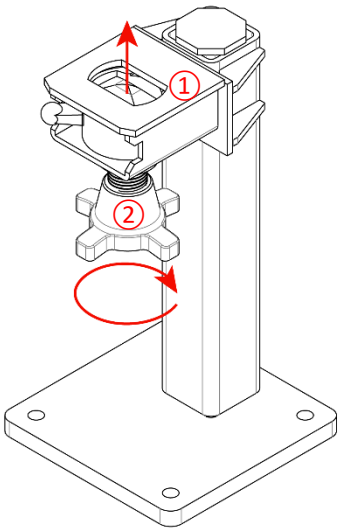
Container foot: 320 mm x 320 mm



T-beam: 300 mm x 2440 mm

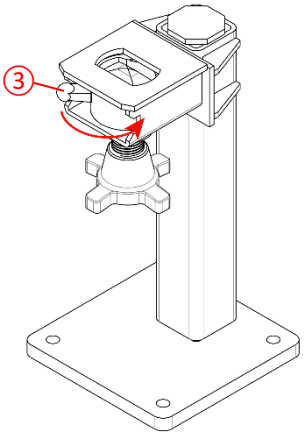


Task 2 **Install the 4 container feet to BESS 1 container.**

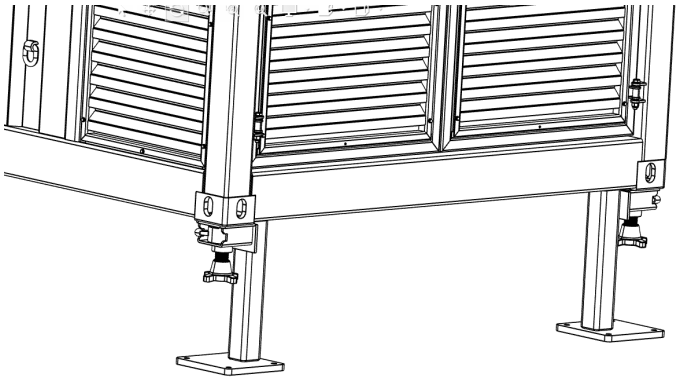


Attach container foot (*see section 6.5.1*) to one of the 4 bottom corner of the container.

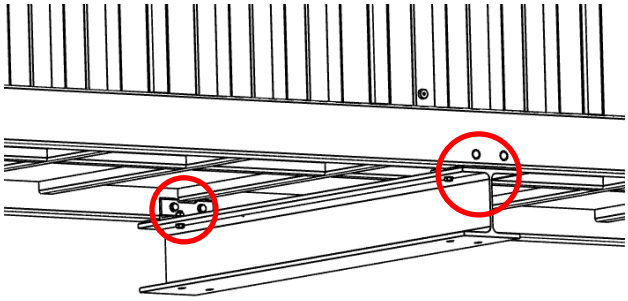
Step 1 : Place the top plate (①) from the bottom to the corner of the container.



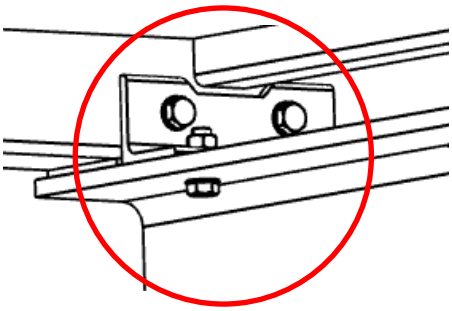
Step 2 : Screw the twist lock head mechanism of the foot (②) by twisting it as indicated in the illustration below. Screw until it has completely penetrated the bottom recess of the foot.



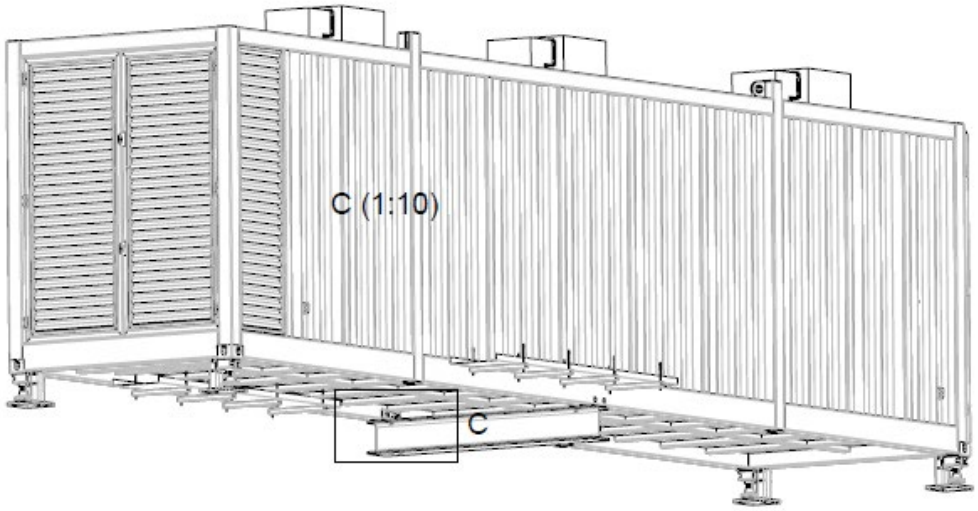
Step 3 : Secure the foot by twisting the twist lock locking mechanism (③) to the position like indicated in the illustration below.



Step 4 : Repeat all the steps of task 2 for the 3 remaining container feet.

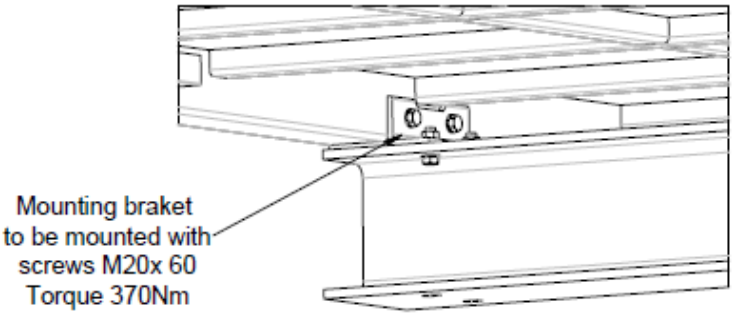


✓ **The container feet have been successfully installed to the BESS container.**



Task 3 **Install the t-beam to BESS container.**

Step 1 : While the container is still lifted on the stools, lift the provided t-beam (④) using a suitable lifting device under the container.
Beam weight approx. 260 kg.
Refer to below drawing for exact positioning of the beam.



Step 2 : Fix the t-beam to the container using the bore holes underneath the container and provided mounting brackets, nuts and bolts. Apply a torque of 370 Nm to the connections.

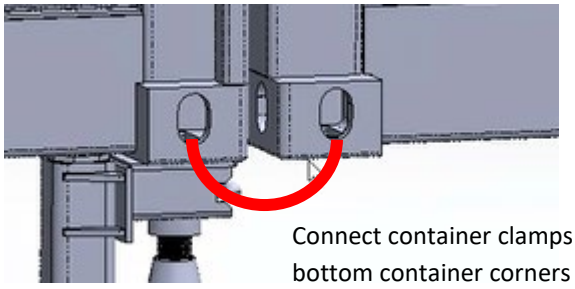
Height	60 mm

Task 5 **Lift BESS container with installed feet to installation location.**

Step 1 : Lift the container (*see section 5.2.1*) and place it to the desired installation location. If bolting of the container feet and T-beam is foreseen, make sure the boreholes of the installed container feet and t-beam are aligned with the connection provisions at the ground of the installation site.

Step 2 : Fix the T-beam to the ground using suitable connection material (welding or bolting).

Step 3 : Fix the container feet to the ground using suitable connection material (welding or bolting).

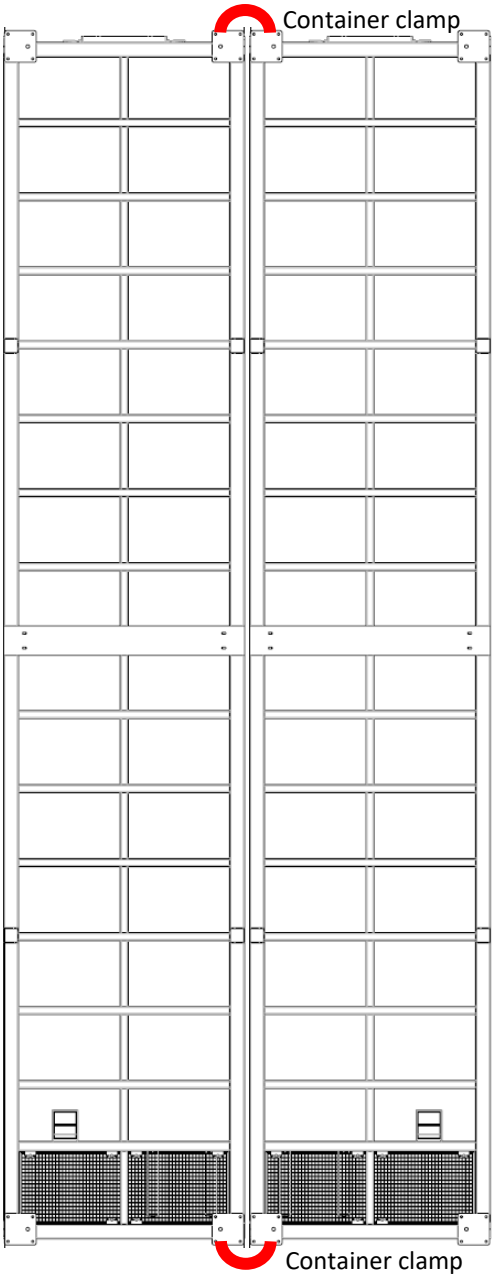


Step 4 : Check connections for tightness.

✓ **BESS container has been successfully fixed to the installation location.**

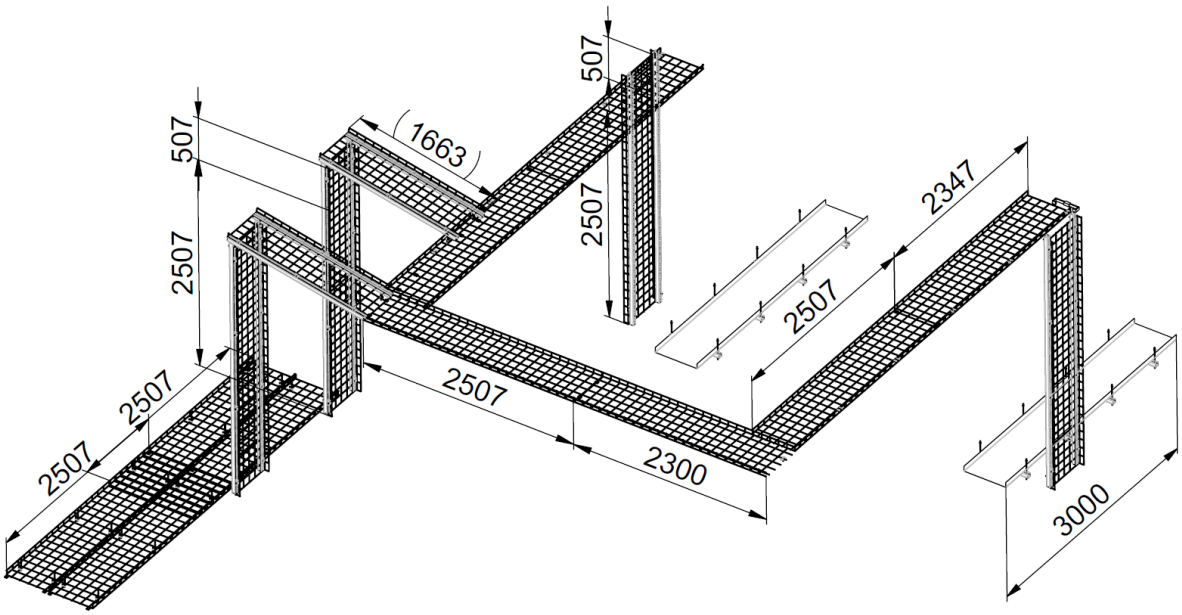
Task 6 **Fix BESS 1 and 2 containers with container clamps**

Step 1 : Attach container clamps for fixation of BESS 1 and BESS 2 containers like indicated below.



✓ **BESS container 1 and 2 has been successfully installed at the installation location.**

Connect container clamps to bottom container corners



Container clamp

1 Introduction

1.1 About this Document

This document is part of project phase “Detailed Design Engineering” for the Base Load Power Hub (BLPH) Project (K559-2254). In case of any contradiction resulting by the information or specification given in this document, phase 2 or later documents supersede the information provided in this document.

Vibration amplitude	Max 1 mm (5 … 13.2 Hz)	Max 1 mm (5 … 13.2 Hz)	Max. 3.5 mm (5 … 13.2 Hz)
IEC60068-2	Max. 7 m/s^2 (13.2 … 100 Hz) sinusoidal	Max. 7m/s^2 (13.2 … 100 Hz) sinusoidal	Max. 15 m/s^2 (9 … 200 Hz) sinusoidal
Impact IEC60068-2-29	Impermissible	Max. 100 m/s^2, 11 ms	Max. 100 m/s2, 11 ms
Free-fall	Impermissible	Impermissible	Impermissible

Table 7: Environmental conditions

5 Transport, Storage and Commissioning

Please observe the instructions for transport in section 5.2.

5.1 Unpacking

⚠ CAUTION

Hazard by sharp edges on packaging

Improper handling during unpacking can cause injuries.

➜ Use appropriate safety gloves to protect your hands from possible cuts.

The packaging of the system consists of cardboard, plastic and corrugated board. After usage the packaging must be disposed according to the local regulations for the disposal of paper products (e.g. recycling). After delivery, the delivered units and components must be checked for completeness and damage. If any damage on the delivered units and components have been found, contact the delivery service or FREQCON GmbH immediately.

5.2 Transport

NOTICE

Inadequate transportation of the device and all of its components may cause damage to the installed components.

- ➜ Vibrations and jolts must be avoided during transportation.
- ➜ The container must be transported in a horizontal position (lying down).
- ➜ Make sure to observe the specific national safety precautions for transport by truck, train or ship´.

NOTICE

Do not transport the containers with installed batteries

- ➜ Lifting or moving of BESS containers is not allowed if battery modules are inside the container
- ➜ Remove every battery module from the container before lifting or mowing the container

The containers must be transported to the installation site by instructed personnel.

Make sure that the components can be placed on a level surface.

For information regarding the dimensions and center of gravity of the containers, see section 5.2.2. The container weights are specified in section 2.

Vibrations and jolts must be avoided during transportation. If the system was damaged during transport, you must immediately inform the responsible transport company.

The containers must be transported in a horizontal position (lying down). It is not permitted to tip over the container during transportation or in any other scenario.

5.2.1 Container Lifting

⚠ DANGER	
	**Heavy load** **Improper lifting can result in death, serious injury or property damage.** Never lift the container above people. Use only lifting and personal protective equipment approved by OSHA or other national institutions.

NOTICE
Only use an appropriate crane to lift the container, capable to withstand the loads specified as follows: Weight of containers *see section 2*

NOTICE
Observe the container´s center of gravity during lifting: Observe the container´s center of gravity during lifting with crane, shown in section 5.2.2.

To lift the container with a crane, use the four transport lugs on the top corners of the container (*see following illustration*).

⚠ DANGER	
	**Heavy load** **Improper lifting can result in death, serious injury or property damage.** Never lift the container above people. Use only lifting and personal protective equipment approved by OSHA or other national institutions.

NOTICE
Only use an appropriate crane to lift the container, capable to withstand the loads specified as follows: Weight of containers *see section 2*

NOTICE
Observe the container´s center of gravity during lifting: Observe the container´s center of gravity during lifting with crane, shown in section 5.2.2.

To lift the containers with a crane, use the four transport lugs on the top corners of the container (*see following illustration*).

6 Installation

6.1 Required Tools

Installation personnel must at least have the following tools in reach before starting the installation:

Pos.	Installation Tools	Amount
	Basic Tools	
1.	Flash light	1
2.	Pliers set	1
3.	Ratchet set	1
4.	Torque wrench (1 - 100 Nm)	1
5.	Socket wrench set (with sockets 7 – 19 mm)	1
6.	Wrench set	1
7.	Cross-section screw drivers set	1
8.	Flat-section screw drivers set	1
9.	Allen key / Hex socket key set	1
10.	Cutter	1
11.	First-aid kit	1

Table 8: Installation tools

⚠ DANGER	
	**Electric shock due to low voltage and arcing on loose wires.** Severe irreparable damage to the nervous system, burns and death. ➜ Access to control cabinets and string cabinets only by FREQCON service personnel or by FREQCON instructed and authorized maintenance personnel. ➜ Plant control units may also be opened by instructed persons with the qualification of a qualified electrician. ➜ Work on electrical and electronic components as well as cables of the battery system may only be carried out by FREQCON service personnel or by FREQCON instructed and authorized maintenance personnel.

⚠ DANGER
Make sure that the energy source is locked and tagged and ensure that the isolation is effective before conducting work on the system. After switching-off the voltage supply, some components might still carry a charge. Check all poles using a suitable device.

⚠ WARNING
The electrical connection must be carried out in accordance with the local regulations of the utility company and /or VDE (in Germany).

Do not operate!	Lock and tag power switches and controller devices
	Observe national laws regarding Occupational Safety and Health, as well as Industrial Standards. ➢ DIN VDE 0105-100; VDE 0105-100:2009-10 Operation of electrical installations - General requirements.

6.2 Installation location

⚠ GEFAHR	
	**Danger from and for unauthorized persons** Unauthorized persons are not aware of the dangers in the work area and may endanger themselves and third parties danger. ➜ Keep unauthorized persons away from the work area. ➜ If in doubt, speak to persons and direct them away from the work area. ➜ Interrupt the work as long as unauthorized persons are in the work area. ➜ Always keep the entrance door(s) locked when not performing work on the system to prevent unauthorized persons from entering the container.

⚠ CAUTION	
	**Danger to life due to unsuitable lifting material** While lifting the container and/or battery modules use only suitable lifting equipment and lifting tackle ➜ Make sure that all the material and equipment is designed for the weight and all required inspections have been done. ➜ Make sure that no person is under the container or battery module during lifting.

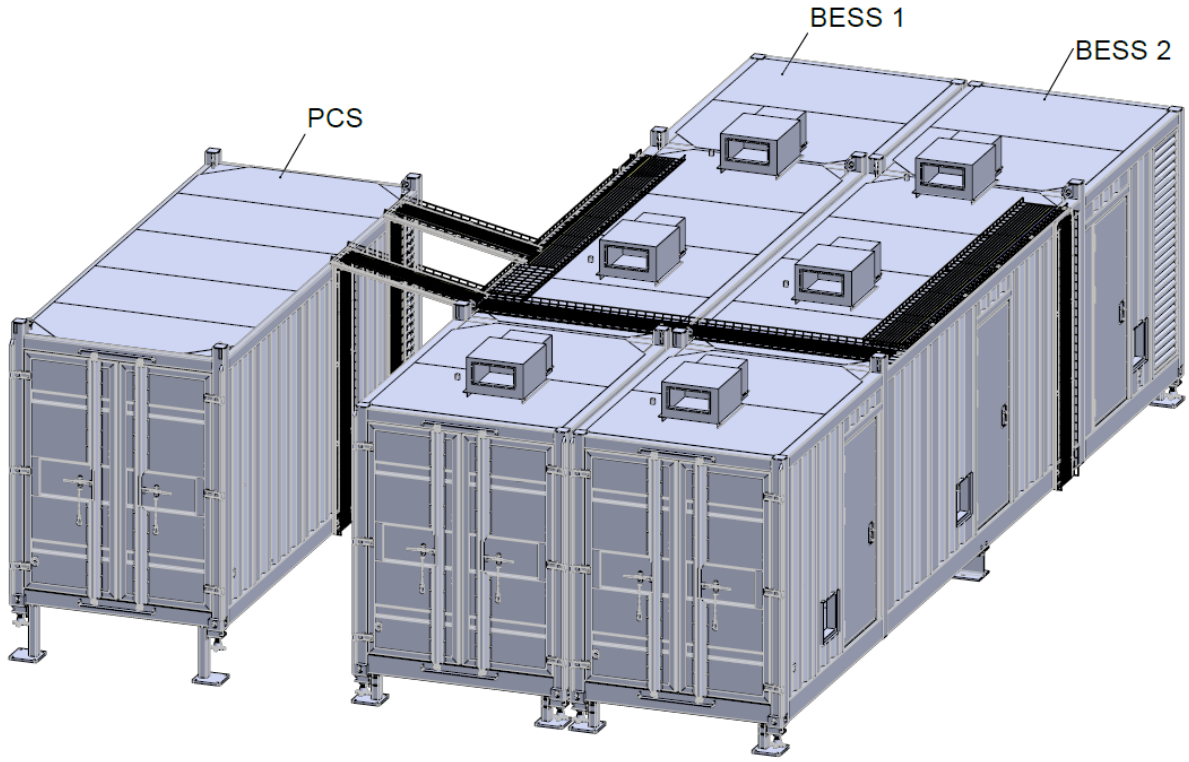
NOTICE
Equipment damage due to intruding animals Prevent animals from entering the interior of the container from below through the cable glands or recesses. ➜ Secure the container from the outside with suitable protection against the entry of animals.

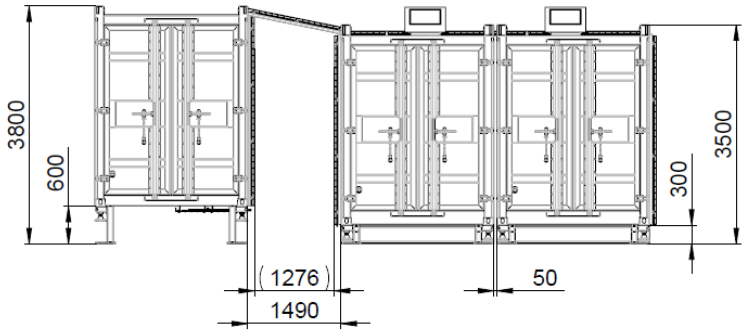
The PCS & BESS Containers are designed for outdoor installation, on a flat and ground level surface. Make sure that the environmental conditions meet the values of section 4 “Environmental Conditions”.

The entrances to the containers must be accessible from every side to allow for visual inspections or maintenance and repair work, if necessary.

Air inlets and outlets of the container, as well as on the cabinets inside the container, must always be kept free and cleaned of dirt in order to ensure the required air flow of the installed fans.

6.3 General Arrangement





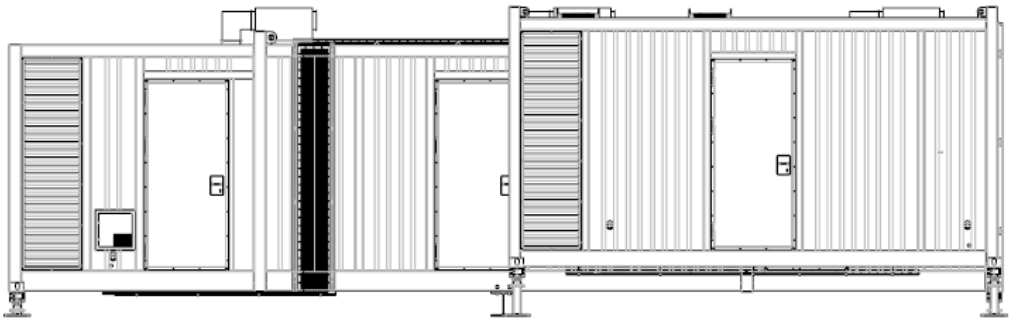


Figure 8: General arrangement

Front view

Side view

Top view

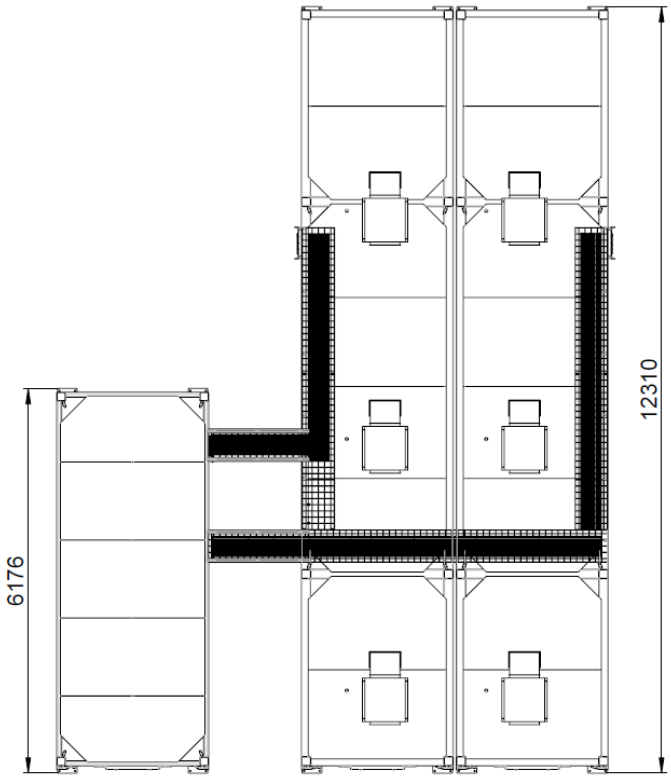

Figure 9: General arrangement with dimensions

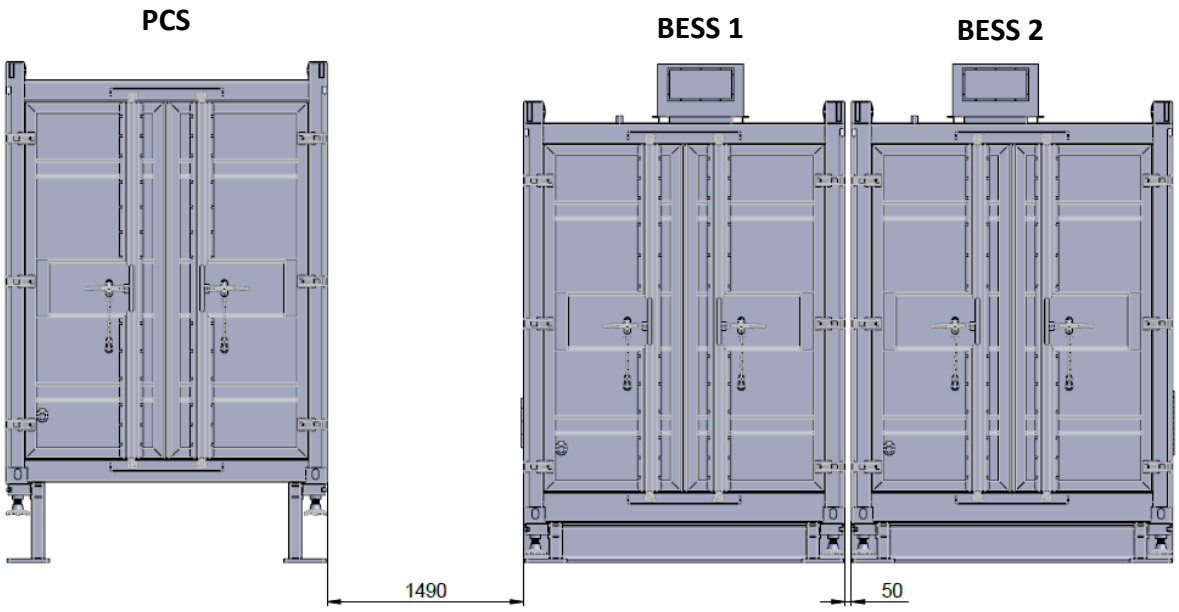
6.4 Distances between Containers



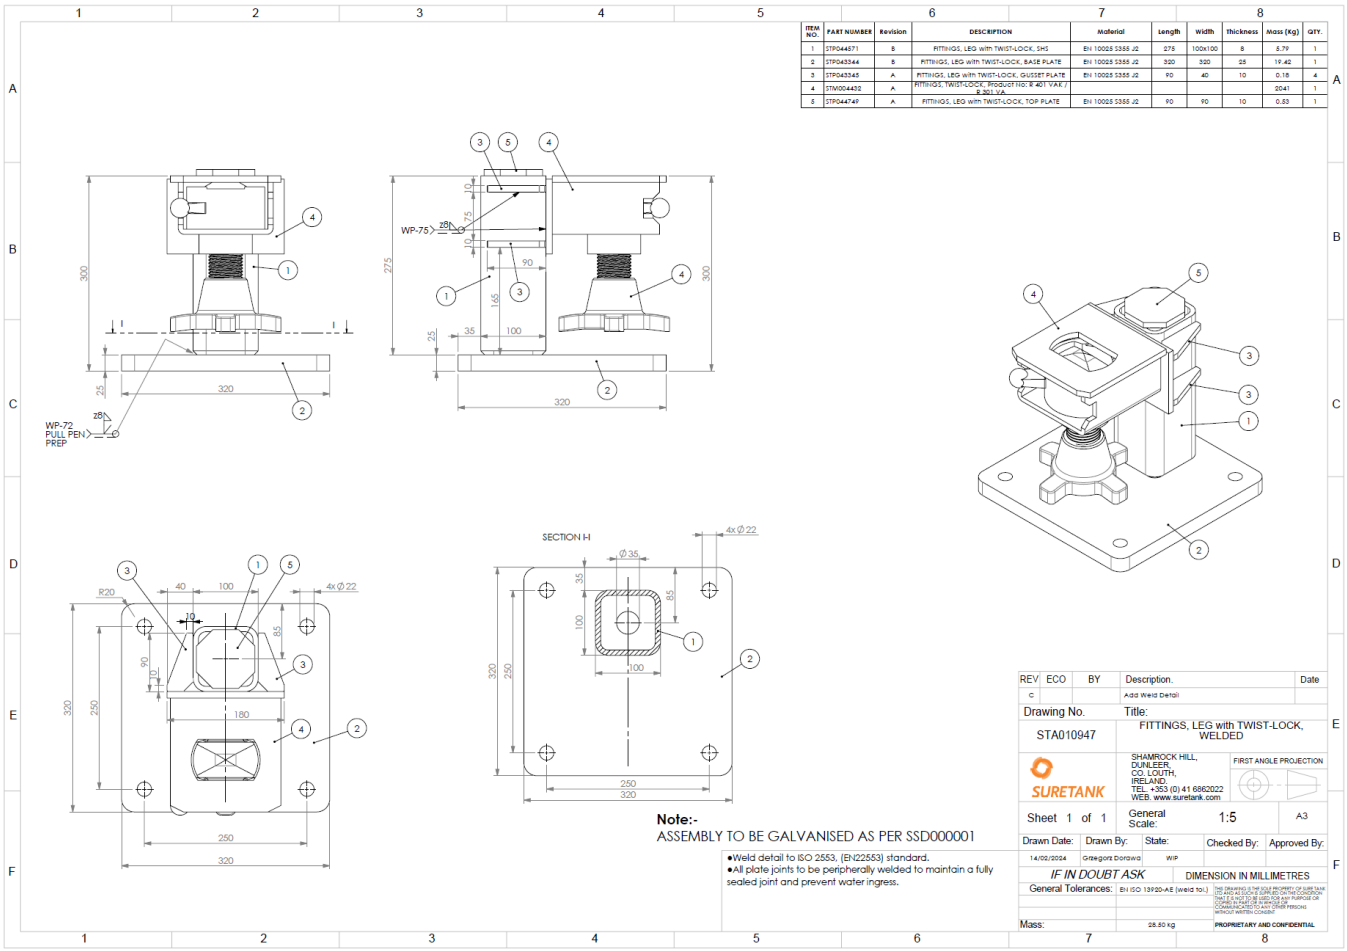


Figure 10: Distances between containers

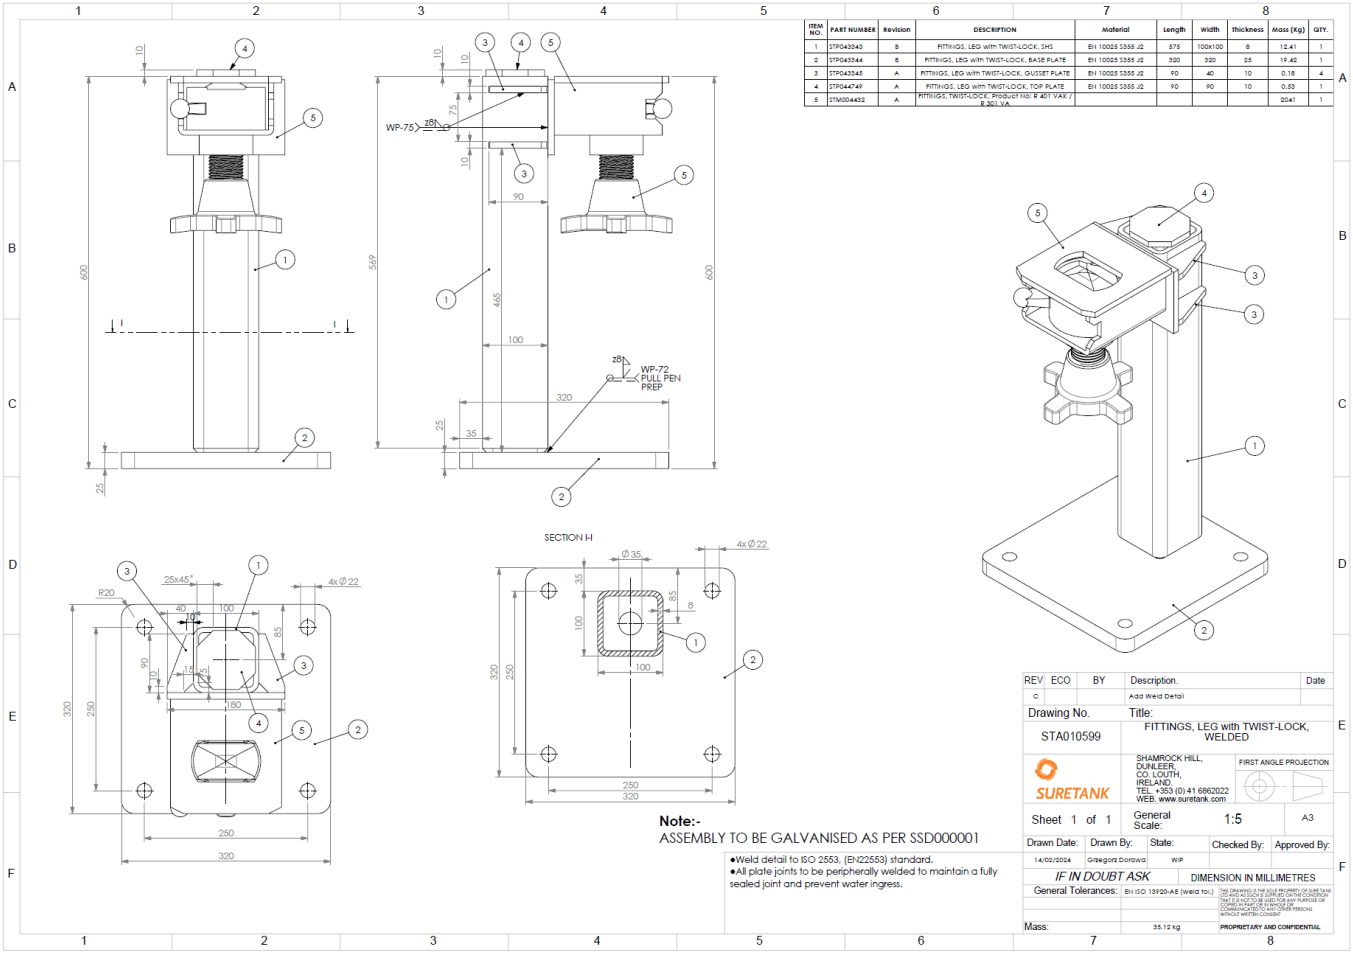
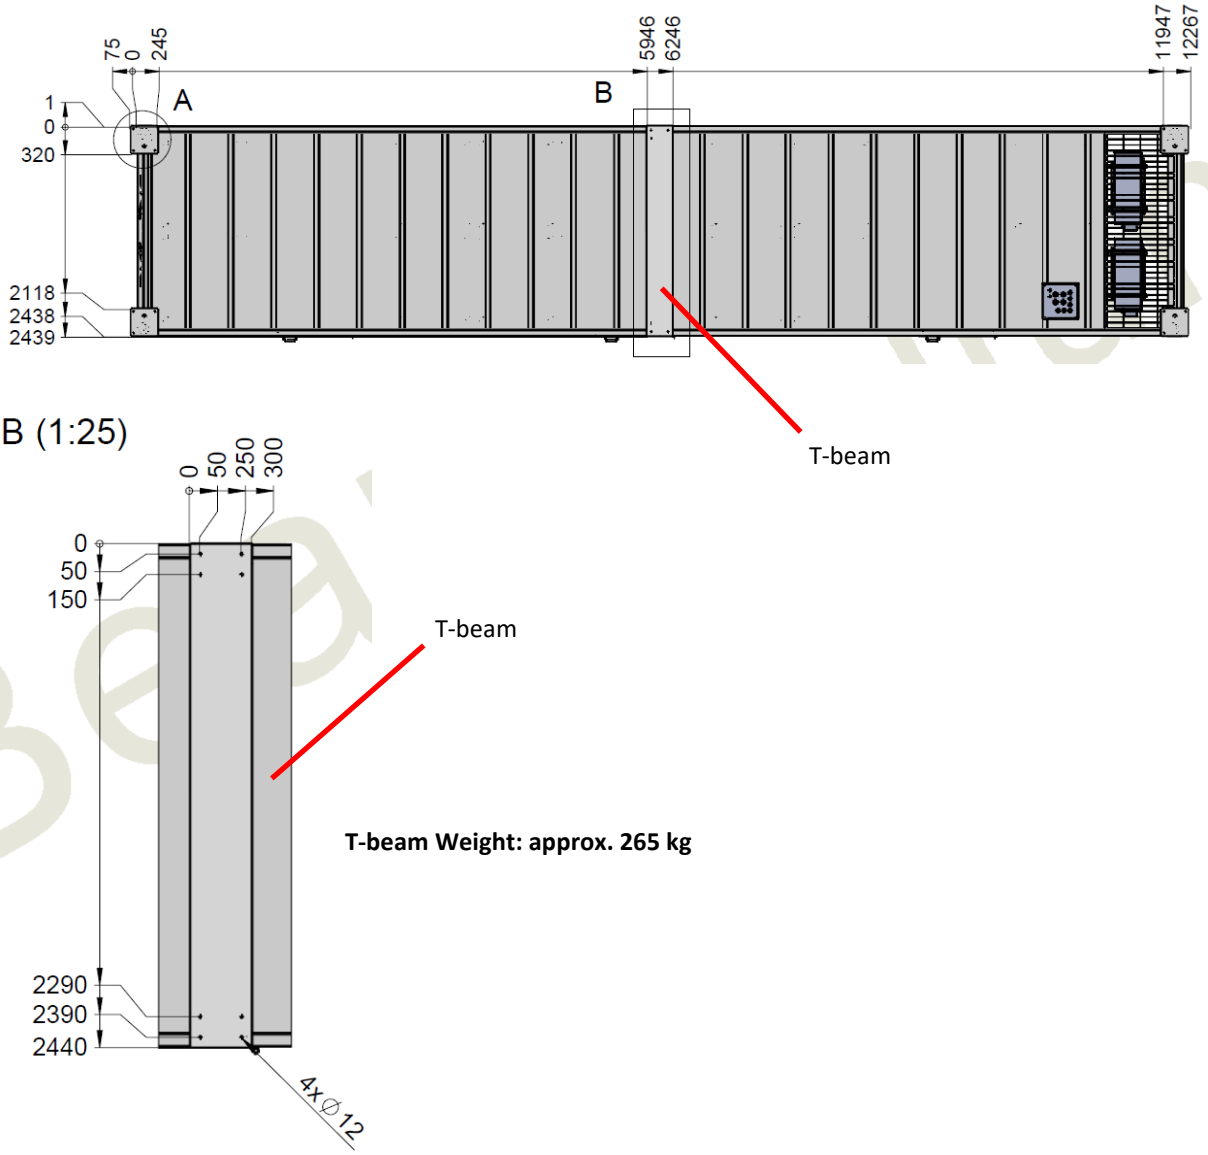
6.5 Container Feet and T-Beams



6.5.1 PCS Container Feet

4 container feet must be installed to the bottom corners of the 20FT PCS containers, before placing the container to the final installation location (*see drawing below and 1.3 "Other Applicable Documents"*.



Weight: approx. 28.5 kg

6.5.2 BESS Container Feet

Weight: approx. 35 kg

6.5.3 BESS T-Beams

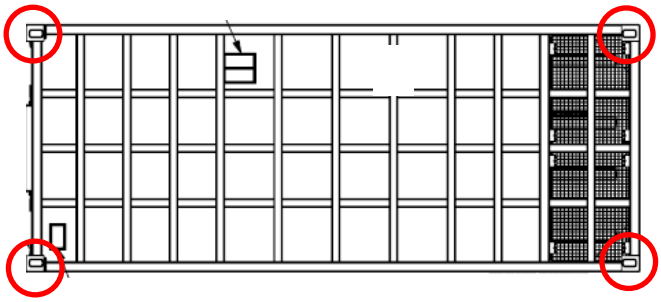
T-beam Weight: approx. 265 kg

6.6 Mechanical Installation of Containers

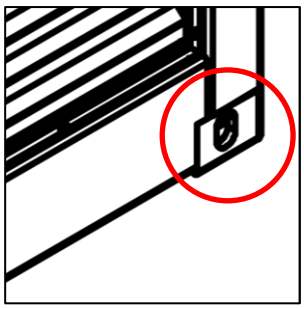
6.6.1 PCS

Task 1 **Lift PCS container and place on pedestal.**

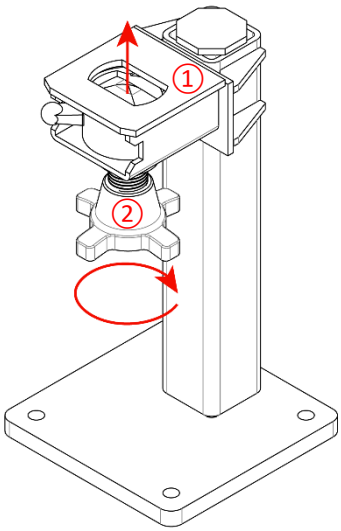
Step 1 : Lift the container (*see section 5.2.1*).



Step 2 : Place the container to several stools suitable to withstand the container load indicated in section 2. Please refer to Figure 13: Suggested stool positions for information on the stool positions.

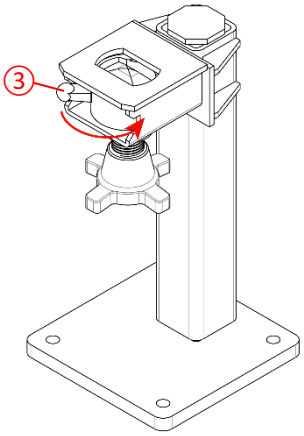


Task 2 **Install the 4 container feet to PCS container.**

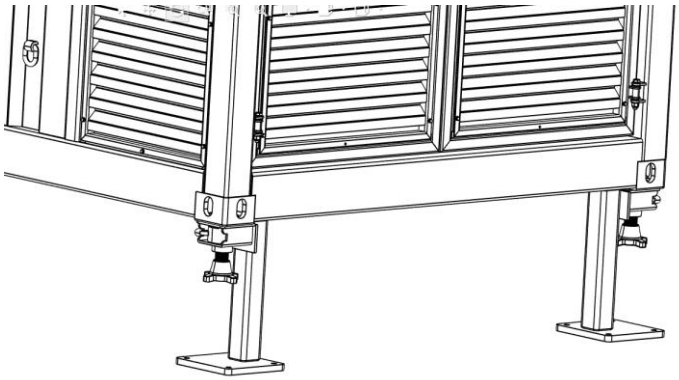


Attach first of the 4 container feet (*see section 6.5.1*).to one of the 4 bottom corner of the container.

Step 1 : Place the top plate (①) from the bottom to the corner of the container.



Step 2 : Screw the twist lock head mechanism of the foot (②) by twisting it as indicated in the illustration below. Screw until it has completely penetrated the bottom recess of the foot.



Step 3 : Secure the feet by twisting the twist lock locking mechanism (③) to the position like indicated in the illustration below.

Step 4 : Repeat the steps for the other 3 container feet.

✓ **The container feet have been successfully installed to the PCS container.**

Task 3 **Install cable trays on container bottom**

Step 1 : While the container is still lifted on the stools, drill the bore holes for cable tray installation according to the attached drawing " Mounting cable tray".

Step 2 : Insert blind rivet nuts to the prepared bore holes according to the drawing " Mounting cable Tray".

Step 3 : Fix the cable trays (① - ④) according to drawing " Mounting cable Tray".

Step 4 : Apply a torque to the connections according to drawing " Mounting cable Tray"

Cable trays:

GKX 520x60x2507

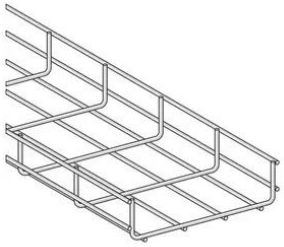


Figure 11: Cable tray V2A_ Gitterrinne GKX

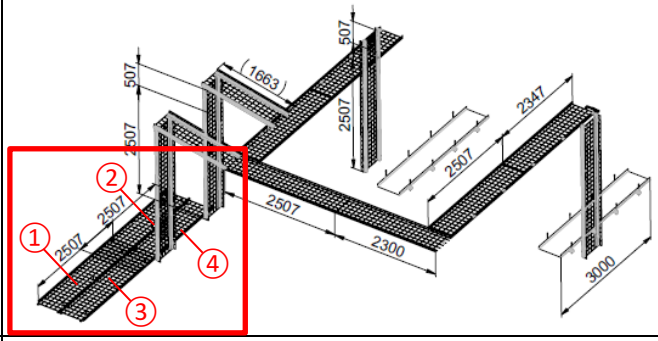

Figure 12: Cable trays for PCS container installation

Specification per cable tray:

Original part no.	Cable tray V2A_ Gitterrinne GKX 520x60x2507
Type	GKX 520x60x2507
Length	2507 mm
Width	520 mm
Height	60 mm

Task 4 **Lift container to installation location and fix to installation location.**

Step 1 : Lift the container (*see section 5.2.1*) and place it to the desired installation location.

Step 2 : Fix the 4 feet to the ground using suitable connection material (welding or bolting).

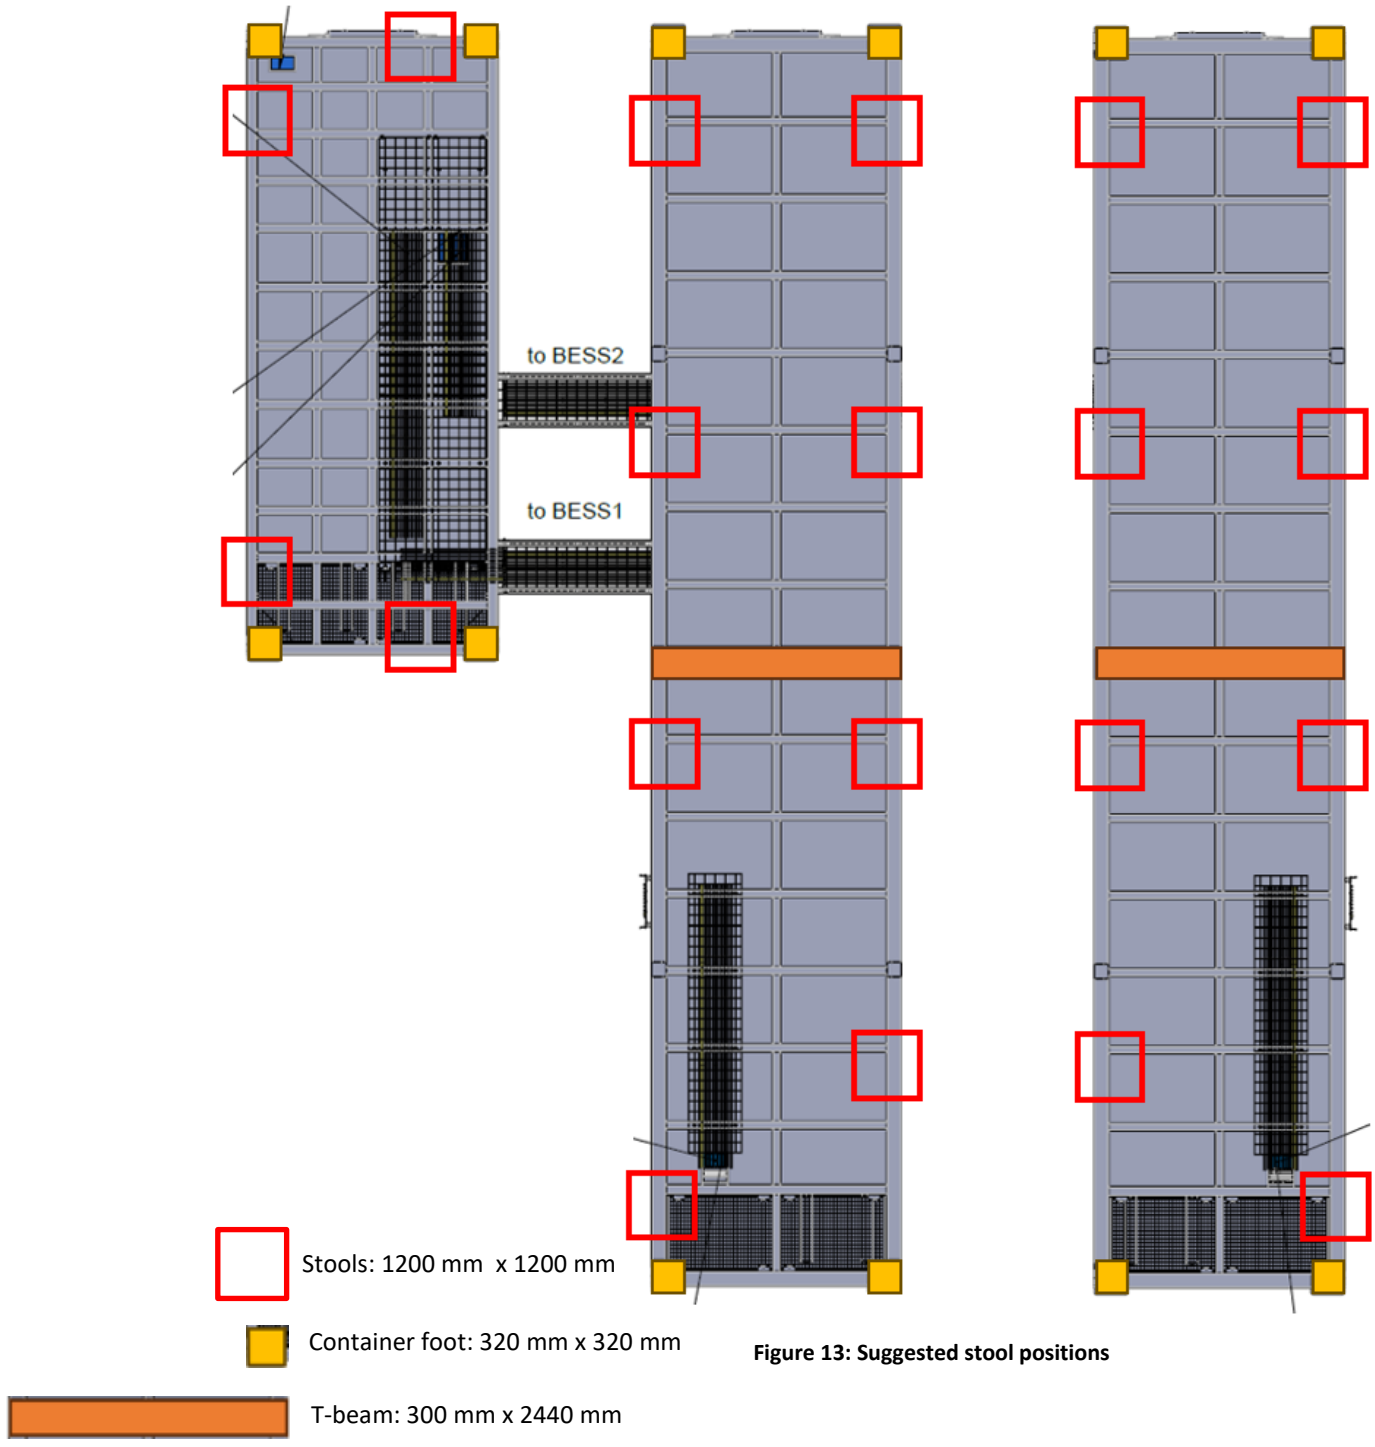
✓ **The PCS container has been successfully fixed to the installation location.**

6.6.2 BESS 1

Task 1 **Lift BESS container and place on pedestal.**

Step 1 : Lift the container (*see section 5.2.1*).

Step 2 : Place the container to stools suitable to withstand the container load indicated in section 2.



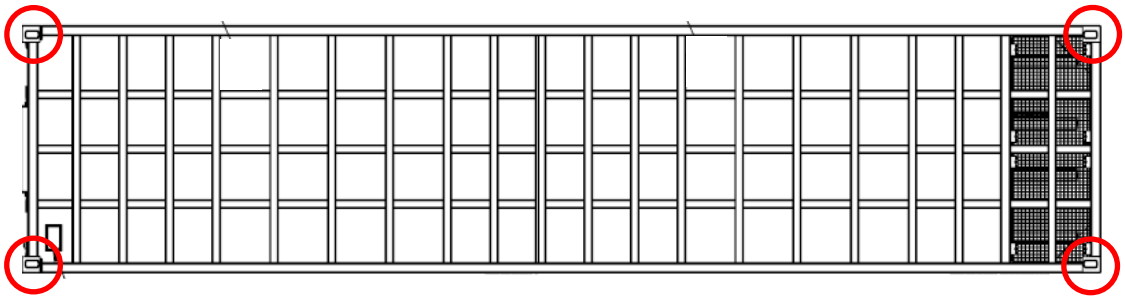


Figure 13: Suggested stool positions

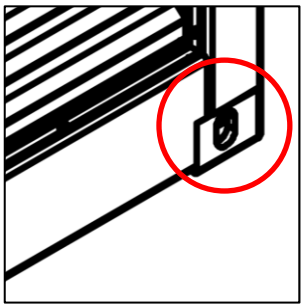
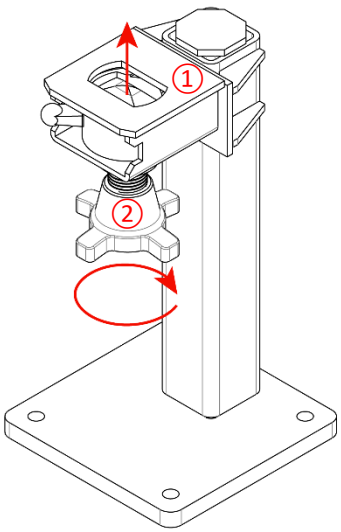
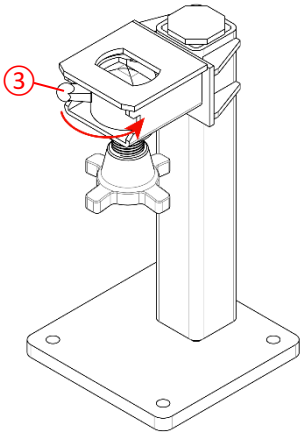


Task 2 **Install the 4 container feet to BESS container.**

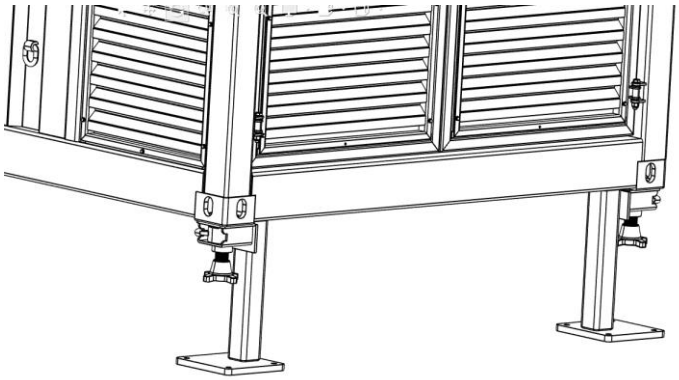


Attach container foot (*see section 6.5.1*) to one of the 4 bottom corner of the container.

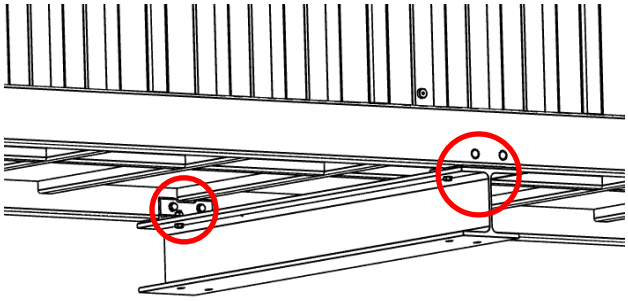
Step 1 : Place the top plate (①) from the bottom to the corner of the container.



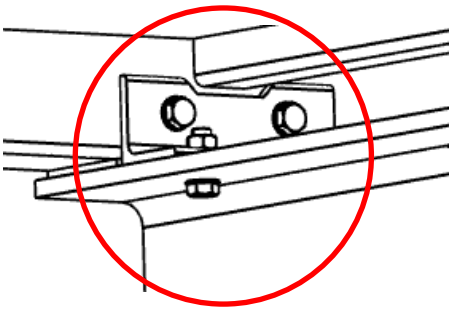
Step 2 : Screw the twist lock head mechanism of the foot (②) by twisting it as indicated in the illustration below. Screw until it has completely penetrated the bottom recess of the foot.



