[13] **SCHEDULE**

[14] **EU - TYPE EXAMINATION CERTIFICATE No.:** **FIDI 21 ATEX 0090X**

[15] **Description of product**

Junction boxes, local control stations and local control panels are made of 'eb' and 'tb' enclosures in stainless steel, aluminium alloy or glass fiber reinforced polyester resin, of various dimensions, which shall house 'eb' and/or 'ia/ib' terminals and/or Ex components or Ex equipment made in different type of Ex protection. All Ex terminals, Ex components and Ex equipment are covered by their own ATEX certificates.

The terminals and components are be used according to data available in related component certificates, in relevant temperature range, voltage and current limitations. The terminals must be fitted in accordance with EN IEC 60079-0 and EN IEC 60079-7 with regards to creepage and clearance distances, and according to related safety instructions.

The cover is fixed to the body with screw, between body and cover a gasket guarantee the protection degree IP66 (IP66/67 depending on models). The cover of stainless-steel enclosure can be also fixed the body with looking devices, between body and cover a gasket guarantee the protection degree IP66. The IP degree of junction boxes, local control stations and local control panels depend on the components actually mounted. The walls and the bottom of the boxes can be drilled and taped with maximum size and maximum number of holes as specified in the manufacturer documents.

The cable glands or plugs, with separate ATEX certificate, made in type of protection 'eb' and/or 'tb' with appropriate IP protection are mounted according to related manufacturer's installation instructions. Each enclosure is provided with internal earthing certified terminal or earthing screw or bolt. Metal enclosures are provided by external earthing screw or bolt. Metal and polyester enclosures can be provided by passing through earthing terminals.

All enclosures can be provided by:
- Externally installed accessories as specified in manufacturer documents,
- Drain breath device type ECR3, included in this certificate,
- Internal/external earthing plate.

Maximum Power Dissipation calculation

The values specified in the tables as per clause 2.1.1 may be modified within the maximum admitted Tamb and maximum admitted internal temperature as follows.

$$Pdiss\ (W) = \frac{Tmax - Tamb}{Rth}$$

$Rth = A \times (\text{enclosure surface in } mm^2 \text{ except enclosure bottom})^B$

Legend:
Rth – Thermal resistance [K/W].
Tmax – Maximum allowed temperature inside enclosure.
Tamb – Ambient temperature of enclosure
A and B - coefficients determined for each series o enclosure. Exact values are given in manufacturer's documentation.

[16] Confidential Report No. FIDI 21 CR 075

[16.1] Routine testing

Junction boxes, local control stations and local control panels fitted with wiring, shall be subject to a routine dielectric strength test according to the clause 7.1 of IEC 60079-7.

[17] Specific Conditions of Use

- Enclosures marked with warning label: "WARNING – POTENTIAL ELECTROSTATIC CHARGING HAZARD – SEE INSTRUCTIONS" must be cleaned only by damp cloth or antistatic products.
- Apparatus equipped with drain / venting valve Technor Italsmea model ECR3:
  - the valve cannot be open when an explosive dust atmosphere is present.
  - The valve can be open when an explosive gas atmosphere is present: when open, the equipment reaches the protection degree IP44.
  - When the valve is left in open position, it should be protected from light exposure.
- On the intrinsic safety terminals, the user must only connect devices with compatible intrinsic safety parameters according to EN 60079-14.

[18] Essential Health and Safety Requirements

Covered by the conformity with harmonized standards listed under item 9.

[13] **SCHEDULE**

[14] **EU - TYPE EXAMINATION CERTIFICATE No.:** **FIDI 21 ATEX 0090X**

[15] **Description of product**

Junction boxes, local control stations and local control panels are made of 'eb' and 'tb' enclosures in stainless steel, aluminium alloy or glass fiber reinforced polyester resin, of various dimensions, which shall house 'eb' and/or 'ia/ib' terminals and/or Ex components or Ex equipment made in different type of Ex protection. All Ex terminals, Ex components and Ex equipment are covered by their own ATEX certificates.

The terminals and components are be used according to data available in related component certificates, in relevant temperature range, voltage and current limitations. The terminals must be fitted in accordance with EN IEC 60079-0 and EN IEC 60079-7 with regards to creepage and clearance distances, and according to related safety instructions.

The cover is fixed to the body with screw, between body and cover a gasket guarantee the protection degree IP66 (IP66/67 depending on models). The cover of stainless-steel enclosure can be also fixed the body with looking devices, between body and cover a gasket guarantee the protection degree IP66. The IP degree of junction boxes, local control stations and local control panels depend on the components actually mounted. The walls and the bottom of the boxes can be drilled and taped with maximum size and maximum number of holes as specified in the manufacturer documents.

The cable glands or plugs, with separate ATEX certificate, made in type of protection 'eb' and/or 'tb' with appropriate IP protection are mounted according to related manufacturer's installation instructions. Each enclosure is provided with internal earthing certified terminal or earthing screw or bolt. Metal enclosures are provided by external earthing screw or bolt. Metal and polyester enclosures can be provided by passing through earthing terminals.

All enclosures can be provided by:
- Externally installed accessories as specified in manufacturer documents,
- Drain breath device type ECR3, included in this certificate,
- Internal/external earthing plate.

Maximum Power Dissipation calculation

The values specified in the tables as per clause 2.1.1 may be modified within the maximum admitted Tamb and maximum admitted internal temperature as follows.

$$Pdiss\ (W) = \frac{Tmax - Tamb}{Rth}$$

$Rth = A \times (\text{enclosure surface in } mm^2 \text{ except enclosure bottom})^B$

Legend:
Rth – Thermal resistance [K/W].
Tmax – Maximum allowed temperature inside enclosure.
Tamb – Ambient temperature of enclosure
A and B - coefficients determined for each series o enclosure. Exact values are given in manufacturer's documentation.

EQUIPMENT:
Equipment and systems covered by this Certificate are as follows:

Junction boxes, local control stations and local control panels series AQ-…..; AR-…..; SB…..; EFE-…..; EFXE-….. use certified enclosures of various sizes, manufactured by Technor Italsmea S.p.A., type: AQ-.... ; AR-....; SB-...; ST- …, certificate IECEx FIDI 21.0012U.

Enclosures coded …-HT are made in glass fiber reinforced polyester resin or in aluminum, and covered by IECEx component certificates: IECEx PTB 08.0003U, enclosure type: 26.****** and IECEx PTB 08.0003U, enclosure type: 25.******.

Enclosures may be equipped with certified Ex equipment or Ex components and Ex terminals listed in manufacturer's documentation. Certified Ex equipment or Ex components and Ex terminals must be used according to data available in related component or equipment certificates, in particular relevant temperature range, voltage and current limitations. The cable glands or plugs, with separate IECEx certificate, made in type of protection ‘eb’ and/or ‘tb’ with appropriate IP protection are mounted according to related manufacturer’s installation instructions. Each enclosure is provided with internal earthing certified terminal or earthing screw or bolt. Metal enclosures are provided by external earthing screw or bolt. Metal and polyester enclosures can be provided by passing through earthing terminals.

All enclosures can be provided by:
- Externally installed accessories as specified in manufacturer documents,
- Drain breath device type ECR3, included in this certificate,
- Internal/external earthing plate.

For other description see Annex.

SPECIFIC CONDITIONS OF USE: YES as shown below:

- Enclosures marked with warning label: “WARNING – POTENTIAL ELECTROSTATIC CHARGING HAZARD – SEE INSTRUCTIONS” must be cleaned only by damp cloth or antistatic products.
- Apparatus equipped with drain / venting valve Technor Italsmea model ECR3:
  - the valve cannot be open when an explosive dust atmosphere is present.
  - The valve can be open when an explosive gas atmosphere is present: when open, the equipment reaches the protection degree IP44.
  - When the valve is left in open position, it should be protected from light exposure.
- On the intrinsic safety terminals, the user must only connect devices with compatible intrinsic safety parameters according to IEC 60079-14.

