1 INTRODUCTION AND INSTRUCTIONS FOR USE

This dossier collects the material certificates related to the structural components supplied for the BLPH project. It has been structured to facilitate both systematic consultation and targeted searches.

The documentation is primarily organized by Purchase Order (PO), which are reflected as bookmarks within the file. Each bookmark provides direct access to the corresponding set of material certificates.

In some cases, a single Purchase Order is subdivided into multiple sub-dossiers. This occurs when materials under the same order have been delivered in different batches. Each sub-dossier is identified by a unique internal reference code, allowing clear traceability of the supplied items.

For ease of navigation, a traceability file is provided at the beginning of the dossier. This document also serves as an index and links key information—such as heat numbers—to the relevant material certificates. By searching for a specific heat number within this file, users can quickly locate the corresponding certificate within the dossier.

In addition, the entire dossier is fully searchable. This allows users to retrieve documents using any relevant search criteria (e.g. heat number, certificate number, material grade), providing flexibility in how the information is accessed.

Please note that traceability requirements do not apply to structural category 5 materials. These items are listed in the attachment provided at the end of this document.

This document undergoes an issuance cycle within EDMS Fusionlive". Its distribution is electronically controlled. Once printed shall be considered as "NOT CONTROLLED" copy