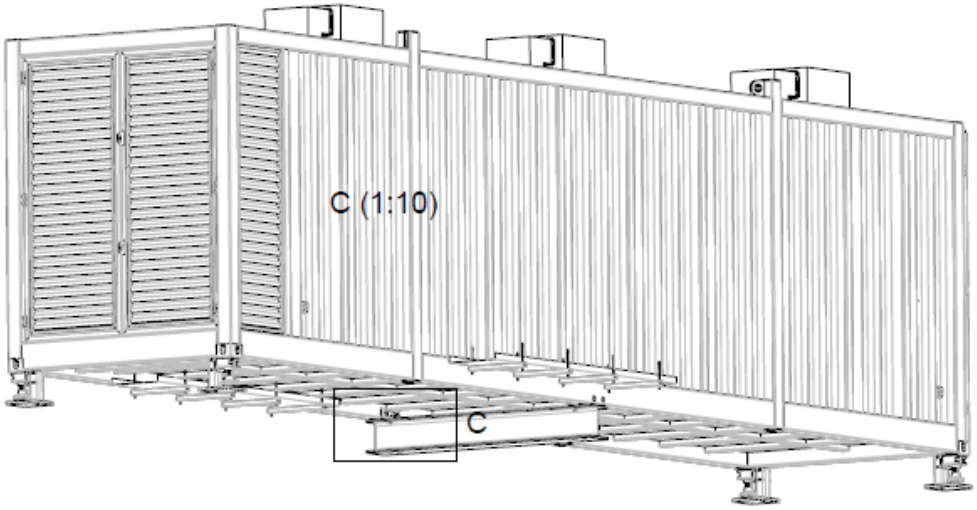
Step 3 : Secure the foot by twisting the twist lock locking mechanism (③) to the position like indicated in the illustration below.



Step 4 : Repeat all the steps of task 2 for the 3 remaining container feet.

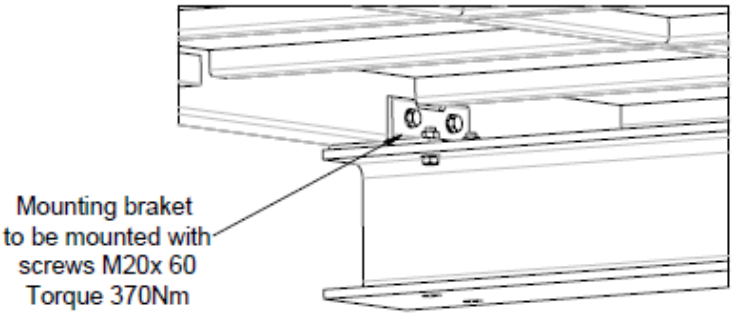


✓ **The container feet have been successfully installed to the BESS container.**



Task 3 **Install the t-beam to BESS container.**

Step 1 : While the container is still lifted on the stools, lift the provided t-beam (④) using a suitable lifting device under the container.
Beam weight approx. 260 kg.
Refer to below drawing for exact positioning of the beam.



Step 2 : Fix the t-beam to the container using the bore holes underneath the container and provided mounting brackets, nuts and bolts. Apply a torque of 370 Nm to the connections.

Height	60 mm

Task 5 **Lift container to installation location and fix to installation location.**

Step 1 : Lift the container (*see section 5.2.1*) and place it to the desired installation location.

Step 2 : Fix the 4 feet to the ground using suitable connection material (welding or bolting).

✓ **The PCS container has been successfully fixed to the installation location.**

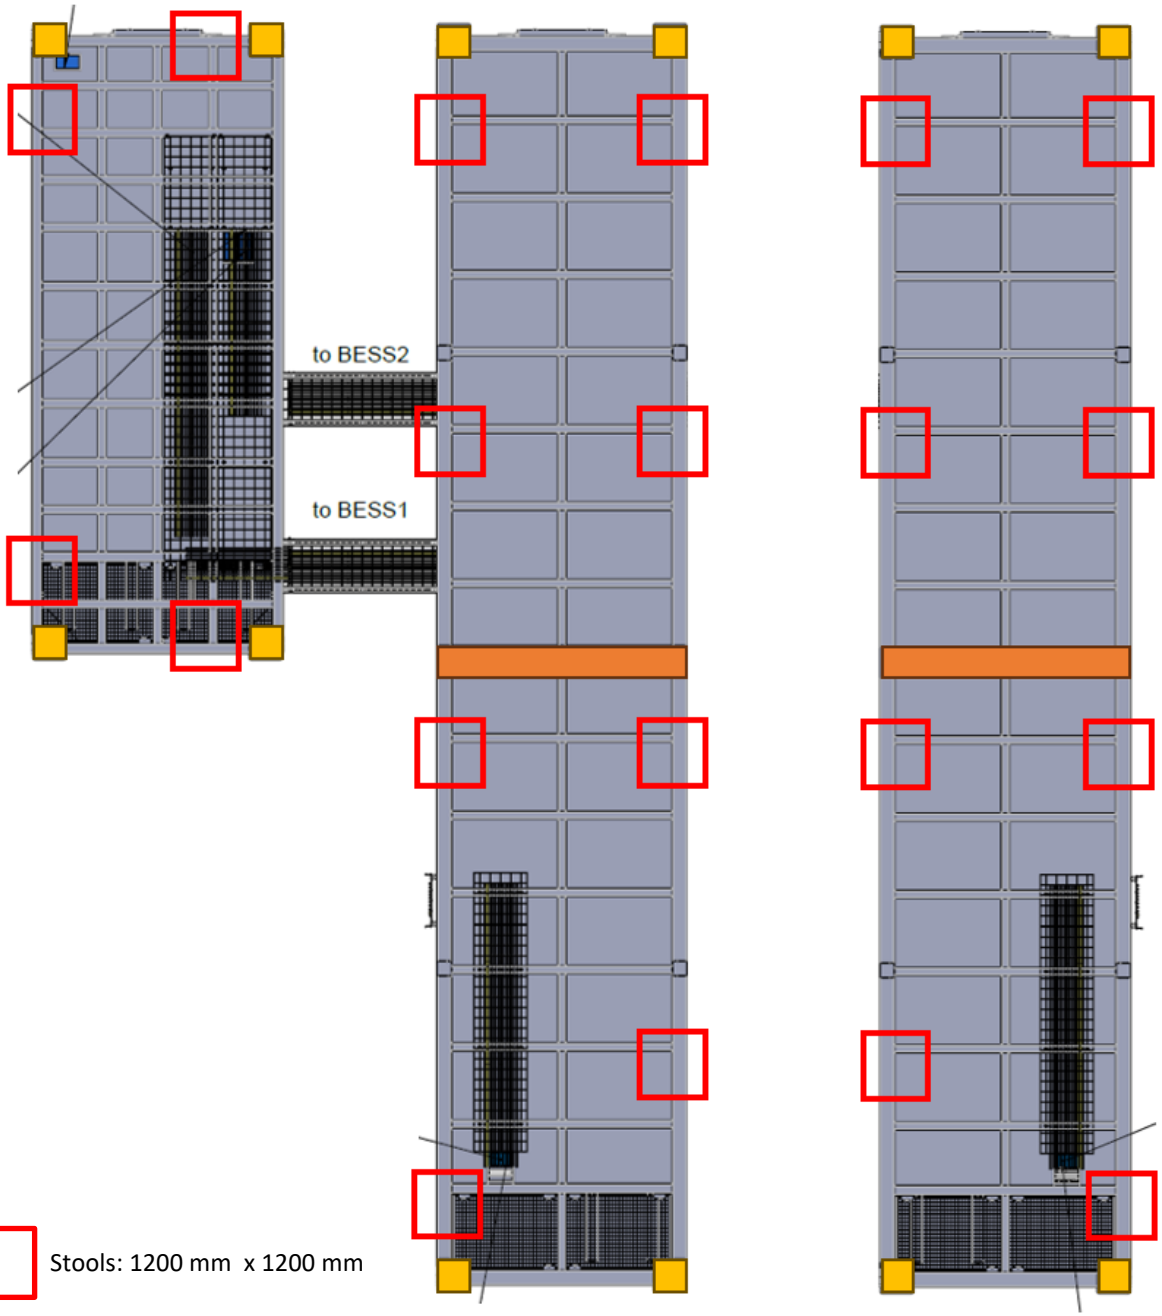
Task 6 **Lift BESS container with installed feet and T-beam to installation location.**

Step 1 : Lift the container (*see section 5.2.1*) and place it to the desired installation location. If bolting of the container feet is foreseen, make sure the boreholes of the installed container feet and t-beam are aligned with the connection provisions at the ground of the installation site.

Step 2 : Fix the T-beam to the ground using suitable connection material (welding or bolting).

Step 3 : Fix the container feet to the ground using suitable connection material (welding or bolting).

Step 4 : Check connections for tightness.



✓ **BESS container has been successfully fixed to the installation location.**

6.6.3 BESS 2

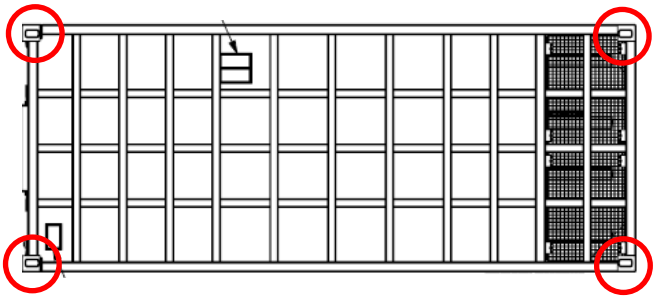
Task 1 **Lift BESS container and place on pedestal.**

Step 1 : Lift the container (*see section 5.2.1*).

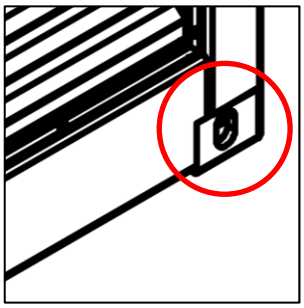
Step 2 : Place the container to stools suitable to withstand the container load indicated in section 2. Please refer to below figure for information on the stool positions.

Stools: 1200 mm x 1200 mm

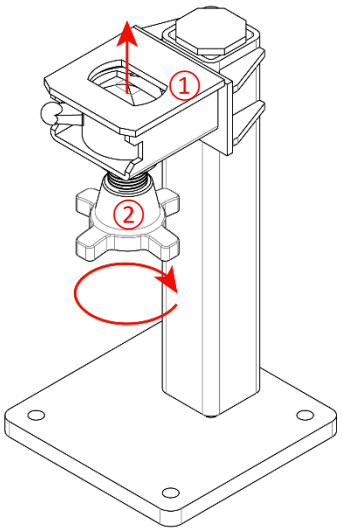
Container foot: 320 mm x 320 mm



T-beam: 300 mm x 2440 mm

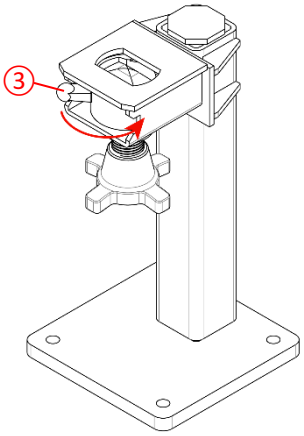


Task 2 **Install the 4 container feet to BESS 1 container.**

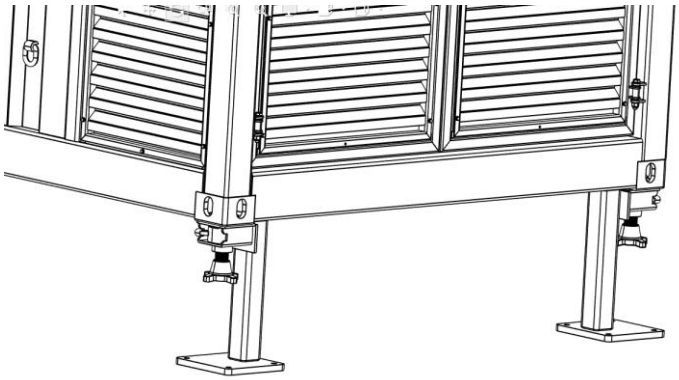


Attach container foot (*see section 6.5.1*) to one of the 4 bottom corner of the container.

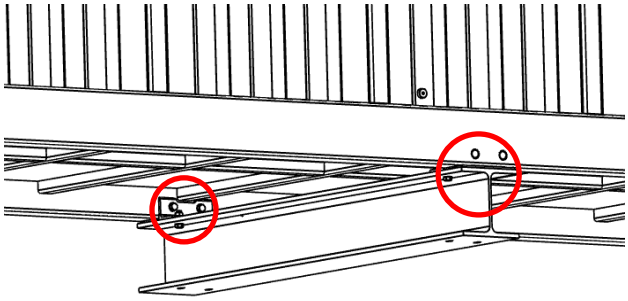
Step 1 : Place the top plate (①) from the bottom to the corner of the container.



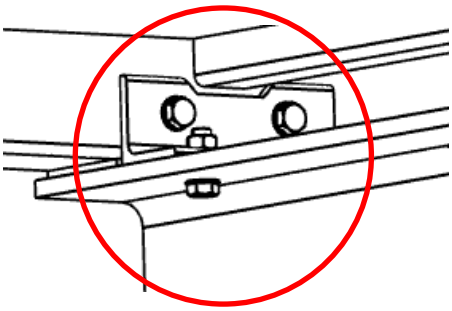
Step 2 : Screw the twist lock head mechanism of the foot (②) by twisting it as indicated in the illustration below. Screw until it has completely penetrated the bottom recess of the foot.



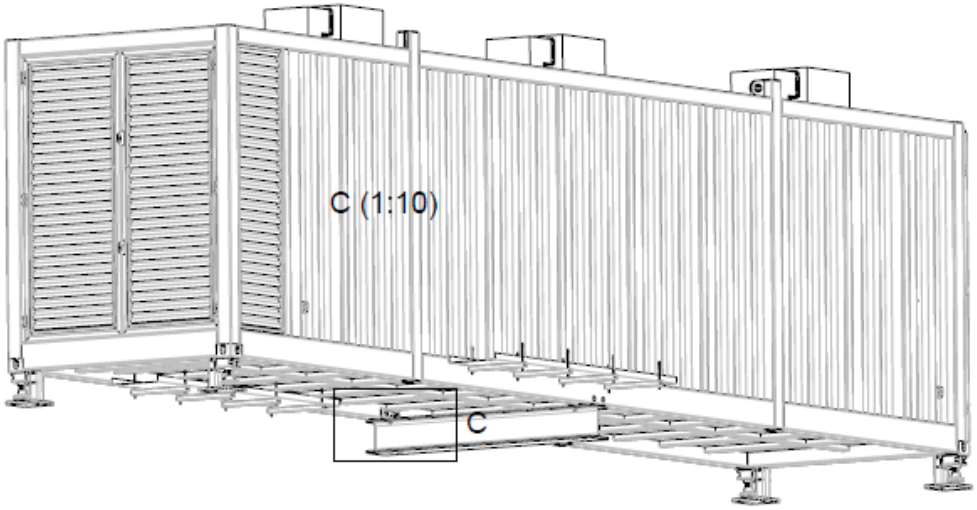
Step 3 : Secure the foot by twisting the twist lock locking mechanism (③) to the position like indicated in the illustration below.



Step 4 : Repeat all the steps of task 2 for the 3 remaining container feet.

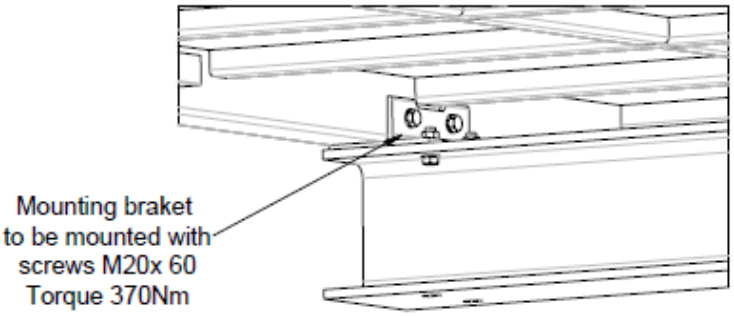


✓ **The container feet have been successfully installed to the BESS container.**



Task 3 **Install the t-beam to BESS container.**

Step 1 : While the container is still lifted on the stools, lift the provided t-beam (④) using a suitable lifting device under the container.
Beam weight approx. 260 kg.
Refer to below drawing for exact positioning of the beam.



Step 2 : Fix the t-beam to the container using the bore holes underneath the container and provided mounting brackets, nuts and bolts. Apply a torque of 370 Nm to the connections.

Description
A warning message is active.
An error has occurred.
The inverter is heated up to operating temperature.
The inverter is at operating temperature.
The DC Link is precharged and the main switch is switched on.
The inverter is ready to switch on the IGBTs.
The inverter is in operation. The IGBTs are pulsing.
The safety chain was interrupted. Except for the control energy, all energy sources are disconnected from the inverter.
The smoke alarm has triggered. The inverter switches off. Except for the control energy, all energy sources are disconnected from the inverter.
main switch is switched on
The heartbeat signal is increased by the value 1 in each cycle.The counter will be reset to 0 by a value of 16383.
Cabinet temperature of the control cabinet +CTRL.
Cabinet temperature of the +CON cabinet.
Cabinet temperature of the first additional cabinet e.g. +IND or +CIR
Cooling water temperature.
Shows the number of currently pending errors.
Via the variable "request an alarm record" in the profile "Profile Freqcon Con" the error entries 1-500 can be actively queried. Example: "actual records" reports that there are three errors. The second fault should be queried. For this purpose "request an alarm

three errors. The second fault should be queried. For this purpose "request an alarm record" =2 is set. With the next processing cycle "records" is set =2. "Records" mirrors the current request.
An error number is assigned to each error. This number is divided into the category, the error location in the program and a consecutive number.
The error level of the currently queried error entry. 2 = Warning 3 = Switch off the power electronics, open the main switch Cooling continues. 4 = Switching off the power electronics, opening the main switch. Cooling is switched off.
Date on which the error occurred. DATE#1990-01-01 --> (W#16#0000) D#2168-12-31--> (W#16#FF62) A variable with type DATE is stored in a word as an unsigned fixed point number. The content of this variable corresponds to the number of days elapsed since 1.1.1992.
Time at which the error occurred. TIME_OF_DAY#00:00:00 --> (W#16#0000_0000) TOD#23:5:.59.999 -->(W#16#0526_5BFF) This type occupies a double word and contains the number of milliseconds since the beginning of the day (0:00).

Description
Will be acitve if the converter hasnt balanced for a long time. Customer to either initate balancing through power setpoint or the enable balancing control bit.
balancing is active
battery rack 1 is connected and available for discharging and charging
battery rack 2 is connected and available for discharging and charging
battery rack 1 is disconnected and has an error
battery rack 2 is disconnected and has an error
The smoke alarm has triggered. The inverter switches off. Except for the control energy, all energy sources are disconnected from the inverter.
The smoke alarm has triggered. The inverter switches off. Except for the control energy, all energy sources are disconnected from the inverter.
The gas alarm has triggered. The inverter switches off. Except for the control energy, all energy sources are disconnected from the inverter.
The gas alarm has triggered. The inverter switches off. Except for the control energy, all energy sources are disconnected from the inverter.

Description
Reset of errors.
Start the preheating. The cooling is started. The circulation pump, the heat exchanger and, if necessary, the heating are switched on.
Start the preload. The intermediate crystals are preloaded and the main switch is switched on.
Enable to pulse the primary IGBTs. These usually supply the DC link and are connected to the public grid.
Enable balancing of this DC port
Enable balancing of this DC port
Enable balancing of this DC port
Enable balancing of this DC port
Enable balancing of this DC port
Enable balancing of this DC port
Start signal to run the converter; 1 = start; 0 = stop
Expects a value that changes with each (bus) cycle in the range of (16#1 to 16#FFFF).
The TimeOut time specifies the time after which a communication error message appears if the heartbeat no longer changes.
Via the variable "request an alarm record" in the profile "Profile Freqcon Con" the error entries 0-500 can be actively queried. Example: "actual records" reports that there are three errors. The second fault should be queried. For this purpose "request an alarm record" =2 is set. With the next processing cycle the error entry is output via the profile "s_profile_freqcon_status_1_struct"
Active power setpoint input to the inverter.
Reactive power setpoint input to the inverter.

Das Profil dient zur Steueurng des Umrichters.

The converter can be controled over this profile.

Messages

Designation	Message
LVMD 4.1	Protective device required due to possible selectivity requirement

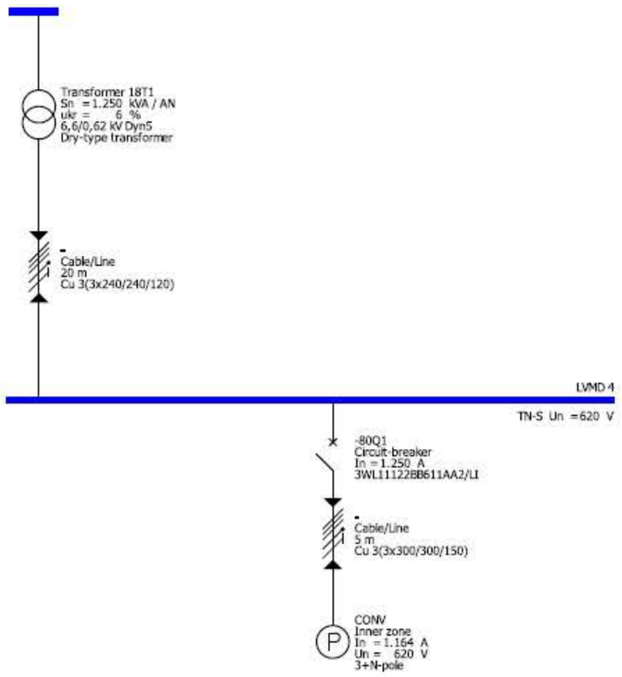
Personal protection against electric shock

All circuits of the project have a permissable break time ta-req > ta-cur and therefor fulfill the requirements for Personal protection against electric shock.

Disclaimer:

Dimensioned protection devices inside tap-off units of busbar trunking systems may not correspond to the actual available devices for those components. Please verify the dimensioning results in the device lists and correct them accordingly.

Symbols legend:



Symbol [Unit]	Description
ai	Load factor
cos φ	Power factor
ftot	Derating factor
Ia/In	Inrush current relation
Ib [A] Iz [A]	Operating current / allowed load capacity
Icu(fuse) [kA]	Rated ultimate short-circuit breaking capacity - fuse
Icu [kA] Icn [kA]	Rated ultimate short-circuit breaking capacity according to IEC 60947-2 Rated short-circuit breaking capacity according to IEC 60898-1
Icu/Icn [kA] required	the required breaking capacity of the protection device at installation location
Icw 1s [kA]	Rated short-time withstand current 1s
IΔn [mA]	Residual current - RCD
Ik1max	Maximum single phase short-circuit current
Ik1min	Minimum single phase short-circuit current
Ik3max	Maximum three phase short-circuit current
Ik3min	Minimum three phase short-circuit current
Ik1D [kA]	single pole uninterrupted short-circuit current
Ik3D [kA]	three pole uninterrupted short-circuit current
Ikmax/Ikmin	Relation of maximum and minimum short-circuit current
Ikre	Short-circuit current recovery factor
In [A]	Nominal current
P0 [kW]	No-load losses
Pk [kW]	Short-circuit losses
Pmech [kW]	mechan. Power
Pn [kW]	Active power
R0 N [mΩ]	Zero phase-sequence resistance phase-neutral conductor
R0 PE(N) [mΩ]	Zero phase-sequence resistance phase-PE(N) conductor
R0/R1	Resistance relation positive / zero phase-sequence system
r1 [%]	Relative value of positive phase-sequence resistance
R1 [mΩ]	Positive phase-sequence resistance

Sn [kVA]	Nominal apparent power
ukr [%]	Short-circuit voltage
Un [V]	Nominal voltage
Uprim [kV]	Primary voltage
Usec [V]	Secondary voltage
X0 N [mΩ]	Zero phase-sequence reactance phase-neutral conductor
X0 PE(N) [mΩ]	Zero phase-sequence reactance phase-PE(N) conductor
X0/X1	Reactance relation positive / zero phase-sequence system
X1 [mΩ]	Positive phase-sequence reactance
xd" [%]	Subtransient reactance
Z1 max	Maximum impedance in positive phase-sequence system
Z1 min	Minimum impedance in positive phase-sequence system
Zs	Faulted circuit impedance
Zs max	Maximum faulted circuit impedance
Zs min	Minimum faulted circuit impedance
u [%] / Δu [%] / ∑ Δu [%]	Relative nominal voltage / voltage drop between beginning and end of a section / cumulated voltage drop from the transformer primary/ secondary clamps to the specified point
θΔu [°C] / θIkmax [°C] / θIkmin [°C]	Conductor temperature of MV cable / Conductor temperature of LV cable for voltage drop / on beginning of short circuit / for disconnection
η	Efficiency
φ [°]	Phase angle
φ1 min/max [°]	Phase angle at Ik1 min/max
φ3 min/max [°]	Phase angle at Ik3 min/max

Converter Container

Network parameters:

General	
Standard	IEC
Attitude of Site	< 1000 m

Medium Voltage	
Rated voltage	6.6 kV
Relative operating voltage at feeding point	100 %
Voltage factor c max	1.1
Voltage factor c min	1
Max./Min short-circuit power	91.452 / 91.452 MVA
Max./Min. short-circuit current	8 / 8 kA
Neutral System	Low-resistance
Relation R1/X1	0.2

Low Voltage	
Rated voltage	400 V
System configuration	TN-S
Frequency	50 Hz
Tolerable touch voltage	50 V
Ambient temperature of devices	30 °C
Voltage factor c max	1.1
Voltage factor c min	0.9
Base point of voltage drop calculation	Transformer-secondary terminals
Max. permissible voltage drop in network	8 %

Defined network modes for calculation and dimensioning:

Operating mode: Betriebsart 1

Starting point	Target point	Connection	Status
NSHV 1	NSHV 2	NSUV 3.1	On
Supply	NSHV 1	NSHV 3.2	On

List of devices:

Sources of feeding:

Messages

Designation	Message
NSHV 3.2	Protective device required due to possible selectivity requirement

Personal protection against electric shock

All circuits of the project have a permissable break time ta-req > ta-cur and therefor fulfill the requirements for Personal protection against electric shock.

Disclaimer:

Dimensioned protection devices inside tap-off units of busbar trunking systems may not correspond to the actual available devices for those components. Please verify the dimensioning results in the device lists and correct them accordingly.

Symbols legend:

Symbol [Unit]	Description
ai	Load factor
cos φ	Power factor
ftot	Derating factor
Ia/In	Inrush current relation
Ib [A] Iz [A]	Operating current / allowed load capacity
Icu(fuse) [kA]	Rated ultimate short-circuit breaking capacity - fuse
Icu [kA] Icn [kA]	Rated ultimate short-circuit breaking capacity according to IEC 60947-2 Rated short-circuit breaking capacity according to IEC 60898-1
Icu/Icn [kA] required	the required breaking capacity of the protection device at installation location
Icw 1s [kA]	Rated short-time withstand current 1s
IΔn [mA]	Residual current - RCD
Ik1max	Maximum single phase short-circuit current
Ik1min	Minimum single phase short-circuit current
Ik3max	Maximum three phase short-circuit current
Ik3min	Minimum three phase short-circuit current
Ik1D [kA]	single pole uninterrupted short-circuit current
Ik3D [kA]	three pole uninterrupted short-circuit current
Ikmax/Ikmin	Relation of maximum and minimum short-circuit current
Ikre	Short-circuit current recovery factor
In [A]	Nominal current
P0 [kW]	No-load losses
Pk [kW]	Short-circuit losses
Pmech [kW]	mechan. Power
Pn [kW]	Active power
R0 N [mΩ]	Zero phase-sequence resistance phase-neutral conductor
R0 PE(N) [mΩ]	Zero phase-sequence resistance phase-PE(N) conductor
R0/R1	Resistance relation positive / zero phase-sequence system
r1 [%]	Relative value of positive phase-sequence resistance
R1 [mΩ]	Positive phase-sequence resistance

Sn [kVA]	Nominal apparent power
ukr [%]	Short-circuit voltage
Un [V]	Nominal voltage
Uprim [kV]	Primary voltage
Usec [V]	Secondary voltage
X0 N [mΩ]	Zero phase-sequence reactance phase-neutral conductor
X0 PE(N) [mΩ]	Zero phase-sequence reactance phase-PE(N) conductor
X0/X1	Reactance relation positive / zero phase-sequence system
X1 [mΩ]	Positive phase-sequence reactance
xd" [%]	Subtransient reactance
Z1 max	Maximum impedance in positive phase-sequence system
Z1 min	Minimum impedance in positive phase-sequence system
Zs	Faulted circuit impedance
Zs max	Maximum faulted circuit impedance
Zs min	Minimum faulted circuit impedance
u [%] / Δu [%] / ∑ Δu [%]	Relative nominal voltage / voltage drop between beginning and end of a section / cumulated voltage drop from the transformer primary/ secondary clamps to the specified point
θΔu [°C] / θIkmax [°C] / θIkmin [°C]	Conductor temperature of MV cable / Conductor temperature of LV cable for voltage drop / on beginning of short circuit / for disconnection
η	Efficiency
φ [°]	Phase angle
φ1 min/max [°]	Phase angle at Ik1 min/max
φ3 min/max [°]	Phase angle at Ik3 min/max

Battery Container

Network parameters:

General	
Standard	IEC
Attitude of Site	< 1000 m

Medium Voltage	
Rated voltage	6.6 kV
Relative operating voltage at feeding point	100 %
Voltage factor c max	1.1
Voltage factor c min	1
Max./Min short-circuit power	91.452 / 91.452 MVA
Max./Min. short-circuit current	8 / 8 kA
Neutral System	Low-resistance
Relation R1/X1	0.2

Low Voltage	
Rated voltage	400 V
System configuration	TN-S
Frequency	50 Hz
Tolerable touch voltage	50 V
Ambient temperature of devices	30 °C
Voltage factor c max	1.1
Voltage factor c min	0.9
Base point of voltage drop calculation	Transformer-secondary terminals
Max. permissible voltage drop in network	8 %

Defined network modes for calculation and dimensioning:

Operating mode: Betriebsart 1

Starting point	Target point	Connection	Status
NSHV 3	NSHV 4	NSUV 3.1	On

Messages

Designation	Message
NSHV 3.2	Protective device required due to possible selectivity requirement

Personal protection against electric shock

All circuits of the project have a permissable break time ta-req > ta-cur and therefor fulfill the requirements for Personal protection against electric shock.

Disclaimer:

Dimensioned protection devices inside tap-off units of busbar trunking systems may not correspond to the actual available devices for those components. Please verify the dimensioning results in the device lists and correct them accordingly.

Symbols legend:

Symbol [Unit]	Description
ai	Load factor
cos φ	Power factor
ftot	Derating factor
Ia/In	Inrush current relation
Ib [A] Iz [A]	Operating current / allowed load capacity
Icu(fuse) [kA]	Rated ultimate short-circuit breaking capacity - fuse
Icu [kA] Icn [kA]	Rated ultimate short-circuit breaking capacity according to IEC 60947-2 Rated short-circuit breaking capacity according to IEC 60898-1
Icu/Icn [kA] required	the required breaking capacity of the protection device at installation location
Icw 1s [kA]	Rated short-time withstand current 1s
IΔn [mA]	Residual current - RCD
Ik1max	Maximum single phase short-circuit current
Ik1min	Minimum single phase short-circuit current
Ik3max	Maximum three phase short-circuit current
Ik3min	Minimum three phase short-circuit current
Ik1D [kA]	single pole uninterrupted short-circuit current
Ik3D [kA]	three pole uninterrupted short-circuit current
Ikmax/Ikmin	Relation of maximum and minimum short-circuit current
Ikre	Short-circuit current recovery factor
In [A]	Nominal current
P0 [kW]	No-load losses
Pk [kW]	Short-circuit losses
Pmech [kW]	mechan. Power
Pn [kW]	Active power
R0 N [mΩ]	Zero phase-sequence resistance phase-neutral conductor
R0 PE(N) [mΩ]	Zero phase-sequence resistance phase-PE(N) conductor
R0/R1	Resistance relation positive / zero phase-sequence system
r1 [%]	Relative value of positive phase-sequence resistance
R1 [mΩ]	Positive phase-sequence resistance

Sn [kVA]	Nominal apparent power
ukr [%]	Short-circuit voltage
Un [V]	Nominal voltage
Uprim [kV]	Primary voltage
Usec [V]	Secondary voltage
X0 N [mΩ]	Zero phase-sequence reactance phase-neutral conductor
X0 PE(N) [mΩ]	Zero phase-sequence reactance phase-PE(N) conductor
X0/X1	Reactance relation positive / zero phase-sequence system
X1 [mΩ]	Positive phase-sequence reactance
xd" [%]	Subtransient reactance
Z1 max	Maximum impedance in positive phase-sequence system
Z1 min	Minimum impedance in positive phase-sequence system
Zs	Faulted circuit impedance
Zs max	Maximum faulted circuit impedance
Zs min	Minimum faulted circuit impedance
u [%] / Δu [%] / ∑ Δu [%]	Relative nominal voltage / voltage drop between beginning and end of a section / cumulated voltage drop from the transformer primary/ secondary clamps to the specified point
θΔu [°C] / θIkmax [°C] / θIkmin [°C]	Conductor temperature of MV cable / Conductor temperature of LV cable for voltage drop / on beginning of short circuit / for disconnection
η	Efficiency
φ [°]	Phase angle
φ1 min/max [°]	Phase angle at Ik1 min/max
φ3 min/max [°]	Phase angle at Ik3 min/max

A method of temperature-rise assessment by extrapolation for partially type-tested assemblies (PTTA) of low-voltage switchgear and controlgear	60890+C	528 S2		0660 – 507
Electrical installations of buildings – Part 5-52: Selection and erection of electrical equipment – Wiring systems	60364-5-52	384		0298 – 4
Low-voltage electrical installations – Selection and erection of electrical equipment – Part 520: Wiring systems – Supplement 3: Current-carrying capacity of cables in three-phase distribution circuits at load currents with harmonic content				0100-520 Supplement 3
Electrical accessories – Circuit-breakers for overcurrent protection for household and similar installations – Circuit-breakers for a.c. operation	60898-1		60898-1	0641 – 11
High-voltage switchgear and controlgear – Alternating Current switch-fuse combinations	62271		62271	0671 – 105
Electrical installations of buildings – Selection and erection of electrical equipment – Isolation, switching and control	60364-5-53	60364-5-534		0100-534
Low-voltage electrical installations – Protection for safety – Protection against voltage disturbances and electromagnetic disturbances	60364-4-44	60364-4-443		0100-443
Protection against lightning – Part 1…4	62305-1…4			0185 – 1…4
Low-voltage surge protective devices - Surge protective devices connected to low-voltage power systems; Requirements and tests	61643-11			0675-6-11
Tests for electric cables under fire conditions – Circuit integrity	60331-11, 21		50200	0472-814 0482-200
Fire behaviour of building materials and building components — Part 12: Circuit integrity maintenance of electric cable systems, requirements and testing				4102-12 : 1998-11
Electrical equipment of electric road vehicles - Electric vehicles conductive charging system	61851		61851	

*) Special national conditions and deviations from IEC 60364-4-41: 2005 are not implemented and need to be considered!

Network parameters:

General	
Standard	IEC
Attitude of Site	< 1000 m

Medium Voltage	
Rated voltage	6.6 kV
Relative operating voltage at feeding point	100 %
Voltage factor c max	1.1
Voltage factor c min	1
Max./Min short-circuit power	92.71 / 92.71 MVA
Max./Min. short-circuit current	8.11 / 8.11 kA
Neutral System	Low-resistance
Relation R1/X1	0.2

Low Voltage	
Rated voltage	620 V
System configuration	TN-S
Frequency	50 Hz
Tolerable touch voltage	50 V
Ambient temperature of devices	30 °C
Voltage factor c max	1.1
Voltage factor c min	0.9
Base point of voltage drop calculation	Transformer-secondary terminals
Max. permissible voltage drop in network	8 %

Defined network modes for calculation and dimensioning:

Operating mode: Betriebsart 1

Starting point	Target point	Connection	Status
Transformer 18T1	LVMD 4	LVMD 4.1	On

List of devices:

Sources of feeding:

Transformers:

Designation	Type	Sn [kVA]	ukr [%]	Uprim [kV]/ Usec [V]	Pk [kW]	P0 [kW]	Vector group	Δu_transformer [%]	Air forced	Catalog Reference

Low-voltage switchgear and controlgear – Circuit-breakers	60947-2		60947-2	0660 – 101
Low-voltage switchgear and controlgear assemblies	61439		61439	0660 – 600
A method of temperature-rise assessment by extrapolation for partially type-tested assemblies (PTTA) of low-voltage switchgear and controlgear	60890+C	528 S2		0660 – 507
Electrical installations of buildings – Part 5-52: Selection and erection of electrical equipment – Wiring systems	60364-5-52	384		0298 – 4
Low-voltage electrical installations – Selection and erection of electrical equipment – Part 520: Wiring systems – Supplement 3: Current-carrying capacity of cables in three-phase distribution circuits at load currents with harmonic content				0100-520 Supplement 3
Electrical accessories – Circuit-breakers for overcurrent protection for household and similar installations – Circuit-breakers for a.c. operation	60898-1		60898-1	0641 – 11
High-voltage switchgear and controlgear – Alternating Current switch-fuse combinations	62271		62271	0671 – 105
Electrical installations of buildings – Selection and erection of electrical equipment – Isolation, switching and control	60364-5-53	60364-5-534		0100-534
Low-voltage electrical installations – Protection for safety – Protection against voltage disturbances and electromagnetic disturbances	60364-4-44	60364-4-443		0100-443
Protection against lightning – Part 1…4	62305-1…4			0185 – 1…4
Low-voltage surge protective devices - Surge protective devices connected to low-voltage power systems; Requirements and tests	61643-11			0675-6-11
Tests for electric cables under fire conditions – Circuit integrity	60331-11, 21		50200	0472-814 0482-200
Fire behaviour of building materials and building components — Part 12: Circuit integrity maintenance of electric cable systems, requirements and testing				4102-12 : 1998-11
Electrical equipment of electric road vehicles - Electric vehicles conductive charging system	61851		61851	

*) Special national conditions and deviations from IEC 60364-4-41: 2005 are not implemented and need to be considered!

Battery Container

Network parameters:

General	
Standard	IEC
Attitude of Site	< 1000 m

Medium Voltage	
Rated voltage	6.6 kV
Relative operating voltage at feeding point	100 %
Voltage factor c max	1.1
Voltage factor c min	1
Max./Min short-circuit power	91.452 / 91.452 MVA
Max./Min. short-circuit current	8 / 8 kA
Neutral System	Low-resistance
Relation R1/X1	0.2

Low Voltage	
Rated voltage	400 V
System configuration	TN-S
Frequency	50 Hz
Tolerable touch voltage	50 V
Ambient temperature of devices	30 °C
Voltage factor c max	1.1
Voltage factor c min	0.9
Base point of voltage drop calculation	Transformer-secondary terminals
Max. permissible voltage drop in network	8 %

Defined network modes for calculation and dimensioning:

Operating mode: Betriebsart 1

Starting point	Target point	Connection	Status
NSHV 3	NSHV 4	NSUV 3.1	On

Messages

Designation	Message
NSHV 3.2	Protective device required due to possible selectivity requirement

Personal protection against electric shock

All circuits of the project have a permissable break time ta-req > ta-cur and therefor fulfill the requirements for Personal protection against electric shock.

Disclaimer:

Dimensioned protection devices inside tap-off units of busbar trunking systems may not correspond to the actual available devices for those components. Please verify the dimensioning results in the device lists and correct them accordingly.

Symbols legend:

Symbol [Unit]	Description
ai	Load factor
cos φ	Power factor
ftot	Derating factor
Ia/In	Inrush current relation
Ib [A] Iz [A]	Operating current / allowed load capacity
Icu(fuse) [kA]	Rated ultimate short-circuit breaking capacity - fuse
Icu [kA] Icn [kA]	Rated ultimate short-circuit breaking capacity according to IEC 60947-2 Rated short-circuit breaking capacity according to IEC 60898-1
Icu/Icn [kA] required	the required breaking capacity of the protection device at installation location
Icw 1s [kA]	Rated short-time withstand current 1s
IΔn [mA]	Residual current - RCD
Ik1max	Maximum single phase short-circuit current
Ik1min	Minimum single phase short-circuit current
Ik3max	Maximum three phase short-circuit current
Ik3min	Minimum three phase short-circuit current
Ik1D [kA]	single pole uninterrupted short-circuit current
Ik3D [kA]	three pole uninterrupted short-circuit current
Ikmax/Ikmin	Relation of maximum and minimum short-circuit current
Ikre	Short-circuit current recovery factor
In [A]	Nominal current
P0 [kW]	No-load losses
Pk [kW]	Short-circuit losses
Pmech [kW]	mechan. Power
Pn [kW]	Active power
R0 N [mΩ]	Zero phase-sequence resistance phase-neutral conductor
R0 PE(N) [mΩ]	Zero phase-sequence resistance phase-PE(N) conductor
R0/R1	Resistance relation positive / zero phase-sequence system
r1 [%]	Relative value of positive phase-sequence resistance
R1 [mΩ]	Positive phase-sequence resistance

Sn [kVA]	Nominal apparent power
ukr [%]	Short-circuit voltage
Un [V]	Nominal voltage
Uprim [kV]	Primary voltage
Usec [V]	Secondary voltage
X0 N [mΩ]	Zero phase-sequence reactance phase-neutral conductor
X0 PE(N) [mΩ]	Zero phase-sequence reactance phase-PE(N) conductor
X0/X1	Reactance relation positive / zero phase-sequence system
X1 [mΩ]	Positive phase-sequence reactance
xd" [%]	Subtransient reactance
Z1 max	Maximum impedance in positive phase-sequence system
Z1 min	Minimum impedance in positive phase-sequence system
Zs	Faulted circuit impedance
Zs max	Maximum faulted circuit impedance
Zs min	Minimum faulted circuit impedance
u [%] / Δu [%] / ∑ Δu [%]	Relative nominal voltage / voltage drop between beginning and end of a section / cumulated voltage drop from the transformer primary/ secondary clamps to the specified point
θΔu [°C] / θIkmax [°C] / θIkmin [°C]	Conductor temperature of MV cable / Conductor temperature of LV cable for voltage drop / on beginning of short circuit / for disconnection
η	Efficiency
φ [°]	Phase angle
φ1 min/max [°]	Phase angle at Ik1 min/max
φ3 min/max [°]	Phase angle at Ik3 min/max

Original document

This document is an original document of FREQCON GmbH.

Target Group

This document is intended for persons responsible for the maintenance of FREQCON Battery Energy Storage Systems.

Display Elements

Symbol	Significance
➜	Action with one or several steps for which the sequence is irrelevant.
Step 1 : **Step 2 :**	Action with several steps for which the sequence is relevant.
•	First level of list.
-	Second level of list.

1.1 Applicable Documents

The delivery scope of the product includes the following documents:

Document	Document Name
Circuit diagram - BESS (FREQCON)	Project specific
Circuit diagram - Inverter (FREQCON)	Project specific
Communication variable list (FREQCON)	Interface description
Data Sheet Battery Module LF280	50_20_220217_52365_Datenblatt_Batteriemodul_LF280_v1.0_EN
Maintenance Schedule BESS	EED_0000_20_230308_Wartungsplan_BESS_LFP_v1.3_EN

Table 3: Applicable Documents

1.2 List of Abbreviations

This following list should help you understand some of the abbreviations used in this document.

Generic Term and Abbreviation	Significance
AC	Alternating current
Identifier	Component Designation
BMS	Battery management system
CMC	Cell management controller
DC	Direct current
DC-link	Direct current link
HMI	Human-machine interface
MV	Medium voltage
LTO	Lithium-titanate-oxide
LV	Low voltage
PLC	Programmable Logic Controller
SoC	State of charge
UPS	Uninterruptable power supply
WGC	Water-glycol circuit
CON	Converter

Table 4: List of Abbreviations

1.3 Disclaimer of Liability

The contents of this publication have been reviewed to ensure consistency with the hardware and software described. Since variance cannot be precluded entirely, we cannot guarantee full consistency. However, any necessary corrections are included in subsequent editions.

2 Safety Instructions

2.1 The Five Safety Rules

For your own personal safety and to prevent material damage when carrying out any work, always observe the safety-relevant instructions and the following five safety rules according to EN 50110-1 "Working in a voltage-free state".

5 Sicherheitsregeln

Vor Beginn der Arbeiten
- Freischalten
- Gegen Wiedereinschalten sichern
- Spannungsfreiheit feststellen
- Erden und Kurzschließen
- Benachbarte, unter Spannung stehende Teile abdecken oder abschranken

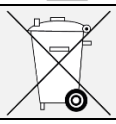
2.2 Basic Safety Information

Do not operate!	**Lock and tag power switches and controller devices**
	Follow national laws regarding occupational safety and health. ➜ Identify the energy source(s). ➜ Isolate the energy source(s). ➜ Determine voltage-free status. ➜ Ground device or equipment to protect from short circuiting and from shocks. ➜ Lock and Tag the energy source(s). ➜ Prove that the equipment isolation is effective. ➜ When required, apply lock-out device or clamp and secure with padlock(s).

Important!	
	➜ Read the instructions of this manual thoroughly before use! ➜ Keep manual within reach. ➜ All personnel who have to perform any task on the Battery Module (on-site or remotely) with respect to operation of the unit are obligated to read all related manuals regarding the Battery Module. By proceeding with work on the Battery Module, the personnel declare that they have fully read and understood all contents of the manuals and agree to follow all instructions, especially issues regarding safety and accident prevention.

⚠ GEFAHR	
	**Hazard by voltage** Always respect all the safety instructions and, in particular: ➜ Always use protective devices suitable and approved for each type of activity. ➜ The instructions in this manual must be strictly followed. ➜ Use of the equipment must comply with all national and local regulations. ➜ Access to internal components is only allowed after the converter has been de-energized and disconnected from all power supplies.

⚠ GEFAHR	
	**Hazard by voltage** ➜ Electric shock hazard. ➜ Only electricians may perform work on electrical components. ➜ Do not touch live components! ➜ Disconnect the device from all power supplies, before performing work on the device. ➜ Do not short circuit any conductive parts that are not de-energized before. (Take care with jewellery, tools, instruments, etc. which can cause short circuits accidentally.)



⚠ GEFAHR	
	**Hazard by voltage** ➜ Before opening the cabinet doors de-energize the converter. ➜ Even if the main circuit breaker is switched off, the cabinets are not completely voltage-free.

⚠ GEFAHR	
	**Risk of burns on hot surfaces** ➜ Avoid contact with hot surfaces or wear protective clothing (e.g. protective gloves).

⚠ GEFAHR	
	**General risk of injury due to improper handling** ➜ Only perform work on this device if you have adequate expert knowledge for the respective work. ➜ Follow the operating instructions and warnings stated in this manual.

2.3 Warning Symbols

Observe the warning symbols in this document and those attached on the device. The warning symbols have the following meaning:

Symbols	Significance
	Hazard (general)
	Hazard by voltage
	Hazard by high temperature
	Hazard by batteries
	Maintenance lockout tagout, do not switch!
	Acute toxicity (oral, dermal, inhalation) (hazard. category 4)
	Respiratory sensitization (hazard category 1, 1A and 1B)
	Prohibition for people with pacemakers
	Hazard by heavy load
	Do not dispose in household waste.

2.4 Information Symbols

Symbol	Significance
	Important technical information for this product

2.5 Warning Levels / Signal Words

⚠ DANGER	Indicates a hazardous situation which, if not avoided, will result in death or serious injury.
⚠ WARNING	Indicates a hazardous situation which, if not avoided, could result in death or serious injury.
⚠ CAUTION	Indicates a hazardous situation which, if not avoided, could result in minor or moderate injury
NOTICE	Indicates that property damage can result, if proper precautions are not taken.

2.6 Warnings and Symbols on the Device

30 Min.
WARNUNG
Gefährliche DC-Spannung!
Vor Wartungsarbeiten, Entladung des Kondensatorfilters (bis zu 30 min.) abwarten und Spannungsfreiheit prüfen.
Sicherheitshinweise in der Dokumentation beachten.

30 min.
WARNING
Hazardous DC voltage!
Observe capacitor´s discharge time (up to 30 min.) and check voltage in case of maintenance.
Observe the safety instructions in the manual.

WARNUNG
Beachten Sie die Sicherheits- und Aufstellhinweise in der Dokumentation.

WARNING
Observe the safety and installation instructions in the manual.

Aufstellung nur
- in Betriebsstätten mit beschränktem Zutritt
- auf Beton oder nicht brennbarem Boden

Installation only
- in operating facilities with restricted access
- on concrete or other non-flammable surface

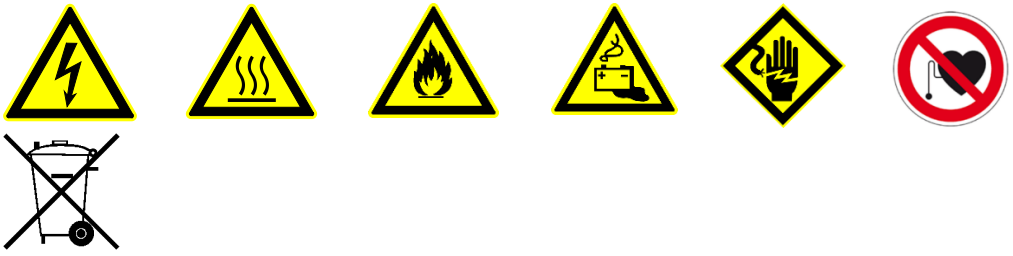
GEFAHR
Gefahr durch austretendes Elektrolyt!
Arbeiten am Batteriespeicher dürfen nur von ausgebildetem und von der FREQCON GmbH qualifiziertem und freigegebenen Fachpersonal durchgeführt werden. Modifizierungen oder Manipulationen am Batteriespeicher können zu erheblichen Sicherheitsrisiken führen und sind deshalb verboten.

DANGER
Hazard by spilling electrolyte!
Only qualified personal trained and certified by FREQCON GmbH are allowed to perform work on the battery storage system. Modifications or manipulation to the battery storage system may lead to severe safety risks and are therefore forbidden.

WARNUNG
Störung von Herzschrittmachern!
Durch elektromagnetische Felder können Herzschrittmacher in ihrer Funktion beeinträchtigt werden. Personen mit Herzschrittmachern dürfen sich deshalb nicht in der Nähe des Umrichters aufhalten.

WARNING
Interference with cardiac pacemakers!
Electromagnetic fields generated by the device may interfere with the correct functioning of cardiac pacemakers. Therefore, persons with cardiac pacemakers are not allowed in the proximity of the device.

WARNUNG
Zum Freischalten des Gerätes Hauptschalter und alle (externen) Einspeisetrenner öffnen!



WARNING
For disconnection, open main switch and all (external) input disconnectors!

HINWEIS
Nicht manuell schalten!

NOTICE
Do not switch manually!

WARNUNG
Schaltschranktüren während des Betriebs nicht öffnen!

WARNING
Do not open switch cabinet doors during operation!

2.7 Qualification of Personnel

Installation, service and operating personnel must be sufficiently trained before installing, operating and handling the equipment.

2.8 Personal Protection Equipment (PPE)

Always wear safety equipment when working on the product.

When carrying out maintenance and service work, secure controllers, devices and units of designated area against accidental activation.

Symbol	Meaning and Application
	Gloves made of nitrile rubber against chemicals and microorganisms (at least protection index 2 according to EN 374-1) • for removal of electrolyte or hydrofluoric acid (only by FREQCON service) • Gloves according to EN 60903 - up to 1000 V AC for live working activities
	Safety shoes (toe protection, non-slip, ESD) • Operation • Cleaning Safety shoes (acid resistant) or rubber boots • for removal of electrolyte or hydrofluoric acid (only by FREQCON service)
	Tightly fitting safety goggles/basket goggles/face shield • for removal of electrolyte and hydrofluoric acid (only by FREQCON service)
	Chemical protective suit • for removal of electrolyte and hydrofluoric acid (only by FREQCON service) • for fire fighting
	Ambient air-independent breathing apparatus • for firefighting in case of smoke formation inside or outside the building (by rescue forces)

Table 5: Personal Protection Equipment (PPE)

2.9 Basic Safety Information

⚠ DANGER	
	**Electric shock hazard!** **Do not perform maintenance work on a live system.** After switching off the converter, the DC-link of the converter still carries dangerous voltages, which may cause death or severe injuries if touched or short circuit. ➜ Before performing work on the converter, deenergize the converter like explained in section, wait for 30 minutes until the installed capacitors are discharged and check the voltage-free status of the DC-link by using a 2-pole voltage tester ➜ It is not allowed to open the cabinet doors before the converter system has been de-energized and the capacitors are discharged. ➜ It is not allowed to perform any work on the converter before the system has been de-energized.

⚠ DANGER	
	**Electric shock hazard!** **Do not perform maintenance work on the converter system, before the converter system has been disconnected from all power sources.** After switching off the converter, the connected AC and DC connection busbars and DC switch & fuse modules still carry dangerous voltages, which may cause death or severe injuries if touched or short-circuit. ➜ Before performing work on the converter, deenergize the converter like explained in section, wait for 30 minutes until the installed capacitors are discharged and check the voltage-free status of the DC-link by using a 2-pole voltage tester ➜ Disconnect the system from the energy generation unit using appropriate disconnecting devices before handling or performing work on the unit. ➜ Before disconnecting the DC power cables from the DC connection busbars, always check for voltage free status of the DC power cables, since dangerous electric arcs may lead to severe injuries or death when disconnecting power cables.

⚠ DANGER	
	**Electric shock hazard!** **Before anywork is carried out onthe device, the circuit breaker must be opened and also secured against unintentional reclosing.** ➜ Before performing work inside the converter cabinets, the circuit breaker must be switched off and also be protected against unintended reclosure.

⚠ DANGER	
	**Danger to life through electric arcs** Danger by electric arcs could occur by: • Exceedance of the maximum input current • Faulty design of circuit breakers or transformers • Faulty or not connected cables • Excessive contamination Electric arcs may lead to death, severe injuries or material damage. ➜ Make sure the system is properly designed and all power cables are connected correctly. The maximum permissible input current is provided in the table "Technical Data". ➜ Excessive contamination must be removed.

⚠ DANGER	
	**General risk of injury due to improper handling.** Always respect all the safety instructions and, in particular: ➜ Always use protective devices suitable and approved for each type of activity. ➜ The instructions in this manual must be strictly followed. ➜ Use of the equipment must comply with all national and local regulations. ➜ Internal components may only be accessed when the device has been disconnected from all voltage sources and de-energized. ➜ It is not allowed to perform work on a live converter. ➜ The converter and all connected systems/components must be electrical grounded properly. ➜ All installation and maintenance work on the device must be carried out by qualified personnel. ➜ Improper use or handling of the device during transportation, installation or during operation may result in damage to the equipment or cause severe, even fatal injury. ➜ Maintenance work on the device must be carried out with the appropriate care. ➜ Non-compliance with the present instructions may cause damage to the product and could lead to serious injuries of the personnel.

⚠ DANGER	
	**Danger to life when live parts are touched on damaged devices** Improper handling of devices can cause damage. For damaged devices, hazardous voltages can be present at the enclosure or at exposed components. If touched, this can result in death or severe injury. ➜ Ensure compliance with the limit values specified in the technical data during transport, storage and operation. ➜ Do not use any damaged devices.

⚠ DANGER	
	**Danger to life through electric shock due to unconnected cable shields** Hazardous touch voltages can occur through capacitive cross-coupling due to unconnected cable shields. ➜ As a minimum, connect cable shields and the conductors of power cables that are not used (e.g. brake cores) at one end at the grounded housing potential.

⚠ DANGER	
	**Danger to life due to electric shock when not grounded** If the protective conductor connection is missing or incorrect, high voltages can occur at open, exposed parts when using devices of protection class I. Touching these parts can result in death or serious injury. ➜ Ground the device in compliance with the applicable regulations.

⚠ DANGER	
	**Danger to life due to electric shock when opening plug connections in operation** When opening plug connections in operation, arcs can result in death or severe injuries. ➜ Only open plug connections when the equipment is de-energized, unless it has been explicitly stated that they can be opened in operation.

⚠ DANGER	
	**Danger to life through electric shock due to the residual charge of the power component capacitors** Due to the use of capacitors, a dangerous voltage is present even up to 5 minutes after the power supply has been switched off. Contact with live parts can result in death or serious injury. ➜ Wait for 5 minutes and then check the de-energized state of the system. Only then should you start working on the device.

⚠ DANGER	
	**Danger to life from electromagnetic fields** Electromagnetic fields (EMF) are generated by the operation of electrical power equipment, such as transformers, converters, or motors. People with pacemakers or implants are at particular risk in the immediate vicinity of this equipment. ➜ If you have a heart pacemaker or implant, maintain a minimum distance of 2 m from electrical power equipment.

⚠ DANGER	
	**Danger to life when safety functions are inactive** Safety functions that are inactive or that have not been adjusted accordingly can cause operational faults on machines that could lead to serious injury or death. ➜ Observe the information in the appropriate product documentation before commissioning. ➜ Carry out a safety inspection for functions relevant to safety on the entire system, including all safety-related components. ➜ Ensure that the safety functions used in your drives and automation tasks are adjusted and activated through appropriate parameterizing. ➜ Perform a function test. ➜ Only put your plant into live operation once you have guaranteed that the functions relevant to safety are running correctly.