Maximum Power Dissipation calculation

The values specified in the tables as per clause 2.1.1 may be modified within the maximum admitted Tamb and maximum admitted internal temperature as follows.

$$Pdiss\ (W) = \frac{Tmax - Tamb}{Rth}$$

$Rth = A \times (\text{enclosure surface in } mm^2 \text{ except enclosure bottom})^B$

Legend:
Rth – Thermal resistance [K/W].
Tmax – Maximum allowed temperature inside enclosure.
Tamb – Ambient temperature of enclosure
A and B - coefficients determined for each series of enclosure. Exact values are given in manufacturer's documentation.

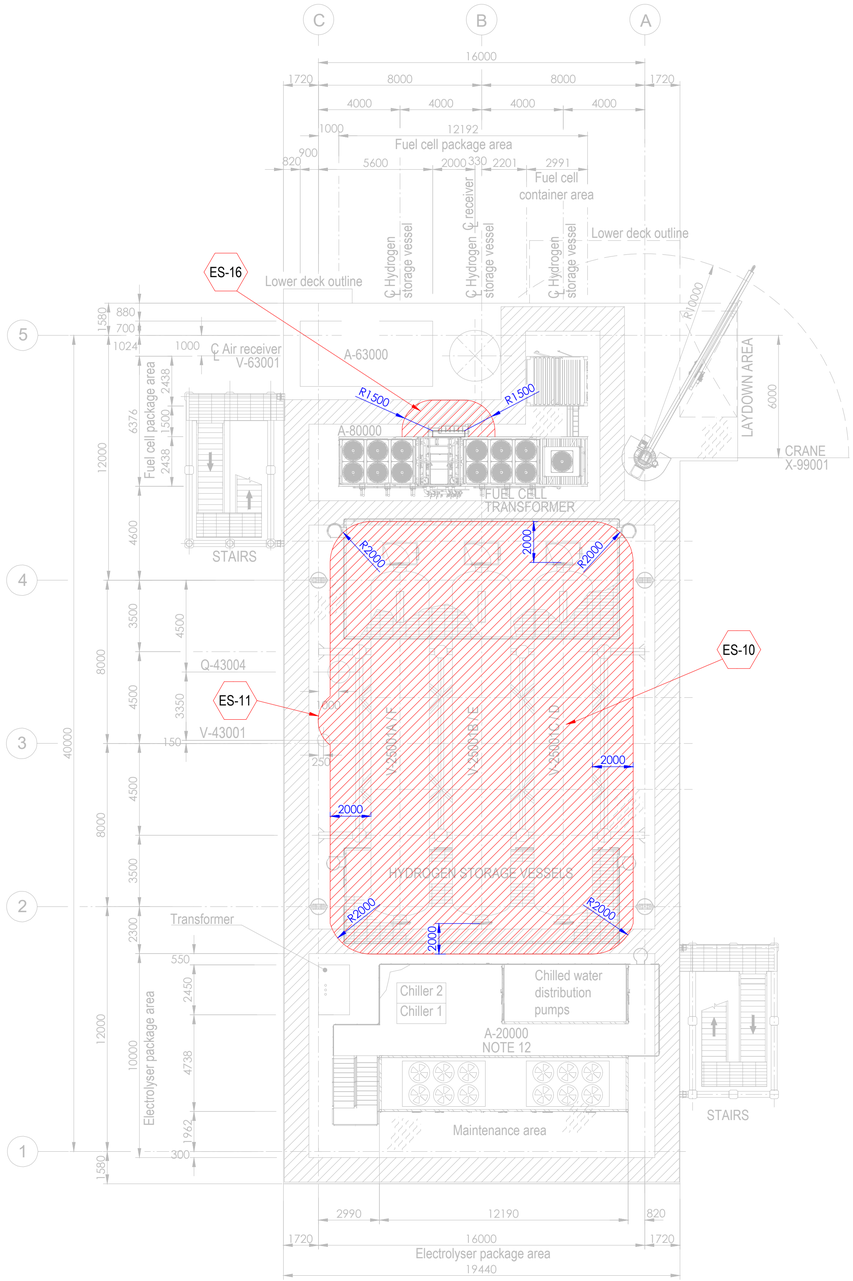
Warning labels:

WARNING – DO NOT OPEN WHEN ENERGIZED (*)
(*) Not mandatory for apparatus with protection type Ex ia Ga and Ex ib Gb.

WARNING – POTENTIAL ELECTROSTATIC CHARGING HAZARD – SEE INSTRUCTIONS

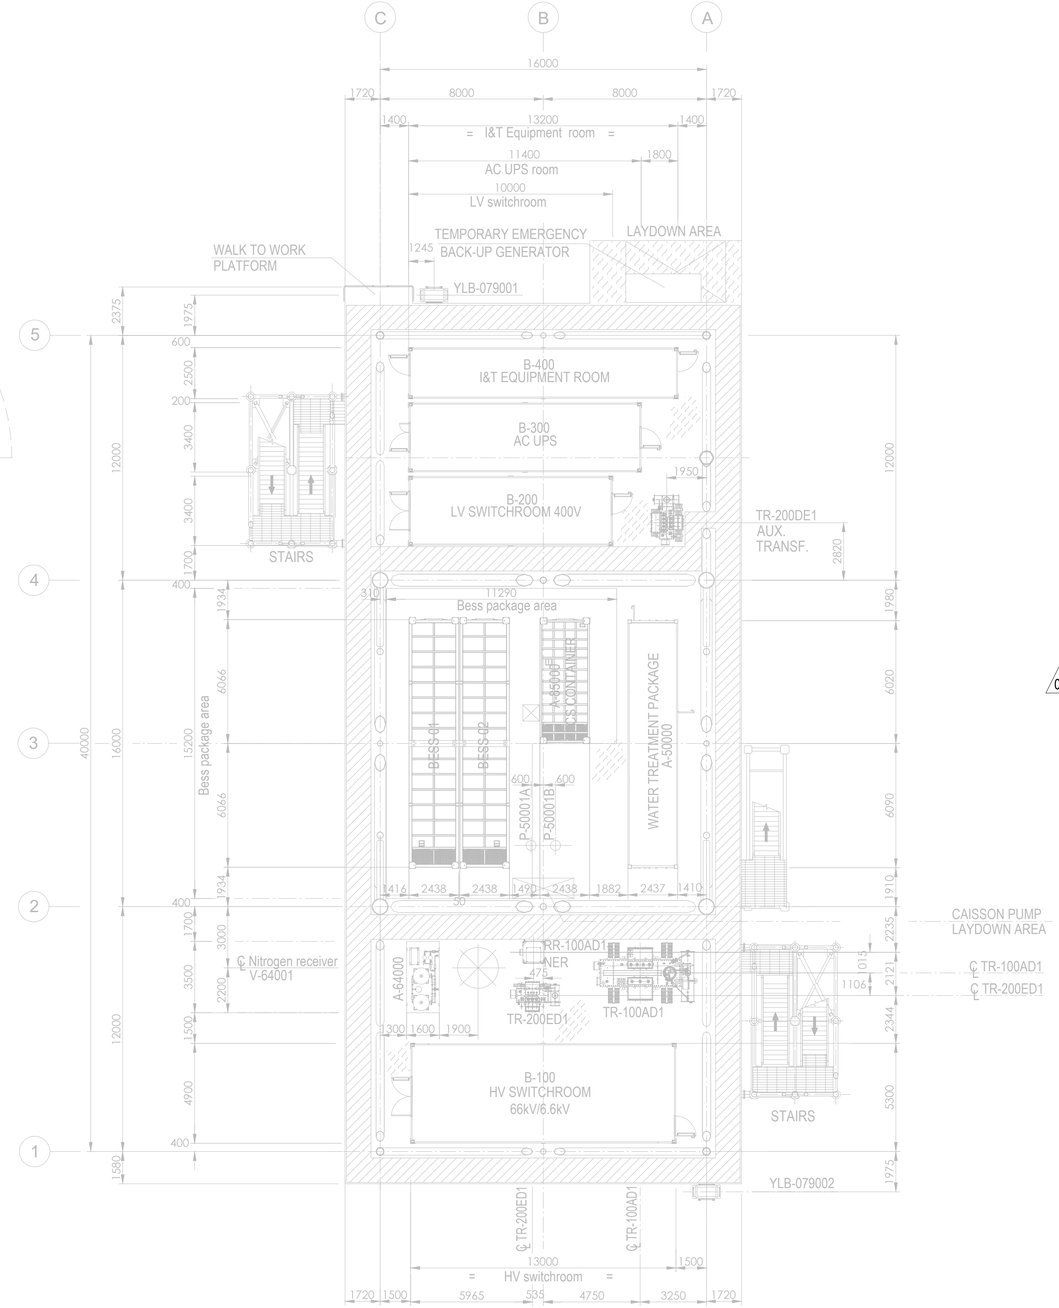
To be added when the enclosures or parts of them have a surface resistance more than 10^9 Ω or 10^{11} Ω according to IEC 60079-0 Clause 7.4.2 a), as applicable, and as per following cases:

- are equipped with transparent parts made of polycarbonate.
- for category II 2 G / EPL Gb Gas group IIC: are painted and the paint layer thickness is > 0.2mm.
- for category II 2 G / EPL Gb Gas group IIB: are painted and the paint layer thickness is > 2mm.
- for category II 2 D / EPL Db: are painted and the paint layer thickness is > 2mm.
- for category II 2 G / EPL Gb Gas group IIC: not conductive individual materials (labels), applied on painted enclosures, have exposed (chargeable area) > 2000mm^2 or, not conductive individual materials (labels), applied on unpainted (conductive earthed surface) enclosures, have exposed (chargeable area) > 8000mm^2.
- for category II 2 G /EPL Gb Gas group IIB: not conductive individual materials (labels), applied on painted enclosures, have exposed (chargeable area) > 10000mm^2 or, not conductive individual materials (labels), applied on unpainted (conductive earthed surface) enclosures, have exposed (chargeable area) > 40000mm^2.



OPEN THE VALVE ONLY WHEN THE APPARATUS IS DE-ENERGIZED AND ONLY WHEN AN EXPLOSIVE DUST ATMOSPHERE IS NOT PRESENT
To be added on Ex tb apparatus equipped with the drain / venting device ECR3.

Other warnings depend on the components actually mounted, according to the component manufacturer's documentation.



The tables below state the maximum power dissipation values (W) related to the internal temperature (Tint) and ambient temperature (Tamb).

[13] **SCHEDULE**

[14] **EU - TYPE EXAMINATION CERTIFICATE No.:** **FIDI 21 ATEX 0090X**

[15] **Description of product**

Junction boxes, local control stations and local control panels are made of 'eb' and 'tb' enclosures in stainless steel, aluminium alloy or glass fiber reinforced polyester resin, of various dimensions, which shall house 'eb' and/or 'ia/ib' terminals and/or Ex components or Ex equipment made in different type of Ex protection. All Ex terminals, Ex components and Ex equipment are covered by their own ATEX certificates.

The terminals and components are be used according to data available in related component certificates, in relevant temperature range, voltage and current limitations. The terminals must be fitted in accordance with EN IEC 60079-0 and EN IEC 60079-7 with regards to creepage and clearance distances, and according to related safety instructions.

The cover is fixed to the body with screw, between body and cover a gasket guarantee the protection degree IP66 (IP66/67 depending on models). The cover of stainless-steel enclosure can be also fixed the body with looking devices, between body and cover a gasket guarantee the protection degree IP66. The IP degree of junction boxes, local control stations and local control panels depend on the components actually mounted. The walls and the bottom of the boxes can be drilled and taped with maximum size and maximum number of holes as specified in the manufacturer documents.

The cable glands or plugs, with separate ATEX certificate, made in type of protection 'eb' and/or 'tb' with appropriate IP protection are mounted according to related manufacturer's installation instructions. Each enclosure is provided with internal earthing certified terminal or earthing screw or bolt. Metal enclosures are provided by external earthing screw or bolt. Metal and polyester enclosures can be provided by passing through earthing terminals.

All enclosures can be provided by:
- Externally installed accessories as specified in manufacturer documents,
- Drain breath device type ECR3, included in this certificate,
- Internal/external earthing plate.

Maximum Power Dissipation calculation

The values specified in the tables as per clause 2.1.1 may be modified within the maximum admitted Tamb and maximum admitted internal temperature as follows.

$$Pdiss\ (W) = \frac{Tmax - Tamb}{Rth}$$

$Rth = A \times (\text{enclosure surface in } mm^2 \text{ except enclosure bottom})^B$

Legend:
Rth – Thermal resistance [K/W].
Tmax – Maximum allowed temperature inside enclosure.
Tamb – Ambient temperature of enclosure
A and B - coefficients determined for each series o enclosure. Exact values are given in manufacturer's documentation.

[16] Confidential Report No. FIDI 21 CR 075

[16.1] Routine testing

Junction boxes, local control stations and local control panels fitted with wiring, shall be subject to a routine dielectric strength test according to the clause 7.1 of IEC 60079-7.

[17] Specific Conditions of Use

- Enclosures marked with warning label: "WARNING – POTENTIAL ELECTROSTATIC CHARGING HAZARD – SEE INSTRUCTIONS" must be cleaned only by damp cloth or antistatic products.
- Apparatus equipped with drain / venting valve Technor Italsmea model ECR3:
  - the valve cannot be open when an explosive dust atmosphere is present.
  - The valve can be open when an explosive gas atmosphere is present: when open, the equipment reaches the protection degree IP44.
  - When the valve is left in open position, it should be protected from light exposure.
- On the intrinsic safety terminals, the user must only connect devices with compatible intrinsic safety parameters according to EN 60079-14.

[18] Essential Health and Safety Requirements

Covered by the conformity with harmonized standards listed under item 9.

IECEx Certificate of Conformity

EQUIPMENT:
Equipment and systems covered by this Certificate are as follows:

Junction boxes, local control stations and local control panels series AQ-…..; AR-…..; SB…..; EFE-…..; EFXE-….. use certified enclosures of various sizes, manufactured by Technor Italsmea S.p.A., type: AQ-.... ; AR-....; SB-...; ST- …, certificate IECEx FIDI 21.0012U.

Enclosures coded …-HT are made in glass fiber reinforced polyester resin or in aluminum, and covered by IECEx component certificates: IECEx PTB 08.0003U, enclosure type: 26.****** and IECEx PTB 08.0003U, enclosure type: 25.******.

Enclosures may be equipped with certified Ex equipment or Ex components and Ex terminals listed in manufacturer's documentation. Certified Ex equipment or Ex components and Ex terminals must be used according to data available in related component or equipment certificates, in particular relevant temperature range, voltage and current limitations. The cable glands or plugs, with separate IECEx certificate, made in type of protection ‘eb’ and/or ‘tb’ with appropriate IP protection are mounted according to related manufacturer’s installation instructions. Each enclosure is provided with internal earthing certified terminal or earthing screw or bolt. Metal enclosures are provided by external earthing screw or bolt. Metal and polyester enclosures can be provided by passing through earthing terminals.