⚠ DANGER	
	**Danger to life due to fire if overheating occurs because of insufficient ventilation clearances** Inadequate ventilation clearances can cause overheating of components with subsequent fire and smoke. This can cause severe injury or even death. This can also result in increased downtime and reduced service lives for devices/systems. ➜ Ensure compliance with the specified minimum clearance as ventilation clearance for the respective component.

⚠ DANGER	
	**Danger of an accident occurring due to missing or illegible warning labels** Missing or illegible warning labels can result in accidents involving death or serious injury. Check that the warning labels are complete based on the documentation. ➜ Attach any missing warning labels to the components, in the national language if necessary. ➜ Replace illegible warning labels.

⚠ WARNING	
	**Hazard by hot surfaces of components** During operation, some components may heat up significantly, e.g. heat sinks and inductors. These components can still be very hot some time after operation. In case of contact, severe bodily injuries, such as skin burns, may result. ➜ Do not touch hot surfaces even after shutdown of the converter syste,m.

⚠ WARNING	
	**Danger to life due to malfunction of the device caused by incorrect or changed parameterization** As a result of incorrect or changed parameterization, the system can malfunction, which in turn can lead to injuries or death. ➜ Protect the parameterization (parameter assignments) against unauthorized access. ➜ Respond to possible malfunctions by applying suitable measures (e.g. EMERGENCY STOP or EMERGENCY OFF).

⚠ WARNING	
 	**Hazard by cooling liquid** The coolant used in the internal cooling system of the converter is harmful to human or animal health when touched or swallowed. ➜ Avoid oral ingestion of the coolant, since it can lead to harm to human or animal health. In case of accidental ingestion or eye contact with the coolant, seek immediate medical attention. ➜ Avoid skin contact with the coolant. ➜ Use appropriate eye protectors and protective gloves when working on the cooling system and during filling and draining of the cooling liquid.

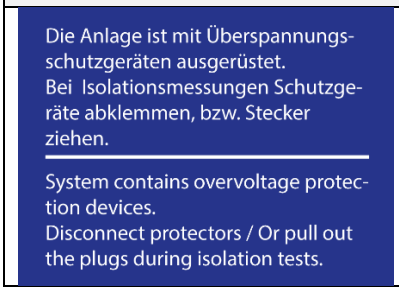
⚠ CAUTION	
	**Hazard by sharp edges on packaging** Improper handling during unpacking can cause injuries. ➜ Use appropriate safety gloves to protect your hands from possible cuts.

NOTICE	
	**Material damage due to loose power connections** Insufficient tightening torques or vibrations can result in loose electrical connections. This can result in damage due to fire, device defects or malfunctions. ➜ Tighten all power connections with the specified tightening torques, e.g. line supply connection, motor connection, DC link connections. ➜ Check all power connections at regular intervals. This applies in particular after transport.

NOTICE

Device damage caused by incorrect voltage/insulation tests
Incorrect voltage/insulation tests can damage the device.
➜ Before performing voltage/insulation tests on the equipment, disconnect all equipment as high voltage tests have been performed on inverters and motors by their manufacturers. Therefore, it is not necessary to perform a retest on the system.

NOTICE



Material damage due to overloading of DC devices and connecting cables
DC paths and connection cables are not protected against overload by the system.
Size external devices according to the nominal and maximum current values specified for the system.
➜ If necessary, use appropriate protective equipment for the external components.

NOTICE

Material damage due to improper use of the transformer
For your safety, carefully read the delivered operating instructions of the transformer and observe the instructions. Technical specifications of the transformer which are provided on its´type plate like rated current, rated power etc. must be strictly observed when commissioning and feeding power to the grid. All electrical connection work must be carried out onsite and by trained, qualified personnel, provided with the required safety devices in accordance with the national occupational safety regulations. Please pay attention to the proper protection of the transformer during unloading, installation at the place of operation, feeding and operation The transgression of the voltage or power and the presence of external factors (such as condensation, solar radiation, plants and animals) can affect the proper functioning of the transformer).

NOTICE

General risk of damage
During isolation tests disconnect overvoltage protection devices or pull out the plugs otherwise they will be activated or destroyed.

2.10 Safety Instructions Battery Storage Unit

⚠ DANGER	
	**Hazard by electrolyte** Performing work on the battery storage unit and its components is only permitted for qualified personnel, trained and certified by FREQCON GmbH. It is not allowed to modify or manipulate the battery storage unit and its components. ➜ Do not open, disassemble or puncture the battery storage unit ➜ Do not short circuit the battery storage unit or battery modules ➜ Do not drop the battery storage unit and avoid vibrations ➜ Do not a use defective or damaged battery storage unit ➜ Do not a use defective or damaged battery storage unit ➜ Do not touch defective or damaged batteries with bare hands. Defective or damaged batteries must only be handled by FREQCON personnel. **Avoid these dangerous situations, since it may lead to severe injuries or even death!**

⚠ DANGER	
	**Hazard by electrolyte** The material/media required for intended operation of the battery storage system are procured and provided by the manufacturer. ➜ The proper handling of these materials/media and the associated risks underly the sole responsibility of the manufacturer. ➜ Hazard and disposal information must be provided by the manufacturer. ➜ The safety data sheets of the material and media manufacturers are to be observed. **Avoid these dangerous situations, since it may lead to severe injuries or even death!**

⚠ WARNING	
	**Health hazards due to negligent use of personal protective equipment** Serious injuries can occur when working without personal protective equipment. ➜ Wear personal protective equipment (PPE). **Avoid these dangerous situations, since it may lead to severe injuries or even death!**

2.10.1 First Aid Measures

Skin Contact
Not anticipated. If the battery module is leaking and the contained material contacts the skin, flush with copious amounts of clear water for at least 15 minutes.

Eye Contact
Not anticipated. If the battery module is leaking and the contained material contacts eyes, flush with copious amounts of clear water for at least 15 minutes. Get medical attention.

Inhalation
Not anticipated. If the battery module is leaking, remove to fresh air. If irritation persists, get medical attention.

Ingestion
Not anticipated. If the battery module is leaking and the contained material is ingested, rinse mouth and surrounding area with clear water. Immediately consult a physician for treatment.

2.10.2 Fire Fighting Measures

Unusual Fire and Explosion Hazards
Battery may explode or leak potentially hazardous vapors if:

- Exposed to excessive heat (above the maximum rated temperature as specified by the manufacturer) or fire.
- Overcharged
- Short-circuit
- Punctured
- and crushed

Hazardous Combustion Products
Fire, excessive heat, or over-voltage conditions may produce hazardous decomposition products. Damaged batteries can result in rapid heating and the release of flammable vapors.

Extinguishing Media
Dry chemical type extinguishers are the most effective means to extinguish a battery fire. A CO_2 extinguisher will also work effectively.

Fire Fighting Procedures
Use a positive pressure self-contained breathing apparatus if batteries are involved in a fire. Full protective clothing is necessary. During water application, caution is advised as burning pieces of flammable particles may be ejected from the fire.

2.10.3 Handling

- Improper charging of the battery modules may cause the battery to flame. When charging the battery, only use the dedicated converter provided by the manufacturer.
- Never disassemble or modify a battery module.
- Do not immerse, throw, or wet a battery module in water.
- Should a battery module be crushed unintentionally, thus releasing its contents, rubber gloves must be used to handle all battery components. Avoid inhalation of any vapors that may be emitted.
- Short-circuits cause heat. In addition, short-circuits reduce the battery life and can lead to ignition of surrounding materials. Physical contact with a short-circuited battery can cause skin burn.
- Avoid reversing the battery modules polarity, which can cause the battery module to be damaged or lead to flames
- In the event of skin or eye exposure to the electrolyte, refer to section 2.10.1 “First Aid Measures”.

2.10.4 Exposure Controls/Personal Protection

Engineering controls

Keep away from heat and open flame.

Ventilation

Not necessary under conditions of normal use. In case of abuse, use adequate mechanical ventilation (local exhaust) for the battery that vent gas or fumes.

Respiratory protection

Not necessary under conditions of normal use. If battery is burning, leave the area immediately. During fire fighting firemen should use self-contained breathing, full-face respiratory equipment. Fires may be fought but only from safe fire fighting distance, evacuate all persons from the area of fire immediately.

Eye protection

Not necessary under conditions of normal use. Use safety glasses with side shields if handling a leaking or ruptured battery module.

Body Protection

Not necessary under conditions of normal use. Use rubber apron and protective work clothing in case of handling a leaking or ruptured battery module.

Protective Gloves

Not necessary under conditions of normal use. Use chemical resistant rubber gloves if handling a leaking or ruptured battery module.

Others

Use good chemical hygiene practice. Wash hands thoroughly after cleaning-up a battery spill caused by leaking or ruptured battery modules. No eating, drinking, or smoking in battery storage area.

2.10.5 Disposal Considerations

- Disposal of battery modules should be performed by permitted, professional disposal firms knowledgeable in federal, state, an local law requirements of hazardous waste treatment and hazardous waste transportation.
- The battery modules should be completely discharged prior to disposal and/or the terminals taped or capped to prevent short circuit. When completely discharged, the battery module is not considered as hazardous.
- The battery modules contain recyclable materials. Recycling option available in your local area should be considered when disposing of this product, through licensed waste carrier.

2.11 Handling electrostatic sensitive devices (ESD)

Electrostatic sensitive devices (ESD) are individual components, integrated circuits, modules or devices that may be damaged by either electric fields or electrostatic discharge.

HINWEIS

Damage through electric fields or electrostatic discharge

Electric fields or electrostatic discharge can cause malfunctions through damaged individual components, integrated circuits, modules or devices.

- ➜ Only pack, store, transport and send electronic components, modules or devices in their original packaging or in other suitable materials, e.g. conductive foam rubber of aluminum foil.
- ➜ Only touch components, modules and devices when you are grounded by one of the following methods:
  - Wearing an ESD wrist strap
  - Wearing ESD shoes or ESD grounding straps in ESD areas with conductive flooring
- ➜ Place electronic components, modules or devices on conductive surfaces (table with ESD surface, conductive ESD foam. ESD packaging, ESD transport container).

⚠ DANGER

Danger to life as a result of unsafe operating states resulting from software manipulation

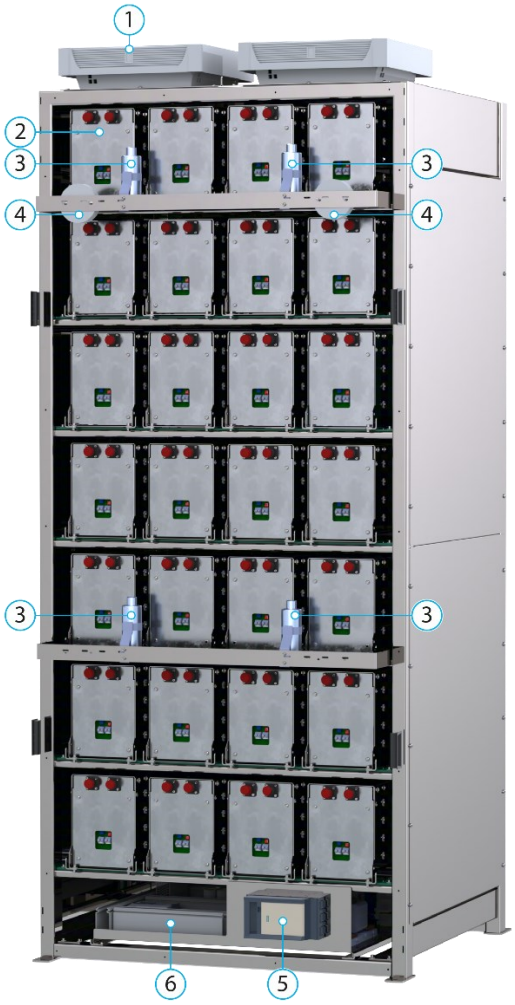
Software manipulations (e.g. viruses, trojans, malware or worms) can cause unsafe operating states in your system that may lead to death, serious injury, and property damage.

- ➜ Keep the software up to date.
- ➜ Incorporate all installed products, especially the automation and drive components into a holistic, state-of-the-art industrial security concept for the installation.
- ➜ Protect files stored on exchangeable storage media from malicious software by with suitable protection measures, e.g. virus scanners.

3 System Description

3.1 Battery Cabinet

The following internal components are contained within the battery cabinets of the BESS:



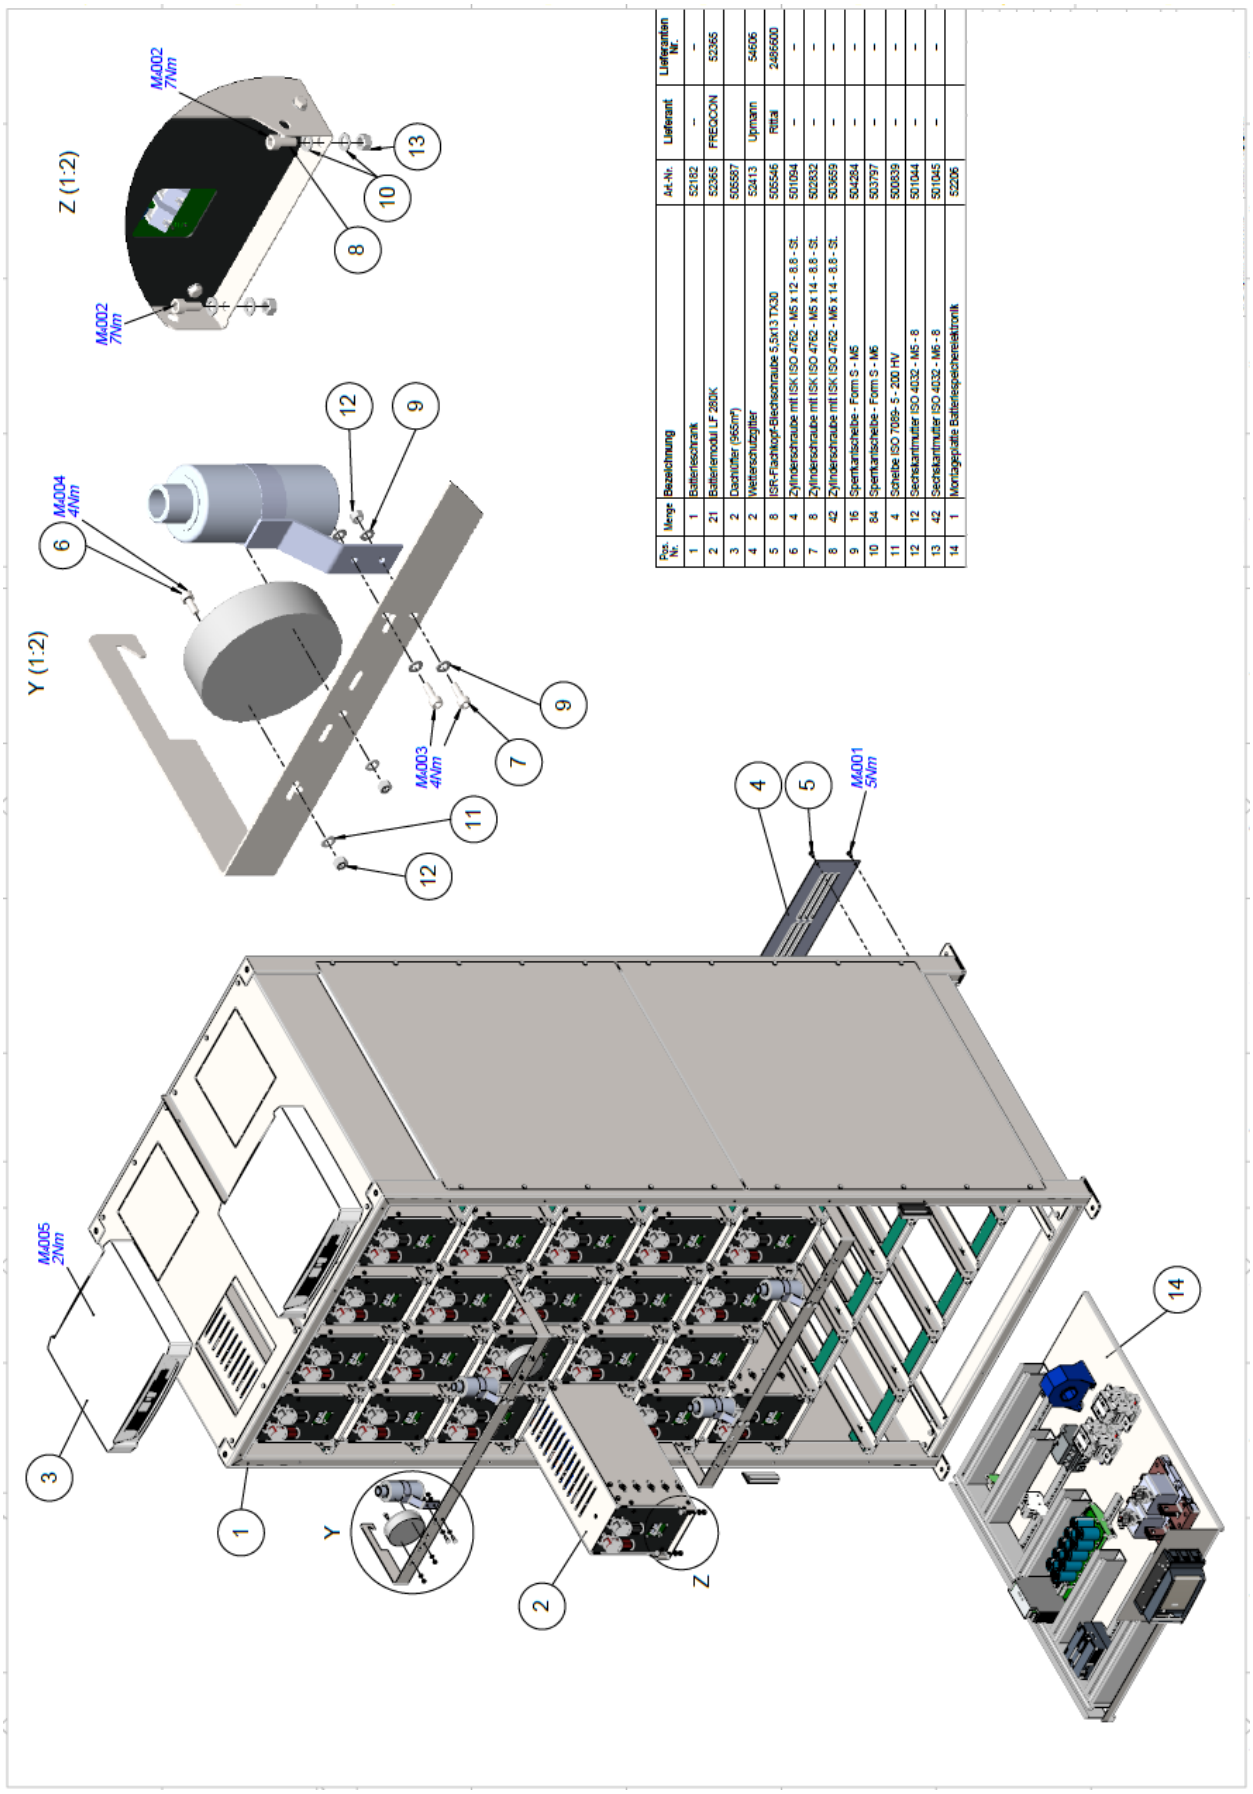


Figure 1: Internal components - battery cabinets

Pos.	Component	Part number
①	Cabinet fan	505587
②	Battery module LF 280	--
③	Aerosol cartridge of fire extinguishing unit Aero-X Stat-X 60E	506501
④	Optical smoke detector 12 V	500713

3.2 Battery Modules

Figure 1: Battery module LF 280

3.2.1 Design

The lithium iron phosphate cells (LiFePO4) inside the LF 280 battery modules are connected in series and provide a total energy content of 8.96 kWh per module.

Each module is equipped with a monitoring PCB, providing the following functions:

- Voltage monitoring of single cells for charging and discharging
- Battery temperature monitoring
- Selective cell balancing
- Data exchange with central BESS controller
- Local insulation measurement
- Robust industrial design for transport, assembly und operation

Figure 2: Battery module design

No.	Component

3.2.2 Technical data

Technical Data Battery Module LF 280	
Part number	52365 / 52375 / 52157
Voltage (nominal)	32 V DC nochmal prüfen lassen laut GK
Total capacity	280 Ah
Number of cells per battery module	10
Stored Energy	8960 Wh
Maximum voltage	36 V DC nochmal prüfen lassen laut GK
Maximum current	280 A
Maximum charge and discharge rate	1 C
Temperature range storage	-20 °C … +45 °C (long-term storage at 0…35°C)
Temperature range operation	0 °C … +55 °C
Connections for DC+ / DC-	Surlock Plus
Connections for communication	RJ 45
Protection class	IP 20
Weight	65.3 kg
Dimensions (WxHxD)	188 mm x 239 mm x 908 mm
Cell Data (Single Cell)	
Type	Prismatic cell
Capacity (typ.)	280 Ah
Voltage (typ.)	3.2V
Voltage (maximum)	3.65 V
Voltage (minimum)	2.5 V
Battery life	>3500 cycles (80% remaining capacity)
Impedance (AC)	<0.25mΩ
BMS Pack Universal	
Power supply (external)	24 V DC (rated), <0.5 W
Power supply (internal)	36 V DC (max.), < 0.2 W
Communication	EIA-485, Modbus RTU
Baud rate (max.)	19200 Bit/s
Bus participants (max.)	32
Balancer design	Load resistor
Balancer current @3.5 V	1.06 A
Voltage measurements	10 measurements per 14-bit resolution
Temperature measurements	8x NTC 10 kΩ (up to 14 bit analogue/digital converter) 1x PT100 (12 bit analogue/digital converter)
Isolation measurement	Earth fault monitoring

Table 7: Technical data LF 280 battery module

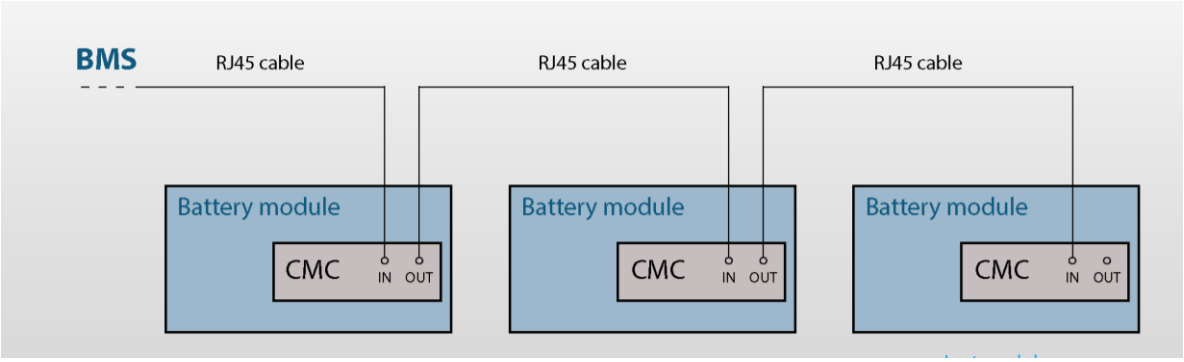
3.2.3 Connection Elements

Figure 3:Connection elements

Pos.	Terminal	Description	Connection type	Cable
①	X1	DC + Battery module	10.3 mm Surlock Plus	Pay attention to cable routing in cabinet
②	X2	DC – Battery module	10.3 mm Surlock Plus	Pay attention to cable routing in cabinet
④	X3	Communication (input)	RJ45, 45°	PiMF, 4x2 min. AWG 27/7
⑤	X4	Communication (Output)	RJ45, 45°	PiMF, 4x2 min. AWG 27/7
⑤	X5	24 V DC power supply	2-pole male terminal	Pay attention to cable routing in cabinet

Table 2: Connection elements

3.2.4 Communication Scheme



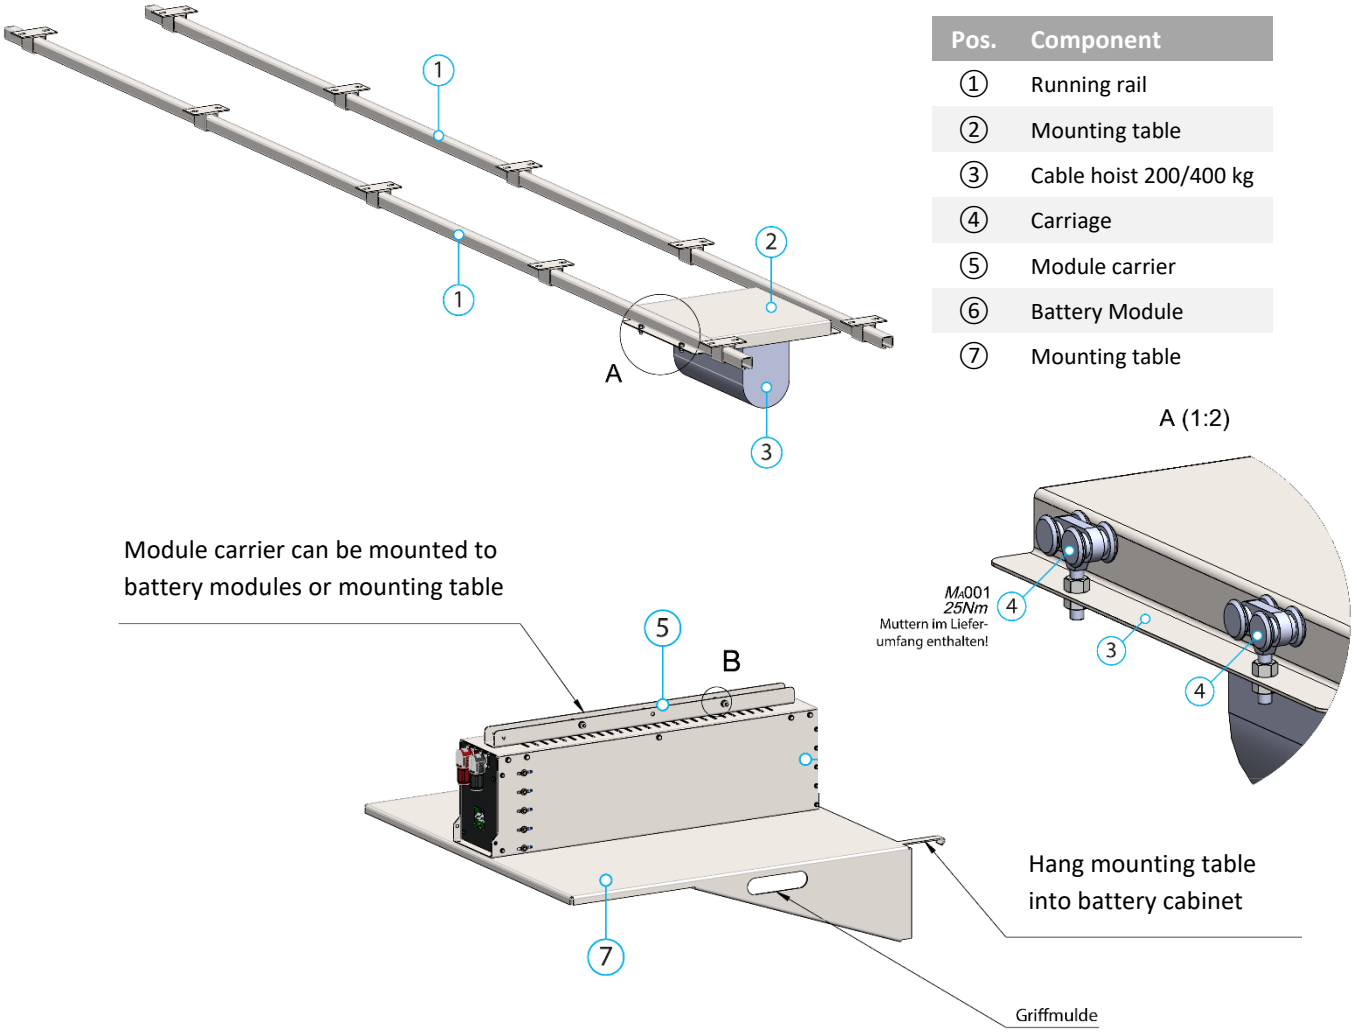


Figure 4: BMS communication scheme

3.2.5 Lifting Device and Mounting Table

For the lifting of battery modules, a lifting device is installed at the container ceiling, allowing safe handling and installation of the battery modules.

The lifting device mainly consist of a cable hoist which is mounted to a mounting plate with carriers, allowing to move the cable hoist through running rails to each end of the container. The cable hoist is operated via cable remote control.
For better handling of the battery modules when inserting them to the battery storage cabinet, a mounting table is provided, which can be attached to the battery storage cabinets.

Detailed information and operating instructions regarding the supplied cable hoist can be found in the original manufacturer's manual *(see section "Other applicable documents")*.

Pos.	Component
①	Running rail
②	Mounting table
③	Cable hoist 200/400 kg
④	Carriage
⑤	Module carrier
⑥	Battery Module
⑦	Mounting table

3.2.6 Mobile Lifting Device

A mobile lifting device for moving battery modules inside the BESS containers can be used. The mobile lifting device “Material-Lift GUIL ELC-725” or other models are suitable to lift and mount battery modules inside FREQCON BESS containers.

One (1) battery module can be placed onto the table of the mobile lifting device at once. The module needs to be pushed from the pallet of the forklift truck in front of the BESS container door onto the table of the mobile lifting device.

The mobile lifting device can then be moved to the battery cabinet where the battery module needs to be installed.

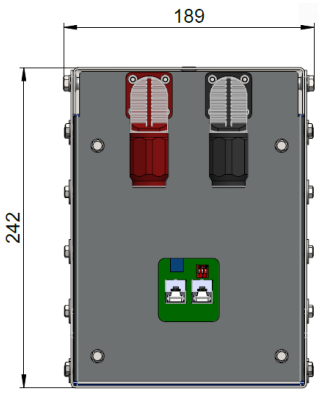

Figure 4: Mobile lifting device “Material-Lift GUIL ELC-725”

Technical details	
Dimensions L x W x H	400 mm x 550 mm x 1320 mm
Type of construction	Material lift
Overall height	1320 mm
Dead weight	51 kg
Lifting function	Cable winch
Lifting height	4000 mm
Platform dimensions L x W	550 x 500 mm
Table height max.	3940 mm
Table height min.	1320 mm
Load capacity:	125 kg

4 Battery Module Installation

⚠ DANGER	
	**Hazard by electrolyte** Performing work on the battery storage unit and its components is only permitted for qualified personnel, trained and certified by FREQCON GmbH. It is not allowed to modify or manipulate the battery storage unit and its components. ➜ Do not open, disassemble or puncture the battery modules ➜ Do not short circuit the battery modules ➜ Do not drop the battery modules and avoid vibrations ➜ Do not a use defective or damaged battery modules ➜ Do not a use defective or damaged battery storage unit ➜ Do not touch defective or damaged batteries with bare hands. Defective or damaged batteries must only be handled by FREQCON personnel. **Avoid these dangerous situations, since it may lead to severe injuries or even death!**

⚠ DANGER	
	**Electric shock hazard!** **Always respect all the safety instructions and, in particular:** ➜ Always use protective devices suitable and approved for each type of activity. ➜ The instructions in this manual must be strictly followed. ➜ The electrical connection must be carried out in accordance with the local regulations of the utility company and /or VDE (in Germany). ➜ Use of the equipment must comply with all national and local regulations. ➜ Battery modules must only be accessed after disconnecting the electrical system from all electrical power sources.

⚠ WARNING	
	**Lifting hazard!** **A single battery module weighs approx. 65 kg. Lifting by a single person can lead to injuries!** ➜ Use assistance when moving or lifting battery modules.

⚠ WARNING

Do not modify or manipulate batteries!
The battery modules are equipped with blue power connectors for power plug and interconnection of the battery modules.
➜ When disconnecting battery modules, only use the power plug for disconnection. Do not remove the power cables from the connection bolts of the battery modules .

NOTICE

Damage due to wrong installation
Avoid any contact of two or more battery modules. A contact can cause short circuits and damage the modules.
➜ Tighten all battery module installation connections with the specified torque.
➜ Check the battery cabinets for contact of battery modules.

NOTICE

Always wear PPE (Personal Protective Equipment) when handling battery modules:
- safety glasses
- safety shoes with steel toe
- electrically insulated gloves

Do not operate!	**Lock-out and tag power switches and controller devices!**
	Observe national laws regarding Occupational Safety and Health, as well as Industrial Standards DIN VDE 0105-100; VDE 0105-100:2009-10 Operation of electronic equipment - General requirements.

Required Tools

Installation personnel must at least have the following tools in reach before starting the installation of the converter:

Pos.	Installation Tools	Amount
1.	Flash light	1
2.	Insulated pliers set	1
3.	Insulated ratchet set	1
4.	Insulated torque wrench (1 - 100 Nm)	1
5.	Insulated socket wrench set (with sockets 7 – 19 mm)	1
6.	Insulated wrench set	1
7.	Insulated wrench extension (min. 300 mm)	
8.	Cross-section screw drivers set	1
9.	Flat-section screw drivers set	1
10.	Allen key / Hex socket key set	1
11.	Cutter	1
12.	First-aid kit	1
13.	Multi-meter instrument	1
14.	Two-pole voltage tester	1
15.	Mounting table	1
16.	Module carrier	

Table 8: Required tools - Battery module installation

4.1 Installation with Cable Hoist

Task 1: **Install the battery modules.**

Step 1 : Mount the module carrier (*see following figure,* ②) on the mounting table.

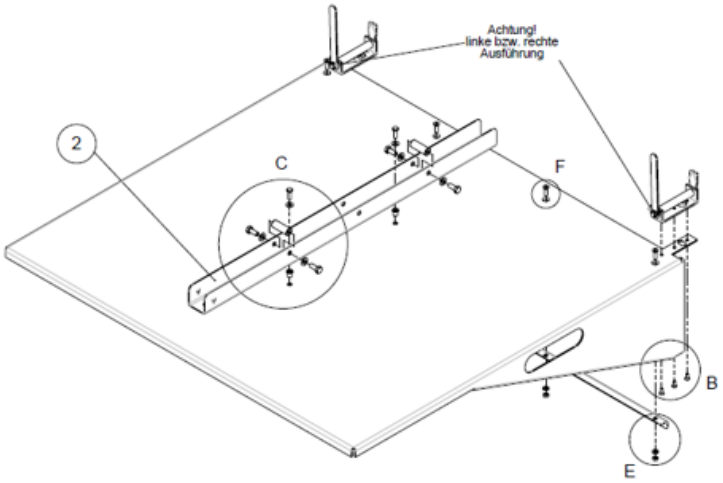

Figure 6: Assembly table with mounted module carrier

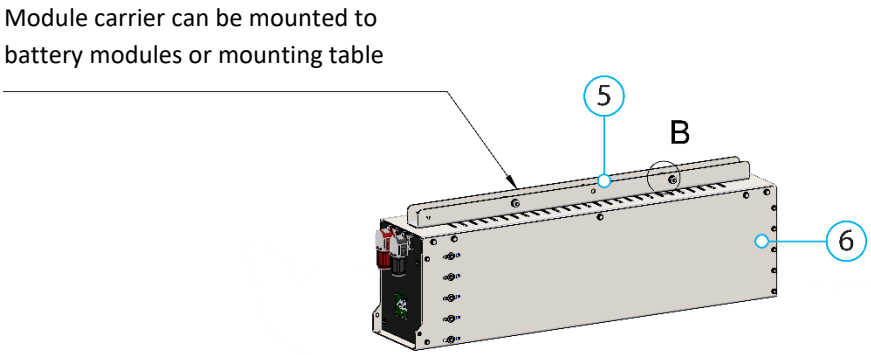
Step 2 : Use the hook of the lifting device mounted on the container ceiling and attach it to the transport bolts of the module carrier.

Step 3 : Raise the mounting table with the help of the lifting device and using the remote control and place the mounting table at the height of the module to be installed and in the centre of the battery cabinet. The latches on the sides of the mounting table must engage in the recesses on both sides of the battery cabinet row.

Step 4 : Fix the mounting table to the battery cabinet (*see following figure,* ⑦) by turning both hinges of the latches 90° to the side.

Step 5 : Check if the mounting table is firmly fixed.

Step 6 : Remove the hook of the lifting device from the module carrier.



Step 7 : Remove the module support from the mounting table.

Figure 7: Mounting table on the battery cabinet

Step 8 : Mount the module carrier (*see following figure,* ⑤) on the battery module to be installed and tighten the connections.

Step 9 : Check connections for tightness.

⚠ WARNING	
	**Lifting hazard!** **A single battery module weighs approx. 65 kg. Lifting by a single person without a lifting device can lead to injuries!** ➜ Use assistance when moving or lifting battery modules. ➜ Always use a suitable lifting device for installing and removing modules to avoid injuries caused by heavy loads. Inside the container, use the installed lifting device on the container ceiling.

Step 10 : Use the hook of the lifting device mounted on the container ceiling and attach it to the transport bolt (B) of the module carrier.

Step 11 : Lift the battery module using the lifting device and the remote control and place the battery module on the mounting table (*see following figure*).

Step 12 : Remove the module carrier from the battery module. Keep the screws, nuts and washers for the installation of further battery modules.

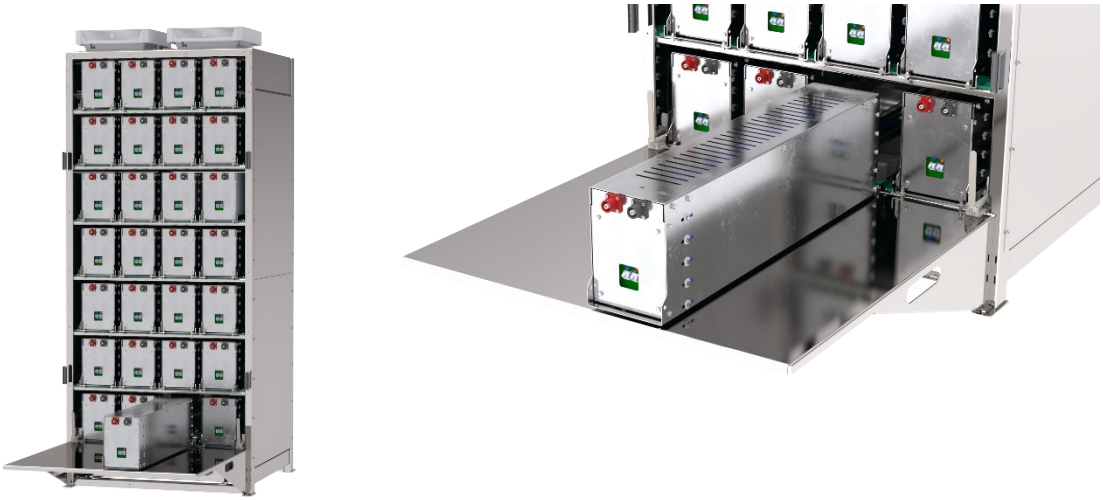


Figure 8: Battery module on mounting table

Step 13 : Mount the supplied transport handle on the two holes on the front of the battery module to be installed (*see markings in the following figure*).

Figure 9: Holes for transport handle

Step 14 : Carefully slide the battery module from the mounting table into the battery cabinet using the transport handle. Use assistance due to the modules´ weight!

Step 15 : Fix the installed battery module to the front mounting rail using the two metal pins (*see following figure,* ⑨).

Figure 10: Metal pins fixing the module

Step 16 : Repeat the process for installing the remaining battery modules.

Task 2: Connect the communication cables.

Step 1 : Locate the IN and OUT communication ports on the front of the battery module to be installed (*see Figure 14,* ④ *and* ⑤).

Step 2 : Connect the IN and OUT communication ports of the module with RJ45 cables to the two adjacent modules of the module row.

Task 3: Connect the DC terminals of the battery modules.

⚠ DANGER	
 	**Electric shock hazard!** **Short-circuiting when tool live parts are touched can lead to short-circuiting and therefore severe injuries:** ➜ Battery modules must only be accessed after disconnecting the converter system from all electrical power sources and subsequent disconnection of the battery modules´ DC connector. ➜ Avoid contact of metal tools or metal components with the live metal parts of the bolts on both sides of the module indicated in the illustration below. Therefore, always use insulated tools when working with battery modules.

Step 1 : Locate the DC +/- terminals of the battery module (*see following figure,* ① *and* ②).

Figure 11: Connections LF280 battery module

Step 2 : Insert the DC +/- plugs of the DC connection cables into the corresponding DC sockets.

Hinweis 1: The DC connectors can only be plugged onto the DC socket in one position when the groove and lug are on top of each other. In this case, the plug engages noticeably.

Hinweis 2: When installing multiple or all modules, be sure to first connect the DC connectors and cables in the vertical rows of modules. Start at the bottom left module and work your way up. In the next row, start from the top and work your way down*(see arrow indicators in Figure 15)*. Then connect the three cross-connections between the module rows *(see oval markings in Figure 15)*. Start with the two upper cross-connections and then set the lower one.

Step 3 : Check the DC connections for strength.

4.2 Installation with Mobile Lifting Device

Task 1: **Install the battery modules.**
Step 1 : XXXXX
Step 2 : XXXXX

5 Exchanging Battery Modules

The battery storage system is delivered with installed battery modules. In order to replace battery modules, e.g. due to malfunction, proceed as follows.

⚠ DANGER	
	**Hazard by electrolyte** Performing work on the battery storage unit and its components is only permitted for qualified personnel, trained and certified by FREQCON GmbH. It is not allowed to modify or manipulate the battery storage unit and its components. ➜ Do not open, disassemble or puncture the battery modules ➜ Do not short circuit the battery modules ➜ Do not drop the battery modules and avoid vibrations ➜ Do not a use defective or damaged battery modules ➜ Do not a use defective or damaged battery storage unit ➜ Do not touch defective or damaged batteries with bare hands. Defective or damaged batteries must only be handled by FREQCON personnel. **Avoid these dangerous situations, since it may lead to severe injuries or even death!**

⚠ DANGER	
	**Electric shock hazard!** **Always respect all the safety instructions and, in particular:** ➜ Always use protective devices suitable and approved for each type of activity. ➜ The instructions in this manual must be strictly followed. ➜ The electrical connection must be carried out in accordance with the local regulations of the utility company and /or VDE (in Germany). ➜ Use of the equipment must comply with all national and local regulations. ➜ Battery modules must only be accessed after disconnecting the electrical system from all electrical power sources.

⚠ WARNING	
	**Lifting hazard!** **A single battery module weighs approx. 65 kg. Lifting by a single person can lead to injuries!** ➜ Use assistance when moving or lifting battery modules.

⚠ WARNING	
	**Do not modify or manipulate batteries!** The battery modules are equipped with blue power connectors for power plug and interconnection of the battery modules. ➜ When disconnecting battery modules, only use the power plug for disconnection. Do not remove the power cables from the connection bolts of the battery modules .

NOTICE
Damage due to wrong installation Avoid any contact of two or more battery modules. A contact can cause short circuits and damage the modules. ➜ Tighten all battery module installation connections with the specified torque. ➜ Check the battery cabinets for contact of battery modules.

NOTICE	
	Always wear PPE (Personal Protective Equipment) when handling battery modules: • safety glasses • safety shoes with steel toe • electrically insulated gloves

Do not operate!	**Lock-out and tag power switches and controller devices!**
	Observe national laws regarding Occupational Safety and Health, as well as Industrial Standards DIN VDE 0105-100; VDE 0105-100:2009-10 Operation of electronic equipment - General requirements.

5.1 Battery Module Removal

Required Tools

Personnel must at least have the following tools in reach before starting work:

Pos.	Installation Tools	Amount
	Basic Tools	
1.	Flash light	1
2.	Insulated pliers set	1
3.	Insulated ratchet set	1
4.	Insulated torque wrench (1 - 100 Nm)	1
5.	Insulated socket wrench set (with sockets 7 – 19 mm)	1
6.	Insulated wrench set	1
7.	Insulated wrench extension (min. 300 mm)	1
8.	Cross-section screw drivers set	1
9.	Flat-section screw drivers set	1
10.	Allen key / Hex socket key set	1
11.	Cutter	1
12.	First-aid kit	1
13.	Multi-meter instrument	1
14.	Two-pole voltage tester	1

Table 9: Required tools – Battery removal

Task 2: **Check current-free status**

Step 6 : Check the current-free state of the battery cabinet on the outgoing side of the DC fuse switch-disconnector using a suitable current clamp *(see Figure 1, ⑤)*.

Task 3: **Remove fuse**

Step 1 : When the power-free condition of the battery cabinet is ensured, pull out the insert of the DC fuse switch disconnector.

Step 2 : Remove both fuses from the insert.

Step 3 : Reinsert the insert into the DC fuse switch disconnector.

Task 4: **If necessary, remove the component holders from the battery cabinet.**

Hinweis 3: If the module to be removed or parts of the module or connection cables are covered by component holders, remove them.

Step 1 : Locate the two component holders in the battery cabinet*(see following figure ① and ②)*.

Step 2 : Remove the component holder by lifting the holder suspended in the cabinet upwards and then pulling it backwards out of the cabinet.

Figure 13: Component holders in the battery cabinet

Step 3 : Carefully move the component holder to the left and let it hang down on the left side of the cabinet by its cables without damaging other cables or components.

Task 5: **Disconnect the DC connections between the battery modules.**

⚠ DANGER	
 	**Electric shock hazard!** **Short-circuiting when tool live parts are touched can lead to short-circuiting and therefore severe injuries:** ➜ Battery modules must only be accessed after disconnecting the converter system from all electrical power sources and subsequent disconnection of the battery modules´ DC connector. ➜ Avoid contact of metal tools or metal components with the live metal parts of the bolts on both sides of the module indicated in the illustration below. Therefore, always use insulated tools when working with battery modules.

Step 1 : Locate the DC +/- terminals of the battery module*(see following figure,* ① *and* ②).

Figure 14: Connections LF280 battery module

Step 2 : Remove the DC +/- plugs of the DC connection cables from the DC sockets by pulling the plugs backwards out of the socket.

Hinweis 1: When removing several or all modules, make sure that you first remove the three cross-connections between the module rows*(see oval markings in the following figure*). Start with the lower cross-connection and then remove the upper two. In the next step, remove the DC connectors and cables from the module at the bottom left and work your way up. In the next row, start from the top and work your way down*(see arrow indicators in the following figure*).

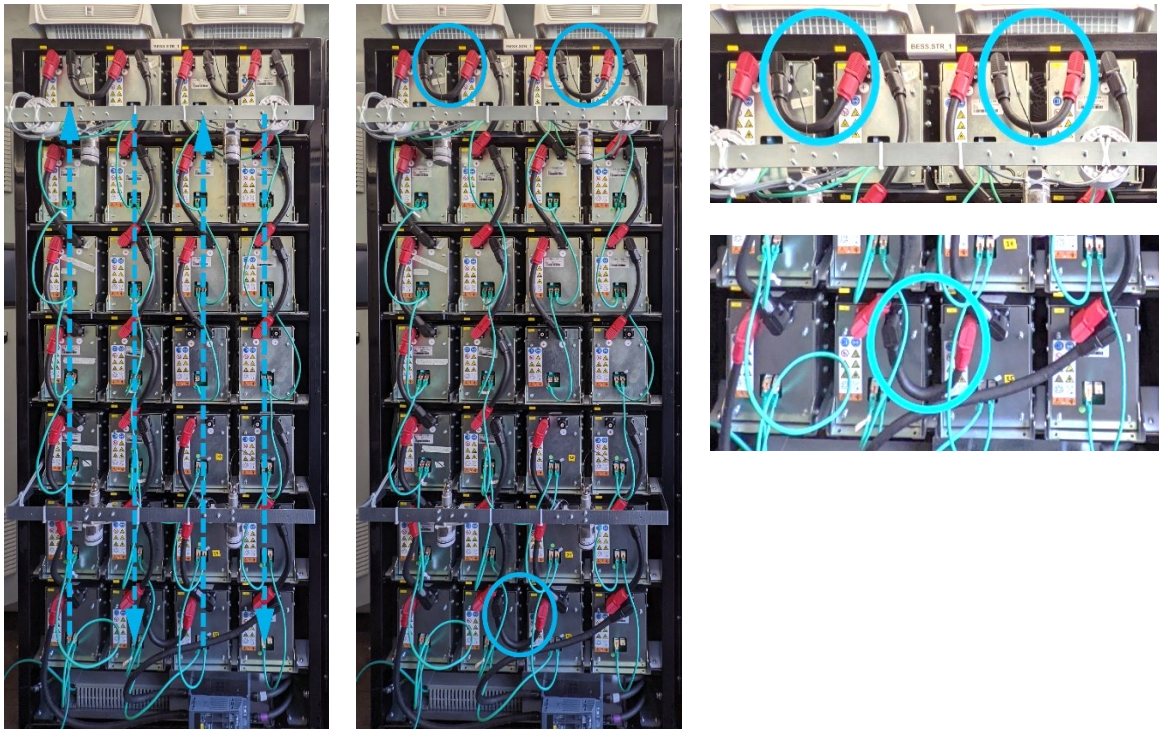

Figure 15: Module rows (vertical) and cross-connections between the module rows

Task 6: Remove communication cables

Step 1 : Locate the IN and OUT communication ports on the front of the battery module to be removed*(see Figure 14, ④ and ⑤)*.

Step 1 : Remove the RJ45 cables from the IN and OUT communication ports of the module.

Step 2 : Remove the other end of the RJ45 cables from the other two battery modules that were connected to the battery module to be removed.
Keep the RJ45 cables for later installation of the new battery module to be installed.

Task 7: Remove the battery module.

Step 3 : Locate the two metal pins that fix the battery module to the front mounting rail*(see following figure, ⑨)*.

Figure 16: Cylinder screws fixing the module

Step 4 : Mount the module support*(see following figure, ②)* on the mounting table.

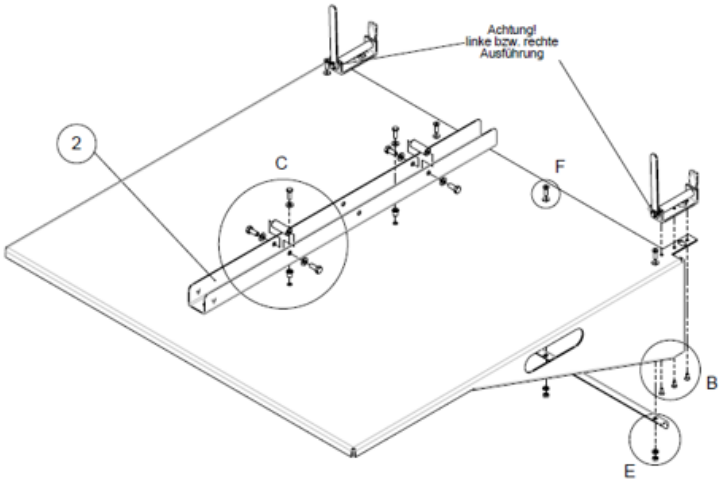

Figure 17: Assembly table with mounted module rack

Step 5 : Use the hook of the lifting device mounted on the container ceiling and attach it to the transport bolts of the module girder.

Step 6 : Raise the mounting table with the help of the lifting device and using the remote control and place the mounting table at the height of the module to be removed and in the center of the battery cabinet. The latches on the sides of the mounting table must engage in the recesses on both sides of the module row.

Step 7 : Fix the mounting table to the battery cabinet*(see following figure, ⑦)* by turning both hinges of the latches 90° to the side.

Step 8 : Check that the mounting table is firmly fixed.

Step 9 : Remove the hook of the lifting device from the module support.

Step 10 : Remove the module support from the mounting table.

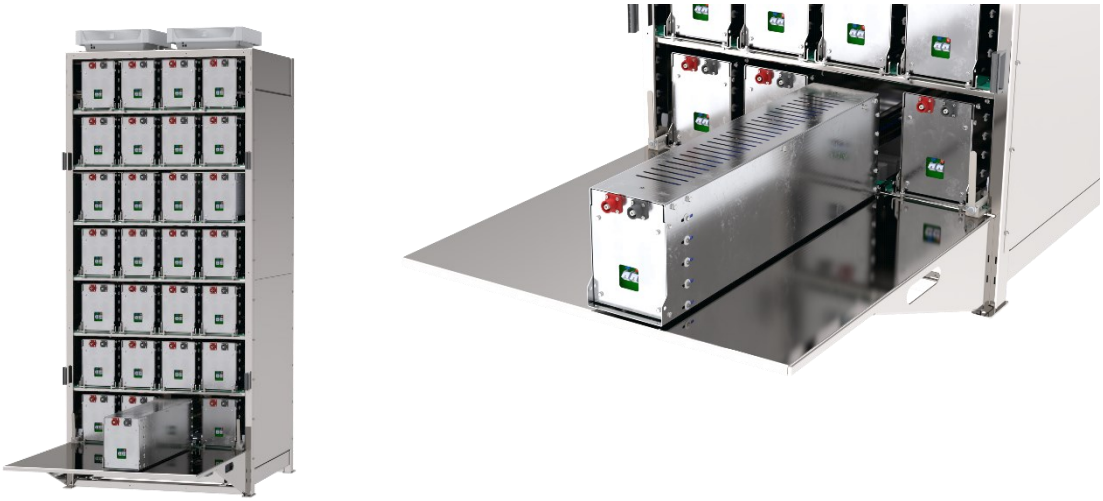
Figure 18: Mounting table on the battery cabinet

Step 11 : Mount the supplied transport handle on the two holes on the front of the battery module to be removed*(see following figure, ⑧)*.

Figure 19: Holes for transport handle

⚠ WARNING	
	**Lifting hazard!** **A single battery module weighs approx. 65 kg. Lifting by a single person without a lifting device can lead to injuries!** ➜ Use assistance when moving or lifting battery modules. ➜ Always use a suitable lifting device for installing and removing modules to avoid injuries caused by heavy loads. Inside the container, use the installed lifting device on the container ceiling.

Step 12 : Carefully pull the battery module by the transport handle out of the battery cabinet onto the mounting table. Use assistance due to the modules´ weight!



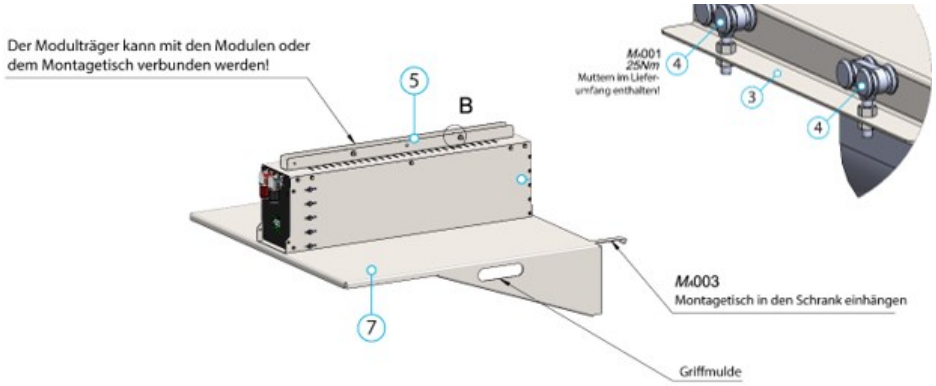


Figure 20: Battery module on mounting table

Step 13 : Mount the module carrier*(see following figure, ⑤)* on the battery module and tighten the connections.

Step 14 : Check connections for tightness.

Step 15 : Use the hook of the lifting device mounted on the container ceiling and attach it to the transport bolt (B) of the module girder.

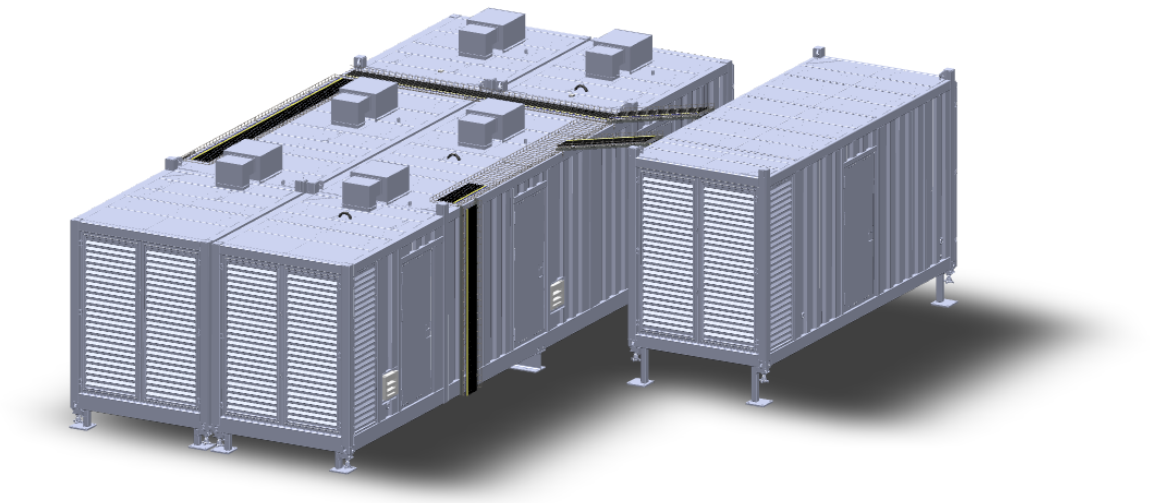
Step 16 : Lift the battery module with the aid of the lifting device and using the remote control and place the battery module in a suitable storage location.

Step 17 : Remove the module holder from the battery module. Keep the screws, nuts and washers for later installation of the new battery module.

Step 18 : Repeat the process for removing additional battery modules.

Task 8: Install the battery cabinet component brackets, if necessary.

Hinweis 1: If component holders*(see Figure 13,* ① *and* ②) have been removed for module removal, they must be reinstalled.



Step 1 : Carefully hook the component holder(s) into the holder provided on the battery cabinet without damaging other cables or components.

1 About these Instructions

This manual is part of the product and applies exclusively to the system described in this document.

This operating manual contains the necessary information for the proper use of the described system. The operating manual is supplied together with the product and is considered as an important part of the product.

Please read this manual carefully, as it contains important information on the installation and operation of the product.
Please pay particular attention to the notes regarding the safe use of the system.
The manufacturer accepts no liability for any damage caused by failure to observe these instructions.

Keep this manual and provide it to the new owner in case of a change of the operating company.
All personnel who have any relation of handling or operating the product must always have direct access to this manual.

All personnel who have any relation of operating the unit are obligated to read all related manuals regarding the system described in this document. The employed personnel must declare that they have fully read and understood all contents of the manuals and agree to follow all instructions, especially issues regarding safety and accident prevention.

Additional Documents

The instructions of this operating manual must be supplemented with the necessary, customary local and current accident prevention regulations, environmental protection rules and laws.

Location of the Manual

Always keep this manual within direct reach when operating or handling the unit. The operator must have direct access to the manual. The operator must have direct access to the manual.

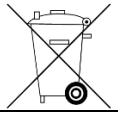
1.3 Abbreviations

The following list provides descriptions about the generic terms and abbreviations used in this document:

Generic Term and Abbreviation	Significance
AC	Alternating current
Identifier	Equipment labeling
BESS	Battery Energy Storage System
BMS	Battery management system
BSU	Blackstart unit
DC	Direct current
DC-link	Direct current link
EMC	Electromagnetic compatibility
EMF	Electromagnetic fields
EMS	Energy management system
FRQ	FRFEQCON GmbH
HMI	Human-Machine Interface
HV	High voltage



HVIO	High Voltage I/O Module
MB	Modbus
RTU	Remote Terminal Unit
TCP	Transmission control protocol
MSC	Multi-Source Converter
MV	Medium voltage
LFP	Lithium iron phosphate
LV	Low voltage
PCS	Power conversion system
PLC	Programmable Logic Controller
PPE	Personal safety equipment
IGBT	Insulated-Gate Bipolar Transistor
IEC	International Electrotechnical Commission
I/O	Input/output
IP	Internet protocol
SoC	State of charge
TR	Thermal runway
UPS	Uninterruptable power supply

Table 4: List of Abbreviations

1.4 Warning Symbols

Observe the warning symbols in this document and those attached on the device. The warning symbols have the following meaning:

Symbols	Significance
	Hazard (general)
	Hazard by voltage
	Hazard by high temperature
	Hazard by batteries
	Hazard by fire
	Maintenance lockout tagout, do not switch!
	Acute toxicity (oral, dermal, inhalation) (hazard. category 4)
	Respiratory sensitization (hazard category 1, 1A and 1B)
	Prohibition for people with pacemakers

	Hazard by heavy load
	Do not dispose in household waste. (See section 24 “Dismantling and Disposal”)

1.5 Information Symbols

Symbol	Significance
	Important technical information for this product

1.6 Warning Levels / Signal Words

DANGER	Indicates a hazardous situation which, if not avoided, will result in death or serious injury.
WARNING	Indicates a hazardous situation which, if not avoided, could result in death or serious injury.
CAUTION	Indicates a hazardous situation which, if not avoided, could result in minor or moderate injury
NOTICE	Indicates that property damage can result, if proper precautions are not taken.

1.7 Target Groups

⚠ DANGER	
	**Danger from and for unauthorized persons** Unauthorized persons are not aware of the dangers in the work area and may endanger themselves and third parties. ➜ Keep unauthorized persons away from the work area. ➜ If in doubt, speak to persons and direct them away from the work area. ➜ Interrupt the work as long as unauthorized persons are in the work area. ➜ Always keep the entrance door(s) locked when not performing work on the system to prevent unauthorized persons from entering the container.

Group	Significance
Operator	• Uses the product himself for commercial or economic purposes or lets a third-party use/apply it. • During operation, bears legal product responsibility for the protection of the user, personnel and third parties. • May not open control cabinets and/or perform maintenance.
Trained person	• Has been demonstrably trained and instructed by the operator about the assigned tasks and possible dangers in case of improper behavior. • Is authorized to operate the plant. • May not open control cabinets and/or perform maintenance.
Service Personnel	• FREQCON GmbH service personnel • Personnel trained and authorized by FREQCON and authorized specialist personnel. • Carries out all other work on the plant, e. g. commissioning, maintenance work, transport, and troubleshooting.
Manufacturer	• Person who was/is involved in the development of the energy storage system and has detailed knowledge of the structure and function of the modules or the entire system - in accordance with the relevant specialist area.

Table 5: Target groups

2 Safety Instructions

2.1 The Five Safety Rules

For your own personal safety and to prevent material damage when carrying out any work, always observe the safety-relevant instructions and the following five safety rules according to EN 50110-1 "Working in a voltage-free state".

2.2 Basic Safety Information

Do not operate!	**Lock and tag power switches and controller devices**
	Follow national laws regarding occupational safety and health. ➜ Identify the energy source(s). ➜ Isolate the energy source(s). ➜ Determine voltage-free status. ➜ Ground device or equipment to protect from short circuiting and from shocks. ➜ Lock and Tag the energy source(s). ➜ Prove that the equipment isolation is effective. ➜ When required, apply lock-out device or clamp and secure with padlock(s).

Important!	
	➜ Read the instructions of this manual thoroughly before use! ➜ Keep manual within reach. ➜ All personnel who have to perform any task on the BESS (on-site or remotely) with respect to operation of the unit are obligated to read all related manuals regarding the BESS. By proceeding with work on the BESS, the personnel declare that they have fully read and understood all contents of the manuals and agree to follow all instructions, especially issues regarding safety and accident prevention.

⚠ DANGER	
	**Hazard by voltage** Always respect all the safety instructions and, in particular: ➜ Always use protective devices suitable and approved for each type of activity. ➜ The instructions in this manual must be strictly followed. ➜ Use of the equipment must comply with all national and local regulations. ➜ Access to internal components is only allowed after the converter has been de-energized and disconnected from all power supplies.

⚠ DANGER	
	**Hazard by voltage** ➜ Electric shock hazard. ➜ Only electricians may perform work on electrical components. ➜ Do not touch live components! ➜ Disconnect the device from all power supplies, before performing work on the device. ➜ Do not short circuit any conductive parts that are not de-energized before. (Take care with jewellery, tools, instruments, etc. which can cause short circuits accidentally.)

⚠ DANGER	
	**Hazard by voltage** ➜ Before opening the cabinet doors de-energize the converter. ➜ Even if the main circuit breaker is switched off, the cabinets are not completely voltage-free.

⚠ DANGER	
	**Risk of burns on hot surfaces** ➜ Avoid contact with hot surfaces or wear protective clothing (e.g. protective gloves).

⚠ DANGER	
	**General risk of injury due to improper handling** ➜ Only perform work on the device if you have expert knowledge of the respective activity. ➜ Follow the operating instructions and warnings stated in this manual.

⚠ DANGER	
	**Electric shock hazard!** **Do not perform maintenance work on a live system.** After switching off the converter, the DC-link of the converter still carries dangerous voltages, which may cause death or severe injuries if touched or short circuit. ➜ Before performing work on the converter, deenergize the converter, wait for 30 minutes until the installed capacitors are discharged and check the voltage-free status of the DC-link by using a 2-pole voltage tester. ➜ It is not allowed to open the cabinet doors before the converter system has been de-energized and the capacitors are discharged. ➜ It is not allowed to perform any work on the converter before the system has been de-energized.

⚠ DANGER	
	**Electric shock hazard!** **Do not perform maintenance work on the converter system, before the converter system has been disconnected from all power sources.** After switching off the converter, the connected DC power cables of the battery strings, the DC connection busbars in the AC_DC cabinet and the DC switch & fuse units continue to carry dangerous voltages that can cause death or serious injury if touched or short-circuited. ➜ Before starting work inside the converter cabinets, de-energize the converter system as described in section 14.6 “De-Energizing”, wait for 30 minutes until the installed capacitors are discharged and check the voltage-free status of the DC-link by using a 2-pole voltage tester. ➜ Disconnect the DC power cables from the converter system using suitable DC disconnecting devices before carrying out any work in the cabinets of the converter system. ➜ Before disconnecting the DC power cables from the DC connection busbars, always check for voltage-free status of the DC power cables, since dangerous electric arcs may lead to severe injuries or death when disconnecting the power cables.

⚠ DANGER	
	**Electric shock hazard!** **Do not perform any work on the MV switchgear and the MV transformer before the PLC container has been disconnected from all voltage sources.** After switching off the converter, the connected MV transformer, the MV switchgear, its connecting cables and terminals continue to carry dangerous voltages which, if touched or short-circuited, can cause death or serious injury. ➜ Before working on the medium voltage components of the converter container, de-energize the converter system as described in section 14.6 “De-Energizing”. ➜ Disconnect the AC mains connection by opening the MV switchgear. ➜ Before disconnecting the AC power cables from the AC connection busbars, always check the voltage-free status of the AC power cables, otherwise dangerous arcs can cause serious injury or death when disconnecting the power cables.

⚠ DANGER	
	**Electric shock hazard!** **Do not perform any maintenance work on the converter system before the AC circuit breaker and MV switchgear have been switched off and protected against unintentional reclosure.** ➜ Before starting work inside the converter cabinets, the AC circuit breaker 80Q1 must be switched off and protected against unintentional reclosure as described in section 14.8.3 “Protect the CB Against Unintentional Reclosing”. ➜ Before you start working inside the control cabinets, the medium-voltage switchgear must be switched off and protected against unintentional reclosure.

⚠ DANGER	
	**Danger to life through electric arcs** Danger by electric arcs could occur by: • Exceedance of the maximum input current • Faulty design of circuit breakers or transformers • Faulty or not connected cables • Excessive contamination Electric arcs may lead to death, severe injuries or material damage. ➜ Make sure the system is properly designed and all power cables are connected correctly. The maximum permissible input current is provided in the table "Technical Data". ➜ Excessive contamination must be removed.

⚠ DANGER	
	**General risk of injury due to improper handling.** Always respect all the safety instructions and, in particular: ➜ Always use protective devices suitable and approved for each type of activity. ➜ The instructions in this manual must be strictly followed. ➜ Use of the equipment must comply with all national and local regulations. ➜ Access to internal components is only allowed after the converter has been de-energized and disconnected from all power supplies. ➜ It is not allowed to perform work on a live converter. ➜ The converter and all connected systems/components must be electrical grounded properly. ➜ All installation work and maintenance on the BESS must be carried out by qualified personnel. ➜ Improper use or handling of the BESS during transportation, installation or during operation may result in damage to the equipment or cause severe, even fatal injury. ➜ Maintenance work on the converter unit must be performed with reasonable care. ➜ Non-compliance with the present instructions may cause damage to the product and could lead to serious injuries of the personnel.

⚠ DANGER	
	**Danger to life when live parts are touched on damaged devices** Improper handling of devices can cause damage. For damaged devices, hazardous voltages can be present at the enclosure or at exposed components. If touched, this can result in death or severe injury. ➜ Ensure compliance with the limit values specified in the technical data during transport, storage and operation. ➜ Do not use any damaged devices.

⚠ DANGER	
	**Danger to life through electric shock due to unconnected cable shields** Hazardous touch voltages can occur through capacitive cross-coupling due to unconnected cable shields. ➜ As a minimum, connect cable shields and the conductors of power cables that are not used (e.g. brake cores) at one end at the grounded housing potential.

⚠ DANGER	
	**Danger to life due to electric shock when not grounded** If the protective conductor connection is missing or incorrect, high voltages can occur at open, exposed parts when using devices of protection class I. Touching these parts can result in death or serious injury. ➜ Ground the device in compliance with the applicable regulations.

⚠ DANGER	
	**Danger to life due to electric shock when opening plug connections in operation** When opening plug connections in operation, arcs can result in death or severe injuries. ➜ Only open plug connections when the equipment is de-energized, unless it has been explicitly stated that they can be opened in operation.

⚠ DANGER	
	**Danger to life through electric shock due to the residual charge of the power component capacitors** Due to the use of capacitors, a dangerous voltage is present even up to 5 minutes after the power supply has been switched off. Contact with live parts can result in death or serious injury. ➜ Wait for 5 minutes and then check the de-energized state of the system. Only then should you start working on the device.

⚠ DANGER	
	**Danger to life from electromagnetic fields** Electromagnetic fields (EMF) are generated by the operation of electrical power equipment, such as transformers, converters, or motors. People with pacemakers or implants are at particular risk in the immediate vicinity of this equipment. ➜ If you have a heart pacemaker or implant, maintain a minimum distance of 2 m from electrical power equipment.

⚠ DANGER	
	**Danger to life when safety functions are inactive** Safety functions that are inactive or that have not been adjusted accordingly can cause operational faults on machines that could lead to serious injury or death. ➜ Observe the information in the appropriate product documentation before commissioning. ➜ Carry out a safety inspection for functions relevant to safety on the entire system, including all safety-related components. ➜ Ensure that the safety functions used in your drives and automation tasks are adjusted and activated through appropriate parameterizing. ➜ Perform a function test. ➜ Only put your plant into live operation once you have guaranteed that the functions relevant to safety are running correctly.

⚠ DANGER	
	**Danger to life due to fire if overheating occurs because of insufficient ventilation clearances** Inadequate ventilation clearances can cause overheating of components with subsequent fire and smoke. This can cause severe injury or even death. This can also result in increased downtime and reduced service lives for devices/systems. ➜ Ensure compliance with the specified minimum clearance as ventilation clearance for the respective component.

⚠ DANGER	
	**Danger of an accident occurring due to missing or illegible warning labels** Missing or illegible warning labels can result in accidents involving death or serious injury. Check that the warning labels are complete based on the documentation. ➜ Attach any missing warning labels to the components, in the national language if necessary. ➜ Replace illegible warning labels.

⚠ WARNING	
	**Hazard by hot surfaces of components** During operation, some components may heat up significantly, e.g. heat sinks and inductors. These components can still be very hot for some time after operation. In case of contact, severe bodily injuries, such as skin burns, may result. ➜ Do not touch hot surfaces even after shutdown of the converter system.

⚠ WARNING	
	**Danger to life or malfunctions of the BESS as a result of incorrect or changed parameterization** As a result of incorrect or changed parameterization, the system can malfunction, which in turn can lead to injuries or death. ➜ Protect the parameterization (parameter assignments) against unauthorized access. ➜ Respond to possible malfunctions by applying suitable measures (e.g. EMERGENCY STOP or EMERGENCY OFF).

⚠ WARNING	
 	**Hazard by cooling liquid** The coolant used in the internal cooling system of the converter is harmful to human or animal health when touched or swallowed. ➜ Avoid oral ingestion of the coolant since it can lead to harm to human or animal health. In case of accidental ingestion or eye contact with the coolant, seek immediate medical attention. ➜ Avoid skin contact with the coolant. ➜ Use appropriate eye protectors and protective gloves when working on the cooling system and during filling and draining of the cooling liquid.

⚠ CAUTION	
	**Hazard by sharp edges on packaging** Improper handling during unpacking can cause injuries. ➜ Use appropriate safety gloves to protect your hands from possible cuts.

NOTICE	
	**Material damage due to loose power connections** Insufficient tightening torques or vibrations can result in loose electrical connections. This can result in damage due to fire, device defects or malfunctions. ➜ Tighten all power connections with the specified tightening torques, e.g. grid supply connection. ➜ Check all power connections at regular intervals. This applies in particular after transport.

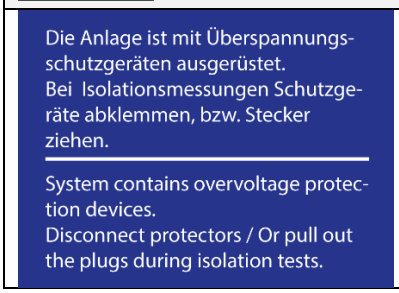
NOTICE	
	**Device damage caused by incorrect voltage/insulation tests** Incorrect voltage/insulation tests can damage the device. ➜ Before performing voltage/insulation tests on the equipment, disconnect all equipment as high voltage tests have been performed on inverters and motors by their manufacturers. Therefore, it is not necessary to perform a retest on the system.

NOTICE

Material damage due to overloading of DC devices and connecting cables

The DC paths and the connection cables are not protected against overload by the BESS.

Select external components according to the specified nominal and maximum currents of the BESS.



➜ If necessary, use appropriate protective equipment for the external components.

NOTICE

Material damage due to improper use of the transformer

For your safety, carefully read the delivered operating instructions of the transformer and observe the instructions. Technical specifications of the transformer which are provided on its´ type plate like rated current, rated power etc. must be strictly observed when commissioning and feeding power to the grid. All electrical connection work must be carried out onsite and by trained, qualified personnel, provided with the required safety devices in accordance with the national occupational safety regulations. Please pay attention to the proper protection of the transformer during unloading, installation at the place of operation, feeding and operation The transgression of the voltage or power and the presence of external factors (such as condensation, solar radiation, plants and animals) can affect the proper functioning of the transformer).

NOTICE

General risk of damage

During isolation tests disconnect overvoltage protection devices or pull out the plugs otherwise they will be activated or destroyed.

2.3 Safety Instructions Battery Storage Unit

⚠ DANGER	
	**Hazard by electrolyte** Work on the battery storage system is only allowed to be performed by FREQCON service personnel or qualified personnel trained and authorized by FREQCON. It is not allowed to modify or manipulate the battery storage unit and its components. ➜ Do not open, disassemble or puncture the battery storage cabinets or battery modules. ➜ Do not short circuit the battery storage unit. ➜ Do not expose the battery storage system to vibrations or shock. ➜ Do not a use defective or damaged battery storage system or battery modules. ➜ Do not touch defective or damaged batteries with bare hands. Defective or damaged batteries must only be handled by FREQCON personnel.

⚠ DANGER	
	**Hazard by electrolyte** The material/media required for intended operation of the battery storage system are procured and provided by the manufacturer. ➜ The proper handling of these materials/media and the associated risks underly the sole responsibility of the manufacturer. ➜ Hazard and disposal information must be provided by the manufacturer. ➜ The safety data sheets of the material and media manufacturers are to be observed.

⚠ WARNING	
	**Health hazards due to negligent use of personal protective equipment** Serious injuries can occur when working without personal protective equipment. ➜ Wear personal protective equipment (PPE) when working on the BESS. Refer to section 2.7 "Personal Protection Equipment (PPE)" for information regarding the required PPE.

⚠ WARNING	
	**Possible danger to life due to electric shock when extinguishing fire or due to flooding!** If the following instructions are not observed, this can lead to damage to property and personal injury, for which FREQCON GmbH accepts no liability whatsoever. ➜ In the event of a fire, switch off the battery storage system if safe to do so. ➜ Immediately alert the fire department. ➜ Immediately remove yourself and other persons from the danger zone. ➜ Inform the fire department about the presence of lithium iron phosphate batteries.

⚠ CAUTION	
	**Danger due to fire breaking out** During operation, fire may break out, e.g. due to sparks or heated surfaces. ➜ Observe the relevant safety regulations (5 safety rules). ➜ Note the risk of arcing when operating the NH isolators installed inside the battery storage cabinets. ➜ Never install or operate a potentially defective or obviously defective battery storage unit.

⚠ CAUTION	
	**Hazard by burns (electric arcs)** When working on the electrical equipment, you may come into direct contact with faulty or overloaded parts which can cause burns. ➜ Always observe the relevant country-specific safety regulations. ➜ Note the risk of arcing when operating the NH isolators installed inside the battery storage cabinets. ➜ Note the risk of arcing when operating the NH isolators installed inside the battery storage cabinets.

2.3.1 Safety Data Sheet

Observe the information provided in the Material Safety Data Sheet (MSDS) of the battery cells (*see section 1.2 "Applicable Documents"*).

2.3.2 Personal Protection

This chapter describes the personal protection for FREQCON battery converter systems in the event of fire or the occurrence of a toxic gas concentration.

Basic safety measures

- No person may remain inside the container or in the safety area of the container while the system is in operation.
- All container doors must be locked while the system is in operation.
- Maintenance and repair work may only be carried out when the system is switched off and all energy sources are disconnected from the system.

Critical situation regarding personal safety

A person enters the container for maintenance/repair work in which there is a fire (risk of deflagration when opening the container door) or a toxic concentration of carbon monoxide due to outgassing batteries.

Definition of the protection objective

Under all circumstances, a person must be prevented from entering the container if the critical situation mentioned before exists.

Technical measures to achieve the protection objective

- Reliable detection of a fire or toxic gas concentration using suitable sensors (smoke detectors, CO sensors, temperature sensors).
- The sensors are redundant. Smoke detectors, CO sensors and temperature sensors are installed in each battery room.
- One H2 sensor is installed inside each battery room of the BESS containers.
- If the system is shut down by emergency shutdown, no person may enter the container.
- If a hazardous situation exists, an infrared thermometer must first be used to check whether there is a fire in the container. A temperature above 60 °C is a sure sign of a fire inside the container. If this is the case, the container doors must not be opened (risk of deflagration) and the fire brigade must be alerted.
- If a fire can be ruled out as the cause of the emergency shutdown, a toxic gas concentration could be present. Entering the container is not permitted in this situation. Active ventilation (exhaust units in the BESS container roof) reduces the gas concentration in the container.

2.3.3 Fire Fighting Measures

1) Fire protection / early fire detection
   a. Spatial conditions:
      Primarily through the structural measure; Space between modules, air conditioning and ventilation reduces the risk of thermal stress to a minimum
   b. It must be ensured that there is no additional fire load in the battery rooms. Unauthorized access must be strictly prevented.
   c. Sensors for detecting smoke, heat and CO gas are redundantly built into the alarm system.
   d. At 300 °C automatic fire suppression using an aerosol mist triggers itself.

Important: Extinguishing an internal cell fire is not possible. Due to the chemical release of bound oxygen in the cathodes, the fire inside the cell sustains itself. The aerosol extinguishing system is intended to prevent the flames from spreading to the outer surroundings of the battery module!

2) Behavior in case of fire
   a. Upon detecting a fire in the battery room, the battery container is immediately and automatically disconnected from the grid. The circuit breaker opens its contacts to prevent any further external energy supply.
   b. Toxic and hazardous substances are released by the battery in the event of a fire.
      Harmful gases include:
      Hydrogen (H_2) 48%
      Carbon dioxide (CO_2) 27%
      Carbon monoxide (CO) 11%
   c. Remove all persons from the danger area.
   d. Clear affected area and secure from entry.
   e. Disconnect all supply voltages of the BESS at the disconnection points of the external voltage sources.
   f. Only start active measures in the event of visible flame development outside the energy storage unit.
   g. Do not enter any electrolyte cloud that may form in the external area (near the floor).
   h. Wait at least 48 hours before starting firefighting measures inside the container. First open the access door and wait another 2 h.

⚠ DANGER	
	**Poisoning and chemical burns hazard** Escaping electrolyte gases contain chemicals which are harmful to humans. ➜ Keep away from electrolyte mist clouds. ➜ Approach electrolyte mist clouds only under full protection. ➜ Observe the instructions in the Material Safety Data Sheet of the battery cells *(see applicable documents)*. ➜ Follow the following instructions

3) Recommendation for rescue units

   Firefighting should be conducted according to regional standards and guidelines.
   (EN 15182-1:2019-11).
   The distance for the fire hose nozzle must be maintained.

Ensure full protective gear according to DGUV Information 205-014 (e.g. DIN EN 469 ; Protective clothing for the fire brigade - performance requirements for protective clothing for fire brigade activities) and recirculating air independent respirator is worn.
For firefighting protective equipment, thermal risk is given more priority than chemical hazard.

4) Instructions after fire extinction

Once the fire brigade has cleared the fire site and the fire has been extinguished, an electrically trained specialist must immediately ensure and verify the absence of voltage (measure all poles) and secure against re-energization.
5 safety rules!
Attention: Batteries continue to maintain voltage even after disconnection!
In addition, ventilate the rooms adequately to eliminate any remaining hazardous fire gases.
According to the technical data sheet, the battery modules must be stored/disposed.

Rules of Conduct for the Fire Brigade

The following notice board must be kept outside the container or handed over to the local fire department. A laminated copy is included in the scope of delivery.

Rules of conduct for the fire brigade

Attention electrical voltage!

Batteries are still live after disconnection!!!

Batteries can outgas when heated

CO = carbon monoxide
H2 = Hydrogen

Unauthorized access is strictly prohibited.

Keep doors closed in case of fire

The use of respiratory protection is strongly recommended

Battery fire cannot be extinguished!

Container cooling from outside

Extinguishing agents: water

2.3.4 Disposal Considerations

Lithium-ion cell batteries are labeled in compliance with the EU Battery Directive 2006/66/EC.

For instructions regarding the disposal of the battery storage system and its battery storage modules, refer to section 24 ”Dismantling and Disposal”.

2.3.5 Transport Information

For information regarding the transport of the battery storage system and its battery storage modules, refer to section 10.2 "Transport”.

2.4 Handling Electrostatic Sensitive Devices (ESD)

Electrostatic sensitive devices (ESD) are individual components, integrated circuits, modules or devices that may be damaged by either electric fields or electrostatic discharge.

NOTICE

Damage through electric fields or electrostatic discharge

Electric fields or electrostatic discharge can cause malfunctions through damaged individual components, integrated circuits, modules or devices.

- ➜ Only pack, store, transport and send electronic components, modules or devices in their original packaging or in other suitable materials, e.g. conductive foam rubber of aluminum foil.
- ➜ Only touch components, modules and devices when you are grounded by one of the following methods:
  - Wearing an ESD wrist strap
  - Wearing ESD shoes or ESD grounding straps in ESD areas with conductive flooring
- ➜ Place electronic components, modules or devices on conductive surfaces (table with ESD surface, conductive ESD foam. ESD packaging, ESD transport container).

⚠ DANGER

Danger to life as a result of unsafe operating states resulting from software manipulation

Software manipulations (e.g. viruses, trojans, malware or worms) can cause unsafe operating states in your system that may lead to death, serious injury, and property damage.

- ➜ Keep the software up to date.
- ➜ Incorporate all installed products, especially the automation and drive components into a holistic, state-of-the-art industrial security concept for the installation.
- ➜ Protect files stored on exchangeable storage media from malicious software by with suitable protection measures, e.g. virus scanners.

2.5 Warnings and Symbols on the Device

2.6 Qualification of Personnel

Installation, service and operating personnel must be sufficiently trained before installing, operating and handling the equipment.

2.7 Personal Protection Equipment (PPE)

Always wear safety equipment when working on the product.

When carrying out maintenance and service work, secure controllers, devices and units of designated area against accidental activation.

Symbol	Meaning and Application
	Gloves made of nitrile rubber against chemicals and microorganisms (at least protection index 2 according to EN 374-1) • for removal of electrolyte or hydrofluoric acid (only by FREQCON service) • Gloves according to EN 60903 - up to 1000 V AC for live working activities
	Safety shoes (toe protection, non-slip, ESD) • Operation • Cleaning Safety shoes (acid resistant) or rubber boots • for removal of electrolyte or hydrofluoric acid (only by FREQCON service)
	Tightly fitting safety goggles/basket goggles/face shield • for removal of electrolyte and hydrofluoric acid (only by FREQCON service)
	Chemical protective suit • for removal of electrolyte and hydrofluoric acid (only by FREQCON service) • for fire fighting
	Ambient air-independent breathing apparatus • for firefighting in case of smoke formation inside or outside the building (by rescue forces)

Table 6: Personal Protection Equipment (PPE)

2.8 Changes of the Product

Modifications to the product and/or mounting of parts from other manufacturers can endanger the operating safety of the product. This especially applies to tampering with safety-relevant parts.

Any modification carried out without prior written approval by the manufacturer will result in the manufacturer's declaration of conformity becoming void. The responsibility for damage and accidents caused by modifications of this kind shall be borne solely by the user.

2.9 Proper Use

The Battery Energy Storage System (BESS) described in this document is intended to feed into or draw power out of a connected electric grid by means of a power conversion system connected between both. The system specifications are listed in section 3 of this document.

The system is properly constructed, installed and commissioned by FREQCON service personnel according to manufacturer specifications. The operator ensures that the required environmental conditions are met (*see section 8 and 9*).

Modification of the device by the operator or integrator is not permitted. Only use the device in accordance with the specifications in this manual and the locally applicable standards and directives. Use contrary to the specifications and specified operating limits as well as any modification of the energy storage unit by the user is not permitted and will void the warranty!

Deviations from this manual are not permitted or require the separate written approval of FREQCON GmbH.

The system is intended for stationary use as a fixed installation. Any other or additional use is considered improper and increases the risk of personal injury and property damage when handling the energy storage system. The manufacturer rejects any liability and warranty claims for damage caused by improper use.

Access to the container is only permitted for instructed personnel. The access doors of the container must be locked if no instructed personnel are on site. The access doors of the container must be locked if no instructed personnel is on site.

Proper use also includes the following measures:

- ➜ Observe the operating manual.
- ➜ Comply with technical data.
- ➜ Comply with maintenance conditions.
- ➜ Immediately eliminate faults which hamper safety.
- ➜ Operate the unit only when it is in technically flawless condition.

2.10 Misuse

Any use which goes beyond the proper use is considered to be misuse. It can result in serious injuries or damage and is therefore prohibited.

The responsibility for damage resulting from misuse shall be borne solely by the operating company of the product.

2.11 Duties of the Operating Company

To ensure safe, smooth operation of the unit, you as the operator must comply with the following:

Personnel

- ➜ Only allow personnel with corresponding knowledge to operate and clean the product.
- ➜ Only allow a trained electrician or person with electro technical instruction to work on the electrical system. The regulations given in section 1.7 “Target Groups” must be observed.
- ➜ Clearly and bindingly specify the responsibilities for operation, service and maintenance work.

Operating Manual

- ➜ Always keep this operating manual available near the device.
- ➜ Make sure that the personnel have read and understood this operating manual before working on the device.

Safety

- ➜ Monitor the compliance with the generally valid legal and other binding safety and accident prevention regulations.
- ➜ Make sure that the users of the product wear the necessary, personal safety equipment in accordance with their job.
- ➜ Ensure that all safety and danger warnings on the product and in the installation room are kept complete and in legible condition.

Inspection and Maintenance

- ➜ Observe the adherence of the inspection and maintenance intervals in section 16 „Maintenance“.
- ➜ Operate the product only if it is flawless.

2.12 Duties of the User

The following are referred to as users:

- Persons, who install and configure the product.
- Persons, who operate the product and eliminate errors during the process.
- Persons, who carry out checking, maintenance and inspection activities.

Follow the instructions below in the interest of your own safety and for fault-free operation of the product:

➜ Read this operating manual before using the product. If you have questions, contact your superior or the safety officer.
➜ Always carry out activities based on the complete operating manual. Missing information due to an incomplete operating manual can result in serious or fatal injuries and in damage.
➜ Familiarize yourself with the safety devices of the product. Do not make any modifications to it.
➜ Do not operate the product until you have received a complete user training course for this product from an authorized person.
➜ Report any fault in the product to your superior if you cannot and may not eliminate it yourself.

3 Product Description

The battery energy storage system described in this document (BESS) is designed as a battery-to-grid system.

The BESS system is generally capable to provide the following functions, but the specific functions depend on the contractually agreed specifications:

Figure 1: BESS Functions Overview

The BESS consisting of a battery storage system with battery modules, battery control system and air conditioning systems are integrated in two (2) 40" HC containers with an active fire suppression system (*see section 4, "Design"*).

The PCS hardware and software control system as well as the converter technology incl. water cooling system with heat exchangers and air conditioning systems for the interior temperature are integrated in one (1) separate 20" container with a passive fire suppression system. The BESS is connected to the AC grid via busbars at the HV side of a 6.6 kV /620 V AC MV transformer inside the PCS container. The cable entries into the containers are located in the container floors.

It is not permitted to use the BESS system for purposes other than those specified in this manual.

Only sufficiently trained personnel are permitted to run, handle, and operate the unit (*see section 1.7* "*Target* Groups").

3.1 Working Principle

The BESS consists of a converter system with a total output of 1 MW and a battery storage system with a usable storage capacity of 5 MWh (5.5 MWh installed).

The BESS is passively charged by the energy taken from the AC grid via contactors and resistors from the DC link of the PCS as soon as the voltage level of the battery storage system falls below a value predefined in the PCS controller.

3.2 Control

A Programmable Logic Controller (PLC) is used as system controller. After commissioning and parameterization, the BESS operates automatically. The control system provides remote monitoring and access to the converter functions and set point adjustment via IT network. For detailed information regarding the control system, refer to section 6 “Control System”.

3.3 PCS

The BESS system is equipped with an integrated power conversion system (PCS), the FREQCON MSC converter system.

The key component of the converter system is a DC link converter with a control unit, generating a controlled DC voltage from the AC infeed, the so-called DC link voltage. The DC link voltage is kept to a constant level independently from the grid voltage (also in case of power feedback into the grid). It is required that the specified DC voltage setpoint is within a defined operational range.

3.4 Decoupling Protection

The decoupling protection of the converter system consists of the main controller, which evaluates the signals and controls the coupling switch (circuit breaker). In addition, peripherals for measuring the grid voltage are installed. The periphery consists of a HVIO that divides the grid voltage to a lower voltage and a PIII converter interface that digitizes the measured voltage and provides it to the main controller.

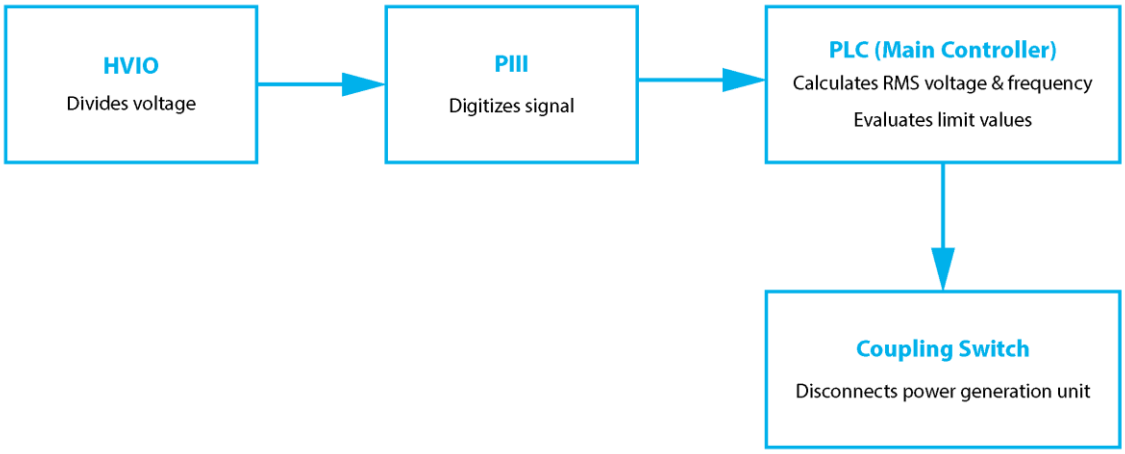


Figure 2: Decoupling protection scheme

The grid phases are measured by an HVIO board that is connected to a PIII. The voltages evaluated are phase-neutral voltages.

The measured instantaneous voltages are used to determine the RMS value, the phase angle and the frequency in the main controller. The currents are recorded directly at IGBT half bridges and also digitized via the PIII. RMS currents are calculated in the main controller.

RMS voltages, RMS currents and frequency are monitored for limit values in the main controller and the coupling switch is switched off if these are exceeded.

3.5 Auxiliary Power Supply of Protective Devices

The entire control system is buffered via a UPS. This is set so that the control and protection system is supplied with energy for at least 15 minutes.

In the event of a faulty UPS and a grid failure, the main controller fails, the grid switch opens, and the converter disconnects from the grid.

3.6 Behavior in the event of a supply voltage failure

If the supply voltage of the converter system fails, the following steps are carried out:

1. The failure of the supply voltage is immediately detected by the main controller.
2. A level 4 error is triggered. This means:
   a. All IGBTs (both DC and AC side) are switched off (500 µs after the fault occurs).
   b. The switches to the energy sources are opened (30 ms after the fault occurs), which disconnects the converter system from all AC and DC networks.
   c. The DC link of the converter system is discharged.
   d. The cooling system of the converter system is switched off (30 ms after the error occurs). This is possible because there are no more heat losses.
3. The UPS supplies the converter control system for another 15 minutes. A backup copy of the init files and parameters is created in the non-volatile memory.
   a. When the power supply is restored, this data is automatically reloaded. It is neither possible nor necessary for the customer to access the data.
   b. Important operating data of the converter system at the time of the power failure (voltages, currents, temperatures, etc.) are logged in a buffer file as long as the UPS is running. Which data is logged in detail depends on the converter type.
   c. The buffer file can be displayed via the FREQCON buffer analysis tool (subject to license) as soon as the supply voltage is available again.
4. If a battery storage system is present, the battery control is switched off immediately so that the battery storage is transferred to a safe state. No operating data of the battery system is saved.
5. Before the switch cabinet doors are opened for a visual inspection after the supply voltage has failed, it is essential to wait for the DC link to discharge.

⚠ DANGER	
	**Risk of injury due to electric shock** Discharging the DC link takes several minutes. The "Ready for Operation" signal light is not an indicator of a fully discharged DC link. Do not carry out any work on the converter before the DC link has been completely discharged. ➜ Wait until the DC link is completely discharged and check that it is de-energized as described in section 14.7 "Check Voltage-Free Status of DC Link ".

4 Design

For better handling and to increase system flexibility, all components of the BESS system are housed in containers.

BESS main components:

- BESS with installed battery modules, control systems and integrated fire protection and suppression system
- Integrated climate control system
- Integrated emergency fan system
- Several sensor systems (H2, CO; temperature and smoke)

PCS main components

- Converter system consisting of AC/DC battery converter, control system and converter cooling system
- Integrated water-air cooling system
- Integrated climate control system
- Several sensor systems (temperature and smoke)

Both the PCS and the BESS are controlled and monitored by the same main control system, which is installed in the control cabinet (CTRL) of the PCS container.

The waste heat in the interior of the containers is conducted via internal air conditioning (AC) units from the interior to external AC units at the front side of the container (*see section 4.8 "Cooling System"*).

The BESS containers are equipped with recesses on its underside for the passage of cables (*see section 11.2.2 "Cable Outlets"*). Furthermore, the PCS container is also provided with cutouts on the bottom side to connect the external AC and DC line cables to the converter system.

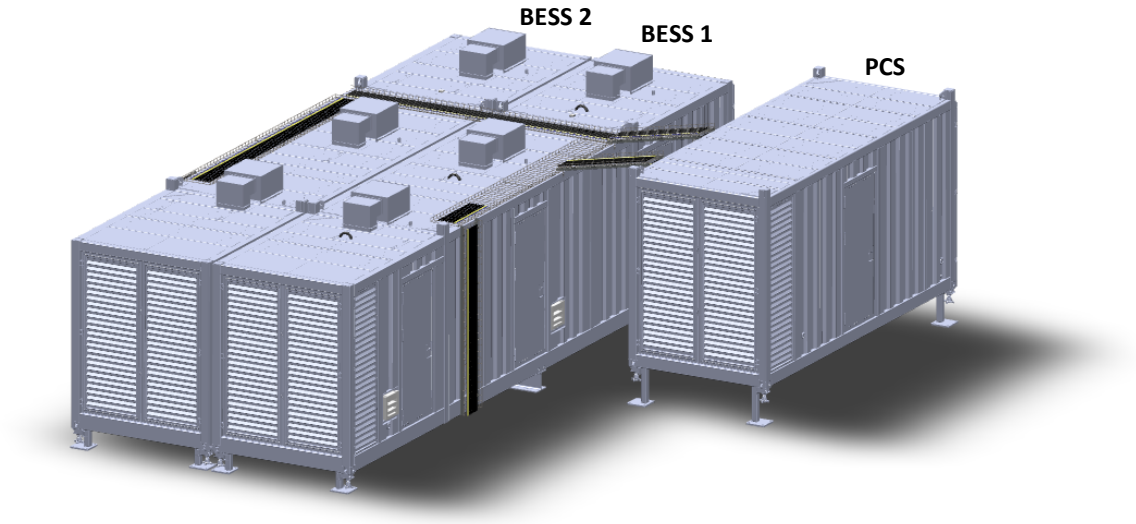

Figure 3: Design

4.1 AC Grid Connection

The BESS is equipped with AC busbars for connection of a 620 V AC grid. The AC busbars are located inside the AC_DC cabinet (*see section 4.4.3*) of the converter system.

Cutouts for inserting the AC power cables into the container are located in the container floor (*see section 11.2.2 "Cable Outlets"*). Through these cutouts, the AC power cables can be fed directly from below into the converter cabinets and connected to the corresponding AC connection busbars inside the cabinets of the converter system.

Further information and a description of the connection of the AC mains supply cables to the converter system are provided in section 11.2.4 "AC Connection".

Note:
The electrical connection must only be performed by personnel trained by FREQCON or by FREQCON service personnel.

4.2 Data Interface

The BESS system can be connected to an electronic higher-level control unit (control room) via a PROFINET interface. The required parameters (current, voltages, frequency, power) are provided by the BESS main control system and transmitted via PROFINET protocol.

The higher-level control unit is connected to the main control unit via a network isolator (114A1) in the CTRL_1 control cabinet (*see section 11.2.5 "Higher-Level Controller Connection"*).

For external control and monitoring of the converter, it is necessary that the customer has access to selected control and status variables stored in the BESS main control system, which can be read and overwritten by the customer's higher-level control. For this purpose, predefined control profiles with the relevant control variables and status profiles with all relevant status variables are stored for the data transfer between the customer's higher-level controller and the converter system.

For a detailed description of the individual data profiles, see the applicable document "23A2007_250116_Modbus_Register BESS_Vx_x_x_x".

4.3 Safety Design

4.3.1 Safety Chain Battery Cell

The battery monitoring system, BMS interface UI and BMS interface RS485, signal error messages via potential-free contacts. See also the documentation for the "BMS interface UI" and "BMS inter-face RS485" hardware modules.

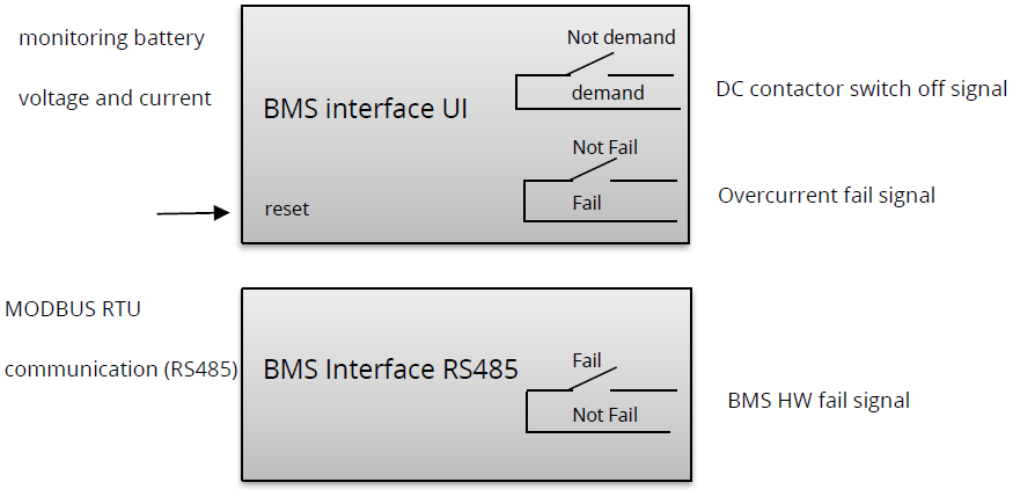

Figure 4: Safety chain battery cell

4.3.1.1 BMS Interface UI

The BMS interface UI monitors the total voltage of a battery rack and the current of the rack.
The BMS interface UI independently monitors the global battery voltage and the battery current. There is a potential-free contact for both errors which opens the contact in the event of an error.
The BMS interface UI has its own digital input for resetting an error message. If an error has been signaled and acknowledged manually via the visualization or MODBUS TCP, this digital input is set briefly.

4.3.1.2 BMS Module

The signals of the BMS interface are monitored in FB_battery_monitoring.
BMS interface RS485 HW error signal. The BMS monitors the battery cells for overvoltage, undervoltage and overtemperature.
If an error is detected locally by a BMS board, the safety chain is opened and an error is signaled.

4.3.2 Safety BMS Rack (S7)

The BMS rack monitors the following states:

- Modbus RTU communication error: The MODBUS RTU master cyclically queries the data of all BMS battery modules (MODBUS RTU slaves).
  If a MODBUS RTU slave [nmodule] is not reached or supplies faulty data, this is evaluated as a communication error. There is a communication error counter for each battery module. While a communication error increments the counter reading, successful communication re-sets the counter to 0.

- Battery voltage monitoring (cmp): The measured battery voltage is cyclically compared with the sum of the individual battery module voltages. If the absolute value of the difference be-tween the two voltages exceeds the 16 V limit value for more than 30 s, an error signal is is-sued.
- Battery monitoring cell voltage: Monitoring of all cell voltages to the maximum value of the measured voltages.
- Battery monitoring current: Monitoring of the battery current.
- Battery monitoring cell temperature: The maximum battery cell temperature is determined cyclically, approximately every 2.5 s, from all battery module cell temperatures recorded. A peak filter suppresses temperature jumps greater than 5 °C for a maximum of 8 cycles. If the average cell temperature is already close to the switch-off limit, incorrect measurements (jump) would result in a warning or error signal.
- Battery monitoring Balancer Temperature and ambient temperature Balancer
- Monitoring the battery pack connections + and - for overtemperature
- Smoke detector
- Gas sensor
- Line protection (fuses) of the auxiliary systems
- Main fuse (battery current)
- Modbus-TCP communication error: An error is triggered in the event of a communication timeout with the charging system (inverter control).
- Contactor feedback: Monitoring whether the status of the contactors matches the target status

If a fault is detected, the DC contactors open after 0.5 seconds.
In addition to errors, warnings can also be generated for cell voltages and cell currents.

4.3.3 Safety Converter Control

The converter system constantly communicates with the connected battery racks and continuously checks the following statuses:

- Modbus-TCP communication: In the event of a communication timeout with the battery racks, a corresponding rack is switched off or an error is triggered at converter level.
- Fault conditions: All faults at BMS rack level are signaled to the converter and the current is briefly set to zero to enable the DC contactors in the racks to be switched without current. Every fault reported by a rack prompts the converter system to disconnect the corresponding rack. Some error states also trigger a switch-off of the converter. The following error messages trigger a switch-off of the converter:
  - Error with the DC contactors in a rack
  - Tripping of a DC fuse in a rack
  - Triggering a smoke detector in a rack
  - Triggering a gas alarm in a rack
- Overvoltage (cell voltage): In the event of a cell overvoltage, the current setpoint value is also set to zero independently of the lookup tables.
- Undervoltage (cell voltage): If a cell is undervoltage, the batteries are charged with a low current to prevent deep discharge. If the cell voltage drops further, the corresponding rack is dis-connected.
- Warning messages: If a warning message is generated by a rack, the charging system re-quests a disconnection of the corresponding rack. As soon as the warning is no longer pre-sent, an attempt is made to reconnect the rack.

- Charge control system: To protect the cells from fault conditions, the following limits are available for charging and discharging the system. The respective limit values can be stored via lookup tables and thus set graduated limit values for the charging and discharging current. All limits are analyzed separately and the lowest limit is selected for the current limit. The limits are parameterized so that the charging or discharging current can be reduced to 0 A.
  - Maximum cell voltage
  - Maximum cell temperature
  - Maximum balance temperature
  - SOC (real)
  - Customer SOC (adjusted to capacity sold)

4.3.4 Overview of the Safety Concept

The safety aspects described in chapters 4.3.1 to 4.3.3 result in a three-stage safety concept:

1. Module level:
   - Detection of cell voltages and temperatures and opening of the safety chain in the event of a limit value violation.
2. Rack level:
   - Evaluation the safety chain and open the DC contactors if necessary.
   - In-house evaluation of cell voltages, cell currents, cell temperatures, smoke sensors, gas sensors and communication with the modules and the charging system. If required, fault generation and opening of the DC contactors.
   - Option to disconnect the rack independently if the safety chain is triggered or a self-detected fault condition occurs.
3. Converter level:
   - Evaluation of the cell voltages, currents and temperatures as well as the error states of a rack. Triggering of a converter error for selected error states of individual racks.
   - Reduction of the charging and discharging currents according to lookup tables depending on the cell voltage and temperatures.
   - Request to switch off the rack or the inverter in the event of a rack fault.

4.3.5 Fire Protection System and Suppression System

FREQCON uses highly safe lithium-ion battery cell technology: Lithium iron phosphate (LiFePO4) cells are, among other things, highly temperature resistant and significantly safer compared to cells based on other lithium-ion technologies. The use of these technologies significantly reduces the probability of a thermal runaway, as they do not catch fire even in the event of a short circuit or overcharging.

Furthermore, in addition to controlling and monitoring the state of charge at cell and system level, the FREQCON BMS (Battery Management System) also handles temperature management during charging and discharging. Every second, the temperature, state of charge and all other important operating parameters of each individual battery cell, as well as of the battery modules, are collected and analyzed by the FREQCON BMS.

This means that a potential problem of the cells is already detected at approx. 60 °C, and thus much earlier than the actual fire development the battery storage is brought back into a safe operating condition by segmental or complete shutdown.

In addition to CO sensors and smoke detectors, there are a total of 339 temperature sensors in one battery cabinet alone. This ensures that the cells are always kept within the defined and safe operating range and that, in addition to achieving high efficiency and low degradation, the probability of overloading is also excluded.

The fire protection system meets the thermal runaway propagation containment requirements of IEC 62619 as well as requirements of the EN 54 Fire detection and fire alarm systems standard.

4.3.5.1 Detection and Response

The fire protection system aims to detect malfunction as early as possible and suppress the problem before it results in a fire hazard. The system is divided into two parts. One part is primarily designed for plant protection and the other part has the aim of personal safety. For both purposes the BESS containers are equipped with several automatic detectors:

Personal safety:

- 3x H2 sensor per BESS container
- 3x emergency exhaust unit per BESS container

Plant protection:

- 1x CO sensor per battery cabinet
- 2x smoke detectors per battery cabinet
- Temperature sensors (in cells)

The carbon monoxide (CO) sensors for the battery cabinets are an extra measure to detect malfunctioning even before smoke detection (VESDA). Its primary objective is to detect outgassing from battery cells. With the cell chemistry known, the specific reactions that occur during outgassing are well understood. The relative proportions of these gases can be predicted based on the known reactions. For the used battery cells up to 169.7 liters of gas mixture of a single battery cell are released in the unlikely event of outgassing. The main components of this gas mixture being approximately:

- Carbon monoxide (CO): 11 %
- Carbon dioxide (CO2): 27 %
- Hydrogen (H2): 48 %

The CO sensors trigger an alarm based on the measured CO concentration as specified in DIN EN 50291-1:

Co concentration	No alarm within	Alarm not later than
30 ppm	120 min	-
50 ppm	60 min	90 min
100 ppm	10 min	40 min
300 ppm	-	3 min

As the complete outgassing of a single battery cell results in about 500 ppm CO in the battery room the CO sensor will be triggered in such an event based on the thresholds in table given above. The CO sensor alarm will reset when the CO concentration falls below approximately 50 ppm.

The alarm level of the analog CO sensor is set to 1000 ppm which is equivalent to a H_2 concentration of about 10 % LEL (lower explosive limit).

The smoke detector has an optical work principle and is getting triggered by (smoke) particles. It is getting also triggered from the aerosol which is released during the outgassing of a battery cell, being thereby independent of the gas concentration.

Personal safety - If an incident should occur and one sensor of the security chain for personal safety is triggered the system responds as follows:

- The complete system (BESS and PCS) is switched off and disconnected from the mains via a control system. The AC connection of the converter is disconnected, the DC connection to the battery storage system is cut off, and if existing, the MV switchgear with the transformer and low voltage distribution are disconnected from the mains.
- H2 concentration > 4000 ppm of analog H2 sensor (equivalent to about 4 % LEL H_2):
  - Battery cabinets are switched off
  - Stop charging/discharging
  - Ventilation starting (Exhaust units)
  - Error message (Error level 4)

Plant protection - Depending on which sensors are triggered the system responds as follows:

- Temperature >55 °C:
  - Battery cabinet is switched off
  - Stop charging/discharging
  - Warning message
- Temperature >56 °C:
  - Same as temperature >55 °C
  - Error message
- 1x CO sensor in the battery cabinets is triggered:
  - Battery cabinet is switched off

  - Stop charging/discharging
  - Warning message
- 2x smoke detectors are triggered:
  - Disconnects battery DC connection (contactors)
  - Deactivate converter IGBTs
  - Disconnect converter from AC connection
  - Error message
- Temperature > 300 °C:
  - StatX fire suppression triggers itself
- CO concentration > 300 ppm of analog CO sensor:
  - Battery cabinet is switched off
  - Stop charging/discharging
  - Error message

The active emergency exhaust system of the container ensures the gas concentration decreases over time. Based on the assumption of a slight overpressure of 1 Pa which is reasonable in the event of an outgassing battery cell, the estimated time for a complete air exchange in the battery room is less than an hour.

4.3.5.2 Active Fire Suppression inside Battery Cabinets

The fire protection system actively fights the fire only in the affected area (battery cabinet). This is achieved by using condensed aerosol, a compact and effective solution compared to CO2 or halocarbons. The aerosol is contained in Stat-X 60 E cartridges, which are triggered by a 12 VDC signal from the control system or self-triggered due to rupture of a temperature sensitive seal, releasing ultrafine cloud of condensed aerosol to chemically extinguish the fire. These cartridges are non-pressurized, leave minimal residue after discharge, and approved for halon and hydrofluorocarbons (HFCs). The cartridges meet the standards dictated by NFPA 2010 and UL 2775.

Each battery cabinet contains two (2) Stat-X aerosol cartridges and two (2) smoke detectors *(see figure below*). Furthermore, the battery cabinets are also equipped with temperature sensors and CO detectors. As soon as a temperature of >300°C has been reached inside the affected cabinet, the aerosol fire suppression cartridges are self-activated and the affected battery cabinet is filled with an aerosol cloud, extinguishing the fire. Aerosol is not released in other cabinets where the sensors have not been triggered, thereby eliminating the fault at the source, and preventing it from spreading to other parts of the system. The aerosol remaining in the air provides additional extended protection for a finite time against re-flash of any fire in case of lithium-ion batteries. The aerosol remains in the cabinet until it is certain that the fire hazard has been eliminated.

① Aerosol cartridge
② Smoke detector

For safety reasons, the container may not be entered for 48 hours after the extinguishing system has been triggered. The defective battery module must then be replaced by the manufacturer and the entire system is put back into operation.

The Stat-X aerosol cartridges are easily replaceable and are connected to the fire protection system again for future events.

Fire detectors will have to be cleaned and tested after a Stat-X discharge event.

After discharge there may be some minimal residue in the immediate vicinity of the generator or underneath it. This should clean up easily with water or detergent as any residue is water soluble. The Stat-X agent does not require hazmat procedures after discharge for cleanup and there are no hazardous materials in the generators themselves

4.7 Battery Modules

Figure 30: Battery module LF 280

4.7.1 Design

The lithium iron phosphate cells (LiFePO4) inside the LF 280 battery modules are connected in series and provide a total energy content of 8.96 kWh per module.