All enclosures can be provided by:
- Externally installed accessories as specified in manufacturer documents,
- Drain breath device type ECR3, included in this certificate,
- Internal/external earthing plate.

For other description see Annex.

SPECIFIC CONDITIONS OF USE: YES as shown below:

- Enclosures marked with warning label: “WARNING – POTENTIAL ELECTROSTATIC CHARGING HAZARD – SEE INSTRUCTIONS” must be cleaned only by damp cloth or antistatic products.
- Apparatus equipped with drain / venting valve Technor Italsmea model ECR3:
  - the valve cannot be open when an explosive dust atmosphere is present.
  - The valve can be open when an explosive gas atmosphere is present: when open, the equipment reaches the protection degree IP44.
  - When the valve is left in open position, it should be protected from light exposure.
- On the intrinsic safety terminals, the user must only connect devices with compatible intrinsic safety parameters according to IEC 60079-14.

Maximum Power Dissipation calculation

The values specified in the tables as per clause 2.1.1 may be modified within the maximum admitted Tamb and maximum admitted internal temperature as follows.

$$Pdiss\ (W) = \frac{Tmax - Tamb}{Rth}$$

$Rth = A \times (\text{enclosure surface in } mm^2 \text{ except enclosure bottom})^{B}$

Legend:
Rth – Thermal resistance [K/W].
Tmax – Maximum allowed temperature inside enclosure.
Tamb – Ambient temperature of enclosure
A and B - coefficients determined for each series of enclosure. Exact values are given in manufacturer's documentation.

Warning labels:

WARNING – DO NOT OPEN WHEN ENERGIZED (*)
(*) Not mandatory for apparatus with protection type Ex ia Ga and Ex ib Gb.

WARNING – POTENTIAL ELECTROSTATIC CHARGING HAZARD – SEE INSTRUCTIONS

To be added when the enclosures or parts of them have a surface resistance more than 10^9 Ω or 10^{11} Ω according to IEC 60079-0 Clause 7.4.2 a), as applicable, and as per following cases:

- are equipped with transparent parts made of polycarbonate.
- for category II 2 G / EPL Gb Gas group IIC: are painted and the paint layer thickness is > 0.2mm.
- for category II 2 G / EPL Gb Gas group IIB: are painted and the paint layer thickness is > 2mm.
- for category II 2 D / EPL Db: are painted and the paint layer thickness is > 2mm.
- for category II 2 G / EPL Gb Gas group IIC: not conductive individual materials (labels), applied on painted enclosures, have exposed (chargeable area) > 2000mm^2 or, not conductive individual materials (labels), applied on unpainted (conductive earthed surface) enclosures, have exposed (chargeable area) > 8000mm^2.
- for category II 2 G /EPL Gb Gas group IIB: not conductive individual materials (labels), applied on painted enclosures, have exposed (chargeable area) > 10000mm^2 or, not conductive individual materials (labels), applied on unpainted (conductive earthed surface) enclosures, have exposed (chargeable area) > 40000mm^2.

OPEN THE VALVE ONLY WHEN THE APPARATUS IS DE-ENERGIZED AND ONLY WHEN AN EXPLOSIVE DUST ATMOSPHERE IS NOT PRESENT
To be added on Ex tb apparatus equipped with the drain / venting device ECR3.

Other warnings depend on the components actually mounted, according to the component manufacturer's documentation.

The tables below state the maximum power dissipation values (W) related to the internal temperature (Tint) and ambient temperature (Tamb).

[13] **SCHEDULE**

[14] **EU - TYPE EXAMINATION CERTIFICATE No.:** **FIDI 21 ATEX 0090X**

[15] **Description of product**

Junction boxes, local control stations and local control panels are made of 'eb' and 'tb' enclosures in stainless steel, aluminium alloy or glass fiber reinforced polyester resin, of various dimensions, which shall house 'eb' and/or 'ia/ib' terminals and/or Ex components or Ex equipment made in different type of Ex protection. All Ex terminals, Ex components and Ex equipment are covered by their own ATEX certificates.

The terminals and components are be used according to data available in related component certificates, in relevant temperature range, voltage and current limitations. The terminals must be fitted in accordance with EN IEC 60079-0 and EN IEC 60079-7 with regards to creepage and clearance distances, and according to related safety instructions.

The cover is fixed to the body with screw, between body and cover a gasket guarantee the protection degree IP66 (IP66/67 depending on models). The cover of stainless-steel enclosure can be also fixed the body with looking devices, between body and cover a gasket guarantee the protection degree IP66. The IP degree of junction boxes, local control stations and local control panels depend on the components actually mounted. The walls and the bottom of the boxes can be drilled and taped with maximum size and maximum number of holes as specified in the manufacturer documents.

The cable glands or plugs, with separate ATEX certificate, made in type of protection 'eb' and/or 'tb' with appropriate IP protection are mounted according to related manufacturer's installation instructions. Each enclosure is provided with internal earthing certified terminal or earthing screw or bolt. Metal enclosures are provided by external earthing screw or bolt. Metal and polyester enclosures can be provided by passing through earthing terminals.

All enclosures can be provided by:
- Externally installed accessories as specified in manufacturer documents,
- Drain breath device type ECR3, included in this certificate,
- Internal/external earthing plate.

Maximum Power Dissipation calculation

The values specified in the tables as per clause 2.1.1 may be modified within the maximum admitted Tamb and maximum admitted internal temperature as follows.

$$Pdiss\ (W) = \frac{Tmax - Tamb}{Rth}$$

$Rth = A \times (\text{enclosure surface in } mm^2 \text{ except enclosure bottom})^B$

Legend:
Rth – Thermal resistance [K/W].
Tmax – Maximum allowed temperature inside enclosure.
Tamb – Ambient temperature of enclosure
A and B - coefficients determined for each series o enclosure. Exact values are given in manufacturer's documentation.

[16] Confidential Report No. FIDI 21 CR 075

[16.1] Routine testing

Junction boxes, local control stations and local control panels fitted with wiring, shall be subject to a routine dielectric strength test according to the clause 7.1 of IEC 60079-7.

[17] Specific Conditions of Use

- Enclosures marked with warning label: "WARNING – POTENTIAL ELECTROSTATIC CHARGING HAZARD – SEE INSTRUCTIONS" must be cleaned only by damp cloth or antistatic products.
- Apparatus equipped with drain / venting valve Technor Italsmea model ECR3:
  - the valve cannot be open when an explosive dust atmosphere is present.
  - The valve can be open when an explosive gas atmosphere is present: when open, the equipment reaches the protection degree IP44.
  - When the valve is left in open position, it should be protected from light exposure.
- On the intrinsic safety terminals, the user must only connect devices with compatible intrinsic safety parameters according to EN 60079-14.

[18] Essential Health and Safety Requirements

IECEx Certificate of Conformity

EQUIPMENT:
Equipment and systems covered by this Certificate are as follows:

Junction boxes, local control stations and local control panels series AQ-…..; AR-…..; SB…..; EFE-…..; EFXE-….. use certified enclosures of various sizes, manufactured by Technor Italsmea S.p.A., type: AQ-.... ; AR-....; SB-...; ST- …, certificate IECEx FIDI 21.0012U.

Enclosures coded …-HT are made in glass fiber reinforced polyester resin or in aluminum, and covered by IECEx component certificates: IECEx PTB 08.0003U, enclosure type: 26.****** and IECEx PTB 08.0003U, enclosure type: 25.******.