Each module is equipped with a monitoring PCB, providing the following functions:

- Voltage monitoring of single cells for charging and discharging
- Battery temperature monitoring
- Selective cell balancing
- Data exchange with central BESS controller
- Local insulation measurement
- Robust industrial design for transport, assembly und operation

4.7.2 Technical Data

Technical Data Battery Module LF 280	
Part number	508972
Rated Voltage	32 V DC
Total capacity	280 Ah
Number of cells per battery module	10
Stored Energy	8960 Wh
Maximum voltage	36 V DC
Max. current	280 A
Max. charge and discharge rate	1 C
Temperature range storage	-20 °C … +45 °C (long-term storage at 0…35°C)
Temperature range operation	0 °C … +55 °C
Connections for DC+ / DC-	Surlock Plus
Communication connections	RJ 45
Protection class	IP 20
Weight	65.3 kg
Dimensions (WxHxD)	188 mm x 239 mm x 908 mm
Cell Data (Single Cell)	
Type	Prismatic cells
Capacity (typ.)	280 Ah
Voltage (typ.)	3.2 V
Voltage (max.)	3.65 V
Voltage (min.)	2.5 V
Battery life	>3500 cycles (80% remaining capacity)
Impedance (AC)	<0.25 mΩ
BMS Pack Universal	
Power supply (external)	24 V DC (rated), <0.5 W
Power supply (internal)	36 V DC (max.), < 0.2 W
Communication	EIA-485, Modbus RTU
Baud rate (max.)	19200 Bit/s
Bus participants (max.)	32
Balancer design	Load resistor
Balancer current @3.5 V	1.06 A
Voltage measurement	10 measurements per 14-bit resolution
Temperature measurements	8x NTC 10 kΩ (up to 14 bit analogue/digital converter) 1x PT100 (12 bit analogue/digital converter)
Isolation measurement	Earth fault monitoring

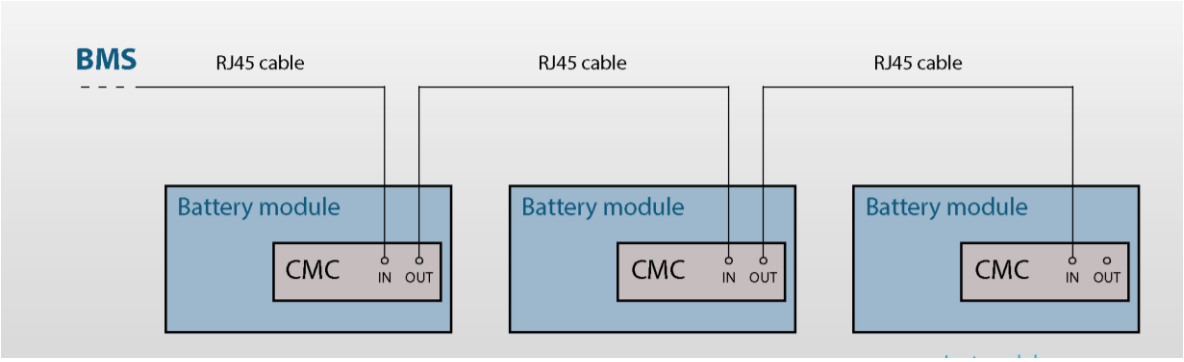
4.7.4 Communication Scheme



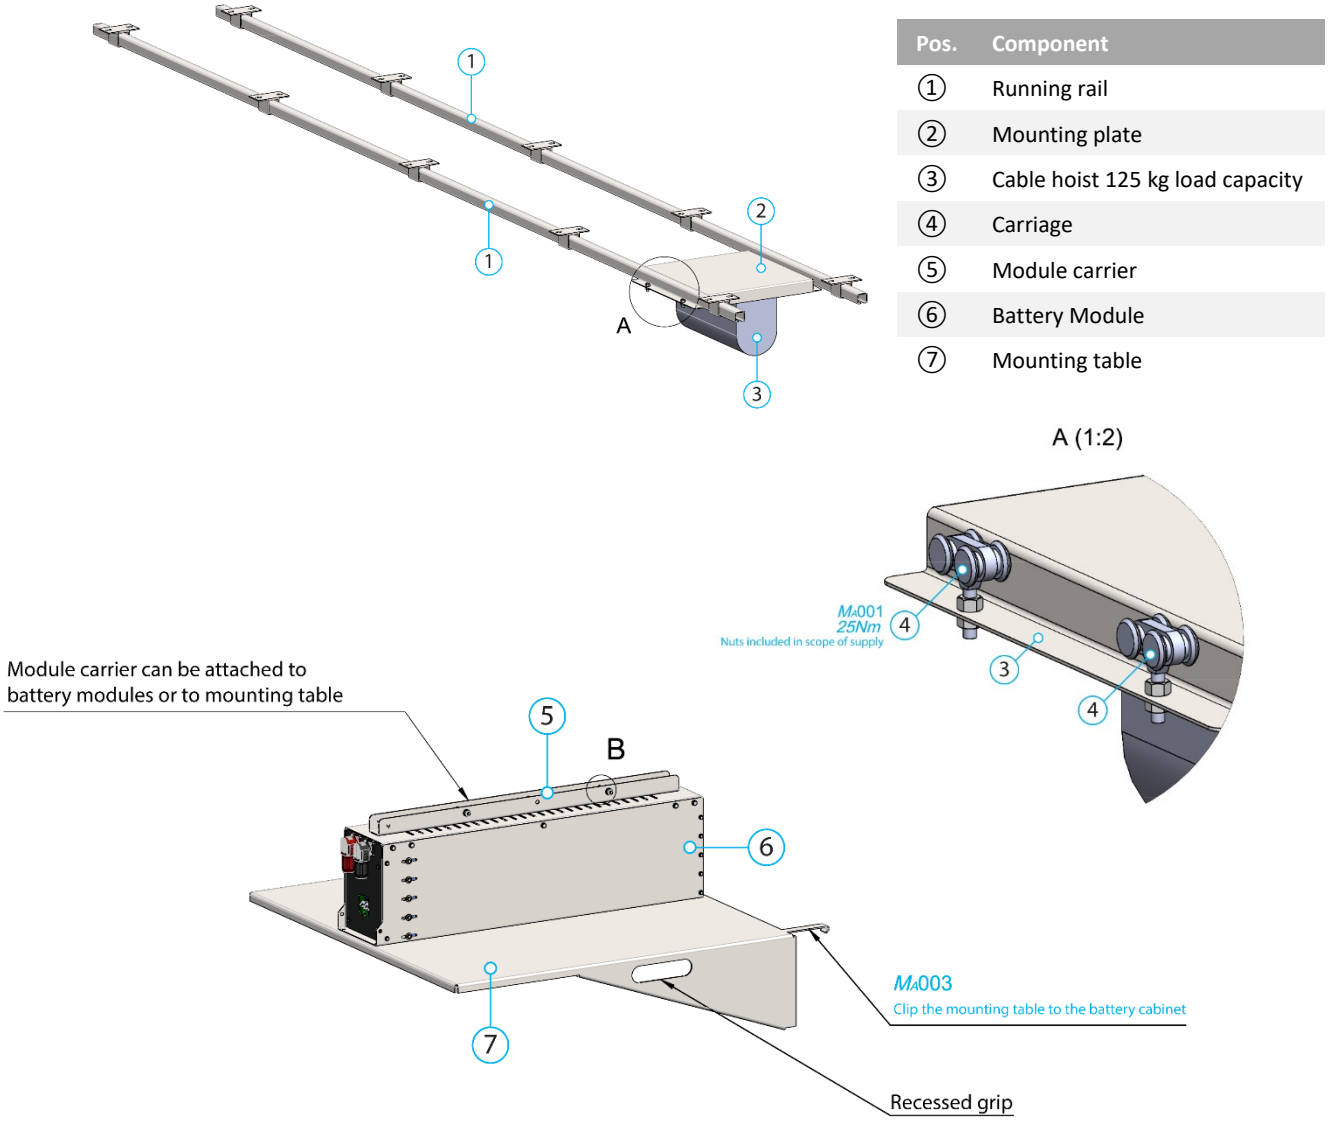


Figure 33: BMS communication scheme

4.7.5 Lifting Device and Mounting Table

For the lifting of battery modules, a lifting device is installed at the container ceiling, allowing safe handling and installation of the battery modules.

The lifting device mainly consist of a cable hoist which is mounted to a mounting plate with carriers, allowing to move the cable hoist through running rails to each end of the container. The cable hoist is operated via cable remote control.
For better handling of the battery modules when inserting them to the battery storage cabinet, a mounting table is provided, that can be attached to the battery storage cabinets.

For detailed information and operating instructions regarding the cable hoist, please refer to the original cable hoist manufacturer's original operating manual (*see section 1.2 "Applicable Documents"*).

Pos.	Component
①	Running rail
②	Mounting plate
③	Cable hoist 125 kg load capacity
④	Carriage
⑤	Module carrier
⑥	Battery Module
⑦	Mounting table

Figure 34: Lifting device and mounting table

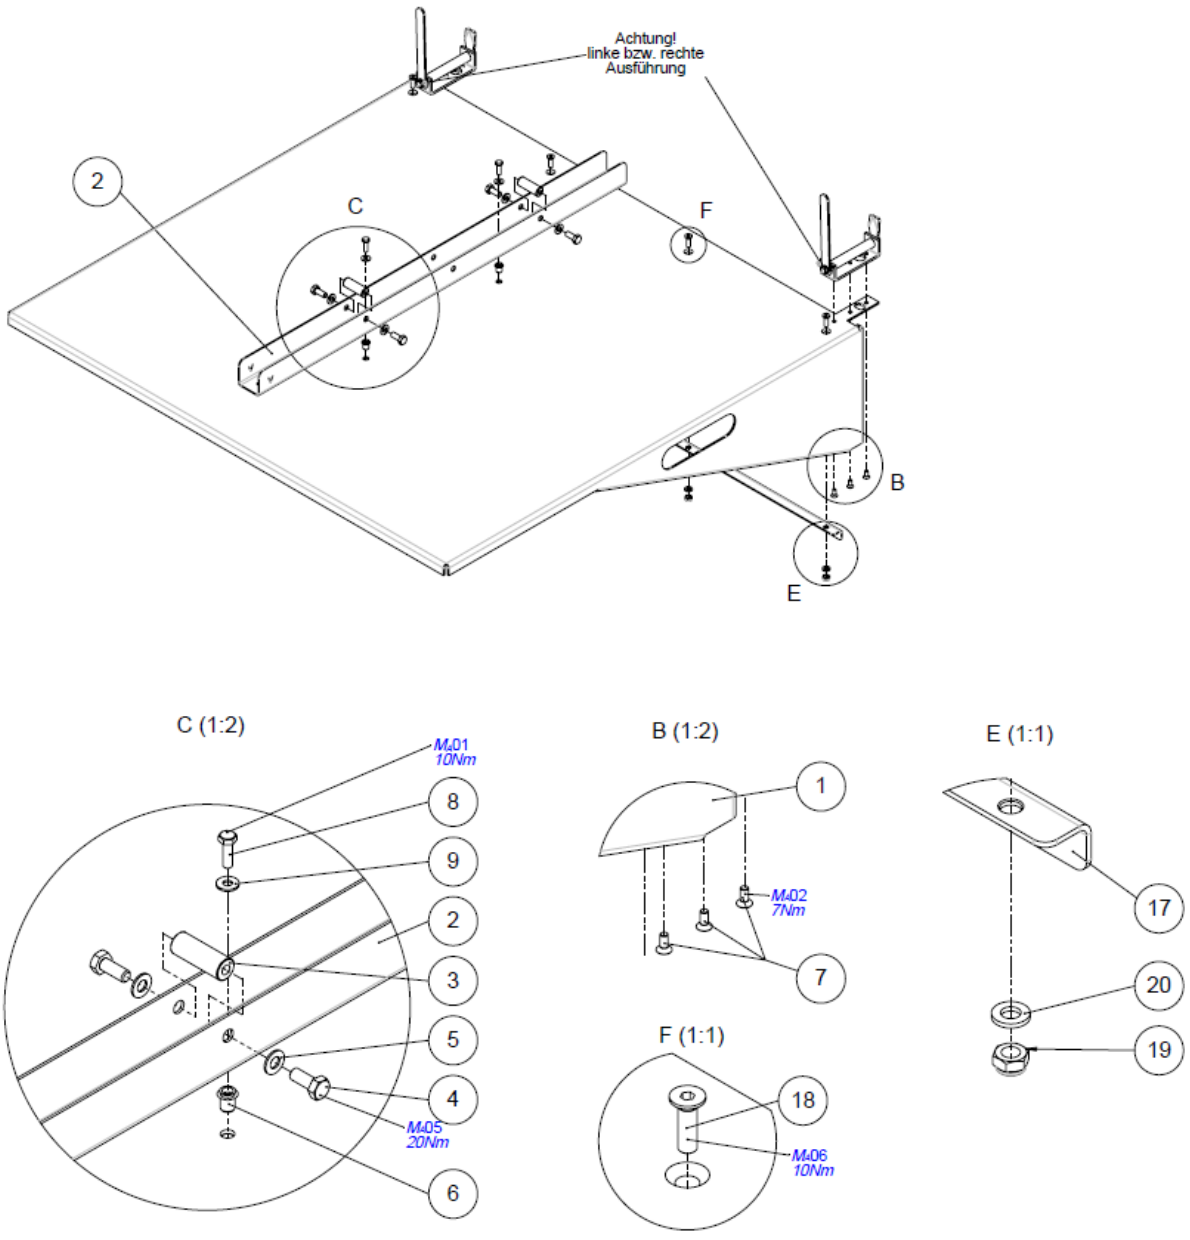

Figure 35: Mounting table

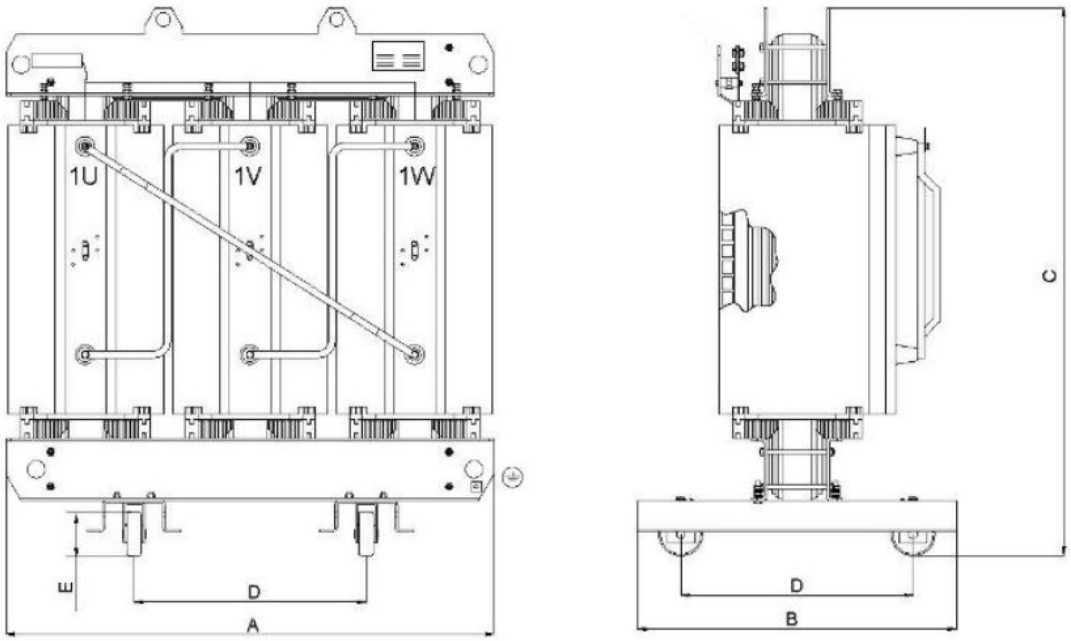
4.7.6 Mobile Lifting Device

A mobile lifting device for moving battery modules inside the BESS containers can be used. The mobile lifting device “Material-Lift GUIL ELC-725” or other models are suitable to lift and mount battery modules inside FREQCON BESS containers.

One (1) battery module can be placed onto the table of the mobile lifting device at once. The module needs to be pushed from the pallet of the forklift truck in front of the BESS container door onto the table of the mobile lifting device.



The mobile lifting device can then be moved to the battery cabinet where the battery module needs to be installed.

Figure 36: Mobile lifting device “Material-Lift GUIL ELC-725”

4.8 Cooling System

4.8.1 BESS 1 / BESS 2 Container

Pos	Component
①	Internal AC unit
②	External AC unit

Table 26: BESS 1 / BESS 2: Cooling system components

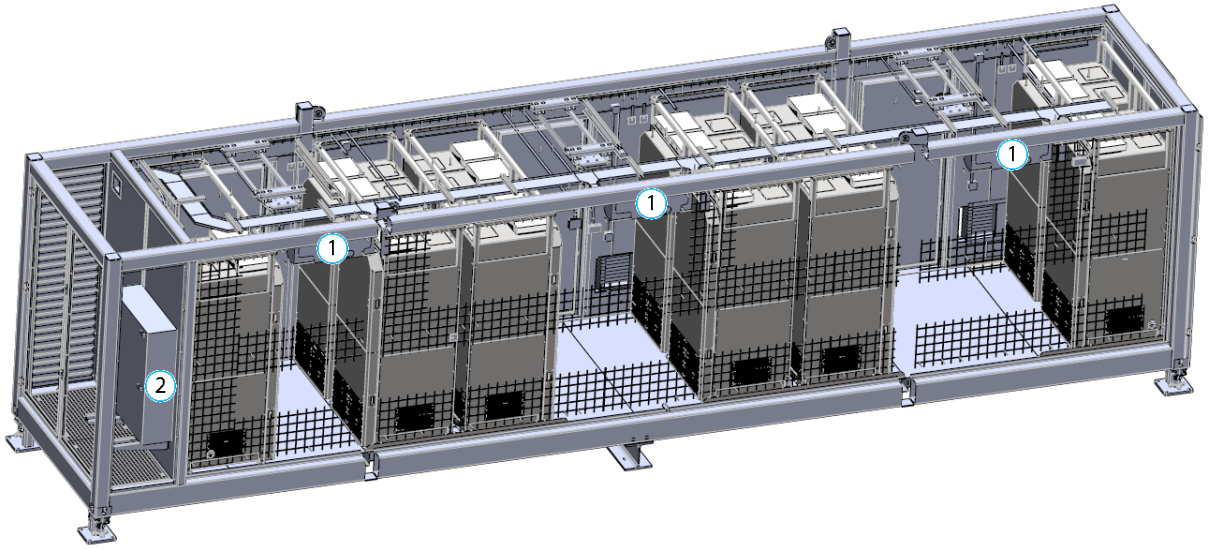

Figure 37: BESS 1 (above) / BESS 2 (below): Cooling system components

4.8.1.1 Battery Cabinets Cooling

The waste heat inside the battery cabinets is actively dissipated by two fans in the roof of each battery cabinet. The heated air is pushed out of the cabinet to the inside of the BESS container.

4.8.1.2 Container Cooling

The waste heat in the interior of the container is conducted via the three internal air conditioning (AC) units (*see Figure 37*) from the interior to the external air conditioning units of the container.

The container is equipped with several temperature sensors for monitoring the internal container temperature.

4.8.2 PCS Container

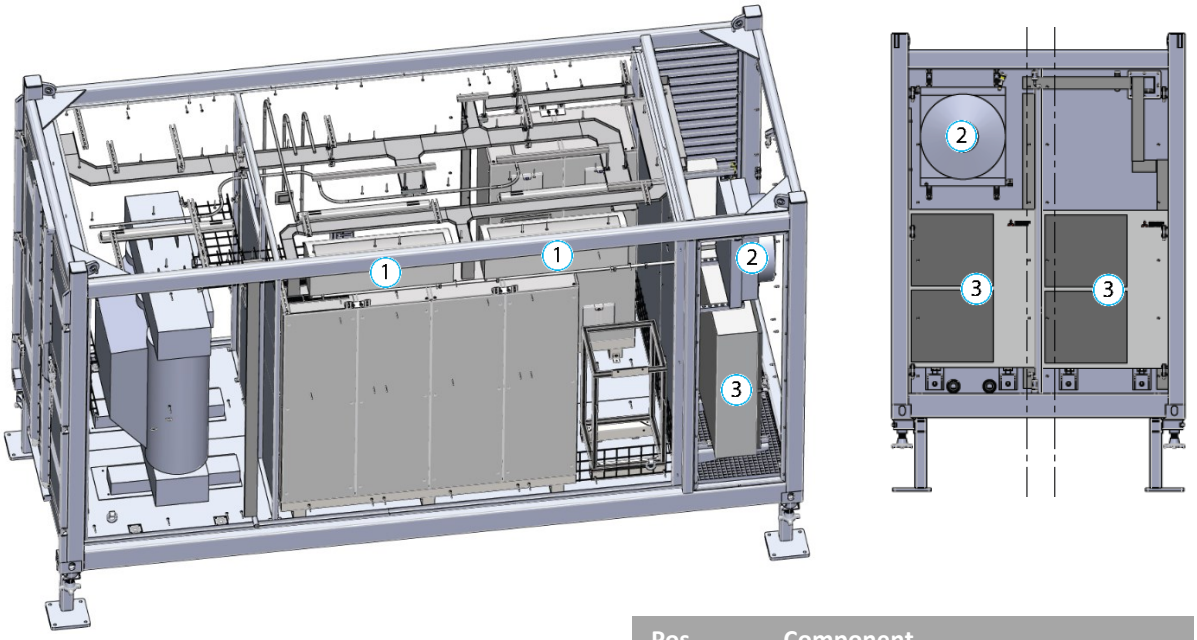

Figure 38: PCS: Cooling system components

Pos	Component
①	Internal AC unit
②	Heat exchanger
③	External AC unit

Table 27: PCS: Cooling system components

4.8.2.1 Container Cooling

The waste heat in the interior of the container is conducted via the three internal air conditioning (AC) units (*see Figure 38*) from the interior to the external air conditioning units of the container.

The container is equipped with several temperature sensors for monitoring the internal container temperature.

4.8.2.2 Converter Cooling System

To dissipate the waste heat from the IGBT power modules and inductors installed in the converter, these components are cooled down to the required operating temperature by an internal cooling system consisting of cooling hoses, coolant pumps, water distributors and four air/water heat exchangers.

The water-glycol-circulation (WGC) is designed as a closed cooling circuit. A water-glycol mix flows through the cooling modules of the converter and dissipates the heat produced by the IGBT modules. Additionally, the IGBT modules need a minimum temperature to operate properly. To heat up the IGBT modules from a cold start, the water-cooling system is pre-heated by an electrical heating element which is flange-mounted to the coolant manifold. The pre-heating process is performed to achieve an operational temperature of 25 °C, which takes about 20 minutes. After the IGBT modules have reached the temperature of about 25 °C, the converter is permitted to begin its normal operation.

The electrical pre-heater will be switched off automatically by a control unit at a temperature of > 28 °C of the coolant temperature sensor. The heating element is switched off at least 2 minutes before the pump is switched off. This procedure avoids overheating of the heating element since there must be a permanent flow around the heating element during heating.

A 3/2 directional mixing valve at the WGC unit controls the inlet temperature to the converter by mixing the water-glycol mixture of the heat exchanger and a bypass circuit. The 3/2 directional mixing valve opens at 36°C (mechanically set at mixing valve) and leads the cooling water to the heat exchanger.

Pre-heater on-off temperature hysteresis (sensor measures the inlet temperature to the converter)	
Coolant temperature > 28 °C	Heaters will be turned off
Coolant temperature < 25 °C	Heater will be turned back on

Table 28: Pre-heater on-off temperature hysteresis

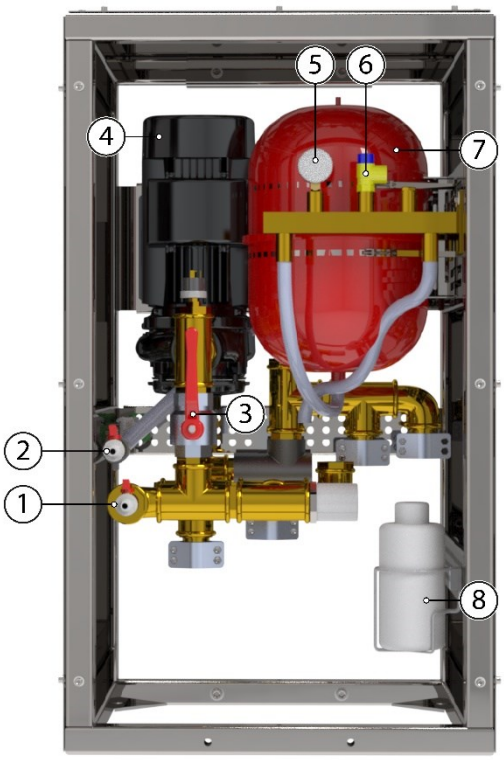

Figure 39: Cooling system cabinet (COSY) components

⑦	Expansion vessel
⑧	Overflow vessel

Table 29: Cooling system enclosure (COSY) components

4.8.2.3 IGBT modules cooling

The cooling system dissipates the heat generated during normal operation of the converter.
The IGBT modules are mounted on heat sinks through which coolant flows. Tubing connectors provide the connection to the inlet and outlet of coolant.

4.8.2.4 Coolant Specifications

Coolant		
	Manufacturer	**Description**
Allowed Coolants	NALCO AG	Varidos FSK
	BASF AG	Glysantin G30
	Clariant	Antifrogen N
	Clariant	Antifrogen L
	DOW	Dowcal 20
Coolant concentration mixed with water	> 40 % to 60 % (depending on manufacturer recommendation)	
Coolant change interval	Every 5 years	

Table 30: Coolant specifications

5 Operating Interfaces

The BESS is operated and controlled either via

- The control panel on the control cabinet CTRL of the converter (*see section 14.1)*
  - Push-buttons
    - RESET (restart emergency stop circuit)
  - Indication lights:
    - Fault (red; controller error is active)
    - Preheating (yellow; preheating of coolant)
    - Ready for Operation (green; converter is ready for operation)
    - Operating (green; converter is active)
  - Other control elements:
    - Main switch
    - Emergency-stop push button
- interface to the customer's higher-level control system (*see section 6*).

6 Control System

6.1 Main Control System

The system is controlled and monitored by a main control system installed on the P320 PLC inside the control cabinet (CTRL). Both the converter and the BESS control system are installed on the same PLC.

Data exchange between the individual cabinet control systems and BESS main control system is performed via MODBUS TCP protocol.

BESS Main Control System Overview

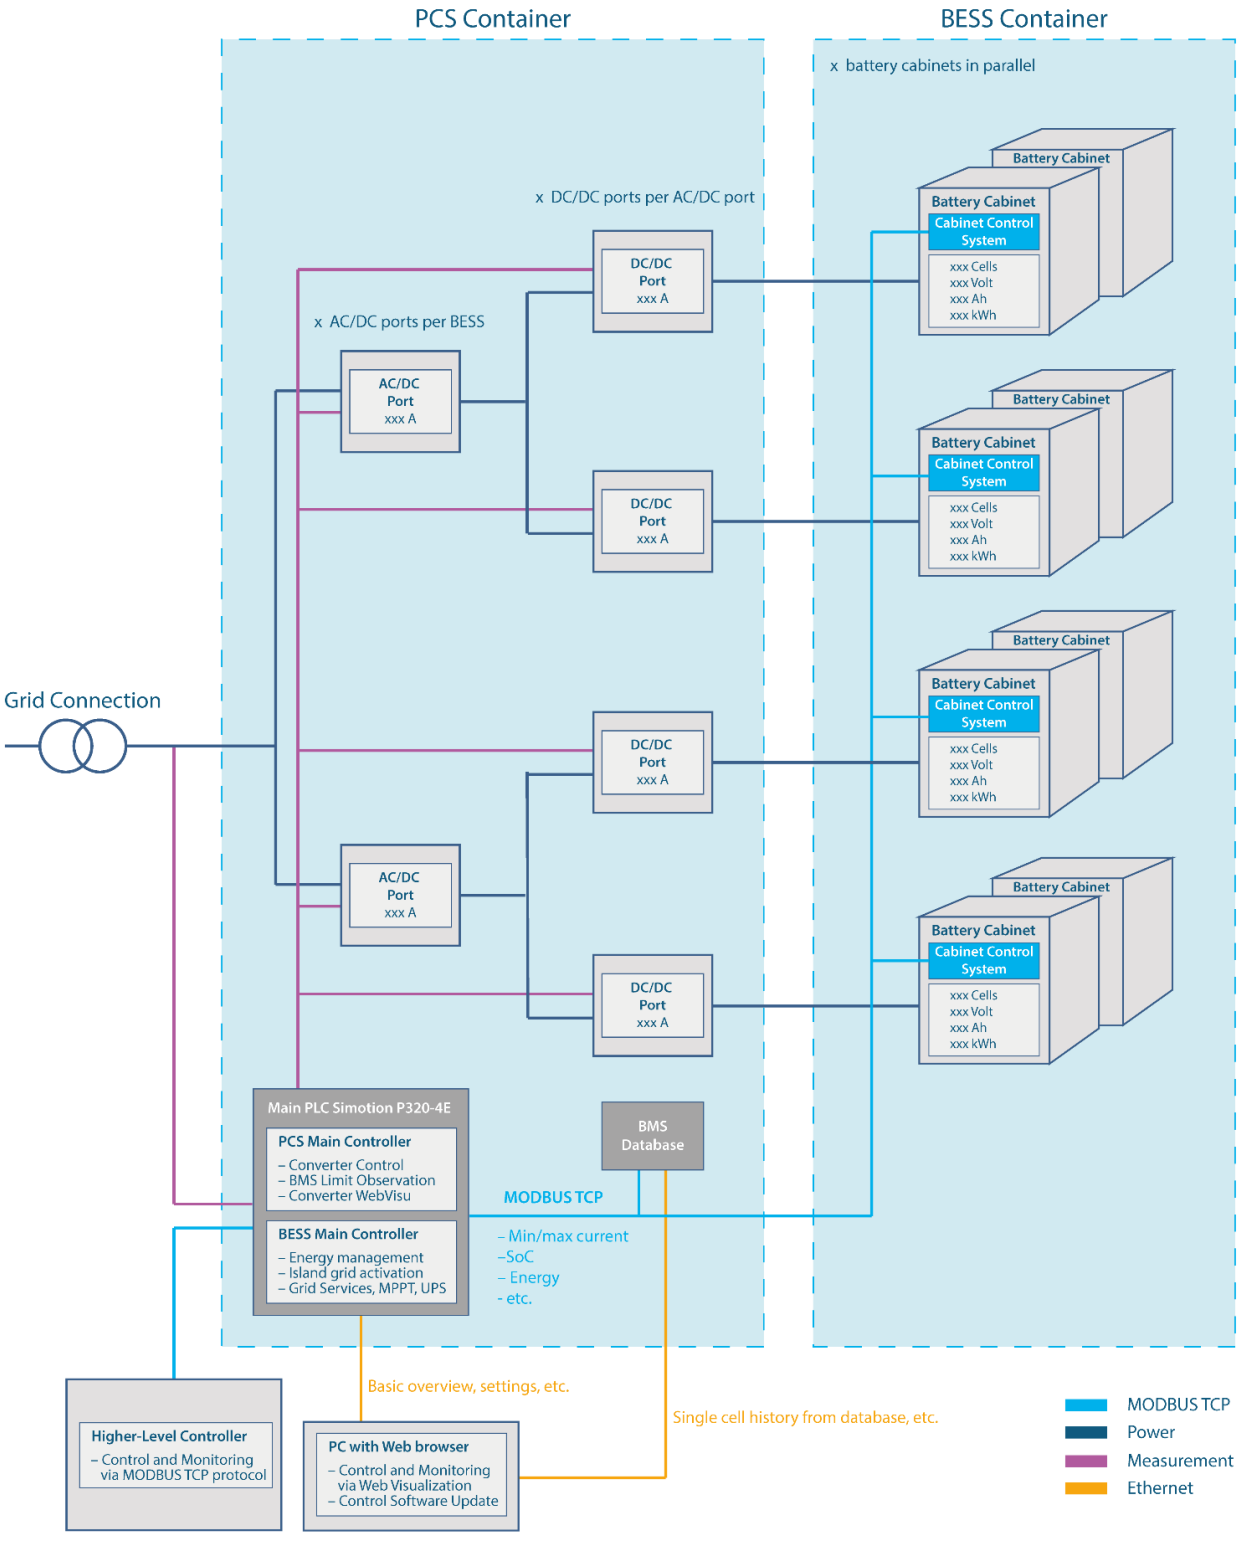

Figure 40: Main control system overview

6.2 Battery Cabinet Control System

Each battery cabinet is equipped with its own control system (Siemens S7) collecting the relevant data from the individual battery modules and providing these to the main control system (*see section 6.1*).

The tasks and features of the cabinet control system are the following:

- Monitoring of battery cell voltages and temperatures
- Monitoring of the battery charging and discharging current
- Control of DC switches
- Monitoring of line protection and smoke detectors
- MODBUS RTU Master for communication with BMS system (battery monitoring system)
- MODBUS TCP Server provides the communication interface to other systems. For example, for the external charger or the consumers

Cabinet Control System Overview

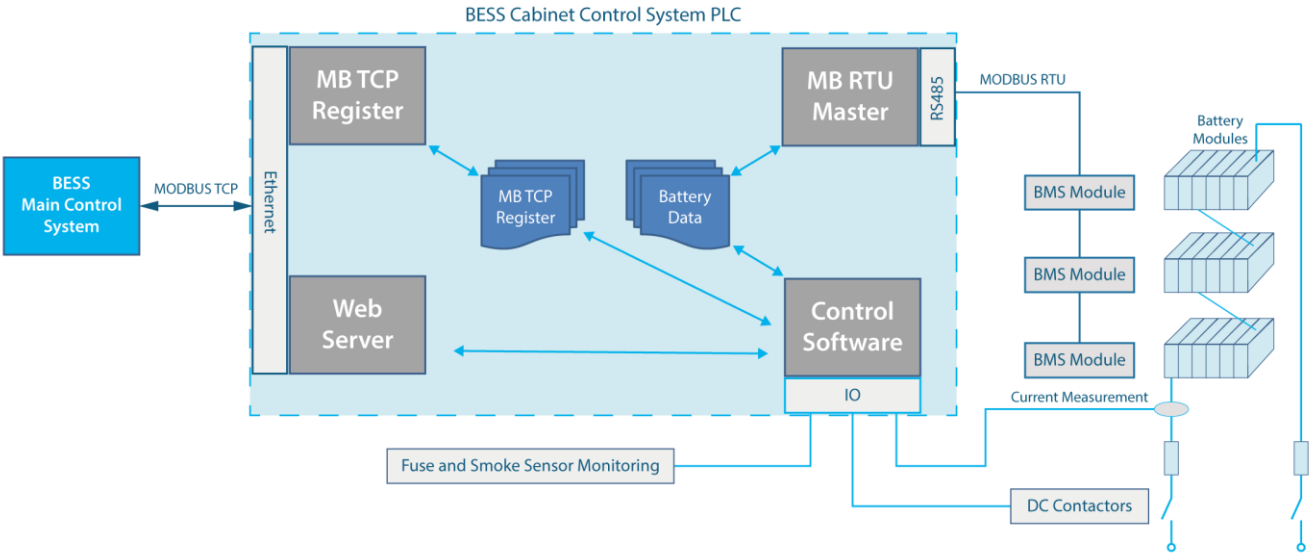

Figure 41: BESS cabinet control system overview

Data exchange between the cabinet control system and the individual battery modules is performed via MODBUS RTU protocol. Therefore, each battery cabinet is provided with several MODBUS RTU interfaces for Modbus connection of the battery modules.

6.3 Network Structure

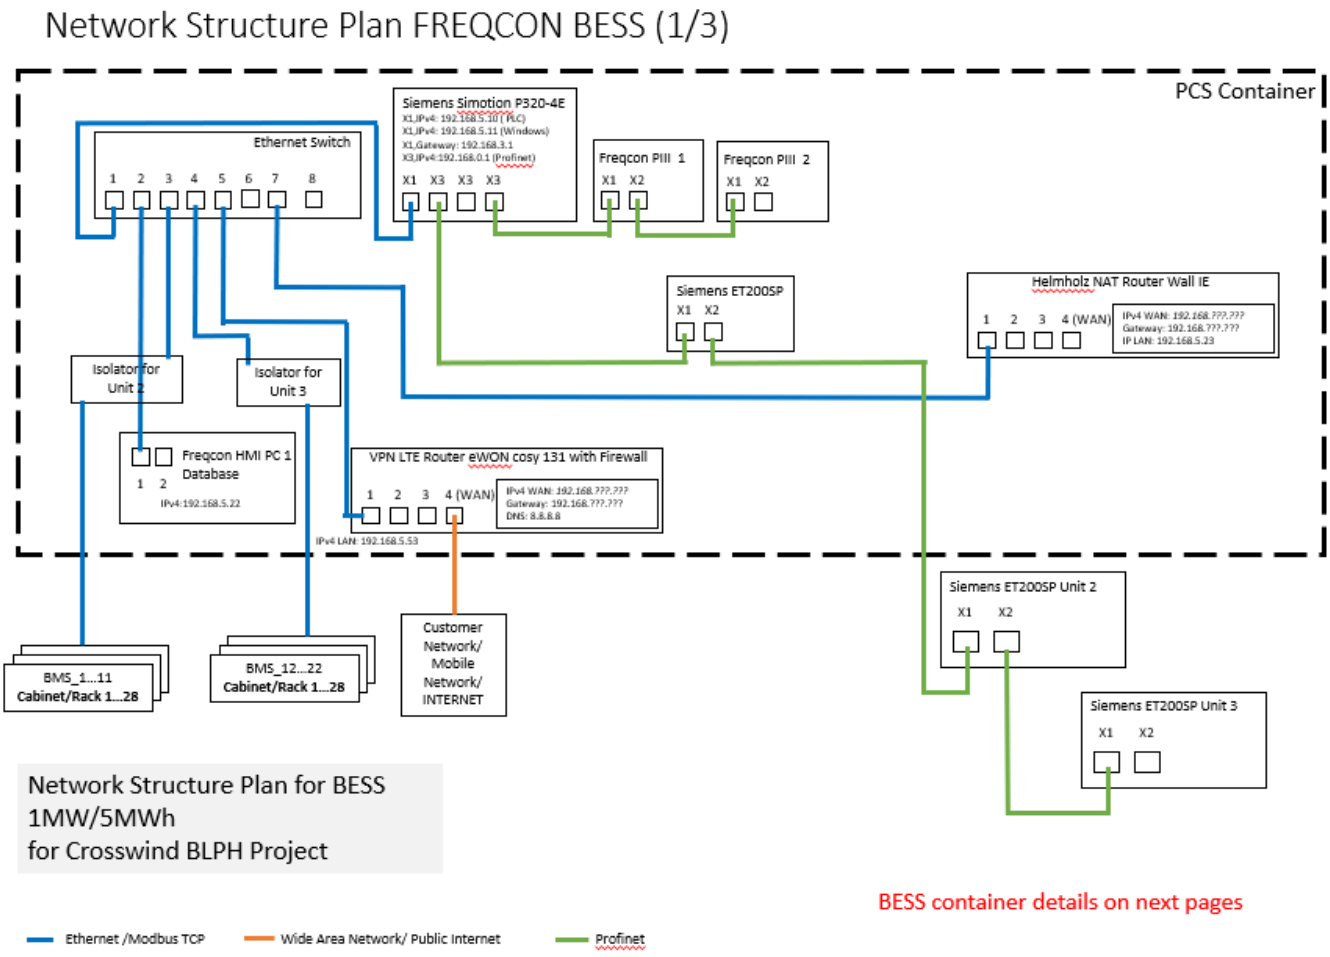

Figure 42: MSC network structure (1/3)

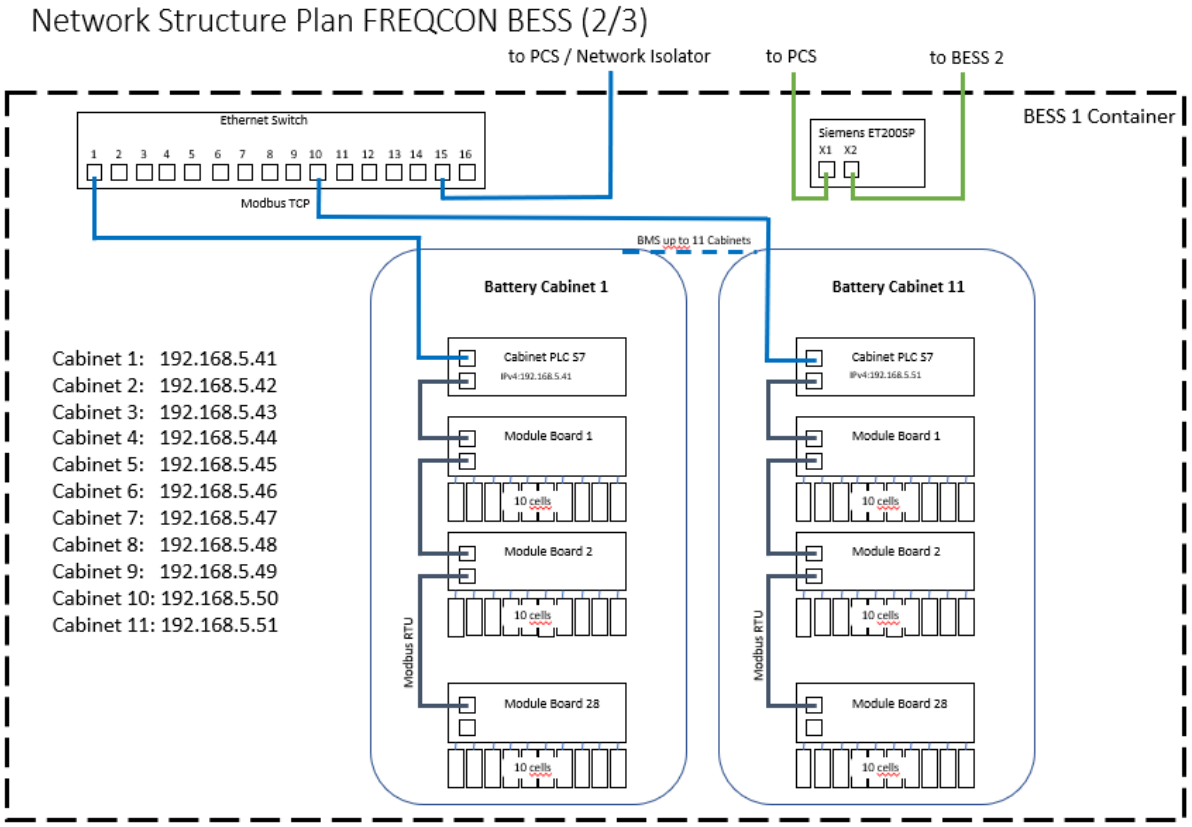

Figure 43: BESS network structure (2/3)

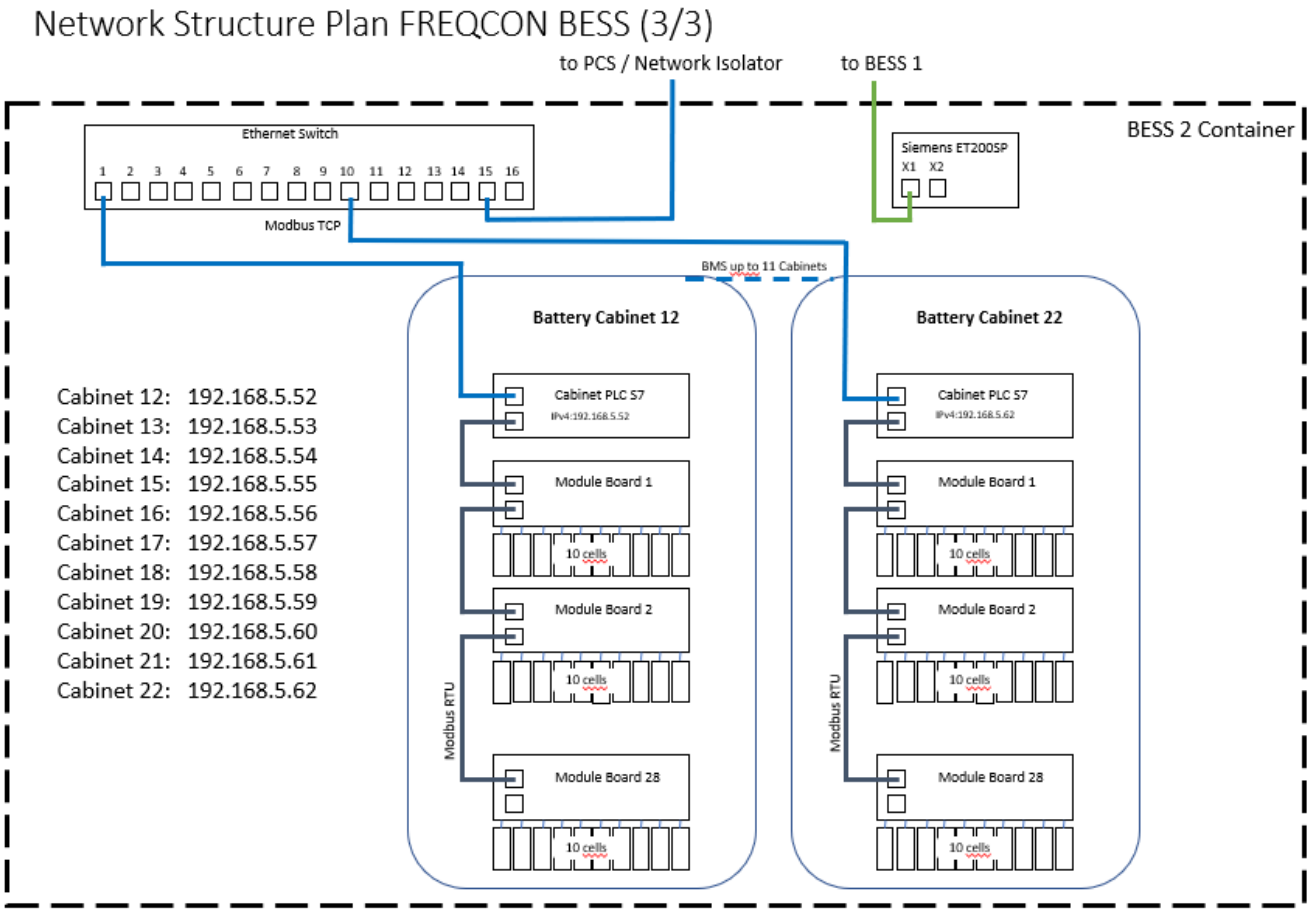

Figure 44: BESS network structure (3/3)

7 Converter Main States

The individual converter main states are depicted in the flow diagram below and described in section 7.2.

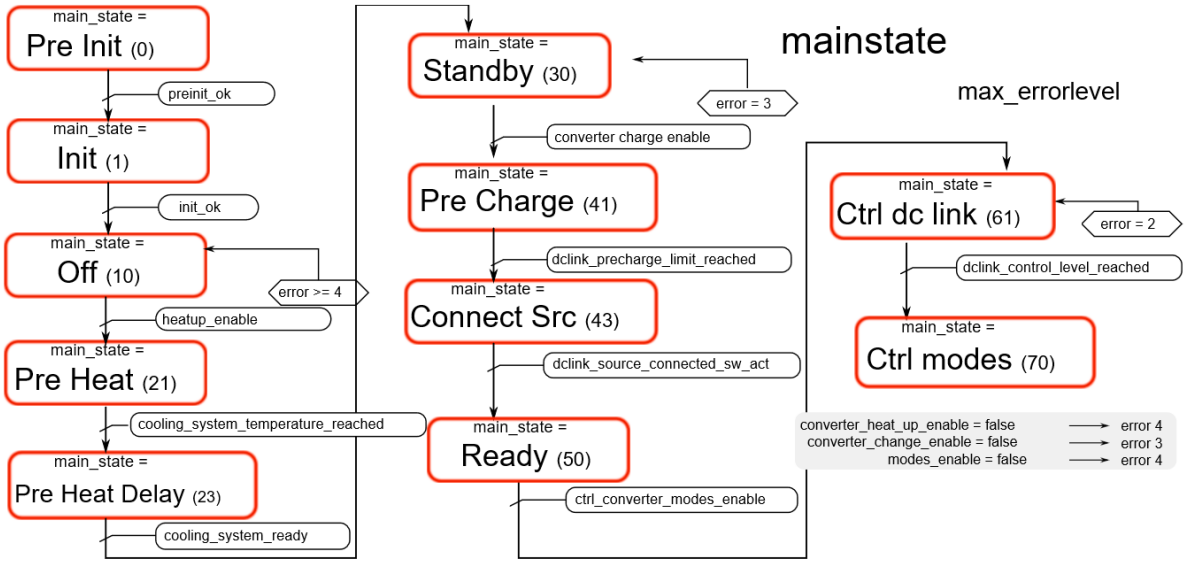

Figure 45: Converter main states

7.1 Error Levels

Error Level	Description
0	No error, logging information
1	Warning category, a warning limit is reached
2	Error category, stop subsystems
3	Error category, stop system and discharge DC-link, cooling system enable
4	Error category, stop system and also the cooling system

Table 31: Error levels

7.2 Main States

INIT

The system was turned on and the stored initialization parameters are read. Cooling and converter system are stopped.

OFF

DC link is discharged. The converter and cooling system are not in operation.

Pre-Heat

The converter is switched-off and is preparing for operation. The cooling system regulates to the optimum temperature of the cooling water, IGBT, capacitors and inductors.

An error level 4, such as a cooling system leak, leads to a change to main state "OFF" (stop cooling system and converter).

Heat-Delay

The converter is preparing for operation. The operation temperatures of the components are reached and maintained for a defined time span.

An error level 4, such as a cooling system leak, leads to a change to main state "OFF" (stop cooling system and converter).

STANDBY

Standby mode – converter is off, but the cooling system is in operation.

An error level 4, such as a cooling system leak, leads to a change to main state "OFF" (stop cooling system and converter).

Pre-Charge

The converter´s main DC-link is pre-charged to a defined voltage level.

An error level 3, such as detection of wrong grid conditions, is leading to a change to main state STANDBY (converter is off, cooling system is in operation).

An error level 4, such as a cooling system leak, leads to a change to main state "OFF" (stop cooling system and converter).

Connect SW

Source contactor is closed.

An error level 3, such as switching error of the source contactor, is leading to a change to main state "STANDBY" (converter is off, cooling system is in operation).

An error level 4, such as a cooling system leak, leads to a change to main state "OFF" (stop cooling system and converter).

READY

Converter is ready for operation. Cooling system is operating, the DC link is charged and source is connected.

An error level 3, such as grid faults, is leading to a change to main state STANDBY (converter is off, cooling system is in operation).

An error level 4, such as a cooling system leak, leads to a change to main state "OFF" (stop cooling system and converter).

DC link Ctrl

The converter power module that is set to "DC link control" mode is activated.

An error level 2, such as derating, DC link errors or over temperature, are leading to a change to main state READY (converter is off, cooling system is in operation).

An error level 3, such as grid faults, is leading to a change to main state STANDBY (converter is off, cooling system is in operation).

An error level 4, such as a cooling system leak, leads to a change to main state "OFF" (stop cooling system and converter).

Ctrl Mode

The remaining converter power modules that are enabled are activated. The converter is operating.

An error level 1, such as power module over temperature, over-current or over-voltage, is leading to a stop of the respective power module.

An error level 2, such as derating, DC link errors or over temperature, are leading to a change to main state READY (converter is off, cooling system is in operation).

An error level 3, such as grid faults, is leading to a change to main state STANDBY (converter is off, cooling system is in operation).

An error level 4, such as a cooling system leak, leads to a change to main state "OFF" (stop cooling system and converter).

8 Technical Data

Container	
Container type	PCS: Customer-specific container BESS: Customer-specific container
Transport weight	PCS: approx. 13.7 t BESS: approx. 15 t (Batteries not installed)

PCS	
Type	MSC-1000-620-8
Manufacturer	FREQCON GmbH
Nominal AC voltage	620 VAC + 10% - 20%
AC power frequency (nominal)	50 Hz ± 5 Hz
Nominal apparent power	1000 kVA
Nominal active power	1000 kW
Nominal AC current	931 A
Maximum AC current	1050 A
Power factor at rated power / adjustable	1 / 0.03 overexcited to 0.0 underexcited
IGBT switching frequency	2 to 4 kHz
DC link voltage	1175 VDC
Number of DC outputs	8
Current per DC output	250 ADC
DC voltage range	700 VDC to 1022 VDC
HVAC system	included

BESS	
Battery Module	1C LFP Battery 280Ah
Cell manufacturer	EVE
Battery cells per cabinet	28
Battery capacity per cabinet	250.88 kWh
Number of battery cabinets	22
BESS capacity (installed)	5500 kWh
BESS capacity (usable at 0.2 C operation)	5000 kWh
Storage temperature range battery storage (> 1 month)	0 °C to 35 °C (30% to 50% SoC)
Ambient temperature range	-20 °C to +40 °C
Battery management system	FREQCON BMS

Controller	
Main control system	Siemens Simotion P320-4
Control software	FREQCON Framework
Internal communication	Profinet IRT
External communication interfaces	Ethernet, RS485, RS232, MODBUS TCP, Profibus, Profinet
Maximum total harmonic distortion	< 3% at nominal power

Converter Cooling System	
Cooling principle	Liquid and air cooled, air heat exchanger
Maximum cooling water inlet temperature	65°C
Operating pressure range cooling system	2.5 … 3.5 bar
Nominal cooling system pressure	3 bar
Coolant capacity (without hoses)	Approx. 80 l
Heat exchanger weight (without cooling liquid)	Approx. 75 kg

Protective Devices and Standards	
Battery (DC)	Fuse and DC load break switch
AC side disconnection point	Air circuit breaker
DC overvoltage protection	Surge arrester, type I
AC overvoltage protection	Surge arrester, class I
Ground fault monitoring	Yes
Insulation monitoring	Yes
Fire protection (converter)	Smoke and arc detection
Fire protection (batteries)	Active Fire Protection System
Maximum permissible value for relative humidity (condensing / non-condensing)	95% to 100% (2 month/year) / 0% to 95%
Inverter Life (rated conditions)	20 years

10 Transport, Storage and Commissioning

Please observe the instructions for transport in section 10.2 and for storage and professional handling in section 10.3.

10.1 Unpacking

⚠ CAUTION

Hazard by sharp edges on packaging
Improper handling during unpacking can cause injuries.
➜ Use appropriate safety gloves to protect your hands from possible cuts.

The packaging of the system consists of cardboard, plastic and corrugated board. After usage the packaging must be disposed according to the local regulations for the disposal of paper products (e.g. recycling). After delivery, the delivered units and components must be checked for completeness and damage. If any damage on the delivered units and components have been found, contact the delivery service or FREQCON GmbH immediately.

10.2 Transport

Regarding the transport of the battery modules, refer to the battery module manual.

⚠ DANGER	
	**Hazard by electrolyte release due to mechanical damage to battery modules** Severe burns, long-term physical damage, and environmental damage due to electrolyte. ➜ The device must be disconnected before maintenance work. Work under voltage is not permitted. ➜ Observe the safety data sheet of the battery module and keep it accessible at all times. ➜ Never open battery modules by force. ➜ Avoid contact with escaping electrolyte at all costs, leave the danger area immediately. ➜ In case of ingestion, immediately alert the emergency services! ➜ In case of eye contact: Rinse cautiously with water for several minutes. Remove any contact lenses and continue rinsing. Call poison information center or doctor! ➜ In case of skin contact: Remove contaminated clothing immediately. Wash/shower skin with plenty of water. Call poison control center or doctor! ➜ Prevent release of electrolyte into the environment at all costs. ➜ Wear suitable protective equipment when disposing of electrolyte *(see section* 2.7 "Personal Protection Equipment (PPE)").

⚠ DANGER	
	**Fire due to short circuits in the event of mechanical damage to the battery modules.** Severe burns or death due to short circuits that may result in fire. The electrolyte used is highly flammable as a liquid or vapor. ➜ Avoid mechanical damage. ➜ Never open battery modules by force. ➜ Protect the system against vandalism. ➜ Fire loads or sources of fire near the installation site are not permitted. ➜ In the event of damage, press the emergency OFF button immediately. ➜ In case of fire, leave the danger area immediately and alert the fire department!

NOTICE
Inadequate transportation of the device and all of its components may cause damage to the installed components. ➜ Vibrations and jolts must be avoided during transportation. ➜ The container must be transported in a horizontal position (lying down). ➜ Make sure to observe the specific national safety precautions for transport by truck, train or ship´.

NOTICE
Do not transport the containers with installed batteries ➜ Lifting or Moving of the Container is not allowed if battery modules are inside the container ➜ Remove every battery module from the container before lifting or mowing the container

The container must be transported to the installation site by instructed personnel.

The container weight is specified in section 8, "Technical Data" on page 93. Make sure that the components can be placed at ground level.

For information regarding the dimensions and center of gravity of the container, see section 10.2.2. The container weight is specified in section 8, "Technical Data". Make sure that the components can be placed at ground level.
Vibrations and jolts must be avoided during transportation. If the system was damaged during transport, you must immediately inform the responsible transport company.

The cabinet must be transported in a horizontal position (lying down). It is not permitted to tip over the container during transportation or in any other scenario.
Applied assemblies (if existing) must be protected against damage by external influences during transportation and storage.

All persons involved in the transport of lithium batteries must be trained and certified according to regulations.

The information provided below is for informational purposes only.

10.2.1 Container Lifting

⚠ DANGER	
	**Heavy load** **Improper lifting can result in death, serious injury or property damage.** Never lift the container above people. Use only lifting and personal protective equipment approved by OSHA or other national institutions.

NOTICE
Only use an appropriate crane to lift the container, capable to withstand the loads specified as follows: Total weight of cabinet combination *see section 8, „Technical Data“ page 93.*

NOTICE
Observe the container´s center of gravity during lifting: Observe the container´s center of gravity during lifting with crane, shown in section 10.2.2.

To lift the containers with a crane, use the four transport lugs on the top corners of the container (*see following illustration*).

PCS

10.2.2.3 BESS 2 Container

NOTE:
Empty container, no batteries installed

Figure 52: BESS 2 Container – dimensions and center of gravity

10.3 Storage

10.3.1 Storage Condition

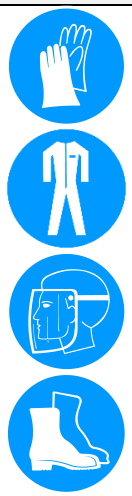
NOTICE	
	Damage to components in the event of improper storage. The storage conditions of the energy storage device are only maintained when the climate control of the container is active. ➜ Keep air conditioning activated/enabled even in case of storage. ➜ Supply energy storage with power even if it is out of operation. ➜ Only deactivate air conditioning if storage conditions are maintained by other measures. ➜ Condensing must be avoided.

NOTICE
The cooling liquid inside the cooling system must be removed at least once every five years. ➜ Check the pressure on the expansion tank every time the cooling liquid is exchanged. The cooling system must be completely drained during a pressure test of the expansion vessel *(see section 17.8.1.3 "Draining the cooling* system*")*.

NOTICE
➜ The BESS container must not be exposed to strong vibrations. ➜ Condensing must be avoided.

NOTICE
The battery of the UPS unit of the converter system must be removed from the battery module at storage temperatures of <0°C. ➜ The removal of the UPS battery is described at 17.3.2.