Enclosures may be equipped with certified Ex equipment or Ex components and Ex terminals listed in manufacturer's documentation. Certified Ex equipment or Ex components and Ex terminals must be used according to data available in related component or equipment certificates, in particular relevant temperature range, voltage and current limitations. The cable glands or plugs, with separate IECEx certificate, made in type of protection ‘eb’ and/or ‘tb’ with appropriate IP protection are mounted according to related manufacturer’s installation instructions. Each enclosure is provided with internal earthing certified terminal or earthing screw or bolt. Metal enclosures are provided by external earthing screw or bolt. Metal and polyester enclosures can be provided by passing through earthing terminals.

All enclosures can be provided by:
- Externally installed accessories as specified in manufacturer documents,
- Drain breath device type ECR3, included in this certificate,
- Internal/external earthing plate.

For other description see Annex.

SPECIFIC CONDITIONS OF USE: YES as shown below:

- Enclosures marked with warning label: “WARNING – POTENTIAL ELECTROSTATIC CHARGING HAZARD – SEE INSTRUCTIONS” must be cleaned only by damp cloth or antistatic products.
- Apparatus equipped with drain / venting valve Technor Italsmea model ECR3:
  - the valve cannot be open when an explosive dust atmosphere is present.
  - The valve can be open when an explosive gas atmosphere is present: when open, the equipment reaches the protection degree IP44.
  - When the valve is left in open position, it should be protected from light exposure.
- On the intrinsic safety terminals, the user must only connect devices with compatible intrinsic safety parameters according to IEC 60079-14.

Maximum Power Dissipation calculation

The values specified in the tables as per clause 2.1.1 may be modified within the maximum admitted Tamb and maximum admitted internal temperature as follows.

$$Pdiss\ (W) = \frac{Tmax - Tamb}{Rth}$$

$Rth = A \times (\text{enclosure surface in } mm^2 \text{ except enclosure bottom})^B$

Legend:
Rth – Thermal resistance [K/W].
Tmax – Maximum allowed temperature inside enclosure.
Tamb – Ambient temperature of enclosure
A and B - coefficients determined for each series of enclosure. Exact values are given in manufacturer's documentation.

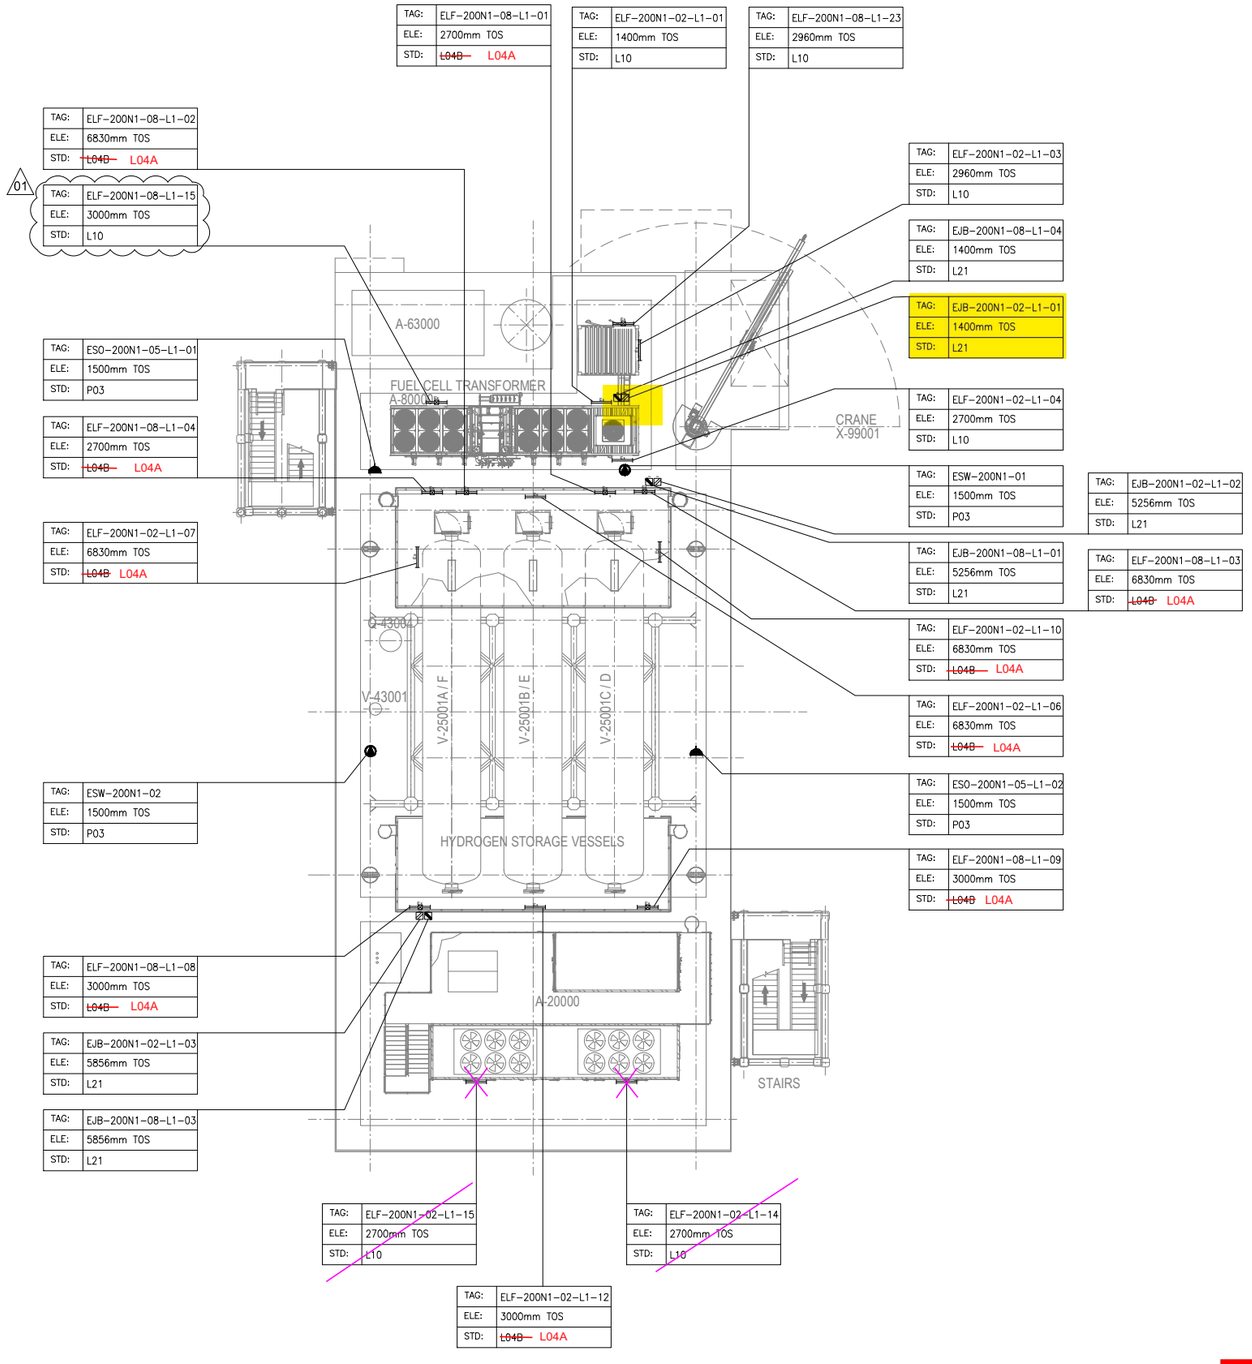
Warning labels:

WARNING – DO NOT OPEN WHEN ENERGIZED (*)
(*) Not mandatory for apparatus with protection type Ex ia Ga and Ex ib Gb.