Store the components of the energy storage system under the following conditions:



➜ Store the components of the energy storage device according to pollution degree 2 (no conductive pollution).
➜ Do not expose components of the energy storage device to aggressive media.

Storage Condition	Value
Storage temperature	*see technical data in section 8*
Max. relative humidity	*see technical data in section 8*
Positioning of the product during storage	laying down, horizontal

Table 34: Storage conditions

10.4 Assembly and Initial Commissioning

⚠ DANGER	
	**Electric shock due to low voltage and arcing on loose wires.** Severe irreparable damage to the nervous system, burns and death. ➜ Access to control cabinets and string cabinets only by FREQCON service personnel or by FREQCON instructed and authorized maintenance personnel. ➜ Plant control units may also be opened by instructed persons with the qualification of a qualified electrician. ➜ Work on electrical and electronic components as well as cables of the battery system may only be carried out by FREQCON service personnel!

⚠ DANGER	
	**Electric shock due to low voltage and arcing on loose wires.** Severe irreparable damage to the nervous system, burns and death. ➜ Access to control cabinets and string cabinets only by FREQCON service personnel or by FREQCON instructed and authorized maintenance personnel. ➜ Work on electrical and electronic components as well as cables of the battery system may only be carried out by FREQCON service personnel! ➜ Wear personal protection equipment (Electrician's gloves, protective visor, safety shoes, hearing protection)

The energy storage system may only be installed and commissioned by trained service personnel or by FREQCON instructed and authorized maintenance personnel.

11 Mounting

11.1 General

The BESS container must be set up and positioned safely at the installation site and may only be installed by instructed FREQCON service personnel.

Service personnel must at least have the following tools in reach before starting the installation:

Pos.	Installation Tools	Amount
	Basic Tools	
1.	Flashlight	1
2.	Pliers set	1
3.	Ratchet set	1
4.	Torque wrench (1 - 100 Nm)	1
5.	Socket wrench set (with sockets 7 – 19 mm)	1
6.	Wrench set	1
7.	Cross-section screw drivers set	1
8.	Flat-section screw drivers set	1
9.	Allen key / Hex socket key set	1
10.	Cutter	1
11.	First-aid kit	1
12.	Multi-meter instrument	1
13.	Two-pole voltage tester	

Table 35: Installation tools

⚠ DANGER	
	**Electric shock due to low voltage and arcing on loose wires.** Severe irreparable damage to the nervous system, burns and death. ➜ Access to control cabinets and string cabinets only by FREQCON service personnel or by FREQCON instructed and authorized maintenance personnel. ➜ Plant control units may also be opened by instructed persons with the qualification of a qualified electrician. ➜ Work on electrical and electronic components as well as cables of the battery system may only be carried out by FREQCON service personnel or by FREQCON instructed and authorized maintenance personnel.

⚠ DANGER
Make sure that the energy source is locked and tagged and ensure that the isolation is effective before conducting work on the system. After switching-off the voltage supply, some components might still carry a charge. Check all poles using a suitable device.

⚠ WARNING
The electrical connection must be carried out in accordance with the local regulations of the utility company and /or VDE (in Germany).

Do not operate!	Lock and tag power switches and controller devices
	Observe national laws regarding Occupational Safety and Health, as well as Industrial Standards. ➢ DIN VDE 0105-100; VDE 0105-100:2009-10 Operation of electrical installations - General requirements.

11.1.1 Cable Routing

It is recommended that the power cables and the control cables are installed in separate trays. Avoid long parallel runs of power cables with other cables in order to decrease electromagnetic interference.
Where control cables must cross power cables, make sure they are arranged at an angle as near to 90 degrees as possible.
The cable trays must have good electrical connection to each other and to the grounding/earthing.

11.1.2 Coding

11.1.2.1 Coding Terminal Strip

Terminal designation	Description
-XE1	Main power supply 600 V AC
-XE2	DC power supply 1000 V DC
-XE	Main power supply 400 V AC
-X1	Main power 400 V / 230 VAC
-X2	Light cabinet 230 V AC
-X3	Control voltage 24 V DC
-14X1	Control voltage 24 V DC (to DC contactors)
-X5	Low-voltage signals
-XDC0	24 V DC power supply
-XDC1-4	Control voltage 24 VDC (UPS)
-XT	Transfer terminal block 24 V DC / 230 V AC

11.1.2.2 Coding Wiring colors

Cable	Color
L1/L2/L3	Black
N	Light blue
PE	Yellow-green
External voltage	Orange
Control voltage 24 VDC	Dark blue
Analog signals	White

11.1.2.3 Coding Power Supply

Terminal	Phase
U1	L1
V1	L2
W1	L3

11.2 Installation location

⚠ DANGER

Danger to life due to electric shock!
The DC paths and the connection cables are not protected against overload by the BESS.
Select external components according to the specified nominal and maximum currents of the BESS.
➜ If necessary, use appropriate protective equipment for the external components.

⚠ DANGER

Danger from and for unauthorized persons
Unauthorized persons are not aware of the dangers in the work area and may endanger themselves and third parties danger.
➜ Keep unauthorized persons away from the work area.
➜ If in doubt, speak to persons and direct them away from the work area.
➜ Interrupt the work as long as unauthorized persons are in the work area.
➜ Always keep the entrance door(s) locked when not performing work on the system to prevent unauthorized persons from entering the container.

⚠ WARNING

Danger to life due to unsuitable lifting material
While lifting the battery modules use only suitable lifting equipment and lifting tackle
➜ Make sure that all the material and equipment is designed for the weight and all required inspections have been done.
➜ Make sure that no person is under the battery module during lifting.

⚠ CAUTION

Danger to life due to unsuitable lifting material
While lifting the container and/or battery modules use only suitable lifting equipment and lifting tackle
➜ Make sure that all the material and equipment is designed for the weight and all required inspections have been done.
➜ Make sure that no person is under the container or battery module during lifting.

NOTICE

Equipment damage due to intruding animals
Prevent animals from entering the interior of the container from below through the cable glands or recesses.
➜ Secure the container from the outside with suitable protection against the entry of animals.

The BESS containers are designed for outdoor installation, on a flat and ground level surface. Make sure that the environmental conditions meet the values of section 8 „Technical Data“ and section 9 “Environmental Conditions”.

The entrances to the containers must be accessible from every side to allow for visual inspections or maintenance and repair work, if necessary

Air inlets and outlets of the containers, as well as on the cabinets inside the container, must always be kept free and cleaned of dirt in order to ensure the required air flow of the installed fans.

11.2.4 AC Connection

⚠ DANGER

Before performing work on the BESS, make sure the system is disconnected from all power supplies, the feed-in disconnectors are open and secured against unintentional reclosing.

NOTICE

- ➜ Comply with the minimum cable cross-sections indicated in the wiring diagram provided.
- ➜ Always secure AC power cables with adequate strain relief in order to prevent the removal of the power cables from the AC connections after installation.

To connect the 620 V AC network, the system provides AC, PE and N connection busbars within the **AC_DC cabinet** *(see circuit diagram and following figure, ① to ⑤)*.

Also refer to the provided circuit diagram (*see section 1.2 "Applicable Documents"*) when connecting the BESS to the AC grid.

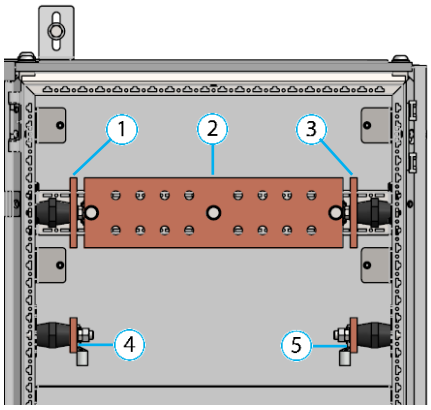

Figure 58: AC grid connection busbars inside AC_DC cabinet

Pos.	Description	Identifier
①	AC grid connection busbar L1	78W1
②	AC grid connection busbar L2	78W2
③	AC grid connection busbar L3	78W3
④	AC grid connection busbar N	78W5
⑤	AC grid connection busbar PE	78W4

Table 36: AC grid connection busbars inside AC_DC cabinet

Task 1: **Connect the AC grid supply cables to the designated AC grid connection busbars inside the AC_DC cabinet *(see wiring diagram and illustration below)*.**

Step 1 : Lead the customer-side AC grid supply cables through the recess provided in the container floor from below into the container interior.

Step 2 : Lead AC grid supply cables through the recess provided in the cabinet floor of the AC_DC cabinet from below to the inside of the cabinet.

Step 3 : Locate the 78W1, 78W2 and 78W3 AC connection and the PE and N busbars inside the AC_DC cabinet (*see illustration above,* ① - ⑤).

Step 4 : Screw the three grid phase cables L1, L2, L3 and the PE and N cable to the corresponding connection busbars inside the AC_DC cabinet (*see illustration and table above,* ① - ⑤) using appropriate cable lugs, screws, nuts and washers.

Step 5 : Apply the torque specified by the screw connection manufacturer to the connection.

Step 6 : Check connections for tightness.

✓ **The AC grid supply cables were successfully connected to the corresponding AC grid connection busbars in the AC_DC cabinet.**

11.2.5 Higher-Level Controller Connection

⚠ DANGER

Before performing work on the BESS, make sure the system is disconnected from all power supplies, the feed-in disconnectors are open and secured against unintentional reclosing.

The converter system is mainly controlled and monitored via the customers´ higher-level controller. The higher-level controller is connected to the BESS main controller via a PROFINET interface. Therefore, a network isolator (114A1) is provided inside the control cabinet 1 (CTRL_1) of the converter system, to which the higher-level controller can be connected via an Ethernet line.

To connect the higher-level controller to the converter controller via Ethernet line, proceed as follows:

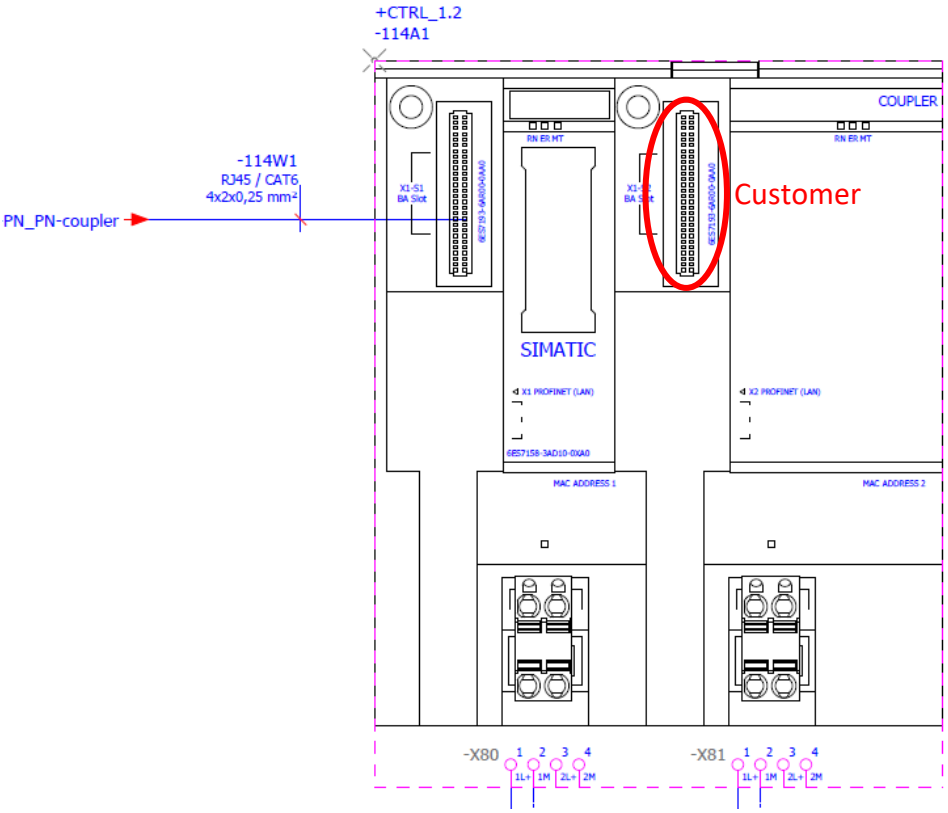

Figure 59: Network isolator 114A1 inside CTRL_1 cabinet

Task 1: **Connect the customer-side higher-level controller to the BESS main controller cabinet (*see circuit diagram and illustration above*).**

Step 1 : Lead the Ethernet cable coming from the external, higher-level controller through the recess in the bottom of the control cabinet 1 (CTRL_1) into the cabinet interior.

Step 2 : Locate the network isolator (114A1) inside the control cabinet.

Step 3 : Connect the external Ethernet cable to the free port of the network isolator.

✓ **The higher-level controller has been successfully connected to the BESS main controller via Ethernet cable.**

12 Pre-Commissioning

Follow the steps below for preparations prior to commissioning of the converter:

Do not operate!	Lock and tag power switches and controller devices
⚠ DANGER 	Disconnect power and block operation controller devices. Follow national laws regarding Occupational Safety and Health. 1. Identify the energy source(s). 2. Isolate the energy source(s). 3. Determine voltage-free status. 4. Ground device or equipment to protect from short circuiting and from shocks. 5. Lock and Tag the energy source(s). 6. Prove that the equipment isolation is effective. 7. When required, apply lock-out device or clamp and secure with padlock(s).

12.1 Activate Motor Contactors and Fuses

Task 1: Activate motor contactors and test auxiliary voltages

Set the main switch on the control cabinet door to ON position. ☐

Activate the motor contactors inside the converters system cabinets. ☐

Check the 400 V AC power supply using the corresponding terminals inside CTRL cabinet. ☐

Task 2: Switch on fuses

Switch on all 24/230/400V AC/DC fuses inside the cabinets. ☐

Install the fuses for the UPS supply. ☐

Check, whether the 24 V DC voltage has the correct polarity and magnitude. ☐

Switch on all the 24 V DC fuses (130F1) if not already activated (green indicator lights indicate activated fuse). ☐

After this action all the control devices indicator lights in the control cabinet including the main PLC Siemens SIMOTION P320 should glow green, indicating that these parts are activated and working.

12.2 Check Power Cables

Inspect wiring for proper installation and connection. See wiring diagram for detailed information about the wiring. ☐

12.3 Check Communication Cables

Inspect wiring for proper installation and connection. See wiring diagram for detailed information about the wiring. ☐

Communication between main PLC and converter is established. ☐

12.4 Cooling System Preparations

The cooling system is set under 3 bar air pressure for at least 1 hour. The system pressure must not decrease within that time. ☐

The system is filled with coolant under working pressure of 3 bar and checked for leakage for at least an hour. ☐

13 Commissioning

Follow the steps below for commissioning of the BESS:

Task 1: **Converter Commissioning**

Step 1 : Make sure that the customer-side mains is switched off and decoupled from the converter system.

Step 2 : Make sure that all the work and action instructions listed in section 11 "Mounting" have been carried out.

Step 3 : Follow all instructions listed in section 14.4.

✓ **The BESS is now ready for operation.**

14 Operation

⚠ DANGER	
	Do not enter the container if the warning light is on (red light) ➜ It is only allowed to enter the container if the warning light indicated that it is safe to enter the container (green light) ➜ If the warning light is completely off (no green or red light) consider that it is not safe to enter the container. Before entering the container, make sure that there is no fire inside and no harmful atmosphere

NOTICE	
	• Staying in the container during operation is not permitted, except to turn-off the system in case of emergency • Use the remote interface to start the converter • Do always switch off the converter if you go inside the container

14.1 Operating Panel

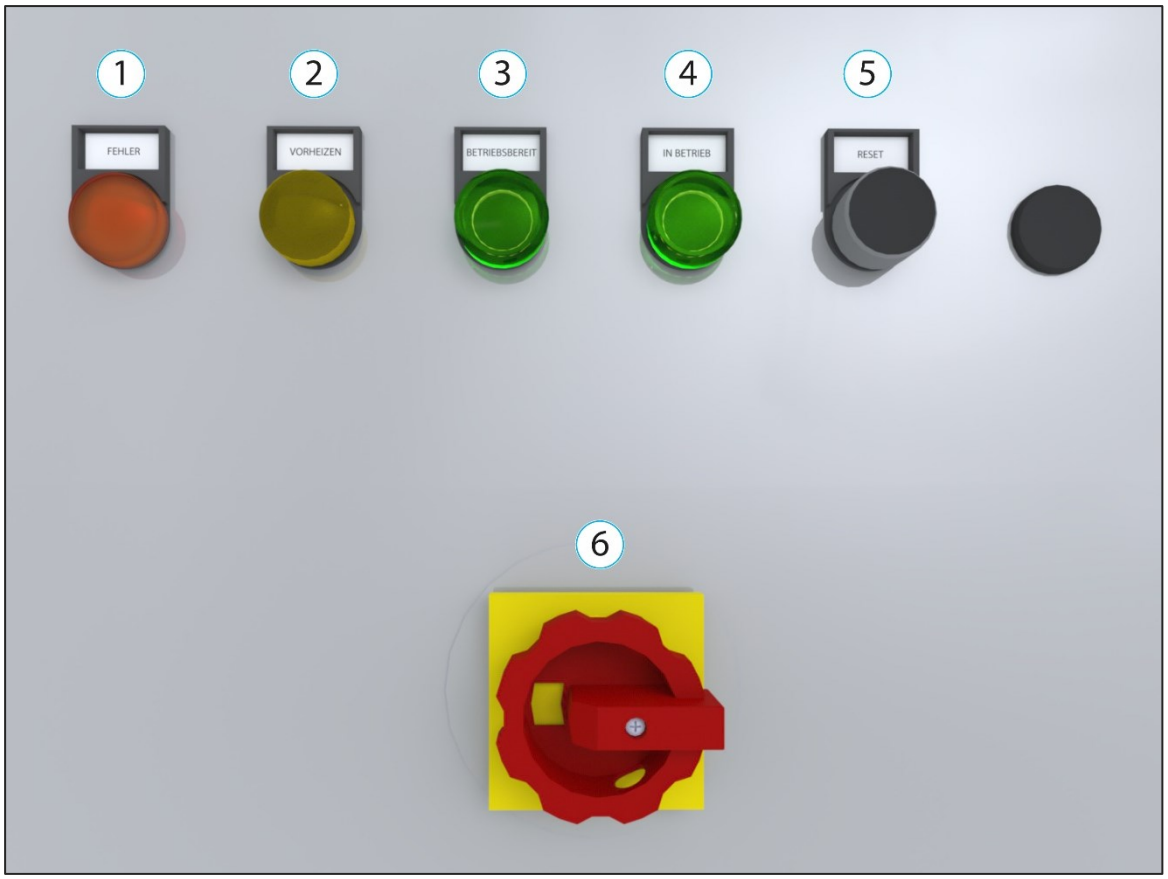

Figure 60: Operating panel

14.2 Indicator Lights

Pos.	Indicator Light	Description
①	**Fault**	**Flashing light** A warning of the converter main controller is present. The converter remains in operation. Constantly glowing: A fault has been detected by the converter main controller. The BESS does not function correctly.
②	**Preheating**	**Flashing light** The cooling liquid is preheated until the set cooling liquid temperature has been reached. Constantly glowing: The coolant temperature has reached the set temperature and is maintained for a set time span (defined in controller). **Light off:** The cooling liquid temperature was maintained for the time span defined in the controller. The preheating process is finished.
③	**Ready for Operation**	**Flashing light** The DC-link of the converter is pre-charging until the set voltage has been reached. **Constantly glowing:**

		The DC-link is precharged to the set voltage and the power switches are closed.
④	**Operating**	**Constantly glowing:** The converter´s IGBTs are enabled. The converter is operating.

Table 37: Indicator lights

14.3 Control Elements

Pos.	Control Element	Description
⑤	**Reset** *Push button*	Resets an existing fault of the main controller and the emergency stop relay.
⑥	**Main switch** *Rotary Switch*	Main switch 480 V power supply for converter control electronics.

Table 38: Control Elements

14.4 Switching on the BESS

Carry out the following steps to switch on the BESS:

Task 1: **Switch on the BESS**
Step 1 : Make sure that the external emergency stop button (customer side, if present) is not activated.
Step 2 : Switch the main switch (*see figure 60,* ⑥) to the "ON" position.

Note 1: If the temperature inside the control cabinet falls below 15°C, the internal control cabinet heating is automatically switched on. The main control is only enabled after the temperature limit value of >5°C has been reached.
Note 2: Once the BESS control system has started up, the function commands transmitted by the higher-level control system are executed.
Note 3: If the BESS control unit detects an error, the red "Fault" indicator (①) lights up.

Step 3 : Check the BESS control system for error messages via the higher-level control system (customer side using WebVisu or communication interface).
Step 4 : Resolve the error(s) if possible.
Step 5 : After successful troubleshooting, acknowledge the error by sending a "Reset" command via the higher-level control system (customer side via WebVisu or communication interface) or the reset button on the CTRL cabinet (⑤*)*.

	For detailed information on the control commands, such as the reset command, which are transmitted to the BESS control system via the customer's higher-level control system, please refer to the document "Description of data profiles" (*see section 1.2 "Applicable Documents"*).

	The control bits described below can be set simultaneously and are automatically processed by the control system in the correct sequence.

Step 6 : Set the **converter_heatup_enable** bit to **TRUE** via the communication interface of the external control room or via the WebVisu. The signal initiates the preheating process of the cooling system. This process normally takes 20 minutes. The "Preheating" indication light illuminates (*see figure 60,* ②).
Step 7 : As soon as all temperatures are within the permissible range, the "Preheating" indication light goes off.
Step 8 : Set the **converter_charge_enable** bit to **TRUE** via the communication interface of the external control room or via the WebVisu. The signal initiates precharging of the DC link and the "Ready for operation" indication light (③) starts to flash. As soon as the DC link is pre-charged, the main switch responsible for the DC link control is switched on and the "Ready for operation" indication light (③) starts to light up constantly.
Step 9 : Set the **converter_modes_enable** bit to **TRUE** via the communication interface of the external control room or via the WebVisu. The signal activates the pulse enable of the grid IGBT´s.
Step 10 : If no errors have occurred, the BESS starts normal operation and the "Operation" indication light (④) lights up constantly.

Step 11 : The detailed procedure for switching on the converter system must be carried out in accordance with the document "Description of data profiles" (*see section 1.2 "Applicable Documents")*. The sequence of the individual steps is shown on the "Flow Chart" tab.

✓ **The BESS is now switched on and in operation.**

14.5 Switching off the BESS

Follow the steps below in order to switch-off the converter:

⚠ DANGER	
	**Electric shock hazard!** **Do not perform maintenance work on a live system.** After switching off the converter, the DC-link of the converter still carries dangerous voltages, which may cause death or severe injuries if touched or short circuit. ➜ Before performing work on the converter, deenergize the converter, wait for 30 minutes until the installed capacitors are discharged and check the voltage-free status of the DC-link by using a 2-pole voltage tester. ➜ It is not allowed to open the cabinet doors before the converter system has been de-energized and the capacitors are discharged. ➜ It is not allowed to perform any work on the converter before the system has been de-energized.

⚠ DANGER	
	**Electric shock hazard!** **Do not perform maintenance work on the converter system, before the converter system has been disconnected from all power sources.** After switching off the converter, the connected DC power cables of the battery strings, the DC connection busbars in the AC_DC cabinet and the DC switch & fuse units continue to carry dangerous voltages that can cause death or serious injury if touched or short-circuited. ➜ Before starting work inside the converter cabinets, de-energize the converter system as described in section 14.6 “De-Energizing”, wait for 30 minutes until the installed capacitors are discharged and check the voltage-free status of the DC-link by using a 2-pole voltage tester. ➜ Disconnect the DC power cables from the converter system using suitable DC disconnecting devices before carrying out any work in the cabinets of the converter system. ➜ Before disconnecting the DC power cables from the DC connection busbars, always check for voltage-free status of the DC power cables, since dangerous electric arcs may lead to severe injuries or death when disconnecting the power cables.

⚠ DANGER	
	**Electric shock hazard!** **Do not perform any work on the MV switchgear and the MV transformer before the PLC container has been disconnected from all voltage sources.** After switching off the converter, the connected MV transformer, the MV switchgear, its connecting cables and terminals continue to carry dangerous voltages which, if touched or short-circuited, can cause death or serious injury. ➜ Before working on the medium voltage components of the converter container, de-energize the converter system as described in section 14.6 “De-Energizing”. ➜ Disconnect the AC mains connection by opening the MV switchgear. ➜ Before disconnecting the AC power cables from the AC connection busbars, always check the voltage-free status of the AC power cables, otherwise dangerous arcs can cause serious injury or death when disconnecting the power cables.

⚠ DANGER	
	**Electric shock hazard!** **Do not perform any maintenance work on the converter system before the AC circuit breaker and MV switchgear have been switched off and protected against unintentional reclosure.** ➜ Before starting work inside the converter cabinets, the AC circuit breaker 80Q1 must be switched off and protected against unintentional reclosure as described in section 14.8.3 “Protect the CB Against Unintentional Reclosing”. ➜ Before you start working inside the control cabinets, the medium-voltage switchgear must be switched off and protected against unintentional reclosure.

Task 1: **Switch off the BESS.**

Step 1 : To switch off the converter, carry out the steps in reverse order according to the document "Description of the data profiles" in the "Flow chart" tab (*see section 1.2 “Applicable Documents”*).

Step 2 : Set the **converter_modes_enable** bit to **FALSE** via the communication interface of the external control room or via the WebVisu. The signal deactivates the pulse enable of the grid IGBT´s.

Step 3 : Set the **converter_charge_enable** bit to **FALSE** via the communication interface of the external control room or via the WebVisu. The signal opens the main switch and initiates the discharge of the DC link. As soon as the main switch is open, the "Ready for operation" indication light goes off (*see figure 60,* ③).

⚠ DANGER	
	**Risk of injury due to electric shock!** **Discharging the DC link takes several minutes. The "Ready for operation" indication light is not an indicator of a fully discharged DC link. Do not carry out any work on BESS before the DC link has been completely discharged.** ➜ Wait until the DC link is completely discharged and check that it is de-energized as described in section 14.7 "Check Voltage-Free Status of DC Link ".

Step 4 : Set the **converter_heatup_enable** bit to **FALSE** via the communication interface of the external control room or via the WebVisu. The signal switches off the water cooling of the converter after a run-on time of 2 minutes.

Step 5 : Switch the main switch on the converter control cabinet (*see figure 60,* ⑥) to the "OFF" position.

✓ **The BESS is now switched off.**

The UPS can be switched off by pulling the blade type fuse of the UPS unit.

14.6 De-Energizing

Carry out the following steps to de-energize the BESS system:

⚠ DANGER	
	**Electric shock hazard!** **Do not perform maintenance work on a live system.** After switching off the converter, the DC-link of the converter still carries dangerous voltages, which may cause death or severe injuries if touched or short circuit. ➜ Before performing work on the converter, deenergize the converter, wait for 30 minutes until the installed capacitors are discharged and check the voltage-free status of the DC-link by using a 2-pole voltage tester. ➜ It is not allowed to open the cabinet doors before the converter system has been de-energized and the capacitors are discharged. ➜ It is not allowed to perform any work on the converter before the system has been de-energized.

⚠ DANGER	
	**Electric shock hazard!** **Do not perform maintenance work on the converter system, before the converter system has been disconnected from all power sources.** After switching off the converter, the connected DC power cables of the battery strings, the DC connection busbars in the AC_DC cabinet and the DC switch & fuse units continue to carry dangerous voltages that can cause death or serious injury if touched or short-circuited. ➜ Before starting work inside the converter cabinets, de-energize the converter system as described in section 14.6 “De-Energizing”, wait for 30 minutes until the installed capacitors are discharged and check the voltage-free status of the DC-link by using a 2-pole voltage tester. ➜ Disconnect the DC power cables from the converter system using suitable DC disconnecting devices before carrying out any work in the cabinets of the converter system. ➜ Before disconnecting the DC power cables from the DC connection busbars, always check for voltage-free status of the DC power cables, since dangerous electric arcs may lead to severe injuries or death when disconnecting the power cables.

⚠ DANGER	
	**Electric shock hazard!** **Do not perform any work on the MV switchgear and the MV transformer before the PLC container has been disconnected from all voltage sources.** After switching off the converter, the connected MV transformer, the MV switchgear, its connecting cables and terminals continue to carry dangerous voltages which, if touched or short-circuited, can cause death or serious injury. ➜ Before working on the medium voltage components of the converter container, de-energize the converter system as described in section 14.6 “De-Energizing”. ➜ Disconnect the AC mains connection by opening the MV switchgear. ➜ Before disconnecting the AC power cables from the AC connection busbars, always check the voltage-free status of the AC power cables, otherwise dangerous arcs can cause serious injury or death when disconnecting the power cables.

⚠ DANGER	
	**Electric shock hazard!** **Do not perform any maintenance work on the converter system before the AC circuit breaker and MV switchgear have been switched off and protected against unintentional reclosure.** ➜ Before starting work inside the converter cabinets, the AC circuit breaker 80Q1 must be switched off and protected against unintentional reclosure as described in section 14.8.3 "Protect the CB Against Unintentional Reclosing". ➜ Before you start working inside the control cabinets, the medium-voltage switchgear must be switched off and protected against unintentional reclosure.

Task 1: **De-energize the BESS**

Step 1 : Switch-off the converter system like explained in section 14.4.

Step 2 : Secure the AC circuit breaker(s) from unintentional reclosure, like explained in section 14.9.3.

Step 3 : Decouple the customer AC connection from the converter system using a suitable disconnection device.

Step 4 : Wait for 30 minutes until the converters´ DC link is discharged and check the voltage-free status of the DC-link by using a suitable 2-pole voltage tester.

✓ **The BESS is now switched off and de-energized.**

14.7 Check Voltage-Free Status of DC Link

The DC link voltage can be up to 1300 VDC. Make sure that the measuring device for testing the absence of voltage in the DC link is suitable for this voltage range.

For converter systems with more than one DC link, the following steps must be carried out to check the absence of DC link voltage on each DC link.

The following steps must be followed to check that the DC link is de-energized:

Step 1 : After switching off the system, check the DC link voltage on the WebVisu or via the communication interface of the external control room.

Step 2 : Check that the DC link is de-energized at the HVIO measuring fuse 173F2 between connections 2 and 4 in the CTRL cabinet.

Step 3 : In addition, check that the DC link is de-energized at the HVIO measuring fuse 173F2 by measuring between connection 2 and N (or PE) in the CTRL cabinet.

Step 4 : In addition, check that the DC link is de-energized at the HVIO measuring fuse 173F2 by measuring between connection 4 and N (or PE) in the CTRL cabinet.

Step 5 : Check that there is no voltage on the DC link between a DC- connection (*see figure below*, ①) and DC+ connection (②) of the PowerStack.

➜ For switch cabinets with more than one installed PowerStack, access to the DC link connections is at the bottom stack.
➜ The DC+ connections are positioned slightly to the rear compared to the DC connections.

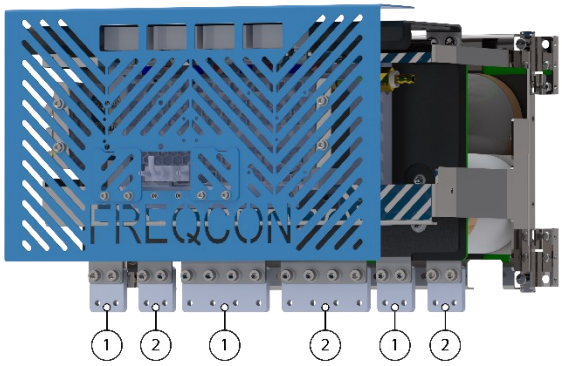

Figure 61: DC- connections ① and DC+ connections ② on the PowerStack (figure may differ from the actual design)

14.8 AC Circuit Breaker

NOTICE

The AC main circuit breaker(s) must not be switched manually!
Do not switch the AC main circuit breaker manually under any circumstances, as this could damage the breaker and the equipment.

The converter system is equipped with an individual 3WL circuit breaker, in order to disconnect the connected grid from the BESS systems electric circuit.

The main circuit-breaker(s) is/are located in the CIR cabinet (*see section 4.4.3 "Internal Components"*).

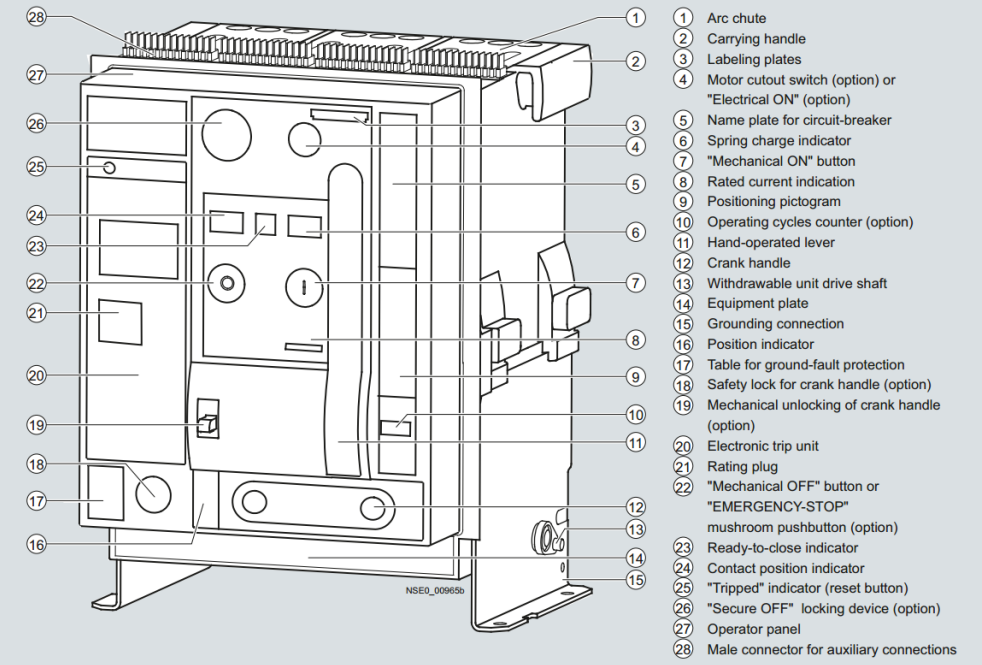
To protect the circuit breaker against unauthorized switching and to protect the maintenance and operator personnel, the circuit breakers contain a number of locking devices.

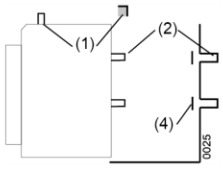
For instructions on how to secure the circuit-breaker(s) against reclosing, see section 14.8.3.

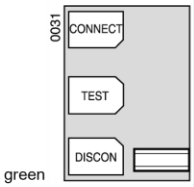
Detailed information can be found in the manufacturer's documentation for the circuit-breaker (*see also section 1.2 "Applicable documents"*):

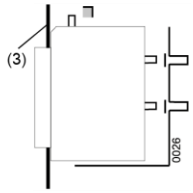
Document type	Document Name	File Name
Operating instructions AC circuit breaker	3ZX1812-0WL00-0AN4	3ZX1812-0WL00-0AN4_online_201806140915326928

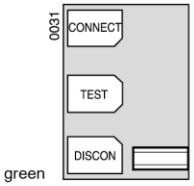
14.8.1 Circuit Breaker Components

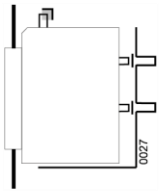


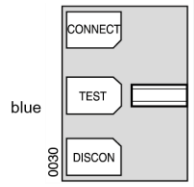


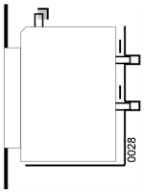












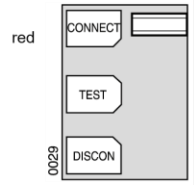


Figure 62: Circuit breaker components

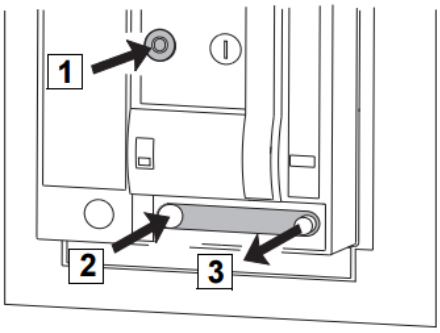
14.8.2 Positions of CB in the Guide Frame

	Diagram	Positon indicator	Power circuit	Auxiliary circuit	Cubicle door	Shutter
Maintenance position			disconnected	disconnected	open	closed
Disconnected position			disconnected	disconnected	closed	closed
Test position			disconnected	connected	closed	closed
Connected position			connected	connected	closed	open

(1) Auxiliary circuit
(2) Primary circuit
(3) Cubicle door
(4) Shutter

Figure 63: Circuit breaker positions

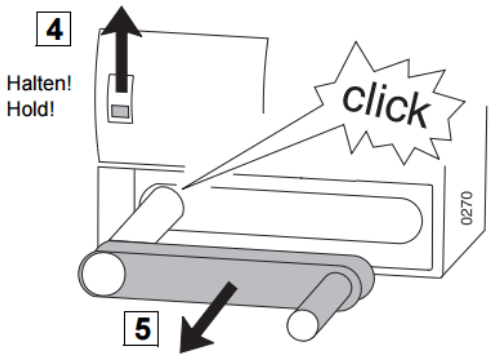


14.8.3 Protect the CB Against Unintentional Reclosing

Drawing out of the racking handle can be prevented by fitting a maximum of three padlocks. The circuit breaker is then locked against moving.

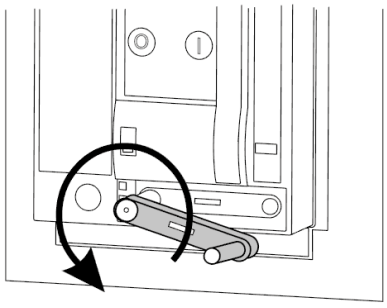
Task 1: **Unlocking the racking handle/ Withdrawing racking handle.**

Step 1 : OPEN circuit breaker.



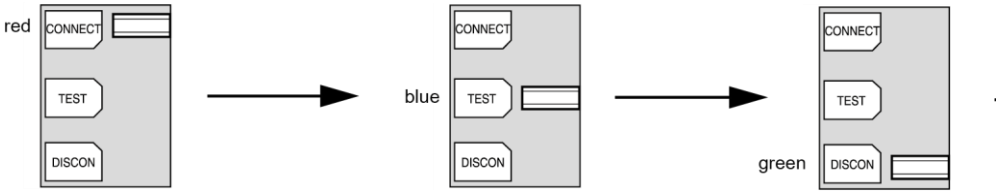
Step 2 : Push the crank.

Step 3 : Pull out handle.



Step 4 : Lift and hold the control lever.

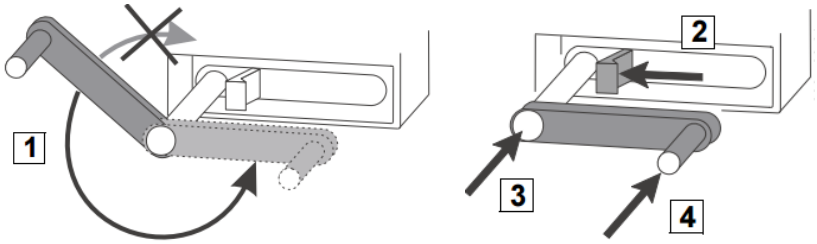
Step 5 : Pull out the crank.



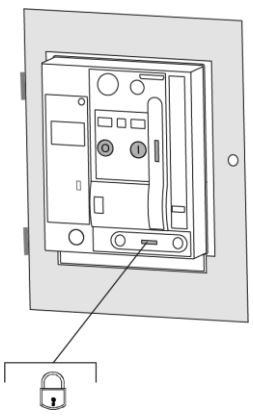
Task 2: Racking circuit breaker into the disconnected position.

Step 1 : Rack the handle until the disconnected position is indicated by the position indicator (green).

Position indicatior



Task 3: Push in the racking handle.



Step 1 : Bring the racking handle to the position indicated in the illustration below.

Step 2 : Push in the crank.

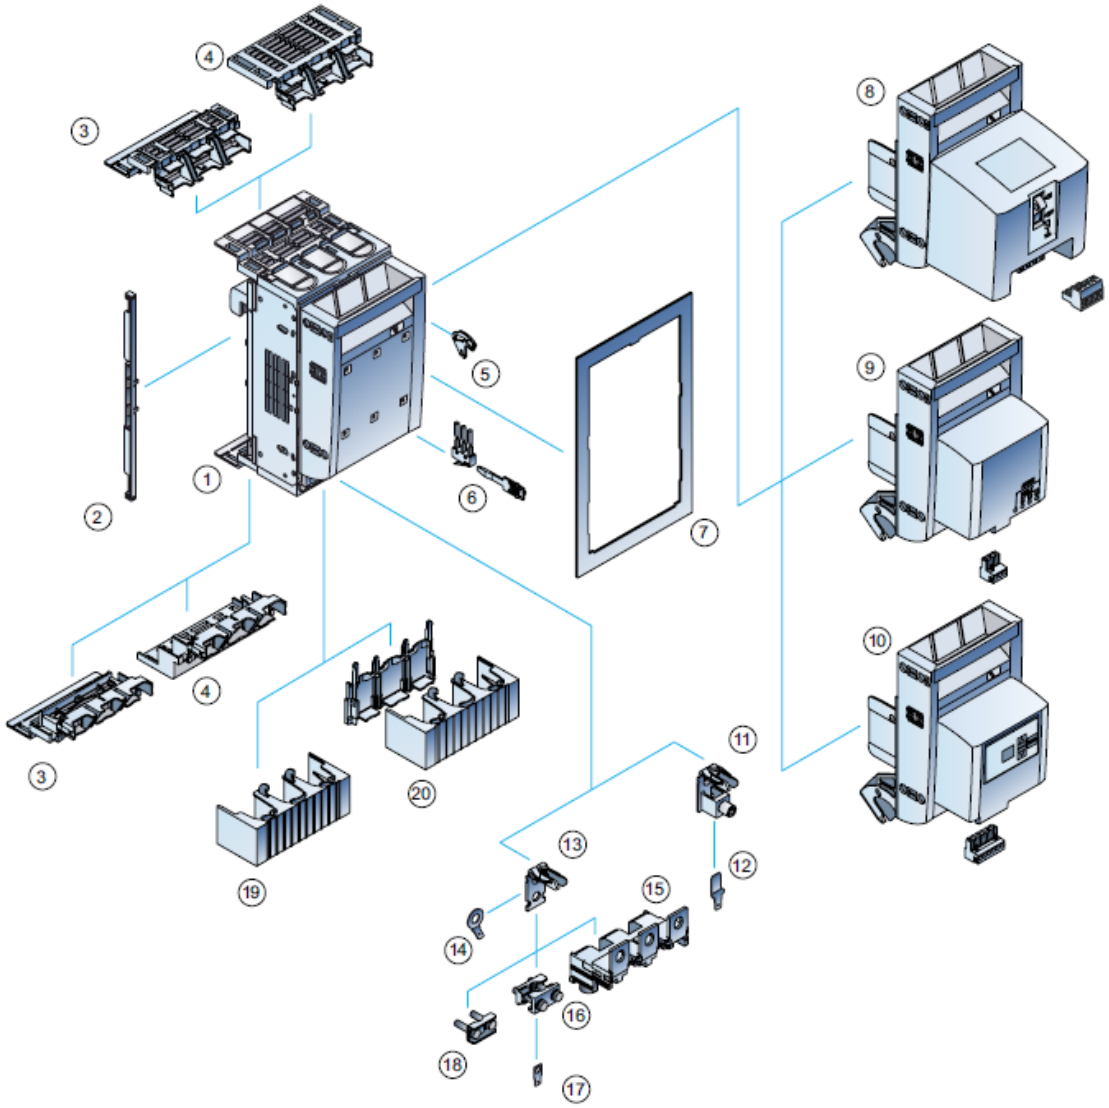
Step 3 : Push in the handle.

Task 4: Lock the racking handle with one or more padlocks.

14.9 DC Fuse Switch Disconnectors

NOTICE	
	**The DC fuse switch disconnectors must not be switched manually!** Do not switch the DC fuse switch disconnectors manually under any circumstances, as this could damage the breaker and the equipment.

Each of the battery storage cabinets is equipped with a DC fuse switch disconnector, in order to disconnect the corresponding battery cabinet from the electric circuit of the BESS.



A DC fuse switch-disconnector is located on the mounting plate at the bottom of each battery cabinet.

To protect the DC fuse switch disconnector against unauthorized switching and to protect the maintenance personnel, the disconnector is provided with locking devices.

For instructions on how to prevent unintentional reclosing of the DC fuse switch disconnector, *see section 14.9.3, "Protect the DC Disconnector Against Unintentional Reclosing"*.

For detailed information regarding the DC fuse switch disconnector, refer to the original manufacturer manual (*see section 1.2 "Applicable Documents"*).

14.9.1 Fuse Disconnector Components

Figure 64: Circuit breaker components

14.9.2 Locking Device

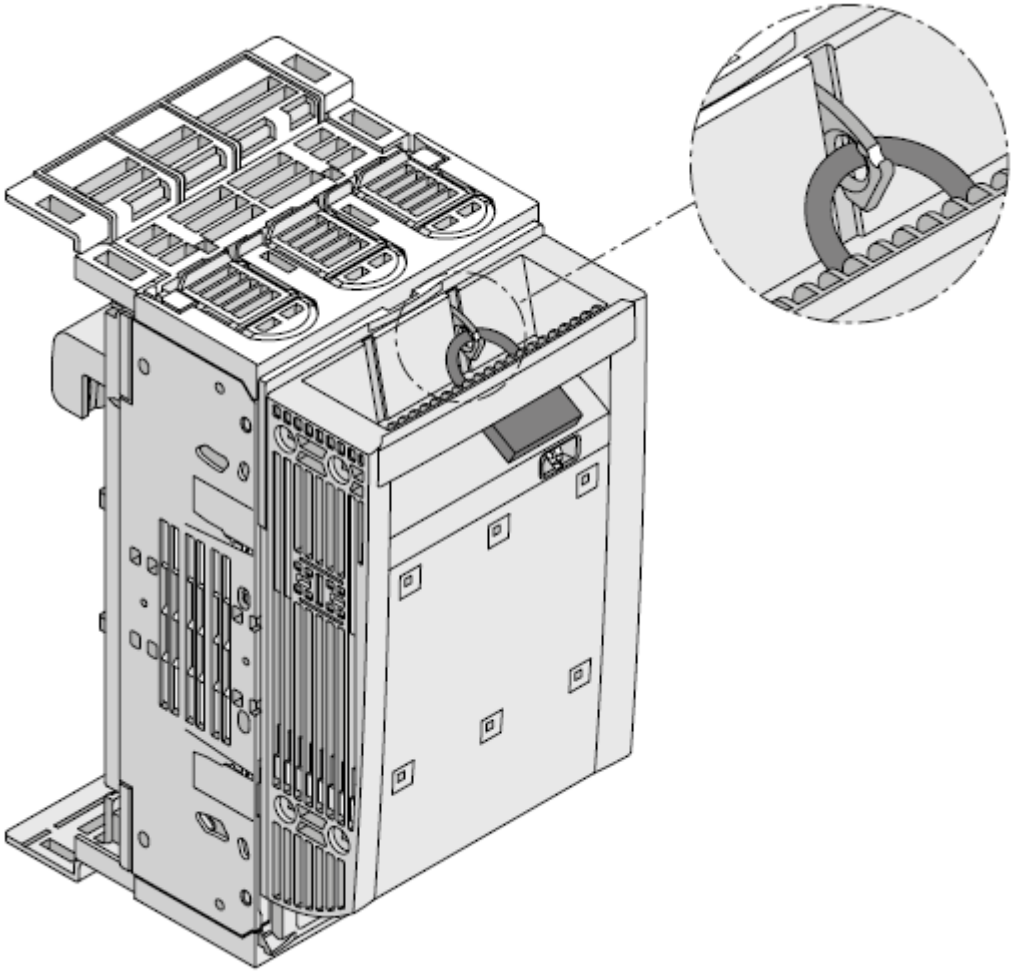

Figure 65: Locking device

14.9.3 Protect the DC Disconnector Against Unintentional Reclosing

You can lock the 3NP1 fuse switch disconnector to protect it against unauthorized actuation.
Either an eye (optional accessory, see below) and a padlock (shackle diameter: 6 mm) or two padlocks (shackle diameter: 2x 3 mm) are required for this purpose. The padlocks are not supplied with the fuse switch disconnector.

NOTICE
You can open the handle unit of a fuse switch disconnector that has been locked with an eye and one padlock by force in order to trip an emergency stop (rupture point on the eye).

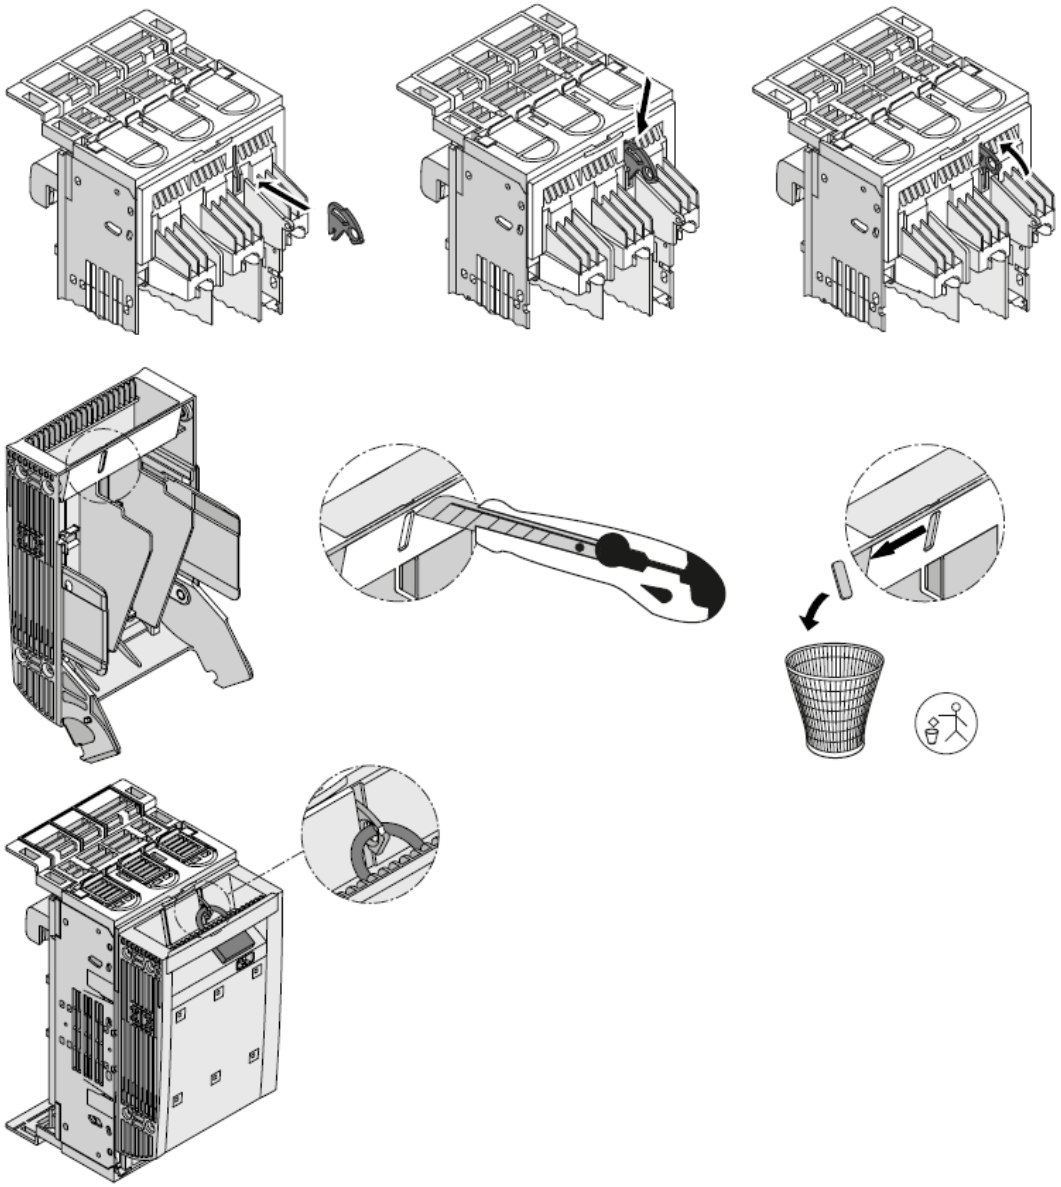

Figure 66: Secure fuse switch-disconnector against unintentional reclosing

15 Monitoring

PIII Converter Control Module

The converter system is equipped with two converter control interfaces.

PIII Indicator Lights

LED	Color	Label	Description
1	red	**UDC max**	DC-link voltage exceeded maximum value
2	red	**Imod max**	Current of one or more IGBT´s exceeded maximum value
3	red	**Error IGBT 1**	Error detected on IGBT 1
4	red	**Error IGBT 2**	Error detected on IGBT 2
5	red	**Error IGBT 3**	Error detected on IGBT 3
6	red	**Error IGBT 4**	Error detected on IGBT 4
7	red	**Error IGBT 5**	Error detected on IGBT 5
8	red	**Error IGBT 6**	Error detected on IGBT 6
9	red	**Error IGBT 7**	Error detected on IGBT 7
10	green	**PWM Mode**	IGBT 1, IGBT 2 and IGBT 3 are working in PWM mode
11	green	**Enable**	IGBT 1 - 6 ready for operation
12	green	**Top 1**	Top 1 active
13	green	**Bot 1**	Bot 1 active
14	green	**Top 2**	Top 2 active
15	green	**Bot 2**	Bot 2 active
16	green	**Top 3**	Top 3 active
17	green	**Bot 3**	Bot 3 active
18	green	**Top 4**	Top 4 active
19	green	**Bot 4**	Bot 4 active
20	green	**Top 5**	Top 5 active
21	green	**Bot 5**	Bot 5 active
22	green	**Top 6**	Top 6 active
23	green	**Bot 6**	Bot 6 active
24	green	**Chopper Active**	Brake chopper is active
25	green	**Blinki**	Profinet communication between main PLC and PIII is established
26	green	**24 V Supply**	24V supply connected
27	green	**UL 1**	L1 voltage apparent
28	green	**UL 2**	L2 voltage apparent
29	green	**UL 3**	L3 voltage apparent
30	green	**Urec**	Booster voltage is apparent on rectifier
31	green	**UDC +**	DC link voltage is apparent
32	green	**Arc Detect**	Arc detection has tripped

Table 39: PIII indicator lights

16 Data transfer with higher-level controller

As described in section 4.2 "Data Interface", the BESS is controlled and monitored via the transfer of data with the customer's higher-level control system. Data transfer between BESS and the higher-level control system is performed via PROFINET protocol.

For external control and monitoring of the converter, it is necessary for the customer to have access to selected control and status variables stored in the converter controller, which can be read and overwritten by the customer's higher-level controller. For this purpose, predefined control profiles with the relevant control variables and status profiles with all relevant status variables are stored for the data transfer from BESS to the customer's higher-level controller.

For a detailed description of the individual data profiles, see Description of data profiles (*see section 1.2 "Applicable Documents"*).

17 Maintenance

The following describes the maintenance work that is necessary for trouble-free operation of the converter system (PCS) and Battery Energy Storage System (BESS). Maintenance intervals must be observed (*see section 17.2 "Maintenance* Schedule*"*).

If increased wear of individual components or functional groups is determined during regular inspections, the operator has to reduce the required maintenance intervals on the basis of the actual signs of wear. Changes compared to the normal operation (increased power consumption, temperatures, vibrations, noises, etc. or respond of monitoring systems) might indicate the functionality of the device is impaired. These then have to be subjected to an inspection by qualified personnel.

For information regarding maintenance of the BESS battery cabinets refer to document „20_Maintenance_Schedule“ (*see section 1.2 "Applicable Documents"*). Maintenance intervals provided in the maintenance schedule must be adhered.

⚠ DANGER	
	**Electric shock hazard!** **Do not perform maintenance work on a live system.** After switching off the converter, the DC-link of the converter still carries dangerous voltages, which may cause death or severe injuries if touched or short circuit. ➜ Before performing work on the converter, deenergize the converter, wait for 30 minutes until the installed capacitors are discharged and check the voltage-free status of the DC-link by using a 2-pole voltage tester. ➜ It is not allowed to open the cabinet doors before the converter system has been de-energized and the capacitors are discharged. ➜ It is not allowed to perform any work on the converter before the system has been de-energized.

⚠ DANGER	
	**Electric shock hazard!** **Do not perform maintenance work on the converter system, before the converter system has been disconnected from all power sources.** After switching off the converter, the connected DC power cables of the battery strings, the DC connection busbars in the AC_DC cabinet and the DC switch & fuse units continue to carry dangerous voltages that can cause death or serious injury if touched or short-circuited. ➜ Before starting work inside the converter cabinets, de-energize the converter system as described in section 14.6 “De-Energizing”, wait for 30 minutes until the installed capacitors are discharged and check the voltage-free status of the DC-link by using a 2-pole voltage tester. ➜ Disconnect the DC power cables from the converter system using suitable DC disconnecting devices before carrying out any work in the cabinets of the converter system. ➜ Before disconnecting the DC power cables from the DC connection busbars, always check for voltage-free status of the DC power cables, since dangerous electric arcs may lead to severe injuries or death when disconnecting the power cables.

⚠ DANGER	
	**Electric shock hazard!** **Do not perform any work on the MV switchgear and the MV transformer before the PLC container has been disconnected from all voltage sources.** After switching off the converter, the connected MV transformer, the MV switchgear, its connecting cables and terminals continue to carry dangerous voltages which, if touched or short-circuited, can cause death or serious injury. ➜ Before working on the medium voltage components of the converter container, de-energize the converter system as described in section 14.6 “De-Energizing”. ➜ Disconnect the AC mains connection by opening the MV switchgear. ➜ Before disconnecting the AC power cables from the AC connection busbars, always check the voltage-free status of the AC power cables, otherwise dangerous arcs can cause serious injury or death when disconnecting the power cables.

⚠ DANGER	
	**Electric shock hazard!** **Do not perform any maintenance work on the converter system before the AC circuit breaker and MV switchgear have been switched off and protected against unintentional reclosure.** ➜ Before starting work inside the converter cabinets, the AC circuit breaker 80Q1 must be switched off and protected against unintentional reclosure as described in section 14.8.3 “Protect the CB Against Unintentional Reclosing”. ➜ Before you start working inside the control cabinets, the medium-voltage switchgear must be switched off and protected against unintentional reclosure.

⚠ WARNING	
 	**Hazard by cooling liquid** The coolant used in the internal cooling system of the converter is harmful to human or animal health when touched or swallowed. ➜ Avoid oral ingestion of the coolant, since it can lead to harm to human or animal health. In case of accidental ingestion or eye contact with the coolant, seek immediate medical attention. ➜ Avoid skin contact with the coolant. ➜ Use appropriate eye protectors and protective gloves when working on the cooling system and during filling and draining of the cooling liquid.

NOTICE
Service and maintenance work on the BESS and cooling system must only be carried out by qualified and authorized personnel.

17.1 Preparations Prior Maintenance

The following safety precautions must be carried out before commencing service and maintenance work.

Non-observation of these safety instructions can cause injury to persons, damage to objects or malfunction or damage to the device itself.

Do not operate!	**Lock and tag power switches and controller devices**
⚠ DANGER 	Disconnect power and block operation controller devices. Follow national laws regarding Occupational Safety and Health. 1. Identify the energy source(s). 2. Isolate the energy source(s). 3. Determine voltage-free status. 4. Ground device or equipment to protect from short circuiting and from shocks. 5. Lock and Tag the energy source(s). 6. Prove that the equipment isolation is effective. 7. When required, apply lock-out device or clamp and secure with padlock(s).

17.2 Maintenance Schedule

Location	Component	Maintenance Work	Maintenance Interval	Description in
PCS Container CTRL cabinet	UPS battery	Functionality check	Once every 6 months	Section 17.3.1
PCS Container CTRL cabinet	UPS battery	Remove battery from battery unit	At storage temperatures below 0°C	Section 17.3.2
PCS Container All switch cabinets	Intake fan filters	Check the fan filters for contamination and replace if necessary	Once every 6 months	Section 17.4
All containers	Complete BESS system	Visual inspection	Once every 6 months / in case of a fault	Section 17.5
PCS Container CIR cabinet	Circuit breaker 3WL	Inspection	Once every 12 months	Section 17.6.1
		Replace arc-chute covers	After no more than three short-circuit interruptions	
		Replace arc chutes and contact system	Depending upon their condition	
		Replace operating system	Depending upon their condition	
PCS Container CTRL cabinet	PLC	Replace backup battery of Simotion PLC	Once every 4 years	Section 17.7
PCS Container COSY	Coolant	Exchange cooling liquid	Once every 5 years	Section 17.6
PCS Container COSY	Expansion vessel	Check pressure	Once every 5 years / When exchanging the cooling liquid / When error "pressure low" is apparent	Section 17.9
BESS Containers	Exhaust units	Inspection	Once every 6 months / in accordance with existing maintenance schedule	Section 17.11
BESS Containers	Fire dampers	Inspection	Once every 6 months / in accordance with existing maintenance schedule	Section 17.12
BESS Containers	H2 Sensors	Inspection	Once every 6 months	Section 17.13

Table 40: PCS Maintenance Schedule

17.3 UPS

17.3.1 UPS Functionality Check

(once every 6 months)

In order to check the functionality of the UPS device, the following steps must be performed:

Task 1: **Perform functionality check of the UPS device**

Step 1 : Set the main switch on the door of the control cabinet (*see figure 60,* ⑥) to the "OFF" position.

Step 2 : Locate the UPS module 102G1 inside the control cabinet (*see section 4.4.3*).
The yellow LED (*see figure below,* ④) on the front of the UPS module should glow, indicating that battery mode is active and the battery is discharging because the power supply is not available.

Step 3 : Wait for the buffer time set on the potentiometer on the front of the UPS module (②, default value: 6.6 min.).
During this time, check if the SoC bar graph (①) is displaying the current state of charge (SoC).

Note 4: During and after the test, the red LED (③) displaying an UPS alarm should not start glowing, since this would indicate an faulty or almost empty battery. In this case, the UPS battery must be replaced as described in the original manufacturer documentation.

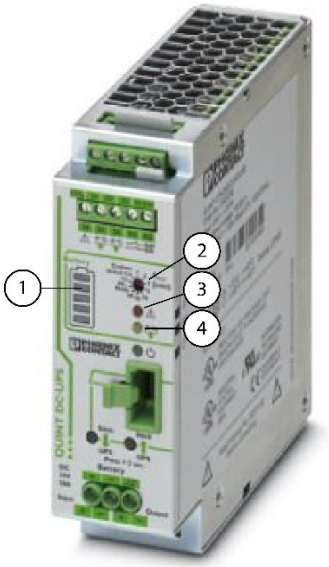

Figure 67: UPS module

Pos.	Description
①	Bar graph for displaying the current charging state of the power storage device
②	Buffer time setting: default: 6.6 min.
③	Red LED: alarm
④	Yellow LED: battery mode

Icon	Meaning of LEDs
⚠	Red LED on: UPS alarm due to one of the reasons: • battery almost empty • battery not detected • battery replacement required LED off: No UPS alarm, power supply available, normal operation.
🔋	Yellow LED on: Battery mode is ON, battery is discharging because power supply failed. LED off: Battery mode is OFF, i.e. mains available.
⏻	Green LED on: Mains is ON. LED off: Mains is OFF.

17.3.2 Removing the UPS battery

(At storage temperatures below 0°C)

NOTICE
The battery of the UPS unit must be removed at temperatures below 0°C.

In order to remove the battery from the energy storage device UPS-BAT/VRLA/24DC/12AH, the service mode of the UPS device must be activated.

Task 1: Activate service mode

The corresponding activation rights have to be granted for service mode activation and deactivation.

The service mode cannot be activated, while the QUINT-UPS runs in battery mode. The power supply must be available.

Step 1 : Depending on the granted activation rights, the service mode can be activated in three different ways:

1. By holding down both push buttons on the QUINT-UPS named "Stick -> UPS" and "UPS -> Stick" for at least 6 seconds.

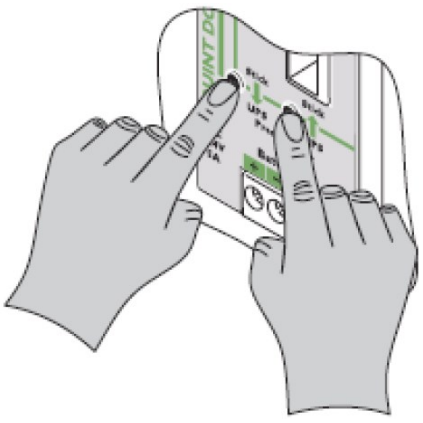

Figure 68: UPS control elements

2. By connecting a service stick (*see manufacturer manual*) to the Data port of the UPS.
3. By using the UPS-CONF (*see manufacturer manual*) software as follows:
   In the "Settings" group, select the "Service" item, and click the "On / Off" button near the "Activate service mode" text.

While the service mode is active

- the alarm status is activated,
- the charging current is interrupted,
- the status LED "Service mode active" in the UPS-CONF software ("Settings" group /"Service" item) is green

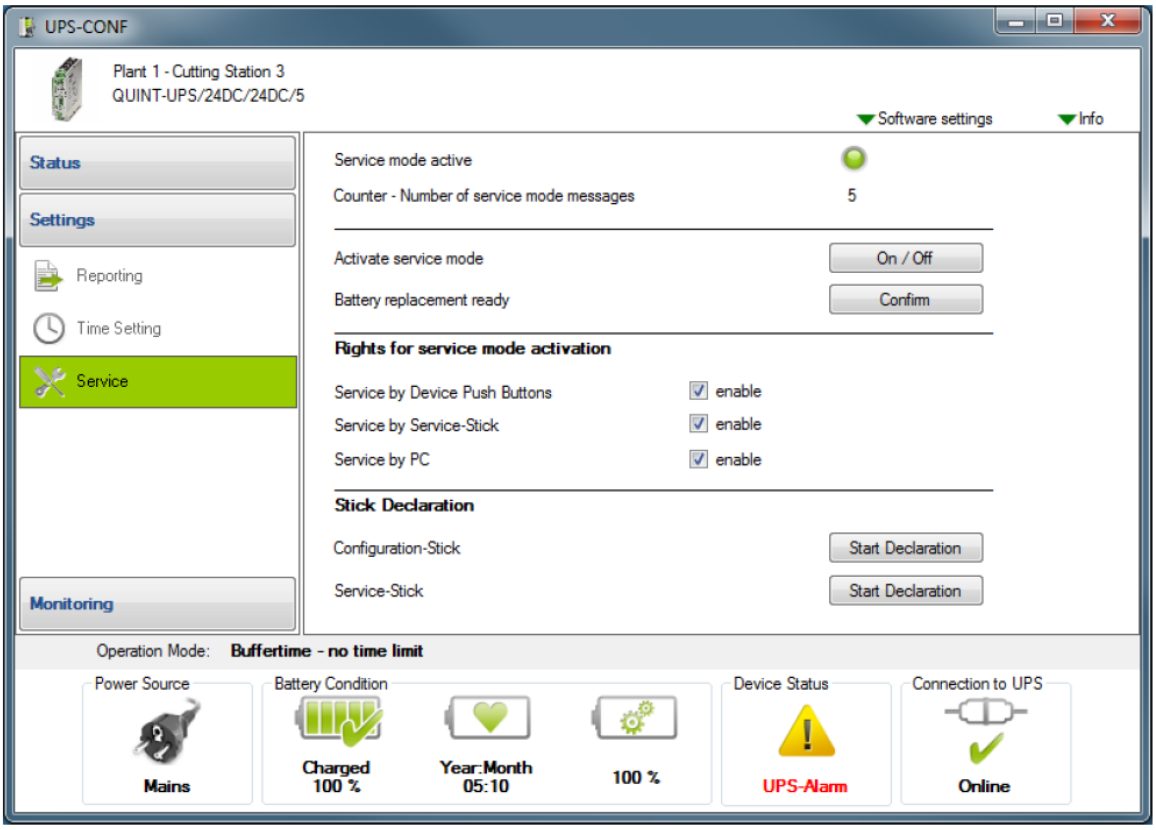

Figure 69: UPS CONF software

Task 2: Remove battery

⚠ DANGER
Before activating the service mode, read and obey carefully the safety instructions in the topic “Important safety notes” of the manufacturer manual.

⚠ DANGER
Watch polarity when connecting cables!

Step 1 : Activate the service mode by one of the ways described in Task 1.
Step 2 : Open battery module housing.
Step 3 : Remove fuses *(see illustration below)*.

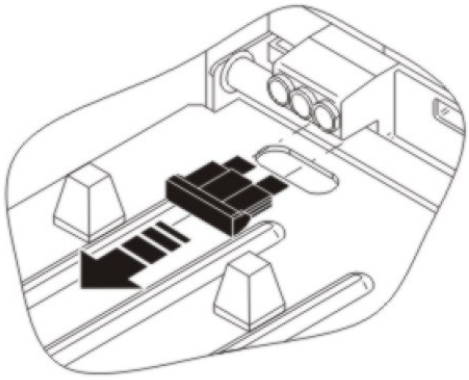

Figure 70: Remove UPS battery fuses

Step 4 : Remove cabling.
Step 5 : Remove battery.
Step 6 : Fix cabling inside housing.
Step 7 : Store the battery module together with the fuses.
Step 8 : Close battery module housing.

NOTICE
The battery and the fuses of the UPS unit must be reassembled before commissioning, recommissioning and operation of the MSC converter unit.

17.4 Changing the Intake Fan Filters

Check every 6 months, replace depending on degree of soiling)

The fan-and-filter unit and outlet filter are supplied as standard with a standard filter mat for the pre-filtering of dry, coarse dust and lint. In order to increase the protection category, and in the case of dust with a grain size of < 10 µm, we recommend the use of fine filter mats (optionally available).
The filter must be checked in regular intervals in accordance to the level of dust exposure and replaced as necessary.

⚠ DANGER

➜ Only change the filter mat while the fan rotor is stationary.
➜ Never insert your fingers into the fan rotor.

⚠ DANGER

The unit is live. Switch off the power supply before opening, and take suitable precautions against it being accidently switched back on.

NOTICE

Use only original Rittal filters which bear the Rittal logo in order to safeguard the designated protection category, air throughout and operating approvals.

To insert or replace the filter, proceed as follows (direction of airflow: drawing from outside and blowing into the enclosure):

Task 1: **Replace intake filter**
Step 1 : First press the catch of the louvred grill (Rittal logo) up slightly with one finger.
Step 2 : Once it is released, the louvred grill can be dropped open by approx. 70° or 90°.
Step 3 : If necessary, first place the fine filter mat into the housing.
Step 4 : Ensure that the open (roughened) side faces towards the louvred grill.
Step 5 : Insert the enclosed standard filter mat.
Step 6 : Ensure that the open side (without Rittal logo) faces towards the louvred grill.
Step 7 : Push the louvred grill back onto the enclosure until it snaps audibly into position.

17.5 Visual Inspection

(once every 12 months/in case of a fault)

Check the fan filters for contamination. Replace filters if necessary (*see section 17.4*).

Visually inspect the BESS cabinets for:

- Corrosion
- Damage
- Contamination

Electrical connections
Electrical connections must be checked for proper connection in order to ensure safe operation of the system and to prevent personnel from injuries due to electrical shock.

Corrosion
Corroded electrical connections must be replaced in order to maintain safe operation of the system and to prevent personnel from injuries due to electrical shock.

Damage
Damaged wires and clamps must be replaced immediately in order to maintain safe operation of the converter system and to prevent personnel from injuries due to electrical shock.

Contamination
Check the interior of the converter unit for contamination and dirt in order to prevent the internal components from short-circuiting and damage.

NOTICE
Do not use solvents for cleaning – especially on polycarbonate plastics. Use a vacuum cleaner to remove dirt or dust.

17.6 AC Circuit Breaker(s)

17.6.1 Inspection work

(once every 12 months)

The arc chutes and contact system of the circuit breaker(s) must be inspected according to these operation instructions. If a fault condition opens the circuit breaker(s), the circuit breaker(s) should be inspected before it is put back into service. Contact assemblies need to be changed according to their condition.

The switchgear operator has to determine inspection intervals depending on the breaker application conditions:

- min. 1 x per annum
- after interruption of heavy loads

During the inspection the following items must be examined:

- arc chutes and contact systems
- electrical and mechanical functionality of the breaker
- mechanical on- / off-functionality
- main and auxiliary circuits, function and connecting quality
- plausibility control of trip unit settings and correction, if necessary

Draw-Out guide frames with arc-chute covers installed, have to be replaced after no more than three short-circuit interruptions of the circuit breaker. If the breaker endurance is exhausted, then the breaker and old spare parts need to be disposed off, according to the effective legal regulations.
The arc chutes and the contact system must be replaced depending upon their condition.

Depending on the circuit breaker stress it may also be necessary to replace the operating system.

For detailed regarding the maintenance of the circuit breaker, refer to original manufacturers´ documentation (*see section 1.2 "Applicable Documents"*):

Document type	Document Name	File Name
Operating instructions	3ZX1812-0WL00-0AN4	3ZX1812-0WL00-0AN4_online_201806140915326928

17.7 Replace PLC Buffer Battery

17.7.1 Preventive maintenance

(every 4 years)

To maintain the high system availability, the manufacturer recommends the preventive replacement of the CMOS buffer battery, which is installed in the system PLC.

Component	Replacement interval
CMOS buffer battery	4 years

17.7.2 Replacing Backup Battery

NOTICE

The service life of the backup battery is approx. 5 - 8 years, depending on the ambient conditions.

Detailed information on maintenance can be found in the manufacturer's documentation for the Simotion P320-4 PLC *(see also section "Other applicable documents")*:

Document type	Document Name	File Name
Operating instructions	P320- 4 Commissioning and installation manual	P320_4_commissioning_en-EN

17.8 Exchanging the Cooling Liquid

(Every 5 years)

The cooling liquid inside the converter cooling system is to be exchanged as described in the following sections.

Like described in section 0, the converter cooling system is split up into two independent cooling systems for each converter system, allowing Converter System 1 and 2 independently from one another.

Therefore, each of the following steps must be performed for each cooling system separately.

NOTICE

- The cooling liquid inside the cooling system must be removed at least once every five years.
- Check the pressure on the expansion tank every time the cooling liquid is exchanged. The cooling system must be completely drained in order to perform a pressure check of the expansion tank (*see section17.9*).

NOTICE

The pump must not run dry as it might damage the pump.

17.8.1.1 Required Tools

The following table provides you with information regarding the tools required to perform maintenance work on the cooling system:

Amount	Tool	Description	Preferred Type	Manufacturer
3	Hose ½"	Length: 2 m, max. 50 bar	Variolux Silverline	Gardena
1	Filling pump	For glycol use, min. 2 bar pressure	Unistar 2000 A	ZUWA
1	Cooling liquid vessel	Min. 55 l capacity		
1	Inlet pressure gauge	For expansion tanks, digital	Art. No.: 512240122	OEG
1	Tank filler 400 ml	For increasing and testing the pressure in expansion tanks	Art. No.: 311779100	OEG
1	Adapter for tank filler	Adapter for screwing on the tank filler can	Art. No.: 512240126	OEG

Table 41: Required tools for cooling system maintenance

17.8.1.2 Allowed Coolants

The following table lists the suitable coolants for using in the cooling system. When exchanging the cooling liquid of the cooling system, only use a coolant listed in the table.

Please observe the manufacture's information regarding the cooling range of the designated cooling liquid.

Manufacturer	Type
NALCO AG	Varidos FSK
BASF AG	Glysantin G30
Clariant	Antifrogen N
Clariant	Antifrogen L
DOW	Dowcal 20
Zitrec	M-25 C

Table 42: Allowed coolants

17.8.1.3 Draining the cooling system

NOTICE

Check the pressure on the expansion tank every time the cooling liquid is exchanged. The cooling system must be empty in order to perform a pressure check of the expansion tank (*see section 17.9*).

⚠ WARNING

Hazard by cooling liquid

The coolant used in the internal cooling system of the converter is harmful to human or animal health when touched or swallowed.

- ➜ Avoid oral ingestion of the coolant, since it can lead to harm to human or animal health. In case of accidental ingestion or eye contact with the coolant, seek immediate medical attention.
- ➜ Avoid skin contact with the coolant.
- ➜ Use appropriate eye protectors and protective gloves when working on the cooling system and during filling and draining of the cooling liquid.

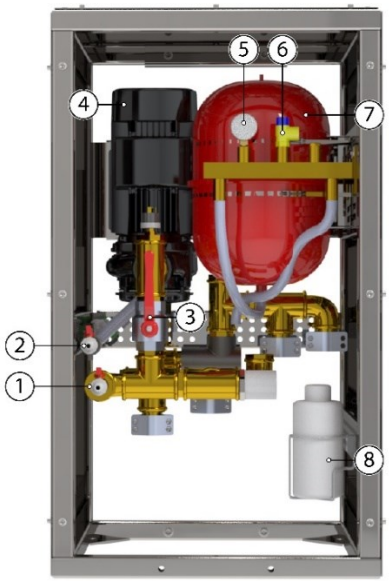

Figure 71: Cooling system components inside cooling system cabinet (COSY)

Pos.	Cooling system components
①	¾“ inlet flow connection with valve
②	"¾“ return flow connection with valve
③	Stop cock
④	Coolant pump
⑤	Manometer
⑥	Overpressure valve
⑦	Expansion vessel
⑧	Overflow vessel

Table 43: Cooling system components

Task 1: **Draining the cooling system**

Step 1 : Connect a pressure hose to the return flow connection of the cooling system inside the COSY cabinet (*see figure 71,* ②) and lead the end of the hose inside a suitable vessel.

Step 2 : Open the return flow valve (②).

Step 3 : The cooling liquid drains through the hose inside the vessel.

Step 4 : Wait until the cooling system is completely drained and then check it for any liquid remaining in the system.

17.8.2 Filling the Cooling System

⚠ WARNING	
	**Hazard by cooling liquid** The coolant used in the internal cooling system of the converter is harmful to human or animal health when touched or swallowed. ➜ Avoid oral ingestion of the coolant, since it can lead to harm to human or animal health. In case of accidental ingestion or eye contact with the coolant, seek immediate medical attention. ➜ Avoid skin contact with the coolant. ➜ Use appropriate eye protectors and protective gloves when working on the cooling system and during filling and draining of the cooling liquid.

Task 1: **Prepare Coolant**

Step 1 : The expansion tank must be pre-charged to 1 bar at approx. 20 °C on the gas side.

Step 2 : Use a suitable container to prepare approx. 55 liters of coolant with a ratio of 60% water and 40% glycol (with Antifrogen N). The actual amount needed depends on the length of the hoses used to connect the heat exchanger.

Step 3 : Open the cooling liquid container (e.g. Antifrogen N) and place it in close proximity to the converter cooling system.

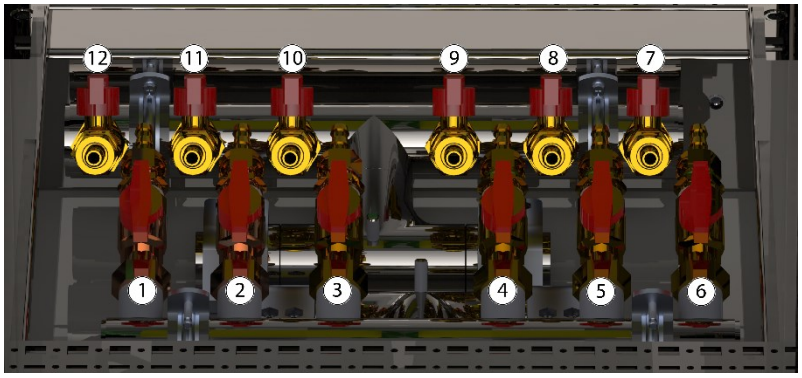

Figure 72: Water distributor, connections and valves in CON Cabinet

Pos.	Cooling System Component
①	Sub circuit with valve 1 - inlet flow
②	Sub circuit with valve 2 - inlet flow
③	Sub circuit with valve 3 - inlet flow
④	Sub circuit with valve 4 - inlet flow
⑤	Sub circuit with valve 5 - inlet flow

⑥	Sub circuit with valve 6 - inlet flow
⑦	Sub circuit with valve 6 - return flow
⑧	Sub circuit with valve 5 - return flow
⑨	Sub circuit with valve 4 - return flow
⑩	Sub circuit with valve 3 - return flow
⑪	Sub circuit with valve 2 - return flow
⑫	Sub circuit with valve 1 - return flow

Table 44: Cooling system – Coolant dispenser connections and valves inside CON cabinet

Task 2: Fill cooling system

NOTICE

Make sure that the pressure and suction hoses are completely immersed in the cooling liquid inside the cooling liquid container throughout the whole filling process, to avoid suction of air into the cooling circuit.

Step 1 : Connect the external filling pump and the cooling liquid canister using a suction hose.

Step 2 : Connect the external filling pump to the inlet flow connection *(see figure 71, ①)* with a pressure hose.

Step 3 : Open the valve on the top of the heat exchanger - if there are several heat exchangers, the valve of each heat exchanger must be opened *(see illustration below)*.

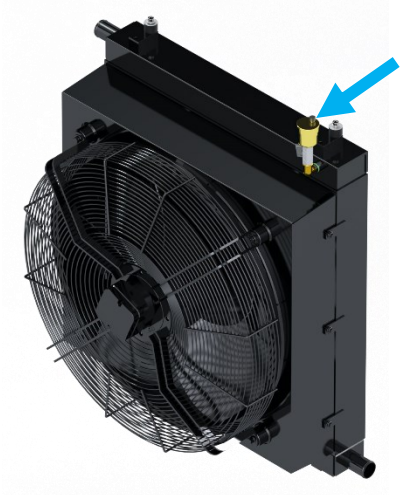

Figure 73: Valve on heat exchanger

Step 4 : Connect the return flow connection (*see figure 71,* ②) and the coolant canister with a pressure hose.

Step 5 : Close ALL valves of the sub-circuits on the water distributor of the CON cabinet (*see figure 72* ① - ⑥, ⑦ - ⑫).

Step 6 : Open the stop cock of the converter cooling system (*see figure 71,* ③).

Step 7 : Open the valves on the inlet flow connection and on the return flow connection.

Step 8 : Switch on the external filling pump and make sure that the intake hose is completely immersed in the cooling liquid inside the cooling liquid canister, so no air is sucked into the cooling circuit.

Step 9 : The main cooling circuit will be filled with coolant and the air will be removed from the circuit during this time. Wait until no more air bubbles are inside the cooling liquid canister.

Step 10 : Open the inlet flow and return flow valves of sub-circuit 1 (*see figure 72,* ① *and* ⑫).

Step 11 : Wait for 3 minutes. The sub cooling circuit will be filled with coolant and the air will be removed from the circuit during this time.

Step 12 : Shut off the inlet and return flow valve of sub circuit 1.

Step 13 : Proceed the same way for the remaining IGBT cooling circuits inside the CON cabinet.

Step 14 : Proceed the same way for the cooling circuits inside the IND cabinet.

Step 15 : Close the stopcock (*see figure 71,*③).

Step 16 : Open the valves of all connected sub-circuits.

Step 17 : Close the valve of the return flow connection (*see figure 71,* ②).

Step 18 : Wait until a pressure of 3 bar is indicated by the cooling systems´ manometer (*see figure 71,* ⑤). As soon as 3 bar have been reached, immediately shut off the inlet flow valve (*see figure 71,* ①).

Step 19 : Shut-off the external filling pump, but make sure the suction and pressure hose are still immersed in the cooling liquid inside the cooling liquid container.

Step 20 : Activate the coolant pump of the cooling system by switching on the motor protection circuit breaker 181Q1 inside the control cabinet and activate the contactor 139K2 inside the control cabinet using a suitable insulated tool.

Step 21 : Let the coolant pump run for 120 min.

Step 22 : Close the valve on the top of the heat exchanger(s) (*see figure 73*).

Step 23 : Deactivate the coolant pump of the cooling system by removing the insulated tool.

Step 24 : Check if the pressure on the cooling system manometer is indicated with 3 bar.

Step 25 : If the pressure indicated by the manometer is below 3 bar, switch the external filling pump back on an open the inlet flow valve.

Step 26 : As soon as a pressure of 3 bar has been reached, immediately shut-off the inlet flow valve and switch off the external filling pump.

Task 3: Perform a visual check of the entire cooling circuit for leaks.

17.9 Check pressure of expansion tank

Once every 5 years / When exchanging the cooling liquid / When error "pressure low" is apparent

NOTICE

The cooling system must be empty in order to perform a pressure check of the expansion tank (*see section 17.9*).

➜ Check the pressure on the expansion tank every time the cooling liquid is exchanged.

⚠ WARNING

Before performing maintenance work, make sure the system is off, cooled and not pressurized, all the electric parts are not energized, and the vessel is completely empty.

Maintenance of the expansion tank is to be performed according to the manual of the manufacturer.
ZILMET: manual_expansion_tank_537L_zilmet

Perform a pressure check of the expansion, checking that the pre-charge is at 1.5 bar.

- At least once every 5 years
- whenever the coolant of the water-cooling system is exchanged
- when converter controller reports the error message “pressure low”

The cooling system must be reduced to 0 bar in order to perform a pressure check of the expansion tank. **The necessary gas pressure is 1.5 bar**. If necessary, refill gas to 1.5 bar with compressed nitrogen. Exceptionally, the expansion tank can be filled up with compressed air. At the next maintenance the gas pre-charge pressure must be corrected with nitrogen.
The filling valve is similar to a filling valve of a car tire. Check the pressure with a tire gauge. Avoid unnecessary gas losses during testing.
See instructions below on how to perform a pressure check of the expansion tank and how to refill gas if necessary.

Task 1: **Check pressure of expansion tank**
In order to check the pressure of the expansion tank, the coolant inside the cooling systems´ circuits must be drained, until the manometer of the water-cooling system indicates a pressure of **0 bar**.

Step 1 : Drain the converter´s water cooling system like explained in section 17.8.1.3 until the manometer of the cooling system indicates a system pressure of 0 bar.

Step 2 : Connect the supplied tank filler with manometer and adapter (*see figure 75*) to the filling valve connection of the expansion vessel (*see figure 74*) and check if the nominal pressure of 1.5 bar is apparent.

Figure 74: Filling valve connection on expansion tank

Figure 75: Tank filler with manometer and adapter

NOTE: If the pressure indicated by the pressure gauge is below 1.5 bar, refill the expansion tank with gas, as described in the following:

Task 2: **Refill gas of expansion tank to 1.5 bar**

Step 1 : Connect the supplied tank filler with manometer and adapter to the filling valve connection of the expansion tank.

> **⚠ WARNING**
>
> Hold the tank filler bottle in upright position during the filling process. Don´t hold the bottle horizontally or tip the bottle during the filling process, since it could lead to injuries due to bursting material.

Step 2 : Refill gas until the connected pressure gauge is indicating a pressure of 1.5 bar.

Task 3: **Refill converter cooling system with coolant**

Step 1 : Refill the converter water-cooling system with cooling liquid like described in section 17.8.2 until the manometer of the water-cooling system indicates a pressure of 3 bar.

Step 2 : Let the coolant pump run for at least 1 hour.

Step 3 : Turn off- the internal coolant pump and check if the pressure indicated by the cooling system manometer is 3 bar.

Note: If the pressure is below 3 bar, refill cooling liquid until a pressure of 3 bar is indicated by the manometer of the water-cooling system.

17.10 Pump

⚠ WARNING

Make sure that escaping cooling water does not cause injury to persons or damage to the equipment.

- The internal pump parts are maintenance-free.
- It is important to keep the motor clean in order to ensure adequate cooling of the motor.
- If the pump is installed in dusty environments, it must be cleaned and checked regularly.
- Take the enclosure class of the motor into account when cleaning.
- The motor has maintenance-free, greased-for-life bearings.
- Pump bearings and shaft seal are maintenance free.

Maintenance of the pump is to be performed according to the manual of the manufacturer

Manufacturer:	Grundfos
Type:	CM10-2 A-R-A-E-AQQE
Manufacturer article no.:	99080211

Frost Protection

NOTICE

Before start-up after a period of inactivity, the pump and the suction pipe should be completely filled with liquid.

Pumps which are not being used during periods of frost should be drained to avoid damage.
Remove the filling and drain plugs from the pump (*see illustration below).*

Do not refit the plugs until the pump is taken into operation again.

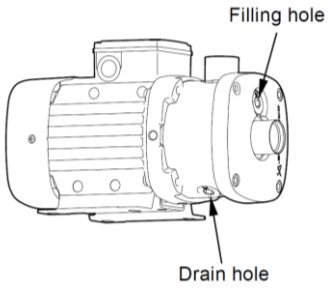

Figure 76: Position of filling hole and drain hole

17.11 Exhaust Units

Once every 6 months / fit in with existing service and maintenance plan

Periodically the extract unit must be electrically tested to ensure that the supply to the unit is continuous and that mechanically the FSD and motor open and close effectively.

It is recommended that this test be carried out twice yearly or to fit in with existing service and maintenance contracts.

The air flow failure switch should be checked for free movement and electrical conductance.

Refer to Puma technical sales leaflet for further information regarding dimensions, weights and unit performance and fan curves.

17.12 Fire Dampers

Once every 6 months / fit in with existing service and maintenance plan

The damper and motor require no service as such, but a periodic mechanical and electrical test of the working mechanisms should be carried out at least twice yearly, or to coincide with existing service and maintenance contracts.

See appropriate certified drawing of units for further information re: sizes etc.

17.13 H2 Sensors

Once every 6 months

The inspection must be carried out by trained service personnel.

The inspection intervals must be established in each individual case and shortened if necessary, depending on technical safety considerations, engineering conditions and the technical requirements of the equipment.

Contact Dräger service if you wish to take out a service contract and have any repairs carried out.

18 Container Repair

In case the container surface is damaged, repair the damaged surface as described in the following, to maintain the surface protection of the container.

18.1 Process Instructions (New Application)

Surface preparation according to DIN EN ISO 12944-4 sandblasting to surface preparation standard SA 2.5 (40 µm minimum roughness depth, medium roughness grade (G), angular blasting grit).

Primer:
REESA 2K-HS-Filling-Primer ZP
Material Nr.: 3D061
Color: ca. RAL 7035
Dry film thickness (DFT): 80 - 100 µm

Application process: spray application
Compressed air spraying, airless-spraying or electrostatic spraying according to technical data sheet.

- Processing is possible above ä minimum temperature of +8 °C. The critical dew point temperature must be exceeded by 3 °C.
- The mixing process of the 2K material must be carried out according to the enclosed technical data sheet.
- After a period of seven hours the mixed material must no longer be used and has to be disposed of, according to the legal regulations.

Topcoat:
REESA 2K-HS-PUR-OneCoat-Paint
Material Nr.: 6D062
Color: n. a.
Dry film thickness: 60 µm

Application process: spray application
Compressed air spraying, airless-spraying or electrostatic spraying according to technical data sheet.

- Furthermore, a forced drying period of 60 minutes at a temperature of +60 °C is possible. Processing is possible above ä minimum temperature of +8 °C. The critical dew point temperature must be exceeded by 3 °C. The complete reaction period of the topcoat is 7 days.
- The mixing process of the 2K material must be carried out according to the enclosed technical data sheet.
- After a period of seven hours the mixed material must no longer be used and has to be disposed of, according to the legal regulations.

18.2 Process instructions (Repair - damage down to the steel)

Surface preparation according to DIN EN ISO 12944-4 surface preparation standard PSt2:

- Removal of loose and labile coating particles.
- Removal of rust using a wire brush or sandpaper (grain size 180).
- Surface grinding of the damaged and uneven areas, as well as edge areas, using sandpaper (grain size 180) until even.
- Removal of all foreign and separating substances.

Primer:
REESA 2K-HS-Filling-Primer ZP
Material nr.: 30061
Color: ca. RAL 7035
Dry film thickness: 80 - 100 µm

Application process: spray application
Compressed air spraying, airless-spraying or electrostatic spraying according to technical data sheet.

Application process: brush application
Up to 3 coats may be required to achieve the DFT.
Intermediate drying time of the individual coats: 30 min.
Drying time between primer and topcoat: 2 hours.

- Processing is possible above ä minimum temperature of +8 °C. The critical dew point temperature must be exceeded by 3 °C.
- The mixing process of the 2K material must be carried out according to the enclosed technical data sheet.
- After a period of seven hours the mixed material must no longer be used and has to be disposed of, according to the legal regulations.

Topcoat:
REESA 2K-HS-PUR-One-Coat-Paint
Material Nr.: 60062
Color: n. a.
Dry film thickness: 60 µm

Application process: spray application
Compressed air spraying, airless-spraying or electrostatic spraying according to technical data sheet.

Application process: brush application
Up to two coats may be required to achieve the DFT.
Intermediate drying time of the individual coats: 30 min.

- Furthermore, a forced drying period of 60 minutes at a temperature of +60 °C is possible. Processing is possible above ä minimum temperature of +8 °C. The critical dew point temperature must be exceeded by 3 °C. The complete reaction period of the topcoat is 7 days.
- The mixing process of the 2K material must be carried out according to the enclosed technical data sheet.
- After a period of seven hours the mixed material must no longer be used and has to be disposed of, according to the legal regulations.

18.3 Process instructions (Repair - damage only within the topcoat)

Surface preparation according to DIN EN ISO 12944-4 surface preparation standard PSt2:

- Removal of loose and labile coating particles.
- Surface grinding of the damaged and uneven areas, as well as edge areas, using sandpaper (grain size 180) until even.
- Removal of all foreign and separating substances.

Topcoat:
REESA 2K-HS-PUR-One-Coat-Paint
Material Nr.: 60062
Color: n. a.
Dry film thickness: 60 - 80 µm

Application process: spray application
Compressed air spraying, airless-spraying or electrostatic spraying according to technical data sheet.

- Furthermore, a forced drying period of 60 minutes at a temperature of 60 °C is possible. Processing is possible above ä minimum temperature of +8 °C. The critical dew point temperature must be exceeded by 3 °C. The complete reaction period of the topcoat is 7 days.
- The mixing process of the 2K material must be carried out according to the enclosed technical data sheet.
- After a period of seven hours the mixed material must no longer be used and has to be disposed of, according to the legal regulations.

19 Settable Devices

The following table provides the manufacturer settings of the components listed in the table.

Location	Identifier	Settable Device	Setting
CIR	80Q1	AC circuit breaker 3WL I_N=1250 A / 690 V	$I_R = I_N \times 1.0$ $I_i = I_N \times 2.0$
CTRL_1	101Q1	Circuit-breaker for motor protection, 2.2 ... 3.2 A	3 A
CTRL_1	181Q1	Circuit-breaker for motor protection, 3.5 ... 5 A	5 A
CTRL_1	181Q2	Circuit-breaker for motor protection, 4.5 ... 6.3 A	4.5 A
CTRL_1	182Q1	Circuit-breaker for motor protection, 3.5 ... 5 A	5 A
CTRL_1	185B1	Thermostat -10°C … +50°C	15°C
CTRL_1	186B1	Thermostat -10°C … +50°C	5°C
CTRL_1	102G1	USV QUINT 24 V DC / 20 A	6.6 min
CTRL_1	101T1	TRIO-PS/3AC/24DC/40	26 V DC
BESS_1	101T1	TRIO-PS/3AC/24DC/40	26 V DC
BESS_1	101Q1	Circuit-breaker for motor protection, 2.2 ... 3.2 A	3 A
BESS_1	102G1	USV QUINT 24 V DC / 20 A	6.6 min
BESS_2	101T1	TRIO-PS/3AC/24DC/40	26 V DC
BESS_2	101Q1	Circuit-breaker for motor protection, 2.2 ... 3.2 A	3 A
BESS_2	102G1	USV QUINT 24 V DC / 20 A	6.6 min

Table 45: Settable devices

20 IP Addresses

The following table provides the IP-addresses set at delivery state of the listed components.

Component	IP Address
Main controller P320	192.168.5.10

Table 46: IP addresses of components

21 PLC

The following sections provide you with a description of the connection elements and the indicator lights of the PLC and gives you information regarding the handling of the unit.

For further information regarding the PLC, see device manual SIMOTION_P320-4 of the manufacturer.

21.1 Indicator Lights

The following table describes the indicator lights at the front panel of the P320 PLC.

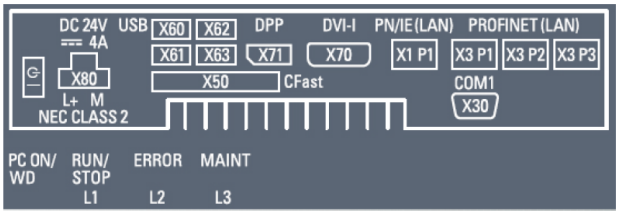

Figure 77: P320 PLC indicator lights

LED	Significance	State	Description
PC ON/ WD	Power supply	Green	BIOS ready to boot. Indicates the correct supply voltage of 3.3 V, 5 V and 12 V from the integrated power unit.
		OFF	Not relevant.
		Green/yellow flashing (1 Hz)	BIOS in POST, power switch on.
		Yellow	Idle state
RUN/STOP or L1	RUN STOP	Off	SIMOTION P Runtime is not running.
		Green	SIMOTION P320-4 in RUN.
		Yellow	SIMOTION P320-4 in STOP.
		Green/yellow: Flashes quickly (2 Hz)	DCP flashing
		Yellow: Flashes quickly (5 Hz)	FAULT state (only in combination with L2 and L3)
ERROR or L2 (SF PROFINET LED)	-	Off	SIMOTION P320-4 is working error-free.
	Error	Red: Continuous light	Bus error at the PROFINET interface.
		Red: Flashes quickly (2 Hz)	Erroneous configuration.

		Red: Flashes quickly (5 Hz)	FAULT state (only in combination with L1 and L3)
	INIT	Red: Flashes slowly (0.5 Hz)	During the INIT process, the SF PROFINET LED is con- trolled by the boot loader. The precise flashing behavior therefore cannot be determined and displayed. In the INIT state, 0.5 Hz flashing is displayed in the SI- MOTION P State. If no project has yet been loaded, 0.5 Hz flashing is also displayed for the INIT, which, in this case, is also retained in the Running state.
MAINT or L3 (SF LED)	-	Off	SIMOTION P320-4 is working error-free.
	Error	Red	An event has occurred which needs to be acknowledged (alarm, message, notification). (See Diagnostics Guide)
		Red: Flashes slowly (0.5 Hz)	License missing for licensed technology objects. Carry out the licensing to correct the error. Further information on the licensing can be found in the SIMOTION P320-4 E / SIMOTION P320-4 S Commissioning and Hardware Installation Manual.
		Red: Flashes quickly (5 Hz)	FAULT state (only in combination with L1 and L2) A fault has occurred to which the user program cannot respond. The following actions may be required to rectify the fault: ● Power OFF/ON ● Recommissioning

Table 47: P320 Indicator lights

21.2 Connection Elements

The following table describes the connection elements at the back side of the P320 PLC.

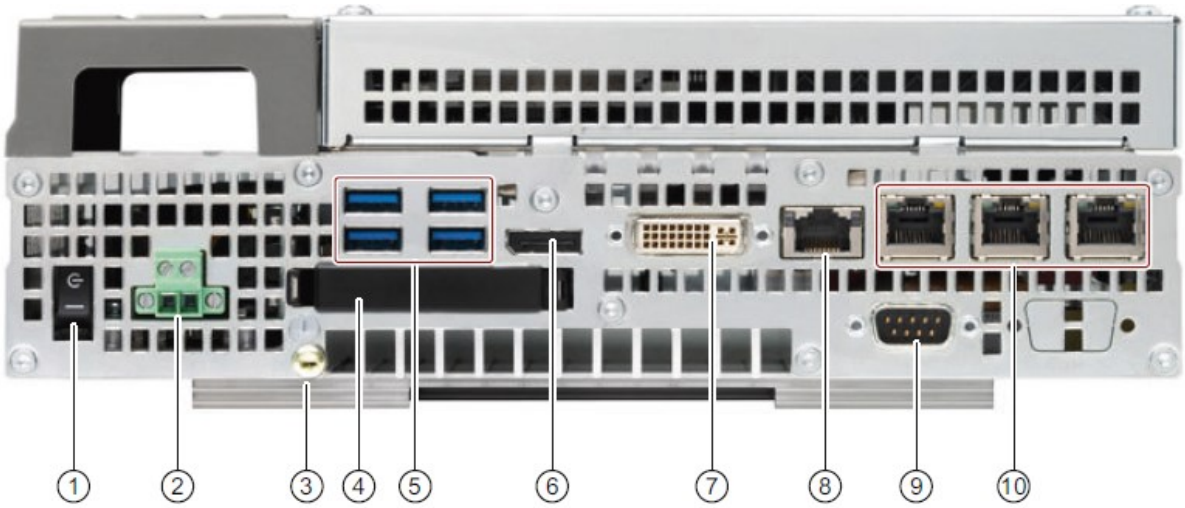

Figure 78: PLC connection elements

Pos.	Description	Description
①	On/off switch	Position OFF is the delivery state. The on/off switch does not isolate the device from the power supply.
②	24 VDC	24 VDC power supply connection
③	Protective conductor	Protective conductor terminal
④	Memory card slot	Cover for the CFast card
⑤	4 × USB 3.0	USB 3.0 high current, backward compatible with USB 2.0/1.1
⑥	Display port	Display port connection for digital monitor
⑦	DVI-I	DVI connector for CRT or LCD monitor with DVI interface
⑧	Ethernet	RJ45 Ethernet connection for 10/100/1000 Mbps
⑨	COM1	Serial interface
⑩	3 × PROFINET	PROFINET ports with three RJ45 sockets

Table 48: Table 38: PLC connection elements

21.3 PLC Connection

Follow the following steps to connect to the main PLC via PC or laptop.

Task 1: **Establish a connection to the PLC via PC or Laptop.**

Step 1 : Connect a PC or laptop via Ethernet cable to port X5 of Ethernet Switch 111A1 inside the CTRL cabinet (*see illustration below*).

Note 1: The connected PC or laptop and the converter PLC must be set to the same IP range.

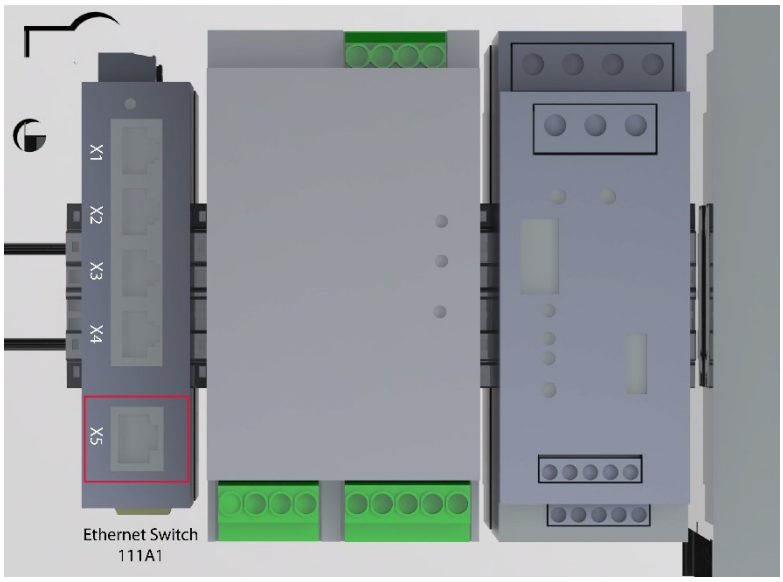

Figure 79: Ethernet Switch 111A1 - Port X5

21.4 Compiled Project Update

In case the PLC control software is not up to date at the time of commissioning, the control software must be updated.

Follow the following steps to perform a compiled project update of the main PLC.

Task 1: **Access the PLC user interface**
Step 1 : Connect to the PLC like described in section 21.3 “PLC“.
Step 2 : Open a web browser of your choice on the connected PLC or laptop
Step 3 : Type in the IP address of the PLC in the address field of your PC´s or laptop´s browser, followed by **/index.mwsl**.

Beispiel 1: 192.168.5.10/index.mwsl

The main controllers´ IP address set at delivery state is provided in Table 46.

Step 4 : The Simotion page “Home” will be displayed in the web browser of the connected PC or laptop.
✓ **The PLC user interface has been successfully accessed.**

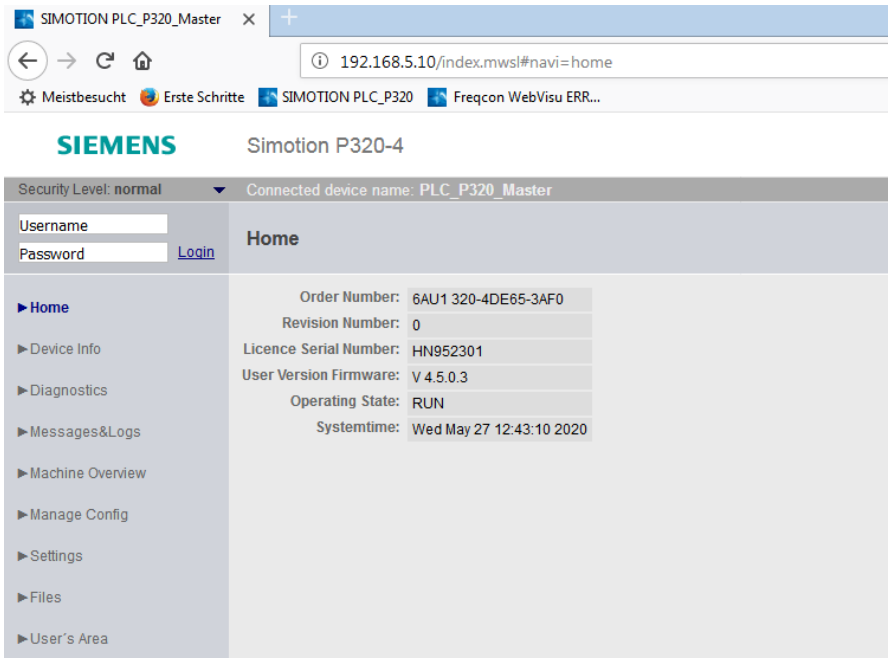

Figure 80: Connecting to the PLC user interface

Task 2: **Stop SIMOTION P320 operation.**

Step 1 : Connect to the PLC like described in section 21.3 “PLC“.

Step 2 : Select the "Settings" tab on the left-hand side of the visualization page (*see figure below,* ①).

Step 3 : In the new window, enter the following user data in the fields provided (case-sensitive):

Username: simotion

Password: simotion

Step 4 : Stop the PLC from running by clicking on the "STOP" button (②).

✓ **The PLC has been successfully stopped from operation.**

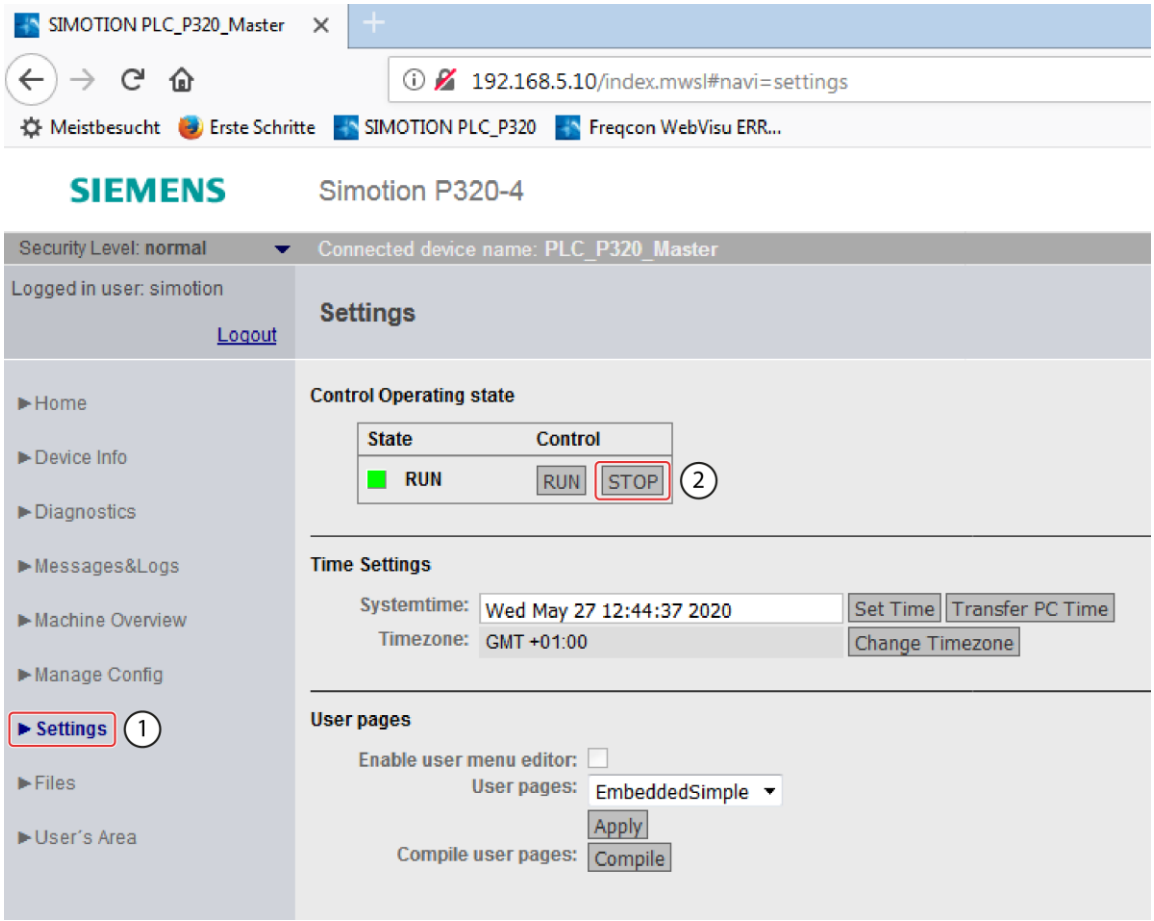

Figure 81: „Settings“ page

Task 3: **Load the compiled project ZIP archive to the SIMOTION P320 PLC**

Step 1 : Select “Manage Config” on the left site of the page (see *figure* below , ③).

Step 2 : Load the compiled project to the system by selecting the folder symbol (④).

Step 3 : Transfer the compiled project to the PLC by selecting the "Send update data" button (⑤).

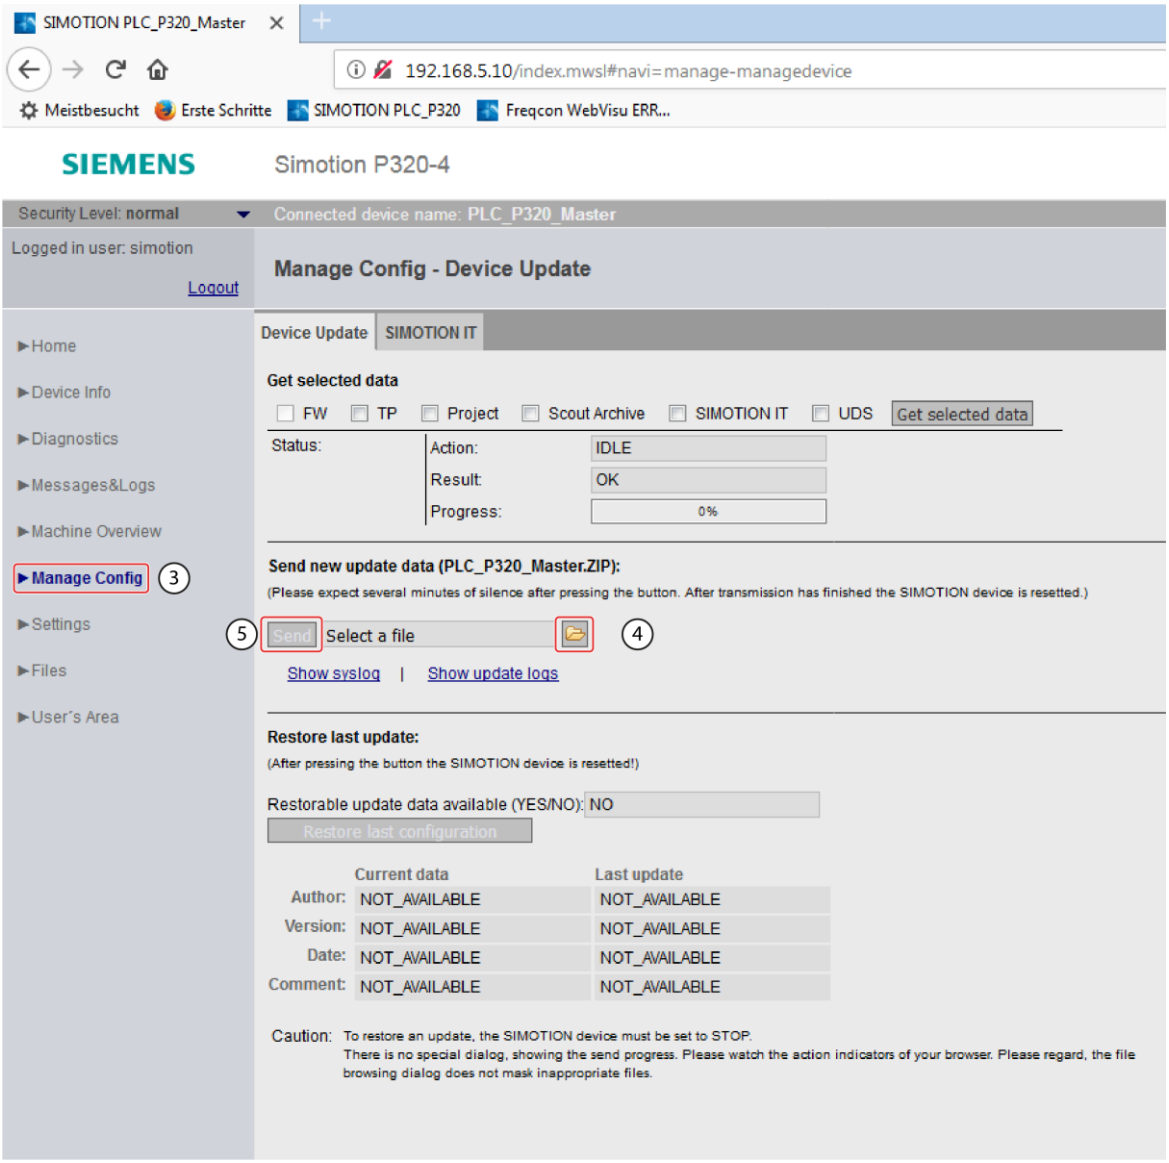

Figure 82: "Manage Config" page

Step 4 : Wait until the confirmation screen appears. The PLC reboots.

Step 5 : Wait for 5-7 minutes until the PLC has completed the reboot process.

Step 6 : Select the "Settings" tab.

Step 7 : Start the PLC by selecting the "RUN" button.