WARNING – POTENTIAL ELECTROSTATIC CHARGING HAZARD – SEE INSTRUCTIONS

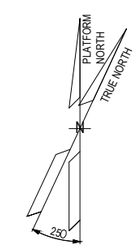
To be added when the enclosures or parts of them have a surface resistance more than 10^9 Ω or 10^{11} Ω according to IEC 60079-0 Clause 7.4.2 a), as applicable, and as per following cases:

- are equipped with transparent parts made of polycarbonate.
- for category II 2 G / EPL Gb Gas group IIC: are painted and the paint layer thickness is > 0.2mm.
- for category II 2 G / EPL Gb Gas group IIB: are painted and the paint layer thickness is > 2mm.
- for category II 2 D / EPL Db: are painted and the paint layer thickness is > 2mm.
- for category II 2 G / EPL Gb Gas group IIC: not conductive individual materials (labels), applied on painted enclosures, have exposed (chargeable area) > 2000mm^2 or, not conductive individual materials (labels), applied on unpainted (conductive earthed surface) enclosures, have exposed (chargeable area) > 8000mm^2.
- for category II 2 G /EPL Gb Gas group IIB: not conductive individual materials (labels), applied on painted enclosures, have exposed (chargeable area) > 10000mm^2 or, not conductive individual materials (labels), applied on unpainted (conductive earthed surface) enclosures, have exposed (chargeable area) > 40000mm^2.



OPEN THE VALVE ONLY WHEN THE APPARATUS IS DE-ENERGIZED AND ONLY WHEN AN EXPLOSIVE DUST ATMOSPHERE IS NOT PRESENT
To be added on Ex tb apparatus equipped with the drain / venting device ECR3.

Other warnings depend on the components actually mounted, according to the component manufacturer's documentation.



The tables below state the maximum power dissipation values (W) related to the internal temperature (Tint) and ambient temperature (Tamb).

[13] **SCHEDULE**

[14] **EU - TYPE EXAMINATION CERTIFICATE No.:** **FIDI 21 ATEX 0090X**

[15] **Description of product**

Junction boxes, local control stations and local control panels are made of 'eb' and 'tb' enclosures in stainless steel, aluminium alloy or glass fiber reinforced polyester resin, of various dimensions, which shall house 'eb' and/or 'ia/ib' terminals and/or Ex components or Ex equipment made in different type of Ex protection. All Ex terminals, Ex components and Ex equipment are covered by their own ATEX certificates.

The terminals and components are be used according to data available in related component certificates, in relevant temperature range, voltage and current limitations. The terminals must be fitted in accordance with EN IEC 60079-0 and EN IEC 60079-7 with regards to creepage and clearance distances, and according to related safety instructions.

The cover is fixed to the body with screw, between body and cover a gasket guarantee the protection degree IP66 (IP66/67 depending on models). The cover of stainless-steel enclosure can be also fixed the body with looking devices, between body and cover a gasket guarantee the protection degree IP66. The IP degree of junction boxes, local control stations and local control panels depend on the components actually mounted. The walls and the bottom of the boxes can be drilled and taped with maximum size and maximum number of holes as specified in the manufacturer documents.

The cable glands or plugs, with separate ATEX certificate, made in type of protection 'eb' and/or 'tb' with appropriate IP protection are mounted according to related manufacturer's installation instructions. Each enclosure is provided with internal earthing certified terminal or earthing screw or bolt. Metal enclosures are provided by external earthing screw or bolt. Metal and polyester enclosures can be provided by passing through earthing terminals.

All enclosures can be provided by:
- Externally installed accessories as specified in manufacturer documents,
- Drain breath device type ECR3, included in this certificate,
- Internal/external earthing plate.

Maximum Power Dissipation calculation

The values specified in the tables as per clause 2.1.1 may be modified within the maximum admitted Tamb and maximum admitted internal temperature as follows.

$$Pdiss\ (W) = \frac{Tmax - Tamb}{Rth}$$

$Rth = A \times (\text{enclosure surface in } mm^2 \text{ except enclosure bottom})^B$

Legend:
Rth – Thermal resistance [K/W].
Tmax – Maximum allowed temperature inside enclosure.
Tamb – Ambient temperature of enclosure
A and B - coefficients determined for each series o enclosure. Exact values are given in manufacturer's documentation.

[16] Confidential Report No. FIDI 21 CR 075

[16.1] Routine testing

Junction boxes, local control stations and local control panels fitted with wiring, shall be subject to a routine dielectric strength test according to the clause 7.1 of IEC 60079-7.

[17] Specific Conditions of Use

- Enclosures marked with warning label: "WARNING – POTENTIAL ELECTROSTATIC CHARGING HAZARD – SEE INSTRUCTIONS" must be cleaned only by damp cloth or antistatic products.
- Apparatus equipped with drain / venting valve Technor Italsmea model ECR3:
  - the valve cannot be open when an explosive dust atmosphere is present.
  - The valve can be open when an explosive gas atmosphere is present: when open, the equipment reaches the protection degree IP44.
  - When the valve is left in open position, it should be protected from light exposure.
- On the intrinsic safety terminals, the user must only connect devices with compatible intrinsic safety parameters according to EN 60079-14.

[18] Essential Health and Safety Requirements

Covered by the conformity with harmonized standards listed under item 9.

IECEx Certificate of Conformity

EQUIPMENT:
Equipment and systems covered by this Certificate are as follows:

Junction boxes, local control stations and local control panels series AQ-…..; AR-…..; SB…..; EFE-…..; EFXE-….. use certified enclosures of various sizes, manufactured by Technor Italsmea S.p.A., type: AQ-.... ; AR-....; SB-...; ST- …, certificate IECEx FIDI 21.0012U.

Enclosures coded …-HT are made in glass fiber reinforced polyester resin or in aluminum, and covered by IECEx component certificates: IECEx PTB 08.0003U, enclosure type: 26.****** and IECEx PTB 08.0003U, enclosure type: 25.******.

Enclosures may be equipped with certified Ex equipment or Ex components and Ex terminals listed in manufacturer's documentation. Certified Ex equipment or Ex components and Ex terminals must be used according to data available in related component or equipment certificates, in particular relevant temperature range, voltage and current limitations. The cable glands or plugs, with separate IECEx certificate, made in type of protection ‘eb’ and/or ‘tb’ with appropriate IP protection are mounted according to related manufacturer’s installation instructions. Each enclosure is provided with internal earthing certified terminal or earthing screw or bolt. Metal enclosures are provided by external earthing screw or bolt. Metal and polyester enclosures can be provided by passing through earthing terminals.

All enclosures can be provided by:
- Externally installed accessories as specified in manufacturer documents,
- Drain breath device type ECR3, included in this certificate,
- Internal/external earthing plate.

For other description see Annex.

SPECIFIC CONDITIONS OF USE: YES as shown below:

- Enclosures marked with warning label: “WARNING – POTENTIAL ELECTROSTATIC CHARGING HAZARD – SEE INSTRUCTIONS” must be cleaned only by damp cloth or antistatic products.
- Apparatus equipped with drain / venting valve Technor Italsmea model ECR3:
  - the valve cannot be open when an explosive dust atmosphere is present.
  - The valve can be open when an explosive gas atmosphere is present: when open, the equipment reaches the protection degree IP44.
  - When the valve is left in open position, it should be protected from light exposure.
- On the intrinsic safety terminals, the user must only connect devices with compatible intrinsic safety parameters according to IEC 60079-14.