✓ **The PLC software has been successfully updated.**

22 WebVisu

FREQCON Web Visualization (WebVisu) provides granular control, real-time monitoring and visualization of key BESS functions. The WebVisu can be accessed either via the HMI touch panel on the control cabinet of the BESS or via a remote connection using a PC or laptop *(see section 22.1 "WebVisu remote connection")*.

The following sections provide you with information on handling and functionality and offer information on the individual WebVisu pages:

- Overview
- Overview DC-DC
- AC-DC Converter
- DC Link
- DC-DC Converter
- Converter Control
- Cooling
- Battery Overview
- Grid Protection Settings
- Init List
- Error List
- Action List

The individual pages can be selected by using the corresponding navigation buttons on the left side of every WebVisu page.

Note:

- Fields highlighted in grey can be adjusted by entering values inside the fields. Adjusted values are accepted by pressing the "Enter" key.
- Values must be entered in the fields without a unit.
- Fields with a white background indicate actual values.
- The selection of individual WebVisu pages depends on the user rights of the currently logged in user profile.

22.1 WebVisu remote connection

To connect to the WebVisu of the BESS via remote connection, carry out the following steps:

Task 1: **Establish a remote connection to the WebVisu of BESS**

Step 1 : Establish a connection to the PLC (main controller) in the control cabinet of the BESS by connecting a PC or laptop to the RJ45 socket of the network isolator (113T1) using an Ethernet cable.

Note 1: The connected PC or laptop and the PLC must be in the same IP range.

Step 2 : Open a web browser of your choice on the connected PLC or laptop.

Step 3 : Enter the IP address of the PLC in the address field of your PC´s or laptop´s browser.

Example: http://192.168.5.30

Note 2: The IP address of the main controller set at delivery is specified in Table 46.

Step 4 : The WebVisu page "Overview" is displayed in the web browser of the connected PC or laptop.

✓ **The remote connection to the WebVisu of BESS has been successfully established.**

22.2 Navigation

22.2.1 Home Button

The WebVisu "Overview" page can be displayed by selecting the "Home" button that appears on the left side of each WebVisu page *(see figure below)*.

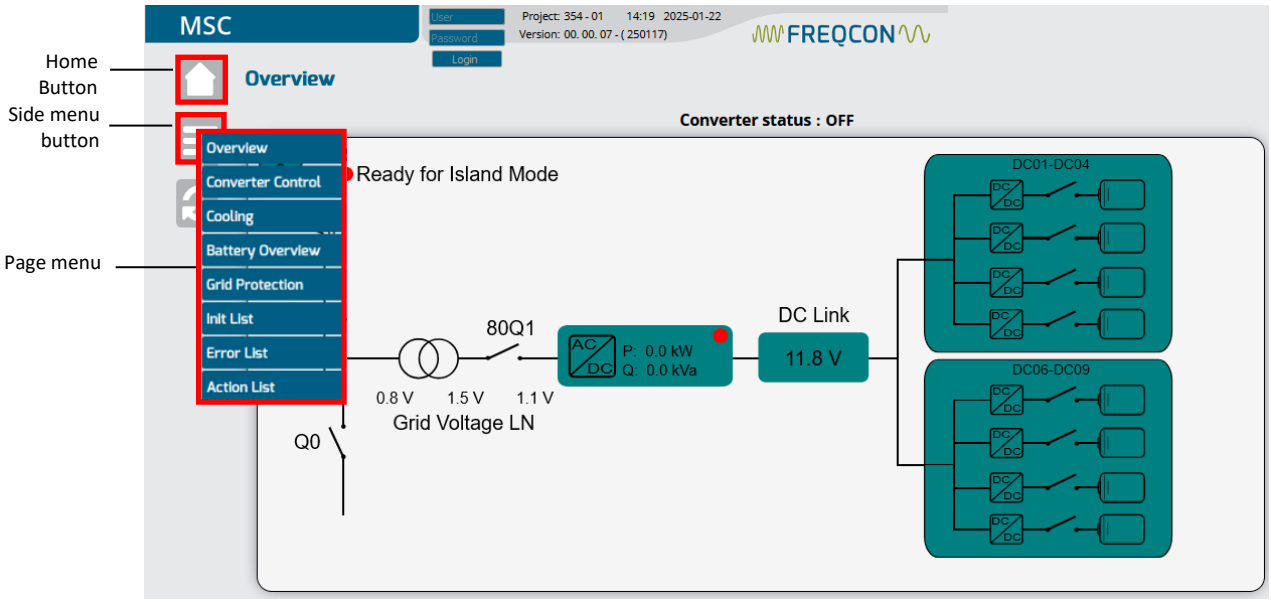

Figure 83: Navigation

22.2.2 Page Menu Button

The Page Menu is displayed via the Page Menu button that appears on every WebVisu page (*see figure 83*).

After selecting the Page Menu button, the Page Menu appears, where all WebVisu pages that can be selected with the respective user profile.

22.3 WebVisu User Interface

At the top of each WebVisu page, a user interface appears for each user (*see figure below*):

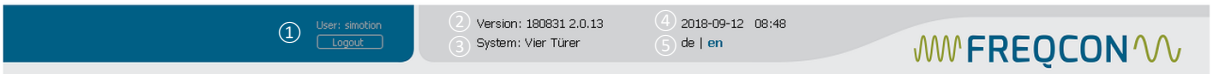

Figure 84: WebVisu user interface

The user interface provides the following information:

	Notification/Function	Description
①	User login	Type in the user profile name and password here. Press "Enter" to log in with a user profile. If a user profile is logged in, the current user profile is displayed here.
②	Version	Software version currently installed in the main control of the BESS
③	System	BESS-Identification number
④	Time/Date	Current time and date
⑤	Language selection	Choice between German and English display language

22.4 WebVisu Pages

22.4.1 Overview

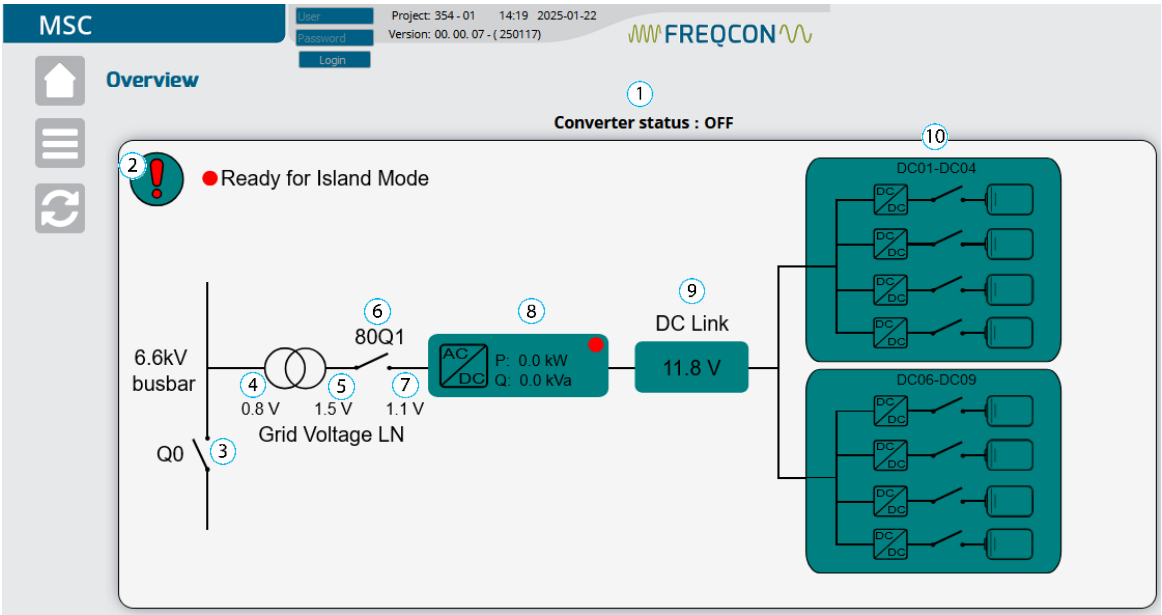

Figure 85: WebVisu page "Overview"

The "Overview" WebVisu page (*see figure above*) provides the user with a graphical overview of the main components of the BESS system and displays the following actual values:

	Description	Value
1	Converter status; for more detailed description see page “Converter control”	--
2	Green: no errors, red: errors; Clicking on the symbol takes you to the page "Error list"	--
3	MV Switch status	Open / closed
4	Voltage at the high-voltage side of the MV transformer	V
5	Voltage at the low-voltage side of the MV transformer	V
6	AC Circuit breaker 80Q1 (Switching state)	Open / closed
7	Voltage at the AC output of the converter	V
8	AC/DC Converter: active power and reactive power; Red: off, green: operation; Clicking on the symbol takes you to the page "AC-DC converter"	kW / kVA
9	DC Link voltage; Clicking on the symbol takes you to the page “DC Link”	V
10	DC/DC Converter; Clicking on the symbol takes you to the page "Overview DC-DC" of the DC Subsystems DC01-DC04 respectively DC06-DC09	--

22.4.2 Overview DC-DC

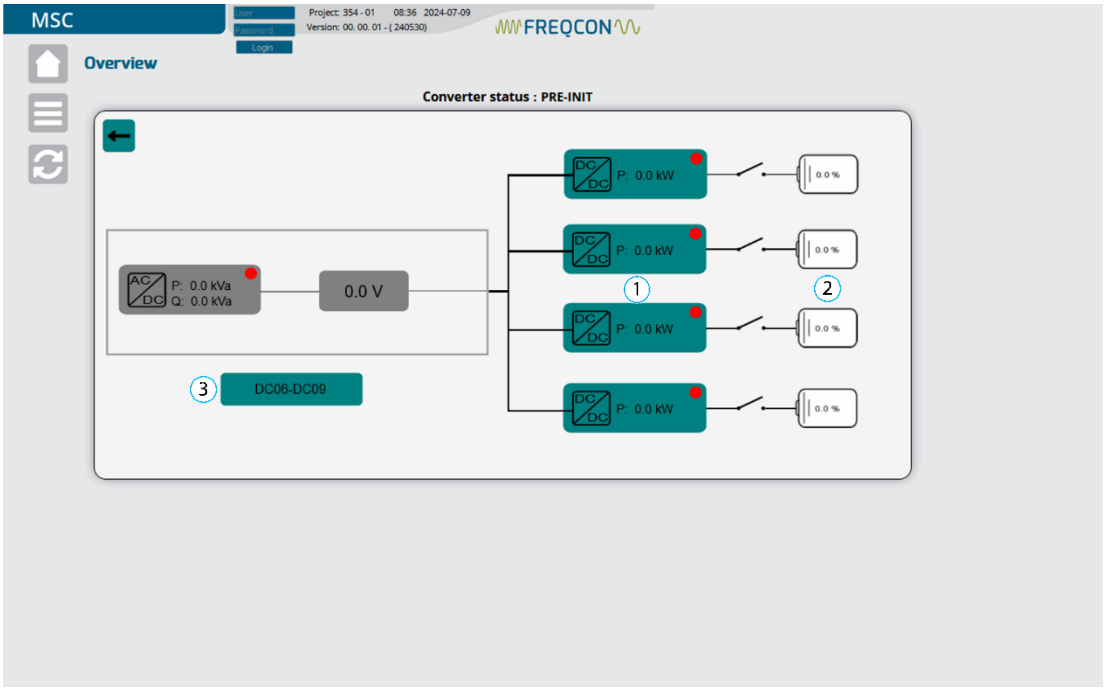

Figure 86: WebVisu page "Overview DC-DC"

The "Overview DC-DC" WebVisu page (*see figure above*) provides the user with a graphical overview of the main components of the BESS system and displays the following actual values:

	Description	Value
1	DC/DC Converter: active power (positive value: battery is charging, negative value: battery is discharging) Red: off; green: operation; Clicking on the symbol takes you to the page "DC-DC Converter" of the respective battery string	kW
2	State of charge	%
3	Switch to the page “Overview DC-DC” of the other DC Subsystem	--

22.4.3 AC-DC Converter

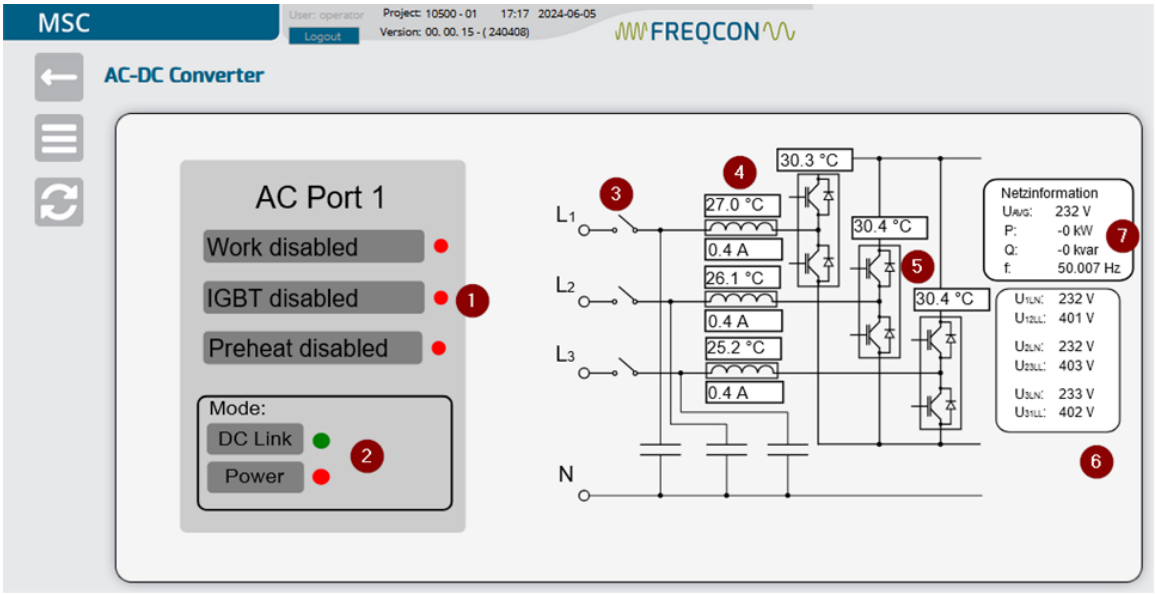

Figure 87: WebVisu page “AC-DC Converter"

	Description	Value
1	Working mode, not changeable	--
2	Control mode, not changeable	--
3	AC Circuit breaker	Open / closed
4	Inductor temperatures and phase currents through the IGBT and inductors	°C / A
5	IGBT temperatures	°C
6	String voltages and phase voltages at grid connection point	V
7	Grid information: Average voltage, active power, reactive power, grid frequency	V / kW / kvar / Hz

22.4.4 DC Link

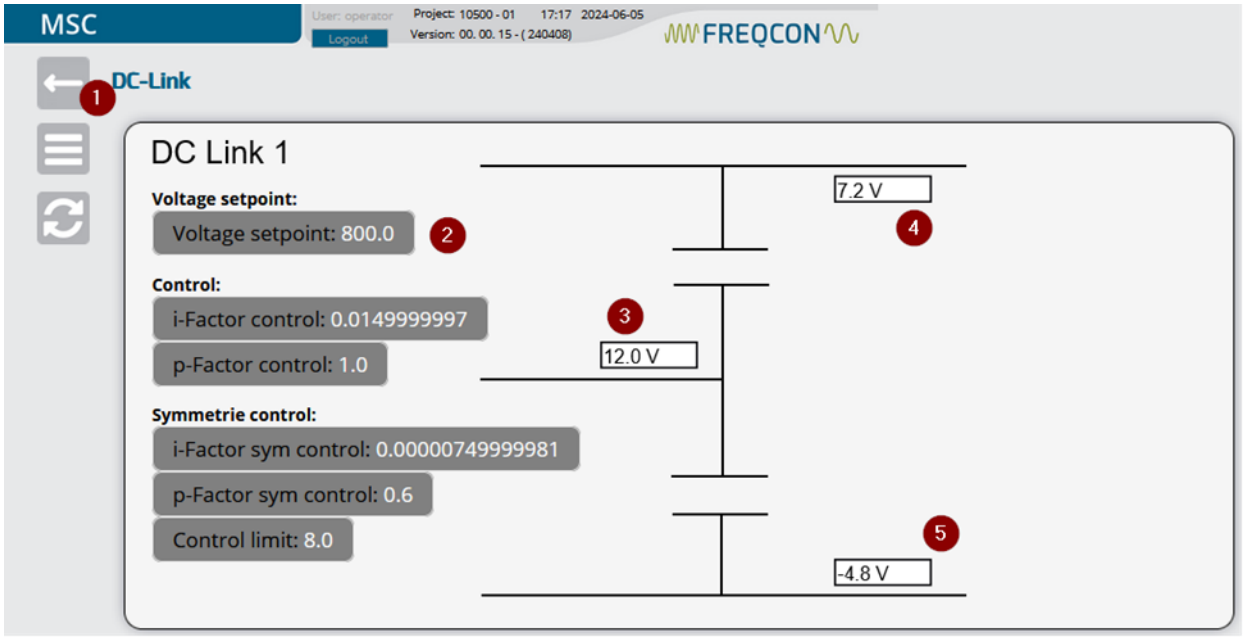

Figure 88: WebVisu page “DC Link"

	Description	Value
1	Back to “Overview”	--
2	DC link voltage setpoint, fixed value	V
3	Total DC link voltage	V
4	Positive DC link voltage	V
5	Negative DC link voltage	V

22.4.5 DC-DC Converter

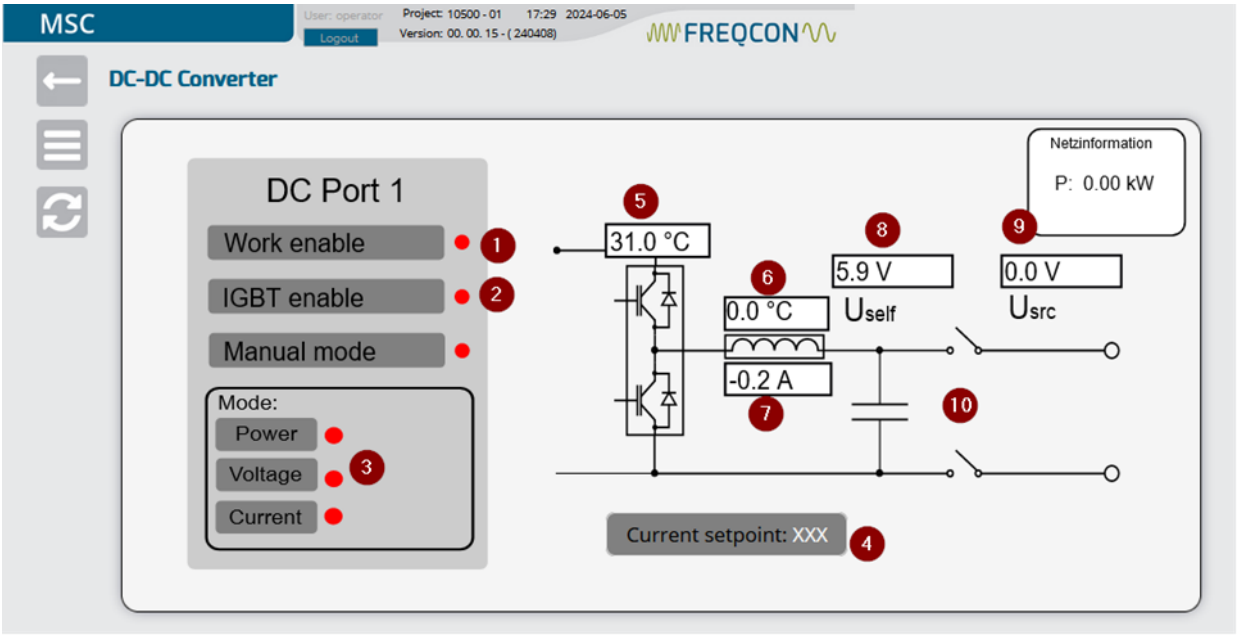

Figure 89: WebVisu page “DC-DC Converter"

	Description	Value
1	Status, not manually changeable	--
2	IGBT enabled	--
3	Control mode, not manually changeable	--
4	Manual setpoint, not available here	--
5	IGBT temperature	°C
6	Inductor temperature	°C
7	Current, filtered	A
8	Voltage at the filter capacitor	V
9	Voltage at the source	V
10	DC contactor (positive and negative)	Open / closed

22.4.6 Converter Control

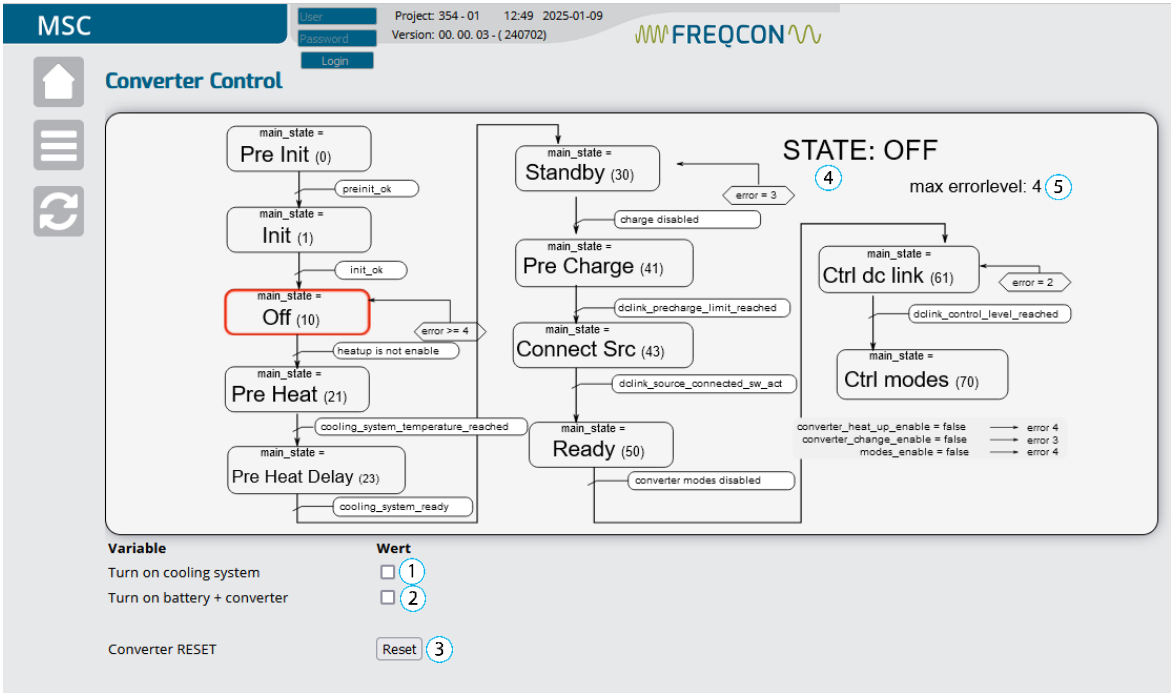

Figure 90: WebVisu page "Converter Control"

	Description	Value
1	Switch on cooling system, converter starts up to standby	--
2	Switch on converter and connect battery system	--
3	Reset converter error	--
4	The converter follows a step chain when it is switched on: Preinit: After switching on the PLC Init: Loading the initialization parameters from the memory card OFF: Converter is off Preheat: Coolant is heated to minimum temperature Preheat Delay: Temperature is held for a few minutes to reduce humidity caused by condensation on the components Standby: Cooling system is ready for use PreCharge: Charging of the DC link via resistors Connect Source: Switching on the mains switch S1 Ready: DC link is pre-charged and converter is connected to the mains, but IGBT is still off Ctrl DC Link: Switch on IGBT and regulate DC link voltage to nominal value Ctrl Modes: Normal operation	--
5	Error level 0 ... 1: Messages, warnings Error level 2: Shutdown of subsystems, e.g. a DC port Error level 3: Shutdown to standby, e.g. in the event of current or voltage overshoots, overtemperatures, etc.	--

22.4.7 Cooling

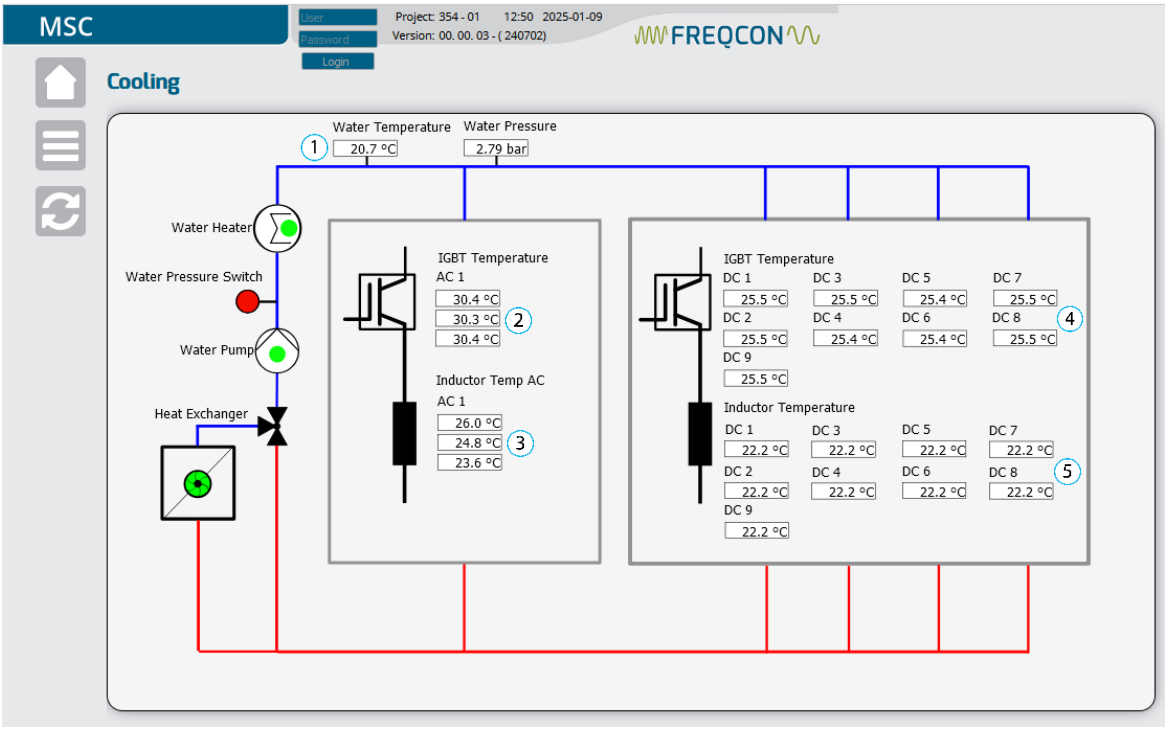

Figure 91: WebVisu page "Cooling"

The "Cooling" WebVisu pages provide the user with a graphical overview of the main components of the BESS cooling system:

- Cooling water heating element (water heater)
- Pressure switch
- Cooling water pump (water pump)
- Heat exchanger

The following actual values are displayed on the "Cooling" WebVisu page:

	Description	Value
1	Cooling water temperature inside the cooling system	°C
2	Temperatures of the AC IGBTs 1/2/3	°C
3	Temperatures of AC inductors 1/2/3	°C
4	IGBT temperatures of DC ports 1 - 8	°C
5	Inductor temperatures of DC ports 1 - 8	°C

22.4.8 Battery Overview

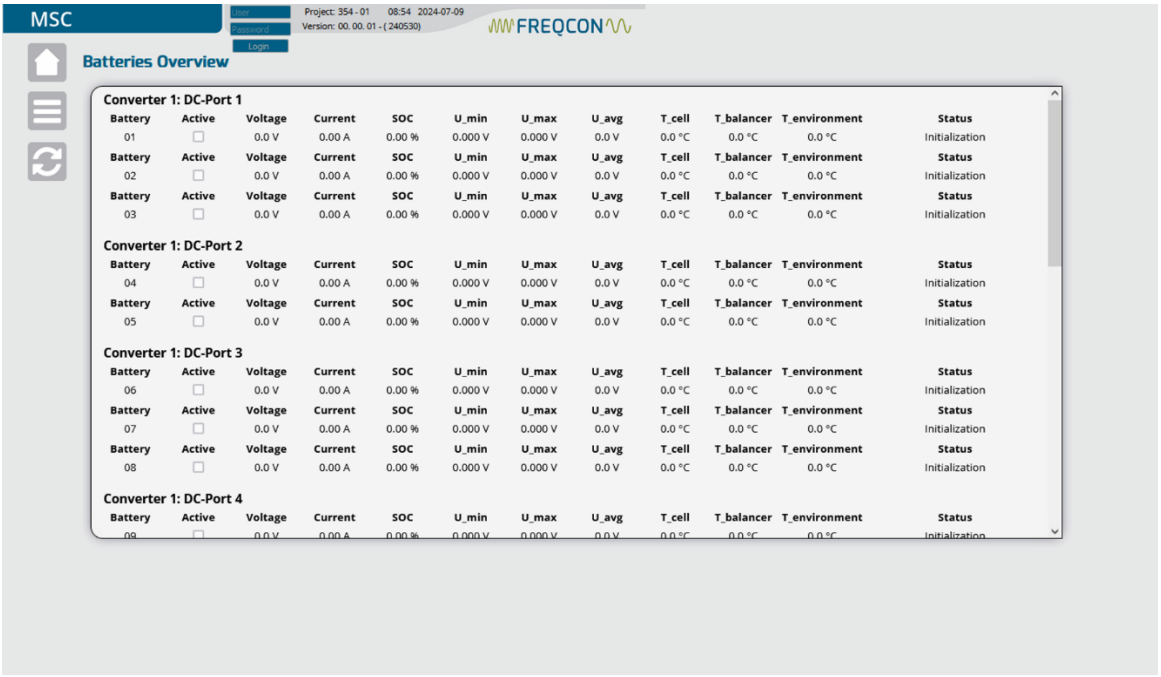

Figure 92: WebVisu page “Battery Overview"

The data is transmitted by the BMS as soon as the respective battery string is connected. If the string is disconnected from the converter system, the value "0" is displayed for current, voltage and SOC.

22.4.9 Grid Protection Settings

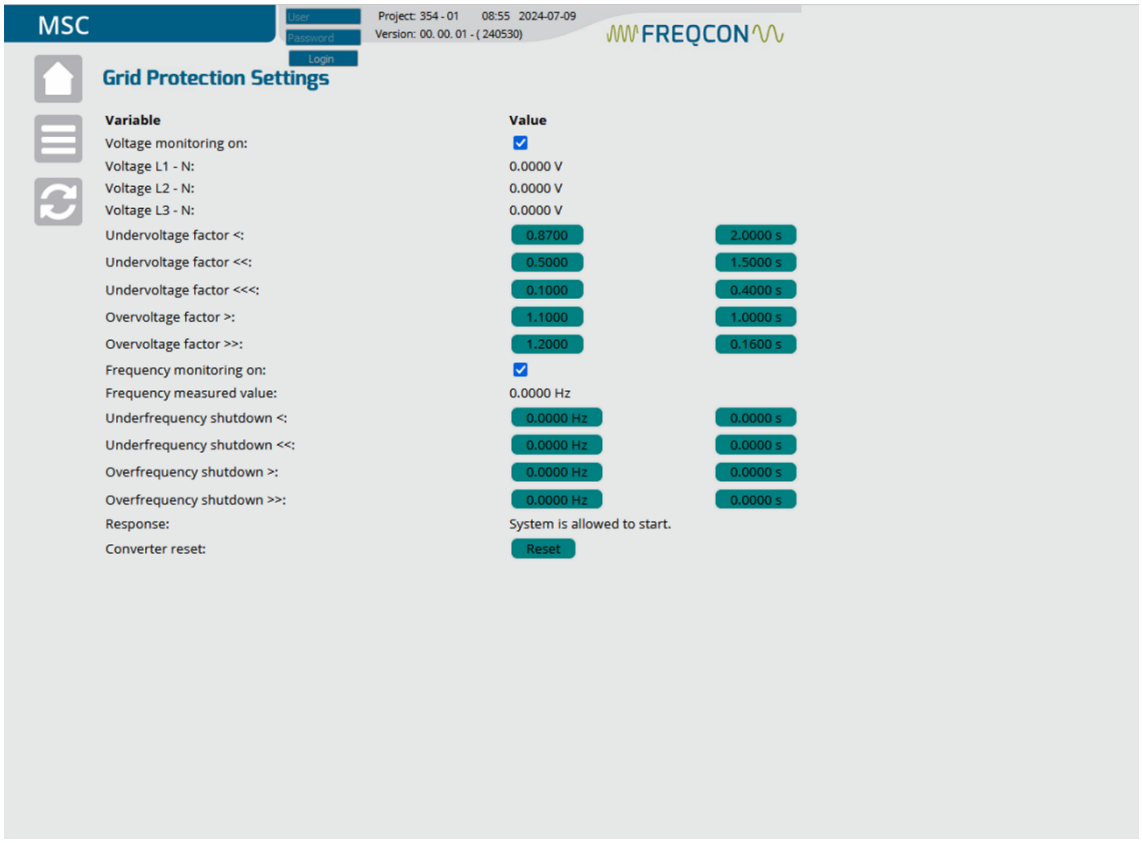

Figure 93: WebVisu page "Grid Protection Settings"

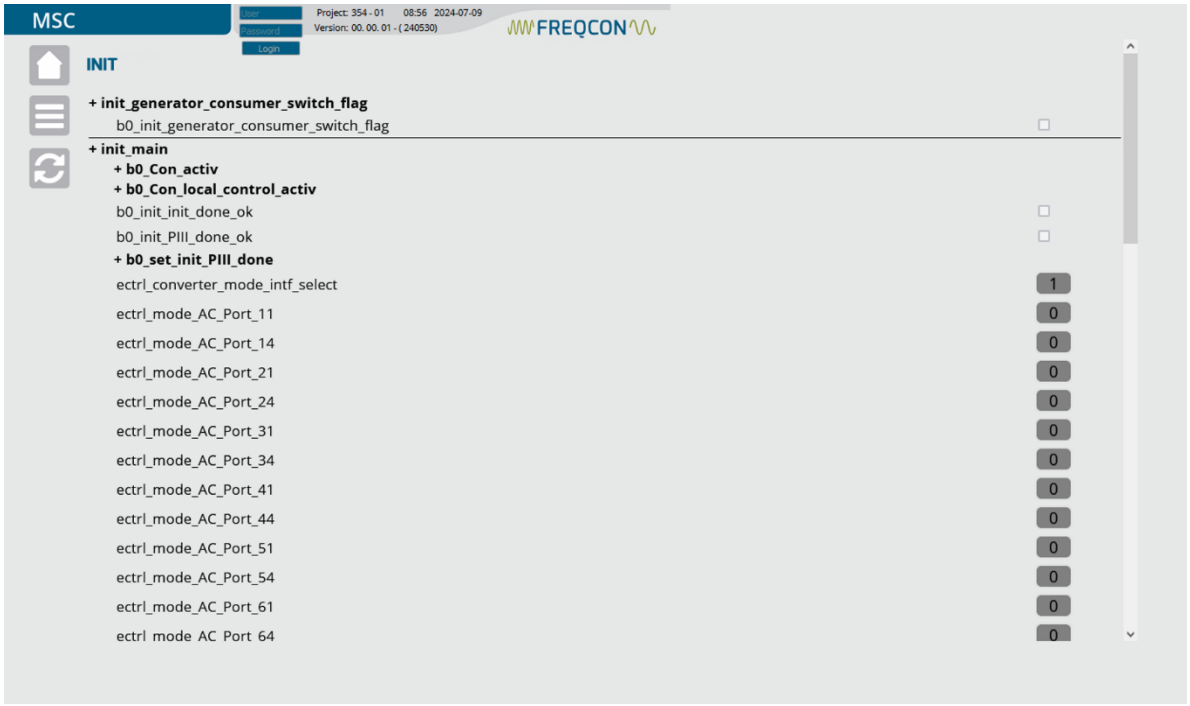
Changing the settings requires a logged in user "operator".

22.4.10 Init List



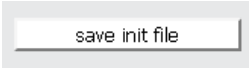


Figure 94: WebVisu page "Init List"

The WebVisu page "Init List" provides the user with an overview of all initialization values (Init values) stored in the BESS main controller.

The "Operator" user profile, as well as users who are not logged in with a profile, can only **check** the set Init values.
Only the **"Service"** and **"Factory"** user profiles can **adjust init values by** changing the value of the corresponding variable in the value field.

- ➜ To expand the parameter overview, click on the "+" sign in front of the corresponding init value.
- ➜ Fixed Init values are displayed on the right side of the corresponding Init parameter.
- ➜ To change the value, change the value inside the box and press „Enter“ on the keyboard of your PC or Laptop.
- ➜ The new value is set, but will be reset after a reboot of the controller.

Note:
To **permanently** adjust the init value, press "Enter" on your PC or laptop keyboard and then select the "Save init file" button at the bottom of the "Init" page. The selected value now remains saved even if the controller is restarted

22.4.11 Error List

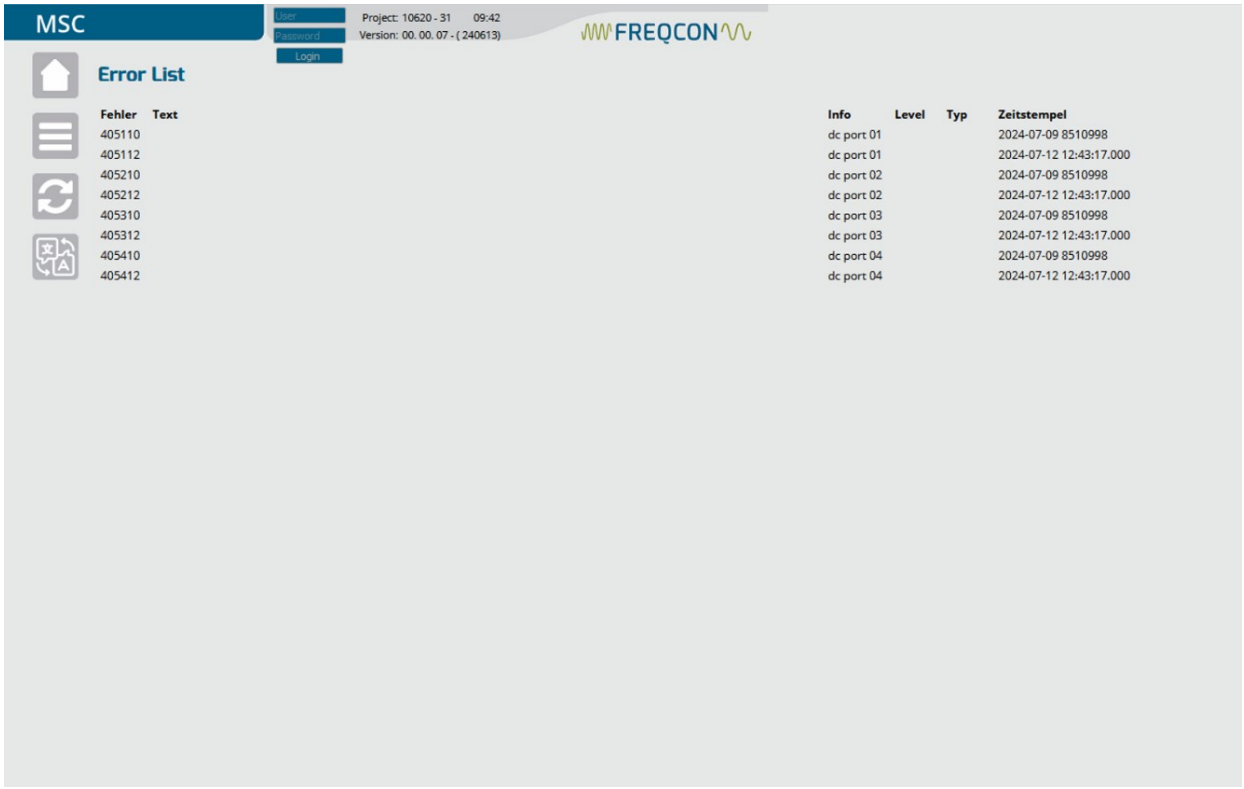

Figure 95: WebVisu page "Error list"

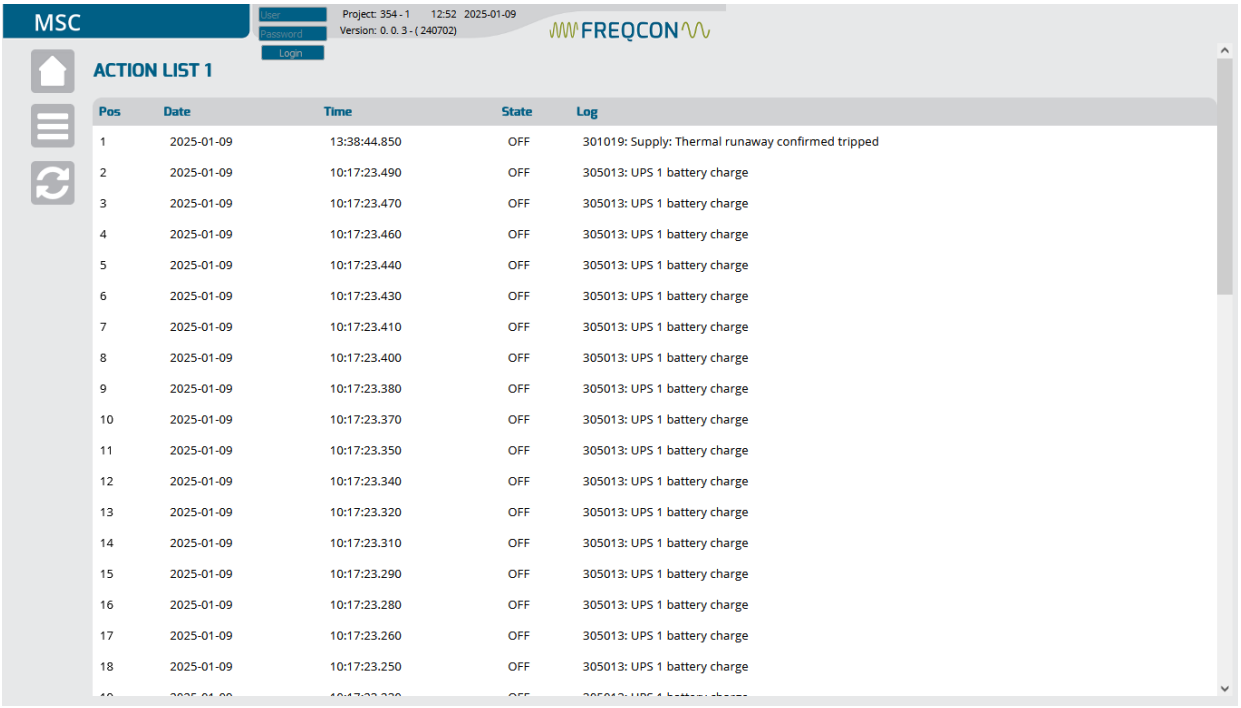


The WebVisu "Error List" page provides the user with a list of current system messages, warnings and errors.

The Error List shows only **current** system messages, warnings and errors. After a reset of a warning or error, these warning and error messages will not be any more displayed in the error list, if the warning or error is not anymore apparent.

The following information are provided inside the error list.

Name	Description
Error	Code of the individual message, warning or error.
Text	Description text for the individual message, warning or error.
Info	Additional information regarding the individual message, warning or error.
Level	Level of message, warning or error. **Note:** Level 1 to 4 are error levels and lead to a stop of the BESS system. For additional information regarding individual error messages, *see section 7.1* "Error Levels": Levels 0 and below are reporting and warning levels and do not cause the BESS system to stop.
Type	Indicates the message type of the individual message. Possible message types are: message, warning or error.
Time stamp	Indicates the time, at when the message, warning or error was detected by the controller.

22.4.12 Action List

Pos	Date	Time	State	Log
1	2025-01-09	13:38:44.850	OFF	301019: Supply: Thermal runaway confirmed tripped
2	2025-01-09	10:17:23.490	OFF	305013: UPS 1 battery charge
3	2025-01-09	10:17:23.470	OFF	305013: UPS 1 battery charge
4	2025-01-09	10:17:23.460	OFF	305013: UPS 1 battery charge
5	2025-01-09	10:17:23.440	OFF	305013: UPS 1 battery charge
6	2025-01-09	10:17:23.430	OFF	305013: UPS 1 battery charge
7	2025-01-09	10:17:23.410	OFF	305013: UPS 1 battery charge
8	2025-01-09	10:17:23.400	OFF	305013: UPS 1 battery charge
9	2025-01-09	10:17:23.380	OFF	305013: UPS 1 battery charge
10	2025-01-09	10:17:23.370	OFF	305013: UPS 1 battery charge
11	2025-01-09	10:17:23.350	OFF	305013: UPS 1 battery charge
12	2025-01-09	10:17:23.340	OFF	305013: UPS 1 battery charge
13	2025-01-09	10:17:23.320	OFF	305013: UPS 1 battery charge
14	2025-01-09	10:17:23.310	OFF	305013: UPS 1 battery charge
15	2025-01-09	10:17:23.290	OFF	305013: UPS 1 battery charge
16	2025-01-09	10:17:23.280	OFF	305013: UPS 1 battery charge
17	2025-01-09	10:17:23.260	OFF	305013: UPS 1 battery charge
18	2025-01-09	10:17:23.250	OFF	305013: UPS 1 battery charge

Figure 96: WebVisu page "Action list"

The WebVisu page "Action list" provides the user with an overview of the system events stored by the BESS controller.

The event list records the most important events and information of the BESS system, such as

- Plant operation
- Error messages
- Event messages
- Status messages

23 Troubleshooting

⚠ DANGER	
	**Electric shock due to low voltage** Severe irreparable damage to the nervous system, severe burns and death. ➜ In the event of faults, contact customer support. ➜ Have work on the energy storage device performed by service personnel only.

24 Dismantling and Disposal

24.1 Safety

For all work on the BESS observe the „Safety Instructions“ in section 2.

24.2 Dismantling

The end user is responsible for dismantling the energy storage device.

24.3 Disposal of Packaging Material

The proper disposal of packing materials is subject to national regulations and laws. If there are any doubts regarding the proper disposal of the packaging materials, ask a local disposal specialist or consult the local authorities.

The packaging my consist of the following materials:

- wooden frames
- pallets
- polyethylene foil
- plywood
- plastics
- silica gel

24.4 BESS Disposal

Always adhere the national regulations and laws regarding disposal or recycling.

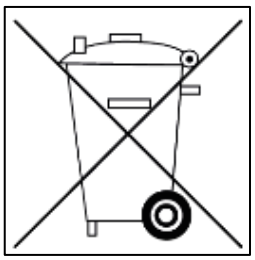
⚠ WARNING	
	**Danger to life due to improper dismantling** In the case of improper dismantling, materials can slip, tip or shift, which can result in death, severe personal injury or material damage. ➜ Only qualified personal is allowed to dismantle and dispose, wearing suitable protective clothing. ➜ Before starting to dismantle, deenergize and ground the device. ➜ Also refer to section 10.1 "Unpacking" and section 10.2 “Transport”.

⚠ WARNING	
	Do not dispose the refrigerant of the external cooling unit in the atmosphere. It should be disposed of by companies dealing with special waste collection and recovery.

The batteries installed in the FREQCON BESS Container are subject to EU Directive 2006/66/EC on batteries and accumulators as well as spent batteries and accumulators.
They must be disposed of separately.
For this purpose, the batteries categorized as industrial batteries are not to be returned to the common take-back system but directly to the manufacturer FREQCON GmbH or a third-party company, qualified for this service.

Please note that the existing regulations for the transport of hazardous materials must be observed. The transport is the responsibility of the end user.

The end user is responsible for the following when disposing of batteries:



- Packaging
- Labeling
- Return transport to the manufacturer

After transport, the battery storage system must be disposed according to local regulations.
The energy storage device also contains electrical and electronic components that must be disposed of separately from other waste in accordance with local regulations and laws.

Pay particular care for the disposal or recycling of the following components:

- Batteries
- Circuit boards
- Electrical components
- Refrigerants

NOTE:
The transport of the battery modules installed inside the battery storage system underly strict regulations (UN 3480) and are only allowed to be transported by companies, qualified for this purpose.

The energy storage device also contains electrical and electronic components that must be disposed of separately from other waste in accordance with local regulations and laws.

SPECIFICATION

TERMINAL STRIP

-XE1	MAIN POWER SUPPLY 600V AC
-XE2	DC POWER SUPPLY 1000V DC
-XE	MAIN POWER SUPPLY 400V AC
-X1	MAIN POWER 400V/230V AC
-X2	LIGHT CABINET 230V AC
-X3	CONTROL VOLTAGE 24V DC
-14X1	CONTROL VOLTAGE 24V DC (TO DC CONTACTORS)
-X5	LOW-VOLTAGE SIGNALS
-XDC0	24V DC POWER SUPPLY
-XDC1-4	CONTROL VOLTAGE 24V DC (UPS)
-XT	TRANSFER TERMINAL BLOCK 24V DC / 230V AC

WIRING COLOR

L1 / L2 / L3	=	BLACK
N	=	LIGHT BLUE (IEC) / GREY (UL)
PE	=	YELLOW-GREEN
EXTERNAL VOLTAGE	=	ORANGE
CONTROL VOLTAGE 24 V DC	=	DARK BLUE
ANALOG SIGNALS	=	WHITE

PLACE

+CTRL	=	Control cabinet
+CON	=	Converter cabinet
+IND	=	Inductor cabinet
+CIR	=	Circuit breaker cabinet
+COSY	=	Cooling System
+FAN	=	External fan

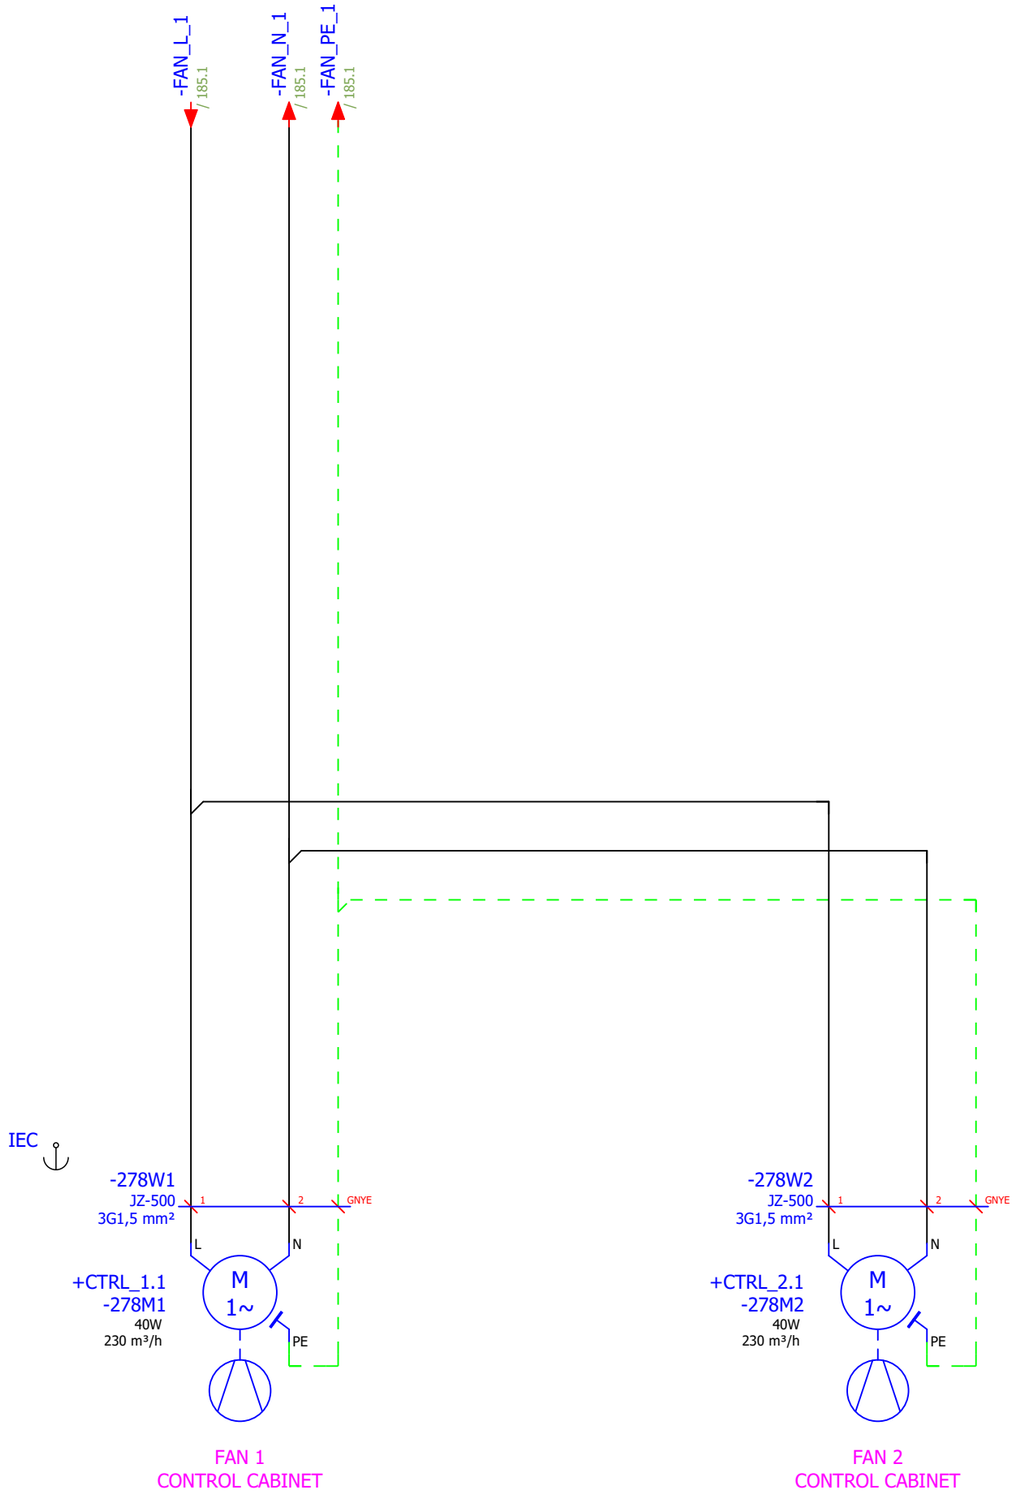
SHUTDOWN CIRCUIT BREAKERS / DC CONTACTORS

FAULT SIGNAL SAFETY RELAY



If the safety relais triggers or a failure is detected, then is the feedback "true".

Note:
The feedback circuit monitors the positions of the positive-guided NC contacts on the contactors 195K1 and 195K2. If one of their contacts latsches, then it is not possible to switch the contactors back on.

Parts list

Freqcon-mit_FRQ-Nr_ABAS_de_en

Equipment identifier Schematic / position	Amount	Designation	Order number	Manufacturer / Supplier	Freqcon ERP No.	subordinated part
-684F1 &EFS/684.0	1	SENTRON Miniature circuit breaker	5SY4332-7	Siemens	505272	
-684F1 &EFS/684.0	1	SENTRON Auxiliary current switch Mountable	5ST3010	Siemens	500737	
-684F2 &EFS/684.5	1	Combination arrester type 1+2, UC 350V AC, 3-pole, FM, for TNC systems	5SD7443-1	Siemens	504070	
-684F3 &EFS/684.2	1	SENTRON Miniature circuit breaker	5SY4332-7	Siemens	505272	
-684F3 &EFS/684.2	1	SENTRON Auxiliary current switch Mountable	5ST3010	Siemens	500737	
-684F4 &EFS/685.0	1	SENTRON Miniature circuit breaker	5SY4332-7	Siemens	505272	
-684F4 &EFS/685.0	1	SENTRON Auxiliary current switch Mountable	5ST3010	Siemens	500737	
-684F5 &EFS/685.5	1	Combination arrester type 1+2, UC 350V AC, 3-pole, FM, for TNC systems	5SD7443-1	Siemens	504070	
-687F1 &EFS/687.1	1	CIRCUIT BREAKER 230/400V 10KA 1POL C16	5SY4116-7	Siemens	503569	
-687F1 &EFS/687.1	1	PIN BUS BAR SHOCKHAZARD SAFETY, 16QMM 3 PHASE+HS	5ST3712	Siemens	10274	
-687F1 &EFS/687.1	2	End cap for pin busbars 2 - 3-phase	5ST3750	Siemens	503570	
-687F2 &EFS/687.3	1	CIRCUIT BREAKER 230/400V 10KA 1POL C16	5SY4116-7	Siemens	503569	
-687F3 &EFS/687.4	1	CIRCUIT BREAKER 230/400V 10KA 1POL C16	5SY4116-7	Siemens	503569	
-687F4 &EFS/687.5	1	CIRCUIT BREAKER 230/400V 10KA 1POL C16	5SY4116-7	Siemens	503569	
-687F5 &EFS/687.7	1	CIRCUIT BREAKER 230/400V 10KA 1POL C16	5SY4116-7	Siemens	503569	
-687F6 &EFS/687.8	1	CIRCUIT BREAKER 230/400V 10KA 1POL C16	5SY4116-7	Siemens	503569	
-687XT1 &EFS/687.1;&EFS/687.3...&EFS/687.5;&EFS/687.7;&EFS/687.8;&EFS/688.1;&EFS/688.3...&EFS/688.5;&EFS/688.7	11	Feed-through terminal block	3209510	Phoenix Contact	500583	
-687XT1 &EFS/687.1	2	End bracket for terminal block	3022276	Phoenix Contact	500588	
-687XT1 &EFS/687.1	1	End and partition plate for terminal block	3030417	Phoenix Contact	500506