Maximum Power Dissipation calculation

The values specified in the tables as per clause 2.1.1 may be modified within the maximum admitted Tamb and maximum admitted internal temperature as follows.

$$Pdiss\ (W) = \frac{Tmax - Tamb}{Rth}$$

$Rth = A \times (\text{enclosure surface in } mm^2 \text{ except enclosure bottom})^B$

Legend:
Rth – Thermal resistance [K/W].
Tmax – Maximum allowed temperature inside enclosure.
Tamb – Ambient temperature of enclosure
A and B - coefficients determined for each series of enclosure. Exact values are given in manufacturer's documentation.

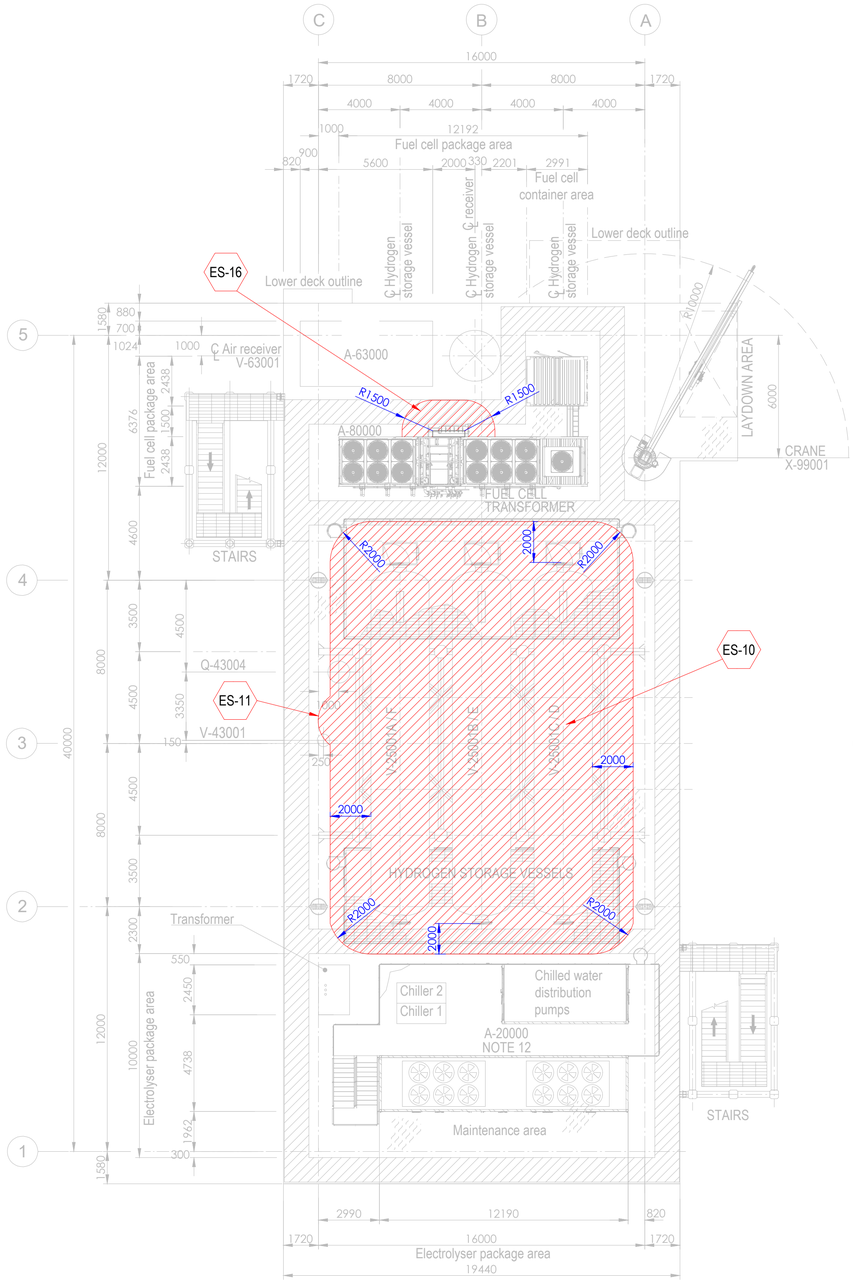
Warning labels:

WARNING – DO NOT OPEN WHEN ENERGIZED (*)
(*) Not mandatory for apparatus with protection type Ex ia Ga and Ex ib Gb.

WARNING – POTENTIAL ELECTROSTATIC CHARGING HAZARD – SEE INSTRUCTIONS

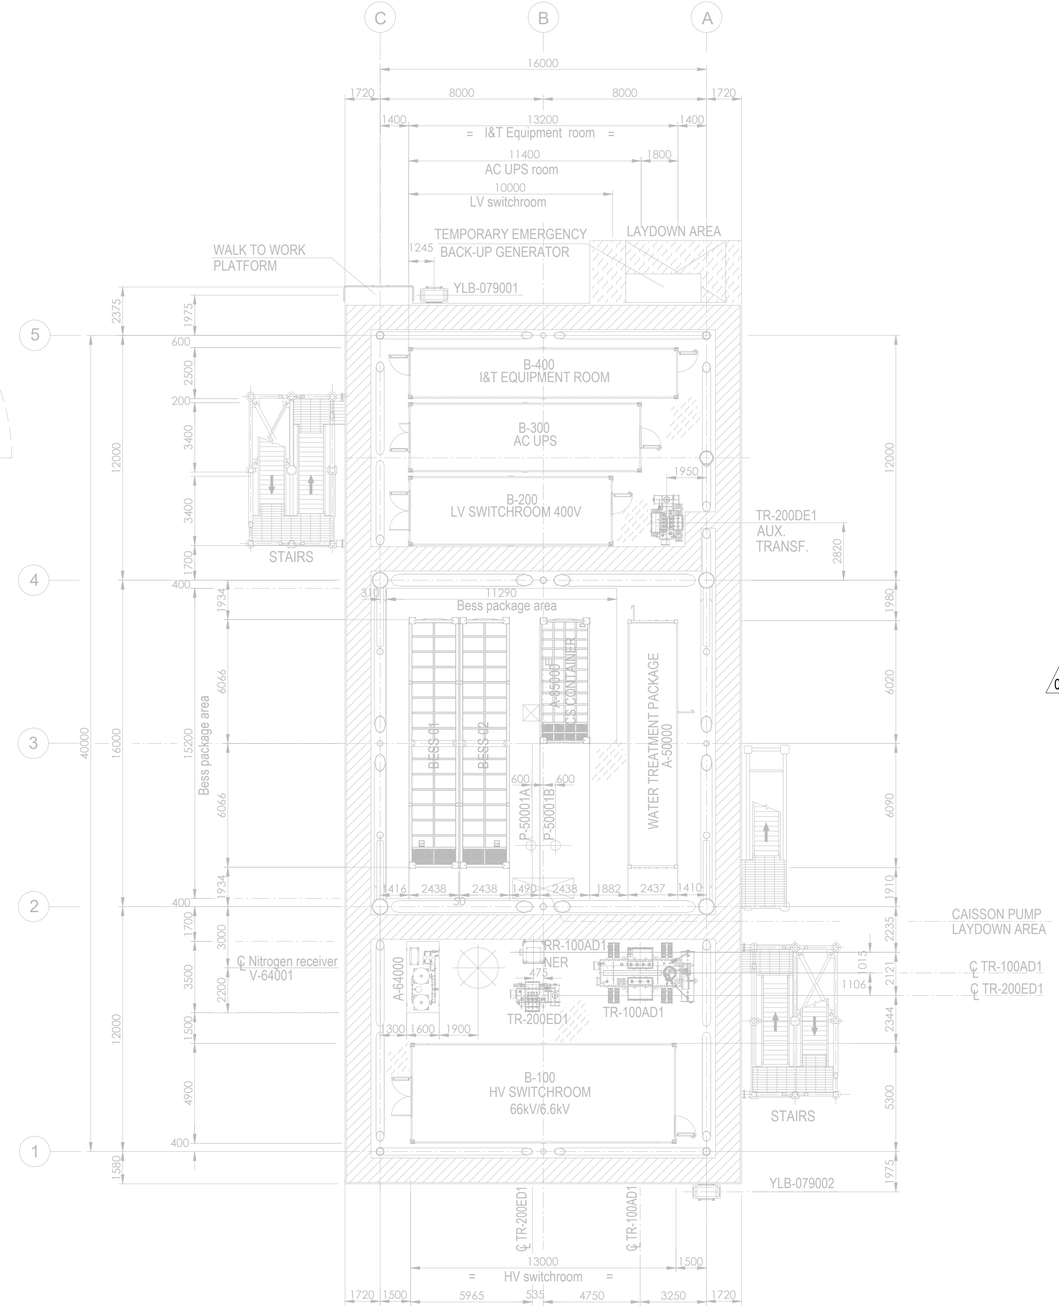
To be added when the enclosures or parts of them have a surface resistance more than 10^9 Ω or 10^{11} Ω according to IEC 60079-0 Clause 7.4.2 a), as applicable, and as per following cases:

- are equipped with transparent parts made of polycarbonate.
- for category II 2 G / EPL Gb Gas group IIC: are painted and the paint layer thickness is > 0.2mm.
- for category II 2 G / EPL Gb Gas group IIB: are painted and the paint layer thickness is > 2mm.
- for category II 2 D / EPL Db: are painted and the paint layer thickness is > 2mm.
- for category II 2 G / EPL Gb Gas group IIC: not conductive individual materials (labels), applied on painted enclosures, have exposed (chargeable area) > 2000mm^2 or, not conductive individual materials (labels), applied on unpainted (conductive earthed surface) enclosures, have exposed (chargeable area) > 8000mm^2.
- for category II 2 G /EPL Gb Gas group IIB: not conductive individual materials (labels), applied on painted enclosures, have exposed (chargeable area) > 10000mm^2 or, not conductive individual materials (labels), applied on unpainted (conductive earthed surface) enclosures, have exposed (chargeable area) > 40000mm^2.



OPEN THE VALVE ONLY WHEN THE APPARATUS IS DE-ENERGIZED AND ONLY WHEN AN EXPLOSIVE DUST ATMOSPHERE IS NOT PRESENT
To be added on Ex tb apparatus equipped with the drain / venting device ECR3.

Other warnings depend on the components actually mounted, according to the component manufacturer's documentation.



The tables below state the maximum power dissipation values (W) related to the internal temperature (Tint) and ambient temperature (Tamb).

ONLY the first and the last lighting fixture of all circuits are connected to earthing system. The earthing continuity of the intermediate lighting fixtures of the circuits is guaranteed by the using of the first and the last lighting fixture earthing connection which is permanently connected to the earthing system as per the typical below.

Refer also to TYP. "E05" for Lighting Fixtures.

11 Description

The LifEx is a range of linear LED lighting fixtures that are available in three different configurations for different applications, designated as the LifEx-ME, LifEx-MT and LifEx-MN.

LifEx-ME

The LifEx-ME version has an Equipment Protection Level of EPL Gb and Db and utilises types of protection increased safety (eb) and dust protection by enclosure (tb), along with encapsulation (mb) for the light source and flameproof (db) for the driver.

It is constructed from an aluminium enclosure, with either a glass or polycarbonate lens and with optional polycarbonate diffuser.

LifEx-MN

The LifEx-MN version has an Equipment Protection Level of EPL Gc and Db and utilises types of protection increased safety (ec) and dust protection by enclosure (tb).

It is constructed from an aluminium enclosure, with polycarbonate diffuser and/or with optional glass or polycarbonate lens.

LifEx-MT

The LifEx-MT versions has an Equipment Protection Level of EPL Db and utilises types of protection dust protection by enclosure (tb).

It is constructed from an aluminium enclosure, with polycarbonate diffuser and/or with optional glass or polycarbonate lens.

Design Options

Every configuration is available in lengths ranging from 300 mm to 1500 mm, and power ratings up to a maximum of 105W of nominal power.

The LifEx can be used in only normal service, in only emergency service or in normal and emergency service.

The minimum ambient temperature for the range is:

- -60°C for versions without battery
- -60°C for versions with the battery heater
- -20°C for versions with battery

The range is available with the following maximum ambient temperatures:

	With glass lens and with/without polycarbonate diffuser	With Polycarbonate lens and with/without polycarbonate diffuser	Without lens polycarbonate diffuser only

Table 1: Maximum Ambient Temperatures

The following tables provide the Temperature Class (EPL Gb) and Maximum Surface Temperature (EPL Db) for each LifEx type, with the following notes:

- The LifEx-MN with an ambient temperature greater than 50°C is T5 or T4. T6 is not included.
- The Temperature Class (EPL Gb) and Maximum Surface Temperature (EPL Db) in the tables below are not applicable when the ambient temperature is not permitted in the above maximum ambient temperature range table.

13. (For example, the LifEx-M...0660 is not permitted with polycarbonate lens, therefore the Temperature Class (EPL Gb) and Maximum Surface Temperature (EPL Db) for this version in tables 2 and 3 are not applicable)

Table 5: (Applicable to EPL Db only) Maximum Surface Temperature for LifEx types without glass/polycarbonate lens and with polycarbonate diffuser

The equipment has been separately tested against the requirements of IEC 60529 and it meets IP66. The gaskets on the caps provide the degree of protection.

The equipment uses the following nomenclature:

Variation 1:

This variation has assed the following changes:

i. Addition of an optional new removable cover for "easy installation" (which use the new aluminium extrusion);
ii. Addition of an optional external battery box;
iii. minimum ambient temperature extended to -60°C when Ex mb heater is used;
iv. Additional optional Ex mb EBM LED driver as an alternative to EBL3040 / EBL4040 Ex db series LED drivers;
v. added 30W model for size 300mm (LifEx-M..-0330).

13 Conditions of Manufacture

The following conditions are required of the manufacturing process for compliance with the certification.

i. Where the product incorporates certified parts or safety critical components the manufacturer shall ensure that any changes to those parts or components do not affect the compliance of the certified product that is the subject of this certificate.
ii. The LifEx series lighting fixtures are to be designed in accordance with general electrical safety standards.
iii. The routine dielectric strength test on the LifEx-ME and LifEx-MN luminaries with applied voltage shall be performed at 2U + 1000V with a minimum value of 1560V (U = maximum rated voltage of the lamp)

iv. A routine visual inspection of the encapsulated parts is required, as per Clause 9.1 of IEC 60079-18. There shall be no visible damage or deformation to the encapsulant.

v. Where the removable battery pack is used with phoenix contacts, if used with a T6 version of the equipment, the maximum ambient shall be limited to +40°C.

14 Specific Conditions of Use (Special Conditions)

The following conditions relate to safe installation and/or use of the equipment.

i. Cable entries are provided which have less than 5 threads engaged. Care must be taken to ensure the correct gaskets and washers are sued with the cable gland to maintain IP66.

ii. The equipment uses an external part that is constructed from non-metallic materials, and as such care is to be taken to prevent an electro-static charging hazard. See instruction manual for details.

iii. For versions with glass window of 4mm thickness without cover, the luminaire must be installed in a location with a low risk of mechanical danger

iv. The temperature at the entry point may reach up to 75°C. Suitably rated cable glands must be used.
